canning, process of hermetically sealing cooked food for future use It was discovered in the early part of the 19th cent by a Frenchman, Nicolas APPERT The process proved moderately successful and was put into practice in other European countries and in the United States A patent was taken out (c 1815) in New England by Ezra Daggett for the canning of seafood, pickles, jams, and sauces In 1820, William Underwood in Boston and Thomas Kensett in New York City began to produce canned foods commercially Because of the food requirements of soldiers during the American Civil War, considerable amounts of canned meats and vegetables were produced The canning of seafood at Eastport, Maine, began in 1843 Salmon from the Columbia River was canned in 1866 and in Alaska in 1872 Glass containers were used at first but proved bulky, costly, and brittle Peter Durand, an Englishman, patented the first tin canister in 1810, and in 1825 the first US patent was obtained Early can-making was slow and expensive, sheets of tin were cut with shears, bent around a block, and the seams heavily soldered A good tinsmith could make only about 60 cans a day The industry began to assume importance with the invention in 1847 of the stamp can A machine for shaping and soldering was exhibited in 1876 at the Centennial Exposition at Philadelphia The open-top can of the 20th cent, with a soldered lock seam and double-seamed ends, permits easy cleaning and filling Cans used for foods that react with metals, causing discoloration (usually harmless), may be coated with a lacquer film Highly specialized machinery, knowledge of bacteriology and food chemistry, and more efficient processes of cooking have combined to make the commercial canning of food an important feature of modern life The range of products now canned has increased enormously and may be grouped as meat and poultry, fruits and vegetables, seafood, milk, and preserves, jams, jellies, pickles, and sauces The general principles of commercial and home canning are the same, but in the factory more accurate con-

trol of procedures is practiced and highly specialized machinery is available. The canning process begins with cleaning or washing the product. During the next steps the edible parts are separated from the inedible parts (just as in ordinary food preparation, e.g., by peeling, trimming, and so forth). Certain foods, especially vegetables, need to be blanched (scalded), to arrest enzyme action that may cause color, flavor, or texture deterioration, or to reduce the size of the product. After the food is put into cans, the can is thermally exhausted in order to release undesirable gases. Once the can is sealed, it is subjected to heat so that any microorganisms inside the can will be destroyed. The canned product is then cooled and labeled.

Cannizzaro, Stanislao (stānēs-lā'ō kăn-nēt-tsa'ō), 1826-1910, Italian chemist. From 1861 he was professor at Palermo and from 1871 at Rome, where he was also a member of the senate and of the council of public instruction. He is known for his discovery of cyanamide, for obtaining alcohols from aldehydes by Cannizzaro's reaction (in which benzaldehyde is converted to benzoic acid and benzyl alcohol, in the presence of a strong alkali), and for distinguishing between molecular and atomic weights. Of fundamental importance was his explanation of how atomic weights may be determined systematically on the basis of Avogadro's law regarding the volumes of gases and vapors, hydrogen is used as a reference standard and, for elements whose compounds are not volatile (do not form vapors by evaporation), the SPECIFIC HEAT is used in the determination of the atomic weight.

Cannock, urban district (1971 pop. 55,873), Staffordshire, W central England. It is a mining town dependent upon the rich coal deposits of Cannock Chase, a nearby moorland. Cannock's other industries are metalworking and brick making.

Cannon, Annie Jump, 1863-1941, American astronomer, b. Dover, Del., grad. Wellesley (B.S., 1884, M.A., 1907). In 1897 she became an assistant in the Harvard College Observatory, where from 1911 to 1938 she was astronomer and curator of astronomical photographs. In the course of her photographic work she discovered 300 variable stars, 5 new stars, 1 spectroscopic binary, and many stars with bright lines or variable spectra. She made a bibliography of variable stars that includes about 200,000 references and completed a catalog of some 300,000 stellar spectra, besides preparing many papers on the subject.

Cannon, George Quayle, 1827-1901, Mormon apostle, b. Liverpool, England. He and his parents were converted to Mormonism in 1840, from the Isle of Man they emigrated to Nauvoo, Ill., in 1842, moving to Utah in 1847. In 1850, Cannon founded a Mormon mission in Hawaii. He became an apostle in 1859 and was assigned to England, where for four years he edited the *Millennial Star* and supervised missionary work. He served as a member of the Utah territorial council and as private secretary to Brigham Young, of whose will he was an executor. In 1867 he became editor of the influential *Deseret News*. Cannon was elected (1872) territorial delegate from Utah to Congress, but in 1882 he was refused his seat, under the Edmunds antipolygamy law. In 1888 he suffered imprisonment for practicing polygamy.

Cannon, Joseph Gurney, 1836-1926, speaker of the U.S. House of Representatives (1903-11), b. Guilford co., N.C. A lawyer in Illinois, Cannon served as a Republican in Congress from 1873 to 1923, except for the years 1891-93 and 1913-15, when first the Populists and then the Progressives were able to defeat him. As speaker he carried the traditional power of his office to appoint all legislative committees to its ultimate arbitrary extremes, dictatorially ruling the House in the interest of his fellow "Old Guard" Republicans and suppressing minority groups. In March, 1910, insurgent Republicans, led by George W. Norris and supported by all the Democrats, passed a resolution that, by providing that the House itself should appoint the important Committee on Rules with the speaker ineligible for membership, broke Cannon's power. See C. R. Atkinson, *The Committee on Rules and the Overthrow of Speaker Cannon* (1911); L. W. Busbey, *Uncle Joe Cannon* (1927, repr. 1971); Blair Bolles, *Tyrant from Illinois* (1951, repr. 1974); W. R. Gwinn, *Uncle Joe Cannon, Archfoe of Insurgency* (1957).

Cannon, Walter Bradford, 1871-1945, American physiologist. While still a medical student at Harvard, Cannon was the first to demonstrate (1897) that bismuth could be utilized as a contrast medium in the roentgenologic examination of the gastroin-

testinal tract. His interest in the physiological effects of emotional stimuli, especially on digestion, led to the publication in 1919 of *Bodily Changes in Pain, Hunger, Fear and Rage*. He later concentrated his attention on the adrenal glands and by 1929 was emphasizing the emergency function of these glands in meeting vital threats to the body and in maintaining the equilibrium of the many processes of the organism. In 1932, while professor of physiology at Harvard, he introduced the important concept of homeostasis.

Cano, Alonso (ālōn'sō ka'nō), 1601-67, Spanish baroque painter, sculptor, and architect. Cano was the outstanding draftsman of the Spanish baroque. He studied under Pacheco and received painting and architecture commissions from King Philip IV. He was named chief architect of the cathedral at Granada. His architectural masterpiece is the design for the cathedral facade (1667), erected after his death. Cano executed both the sculpture and paintings for his monumental altarpieces and did independent religious pictures and portraits for the cathedral. Examples of his paintings are *Descent into Limbo* (Los Angeles County Mus.), *Way to Calvary* (Worcester Art Mus., Mass.), and portrait of an ecclesiastic (Hispanic Society of America, New York City). His sculptures, including statues of saints in Granada Cathedral, are executed with vigor and sensitivity. See study by H. E. Wethey (1955).

Cano, Juan Sebastián del (hwān sābāstyān' dēl), c. 1476-1526, Spanish navigator, the first to circumnavigate the globe. Under Magellan he commanded the *Concepción* and after Magellan's death in the Philippines took command of the expedition. From the Philippines to the Molucca islands Cano sailed new waters, arriving in Spain with the *Victoria* and 18 men on Sept. 6, 1522. He set out in 1525 on a second voyage to the Moluccas by Magellan's route but died while crossing the Pacific.

canoe, long, narrow watercraft with sharp ends originally used by most primitive peoples. It is usually propelled by means of paddles, although sails and, more recently, outboard motors are also used. The canoe varies in material according to locality and in design according to the use made of it. In North America, where horses were not generally used and where the interlocking river systems were unusually favorable, the canoe in its various types was highly developed. Where large logs were available, it took the form of the hollowed-out log, or dugout, especially on the N. Pacific coast, where immense trees grew at the water's edge, where an intricate archipelago invited navigation in ocean waters, and where the tribes came to depend to a large extent upon sea life for their food supply. A semiseafaring culture developed there, and the great canoes of the Haida and Tlingit tribes, with high, decorated prows, capable of carrying 30 to 50 people, began to resemble the boats of Viking culture. On the northern fringe of the American forest where smaller tree trunks were found and rapid rivers and many portages favored a lighter craft, the bark canoe dominated, reaching its highest development in the birchbark canoe. At portages this light canoe could be lifted on one's shoulders and easily transported. A third type of primitive canoe is that made from skins, found where trees are lacking. The bullboat of the Plains Indian, little more than a round tub made of buffalo hides stretched over a circular frame, was its crudest form. A much finer form is the kayak of the Eskimo, made of sealskin stretched over a frame constructed of driftwood or whalebone. In the South Seas, canoes were developed for use on long voyages from island to island, and ingenious outriggers were developed to give stabilization to the canoe under sail. It was the birchbark canoe that carried such explorers as Jacques Marquette, Sir Alexander Mackenzie, and David Thompson on their journeys. It was the canoe that carried fur traders out to trade with the Indians, thus it played an important part in early American history. The double-bladed paddle—used in North America only by the Eskimo—is almost always in use on wide bodies of water affected by wind and tidal currents. The substitution of canvas for birch bark in making canoes is credited to the Oldtown or Penobscot Indians in Maine, the canvas-covered wooden canoe is sometimes called the Oldtown canoe. All-wood canoes made of basswood or cedar, very popular in Canada, are sometimes called Peterborough canoes after a canoe-making center. Plywood canoes made in Canada and elsewhere have also been popular. The majority of canoes made today, however, are manufactured of a tough but light aluminum alloy. This type of canoe contains an air pocket in either

end to ensure flotation. Modern canoes are also made of fiber glass, plastic, and even a hard rubber nonsinkable compound. The sail used on the modern canoe is usually the triangular lug sail known as the lateen. The decked sailing canoe used for racing carries two and sometimes three sails, its navigator uses a sliding seat (sometimes called the monkey seat) on which he balances, frequently out over the water on either side, to prevent his craft from heeling over too far. This canoe, clocked at 16 knots or more, and the Samoan canoe (with an outrigger), exceeding 20 knots, were the fastest watercraft under sail until the advent of the CATAMARAN. See Terence T. Quirke, *Canoes the World Over* (1952).

canoeing, sport of propelling a canoe through water. John MacGregor, an English barnster and founder of the Royal Canoe Club (est. 1865), is generally credited with being the initiator of modern sport canoeing. Between 1849 and 1869, MacGregor wrote a number of highly popular books in which he described his experiences on long canoe trips throughout Europe. Sport canoeing today may either involve recreational journeys or fixed-distance racing. Racing canoes are propelled by either sails or paddles. The International Challenge Cup, one of the oldest existing canoeing trophies, was originally offered by the New York Canoe Club (1885) as a perpetual challenge sailing prize. Canoe racing with paddles first became an official Olympic event at the Berlin games in 1936. The two types of Olympic canoe races are those among kayaks and Canadian canoes. The kayak, a buoyant arctic canoe that is completely covered except for its cockpit(s), is raced by both men and women. The Canadian, the typical North American canoe, is raced only by men. Hunters, fishermen, and outdoorsmen use canoes as combination recreation-transportation vehicles. This type of canoeing is especially popular in the N. United States. White-water canoeing, in which the vessel is navigated through rapids, is quite popular in the W. United States, especially along the Colorado River. See studies by John Malo (1969 and 1971).

canon, in Christendom, term of several meanings. Decrees of church councils are usually called canons, since the Council of Trent the expression has been especially reserved to dogmatic pronouncements of ecumenical councils. The body of ratified conciliar canons is a large part of the legislation of CANON LAW. A canon is also an official list, as in canonization, i.e., enrollment among the saints, and of the names of books of the Bible accepted by the church (see OLD TESTAMENT, NEW TESTAMENT APOCRYPHA PSEUDEPIGRAPHIA). The central, mainly invariable part of the Mass is the canon. The term is also applied in the Western Church to certain types of priests. There are canons regular, priests living in community under a rule but not cloistered like monks, the Augustinian, or Austin, canons and the Premonstratensians are the best known of these. The priests attached to a cathedral or large church are sometimes organized into a group, or college, and called canons secular, a church having such a group is a collegiate church. Cathedral canons often have diocesan charges or pastoral duties apart from the cathedral. Canons of the Church of England are mostly cathedral canons.

canon, in music, a type of counterpoint employing the strictest form of imitation. All the voices of a canon have the same melody, beginning at different times. Successive entrances may be all at the same pitch or at different pitches. Another form of canon is the circle canon, or ROUND, e.g., *SUMMER IS ICMEN IN*. In the 14th and 15th cent. retrograde motion was employed to form what is known as crab canon, or canon cancrizans, wherein the original melody is turned backward to become the second voice. In the 15th and 16th cent. mensuration canons were frequently written, in which the voices sing the same melodic pattern written in different note values, i.e., to be sung at different speeds. Bach made noteworthy use of canon, particularly in the *Goldberg Variations*. Beethoven, Mozart, Haydn, Schumann, and Brahms wrote canons, and Franck used the device in the last movement of his violin sonata. It is an essential device of SERIAL MUSIC.

Canonchet: see KING PHILIP'S WAR.

Canon City (kăn'yān), city (1970 pop. 9,206), seat of Fremont co., S. central Colo., at the mouth of the Grand Canyon of the Arkansas River (see ROYAL GORGE), laid out 1859 on the site of a blockhouse built (1807) by Zebulon M. Pike, inc. 1872. It is a health and tourist resort in a spectacularly scenic area with mineral springs. Marble and limestone are quarried, and a great variety of minerals are found in the region. A restored mining town is nearby.

Canonicus (kānōn'īkas), c 1565–1647, North American Indian chief, who ruled the Narragansett Indians when the Pilgrims landed in New England. He granted (1636) Rhode Island to Roger WILLIAMS and because of William's influence remained friendly to the settlers, despite their aggressive ways. See H. M. Chapin, *Sachems of the Narragansetts* (1931).

canonization (kān''ānīzā'shən), in the Roman Catholic Church, process by which a person is classified as a SAINT. It is now performed at Rome alone, although in the Middle Ages and earlier bishops everywhere used to canonize. Canonization is not necessary for martyrs, who are considered to be enrolled among the saints on their death, but in recent years the church has approved the cult of canonized persons only. The process of canonization is a trial (or cause), at which the saint is said to be defended by the church, a prosecutor is appointed to attack all evidence alleged in favor of canonization. The prosecutor is popularly called *advocatus diaboli* [devil's advocate], his opponent the *advocatus Dei* [God's advocate]. This evidence consists primarily of the proof of four miracles attributable to the saint and proof that the saint's life was exemplary. Beatification, by which a person is called blessed and his cult is approved for localities and orders, requires two miracles. Miracles attributed to saints are considered probable or pious opinions, and Catholics are not required to believe in them. The first solemn canonization seems to have been that of St. Ulrich late in the 10th cent. The method of formal canonization was set by the enactments of Urban VIII that came into force in 1634.

canon law, in the Roman Catholic Church, the body of law based on the legislation of the councils (both ecumenical and local) and the popes, as well as the bishops (for diocesan matters). It is the law of the church courts and is to be distinguished from other parts of ecclesiastical law, such as liturgical law. However, when liturgical law overlaps with canon law, the great body of canon law, promulgated in the *Codex juris canonici* [code of canon law] in 1917 (and effective since 1918), prevails, although exceptions to this rule are noted in the code. The code itself, the culmination of centuries of legal growth, consists of 2,414 canons, with an analytical index (at the beginning) and nine appended documents, it superseded all previous compilations. It does not contain all of canon law, which continues to grow, but it is the base of the present-day law, and the study of canon law consists mainly in mastering the code and its application. It lays down rules for the governance and regulation of the clergy and the church, including such matters as the qualifications, duties, and discipline of the clergy and the administration of the sacraments (more particularly the laws regarding holy orders and the sacrament of marriage). Canon law embraces both general laws applicable in the church universal, such as those on requirements for the priesthood and those on marriage, and local laws applicable only in certain dioceses. The early law grew particularly from the letters of the bishops of Rome that settled matters of ecclesiastical government and discipline from the end of the 1st cent. A.D. Such papal letters and pronouncements are called decretals. Joined to them are the canons of the councils of the church regarding church discipline and governance. From the 4th cent. this legislation grew profuse, and attempts to collect and correlate the laws began early (see *CONSTITUTIONS, APOSTOLIC*). These collections were not always authorized and were sometimes not genuine, as in the case of the *FALSE DECRETALS*. It was not until the middle of the 12th cent. that the great genius of the canon law, GRATIAN, following after IVO OF CHARTRES, applied the methods of Roman law in bringing order out of the chaos of conflicting and uncoordinated legislation. His *Concordantia discordantium canonum* (c 1140) or *Decretum Gratiani*, called in English *Gratian's Decree*, became the basis for future compilations of the law. Important among the later additional works were the collections of decretals under Gregory IX, called the *Extravagantes* or *Extra* because they were outside Gratian's Decree, the collection issued (1298) by Boniface VIII and called *Liber sextus* [the sixth book] because it added to the five books of decretals promulgated by Gregory, the collection promulgated (1317) by John XXII, drawn mostly from the constitutions of Clement V at the Council of Vienne and called the *Clementinae*, the work commonly called *Corpus juris canonici*, which in 1500 combined all the preceding with the *Extravagantes* of John XXII and the *Extravagantes communes* (decretals from Boniface VIII through Sixtus IV) and was to be the fundamental work in canon law for centuries.

The Council of Trent (1545–63, with interruptions) by its decrees concerning the church and church discipline was a landmark in canon law. Legislation in the church continued and had reached considerable confusion by the time that, in 1904, St. Pius X announced the undertaking of the *Codex juris canonici*. This was drafted by a commission of cardinals headed by Cardinal Gasparri, all the resources of the church were used to produce this code. In 1917, when the code was finished, a permanent commission of cardinals was set up to interpret it. In 1959, Pope John XXIII convoked the Second Vatican Council and announced a revision of the code of 1917, in 1963 he appointed a pontifical commission for the revision of the code, which replaced the 1917 commission. Canon law has had a profound influence on the law of countries where the Roman Catholic Church has been the state church. In the Middle Ages the church courts had very wide jurisdiction—e.g., in England, control of the law of personal property—and because they were well regulated, they tended to attract many borderline cases that might have been the business of the developing royal courts (see *BENEFIT OF CLERGY*). Catholics of Eastern rites have their own separate codes of canon law, approved by the Roman Catholic Church. The term "canon law" is also used for ecclesiastical law in churches of the Anglican Communion. The *Anglican Constitutions and Canons Ecclesiastical* (1603) was a collection of rulings, not based on the old canon law, but given equal force with the canon law. See A. G. Cicognani, *Canon Law* (rev. ed. 1949), Stanislaus Woywod, *Practical Commentary on the Code of Canon Law* (rev. ed. 1949), J. A. Abbo and J. D. Hannan, *The Sacred Canons* (2d rev. ed. 1960), Rene Metz, *What is Canon Law?* (1960), T. L. Bouscaren and A. C. Ellis, *Canon Law* (4th rev. ed. 1966), J. E. Biechler, ed., *Law for Liberty* (1967).

Canonsburg, borough (1970 pop. 11,439), Washington co., SW Pa., inc. 1802. It is an industrial center in a coal-mining area. Its varied manufactures include steel and metal products and pottery. A gram of radium produced there was presented to Mme. Curie in 1921 when she visited the town. The Log Cabin School (est. 1777, the first school west of the Alleghenies) is preserved, it was the precursor of Washington and Jefferson College, now in Washington, Pennsylvania. The Black Horse Tavern in Canonsburg was a famous gathering place for leaders of the Whisky Rebellion (1794). Roberts House (1804) is an example of W. Pennsylvania manor architecture. A state school and hospital for the mentally retarded is nearby.

Canopus (kānō'pas), ancient city of N. Egypt, 12 mi (19 km) E of Alexandria. Canopus, the pilot of Menelaus' ship, died there. In Hellenistic times Canopus was known as a pleasure city for the rich. Vases capped with the figure of a human head, called Canopic vases, were used to hold the viscera of embalmed bodies. The Decree of Canopus, issued there in 238 B.C. and found at Tanis, has been of value in studying the ancient Egyptian language. The modern village of ABU QIR is near the ancient ruins.

Canopus, in astronomy, 2d brightest star in the sky, located in the constellation Carina, which is part of the ancient constellation Argo Navis, Bayer designation α Carinae, 1970 position R.A. 6^h23^m3^s, Dec. –52°41'. It has an apparent magnitude of –0.72, second only to Sirius among the bright stars. Canopus is a yellowish-white giant star of spectral class F0 I-II. Its distance is about 100 light-years. It is probably named after the ancient Egyptian city of Canopus.

Canosa di Puglia (kānō'sā dē pōō'lyā), Lat. Canusium, city (1971 pop. 30,059), Apulia, S. Italy, on the Ofanto River. It is a commercial and agricultural center. The city flourished under the Romans and was noted for its wool and its fine vases, many of which have been unearthed in nearby tombs (3d and 4th cent. B.C.). The Romans fled to Canusium after their disastrous defeat by Hannibal at nearby Cannae (216 B.C.). The city was destroyed by the Arabs in the 9th cent. but was resettled by the Normans in the 11th cent. There are other Roman remains, including walls, an amphitheater, and a gate. The city also has an 11th-century Romanesque cathedral and the mausoleum of the Norman leader Bohemond I (d. 1111), which has fine sculptured bronze doors.

Canossa (kānō'sā), village, in Emilia-Romagna, N. central Italy, in the Apennines. There are ruins of the 10th-century castle of the powerful feudal family that took its name from the place. In the 10th and

11th cent. they ruled over much of Tuscany and Emilia. MATILDA, countess of Tuscany, was the last of the family. In Jan. 1077, the castle was the scene of penance done by Emperor HENRY IV to obtain from Pope Gregory VII the withdrawal of the excommunication against him. The pope was Matilda's guest at the castle, and Henry is said to have stood three days barefoot in the snow before being admitted to the pope's presence. Henry was absolved, but the peace between him and the pope was short-lived. The political implications of this episode inspired Bismarck to coin the phrase "to go to Canossa" (i.e., to submit to the demands of the Roman Catholic Church) in the Kulturkampf.

Canova, Antonio (āntō'nōyō kānō'vā), 1757–1822, Italian sculptor. He was a leading exponent of the neoclassical school whose influence on the art of his time was enormous. Canova's monumental statues and bas-reliefs are executed with extreme grace, polish, and purity of contour. His first important commission was the monument (1782–87) to Clement XIV in the Church of the Apostles, Rome, followed by that to Clement XIII (completed 1792) in St. Peter's. He then received numerous major commissions from many countries. An admirer of Napoleon, Canova executed a bust of the emperor from life and several other portraits, including two where Napoleon is represented nude in the guise of a Roman emperor. His statue (1820) of George Washington for the statehouse at Raleigh, N.C. (destroyed), was dressed in Roman armor. Canova's memorabilia, consisting of sketches, casts, a few oil paintings, and a voluminous correspondence, are divided between the Gipsoteca in Possagno, his birthplace, and the Civic Museum in Bassano.

Canovas del Castillo, Antonio (āntō'nōyō kānō'vās dēl kāstēlyō), 1828–97, Spanish conservative politician, historian, and man of letters. He was instrumental in securing the restoration (1875) of Alfonso XII and was premier for six years (with short interruptions in 1875 and 1879) thereafter. To stabilize the monarchy, he worked out a political arrangement that rotated power within a narrow group, and after 1881 he alternated as premier with the Liberal party leader, Sagasta. He was assassinated by an anarchist. The editor of *Historia general de España* (18 vol., 1891–97), he also wrote several historical and critical works.

Canrobert, François Certain (frān'swa' sērtān' kānrōbēr'), 1809–95, marshal of France. After brilliant service in Africa, he returned to Paris and aided Louis Napoleon (later NAPOLEON III) in the coup d'état of 1851. He served in the Crimean War and was for a time commander in chief. Later, he distinguished himself in the Italian War of 1859 and in the Franco-Prussian War (1870–71). He became a senator under the Third Republic.

Canso, town (1971 pop. 1,209), 5 central N.S., Canada, on the Atlantic Ocean, near Cape Canso, the easternmost point of Nova Scotia peninsula proper. The harbor was much used by fishing fleets in colonial times and was fortified by the British in 1720. The Gut, or Strait, of Canso, scarcely 1 mi (1.6 km) wide in places, separates Nova Scotia peninsula from Cape Breton Island.

Cantabrian Mountains (kāntā'briān), N. Spain, extending c. 300 mi (480 km) along the Bay of Biscay from the Pyrenees to Cape Finisterre. Torre de Cerredo (8,687 ft/2,648 m) in the Europa group in the central section is the highest peak. The mountains are rich in minerals, especially coal and iron, the slopes are farmed. The streams on the northern slope are used to generate hydroelectricity. The Ebro River rises on the southeast slope.

Cantacuzene (kān''takyōōzēn') or **Cantacuzino** (kān'tākōōzēnō), noble Rumanian family of Greek origin, tracing its descent from the Byzantine emperor JOHN VI (John Cantacuzene). Under Ottoman rule members of the family were among the Phanariots (see under PHANAR) who governed Walachia and Moldavia. By the mid-17th cent., part of the family had settled in Walachia. A Russian branch of the family held high positions in the army and as governors of Bessarabia. Serban Cantacuzene, 1640–88, hospodar [governor] of Walachia (1678–88), took part in the Turkish siege of Vienna (1683), outwardly on the side of the Turks but in reality supplying intelligence information to the Austrians and conducting secret negotiations with them. He was poisoned, probably because of his pro-Austrian feelings. During his rule Rumanian was substituted for Slavonic as the liturgical language, and the first Rumanian Bible was printed (1688) under his auspices. George Cantacuzene, 1837–1913, the head of the Rumanian Conservative party, held several im-

portant government posts, most notably the premiership (1905-7)

Cantacuzene, John: see JOHN VI, Byzantine emperor

Cantal (kaNtal'), department (1968 pop 169,330), S central France, in Auvergne AURILLAC is the capital

cantaloupe: see GOURD, MELON

cantata (kanta'ta) [Ital, =sung], composite musical form similar to a short unacted opera or brief ORATORIO, developed in Italy in the baroque period. The term was first used in 1620 to refer to strophic variations in the voice part over a recurrent melody in the bass accompaniment. Gradually the cantata came to contain contrasting sections of recitative and aria separated by instrumental passages, often in the current operatic style. In the second half of the 17th cent the secular cantata was standardized by Stradella, Alessandro Scarlatti, and other members of the Neapolitan school into two arias with recitatives. This form was very popular through the 18th cent as a vehicle for virtuoso singing. In France the cantata was adapted by Rameau to contain three arias with recitatives. In Germany the sacred cantata was more popular than the secular. It incorporated extensive choral and instrumental sections. A particular variety, the chorale cantata, utilized the verses of hymns and frequently the hymn tunes in various parts of the cantata. This type, as written by J S Bach, opens with a chorus, which is followed by recitatives and arias for each soloist, and then closes with a harmonized chorale. After Bach the cantata became, in general, a diminutive form of the oratorio.

Canterbury, city (1971 pop 130,334), New South Wales, SE Australia. It is a suburb of Sydney.

Canterbury, county borough (1971 pop 33,157), Kent, SE England, on the Stour River. Economically unimportant except for its tourism, Canterbury is famous as the long-time spiritual center of England. In 597, St Augustine went to England from Rome to convert the island peoples to Christianity. He founded an abbey at Canterbury and became the first archbishop of Canterbury and primate of all England. The early cathedral was burned and rebuilt several times. After the murder (1170) of Thomas a Becket and the penance of Henry II, Canterbury became famous throughout Europe as the object of pilgrimage, and the *Canterbury Tales* of Chaucer relate the stories told by a fictional group of pilgrims. The present cathedral was begun under Archbishop Lanfranc, the first Norman archbishop. Constructed from 1070 to 1180 and from 1379 to 1503, it is a magnificent structure, its architecture embodying the styles of several periods and various architects. Noteworthy are the great 15th-century tower (235 ft/72 m high), the long transepts, the screen separating the raised choir from the Perpendicular nave, the east chapel (called the Corona or Becket's Crown), which contains the marble chair in which the archbishops are enthroned, Trinity Chapel, which held the shrine of St Thomas until 1538, when Henry VIII ordered it destroyed and the accumulated wealth confiscated, the chapel in which French Protestants worshiped in the 16th cent and where services are still held in French, the northwestern transept (where a stone slab commemorates the exact site of Thomas a Becket's murder), and the tombs of Henry IV and Edward the Black Prince. During World War II the cathedral was the object of severe German reprisal raids (June, 1942), which destroyed the library and many other surrounding buildings, but the cathedral itself received no direct hits. The city of Canterbury is also of great historical interest, with a 14th-century gate and remains of the old city walls, St Martin's Church (established before St Augustine's arrival and known as the Mother Church of England), the old pilgrims' hostel called the Hospital of St Thomas, and several fine old inns. Christopher Marlowe was born at Canterbury and educated at King's School (of very ancient origin) there before going to Cambridge. Other schools are the Univ of Kent at Canterbury, and theological, art, and teacher-training colleges. In 1974, the borough became part of the new nonmetropolitan county of Kent.

Canterbury Tales: see CHAUCER, GEOFFREY

cantharides: see BLISTER BEETLE

Can Tho (kân tô, kântô'), city (1968 est pop 88,000), S South Vietnam, a port on the Mekong River delta. Rice and fish are traded. It is the seat of the Univ of Can Tho. The city has a commercial airport.

Canticles, another name for the SONG OF SOLOMON

cantilever (kân'talēvər), beam supported rigidly at one end to carry a load along the free arm or at the

free end. A slanting beam fixed at the base is often used to support the free end, as in a common bracket. The springboard is a simple cantilever beam, and the cantilever design is often used for canopies, balconies, sidewalks outside the trusses of bridges, and large cranes such as those used in shipyards. By the use of cantilever trusses, obstructing columns are eliminated in theaters. The cantilever principle is one of the methods that may be used in constructing a BRIDGE.

Canton, John, 1718-72, English physicist. He is known for his research in magnetism and in electricity, especially his experiments in electrostatic induction. Canton was the first in England to verify Benjamin Franklin's conclusions about lightning. He invented an electroscope and an electrometer and demonstrated the compressibility of water.

Canton (kân'tôn', kân'tôn''), Mandarin *Kuang-chou*, city (1970 est pop of 2,300,000), capital of Kwangtung prov, S China, a major deepwater port on the Pearl River delta. Among the largest cities in the country, Canton is the transportation, industrial, financial, and trade center of S China. It has shipyards, an integrated steel complex, paper mills, a long-established textile industry (silk, cotton, jute, and more recently synthetic fibers), and factories producing tractors, machinery, machine tools, boilers, tires, bicycles, sports equipment, porcelain, cement, and chemicals. The hub of water transportation along the Pearl River, it is the southern terminus of the Canton-Han-k'ou RR. It has a large international airport and is linked with Hong Kong by the Canton-Kowloon RR. Canton is the marketplace for China's world trade, great national trade expositions, held there every spring and fall (since 1957), attract thousands of businessmen from all over the world. Canton became a part of China in the 3d cent B.C. Hindu and Arab merchants reached Canton in the 10th cent., and the city became the first Chinese port regularly visited by European traders. In 1511, Portugal secured a trade monopoly, but it was broken by the British in the late 17th cent., in the 18th cent the French and Dutch were also admitted. Trading, however, was restricted until the Treaty of Nanking (1842) following the Opium War, which opened the city to foreign trade. Following a disturbance, French and British forces occupied Canton in 1856. Later the island of Shameen was ceded to them for business and residential purposes, and this reclaimed sandbank with its broad avenues, gardens, and fine buildings was known for its beauty, it was restored to China in 1946. Canton was the seat of the revolutionary movement under Sun Yat-sen in 1911, the Republic of China was proclaimed there. From Canton the Nationalist armies of Chiang Kai-shek marched northward in the 1920s to establish a government in Nanking. In 1927, Canton was briefly the seat of one of the earliest Communist communes in China. The fall of Canton to the Communist armies in late Oct., 1949, signalled the Communist takeover of all China. Under the Communist government, Canton was developed as an industrial center and a modern port, with a great trade to and from Hong Kong. The city is also a cultural and educational center with several institutions of higher learning, notably Sun Yat-sen Univ and Chinan Univ. Tourist attractions include a large pagoda overlooking the river, now a museum of ceramics, the huge Temple of the Six Banyan Trees, and a park, with pavilions, commemorating the 1927 conflict between the Communists and the KUOMINTANG. Nearby are Ts'ung Hua hot springs and an important army base.

Canton 1 City (1970 pop 14,217), Fulton co., W central Ill., in the corn belt, inc 1849. It is a trade and industrial center for a coal and farm area. Its industries include coal mining and the manufacture of farm equipment and clothing. A junior college is there. 2 Town (1970 pop 17,100), Norfolk co., E Mass., a residential and industrial suburb of Boston, settled 1630, inc 1797. Rubber goods, textiles, plastics, and paper products are manufactured. Paul Revere operated a copper-rolling mill there. The town has a state hospital for the physically handicapped. 3 City (1970 pop 10,503), seat of Madison co., W central Miss., inc 1836. It is a trade and processing center in a cotton, truck farm, and timber area. There are a number of fine old antebellum houses. 4 City (1970 pop 110,053), seat of Stark co., NE Ohio, at the junction of three branches of Nimishillen Creek, inc 1822. It is a steel-processing center in a great iron and steel area. Other manufactures include roller bearings, heavy office equipment, water softeners, and forgings. In Canton are Malone College and a football hall of fame. Walsh College is in suburban North Canton. William McKinley lived in

Canton, his grave and monument are in the McKinley State Memorial. The Stark County Historical Center, adjacent to the memorial, contains a McKinley museum.

Canton or Pearl, Chin *Chu-chiang*, river, 110 mi (177 km) long, S Kwangtung prov., S China. Formed at Canton by the confluence of the Si and Pei rivers, it flows E then S past Canton and Huang-pu island to form a large estuary between Hong Kong and Macao. The river links Canton to Hong Kong and the South China Sea and is one of China's most important waterways. The estuary, called Boca Tigris, is kept open for ocean vessels by dredging.

Canton Island, coral atoll (1967 est pop 130), 3.5 sq mi (9 sq km), central Pacific, largest of the PHOENIX ISLANDS, c 2,000 mi (3,220 km) SE of Honolulu, Hawaii. Annexed by the British at the end of the 19th cent., the island was also claimed by American gun companies. In 1937 the British built a radio station on Canton, but in 1938 the United States formally claimed the island and placed it under the Dept. of the Interior. British and American colonists were brought to Canton in 1938 but were evacuated during World War II. In 1939 both Great Britain and the United States agreed on joint control of Canton and nearby Enderbury Island for 50 years.

Cantor, Eddie, 1892-1964, American entertainer, b New York City, originally named Edward Israel Iskowitz. Cantor became one of the best-known theatrical figures of his day. His style was typified by lively footwork, rolling eyes, and an utterly individual singing voice. On stage from 1907 and a Ziegfeld star from 1916, Cantor had numerous movie successes and a series of his own radio and television shows. See his autobiographical *As I Remember Them* (1963).

Cantor, Georg (gä'örkh kan'tör), 1845-1918, German mathematician, b St Petersburg. He studied under Karl Weierstrass and taught (1869-1913) at the Univ of Halle. He is known for his work on transfinite numbers and on the development of set theory, which is the basis of modern analysis, as well as for his definition of irrational numbers. His approach to the concept of the infinite revolutionized mathematics by challenging the processes of deductive reasoning and led to a critical investigation of the foundations of mathematics.

cantor [Lat, =singer], a singer or chanter, especially one who performs the solo chants of a church service. The office of cantor, at first an honorary one, originated in the Jewish synagogues, in which from early times it was the custom to appoint a lay member to represent the congregation in prayer. The cantillation of prayers, and later of parts of the Scriptures, was transmitted by oral tradition. The notation of the chants was forbidden. In the 6th cent poetic prayer forms were developed, and with them more complicated modes, or music, thus necessitating professional cantors. In the early Christian church, cantors known as *precentors* had charge of the musical part of the service. In modern Roman Catholic and Anglican services cantors sing the opening words of hymns and psalms.

Canosum* see CANOSA DI PUGLIA, Italy

Canute (kändōt', kanyōt'), 995?-1035, king of England, Norway, and Denmark. The younger son of Sweyn of Denmark, Canute accompanied his father on the expedition of 1013 that invaded England and forced Æthelred to flee to Normandy. When Sweyn died (1014), the Danes in England swore fealty to Canute, but on Æthelred's return from Normandy, Canute withdrew to Denmark, where his older brother, Harold, had become king. In 1015, Canute reinvaded England with a powerful army that conquered most of Wessex, harried the Danelaw, and conquered Northumbria. After the Danish victory in the battle of ASSANDUN, Canute divided England with EDMUND IRONSIDE, Æthelred's son. When Edmund died, late in 1016, Canute was accepted as sole king. He gave England peace and strove to continue English traditions by restoring the church to high place and codifying English law. To forestall dynastic quarrels he banished his wife (and their son Sweyn) and married Emma, the widow of Æthelred. His son by Emma was Harthacnut. In 1018 or 1019 he succeeded to the throne of Denmark and was forced to lead several expeditions to assert his rights there and in the Danish provinces in Norway. In 1028, after an uprising had expelled Olaf II of Norway, Canute was recognized as ruler of that kingdom. He made his son Harthacnut king of Denmark, and in 1029 he made his son Sweyn king of Norway, with Sweyn's mother as regent. She and Sweyn were driven out by 1035, and Norway was ruled by Olaf's son Magnus. Canute established

friendly relations with the Holy Roman Empire and attended the coronation of Conrad II in Rome in 1027. At the end of his reign Canute led an army into Scotland to stop Scottish invasions under Malcolm II. Canute was succeeded by his illegitimate son, Harold Harefoot, then by Harthacanute. The name also appears as Cnut or Knut. See biography by L. M. Larson (1912, repr. 1970), F. M. Stenton, *Anglo-Saxon England* (3d ed., 1971).

Canute the Saint, d. 1086, king (1080-86) and patron saint of Denmark. He built churches and cathedrals and raised the bishops to the rank of prince. In 1085 he made an unsuccessful attempt to invade England. He was killed by a mob enraged by the imposition of heavy fines and a tithe. Feast Jan. 19.

canvas, strong, coarse cloth of cotton, flax, hemp, or other fibers, early used as sailcloth. Left in its natural color, bleached, or dyed, it has a wide variety of uses, as for game, duffel, sport, mail and nose bags, tennis shoes, covers, tents, and awnings. Waterproofed with tar, paint, or the like, it is called tarpaulin and used to protect boats, hatches, and machinery. Duck is a fine light quality used for summer clothing, awnings, and sails. Artists' canvas is a light, smooth, single-warp texture, specially treated to receive paint. Art or embroidery canvas is an open-mesh type, usually linen, for working in crewels and for needlepoint.

canvasback: see DUCK.

Canyon de Chelly National Monument [De Chelly, Sp. corruption of Navaho *Tsegi* = rock canyon], 83,840 acres (33,930 hectares), NE Ariz., est. 1931. The area contains the ruins of several hundred prehistoric Indian villages, most of them built A.D. 350-1300. The spectacular cliff dwellings include Mummy Cave, with a three-story tower house. Artifacts have been found, and there are numerous pictographs in rock shelters and on cliff faces. The earliest people living in the region were the BASKET MAKERS, predecessors of the PUEBLO INDIANS. The NAVAHO came to the canyon c. 1700, and it became their chief stronghold. In 1805 a Spanish expedition fought the Navaho in a rock shelter, now called Massacre Cave, in Canyon del Muerto (site of a prehistoric Indian burial ground). In 1864 a U.S. cavalry force under Kit Carson engaged the Navaho in Canyon de Chelly.

Canyonlands National Park, 257,640 acres (104,267 hectares), SE Utah, est. 1964. Located in a desert region, the park contains a maze of deep canyons and many unusual features carved by wind and water, including spires, pinnacles, and arches, surrounding mesas rise more than 7,800 ft (2,377 m). Cataract Canyon, through which the raging waters of the Colorado and Green rivers flow, contains one of the world's largest exposures of red sandstone. Island in the Sky, a plateau overlooking the junction of the Green and Colorado rivers, has walls that drop in giant steps 2,200 ft (671 m) to the canyon floor. Upheaval Dome, pushed upward by the pressure of surrounding rock on underground salt deposits, contains a crater 1 mi (1.6 km) wide and 1,500 ft (457 m) deep. Also found in the park are many Indian petroglyphs drawn on rocks c. 1,000 years ago. Bighorn sheep, mule deer, and beaver live in the park.

canzone (kantsō'nā) or **canzona** (-na), in literature, Italian term meaning lyric or song. It is used to designate such various literary forms as Provençal troubadour poems and the lyrics of Dante, Petrarch, and other Italian poets of the 13th and 14th cent. The term was revived in the 19th cent. by Italian lyric poets, among them Giosuè Carducci.

canzone or **canzona**, in music, a type of instrumental music in Italy in the 16th and 17th cent. The term had previously been given to strophic songs for five or six voices, usually the canzone had three sections. The instrumental canzone was written in imitation of lute or keyboard transcriptions of French chansons. Frescobaldi used it in a series of fugal sections, each a rhythmic variation of the same theme. The thematic unity of his example was adopted by Froberger and other German composers, and this development led to the fugue. The canzone for instrumental ensemble became, in the hands of Giovanni Gabrieli and his followers, a structure consisting of sections of imitation in duple meter alternating with passages in triple meter.

caoutchouc (kou'chōök), natural RUBBER obtained as a LATEX from various tropical plants, e.g., the PARÁ RUBBER TREE. It is much more elastic than BALATA or GUTTA-PERCHA. It is the most familiar and widely used of the natural rubbers. It is usually processed by coagulating the latex and by milling or smoking the solid rubber. It is then further treated, e.g., by VULCANIZATION, to produce useful articles.

cap: see HAT.

Capa, Robert, 1913-54, American photographer of war, b. Hungary. From the early 1930s, Capa recorded with profound concern the spectacle of humanity caught in war. In 1936 he covered the Spanish civil war, making the photograph of a Loyalist at the instant of death that has become a classic. In 18 years he covered five wars, the result is a powerful and very personal indictment. In 1946, Capa helped found Magnum, a select agency for photojournalists. His books include *Death in the Making* (1938) and *Images of War* (1964). Capa was killed at 41 by a North Vietnamese land mine while photographing French combat troops.

Capablanca, José Raúl (hōsā' rāōōl' kăpăblăng'ka), 1888-1942, Cuban chess player, b. Havana. Champion of Cuba at the age of 12, he won the world's championship from Emanuel LASKER in 1921, retaining the title until he was defeated by Alexander ALEKHINE in 1927. His game was almost free from false interpretations of position, and his technique, although facile, was highly refined. See his *My Chess Career* (1920, rev. ed. 1966), *Chess Fundamentals* (1921, repr. 1967), *A Primer of Chess* (1935), and *Capablanca's Last Chess Lectures* (1967), Harry Golombek, ed., *Capablanca's Hundred Best Games of Chess* (1947, repr. 1965).

capacitance, in electricity, capability of a body, system, circuit, or device for storing electric charge. Capacitance is expressed as the ratio of stored charge in coulombs to the impressed potential difference in volts. The resulting unit of capacitance is the FARAD [for Michael Faraday]. In an electric circuit the device designed to store charge is called a CAPACITOR. An ideal capacitor, i.e., one having no resistance or inductance, may be spoken of as a capacitance. When an alternating current flows through a capacitor, the capacitor produces a reactance that resists the current (see IMPEDANCE).

capacitor or **condenser**, device for the storage of electric charge. Simple capacitors usually consist of two plates made of an electrically conducting material (e.g., a metal) and separated by a nonconducting material (e.g., glass, paraffin, mica, oil, or air). The LEYDEN JAR is a simple capacitor. If an electrical potential (voltage) is applied to the plates of a capacitor (e.g., by connecting one plate to the positive and the other to the negative terminal of a storage battery), the plates will become charged, one positively and one negatively. If the externally applied voltage is then removed, the plates of the capacitor remain charged, and the presence of the electric charge induces an electrical potential between the plates. This phenomenon is called electrostatic induction. The capacity of the device for storing electric charge (i.e., its capacitance) can be increased by increasing the area of the plates, by decreasing their separation, or by varying the substance used as an insulator. The property of this insulator (or dielectric) that affects the capacitance of the device is its acceptance of an induced electric field, the dielectric constant is a measure of the increase in capacitance due to a particular substance. Capacitors are used in many electrical and electronic devices. One type of variable capacitor, commonly used in the tuning circuits of radio sets, consists of two sets of semicircular plates, one set fixed and the other mounted on a movable shaft. By rotating the shaft the plates can be moved, increasing or decreasing the overlap of area of the plates, and thus increasing or decreasing the capacitance. For each different value of the capacitance the tuning circuit responds to a different particular frequency, and thus the circuit is able to select stations broadcasting on different frequencies.

Capaneus: see SEVEN AGAINST THEBES.

Cap de la Madeleine (kăp də lă mäd'lēn'), city (1971 pop. 31,463), 5 Que., Canada, at the confluence of the St. Maurice and St. Lawrence rivers. Newsprint and paper products, plywood, aluminum products, and clothing are manufactured there. The shrine and sanctuary of Notre Dame du Cap is in the city.

Cape Breton Highlands National Park (brēt'ən), 367 sq mi (951 sq km), N Cape Breton Island, N.S., Canada, est. 1936. It covers a large tableland and includes sections of the rugged Atlantic coastline.

Cape Breton Island, island (1971 pop. 170,007), 3,970 sq mi (10,282 sq km), forming the northeastern part of N.S., Canada, and separated from the mainland by the narrow Gut, or Strait, of Canso. The easternmost point is called Cape Breton. The center of the island is occupied by the Bras d'Or salt lakes. Gently sloping in the south, the island rises to rug-

ged hills in the wilder northern part. The inhabitants are mainly of Scottish Highlander descent. There are many summer resorts on the lakes and fishing villages on the coast. In the northeast are steelworks dependent on the extensive Sydney coal fields. The Cabot Trail, a scenic road through Cape Breton Highlands National Park, commemorates the discovery of Cape Breton Island in 1497 by John Cabot. The island was a French possession from 1632 to 1763. After the Peace of Utrecht (1713) many Acadians migrated there from mainland Nova Scotia, which was ceded to the English. They renamed the island Île Royale and established the fortress at LOUISBURG. With the final cession of Canada to the British (1763), Cape Breton was attached to Nova Scotia. It was made a separate colony in 1784, with Sydney as its capital, but was rejoined to Nova Scotia in 1820.

cape buffalo, species of short-haired African ungulate, or hoofed mammal, *Syncerus caffer*. The cape, or African, buffalo may reach 7 ft (2.1 m) in length, weigh more than 1,500 lb (670 kg), and reach a height of 5 ft (1.5 m) at the shoulder. Coat color and horn shape seem to vary with the animal's habitat, which ranges from high grass savanna to equatorial forest and extends from Lake Chad south to the Cape of Good Hope and from Senegal, on the Atlantic coast, to Ethiopia, on the Indian Ocean. Cape buffalo gather in herds of up to a thousand animals, they graze and drink in the early morning and evening and rest during the heat of midday and at night. They are aggressive and powerfully built, and can easily fend off the attack of a lion. They mate in January or February, after a gestation period of 11 months the cow gives birth to a single calf. Its life span is about 16 years. Cape buffalo are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

Cape Canaveral, low, sandy promontory extending E into the Atlantic Ocean from a barrier island, E Fla., separated from Merritt Island by the Banana River, a lagoon, named (1963) Cape Kennedy in memory of President John F. Kennedy, it reverted to its original name in 1973. The John F. Kennedy Manned Space Flight Center of the National Aeronautics and Space Administration is located at Cape Canaveral. Since 1947 the cape has been the principal U.S. launching site for long-range missiles, earth satellites, and manned space flights. The first U.S. space satellite (Explorer I, 1958), John Glenn, the first American to orbit the earth (1962), and Neil Armstrong (see ASTRONAUTS), the first man on the moon (1969), were launched into space from the cape. The region around Cape Canaveral has attracted many rocket and guided-missile-related industries. Patrick Air Force Base is nearby.

Cape Coast, town (1970 pop. 51,764), capital of Central Region, S Ghana, on the Gulf of Guinea. The town is an export port and fishing center. It grew up around European forts built in the 17th cent. The British made it their headquarters in 1664. It was capital of the Gold Coast until superseded by ACCRA in 1877. Cape Coast is also an educational center.

Cape Cod, narrow peninsula of glacial origin, 399 sq mi (1,033 sq km), SE Mass., extending 65 mi (105 km) E and N into the Atlantic Ocean. It is generally flat, with sand dunes, low hills, and numerous lakes. The cape's familiar hook-shape is a result of the action of winds and ocean currents on the sand and gravel. Bartholomew Gosnold, an English explorer, visited the cape in 1602 and named it for the abundant codfish found in surrounding waters. Fishing, whaling, shipping, and salt making were important until the late 1800s, tourism and cranberry growing (Cape Cod is the nation's largest producer of cranberries) are now the main industries. Candle making and boatbuilding are also carried on. Towns on Cape Cod include Provincetown, site of the Pilgrim's first landing (1620), Barnstable, where the Hyannis home of the Kennedy family is located, Falmouth, location of Woods Hole, an oceanographic center, and Bourne, through which the Cape Cod Canal passes. This lockless canal, 17.5 mi (28.2 km) long, 32 ft (10 m) deep, was built (1910-14) from private funds. It was purchased by the U.S. government in 1927. The canal accommodates oceangoing vessels and cuts the distance between New York City and Boston by 75 mi (121 km). Parts of Cape Cod constitute Cape Cod National Seashore (44,600 acres/18,050 hectares, est. 1961). It contains beaches, sand dunes, heathlands, marshes, fresh-water ponds, and historic sites including the first Marconi Wireless Station in the United States.

Cape Colony: see CAPE PROVINCE.

Cape Dezhnev (dēzh'naf, Russ. dyāsh'nyaf) or **East Cape**, northeasternmost point of Asia, Far Eastern

USSR, on Chukchi Peninsula and on the Bering Strait. It is named after the Russian navigator who discovered it in 1648. It was first called East Cape by Capt. James Cook.

Cape Fear River, 202 mi (325 km) long, formed in E central N.C. by the junction of the Deep and Haw rivers, and flowing southeast to enter the Atlantic Ocean N of Cape Fear, longest river entirely within North Carolina. Dams and locks make the river navigable to Fayetteville, N.C.; its estuary forms part of the Intracoastal Waterway. During the colonial period the river was a main route to the interior.

Cape Girardeau (jīrār'dō, jērardō'), city (1970 pop 31,282), Cape Girardeau co., SE Mo., overlooking the Mississippi River, founded 1793, inc. as a city 1843. It is a transportation, trade, and distribution center with factories that manufacture a variety of products. Its position on the river, near the confluence with the Ohio River, spurred its early growth. During the Civil War it was occupied by Union forces, and four forts were built there. A minor battle occurred on April 26, 1863. Fort D (1861) and other old buildings are among today's points of interest. The city is known for its roses, one display garden has numerous varieties. Southeast Missouri State Univ. is there. *The city is connected with Illinois by a highway bridge.*

Cape jasmine* see MADDER

Čapek, Josef (cha'pěk), 1887-1945, Czech writer and painter. He collaborated with his brother Karel on a number of plays and short stories. On his own he wrote the utopian play *Land of Many Names* (1923, tr. 1926) and several novels. *Poems from a Concentration Camp* (1946) were written in 1895, where he died. As a painter, Josef Čapek developed an original primitivist style. His works of art criticism include *The Humblest Art* (1920).

Čapek, Karel, 1890-1938, Czech playwright, novelist, and essayist. He is best known as the author of two brilliant satirical plays—*R.U.R.* (*Rossum's Universal Robots*, 1921, tr. 1923), which introduced the word robot into the English language, and *The Insect Play*, written with his brother Josef (1921, tr. 1923). These plays embody Čapek's attacks on technological and materialist excesses. Of his other plays *The Makropoulos Secret* (1923, tr. 1925) satirizes man's search for immortality. Janáček used it as the basis for his opera *The Makropoulos Affair* (1925). Čapek's *Power and Glory* (1937, tr. 1938), condemns totalitarianism. He also wrote travel sketches, romances (e.g., *Krakatit*, 1924, tr. 1925), and essays. His three volumes of conversations with Thomas G. Masaryk (1928-35, tr. 1934, 1938) form a political biography. Čapek's three philosophical novels, *Hordubal* (1934, tr. 1934), *Meteor* (1934, tr. 1935), and *An Ordinary Life* (1935, tr. 1936) are mystical in tone and are not closely related to his other works. See study by W. E. Harkins (1962).

Cape Kennedy, see CAPE CANAVERAL, Fla.

Capell, Edward (kā'pəl), 1731-181, English Shakespearean scholar. His 10-volume edition of Shakespeare (1768) was the first to incorporate exact collations of all available old texts. He followed this with a commentary, *Notes and Various Readings to Shakespeare* (3 vol., 1783).

Capella, Martianus (marshēā'nās kăpěl'ə), fl. 5th cent., Latin writer, b. Carthage. His one famous work, *The Marriage of Mercury and Philology*, also called the *Satyricon and Disciplinæ*, is a long allegory about the liberal arts. Its popularity in medieval schools was universal. The author is also known as Felix Capella and may have lived in the 4th cent.

Capella, brightest star in the constellation AURIGA, Bayer designation α Aurigae, 1970 position R.A. 5^h14^m, Dec. +45°58'. Capella is a yellow giant star of SPECTRAL CLASS G8 III and is also a spectroscopic BINARY STAR with a component of spectral class F. Its apparent MAGNITUDE of 0.06 makes it the 6th-brightest star in the sky. Capella is about 45 light-years from the earth. Its name is from the Latin for "little she-goat."

Capelle, Eduard von (ä'dōōart fən kăpěl'ə), 1855-1931, German admiral. As secretary for the navy (1916-18) he reinstituted (1917) unrestricted submarine warfare in World War I.

Capello, Bianca (byang'ka kăpěl'ō), 1548-87, grand duchess of Tuscany (1579-87). Of a noble Venetian family, she eloped (1563) with a Florentine, Pietro Bonaventuri, who was later killed (1569). She was the mistress, then (1579) the wife, of Francesco de' MEDICI. After a banquet the grand duke and his duchess died suddenly, but rumors that they had been poisoned were never substantiated.

Cape Lookout National Seashore: see NATIONAL PARKS AND MONUMENTS (table)

Cape May, city (1970 pop 4,392), Cape May co., S N.J., at the end of Cape May peninsula, on the Atlantic Ocean, settled in the 1600s, inc. 1857. One of the nation's oldest beach resorts, it became popular in the mid-19th cent., when it was known as the "President's Playground", Lincoln, Grant, Arthur, Buchanan, Hayes, and Benjamin Harrison vacationed there. The city's various mansions and Victorian hotels comprise a high concentration of notable 19th-century architecture. **Cape May**, the southern extremity of New Jersey, has a lighthouse on Cape May Point at the entrance to Delaware Bay. The cape is bisected by a canal, c. 3 mi (4.8 km) above the point, which was constructed by the Federal government in 1942-43 as a war emergency measure to provide an alternative to the longer, more hazardous route around the cape. The canal is part of the New Jersey Intracoastal Waterway. In the past few decades erosion has washed away nearly 2 mi (3 km) of the cape in the area of Cape May Point.

Cape Province, formerly **Cape of Good Hope Colony**, province (1970 pop 4,991,224), 278,465 sq mi (721,224 sq km), S Republic of South Africa. The capital and largest city is CAPE TOWN, which is also the country's legislative capital. Other cities include EAST LONDON, KIMBERLEY, PORT ELIZABETH, and Uitenhage. Cape Province has a diversified economy. Grain, fruit, tobacco, and chicory are cultivated, chiefly in the fertile coastal regions, cattle, sheep, and goats are raised in the interior. Marine fishing is pursued, especially in the southwest, and diamonds, iron ore, manganese, asbestos, and copper are mined. Industry is centered in Cape Town, Port Elizabeth, Uitenhage, and East London. Manufactures include textiles, clothing, processed foods, wine and liquor, motor vehicles, refined petroleum, and footwear. The province has an excellent road and rail system. Cape Town, Port Elizabeth, and East London are major seaports. Institutions of higher education include the Univ. of Cape Town, Rhodes Univ. (Grahamstown), and the Univ. of Stellenbosch. Although the Cape of Good Hope was first circumnavigated in 1488 by Bartolomeu Dias and later (1497) by Vasco da Gama, the first European settlement of the region was only in 1652, when Jan van Riebeeck founded a resupply station for the Dutch East India Company on TABLE BAY, the station subsequently became Cape Town. At the time of Van Riebeeck's landing, Cape Province was inhabited by San (Bushmen) and Khoikhoi (Hottentots) in the southern and central areas, and by 8antu-speaking black Africans on the northern and eastern fringes (see BANTU LANGUAGES). The Dutch East India Company brought Dutch settlers to Cape Town, who farmed and raised livestock and were called BOERS [Du., =farmers]. In 1689, French HUGUENOTS began to arrive, they developed the wine industry. The company ruled the Cape until 1795, except for a brief period (1781-84) of French occupation. In 1779 the first of numerous frontier wars (continuing until 1877) between Europeans and the Xhosa (a 8antu-speaking people) erupted. These so-called Kaffir Wars were mainly over land and cattle. During the French Revolutionary and Napoleonic Wars (1792-1815), Britain occupied the Cape from 1795 to 1803, when the Dutch regained control, Holland formally ceded it to Great Britain in 1806. The British named the territory Cape of Good Hope Colony and encouraged immigration from England. The new British settlers soon conflicted with the Boers over anglicization of the courts, control of farm- and pastureland, and slaveholding. Beginning in 1835 many Boers left Cape Colony (see TREK), seeking more land and escape from British rule. The Boers founded a temporary republic in NATAL and longer lasting republics in the TRANSVAAL and ORANGE FREE STATE. In 1850, Cape Colony had about 140,000 residents of European descent. In 1853 the colony was allowed to elect a legislature to advise the governor, and in 1872 it received internal self-government. In 1867 diamonds were discovered in the Kimberley region, which in 1880 was annexed by the Cape. The British and the remaining Boers generally cooperated until the 1890s, when the British, and especially Cecil Rhodes (then prime minister of Cape Colony), sought to unite the Transvaal and the Orange Free State with the Cape and Natal. In 1895-96, L. S. JAMESON staged an unsuccessful raid from Cape Colony into the Transvaal, which greatly increased tension between Britons and Boers. The South African War (1899-1902) followed soon thereafter. In 1910 the Cape Colony joined with Natal, the Transvaal, and the Orange Free State to become a founding province of the Union of South Africa.

capér, common name for members of the Capparidaceae, a family of tropical plants found chiefly in the Old World and closely related to the family Cruciferae (MUSTARD family). *Capparis spinosa* is cultivated in the Mediterranean area for its flower buds—capers—which are pickled and used as a condiment. The spiderflower (*Cleome spinosa*) is a common garden annual. The family also includes a few species indigenous to the United States, e.g., the burro-fat (*Isomers*), a common desert shrub of the Southwest. The caper family is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Capparales.

Capernaum or **Capharnaum** (kapūr'nāam, kafār'nāam), town, NE Palestine, on the northwestern shore of the Sea of Galilee, closely associated with Jesus' ministry. John 2:12, 6:59, Mat 11:23, 8:9, Mark 1:2, Luke 4:5. A synagogue of the 3d cent. was excavated on the site (Kefar Nahum, Israel) and partially restored.

Cape Sable Island, 7 mi (11.2 km) long and 3 mi (4.8 km) wide, SW N.S., Canada. It is connected to the mainland by a causeway over Barrington Passage. Clark's Harbour (1971 pop 1,082), a fishing port, is on the west coast.

Capetians (kăpē'shānz), royal house of France that ruled continuously from 987 to 1328, it takes its name from HUGH CAPET. Related branches of the family (see VALOIS, BOURBON) ruled France until the final deposition of the monarchy in the 19th cent. The first historical ancestor was ROBERT THE STRONG, count of Anjou and of Blois. His son, EUDES, count of Paris, was elected (888) king after the deposition of the Carolingian king Charles III (Charles the Fat). From 893 to 987 the crown passed back and forth between CAROLINGIANS and descendants of Robert the Strong. Eudes's brother, ROBERT I, was chosen king in 922 but died in 923. The title, waived by his son, HUGH THE GREAT, passed to Robert's son-in-law, RAOUX, duke of Burgundy. In 987, Hugh's son, Hugh Capet, became king. His direct descendants remained on the throne until the death (1328) of Charles IV, when it passed to the related house of Valois. The successors of Hugh Capet were Robert II, Henry I, Philip I, Louis VI, Louis VII, Philip II, Louis VIII, Louis IX, Philip III, Philip IV, Louis X, John I, Philip V, and Charles IV. Their reign marked the expansion of royal authority, the revival of towns and commerce, and the beginning of the modern French state. See Robert Fawtier, *The Capetian Kings of France* (1941, tr. 1960).

Cape Town or **Capetown**, city (1970 pop 691,296), legislative capital of the Republic of South Africa and capital of its CAPE PROVINCE, a port on the Atlantic Ocean. The city lies at the foot of Table Mt. (c. 3,570 ft/1,090 m) and on the shore of Table Bay. Cape Town is a commercial and industrial center, food processing, wine-making, printing, and the manufacture of clothing and plastic and leather goods are the chief industries. An important port, Cape Town exports mainly gold, diamonds, and fruits. Tourism is of growing economic importance for the city, with its beaches and pleasant climate. The city is linked by road and rail with the rest of South Africa. Cape Town was founded in 1652 by Governor Jan van Riebeeck as a supply station on the Dutch East India Company's sea route to the East. In 1795 the British occupied the city. It was returned to the Dutch in 1803 but recaptured in 1806 by the British, who established Cape of Good Hope Colony with Cape Town as capital. When the Union of South Africa was formed in 1910, Cape Town became its legislative capital and Pretoria its administrative capital. Cape Town's attractions include the Castle, a fortress dating from 1666, the Dutch Reformed church (begun 1699), Old Town House (1755), which contains a museum of 17th-century Flemish and Dutch paintings, and botanical gardens. The Cape Malay section of the city is noted for its old Dutch-style houses and its mosques. Cape College for Advanced Technical Education is in Cape Town, nearby is the Groote Schuur estate, which includes the prime minister's residence and the Univ. of Cape Town.

Cape Verde Islands, Port. *Ilhas do Cabo Verde*, overseas province of Portugal (1970 pop 272,017), c. 1,560 sq mi (4,040 sq km), W Africa, in the Atlantic Ocean about 300 mi (480 km) W of Dakar, Senegal. It is an archipelago made up of 10 islands and 5 islets, which fall into two main groups—the Barlavento, or Windward, in the north, which include Santo Antão, São Vicente, Santa Luzia, São Nicolau, Boa Vista, and Sal, and the Sotaventos, or Leeward, in the south, which include SÃO TIAGO (c. 600 sq mi/1,550 sq km, the largest island), Fogo, Maio, and Bra-

va Praia, located on São Tiago, is the capital, other towns include Mindelo on São Vicente, Ribeira on Santo Antão, Sal Rei on Boa Vista, and Santa Maria on Sal. The islands are mountainous and of volcanic origin, the only active volcano is at the archipelago's highest point, Cano (c 9,300 ft/2,830 m), which is located on Fogo. About 60% of the population is of mixed black African and European descent, and most of the rest are black Africans, there are also a few Portuguese settlers. Most persons are Roman Catholic. Farming, the main economic activity, is severely limited by the small annual rainfall. Occasionally, as in the early 1970s, there are severe droughts. The main crops are maize, bananas, potatoes, tomatoes, pulses, arabica coffee, groundnuts, physic nuts, and sugarcane. Goats, hogs, cattle, and sheep are raised. Tuna and lobster are the main catches of a small, but growing, fishing industry. Puzzolana and salt are the only minerals extracted. The islands' manufactures are limited to processed food, beverages, and tobacco products. Mindelo is an important coaling station for ships, and transatlantic flights are serviced at an airport on Sal. The islands carry on a small foreign trade, mostly with Portugal, the annual cost of imports is usually much higher than the earnings from exports. The main imports are foodstuffs, textiles, and machinery, the leading exports are salt, coffee, and foodstuffs. Many of the islanders work in Portugal, in other Portuguese holdings in Africa, and in the United States, and the money they send home constitutes an important contribution to the islands' economy. The Cape Verde Islands probably were discovered (1456) by Luigi da Cadamosto, a navigator in the service of Prince Henry of Portugal, at that time they were uninhabited. Diogo Gomes, a Portuguese explorer, visited the islands in 1460, and colonists from Portugal began to settle there in 1462. Soon thereafter, black Africans from W Africa were brought to the islands as slaves. Later a Portuguese penal colony was established, and some of the convicts remained after their terms had been completed. Slavery was abolished on the islands in 1876. Portuguese Guinea (now Guinea-Bissau) was administered as part of the Cape Verde Islands until 1879. In 1951 the status of the islands was changed from colony to overseas province. In contrast to Portugal's other African holdings, there was little agitation for independence in the 1960s and early 70s. Although some persons belonged to the outlawed African Party for Independence in Guinea-Bissau and Cape Verde (PAIGC), which advocated the union of the two areas into one nation, the movement was never strong in the islands. Because of important military bases there, Portugal dealt separately with the islands during the negotiations with the PAIGC that led to the independence (Sept., 1974) of Guinea-Bissau, it was decided to let the political future of the Cape Verde Islands be determined by a referendum. See James Duffy, *Portuguese Africa* (1959), T B Duncan, *Atlantic Islands: Madeira, the Azores, and the Cape Verdes in Seventeenth-century Commerce and Navigation* (1972).

Cape York Peninsula, 280 mi (451 km) long, N Queensland, Australia, between the Gulf of Carpentaria and the Coral Sea. It is largely tropical jungle and sparsely populated. Weipa is the largest town.

Capgrave, John, 1393-1464, English author and Augustinian friar. One of the most learned men of his day, he was a distinguished theologian, philosopher, and historian. His writings, many of which have been lost, include a chronicle of England up to 1417 and the Latin works *De illustribus Henricis* [on illustrious men named Henry] and *Nova legenda Angliae* [new legends of England], a rewriting of a collection of lives of English saints by a monk of Tynemouth.

Cap-Haïtien (kăp-ä'syā'n'), city (1971 pop. 46,217), N Haiti, on the Atlantic Ocean. Haiti's second largest city, it is a major seaport, commercial center, and tourist attraction. Coffee, cacao, and sugar are exported. Founded by the French c 1670, the city was the capital of colonial Haiti for a century. In 1791, Cap-Haïtien was captured by Toussaint L'Ouverture, leader of a slave rebellion. From 1811 to 1820 it served as capital of the kingdom of Henri Christophe, whose Sans Souci Palace and famous citadel, la Ferrière, still stand. Despite earthquakes (notably in 1842), bombings, and civil strife, Cap-Haïtien retains some picturesque colonial charm. It is also known as Le Cap.

Capharnaum (kəfār'nāam), the same as CAPERNAUM. **Caphtor** (kăf'tôr), home of the Philistines before they went to Canaan. Its inhabitants are called Caphtorim. Gen 2:23, 10:14, Deut 2:23, 1 Chron

1:12, Jer 47:4, Amos 9:7. Caphtor is now generally identified with Crete.

capillarity or **capillary action**, phenomenon in which the surface of a liquid is observed to be elevated or depressed where it comes into contact with a solid. For example, the surface of water in a clean drinking glass is seen to be slightly higher at the edges, where it contacts the glass, than in the middle. Capillarity can be explained by considering the effects of two opposing forces: adhesion, the attractive (or repulsive) force between the molecules of the liquid and those of the container, and cohesion, the attractive force between the molecules of the liquid (see ADHESION AND COHESION). Adhesion

Capillarity. Water wets the walls of a capillary tube and thus rises, causing the upper surface, or meniscus, of the liquid to be concave; mercury does not wet the walls of a capillary tube and thus sinks, producing a convex meniscus.

causes water to wet a glass container and thus causes the water's surface to rise near the container's walls. If there were no forces acting in opposition, the water would creep higher and higher on the walls and eventually overflow the container. The forces of cohesion act to minimize the surface area of the liquid (see SURFACE TENSION), when the cohesive force acting to reduce the surface area becomes equal to the adhesive force acting to increase it (e.g., by pulling water up the walls of a glass), equilibrium is reached and the liquid stops rising where it contacts the solid. In some liquid-solid systems, e.g., mercury and glass or water and polyethylene plastic, the liquid does not wet the solid, and its surface is depressed where it contacts the solid. Capillarity is one of the causes of the upward flow of water in the soil and in plants.

capillary, microscopic blood vessel, smallest unit of the CIRCULATORY SYSTEM. Capillaries form a network of tiny tubes throughout the body, connecting arterioles (smallest ARTERIES) and venules (smallest VEINS). Through the thin capillary walls, which are composed of a single layer of cells, the nutritive material and oxygen in the blood pass into the body tissues, and waste matter and carbon dioxide in turn are absorbed from the tissues into the bloodstream.

capital, in architecture, the crowning member of a column, pilaster, or pier. It acts as the bearing member beneath the lintel or arch supported by the shaft and has a spreading contour appropriate to its function. The most primitive type, of which examples were found in the Beni Hassan tombs, Egypt, consisted of a square block. In later forms the capital had three well-defined parts: the neck, or necking, where it joins the shaft, the echinus, or spreading member above it, and the abacus, or block at the top. In Egypt such types were developed as early as 1500 B.C., papyrus buds, the lotus, and the palm leaf were used as motifs of ornamentation. The Greeks perfected three types belonging to three separate orders of architecture—the DORIC ORDER, the IONIC ORDER, and the CORINTHIAN ORDER—which were also used in slightly modified forms by the Romans. The classic forms of capitals continued in use after the fall of Rome, but the Romanesque and Gothic de-

signers introduced new forms rich in variety: grotesque heads, birds, and animals. In the 15th cent., with the Renaissance, came a return to the classical

A Types of capitals

B Parts of a capital

orders that continued in use until the late 19th and early 20th cent. when the modernists cast out classical decoration.

capital, in economics, the entire stock of goods from which an income is derived. As originally used in business, capital denoted interest-bearing money. In classical economic theory it was one of the three major factors of production, along with land and labor. In the broad sense, all tools, machines, stores of merchandise, houses, means of transportation, lands, and such paper as stocks and bonds—any materials used to extract, transport, create, or alter goods—can be called capital. Marketable intangibles, such as credits, good will, promises, patents, and franchises, are also included by some economists. Capital goods (e.g., tractors) are distinguished from consumer goods (e.g., passenger cars) in that the former provide for future wants, while the latter provide only for the present. Distinction is also made between capital stocks, or circulating capital (e.g., raw materials, goods in process, finished goods, and sometimes wages), and capital instruments, or fixed capital (e.g., machines, tools, railways, and factories). Capital may be classed as specialized, such as railway equipment, or unspecialized, such as lumber or other raw materials having many uses. Economic theorists believe that capital arose out of the need to use the world's limited natural materials efficiently. The scarcity of the earth's resources necessitates the creation of materials (capital) that can act on the resources in such a way as to make more goods available to society than would normally exist. For example, a tractor enables man to coax more corn out of his limited supply of land. Capital is thought to accumulate from savings derived from incomes, presence of monopolies, previous profits, speculation, and recapitalization. See Irving Fisher, *The Nature of Capital and Income* (1906), F. A. von Hayek, *The Pure Theory of Capital* (1941, repr. 1962), B. S. Kerstead, *Capital, Interest, and Profits* (6th ed. 1959), S. S. Kuznets, *Capital in the American Economy* (1961), Donald Dewey, *Modern Capital Theory* (1965), J. F. Childs, *Profit Goals and Capital Management* (1968).

capital gains, see CAPITAL LEVY.

capitalism, economic system characterized by private ownership of property and of the means of production and by well-developed financial institutions. Generally the capitalist system is also thought of as embodying the concepts of freedom of individual initiative, competition, inheritance, and the profit motive. Along with SOCIALISM, it is one of the two major economic systems of the modern world. Capitalism has existed in at least partial form in the economies of all civilizations, but its modern importance dates from the INDUSTRIAL REVOLUTION that began in the 18th cent., when bankers, merchants, and industrialists—the bourgeoisie—began to displace landowners in political, economic, and social importance, particularly in Great Britain. Capitalism stresses freedom of individual economic enterprise, but even when, as in the early 19th cent., the economy was least restricted, the ultimate right of the state to supervise and regulate industry and trade was questioned by few. In the 19th and the early

20th cent., the profit motive called into being vast credit, manufacturing, and distributing institutions, and the social and economic effects of capitalism largely transformed world culture. In the middle of the 20th cent., social and industrial reforms in democratic states and the action of totalitarian governments circumscribed the freedom of economic action in capitalist systems. An epoch-making and extremely detailed analysis of capitalism was made by Karl Marx in *Das Kapital*. See Milton Friedman, *Capitalism and Freedom* (1962), William Ebenstein, *Today's Isms* (6th ed. 1970), Daniel Bell and Irving Kristol, ed., *Capitalism Today* (1971), Fernand Braudel, *Capitalism and Material Life, 1400-1800* (tr. 1973), J. D. Forman, *Capitalism, Economic Individualism to Today's Welfare State* (1973).

capital levy, form of taxation by which the government takes part of the capital of any person or business, as distinguished from a tax on personal or business income. It is usually applied to all capital above a certain minimum and may be set aside for a specific purpose, such as the reduction of the public debt. It was used by several European nations experiencing financial difficulties after World War I, and has been advocated as a measure of social welfare and a deterrent to war profits. Opponents of the capital levy stress its implied penalty on saving. In World War II, Great Britain and the United States resorted to tremendous direct taxation in order to accomplish many of the aims of the capital levy. A special tax on capital gains, at a rate more favorable than the tax rate on earned income, has been a part of the U.S. system since the New Deal. The U.S. capital-gains tax is levied on profits earned by the sale of capital assets, such as stocks. Many other nations also impose taxes on capital gains. See M. J. Bailey, et al., ed., *Taxation of Income From Capital* (1969).

capital punishment, imposition of the death penalty by the state. Capital punishment was widely applied in ancient times; it is found (c. 1750 B.C.) in the Code of Hammurabi. Methods included beheading, stoning, impaling, drowning, and burning. From the fall of Rome to the beginnings of the modern era, capital punishment was practiced throughout Western Europe. Death by burning was carried out in Europe as late as the 18th cent., and in England at the beginning of the 19th cent. over 200 crimes still carried the death penalty. The modern movement for the abolition of capital punishment began in the 18th cent. with the writings of Montesquieu and Voltaire, another strong influence was Cesare BECCARIA, especially his *Essay on Crimes and Punishments* (1764). In Great Britain, Jeremy Bentham was influential in having the number of capital crimes reduced in the 18th and 19th cent. Since then, the movement has continued to gain strength worldwide. By the 1970s only France and Spain in Western Europe still retained the death penalty for crimes. Capital punishment was also practiced in Australia, in Africa, and in most of Asia. On June 29, 1972, the U.S. Supreme Court ruled that capital punishment, because it was being arbitrarily, or inconsistently, imposed, was no longer legal. Although this ruling voided the federal and state death penalty laws then in effect, it left the way open for Congress or state legislatures to enact new capital punishment laws in the future. A number of states enacted such laws soon after the ruling. See John Laurence, *A History of Capital Punishment* (1960), J. A. Joyce, *Capital Punishment: A World View* (1961), H. A. Bedau, ed., *The Death Penalty in America* (2d ed. 1967), J. A. McCafferty, ed., *Capital Punishment* (1972), Michael Meltsner, *Cruel and Unusual* (1973).

Capito, Wolfgang Fabricius (kăp'itō, Ger. völf-gang fabr'itsyōs kă'pētō), 1478-1541, German Protestant reformer, whose original family name was Kopfel. As a well-known humanist, he brought about communication between Erasmus and Luther. Capito worked with Martin BUCER in an attempt to unify the Evangelical churches of Germany, France, and Switzerland.

Capitol, seat of the U.S. government at Washington, D.C. It is the city's dominating monument, built on an elevated site that was chosen by George Washington in consultation with Major Pierre L'ENFANT. The building as it now stands took many years to build and is the result of the work of several architects. In 1792 a competition was held to select an architect, but William THORNTON gained the President's approval with a plan separately submitted and was appointed. In 1793 the President set the cornerstone, with Masonic rites, and the building was begun. Later three additional architects were employed—E. S. HALLET, George Hadfield (d. 1826),

and James HOBAN. In 1814 the uncompleted building was burned by the British, and B. H. LATROBE, who had been appointed (1803) surveyor of public buildings, undertook its restoration. He was succeeded in 1818 by Charles BULFINCH, who brought the design to completion in 1830. The building proved inadequate and was greatly enlarged (1851-65) by T. U. WALTER, who added the extensive House and Senate wings at either end and the imposing dome, c. 288 ft (90 m) in height, which dominates the composition. The building proper is over 750 ft (229 m) long, including approaches c. 350 ft (110 m) wide. In 1960 the east front of the Capitol was extended 32 ft (9.8 m) and the original sandstone facade was replaced by marble. See I. T. Frary, *They Built the Capitol* (1940), L. Aikman, *We, The People* (4th ed. 1966).

Capitol, in Rome. See CAPITOLINE HILL.

Capitoline Hill or **Capitol**, highest of the seven hills of ancient Rome, historic and religious center of the city. The great temple of Jupiter Capitolinus, on its southern summit, was dedicated in 509 B.C., it was foremost among the temples and altars of Rome. Destroyed three times by fire, it was last rebuilt by the emperor Domitian. On the northern summit of the Capitol was the citadel (arx). On the side overlooking the Forum stood the Tabularium, where the state archives were kept. Until the 1st cent. A.D., state criminals were hurled to their death from the Tarpeian Rock, on the steep south face of the hill. In the Middle Ages the Capitol remained the political center of Rome. The center of municipal government in modern Rome is on the same location. In the 16th cent. Michelangelo designed the present plan. A flight of steps leads to the square on top of the hill, on one side of the square is the Palazzo dei Conservatori, on the other, the Capitoline Museum. Both buildings now house collections of antiquities. In the center of the square is the ancient equestrian bronze statue of Emperor Marcus Aurelius.

Capitol Reef National Park: see NATIONAL PARKS AND MONUMENTS (table).

capitularies (kăp'ich'ōlēr'ēz), decrees and written commands of the Carolingian kings of the Franks, so called because they were divided into *capitula*, or chapters. Both legislative and administrative, they were the chief written instrument of royal authority. The ordinances were issued either by the king alone or by the king and his counselors. They also served to amend or extend the GERMANIC LAWS as they applied to the entire Carolingian empire. Several capitularies—such as the exemplary *De villis*—dealt with the administration of the royal domains, others dealt with the church. Most important were the *missi dominici*, addressed by Charlemagne to his envoys. These contained instructions for the administration of the empire and instituted far-reaching reforms. Capitularies issued in the late Carolingian period foreshadowed the feudal system and are collected in the *MONUMENTA GERMANIAE HISTORICA*. The term *capitularies* is applied also to similar documents in other fields.

Capo d'Istria, Giovanni Antonio, Count (ka'pō dē'strēa), Gr. *Ioannes Antonios Kapodistrias* or *Kapodistrias*, 1776-1831, Greek and Russian statesman, b. Corfu. After administrative work in the Ionian Islands he entered (1809) Russian service and was until 1822 a close adviser in foreign affairs to Czar Alexander I, he represented Russia at the Congress of Vienna. After his resignation and retirement to Switzerland in 1822, he actively elicited support for Greek independence. In 1827 the Greek national assembly elected him president of Greece. He was a dedicated reformer, but his autocratic methods, nepotism, factionalism, and Russian affiliations aroused opposition and led to his assassination. See studies by W. P. Kaldis (1963) and C. M. Woodhouse (1973).

Capodistria: see KOPER, Yugoslavia.

Capone, Al (Alfonso or Alphonse Capone) (kăpōn'), 1899-1947, American gangster, b. Naples, Italy. Brought up in New York City, he became connected with organized crime and was involved in murder investigations. In 1920 he moved to Chicago and became a lieutenant to John Torrio, a notorious gang leader. They established numerous speakeasies in Chicago in the prohibition era. After eliminating his opponents "Scarface" Capone took over control from Torrio. He was implicated in brutal murders and received tribute from businessmen and politicians. His crime syndicate—which terrorized Chicago in the 1920s and controlled gambling and prostitution there—was estimated by the Federal Bureau of Internal Revenue to have taken in \$105 million in

1927 alone. Capone was indicted (1931) by a Federal grand jury for evasion of income tax payments and was sentenced to an 11-year prison term. In 1939, physically and mentally shattered by syphilis, Capone was released. See biographies by F. D. Pasley (1930, repr. 1971) and John Kobler (1971), Kenneth Allsop, *The Bootleggers and Their Era* (1970).

Capote, Truman (kapō'tē), 1924-, American author, b. New Orleans. His fictional writings reflect a private but highly imaginative world of grotesque, narcissistic, and strangely innocent people. *Other Voices, Other Rooms* (1948), his first novel, is the story of a young boy's painful search for identity. He has published another novel, *The Grass Harp* (1951), two collections of short stories, *Tree of Night* (1949) and *Breakfast at Tiffany's* (1958), a report of his trip to Russia, *The Muses Are Heard* (1956), *A Christmas Memory* (1966), and a collection of nonfiction pieces, *The Dogs Bark: Public People and Private Places* (1973). He also collaborated on the screenplay for the film *Beat the Devil* (1953). In 1966, Capote published *In Cold Blood*, a chilling, semidocumentary study of a senseless, brutal murder in Kansas, which he called a "nonfiction novel."

Cappadocia (kăpădō'shā), ancient region of Asia Minor, watered by the Halys River (the modern Kizil Irmak), in present E. central Turkey. The name was applied at different times to territories of varying size. At its greatest extent Cappadocia stretched from the Halys valley E. to the Euphrates River, from the Black Sea S. to the heights of the Taurus and Anti-Taurus ranges. Mostly a high plateau, it was famous for its mineral resources, particularly its copper and iron. Cappadocia maintained its local Asian traditions in contrast to the Mediterranean seacoast of Asia Minor, which was dominated by the Aegean culture. Several thousand tablets, written in cuneiform by Assyrian colonists in Cappadocia, have been found at Kültepe (Kanish), they show that a highly developed trade existed between Assyria and Asia Minor before 1800 B.C. At that time Cappadocia was the heart of an old Hittite state. Later the Persians controlled Cappadocia. It did not yield fully to the conquest of Alexander the Great, and during the 3d cent. B.C. it gradually developed as an independent kingdom. PONTUS now became completely separated from Cappadocia. The kings had their capital at Mazaca (later CAESAREA MAZACA), the only other important cities were Tyana and Melitene, though Iconium was at times in Cappadocia. In the 2d and 1st cent. B.C. the Cappadocian dynasty maintained itself largely by siding with Rome. Invaded in 104 B.C. by Mithridates VI and c. 90 B.C. by his son-in-law, Tigranes of Armenia, Cappadocia was restored by Pompey. Antony replaced the king, who had been disloyal to Rome in the Parthian invasion at the time of Julius Caesar, and in A.D. 17 Rome annexed the region as a province. Cappadocia became prosperous. Christianity was introduced early (1st cent. A.D.). The name appears in the Bible, though its importance as a separate region was already declining and later disappeared.

Capponi, Gino, Marchese (jē'nō kap-pō'nē), 1792-1876, Italian politician, historian, and educator. He played an important part in the Risorgimento. His theory of education anticipated the thought of John Dewey. In 1848 he was president of the constitutional government in Tuscany, and he became a senator after the annexation (1860) of Tuscany to the kingdom of Sardinia. Of his historical writings, the history of the Florentine republic (3 vol., 1875) is best known.

Caprera (kaprā'ra), island, 6 sq. mi. (15.5 sq. km), NE Sardinia, Italy, in the Strait of Bonifacio. It was the residence (1856-82) of Garibaldi, who is buried there.

Capri (ka'prē), Lat. *Capreae*, island (1971 pop. 7,725), 4 sq. mi. (10.4 sq. km), Campania, S. Italy, in the Bay of Naples off the tip of the Sorrento Peninsula. It is an international tourist center, celebrated for its striking scenery, delightful climate, and luxurious vegetation. There are two small towns on the island, Capri and Anacapri. The Blue Grotto is the most famous of the many caves along the island's high, precipitous coast. Monte Solaro, the highest point (1,932 ft/589 m), commands a magnificent view. On the island are remains of the 12 fine villas built there by the Roman emperors Augustus and Tiberius. The local architecture has Roman, Norman, and Arabic features.

Capricornus (kăprīkōr'nās) [Lat. = the goat horn], inconspicuous southern CONSTELLATION lying on the ECLIPtic (the sun's apparent path through the heavens) between Sagittarius and Aquarius, it is one of the constellations of the ZODIAC. Known as the Sea

Goat, it has been depicted from earliest times either as a goat or as a figure with its forepart like that of a goat and its hind part like the tail of a fish. The tropic of Capricorn takes its name from this constellation, in which the winter solstice was located about 2,000 years ago. Now, because of the PRECESSION OF THE EQUINOXES, the winter solstice has moved westward into Sagittarius. Capricornus contains a globular STAR CLUSTER that can be seen on a very clear night. The constellation reaches its highest point in the evening sky in late September.

caprifig (kăp'räfīg") see FIG

Caprivi, Leo, Graf von (lä'ō gräf fən kăprē'vê), 1831-99, German chancellor, whose full name was Georg Leo, Graf von Caprivi de Caprara de Montecuculi. A former army officer and head of the admiralty, he succeeded (1890) Bismarck as chancellor. Under him the antisocialist law was abrogated and military service was shortened from three to two years. Favoring industrial over agrarian interests, he negotiated (1892-94) a series of reciprocal trade agreements to stimulate industrial exports. The agreements reduced duties on agricultural products and aroused agrarian opposition to Caprivi, which contributed to his dismissal (1894). Prince Hohenlohe-Schillingsfürst succeeded him as chancellor.

Caprivi Strip (kăprē'vê) or **Caprivi Zipfel** (tsîp'fâl) [Ger. *Zipfel*=tip, point], region, c.300 mi (480 km) long and 50 mi (80 km) wide, NE South West Africa, bordered on the N by Angola and Zambia and on the S by Botswana. It is named for the German chancellor Leo, Graf von Caprivi, who obtained it from Great Britain as part of a general settlement (1890) between the two countries. It gave the former German colony of South West Africa access to the Zambezi River.

Caspian culture see QAFAH, Tunisia

Captain Jack (d. 1873), subchief of the MODOC INDIANS and leader of the hostile group in the MODOC WAR (1872-73). Jack, whose Indian name was Kintpuash, had agreed (1864) to leave his ancestral home and live on a reservation with the Klamath Indians. He found it impossible to live on friendly terms with his former enemies, and after killing a Klamath medicine man, Jack and a group of followers left the reservation. They resisted arrest (Nov. 1872) and fled into the lava beds in California. Their strong defensive position frustrated numerous attempts by U.S. troops to dislodge them. In April, 1873, a peace commission headed by Gen. Edward Richard Sprigg CANBY met with Jack and several of his men. At a prearranged signal, Jack shot Canby dead. The army renewed its efforts to capture them and forced the Modocs to take refuge elsewhere. The Indians, who were tired of fighting, began to give themselves up, and on June 1, Captain Jack was captured. He was taken to Fort Klamath, where on Oct. 3, 1873, he and three of his warriors were hanged for the murder of Canby. See biography by D. P. Payne (1938).

Capua (kă'pwā), town (1971 pop. 17,581), Campania, S Italy, on the Volturno River. It is an agricultural center and occupies the site of ancient CASILINUM. Ancient Capua, situated 3 mi (4.8 km) to the south-east, where Santa Maria Capua Vetere (1968 est. pop. 31,500) now lies, was a Roman town strategically located on the Appian Way. During the second of the PUNIC WARS it went over (216 B.C.) to the side of Hannibal, but was retaken by Rome in 211 B.C. Later it was an important colony under the Roman Empire. After Capua was destroyed (A.D. 841) by the Arabs, its inhabitants moved to Casilinum and founded modern Capua. Strongly fortified to defend nearby Naples, Capua suffered several sieges, including ones by Cesare Borgia (1501) and the Piedmontes (1860). Of note are a Roman bridge, a 9th-century cathedral (frequently restored), an 11th-century castle, and a museum of archaeology and sculpture.

Capuana, Luigi (lōō'e'jē kăpwā'nā), 1839-1915, Italian critic and novelist. His activities included teaching, scientific study, and politics. He wrote in almost every genre, but his reputation rests upon his naturalistic novels and criticism. Among his best works are the short stories in *Paesane* [peasant women] (1894), the novel *Il marchese di Roccaverdina* (1901), and his *Studi della letteratura contemporanea* (1879-82). His stories for children include *Nimble Legs* (1903, tr. 1927) and *Once upon a Time* (1882, tr. 1892). See study by S. E. Scaglia (1952).

Capuchin (kăp'yōōchîn), name for New World MONKEYS of the genus *Cebus*, widely distributed in tropical forests of Central and South America. Medium-sized monkeys, they have a body length of 14 to 24 in. (36-61 cm), with a tail up to 20 in. (50 cm) long,

and weigh 2 to 4 lb (0.9-1.8 kg). The coat is black or brown, with lighter markings on the chest in some species. The flattened face is naked and pink. Members of some species have manes resembling the cowls of capuchin monks. The tail is partially prehensile, that is, it can be used for grasping but not with the dexterity displayed by most New World monkeys. It is usually carried with the end curled in a spiral, hence the alternate name, ringtail monkey. Capuchins travel in groups through the trees, making loud sounds, and rarely descend to the ground. They feed on leaves, fruit, insects, small animals, and bird eggs. Intelligent and friendly, they are easily trained and are well known from circuses and as the classic organ-grinder's monkey. In the wild they use simple tools, such as rocks, for such tasks as cracking the hard shells of fruits. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Cebidae.

Capuchins (kăp'yōōchînz) [Ital. =hooded ones], Roman Catholic religious order of friars, one of the independent orders of FRANCISCANS, officially the Friars Minor Capuchin [Lat. abbr. O.M. Cap.]. The order was founded (1525-28) in central Italy as a reform within the Observants, led by Matteo di Basilio. It is one of the largest orders. Born, like the Jesuits, at the beginning of the Catholic Reformation, the Capuchins became a major force in church activity, especially in preaching and in missions. With the Jesuits they did much to revive Catholicism in the parts of Europe where Protestantism had prevailed. The Capuchins have been very important in foreign missions; they were early arrivals in French Canada. See study by Father Cuthbert (1928, repr. 1971).

Capulin Mountain National Monument: see NATIONAL PARKS AND MONUMENTS (table)

capybara (kăpibār'ā), mammal of Central and much of South America. It is the largest living member of the order Rodentia (the rodents) reaching a length of 4 ft (120 cm) and a weight of 75 to 100 lb (34-45 kg). Its brownish hair flecked with yellow is coarse and scanty, and its tail rudimentary. The feet are partially webbed, and there are four thick-nailed toes on the front feet and three on the hind feet. The capybara is an expert swimmer and diver. It eats vegetation and sometimes damages crops. It is hunted for food; its hide is made into gloves, and its bristles are used in brushes. It is also called water hog and carpincho. Capybaras are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Hydrochoeridae.

Caquetá, river, Colombia. See JAPURA

caracal (kăr'akāl), or Persian lynx, mammal of the family Felidae (cat family), native to Asia and Africa. It is considered by some to be a link between the true cats and the true LYNXES. It is reddish brown with black-tufted ears. Its total length is about 3¼ ft (105 cm). It preys on small deer, hares, birds, and other animals, in some regions it is trained to catch such game for man. Caracals are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Felidae.

Caracalla (kărakāl'ā), 188-217, Roman emperor (211-17), son of Septimius SEVERUS. His real name was Marcus Aurelius Antoninus, and he received his nickname from the caracalla, a Gallic tunic he regularly wore. He was made caesar in 196 and augustus in 198, but he resented having to share these honors with his brother Geta. Early in his career he revealed his ruthless character by bringing about the downfall of his father-in-law, the political leader Plautianus, through false reports. After Septimius Severus died, leaving the empire to his two sons, Caracalla murdered (212) the more popular Geta and ordered a general massacre of Geta's followers and sympathizers (including the jurist Papinian). He thus ushered in a reign infamous for cruelty and bloodshed. Caracalla did, however, pacify the German frontier. He also extended Roman citizenship to all free inhabitants of the empire, presumably not out of generosity but to increase his income from taxes in order to meet staggering expenses. He tried to buy popularity with his soldiers and planned an ambitious campaign to extend his father's conquests into old Persia. When leading an expedition in Asia, Caracalla was murdered by MACRINUS, who succeeded him. The famous Baths of Caracalla were erected in his reign.

caracara (kăr'ākār'ā) see FALCON

Caracas (kărāk'as, kărā'-, Span. kărākās), city (1970 est. metropolitan area pop. 2,175,438), N Venezuela, the capital and largest city of the country, near the Caribbean Sea. Its port is La Guaira. With an elevation of c. 3,100 ft (945 m), Caracas has a pleasant

climate, which contributed to making it rather than Valencia the economic and political center of Spanish colonization in Venezuela. Caracas is the commercial, industrial, and cultural hub of the nation. As a result of the oil boom of the 1950s the city expanded prodigiously. Enormous sums were spent on public works, notably the futuristic University City, school construction, slum clearance projects, a new aqueduct, and an impressive highway cloverleaf, known to Caracans as "the octopus." The symbol of the new Caracas is the twin-towered complex housing government offices known as Centro Bolívar. A colossal shopping center, the Helicoid, was built on a hill outside the city. In addition to oil refining, industries include textile milling, sugar refining, and meat-packing. Caracas was founded in 1567 as Santiago de Leon de Caracas by Diego de Losada. The city was sacked by the English in 1595 and by the French in 1766. Two of South America's great revolutionary leaders, Francisco de Miranda (1750) and Simon Bolívar (1783) were born in the city. Independence from Spain was declared in Caracas in July, 1811. However, the city was almost completely destroyed by an earthquake on March 26, 1812, negating the revolution led by Miranda. Bolívar captured the city in Aug., 1813, but abandoned it after a crushing defeat in June, 1814. Finally, after his victory at Carabobo, he made a triumphal entry in June, 1821.

Caractacus (kărāk'takəs) or **Caradoc** (kărād'ak), fl. A.D. 50, British king, son of Cymbeline. After the Roman invasion of A.D. 43, he led British resistance until defeated in A.D. 50. He was captured and taken to Rome. Emperor Claudius, admiring his courage, spared his life.

Caragiali, Ion Luca (yōn lōō'kă kărājā'li), 1853-1912, Rumanian author and theatrical manager. In 1888 he became director of the Bucharest National Theater. Among his comedies satirizing the modernization of Rumanian society are *The Lost Letter* (1884) and *Carnival Adventures* (1885). His *False Accusation* (1889) is a tragedy. Caragiali also wrote short stories and novels.

Caraglio, Giovanni Jacopo (jōvăn'nê yă'kōpō kărājō'lyō), c. 1500-1565, Italian engraver and designer, known also as Jacobus Parmensis and Jacobus Veronensis. He was a pupil of Raimondo and achieved distinction as an engraver on copper and, later, as a designer of medals and engraver of gems. His plates, about 70 in number, are chiefly reproductions of works of the Italian masters—Raphael, Titian, Michelangelo, and others.

Caraites: see KARAITES

carapace (kăr'apās), shield, or shell covering, found over all or part of the dorsal portion of an animal. In lobsters, shrimps, crayfish, and crabs the carapace is the part of the exoskeleton that covers the head and thorax and protects the dorsal and lateral surfaces. The term carapace is also used to describe the hard, protective covering of the cephalothorax of the horseshoe crab. The carapace of a turtle's shell is composed of expanded ribs and vertebrae overlain by dermal plates and horny scales.

Carausius (kărōsh'ēas), d. 293, Gallo-Roman military commander. He was stationed in Gaul, but Emperor MAXIMIAN suspected him of conspiring with the Germans and condemned him to death. Carausius fled to Britain and established his rule there, defying attempts to conquer him. Diocletian and Maximian finally recognized (c. 289) him as coemperor, and he established his rule in NE Gaul as well as in Britain. In 293, however, Constantius (later Constantine I) defeated him, and he was murdered by one of his own men.

Caravaca (kărāvākā), town (1970 pop. 18,415), Murcia prov., SE Spain, in Murcia, on the Caravaca River. It is a farm center for an area producing cereals, potatoes, fruits, and grapes. It has textile and brandy manufactures. The miraculous Cross of Caravaca was formerly kept in the Church of the Most Holy Cross (1617). Many ancient remains have been found in the area.

Caravaggio, Michelangelo Merisi da (mēkālān'-jālō mărē'zē dă kărāvād'jō) or **Amerigi da Caravaggio** (ă'mărē'jē), 1573-1610, Italian painter. His surname Caravaggio came from his birthplace. After an apprenticeship with a mediocre painter in Milan, he arrived in Rome where he eventually became a pensioner of Cardinal Francesco del Monte for whom he produced several paintings, among them the *Concert of Youths* (Metropolitan Mus.). Most of Caravaggio's genre pieces such as the *Fortune Teller* (Louvre) are products of his early Roman years, but after completing the *Calling of St. Matthew* and the *Martyrdom of St. Matthew* (c. 1598-99, San Luigi de'

Francesi), he devoted himself almost exclusively to religious compositions and portraiture. His violent temper and erratic disposition involved him in several brawls, and in 1606 he fled Rome after killing a young man in a duel. He spent the last four years of his life in Naples, Malta, Syracuse, and Messina. A revolutionary in art, Caravaggio was accused of imitating nature at the expense of ideal beauty. In religious scenes his use of models from the lower walks of life was considered irreverent. He generally worked directly on the canvas, a violation of current artistic procedure. His strong chiaroscuro technique of partially illuminating figures against a dark background was immediately adopted by his contemporaries, and although he had no pupils, the influence of his art was enormous. Its effect can be seen throughout Europe, from Ribera in Spain to Rembrandt in Holland. See study by Bernard Berenson (1954), Walter Friedlaender, *Caravaggio Studies* (1955, repr., 1970).

Caravaggio, Polidoro Caldara da (pōlēdō'rō kal'da'ra), c.1496-1543, Italian painter. His surname Caravaggio came from his birthplace. A student of Raphael, he was responsible for some of the monochrome decorations in the Vatican Stanze as well as for a few of the scenes in the Loggia. After Raphael's death (1520) Polidoro entered upon a career as a decorator of house facades. These chiaroscuro decorations, based on scenes taken from ancient history, survive now mainly through engravings and drawings. Greatly admired in his own time, Polidoro exercised considerable influence on later generations. In 1527 he left Rome, traveling to Naples and Messina. Of his paintings from this period the *Christ on the Way to Calvary* (Naples) is perhaps the most impressive.

caravan, group of travelers or merchants banded together and organized for mutual assistance and defense while traveling through unsettled or hostile country. Caravan trade is associated with the history of the Middle East as far back as the records of ancient civilizations extend and seems to have been well developed before sea commerce began. It is evident that all trade from one fertile area to another in this region had to be organized from the first, since long distances of desert trail separated settled parts and since local governments could not guarantee protection against tribes eager for loot and pillage. Such wares as jewels, spices, perfumes, dyes, metals, rare woods, ivory, oils, and textiles (chiefly silk) are associated with the trade. Camels were the main carriers from Egypt to Mesopotamia and throughout the Arabian peninsula. They were introduced into N. Africa and the Sahara region in the 3d cent. A.D. Donkeys were used in Asia Minor. Trade naturally prospered in the period of the great empires, when the caravan routes could be controlled and protected, and it was to secure control of such routes that many wars were fought and conquests made in ancient times. An empire provided for the establishment of inns, or caravansaries, for the accommodation of travelers along the way. Such improvements facilitated the movement of troops to protect the routes. Cities rose and fell in ancient times in proportion to the rise and fall in the trade of the caravan routes upon which they were located. Basically the caravan system underwent little change until challenged in modern times by the motor truck and the airplane. Travelers having occasion to cross desert spaces usually joined merchant caravans. Since the advent of Islam, the pilgrimage of the devout to Mecca has given rise to the long pilgrim caravans that are a feature of the pilgrimage season each year. The closest approach to caravan trade in the New World was the wagon train commerce that developed over the Santa Fe Trail. See Mikhail Rostovtzev, *Caravan Cities* (1932, repr. 1971), E. W. Bovill, *The Golden Trade of the Moors* (1958).

caravel (kā'rəvēl') or **carvel** (kā'rəvəl), three-masted sailing vessel, generally square-rigged with the aftermast lateen-rigged. It had a roundish hull with a high bow and stern. The term "carvel-built" (see BOAT) was derived from its method of construction. A change from bulkier ships to caravels, with their small displacement, enabled the Portuguese in the 15th cent. to take the lead among Western nations in exploring the African coast, the caravel thereafter was of primary importance in the era of expansion and exploration. Columbus's flagship, the *Santa María*, was a typical caravel.

Caraway, Hattie Wyatt, 1878-1950, U.S. Senator (1932-45), b. near Bakerville, Tenn. In 1932 she was appointed to fill the unexpired Senate term from Arkansas of her late husband, Thaddeus H. Caraway.

With the support of Huey Long, she was elected for a full term later that year, becoming the first woman to be elected to the U.S. Senate. After failing to win renomination in 1944, she was appointed (1945) by President Franklin Delano Roosevelt to the Federal Employees Compensation Commission.

caraway (kā'rəwā), biennial Old World plant (*Carum carvi*) of the family Umbelliferae (CARROT family), cultivated in Europe and North America for its aromatic seeds. They are small and ovate, with a pleasant spicy flavor, and are used as a condiment, as seasoning of pastry and bread doughs, cabbage, sausage, and some kinds of cheese, and as flavoring for certain liqueurs (as kummel). The volatile oil expressed from the seeds is a stimulant and a carminative. Caraway is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Umbellales, family Umbelliferae.

carbaryl (kā'rəbəl) see INSECTICIDE

carbide, any one of a group of compounds that contain carbon and one other element that is either a metal, boron, or silicon. Generally, a carbide is prepared by heating a metal, metal oxide, or metal hydride with carbon or a carbon compound. Calcium carbide, CaC_2 , can be made by heating calcium oxide and coke in an electric furnace; it reacts with water to yield acetylene and is an important source of the gas. Barium carbide reacts similarly. Aluminum carbide reacts with water to yield methane. Some carbides are unaffected by water, e.g., chromium carbide and silicon carbide. SILICON CARBIDE, almost as hard as diamond, is used as an abrasive. Tungsten carbide, also very hard, is used for cutting edges of machine tools. Iron carbides are present in steel, cast iron, and some other iron alloys.

Carbo, Cneius Papirius (nē'əs pāpē'ēəs kā'r'bō), d. 82 B.C., Roman political leader. He was consul three times (85 B.C., 84 B.C., 82 B.C.) and one of the leaders of the party of Marius. After the death of Marius he and his colleague, Cinna, gathered (84 B.C.) an army to oppose Sulla in Italy. When Cinna was murdered in a mutiny, Carbo became chief commander. Sulla gathered strength as he moved slowly N. through Italy, and much of Carbo's force deserted. He was defeated at Faventia (present-day Faenza) by Quintus Caecilius Metellus Pius (see under METELLUS) and fled to Africa. He later crossed to Sicily, where he was captured, condemned, and executed by Pompey.

carbohydrate, any member of a large class of chemical compounds that includes sugars, starches, cellulose, and related compounds. These compounds are produced naturally by green plants from carbon dioxide and water (see PHOTOSYNTHESIS). Carbohydrates are important as foods, they supply energy and are used in the production of fats. They are also used in various forms in industry and commerce. There are three main classes of carbohydrates. Monosaccharides are the simple sugars, e.g., FRUCTOSE and GLUCOSE, they have the general formula $(\text{CH}_2\text{O})_n$, in which n is an integer larger than 2. Disaccharides include LACTOSE, MALTOSE, and SUCROSE. Upon hydrolysis, a disaccharide molecule yields two monosaccharide molecules. Most disaccharides have the general formula $\text{C}_n(\text{H}_2\text{O})_{n-1}$, with n larger than 5. Polysaccharides include such substances as CELLULOSE, DEXTRIN, GLYCOGEN, and STARCH, they are polymeric compounds made up of the simple sugars and can be hydrolyzed to yield simple

sugars. The disaccharides are sometimes grouped with the simpler polysaccharides (usually those made up of three or four simple sugar units) to form a class of carbohydrates called the oligosaccharides.

carboloid acid, see PHENOL

carboly (kā'rəbəl) [portmanteau word from carbon and alloy], an alloy containing cobalt, tungsten, and carbon. This alloy is extremely hard, harder than steel, it is used to cut steel, porcelain, quartz, and other materials. Its hardness is little affected by heat, and it retains a sharp cutting edge even at red heat.

carbon [Lat. = charcoal], nonmetallic chemical element, symbol C, at no. 6, at wt. 12.011, m.p. about 3550°C, graphite sublimes about 3375°C, b.p. 4827°C, sp. gr. 1.8-2.1 (amorphous), 1.9-2.3 (graphite), 3.15-3.53 (diamond), valence +2, +3, +4, or -4. Although carbon makes up only 0.32% of the earth's crust, it is very widely distributed and forms a vast number of compounds. There are more carbon compounds than there are compounds of all other elements combined. Carbon exists in the stars, a series of thermonuclear reactions called the carbon cycle (see NUCLEOSYNTHESIS) is a source of energy for some stars. Carbon in the form of diamonds has been found in meteorites. It is found free in nature in at least three distinct forms (see ALLOTROPY). One form, GRAPHITE, is a very soft, dark gray or black, lustrous material with either a hexagonal or rhombohedral crystalline structure. DIAMOND, a second crystalline form, is the hardest substance known. In a third form, the so-called amorphous carbon, the element occurs partly free and partly combined with other elements, CHARCOAL, COAL, COKE, lampblack, PEAT and LIGNITE are some sources of amorphous carbon. A fourth form, "white" carbon, is believed to exist. Carbon has the capacity to act chemically both as a metal and as a nonmetal. It is a constituent of all organic matter. The study of carbon compounds, both natural and synthetic, is called organic chemistry. PLASTICS, foods, TEXTILES, and many other common substances contain carbon. HYDROCARBON fuels (e.g., natural gas), marsh gas, and the gases resulting from the combustion of fuels (e.g., carbon monoxide and carbon dioxide) are compounds of carbon. With oxygen and a metallic element, carbon forms many important carbonates, such as calcium carbonate (limestone) and sodium carbonate (soda). Certain active metals react with it to make industrially important carbides, such as silicon carbide (known as carborundum), calcium carbide, used for producing acetylene gas, and tungsten carbide, an extremely hard substance used for rock drills and metalworking tools. Coke is used as a fuel in the production of iron. Carbon electrodes are widely used in electrical apparatus. The "lead" of the ordinary pencil is graphite mixed with clay. The successful linking in the 1940s of carbon with silicon has led to the development of a vast number of new substances known collectively as the SILICONES. All living organisms contain carbon, the human body is about 18% carbon by weight. In green plants carbon dioxide and water are combined to form simple sugars (CARBOHYDRATES), light from the sun provides the energy for this process (PHOTOSYNTHESIS). The energy from the sun is stored in the chemical bonds of the sugar molecule. Anabolism, the synthesis of complex compounds (such as FATS, PROTEINS, and NUCLEIC ACIDS) from simpler substances, involves the utilization of energy stored by photosynthesis. Catabolism is the release of stored energy by the ox-

The two solid forms of carbon. In the diamond crystal each carbon atom is surrounded symmetrically by four other carbons (at each of the corners of a tetrahedron). In the graphite crystal the atoms bond to three other carbons to form flat sheets.

dative destruction of organic compounds, water and carbon dioxide are two by-products of catabolism. This continuing synthesis and degradation involving carbon dioxide is known as the biological carbon cycle. Seven isotopes of carbon are known. Carbon-12 was chosen by the IUPAC in 1961 as the basis for ATOMIC WEIGHTS; it is assigned an atomic mass of exactly 12 atomic mass units. Carbon-13 is used as a radioactive tracer. Carbon-14, which has a half-life of 5,730 years, is a naturally occurring isotope that can also be produced in a nuclear reactor. It is used extensively as a research tool in tracer studies; a compound synthesized with carbon-14 is said to be "tagged" and can be traced through a chemical or biochemical reaction. Carbon-14 has been used in the study of such problems as utilization of foods in animal nutrition, catalytic petroleum processes, photosynthesis, and the mechanism of aging in steel. It is also used for determining the age of archaeological specimens (see DATING, GEOLOGIC). Carbon has been known to man in its various forms since ancient times. See Isaac Asimov, *The World of Carbon* (rev. ed. 1966), P. L. Walker, Jr., and P. A. Thrower, ed., *Chemistry and Physics of Carbon* (11 vol., 1966-74).

carbonado: see DIAMOND

Carbonari (kãrbônã'rã) [Ital., =charcoal burners], members of a secret society that flourished in Italy, Spain, and France early in the 19th cent. Possibly derived from Freemasonry, the society originated in the kingdom of Naples in the reign of Murat (1808-15) and drew its members from all stations of life, particularly from the army. It was closely organized, with a ritual, a symbolic language, and a hierarchy. Beyond advocacy of political freedom its aims were vague. The Carbonari were partially responsible for uprisings in Spain (1820), Naples (1820), and Piedmont (1821). After 1830 the Italian Carbonari gradually were absorbed by the RISORGIMENTO movement, elsewhere they disappeared.

carbonate, chemical compound containing the carbonate RADICAL or ION, CO_3^{2-} . Most familiar carbonates are SALTS that are formed by reacting an inorganic BASE (e.g., a metal HYDROXIDE) with CARBONIC ACID. Normal carbonates are formed when equivalent amounts of acid and base react, bicarbonates, also called acid carbonates or hydrogen carbonates, are formed when the acid is present in excess. SODIUM CARBONATE, Na_2CO_3 , SODIUM BICARBONATE, NaHCO_3 , and POTASSIUM CARBONATE, K_2CO_3 , are widely used. Smelling salts is ammonium carbonate. Calcium carbonate is found in shells of animals and in ICELAND SPAR, LIMESTONE, and MARBLE; it is used in the production of lime (CALCIUM OXIDE). Barium carbonate occurs as the mineral witherite. Magnesium carbonate occurs as MAGNESITE and in DOLOMITE (with calcium carbonate). Iron carbonate is a ferrous compound that occurs in nature as SIDERITE. WHITE LEAD used as a pigment in paints is basic lead carbonate. Only ammonium, potassium, and sodium carbonates are readily soluble in water. Alkali metal carbonates are stable when heated, but other carbonates decompose, releasing CARBON DIOXIDE. Carbonates also give off carbon dioxide when treated with dilute acids, e.g., hydrochloric acid.

carbon black, mixture of partially burned hydrocarbons. Carbon black is produced by partial combustion of NATURAL GAS. It is used as a black pigment for inks and paints, and is used in large amounts by the tire industry in the production of vulcanized rubber. Lampblack resembles carbon black, but is produced by burning liquid hydrocarbons, e.g., kerosene; it is often somewhat oily, is duller than carbon black, and may have a bluish undertone. It is sometimes used in making contact brushes for electrical apparatus.

carbon cycle, in biology, the exchange of carbon between living organisms and the nonliving environment. Living organisms are composed of matter derived from the environment and engage in a continual exchange of matter with their surroundings; as old cells die and their materials return to the environment, new cells are formed of newly incorporated substances. Carbon is the central element in most compounds of which organisms are composed, and it is derived from free carbon dioxide, that found in air (or, in an aquatic environment, in water). The process of incorporating inorganic molecules into the more complex molecules of living matter is called fixation. Nearly all carbon dioxide fixation is accomplished by means of PHOTOSYNTHESIS, in which green plants form carbohydrates from carbon dioxide and water, using the energy of sunlight to drive the chemical reactions involved. A few microorganisms fix insignificant amounts of carbon

dioxide by using other energy sources, such as oxidation of iron. Green plants use carbohydrates to build the other organic molecules that make up

Carbon cycle

their cells, such as cellulose, fats, proteins, and nucleic acids. Some of these compounds require the incorporation of nitrogen (see NITROGEN CYCLE). When carbohydrates are oxidized in cells they release the energy stored in their chemical bonds, and some of that energy is also used by the cell to drive other reactions. In the process of oxidation, or respiration, oxygen from the atmosphere (or from water) is combined with portions of the carbohydrate molecule, producing carbon dioxide and water, the compounds from which the carbohydrates were originally formed. However, not all of the carbon atoms incorporated by the plant can be returned to the atmosphere by its own respiration; some remain fixed in the organic materials that make up its cells. When the plant dies, its tissues are consumed by bacteria and other microorganisms, a process called decay. These microorganisms, which cannot make carbohydrates from carbon dioxide and water, break down the organic molecules of the plant and use them for their own cell-building and energy needs, by their respiration more of the carbon is returned to the atmosphere. Animals, which likewise cannot make their own carbohydrates, feed on plants or on other animals, ultimately their matter and energy are derived from plants. The carbon-containing molecules that an animal derives from other organisms are reorganized to build its own cells or oxidized for energy by respiration, releasing carbon dioxide and water. When the animal dies it too is decayed by microorganisms, resulting in the return of more carbon to the atmosphere. Carbon-containing molecules in wood (or other dry, slow-decaying organic materials) may be oxidized by burning, or combustion, also producing carbon dioxide and water. Under conditions prevailing on earth at certain times, green plants have decayed only partially and have been transformed into fossil fuels—coal, peat, and oil. These materials are made of organic compounds formed by the plants, when burned, they too restore carbon dioxide to the atmosphere.

Carbondale 1 City (1970 pop. 22,816), Jackson co., S Ill., inc. 1869. It is a railroad division point and the retail center of a coal-mining and farming area. Southern Illinois Univ. is the major employer. Memorial Day was inaugurated (1868) in Carbondale by Gen. John A. Logan. Giant City State Park and a wildlife refuge are nearby. 2 Industrial city (1970 pop. 12,808), Lackawanna co., NE Pa., on the Lackawanna River, inc. 1851. Its important activities are anthracite coal mining and the manufacture of mining machinery, machine shop products, chemicals, and clothing. It is also a vacation center in a lake and mountain region. Terence Powderly, the labor leader, was born there.

carbon dioxide, chemical compound, CO_2 , a colorless, odorless, tasteless gas that is about one and one-half times as dense as air under ordinary conditions of temperature and pressure. It does not burn and will not support combustion of ordinary materials. Although it is not a poison, it can cause death by suffocation if inhaled in large amounts. It is a fairly stable compound but decomposes at very high temperatures into carbon and oxygen. It is fairly soluble

in water, one volume of it dissolving in an equal volume of water at room temperature and pressure, the resultant weakly acidic aqueous solution is called CARBONIC ACID. The gas is easily liquefied by compression and cooling. If liquid carbon dioxide is quickly decompressed it rapidly expands and some of it evaporates, removing enough heat so that the rest of it cools into solid carbon dioxide "snow." Carbon dioxide has familiar uses. Formed by the action of yeast or baking powder, it causes the rising of bread dough. It provides the sparkle in carbonated beverages such as soda water. In some fire extinguishers it is expelled through a nozzle and settles on the flame, smothering it. It is a raw material for PHOTOSYNTHESIS in green plants and is a product of animal RESPIRATION. It is also a product of the decay of organic matter. It occurs in nature both free and in combination (e.g., in CARBONATES). It is part of the ATMOSPHERE, making up about 1% of the volume of dry air. Because it is a product of combustion of carbonaceous fuels (e.g., coal, coke, fuel oil, gasoline, and cooking gas), there is usually more of it in city air than in country air. In various parts of the world—notably in Italy, Java, and Yellowstone National Park in the United States—it is formed underground and issues from fissures in the earth. Natural mineral waters such as Vichy water sparkle (effervesce) because excess carbon dioxide that dissolved in them under pressure collects in bubbles and escapes when the pressure is released. The chokedamp (see DAMP) of mines, pits, and old, unused wells is largely carbon dioxide. Carbon dioxide has varied commercial uses. Its greatest use as a chemical is in the production of carbonated beverages; it is also used in water softening, in the manufacture of aspirin and lead paint pigments, and in the SOLVAY PROCESS for the preparation of sodium carbonate. It also has numerous nonchemical uses. It is used as a pressurizing medium and propellant, e.g., in aerosol cans of food, in fire extinguishers, in target pistols, and for inflating life rafts. Because it is relatively inert, it is used to provide a nonreactive atmosphere, e.g., for electric arc welding of steel and for packaging foods, such as coffee, that can be spoiled by oxidation during storage. Solid carbon dioxide, known as dry ice, is used as a refrigerating agent. There are three principal commercial sources for carbon dioxide. High-purity carbon dioxide is produced from some wells. The gas is obtained as a by-product of chemical manufacture, as in the fermentation of grain to make alcohol and the burning of limestone to make lime. It is also manufactured directly by burning carbonaceous fuels. For commercial use it is available as a liquid under high pressure in steel cylinders, as a low-temperature liquid at lower pressures, and as the solid dry ice. A standard test for the presence of carbon dioxide is its reaction with limewater (a saturated water solution of CALCIUM HYDROXIDE) to form a milky-white precipitate of calcium hydroxide.

carbon disulfide, CS_2 , liquid organic compound, it is colorless, foul-smelling, flammable, and poisonous. It can be prepared by direct reaction of carbon, e.g., as charcoal, with sulfur. It is widely used as a solvent, e.g., for rubber, and is used to treat alkali cellulose in the viscose process (a source of rayon and cellophane). Carbon disulfide reacts with chlorine in the presence of a catalyst to form carbon tetrachloride.

carbonic acid, H_2CO_3 , a weak dibasic acid (see ACIDS AND BASES) formed when CARBON DIOXIDE dissolves in water; it exists only in solution. Carbonic acid forms carbonate and bicarbonate (or acid carbonate) salts (see CARBONATE) by reaction with bases. It contributes to the sharp taste of carbonated beverages.

Carboniferous period (kãrbônif'ərəs), fifth period of the PALEOZOIC ERA of geologic time (see GEOLOGIC ERAS, table). The Carboniferous period was marked by vast, coal-forming swamps and a succession of changes in the earth's surface that, continuing into the PERMIAN PERIOD, ended the Paleozoic era. The events of the Carboniferous fall naturally into two divisions, the Mississippian and the Pennsylvanian, in America the break in sequence is so sharp that each division is commonly considered an independent period. In the Lower Carboniferous, or Mississippian, period, the interior of North America was submerged several times by shallow seas in which were formed limestone, shale, and sandstone. In the Appalachian region, especially in Pennsylvania, great deposits of sandstone and shale were laid down by the erosion products from the eastern coastal highlands. In the Far West the Rocky Mt. region was covered by shallow seas which depos-

ited the Madison limestone and the Redwall limestone of the Grand Canyon. The Lower Carboniferous in Europe, as in America, was a period of submergence and was also one of great volcanic activity. In the British Isles and adjacent areas the mountain limestone was formed, E of the Rhine, the culm shale, sandstone, and conglomerate, and in the USSR, the Coal Measures. The close of the Lower Carboniferous was marked by mountain building in New Brunswick, Nova Scotia, the S Appalachian region, the SW United States, and Europe. In the Upper Carboniferous, or Pennsylvanian, period, there was at least one great submergence, however, the sea level oscillated and caused the formation of great marshes with extensive vegetation that was later transformed into coal. In the E United States great deltas of sediments, now represented by the Pottsville conglomerate, were formed during the early Pennsylvanian. In Kansas, Nebraska, Arkansas, and Texas, the Pennsylvanian beds are chiefly shale, sandstone, and coal, over the Cordilleran region, marine limestone, with little coal, on the Pacific coast from California to Alaska, limestone and shale. The Carboniferous coal fields of North America include the anthracite field of E Pennsylvania, the Appalachian field, from Pennsylvania to Alabama, the Michigan field, the eastern interior field, in Indiana, Illinois, and Kentucky, the western interior and southwestern field, stretching from Iowa to Texas, the Rhode Island field, and the Acadian field of SE Canada. In the Upper Carboniferous of Western Europe, the Millstone Grit, equivalent to the Pottsville conglomerate, is followed by the Coal Measures, which include the Welsh, English, Belgian, Westphalian, and Saar Basin fields. In the Mediterranean region and in the USSR, the Upper Carboniferous resembles that of W North America. The Upper Carboniferous was a period of marked crustal disturbances. In Europe the Paleozoic Alps were thrust up, in Asia, the Altai and the Tien Shan, in North America, the Arbuckle and Wichita mts and the ancestral S Rockies. The Indian peninsula became an active site of deposition, in the Himalayan geosyncline and much of China, mountain building was dominant. Crustal movements in the Andean geosyncline of South America affected the pattern of sedimentation over much of the continent. The plant life of the Carboniferous period was extensive and luxuriant, especially in the Pennsylvanian. It included ferns and fernlike trees, giant horsetails, called calamites, club mosses, or lycopods, such as *Lepidodendron* and *Sigillaria*, seed ferns, and cordaites, or primitive conifers. Land animals included primitive amphibians, reptiles (which first appeared in the Upper Carboniferous), spiders, millipedes, land snails, scorpions, enormous dragonflies, and more than 800 kinds of cockroaches. The inland waters were inhabited by fishes, clams, and various crustaceans, the oceans by mollusks, crinoids, sea urchins, and one-celled lime-making foraminifers.

carbonite: see COKE

carbon monoxide, chemical compound, CO, a colorless, odorless, tasteless, extremely poisonous gas that is less dense than air under ordinary conditions. It is very slightly soluble in water and burns in air with a characteristic blue flame, producing carbon dioxide, it is a component of PRODUCER GAS and WATER GAS, which are widely used artificial fuels. It is a reducing agent, removing oxygen from many compounds and is used in the reduction of metals, e.g., IRON (see BLAST FURNACE), from their ores. At high pressures and elevated temperatures it reacts with hydrogen in the presence of a catalyst to form METHANOL. Carbon monoxide is formed by combustion of carbon in oxygen at high temperatures when there is an excess of carbon. It is also formed (with oxygen) by decomposition of carbon dioxide at very high temperatures (above 2000°C). It is present in the exhaust of internal combustion engines (e.g., in automobiles) and is generated in coal stoves, furnaces, and gas appliances that do not get enough air (because of a faulty draft or for other reasons). Carbon monoxide is an extremely poisonous gas. Breathing air that contains as little as 0.1% carbon monoxide by volume can be fatal, a concentration of about 1% can cause death within a few minutes. The gas is especially dangerous because it is not easily detected. Early symptoms of carbon monoxide poisoning include drowsiness and headache, followed by unconsciousness, respiratory failure, and death. First aid for a victim of carbon monoxide poisoning requires getting him to fresh air, administering ARTIFICIAL RESPIRATION and, if available, oxygen, and, as soon as possible, summoning a doctor. When carbon monoxide is inhaled it reacts with hemoglobin, the red blood pigment that normally car-

ries oxygen to all parts of the body. Because carbon monoxide is attracted to the hemoglobin about 210 times as strongly as is oxygen, it takes the place of oxygen in the blood, causing oxygen starvation throughout the body.

carbon-nitrogen-oxygen cycle: see NUCLEOSYNTHESIS

carbon tetrachloride or **tetrachloromethane**, CCl₄, colorless, poisonous, liquid organic compound that boils at 76.8°C. It is toxic when absorbed through the skin or when inhaled. It reacts at high temperatures to form the poisonous gas phosgene. Carbon tetrachloride is used in the production of Freon refrigerants, e.g., Freon-12 (dichlorodifluoromethane). Because it is not flammable and is a good solvent for fats, oils, and greases, it is often used commercially for dry cleaning and for degreasing metals. It is sometimes used in fire extinguishers, since its vapors are denser than air and serve to smother a flame. Its use in the home as a spot remover should be avoided because of its poisonous nature.

carbonyl group (kar'bōnīl), in chemistry, FUNCTIONAL GROUP that consists of an oxygen atom joined by a double bond to a carbon atom. The carbon atom is joined to the remainder of the molecule by two single bonds or one double bond. If the carbonyl group is joined only to ALKYL GROUPS or ARYL GROUPS, the compound is a KETONE, if it is joined to at least one hydrogen atom, the compound is an ALDEHYDE. The chemical reactivity of aldehydes and ketones is primarily due to the difference in ELECTRONEGATIVITY between carbon and oxygen. Because oxygen has the greater affinity for electrons, it acquires a partial negative charge, becoming electron-rich, the carbon atom of the carbonyl group thus becomes electron-deficient, acquiring a partial positive charge. One major type of reaction of aldehydes and ketones involves the addition of an electron-rich chemical species to the electron-deficient carbon atom of the carbonyl group. Another type of reaction is due to the tendency of the electron-deficient carbon atom of the carbonyl group to partially attract electrons from carbon atoms adjacent to it in the molecule, thus increasing the acidity of hydrogen atoms that are bonded to the adjacent carbon.

Carborundum. see SILICON CARBIDE

carboxyl group (kar'bōk'sīl), in chemistry, FUNCTIONAL GROUP that consists of a carbon atom joined to an oxygen atom by a double bond and to a HYDROXYL GROUP, OH, by a single bond. Carboxylic acids are compounds whose molecules contain a carboxyl group that is joined to a hydrogen atom, an ALKYL GROUP, or an ARYL GROUP by a single bond to its carbon atom. Dicarboxylic acids, compounds that contain two carboxyl groups, are important in a number of industrial processes. The four main types of reactions of carboxylic acids are chiefly due to either the weak acidity of the hydroxyl hydrogen or to the difference in ELECTRONEGATIVITY between carbon and oxygen. One type involves cleavage of the hydroxyl oxygen-hydrogen bond, e.g., reaction with an alcohol to form an ESTER or reaction with an alkali to form a water-soluble salt. A second type involves addition of an electron-rich species to the electron-deficient carbon atom of the carboxyl group. A third type is characterized by the joining of a carbon atom directly to the carboxyl group. A fourth type involves the loss of carbon dioxide (decarboxylation). The second and third types are similar to reactions of the CARBONYL GROUP, the carboxyl group may be thought of as a carbonyl group joined to a hydroxyl group.

carboxylic acid. see CARBOXYL GROUP

carbuncle, acute inflammatory nodule of the skin caused by bacterial invasion into the hair follicles or sebaceous gland ducts. It is actually a BOIL, but one that has more than one focus of infection, i.e., involves several follicles or ducts. Carbuncles occur more often in men because of their more extensive body hair growth. The infection is treated by applying antibiotics systemically and directly to the lesion and by incision and drainage at the proper time.

carburetor, part of a gasoline engine in which liquid fuel is converted into a vapor and mixed with a regulated amount of air for combustion in the cylinders. Land vehicles, boats, and light aircraft have a float carburetor, in which a float regulates the fuel level in a reservoir from which the fuel is sucked into the intake manifold at a restriction called a venturi. This venturi metering system controls the flow of a continuous pumped spray into the intake manifold downstream from the carburetor. When there is an individual spray for each cylinder and the injec-

tion is an intermittent, timed spurt, or is metered differently, the device is usually called a fuel injector, not a carburetor.

Carcas (kar'kās), king's chamberlain. Esther 1:10

Carcassonne (karkasōn'), city (1968 pop. 46,329), capital of Aude dept., S France, in Languedoc. The old city, a medieval fortress atop a hill, is one of the architectural marvels of Europe. The new city, across the Aude River, is a farm trade center with rubber, shoe, and textile manufactures. The Romans fortified the hilltop site in the 1st cent. B.C., towers built (c. 6th cent.) by the Visigoths are still intact, and the viscounts of Carcassonne added to the fortifications in the 12th cent. A stronghold of the ALBIGENSES, the fortress was taken by Simon de Montfort in 1209. It yielded to the king in 1247, at which time Louis IX (St. Louis) founded the new city across the river. The outer ramparts of the fortress were constructed during St. Louis's reign, and the work was continued, with intricate defense devices, under Philip III. When completed, the fortress was widely considered impregnable, Edward the Black Prince was stopped at its walls in 1355. However, its usefulness ended in 1659, with the annexation to France of the province of Roussillon. The ramparts were gradually abandoned and fell into disrepair, they were restored by Viollet-le-Duc in the 19th cent.

Carchemish (kar'kīmīsh, karkē'mīsh), ancient city, Turkey, on the Euphrates River, at the Syrian border, c. 35 mi (56 km) SE of Gaziantep. It was an important Neo-Hittite city and was prosperous in the 9th cent. B.C. before it was destroyed by the Assyrians. Even then it continued as an important trade center. There, in 605 B.C., Nebuchadnezzar defeated Necho (2 Chron. 35:20, Jer. 46:2, Isa. 10:9). Among the excavated remains are sculptured neo-Hittite reliefs with hieroglyphic Hittite inscriptions. See British Museum, *Carchemish* (3 vol. in 2, 1914-52).

carcinogen: see CANCER

carcinoma. see NEPLASM

Carco, Francis (fran'sēs' karkō'), 1886-1958, French poet and novelist, b. New Caledonia of Corsican parents. His real name was François Carcopino. The bohemian Parisian life he cherished is portrayed in several of his novels, including *Jesus-la-caille* (1914). Among his verses are *La Bohème et mon cœur* (1912) and *Poèmes en prose* (1948).

cardamom (kar'dāməm) see GINGER

Cardamom Hills, range, c. 4,000 ft (1,220 m) high, c. 1,000 sq mi (2,590 sq km), Kerala state, southern tip of India. Tea, coffee, teak, bamboo, turmeric, and cardamom, which gives the area its name, are grown in the hills.

Cardamom Mountains, Thai *Banthat*, Khmer *Kra vanh*, mountain group extending c. 100 mi (160 km) along the Thai-Cambodian border, E of Chanthaburi, SE Thailand. Ta Det (3,667 ft/1,118 m) is the highest peak. The mountains receive monsoon rains and have a dense vegetation cover.

Cardano, Geronimo (jārō'nēmō karda'nō), 1501-76, Italian physician and mathematician. His works on arithmetic and algebra established his reputation. Barred from official status as a physician because of his illegitimate birth, he practiced as a medical astrologer. His major work, *De subtilitate rerum* (1550), on natural history, is perceptive and implies a grasp of evolutionary principles. His book on games of chance represents the first organized theory of probability. Cardano described a tactile system similar to Braille for teaching the blind and thought it possible to teach the deaf by signs. See his *The Book of my Life* (1643, tr. 1930), studies by Oystein Ore (with a tr. of Cardano's *Book of Games of Chance*, 1965) and Alan Wykes (1969).

Cardenas, García Lopez de (garthē'a lō'pēth dā kar'dānas), fl. 1540, Spanish explorer in the Southwest. A member of the 1540 expedition of Francisco Vazquez de CORONADO, he was selected to lead a party from Cibola (the Zuni country of New Mexico) to find a river of which the Hopi Indians had spoken. After 20 days' march he became the first white man to see the GRAND CANYON of the Colorado River. He was not, however, the discoverer of the Colorado itself, for Hernando de ALARCÓN had explored its lower waters a month earlier.

Cárdenas, Lázaro (la'sarō), 1895-1970, president of Mexico (1934-40). He joined the revolutionary forces in 1913 and rose to become a general. He was governor (1928-32) of his native state, Michoacán, and held other political posts before he was, with the support of Plutarco E. CALLES, elected president. After a bitter conflict Cardenas sent (1936) Calles into exile and organized a vigorous campaign of socialization of industry and agriculture based on the

constitution of 1917. Large land holdings were broken up and distributed to small farmers on the EJIDO system, and many foreign-owned properties, especially oil fields, were expropriated. His policy, founded on his determination to make Mexico a modern democracy, became anathema to large landowners, industrialists, and foreign investors, but—himself a mestizo—he won the support of the Indians and of the Mexican working classes. Cardenas relinquished his office at the end of his term, thus acting in accord with his desire for democratic and orderly constitutional processes. Cardenas was recalled to public service as minister of national defense (1942–45). His political influence as the leader of the Mexican left wing continued in the years after World War II. See study by J. C. Ashby (1967).

Cardenas, city (1970 pop. 55,209), N central Cuba, a port on Cardenas Bay. It processes and exports sugar and sisal and has industries producing tobacco, beer, and soap. A fishing fleet is based at Cardenas, which is also an important commercial center. The city was founded in 1828 as a shipping point for the sugar industry of the surrounding area.

cardiac failure: see CONGESTIVE HEART FAILURE

Cardiff (kar'dif), county borough (1971 pop. 278,221), county town of Glamorganshire, S Wales, on the Taff River near its mouth on the Bristol Channel. Until the early 20th cent. Cardiff was one of the greatest coal-shipping ports in the world. Present industries include shipbuilding and repairing, metal casting, engineering, oil and gasoline distribution, and food processing. There are British Broadcasting Corp. studios in Cardiff. The construction of docks by the 5th marquess of Bute in 1839 stimulated the growth of Cardiff. The Port of Cardiff includes the docks at Penarth and Barry. There is a canal to Merthyr Tydfil (opened 1794), with a branch to Aberdare. Cardiff Castle, the residence of the marquess of Bute until 1947, was first built in 1090 on the site of a Roman fort. Robert, duke of Normandy, was imprisoned (1126–34) in the castle. Owen Glendower partly destroyed it in 1404. In Cathays Park the group of public buildings includes the National Museum of Wales, the law courts, the city hall, Glamorgan county hall, and the University College of South Wales and Monmouthshire (one of the four constituent colleges of the Univ. of Wales). Other schools are City of Cardiff College (teacher training) and Welsh College of Advanced Technology. Llandaff, which has a notable medieval cathedral, has been part of Cardiff county borough since 1922. The parish church of St. John dates partly from the 13th and partly from the 15th cent. In 1974, Cardiff became part of the new nonmetropolitan county of South Glamorgan.

Cardigan, James Thomas Brudenell, 7th earl of, 1797–1868, British general. In the Crimean War he led the disastrous cavalry charge at BALAKLAVA (1854) that Tennyson immortalized in *The Charge of the Light Brigade*. The charge was made on a misunderstood order, and the brigade was destroyed. Quarrels with his officers showed him a vain and contentious man. The Cardigan sweater was named for him. See biography by Piers Compton (1972).

Cardiganshire, county (1971 pop. 54,844), W Wales, on Cardigan Bay. The county town is Cardigan, but ABERYSTWYTH is of greater importance. The region is largely one of pleasant, rolling hills, with fertile valleys and a narrow coastal plain. The chief river is the Teifi. Agriculture predominates but there is also some fishing and the manufacture of woollens. The county long resisted English influence, and the Welsh language and Welsh customs are well preserved. In 1974, Cardiganshire became part of the new nonmetropolitan county of Dyfed.

Cardigan Welsh corgi, breed of short, long-bodied WORKING DOG believed to have been introduced into Wales from Central Europe c. 1200 B.C. It stands about 12 in. (30.5 cm) high at the shoulder and weighs from 15 to 25 lb (6.8–11.3 kg). Its dense, medium-length, straight coat is of harsh texture and may be red, brindle, sable, black and tan, black, or blue-merle in color, often with white markings on the face, chest, neck, feet, and tip of tail. Originally used as a guardian and hunter, the Cardigan later came to be raised as a drover of cattle. Working to the whistled commands of its master, it would nip at the heels of the livestock and then avoid their lethal kicks by dropping to the ground. With the sale and division of the common pastureland and the increasing use of fences, the usefulness of the Cardigans as drovers was eliminated and the breed became scarce. Revived by the diligence of modern breeders, the Cardigan today is raised for show competition and as a family companion. See DOG.

cardinal [Lat., =belonging to the hinge], in the Roman Catholic Church, a member of the highest body of the church below the pope. This, the sacred college of cardinals of the Holy Roman Church, is the electoral college of the PAPACY. Its members are appointed by the pope. There are three classes. Cardinal bishops are the bishops of seven sees around Rome (Ostia, Velletri, Porto and Santa Rufina, Albano, Frascati, Palestrina, and Sabina and Poggio Mirteto) and Eastern rite patriarchs, the first of these in order of creation is dean of the college and ex officio bishop of Ostia in addition to his other see. Cardinal priests are mostly archbishops outside the Roman province, the title "cardinal archbishop"—often applied to these men—simply represents the union of the two dignities in one man. Cardinal deacons are priests with functions in the papal government. Cardinal priests and cardinal deacons have titles corresponding to churches of the Roman diocese. A cardinal's insignia resemble those of a bishop, except for the characteristic red, broad-brimmed, tasseled hat, which is conferred by the pope but not subsequently worn. Cardinals are styled "Eminence." Apart from papal elections, the cardinals have great importance as the privy council of the pope. Hence those who are not bishops away from Rome must live at Rome. They meet with the pope in consistories, public and secret, but most of the business they transact is done in their various jurisdictional capacities. Thus the cardinals in residence at Rome make up a cabinet for the pope, directing the work of the Curia Romana, as the papal administration is called. This is made up of standing committees and courts, the departments of administration divided among them. Since there is no division of powers in the headship of the church, most organs of the Curia have power to judge, to command, and to legislate. The acts of these bodies are validated by papal approbation, and they therefore bind Roman Catholics as direct pontifical acts. Only the pope himself can speak finally in matters of faith and morals (see INFALLIBILITY). The Curia may be divided into Roman congregations, Roman tribunals, curial offices, and secretariats. A Roman congregation consists of a group of cardinals, headed by a prefect, together with two staffs which transact most of the business—the congress of major officials and a staff of minor officials chosen by competitive examination and assigned to less important affairs. The congregation proper, i.e., the cardinals, makes all major decisions. The following are the Roman congregations (founded by Sixtus V in 1588, reorganized by Pius X in 1908, and by Paul VI at the close of the Second Vatican Council). Congregation of the Doctrine of the Faith (formerly, of the Holy Office, see INQUISITION), of which the pope is prefect, concerned with doctrinal orthodoxy, Congregation of the Consistory, of which the pope is prefect, for the preparation of agenda for consistories and the regulation of dioceses of the Western Church not under the Propaganda (see below), Congregation of the Sacraments, for legislation on administration of the sacraments and for dispensations concerning them, Congregation of the Council, for the regulation of councils and of benefices, properties, and the like, for dispensations from the commandments of the church, and for the maintenance of the shrine of Loreto, Congregation of Religious, for all concerns of all seculars and regulars, of both sexes, Congregation for the Propagation of the Faith (the Propaganda), for all concerns of the MISSIONS of the Latin rite, Congregation of the Eastern Church, for all concerns of the Eastern rites in communion with the pope and of every person involved, except for the Russian Catholics, who are under a separate commission, Congregation of Sacred Rites, for all public worship of the Latin rite, for canonizations, liturgical books, and the like, Congregation of the Ceremonial, for liturgical ceremonies involving the pope and the sacred college, Congregation for Extraordinary Ecclesiastical Affairs, virtually a board of assistants to the secretariat of state, Congregation of Seminaries and Universities, for the administration of education, of seminaries, and of ecclesiastical research, Congregation of the Fabric, for the maintenance of St. Peter's Church of the Roman congregations, the two whose influence is felt most deeply throughout the church are probably the Congregation of the Faith and the Propaganda. The Roman tribunals are three secret courts, the highest of the church, each is headed by a cardinal, and its work is handled by trained canonists. They are the Apostolic Penitentiaria, for all cases of conscience appealed by any Catholic to the pope and for the regulation

of indulgences, the Apostolic Signatura, the court of final appeal of the church, considering only cases involving the members of, or appealed from, the Rota, the Sacred Roman Rota, the court of appeal from diocesan courts and the lower court of Vatican City, hearing all cases requiring trial and evidence, except cases of conscience, cases of canonization, and cases involving sovereigns of states (reserved to the pope in person). The curial offices are now to a large extent unimportant and honorary. They are the Apostolic Chancery, to issue bulls of foundations and the like, the Apostolic Dataria, to handle matter concerning candidates for papal benefices, pensions, and the like, the Apostolic Camera, headed by the chamberlain of the Holy Roman Church, to administer the property (except revenue) of the Holy See, notably in the vacancy of the papal see. The secretariats are the secretariat of state, headed by the cardinal secretary of state, who has charge of all matters involving relations with political governments and has for his aid a large staff and the Congregation of Extraordinary Ecclesiastical Affairs, and the secretariat of briefs, in charge of the official Latin correspondence of the pope. A secretariat for promoting Christian unity and another for dealings with non-Christians were established by Paul VI. Besides these permanent departments there are always some special commissions of cardinals, e.g., for the Russian Church, for the revision of the Vulgate, for biblical study, and for sacred art. The term *cardinal* was formerly applied to important clergymen of all sorts and countries, but in the Middle Ages it was officially restricted to the Roman province. The college of cardinals is the modern derivative of the advisory board of clergymen of the ancient diocese of Rome, used by the pope for advice and transaction of business. Pope Sixtus V set the maximum number of cardinals at 70, a tradition maintained for centuries until the pontificate of Pope John XXIII. Following the lead of Pius XII, John XXIII and Paul VI have promoted the international character of the college. In 1973 the number of cardinals was increased to 145. See studies by T. B. Morgan (1946, repr. 1971), G. D. Kittler (1960), and F. B. Thornton (1963).

cardinal or **redbird**, common name for a North American songbird of the family Fringillidae (New World FINCH family). In the eastern cardinal, *Richmondia cardinalis*, the male is bright scarlet with black throat and face, the female is brown with patches of red. Both sexes have crests and red bills. The Arizona, gray-tailed, Louisiana, and San Lucas cardinals frequent the S United States and Mexico. The pyrrhuloxia of the SW United States, gray with red face, crest, breast, and tail, is called gray cardinal or parrotbill. Cup-shaped nests are built by male and female, and the male helps rear the young. Cardinals are essentially monogamous, and are not very gregarious. They are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Fringillidae.

cardinal flower: see LOBELIA

carding, process by which fibers are opened, cleaned, and straightened in preparation for spinning. The fingers were first used, then a tool of wood or bone shaped like a hand, then two flat pieces of wood (cards) covered with skin set with thorns or teeth. Primitive cards, rubber-covered and toothed with bent wires, are still employed by Navaho women. Modern carding dates from the use of revolving cylinders patented in 1748 by Lewis Paul. A mechanical apron feed was devised in 1772, and Richard Arkwright added a funnel that contracted the carded fiber into a continuous sliver. See COMBING.

cardiovascular system: see CIRCULATORY SYSTEM

Cardozo, Benjamin Nathan (kardō'zō), 1870–1938, American jurist, Associate Justice of the U.S. Supreme Court (1932–38), b. New York City. He was admitted to the bar (1891) and practiced law until he was elected (1913) to the New York supreme court on a fusion ticket. Cardozo was appointed (1914) to the court of appeals, was elected (1917) for a 14-year term, and in 1927 was elected chief judge of the court, which, largely through his influence, gained international fame. He was prominent in the efforts of the American Law Institute to restate and simplify the law, and he advocated a permanent agency to function between the courts and legislatures to aid in framing effective legislation. He was active in a number of Jewish movements. He was appointed (1932) by President Herbert Hoover to the Supreme Court to succeed Oliver Wendell Holmes. Cardozo was one of the foremost spokesmen on sociological jurisprudence, and his views on the relation of law to social change made him

one of the most influential of U.S. judges. With justices Louis D. Brandeis and Harlan F. Stone, he upheld much New Deal legislation, dissenting from the majority opinion. His philosophy of law and the judicial process was developed in three classics of jurisprudence: *The Nature of the Judicial Process* (1921), *The Growth of the Law* (1924), and *The Paradoxes of Legal Science* (1928). He also wrote *Law and Literature and Other Essays and Addresses* (1931). See the selection of his writings edited by M. E. Hall (1947), biography by J. P. Pollard (1935, repr. 1970), studies by B. H. Levy (rev. ed. 1969) and W. C. Cunningham (1972).

cards, playing. see **PLAYING CARDS**

Cardston, town (1971 pop. 4,130), SW Alta., Canada, near the U.S. boundary. It was founded in 1887 by Mormons from Utah under the leadership of Charles Ora Card, son-in-law of Brigham Young. The chief Mormon temple of Canada is in the town. Nearby is the Blood Indian Reserve, the largest in Canada.

Carducci or **Carducho**, **Bartolomeo** (bartōlōmē'ō kardōō'tchē, kardōō'kō), 1560-1638, Italian painter, sculptor, and architect in Spain. He studied with Federigo Zuccaro, whom he accompanied (1585) to the court of Madrid. He assisted Tibaldi in decorating the library ceiling of the Escorial and executed some of the cloister frescoes. His masterpiece, *Descent from the Cross*, is in San Felipe el Real, Madrid. His brother Vincenzo Carducci, 1576-1638, succeeded him as court painter to Philip III. Vincenzo is the author of the *Diálogos de la pintura* (1633). The paintings of both brothers, though different in style, are marked by sobriety and an insistence upon moral tone.

Carducci, **Giosuè** (jōzōō'ā), 1835-1907, Italian poet and teacher. He was professor of literature at the Univ. of Bologna from 1860 to 1904. He was a scholar, an editor, an orator, a critic, and a patriot, although his defection from republicanism and his anti-Catholicism brought him into disfavor even with his students. He was awarded the 1906 Nobel Prize in Literature. Carducci ranks with the greatest Italian poets; his verse is classic in design, with a deep and wide range of emotion. His chief works include *Rime* (1857), *Inno a Satana* [hymn to Satan] (1865), *Decennali* (1871), *Nuove poesie* (1873), *Odi barbare* (1877, 1882, 1889), *Rime nuove* (1889, tr. New Rhymes, 1916), and *Rime e rime* (1898). See translations by G. L. Bickelsteth (1913), Maud Holland (1927), William Fletcher Smith (1939), and Arthur Burkhard (1947), studies by John Bailey (1926) and S. E. Scaglia (1937).

Carducho, **Bartolomeo** see **CARDUCCI**, **BARTOLOMEO**

Cardwell, **Edward Cardwell**, **Viscount**, 1813-86, British statesman. He entered Parliament (1842) as a supporter of Sir Robert Peel, under whom he was secretary to the treasury (1845-46). He was president of the Board of Trade (1852-55) under Lord Aberdeen and secretary for Ireland (1859-61) and chancellor of the duchy of Lancaster (1861-64) under Lord Palmerston. While colonial secretary (1864-66) he worked toward federation in Canada. As war secretary (1868-74) under Gladstone, he reformed the British army, abolishing the purchase of commissions, shortening the term of enlistment, and creating a reserve.

CARE (Cooperative for American Relief Everywhere), nonprofit, nonsectarian federation of agencies devoted to channeling relief and self-help materials to needy people in foreign countries. Organized (1945) to help war-ravaged Europe, CARE soon expanded its program to include underdeveloped nations in Asia, Africa, and Latin America. Since its founding, CARE has distributed more than \$200 million in supplies including foodstuffs, textiles, books, and agricultural and other tools. In 1962 the Medical International Cooperation Organization (MEDICO), a worldwide medical assistance program founded (1958) by Dr. Thomas Dooley and Dr. Peter Comanduras, became a part of CARE.

Careah (kā're'ā), variant of **KAREAH**

Carême, **Marie Antoine** (marē' aNtwan' karēm'), 1784-1833, celebrated French cook and gastronomist. He was chef for Talleyrand, Czar Alexander I, George IV, and Baron Rothschild. His writings on the culinary art include *L'Art de la cuisine française* (5 vol., 1833-34).

Carew, **George**, **Baron Carew of Clopton** and **earl of Totnes**, 1555-1629, English soldier and statesman. He began his military career in Ireland in 1574 and served (1588-92) as master of the ordnance there. He took part in the naval expeditions to Cadiz

(1596) and the Azores (1597) and in 1598 was an envoy to France. Appointed (1600) lord president of Munster, he aided the lord deputy, Lord Mountjoy, in defeating Hugh O'Neill, earl of TYRONE. Under James I, Carew was unable to save his friend Sir Walter Raleigh from execution, but he himself received honors, including his earldom in 1626. An antiquarian, he collected material on the history of Ireland, used later by his secretary, Sir Thomas Stafford, to prepare the important *Pacata Hibernia*, or, *An Historie of the Late Warres of Ireland* (1633).

Carew, **Thomas**, 1595?-1639?, English author, one of the CAVALIER POETS. Educated at Merton College, Oxford, he had a short diplomatic career on the Continent, then returned to England and became a favorite of Charles I and a court official. He is best known for his courtly, amorous lyrics, such as "Ask me no more where Jove bestows" and "He that loves a rosy cheek," but of equal importance are his "Elegy on the Death of Dr. Donne," and the highly erotic poem, "A Rapture." In his use of metaphysical and classical material, he shows the influence of both John Donne and Ben Jonson. See ed. of his works by Rhodes Dunlap (1949), study by E. I. Selig (1958, repr. 1970).

Carey, **Henry**, 1687-1743, English author. After the first collection of his poems appeared in 1713, he turned to writing for the stage. Primarily a writer of farce comedy, his greatest success was *Chrononhotonthologos* (1734), a burlesque on theatrical bombast. He is best remembered, however, for his songs, in particular the ballad "Sally in Our Alley."

Carey, **Henry Charles**, 1793-1879, American economist, b. Philadelphia, son of Mathew CAREY. In 1835 he retired from publishing, where he had done notable work, to devote himself to economics. His *Principles of Political Economy* (3 vol., 1837-40) and *Principles of Social Science* (3 vol., 1858-59) were among the first important American works in the field. Carey opposed the dominant British political economy of the day, particularly the "pessimism" of Ricardo and Malthus, and led in the theoretical development of American economic nationalism. He advocated the protective tariff but believed generally in laissez-faire. See studies by A. D. H. Kaplan (1931, repr. 1973) and A. W. Green (1951).

Carey, **Mathew**, 1760-1839, American publisher, bookseller, and economist, b. Dublin. In his Dublin journal he violently attacked English rule of Ireland, was imprisoned for a month, fled to France, where he worked in Benjamin Franklin's printing shop at Passy, returned to Ireland, and finally emigrated (1784) to Philadelphia. There a gift from Lafayette enabled him to establish (1785) the *Pennsylvania Herald*. From 1787 to 1792 he edited and published the *American Museum*, making it the leading American magazine of the period. In 1790, Carey began his career as bookseller and publisher on a large scale. In this double capacity he stimulated the growth of American letters. Although many of his own political pamphlets were controversial, the most famous, *The Olive Branch* (1814), was written during the War of 1812 in an effort to unite the Republican and Federalist parties in support of the war. His copious writings advocating the American protective system are interesting documents for the study of American economic history. The economist Henry Charles Carey was his son. See biography by E. L. Bradsher (1912, repr. 1968).

Carey, **William**, 1761-1834, English Baptist missionary and Orientalist, one of the first Protestant missionaries to India. He helped found the Baptist Missionary Society in 1792 and shortly thereafter went to India. Carey did most of the work in publishing the Bible in many Indian vernaculars. He wrote grammars of the vernaculars and several dictionaries. He became a professor of Sanskrit at Fort William College, Calcutta. See biographies by S. P. Carey (8th ed. rev. 1934) and W. B. Davis (1963).

Carey Land Act, sponsored by Sen. Joseph M. Carey and passed by the U.S. Congress in 1894. The act provided for the transfer to Western states of U.S.-owned desert lands on the condition that they be irrigated. Settlers were permitted to buy up to 160 acres (64.7 hectares) of the land at 50¢ per acre plus the cost of water rights. Hopes that the act would hasten reclamation and settlement were disappointed.

Cargill, **Donald**, 1619?-1681, Scottish COVENANTER. He was a minister in Glasgow from c. 1655 until 1662, when he was expelled for denouncing the Restoration and resisting the establishment of the episcopacy in Scotland. After escaping wounded from the battle of Bothwell Bridge (1679), he joined Richard Cameron in the Sanquhar Declaration (1680) against

Charles II. Cargill, having excommunicated the king, the duke of York, and others, was arrested and executed.

cargo cult, native religious movement found in Melanesia, holding that at the millennium the spirits of the dead will return and bring with them cargoes of modern goods for distribution among its adherents. The cult had its beginnings in the 19th cent. and received great impetus from World War II, when the Western armed forces littered the islands with surplus cargo. The cult aims to restore a past time and to regain the good will of ancestors who are being lured into giving cargo to the white foreigners, cargo originally intended for the native Melanesians. Cargo cults are revivalistic, in that the adherents expect the restoration of a golden age in which they will be reunited with their ancestors, and nativistic (see NATIVISM), in that the whites are to be driven away. However, as the cargo is composed principally of European goods, and native goods and rituals are abandoned, both the nativistic and revivalistic aspects of cargo cults are qualified by a strong motive toward ACCULTURATION.

Caria (kā'rēā), ancient region of SW Asia Minor, S of the Maeander River, which separated it from Lydia. The territory is in present SW Asiatic Turkey. The Carians were probably a native people, but their region was settled by both Dorian and Ionian colonists. Caria was a center of the Ionian revolt (c. 499 B.C.) that was a prelude to the Persian Wars. Some of the communities joined (c. 468 B.C.) the Delian League. In the 4th cent. B.C. the region was united under a dynasty of princes, of whom the most celebrated was MAUSOLUS. Alexander the Great conquered Caria, and it changed hands often in the wars after his death. In 125 B.C. it was made a Roman province (part of the province of Asia). Cnidus, Halicarnassus, and Miletus were famous Carian cities.

Carias Andino, **Tiburcio** (tēbōō'syō karē'ās andē'nō), 1876-1969, president of Honduras (1933-49). A strong-handed dictator, his term was twice extended by congress. Some improvements were made in communication and education. After Carias announced his retirement in 1948, presidential elections were held. Juan Manuel Galvez, the government candidate, won easily.

Caribbean Sea (kā'rībē'an, kārīb'ēan), tropical sea, c. 750,000 sq mi (1,942,500 sq km), arm of the Atlantic Ocean, Central America. It is bordered on the N and E by the West Indies archipelago, on the S by South America, and on the W by the Central American isthmus. The Caribbean is linked to the Gulf of Mexico by the Yucatan Channel, to the Atlantic by many straits, of which the Windward Channel and Mona Passage are the most important, and to the Pacific Ocean by the Panama Canal. The Magdalena is the largest river entering the sea. Lake Maracaibo is its largest embayment. Geologically, the Caribbean Sea consists of two main basins separated by a broad, submarine plateau, Bartlett Deep, a trench between Cuba and Jamaica, contains the Caribbean's deepest point (22,788 ft/6,946 m below sea level). The Caribbean's water is clear, warm (75°F/24°C), and less salty than the Atlantic; the basin has a very low tidal range (c. 1 ft/3 m). The Caribbean Sea has a counterclockwise current; water enters through the Lesser Antilles, is warmed, and exits via the Yucatan Channel, where it forms the Gulf Stream. Volcanic activity and earthquakes are common in the Caribbean, as are destructive hurricanes that originate over the sea or in the Atlantic. The Caribbean was discovered by Christopher Columbus in 1493 and was named for the Carib Indians. Spain claimed the area, and its ships searched for treasure. With the discovery of the Pacific Ocean in 1513 the Caribbean became the main route of Spanish expeditions and, later, of convoys. Pirates and warships of rival powers preyed on Spanish ships in the Caribbean. Although Spain controlled most of the sea, Britain, France, Holland, and Denmark established colonies on the islands along the eastern fringe. The 1800s brought U.S. ships into the Caribbean, especially after 1848, when many gold-seekers crossed the sea to reach California via Panama. After unsuccessful French attempts in the late 1800s to build a canal across Panama, the United States, in 1903, assumed control of the project, the 1914 opening of the Panama Canal paved the way for increased U.S. interest and involvement in this strategic sea, sometimes called the "American Mediterranean." Several Caribbean islands have U.S. military bases, many of which were established during World War II as support bases to protect the Panama Canal. The naval base at Guantanamo Bay, Cuba (est. 1899) is the old

est U.S. Caribbean base. U.S. policy since the MONROE DOCTRINE of 1823 has been to exclude foreign powers from the Caribbean, however, in 1959, Cuba became the first country to come under strong foreign (Soviet) influence. U.S. intervention in the affairs of Caribbean countries, most recently in the Cuban missile crisis of 1962 and the landing of U.S. marines at Santo Domingo in 1965, reflects the region's importance in U.S. eyes. Petroleum, iron ore, bauxite, sugar, coffee, and bananas are the main local products moved on the sea. Economically, the region is dependent on U.S. patronage. The Caribbean Sea has also acted as a barrier, isolating the islands and preventing the mingling of peoples on the scale characteristic of Latin America.

Caribbees (kār'ibēz), name sometimes applied to the islands of the Caribbean or even to all the West Indies. More specifically the Caribbees are the Lesser Antilles and include the Leeward Islands, the Windward Islands, and the Virgin Islands.

Carib Indians (kār'ib), native people formerly inhabiting the Lesser Antilles, West Indies. They seem to have overrun the Lesser Antilles and to have driven out the ARAWAK about a century before the arrival of Christopher Columbus. The original name by which the Caribs were known, *Gahri*, was corrupted by the Spanish to Canibal and is the origin of the English word *cannibal*. Extremely warlike and ferocious, they practiced cannibalism and took pride in scarification (ritual cutting of the skin) and fasting. Among these Indians the Carib language was spoken only by the men, while the women spoke Arawak. This was so because Arawak women, captured in raids, were taken as wives by the Carib men. Fishing, agriculture, and basketmaking were the chief domestic activities. The Caribs were expert navigators, crisscrossing a large portion of the Caribbean in their canoes. After European colonization began in the 17th cent., they were all but exterminated. A group remaining on St. Vincent mingled with Negro slaves who escaped from a shipwreck in 1675. This group was transferred (1795) by the British to Roatan island off the coast of Honduras. They have gradually migrated north along the coast into Guatemala. A few Caribs survive on a reservation on the island of Dominica. The Carib, or Cariban, languages are a separate family, believed to have originated in Brazil. Carib-speaking tribes are found in N. Honduras, British Honduras, and N. South America.

Cariboo Mountains (kār'ibōō), range, c. 200 mi (320 km) long, E. British Columbia, Canada, rising to 11,750 ft (3,582 m) at Mt. Sir Wilfrid Laurier. It runs roughly parallel with the main Rocky Mt. range to the northeast, from which it is separated by the Rocky Mt. Trench, there occupied by the Fraser River. In the foothills to the west is the Cariboo dist., scene of the famous Cariboo gold rush of 1860. Many camps sprang up in the region, and much gold was taken out, but after 1866 the diggings declined. Many gold-seekers stayed on in the region, and today there are several thousand who make their living by a combination of mining, hunting, and farming. The Cariboo wagon road, built (1862-65) by the government, facilitated the settlement of the interior of the province. It started from Yale, at the head of navigation on the Fraser River, and ended in the Cariboo dist. nearly 400 mi (640 km) to the north. Bowron Lake and Wells Gray provincial parks are in the Cariboo Mts.

Caribou (kār'ibōō), town (1970 pop. 10,419), Aroostook co., NE Maine, on the Aroostook River, inc. 1859. A processing and shipping hub for a great potato-growing region, it is also a winter sports center.

caribou, name in North America for the genus (*Rangifer*) of deer from which the Old World REINDEER was originally domesticated. Caribou are found in arctic and subarctic regions. They are the only deer in which both sexes have antlers. The broad hooves support the animal (males may weigh over 300 lb/90 kg) on boggy land or snow and have sharp edges that enable it to traverse rocky or frozen surfaces and to dig down to the grass and lichens on which it sometimes feeds. In North America there are two main types: the woodland caribou of the bogs and coniferous forests from Newfoundland to British Columbia, with palmate antlers up to 4 ft (120 cm) wide, and the barren-ground caribou of the tundra of Alaska and N. Canada, which has many-branched, slender antlers and which may undertake mass migrations in search of food. Caribou are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Cervidae.

caricature, a satirical drawing, plastic representation, or description which, through gross exaggeration of natural features, makes its subject appear

ridiculous. Although 16th-century Northern painters, such as Holbein, Bruegel, and Bosch, employed certain elements of caricature, no comic tradition was established until the 17th cent. with the work of the Carracci. In the 18th cent. caricature flourished in England in the works of Hogarth, Rowlandson, and Gillray. The genre expanded to include political and social as well as personal satire, developing into the art of the CARTOON. Periodicals of caricature, such as the French *Charivari* (1832), followed by *Punch* in England, *Simplicissimus* in Germany, and *Puck*, *Life*, and *Judge* in the United States, were quite popular in the 19th cent. They featured work by Daumier, George Cruikshank, John Tenniel, Art Young, E. W. Kemble, and Daniel Fitzpatrick. Modern caricaturists of note include David Low, Ronald Searle, Max Beerbohm, Al Hirschfeld, David Levine, and H. L. Block. Sculpture generally lends itself less well to caricature, but an exception exists in the series of heads by Franz Xavier Messerschmidt (1736-83) which represent exaggerated states of emotion and character. In literature, caricature has been a popular form since the ancient Greeks. Through verbal exaggeration and distortion the writer achieves an immediate, comic, often satiric effect. No one has made wider use of the literary caricature than Dickens. See M. D. George, *Hogarth to Cruikshank: Social Change in Graphic Satire* (1967); R. E. Shikes, *The Indignant Eye: The Artist as Social Critic* (1969).

carillon, in music. See BELL.

Carina (karē'na) [Lat. = the keel], southern CONSTELLATION, representing the keel of the ancient constellation Argo Navis, or Ship of the Argonauts. Carina contains CANOPUS, the second brightest star in the sky. It also contains the False Cross, a combination of four stars very similar to the Southern Cross (see CRUX), however, the long axis of the False Cross does not point toward the south celestial pole. In 1843 a nova was observed in Carina. Carina reaches its highest point in the evening sky in March.

Carinthia (kār'in'thēa), Ger. Kärnten, province (1971 pop. 526,000), c. 3,680 sq mi (9,531 sq km), S. Austria. KLAGENFURT is the capital. Predominantly mountainous, it is the southernmost Austrian province, bordering on Italy and Yugoslavia in the south. The GROSSGLOCKNER, the highest point in Austria, rises in the northeast, at the Tyrol province border. Carinthia has mines (lead, zinc, iron, and lignite) and well-developed farms (especially in the fertile Draava, or Drau, plain). Manufactures of the province include forest products, construction materials, chemicals, and metal goods. There is also an active tourist trade, particularly along the Wörther See, a lake near Klagenfurt. In 976, Carinthia, which then included Istria, Carniola, and Styria, was detached from BAVARIA and made an independent duchy. Acquired by Ottocar II of Bohemia in 1269, it fell to RUDOLPH of Hapsburg in 1276 and in 1335 became an Austrian crown land. By the Treaty of Saint-Germain (1919) the province lost some minor territories to Italy and Yugoslavia. The only Austrian province with an appreciable ethnic minority, Carinthia has a Slovene population in the south.

Carinus (Marcus Aurelius Carinus) (kār'inās), d. 285, Roman emperor (283-85). He was the son of CARUS, who left Carinus as ruler in the West when he went to the East on a campaign against the Parthians. On the death of Carus, Carinus succeeded in the West, and his brother Numerianus succeeded in the East. After the murder of Numerianus, DIOCLETIAN was chosen (284) emperor in the East by the soldiers. Carinus set out to defeat the new claimant and met him in battle. At the moment of victory, however, Carinus was murdered by one of his own soldiers, and Diocletian became sole emperor.

Carissimí, Giacomo (jākōmō kārēs'sēmē), 1605-74, Italian composer. Most of his life was spent in Rome, where he wrote chamber cantatas in a style that lasted for over a century. His Latin oratorios, of which *Jephtha* is best known, are among the earliest extant examples of true oratorio. Famous as a teacher, he had among his pupils Alessandro Scarlatti.

Carlén, Emilie Smith Flygare: see FLYGARE-CARLEN.
Carleton, Guy, 1st Baron Dorchester, 1724-1808, governor of Quebec and British commander during the American Revolution. He began his service in America in 1758 and distinguished himself in the French and Indian War. After 1766, as lieutenant governor, acting governor, and governor of Quebec, he proved to be a very able administrator. He fostered the QUEBEC ACT of 1774, which brought about better relations between the British and the French Canadians. The loyalty of the French Canadians to the British in the American Revolution was at least

partly the result of the act. On the other hand, it infuriated the colonists in the present United States and helped bring on revolution. When Thomas Gage resigned as commander in chief of British forces in America, the command was divided—Sir Guy Carleton had command in Canada, and Sir William Howe had command farther south. When the American Revolutionaries launched their QUEBEC CAMPAIGN, Carleton had few men and was forced to abandon Montreal, which fell to the forces under Richard Montgomery. Withdrawing to Quebec, Carleton repelled (Dec. 31, 1775) an attack led by Montgomery and Benedict Arnold and withstood a long winter siege. British reinforcements in the spring enabled him to push the American forces out of Canada to Crown Point, which he took in the autumn of 1776. Disagreements with the British colonial secretary, Lord George Germain, led to his being replaced as commander by Gen. John Burgoyne in 1777. Carleton resigned as governor and left Canada in 1778, when he was succeeded by Sir Frederick Haldimand. In Feb. 1782, after the Yorktown campaign had already effectively ended the American Revolution, Carleton replaced Sir Henry Clinton as commander in chief of the British forces. His delicate task was to suspend hostilities, withdraw the forces from the New York and Vermont frontiers, and protect the Loyalists—both those who were emigrating to Canada and those who were attempting to reestablish themselves in their old homes. He was again governor of Quebec from 1786 to 1796. High-principled and able, Carleton was perhaps the most admirable British colonial commander in America in his time. See biography by A. G. Bradley (new ed. 1926; repr. 1966).

Carleton, Will, 1845-1912, American poet, b. Hudson, Mich. He is best known for his sentimental poems of rural life, the most famous being "Over the Hill to the Poorhouse." Among his works are *Farm Ballads* (1873), *Farm Legends* (1875), and *City Ballads* (1885).

Carleton, William, 1794-1869, Irish author. His *Traits and Stories of Irish Peasantry* (5 vol., 1830-33) realistically depicts his own rural youth. This was followed by *Tales of Ireland* (1834), *Fardorougha the Miser* (1839), and *The Black Prophet* (1847). See study by Benedict Kiely (1947).

Carleton College, at Northfield, Minn., coeducational, chartered 1866 by Congregationalists, presently nonsectarian. It was called Northfield College until 1872, when it was renamed for William Carleton, a benefactor.

Carleton University, at Ottawa, Ont., Canada, nonsectarian, coeducational, founded 1942 as Carleton College. It achieved university status in 1957. It has faculties of arts, science, engineering, and graduate studies, and schools of architecture, commerce, journalism, public administration, social work, and international affairs.

Carl XVI Gustaf: see CHARLES XVI GUSTAVUS.

Carlile, Richard (kār'ilē), 1790-1843, English journalist, reformer, and freethinker. For his radical writings and efforts to secure the freedom of the press, he spent over nine years in prison. He republished suppressed works by Thomas Paine, William Hone, and others, brought out his own *Political Liberator* (1817), and while he was imprisoned kept his weekly, the *Republican*, going (1819-26) with the help of his wife and sister. See biography by G. A. Aldred (1923).

Carlisle, Charles Howard, 1st earl of (kār'ilē), 1629-85, English statesman. A member of the prominent HOWARD family, he held various offices under Oliver Cromwell and remained in favor after the Restoration (1660) of Charles II. He was created earl in 1661 and served on several diplomatic missions. From 1677 to 1681 he was governor of Jamaica.

Carlisle, Frederick Howard, 5th earl of, 1748-1825, British statesman. A member of the distinguished Howard family, he went to the American colonies on an unsuccessful peace mission (1778) and served (1780-82) as lord lieutenant of Ireland. In 1798 he was made guardian of Lord Byron, who ridiculed him in the satirical poem *English Bards and Scotch Reviewers* (1809).

Carlisle, county borough (1971 pop. 71,497), county town of Cumberland, NW England, near the junction of the Caldew, Eden, and Petteril rivers. It is an important rail center and manufactures textiles, biscuits, and metal products. There is also an important livestock auction. Carlisle's location was formerly strategic. The Roman camp Luguvallum stood there, near Hadrian's Wall. The site figured prominently in the border warfare between the English and the

Scots during the Middle Ages. Mary Queen of Scots was imprisoned there in 1568. During the ENGLISH CIVIL WAR parliamentarians captured Carlisle. A technical college is in the borough. In 1974, Carlisle became part of the new nonmetropolitan county of Cumbria.

Carlisle (kar'lil', kar'lil'), industrial borough (1970 pop 18,079), seat of Cumberland co., 5 Pa., inc. 1782. Its manufactures include shoes, rugs, and quartz crystals. In the French and Indian War the Forbes (1758) and the Bouquet (1763) expeditions were organized there. A munitions depot during the Revolution, Carlisle was a headquarters for Washington during the WHISKEY REBELLION in 1794. Molly Pitcher is buried in the Old Graveyard there. The borough was a stop on the Underground Railroad and was attacked during the Civil War by Gen. Fitzhugh Lee. Carlisle is the seat of a U.S. Army War College and Dickinson College. The Carlisle Indian School, founded in 1879 by R. H. Pratt, was there.

Carlisle Indian School, in Carlisle, Pa., the first Federally supported school for Indians to be established off a reservation, it was founded in 1879 by Richard Henry Pratt. Its football team, led by Jim Thorpe and coached by Glenn Warner, brought the school nationwide attention. Pratt, who strenuously opposed the Indian Bureau's efforts to establish schools closer to the reservations, was relieved of his superintendency in 1904. The school was closed in 1918.

Carlists, partisans of Don CARLOS (1788-1855) and his successors, who claimed the Spanish throne under the SALIC LAW of succession, introduced (1713) by Philip V. The law (forced on Philip by the War of the Spanish Succession to avoid a union of the French and Spanish crowns) was abrogated by Ferdinand VII in favor of his daughter, who succeeded him (1833) as ISABELLA II. Ferdinand's brother, Don Carlos, refused to recognize Isabella and claimed the throne. A civil war followed, and in the hope of autonomy, most of the Basque Provs. and much of Catalonia supported Carlos. The Carlists' conservative and clericalist tendencies gave the dynastic conflict a political character, since the upper middle classes profited from the sale of church lands and supported Isabella. In 1839 the Carlist commander Rafael Maroto yielded, but in Catalonia the Carlists under Ramon CABRERA continued the struggle until 1840. After the failure of a peace plan that proposed marriage between Isabella and Don Carlos's son, Don Carlos, conde de Montemolin (1818-61), the latter made an unsuccessful attempt at an uprising in 1860. Montemolin's claims were revived by his nephew, Don Carlos, duque de Madrid (1848-1909), after the deposition (1868) of Isabella. Two insurrections (1869, 1872) failed, but after the abdication (1873) of King AMADEUS and the proclamation of the first republic, the Carlists seized most of the Basque Provs. and parts of Catalonia, Aragon, and Valencia. The ensuing chaos and brutal warfare ended in 1876, over a year after ALFONSO XII, son of Isabella, was proclaimed king. Don Carlos escaped to France. In the next half century many defected from Carlist ranks, and several rival groups formed. Pressure against the church by the second republic (1931-39) helped revive Carlism, and the Carlists embraced the Nationalist cause in the Spanish civil war (1936-39). Under the Franco regime Carlism was for many years an obstacle to plans for restoring the main branch of the Bourbon dynasty, but in 1969, Franco overrode Carlist objections and named the Bourbon prince Juan Carlos as his successor. See Edgar Holt, *Carlist Wars in Spain* (1967).

Carloman, d. 880, king of Bavaria, Carinthia, Pannonia, and Moravia (876-80) and of Italy (877-80), son of LOUIS THE GERMAN and father of Arnulf, emperor of the West. He failed (875) to prevent the assumption of the imperial crown by his uncle, Charles II (Charles the Bald). In 879 he was incapacitated by a paralytic stroke and transferred to his brothers the authority to rule. He was the first German king to become king of Italy.

Carloman, 751-71, son of Pepin the Short. He and his brother, CHARLEMAGNE, shared the succession to their father's kingdom. Carloman ruled the southern portion. Attempts to end rivalry between the brothers failed, and when Carloman died Charlemagne seized his domain. Carloman's wife and children went to the court of DESIDERIUS, who, as an enemy of Charlemagne, supported their claims.

Carloman, d. 884, king of the West Franks (France), son of King LOUIS II (Louis the Stammerer). He became joint ruler with his brother LOUIS III in 879. His reign was disturbed by revolts in Burgundy, by the loss (879) of Provence to Boson, count of Arles, and by an invasion of the Normans. He became sole

ruler at his brother's death (882). He was succeeded as French king by Emperor of the West Charles III (Charles the Fat).

Carloman, d. 754, mayor of the palace in the kingdom of AUSTRIA after the death (741) of his father, Charles Martel. Ruling with his brother, PEPIN THE SHORT, he carried on successful wars against the dukes of Aquitaine, the Saxons, the Swabians, and the Bavarians. The brothers helped St. Boniface reform the Frankish Church, bringing church and state into closer relationship. In 747, Carloman retired to a monastery.

Carlos. For Spanish and Portuguese kings thus named, see CHARLES.

Carlos, 1545-68, prince of the Asturias, son of Philip II of Spain and Maria of Portugal. Don Carlos, who seems to have been mentally unbalanced and subject to fits of homicidal mania, was imprisoned by his father in 1568. When he died shortly afterward, it was rumored (falsely) that Philip had poisoned him. Friedrich von Schiller deliberately idealized his character in his tragedy *Don Carlos*, portraying him as a champion of liberalism, unhappily in love with his stepmother, ELIZABETH OF VALOIS.

Carlos (Carlos María Isidro de Borbon), 1788-1855, second son of Charles IV of Spain. He was the first Carlist pretender. After his father's abdication (1808) he was, with the rest of his family, held a prisoner in France until 1814. A conservative and a devout Catholic, he was supported by the clerical party when he refused to recognize Isabella, daughter of his brother, FERDINAND VII, as successor to the Spanish throne. When his niece became queen (1833) as ISABELLA II, Don Carlos took up arms. Defeated in 1839, he escaped to France and renounced his claim in favor of his son, Don Carlos, conde de Montemolin. See CARLISTS.

Carlotta, Span. *Carlota* (kar'lō'ta), 1840-1927, empress of Mexico, daughter of Leopold I of Belgium, christened Marie Charlotte Amélie. She married MAXIMILIAN, archduke of Austria, on July 27, 1857, and accompanied him when he went to Mexico as emperor (1864). After Napoleon III decided to withdraw the French troops from Mexico and the fate of the empire became apparent, she went to Europe (1866) and sought the aid of Napoleon III and the pope. Her pleas were in vain, and her overwrought mind gave way under the strain. The Mexican empire ended with the execution of Maximilian in 1867, but the unhappy empress survived it by 60 years. See studies by Egon Corti (1928, repr. 1968), Richard O'Connor (1971), and Joan Haslip (1971).

Carlow (kar'lō), county (1971 pop. 34,025), 346 sq mi (896 sq km), SE Republic of Ireland. The chief towns are CARLOW, the county town, 8agenalstown, on the Barrow River, which forms much of the western boundary of the county, and Tullow, on the Slaney River which crosses the county from north to south. The granitic uplands of the Blackstairs Mts. in the southeast are a conspicuous feature in an otherwise fertile lowland region. Wheat, barley, and sugar-beet farming, cattle raising, and dairying are occupations of the region. There are also flour-milling, malting, and sugar-refining industries. Organized as a county in the early 13th cent., Carlow was strategically situated on the southern edge of the English PALE. In the 13th cent. it had palatinate privileges.

Carlow, urban district (1971 pop. 9,384), county town of Co. Carlow, SE Republic of Ireland, on the Barrow River. It is an agricultural market in a dairy region, with sugar refining, flour milling, brewing, and shoe manufacturing. There are ruins of a 12th-century castle. Carlow is the seat of the Roman Catholic diocese of Kildare and Leighlin. Of strategic importance, it was burned in 1405 and in 1577, in 1798 there was a fierce street battle fought by insurgent United Irishmen. St. Patrick's College for priests opened there in 1798.

Carl Sandburg Home National Historic Site see NATIONAL PARKS AND MONUMENTS (table).

Carlsbad see KARLOVY VARY, Czechoslovakia.

Carlsbad (kar'lz'bād), 1. Resort city (1970 pop. 14,944), San Diego co., S Calif., on the Pacific coast, settled in the 1880s, inc. 1952. It has an electronic industry, machine shops, and a crystal silica quarry. Major agricultural products are tomatoes and flowers, the flower fields in bloom are a tourist attraction. The discovery there of mineral springs with waters identical to those at Carlsbad (Karlový Vary), in Bohemia (now part of Czechoslovakia), led to the settlement and naming of the town. There are two lagoons, one freshwater and one tidewater, and many water sports facilities. La Costa resort spa is there. 2. City (1970 pop. 21,297), seat of Eddy co., SE

N Mex., on the Pecos River, in a grazing and irrigated farm area, settled 1888, inc. 1918. Great quantities of potash are mined and refined there. Other industries include agriculture, ranching, and tourism. The climate is mild, and two dammed lakes within the city provide water recreation. The Carlsbad reclamation project, begun in 1906, serves more than 20,000 acres (8,094 hectares). A two-year branch of New Mexico State Univ. is located in Carlsbad. There is a state zoological and botanical park on the city's outskirts, and Carlsbad Caverns National Park is nearby.

Carlsbad Caverns National Park, 46,753 acres (18,921 hectares), SE N Mex., in the Guadalupe Mts., est. as a national park 1930. These limestone caves, with remarkable stalactite and stalagmite formations and huge chambers, began forming 60 million years ago as groundwater started dissolving the rock. The caverns, among the largest in the world, were discovered c. 1900 and still have not been completely explored. The temperature of the caves remains constant at 56°F (13.3°C). Seven miles (11.3 km) of trail are electrically lighted. The Big Room, 754 ft (230 m) below the surface, is the most majestic of the many chambers, its perimeter is c. 1¼ mi (2 km) long. Each evening during the spring, summer and fall, the countless bats that inhabit the cave swarm out to feed on insects.

Carlsbad Decrees, 1819, resolutions adopted by the ministers of German states at a conference at Carlsbad that was convened and dominated by Prince METTERNICH following the murder of August von KOTZEBUE by a student. The decrees provided for uniform press censorship and close supervision of the universities, with the aim of suppressing all liberal agitation against the conservative governments of Germany, particularly by the student organizations (see BÜRSCHENSCHAFT). The resolutions, ratified by the diet of the German Confederation, remained in force until 1848.

Carlskrona: see KARLSKRONA, Sweden.

Carlson, Evans Fordyce, 1896-1947, U.S. marine officer, b. Delaware co., N.Y. Enlisting at 16 in the army, he served in the Philippines and Hawaii and in France during World War I. In the U.S. marine corps after 1922, he saw service in Cuba, Nicaragua, Japan, and especially China, where in 1937 he studied guerrilla warfare intensively. Angered by censorship of his reports, he resigned, but in 1941 he applied for recommissioning. During World War II he organized and commanded Carlson's Raiders, a guerrilla unit that achieved fame by its raids on Makin Island (Aug., 1942) and Guadalcanal (Nov., 1942). In 1946 he was promoted to brigadier general and retired from service. He wrote *The Chinese Army* (1940) and *Twin Stars of China* (1940). See biography by Michael Blackford (1947).

Carlstadt, Karlstadt (both kar'l'shtat), or **Karolstadt** (ka'rōlō'shtat'), c. 1480-1541, German Protestant reformer, whose original name was Andreas Rudolph Bodenstern. As early as 1516, Carlstadt presented theses denying free will and asserting the doctrine of salvation by grace alone. In 1518 he supported Luther against the attacks of Johann Maier von Eck by maintaining the supremacy of Scripture and in 1519 he appeared with Luther against Eck in the public disputation at Leipzig. He soon became known as the most extreme of the Wittenberg reformers. During Luther's stay at the Wartburg (1521-22) he became the leader at Wittenberg and began to put his radical beliefs into effect. His extreme spiritualization of religion tended to undermine the importance of the church and the sacraments. Upon his return Luther accused Carlstadt of betrayal and restored the more orthodox practices. Accused of revolutionary political activity he fled to Switzerland where he was protected by the Zurich preachers and became professor of theology at Basel.

Carlton Club, British political and social club (founded 1832). Located in London, it was long the center of the Conservative party organization. Since World War II the club has been primarily social. See study by Sir C. A. Petrie (1955).

Carlyle, Jane Baillie Welsh, 1801-66, English woman of letters, wife of Thomas Carlyle, whom she married in 1826. She possessed a genius for letter writing, manifest in the volumes of her published correspondence (1883, 1924, 1931). See edition of her letters by Trudy Bliss (1950), biography by E. A. Drew (1928, repr. 1973), study by Lawrence Hanson (1952).

Carlyle, Thomas, 1795-1881, English author, b. Scotland. He studied (1809-14) at the Univ. of Edinburgh, intending to enter the ministry, but left when his doubts became too strong. He taught mathemat-

ics before returning to Edinburgh in 1818 to study law. However, law gave way to reading in German literature. He was strongly influenced by Goethe and the transcendental philosophers and wrote several works interpreting German romantic thought, including a *Life of Schiller* (1825) and a translation (1824) of Goethe's *Wilhelm Meister*. In 1826 he married Jane Baillie Welsh, a well-informed and ambitious woman who did much to further his career. They moved to Jane's farm at Craigenputtock in 1828. There he wrote *Sartor Resartus* (published 1833-34 in *Fraser's Magazine*), in which he told his spiritual autobiography. He saw the material world as mere clothing for the spiritual one. The God of his beliefs was an immanent and friendly ruler of an orderly universe. In denying corporeal reality, Carlyle reflected his revulsion from the materialism of the age. In 1832, Ralph Waldo Emerson went to Craigenputtock, and began a friendship with Carlyle that was continued in their famous correspondence. In 1834 the Carlyles moved to London to be near necessary works of reference for the projected *French Revolution*. Finally completed in 1837 (the first volume had been accidentally burned in 1835), the book was received with great acclaim. Although it vividly re-creates scenes of the Revolution, it is not a factual account but a poetic rendering of an event in history. Carlyle extended his view of the divinity of man, particularly in his portraits of the great leaders of the Revolution. In subsequent works he attacked laissez-faire theory and parliamentary government and affirmed his belief in the necessity for strong, paternalistic government. He was convinced that society does change, but that it must do so intelligently, directed by its best men, its "heroes." His lectures, published as *On Heroes, Hero-Worship, and The Heroic in History* (1841), express his view that the great men of the past have intuitively shaped destiny and have been the spiritual leaders of the world. His other works expanded his ideas—*Chartism* (1840), *Past and Present* (1843), contrasting the disorder of modern society with the feudal order of 12th-century England, *Oliver Cromwell's Letters and Speeches* (1845), *Latter-Day Pamphlets* (1850), *Life of John Sterling* (1851), and a massive biography of a hero-king, Frederick the Great, on which he spent the years 1852-65. In 1866 his wife died, and the loss saddened the rest of his life. One of the most important social critics of his day, Carlyle influenced many men of the younger generation, among them Matthew Arnold and Ruskin. His style, one of the most tortuous yet effective in English literature, was a compound of biblical phrases, colloquialisms, Teutonic twists, and his own coinings, arranged in unexpected sequences. See his *Reminiscences* (1881) and numerous collections of his letters and his wife's, biographies by J. A. Froude (4 vol., 1882-84, repr. 1971) and D. A. Wilson (6 vol., 1923-34, repr. 1971, Vol. VI finished by D. W. MacArthur), studies by Emery Neff (1932, repr. 1968), Eric Bentley (1944), Julian Symonds (1952, repr. 1970), George B. Tennyson (1966), and A. J. LaValley (1968).

Carmagnola, Francesco Bussone da (frānchēs'kō bōōs-sō'nā da karmanyō'la), c. 1380?-1432, Italian condottiere. He fought for Filippo Maria Visconti, duke of Milan, in his wars against Florence and Venice but later fell out with Visconti and entered the service of Venice. After 1425 he commanded Florentine and Venetian forces against Milan. His irresolute conduct of the war led the Venetians to suspect treason, and he was tried and executed.

Carman, Bliss (kar'mən), 1861-1929, Canadian poet, b. Fredericton, N.B. He studied at the universities of New Brunswick and Edinburgh and at Harvard. While at Harvard (1886-88) he began a friendship with Richard Hovey that later resulted in their joint publication of the series *Songs from Vagabondia* (1894, 1896, 1901). Carman's poetry is emotional, optimistic, and impressionistic, filled with vivid, sensuous imagery. Among his numerous volumes of verse are *Behind the Arras* (1895), the series *Pipes of Pan* (1902-5), and *Echoes from Vagabondia* (1912). The best of these and other poems are collected in *Later Poems* (1921) and *Ballads and Lyrics* (1923). His *Talks on Poetry and Life*, lectures on Canadian literature, was published in 1926. See biography by Odell Shepard (1924), study by Donald Stephens (1966).

Carman, Harry James, 1884-1964, American historian and educator, b. Greenfield, Saratoga co., N.Y. He was a grade school teacher and a high school principal before becoming an instructor and then an assistant professor at Syracuse Univ. (1914-17). In 1918 he began teaching at Columbia, where he attained the rank of professor in 1931. From 1925 to

1931 he was assistant to the dean of Columbia College, and from 1943 to 1950 he was dean. He was appointed a member of the Board of Higher Education of New York City in 1938 and served on the New York State Board of Mediation from 1941 to 1955. Among his works are *Social and Economic History of the United States* (2 vol., 1930-34), *Lincoln and the Patronage* (with R. H. Luthin, 1943), *A History of the American People* (with H. C. Syrett, rev. ed. 1962), and *A Short History of New York State* (with others, 1957). He also edited several works concerning early American agriculture, on which he was a leading authority. Jared Eliot's *Essays upon Field Husbandry in New England* (with Rexford G. Tugwell, 1934), *American Husbandry* (1939), and *Jesse Buel, Agricultural Reformer: Selections from His Writings* (1947). Carman was also the editor of a valuable compilation, *A Guide to the Principal Sources for American Civilization, 1800-1900, in the City of New York* (with A. W. Thompson, 2 vol., "Manuscripts," 1960, and "Printed Sources," 1962).

Carmarthen (karmar'thən), municipal borough (1971 pop. 13,072), county town of Carmarthenshire, S. Wales, on the Towy River. It is a port for small vessels, a transportation hub, a cattle market, and a dairy center. In the Middle Ages Carmarthen was an important wool port. Its old castle (now in ruins) was the headquarters of Welsh chieftains. Carmarthen's parish church of St. Peter (14th cent.) is noteworthy. Trinity College is a teacher-training school. Merlin, the wizard of Arthurian legend, was reputedly born in Carmarthen. In 1974, Carmarthen became part of the new nonmetropolitan county of Dyfed.

Carmarthenshire, county (1971 pop. 162,313), 919 sq. mi (2,380 sq. km), S. Wales. The county town is CARMARTHEN. Largest of the Welsh counties, it is hilly, with lower land along the coast of Carmarthen Bay (off the Bristol Channel) and in the fertile valley of the Towy River. The county is generally devoted to agriculture (dairy farming is most important), but part of the great S. Wales coalfield extends into the southeast corner of the county around Llanelly. Metal products, textiles, and lenses are among the manufactured goods. There are remains of prehistoric and Roman settlements. In 1974, Carmarthenshire became part of the new nonmetropolitan county of Dyfed.

Carmathians: see KARMATHIANS

Carmel, Mount [Heb. = garden land], mountain ridge, NW Israel, extending 13 mi (21 km) NW from the plain of Esdraelon to the Mediterranean Sea, where it ends in a promontory marking the southern limit of the Bay of Haifa. Its highest point is 1,792 ft (546 m), and it is one of the most striking physical features of Israel. Long an object of veneration, it was associated in biblical times with the lives of the prophets Elijah and Elisha (Isa. 35:2, Amos 9:3, 1 Kings 18). From the mountainside vineyards comes the renowned Mt. Carmel wine; there are also olive groves. At the foot of Mt. Carmel is the port of Haifa. On its slopes are a Baháist garden shrine, with the tombs of ʿAbd-ʿed-din and of ʿAbdullāh Baha (see BAHÁISM), and a 19th-century Carmelite monastery.

Carmel-by-the-Sea or Carmel (karmēl'), village (1970 pop. 4,525), Monterey co., Calif., at the neck of Monterey peninsula on Carmel Bay, inc. 1916. It is a tourist spot as well as an artists' and writers' community (Jack London and Robinson Jeffers both lived and worked there), art shows and an annual Bach festival are held in the village. The bay, named in 1602 by Carmelite friars in Vizcaino's expedition, is famed for its beauty. Mission San Carlos Borromeo, the burial place of Father Junipero Serra, is nearby.

Carmelites (kar'məlīts), Roman Catholic order of mendicant friars. Originally a group of hermits, apparently European, living on Mt. Carmel, Palestine, their supervision was undertaken (c. 1150) by St. Berthold. In 1238 they moved to Cyprus, and thence to Western Europe. St. Simon Stock (d. 1265), an Englishman, was their second founder. He transformed them into an order of friars resembling Dominicans and Franciscans and founded monasteries at Oxford, Cambridge, Paris, and Bologna. They rapidly became prominent in university life. An enclosed order of Carmelite nuns was established. The Carmelites, like other orders, declined in the 15th cent. They were revived by St. THERESA (of Ávila) and St. JOHN OF THE CROSS in 16th-century Spain. These great contemplatives gave the order a special orientation toward mysticism. Their reformed branch is the Discalced (or Barefoot) Carmelites; it is now more numerous than the Carmelites of the Old Observance. The Discalced Carmelites cultivate the

contemplative life in all aspects, and they have produced many works on mystical theology. St. THERESA (of Lisieux) is a well-known Discalced Carmelite of the 19th cent. In 1790 the first community came to the United States and settled near Port Tobacco, Md. There are presently about 6,900 priests and brothers living in Carmelite communities, with 500 living in the United States. See E. Allison Peers, *Spirit of Flame* (1944, repr. 1961), Peter Rohrbach, *Journey to the Carth* (1966).

Carmen Sylva: see ELIZABETH, queen of Rumania

Carmi (kar'mi): 1. Father of Achan. Joshua 7:1, 18, 1 Chron. 2:7. In spite of textual difficulties this can probably be identified as the Carmi of 1 Chron. 4:1. 2. Reuben's son. Gen. 46:9, Ex. 6:14, Num. 26:6, 1 Chron. 5:3.

Carmichael, uninc. residential city (1970 pop. 37,625), Sacramento co., N. central Calif., on the American River.

carmina burana: see GOLIARDIC SONGS

Carmona, António Oscar de Fragoso (antō'nyō āshkar' dī fragō'sōō karmō'nā), 1869-1951, Portuguese general and political leader. When Gen. Manuel de Oliveira Gomes da Costa overthrew the democratic regime in 1926, Carmona was made foreign minister in the new government. Shortly afterward he deposed Gomes da Costa and served (1926-28) as head of the provisional government. Elected president in 1928, Carmona won (1935, 1942, 1949) each successive election. The regime he established was dictatorial, dominated after 1928 by Antonio de Oliveira SALAZAR.

Carmona (karmō'nā), town (1970 pop. 24,378), Seville prov., SW Spain, in Andalusia. It is a farm center for an area raising cattle, cereals, fruits, and olives. Ferdinand III of Castile took Carmona from the Moors in 1247 after a year-long siege. It has numerous examples of Gothic, Moorish, and baroque architecture, including the imposing ruins of an alcazar. A large Roman necropolis was discovered nearby in 1881.

Carnac (karnak'), town (1968 pop. 3,681), Morbihan dept., NW France, in Brittany, at the foot of the Quiberon peninsula. It is the site of remarkable MEGALITHIC MONUMENTS, particularly the MENHIR. The menhirs, formerly ascribed to the druids, extend along the coast in 11 parallel rows, 1,100 yd (1,006 m) long, some are 20 ft (6.1 m) high. The sea resort of Carnac-Plage is nearby.

Carnaim (kar'nāim): see ASHTEROTH KARNAIM

Carnap, Rudolf, 1891-1970, German-American philosopher. He taught philosophy at the Univ. of Vienna (1926-31), where he became a member of the VIENNA CIRCLE, and at the German Univ. in Prague (1931-35). After going to the United States he taught at the Univ. of Chicago (1936-52) and at the Univ. of California at Los Angeles (1954-62). Carnap was one of the most influential of contemporary philosophers; he is known as a founder of LOGICAL POSITIVISM and made important contributions to logic, semantics, and the philosophy of science. In *Logische Syntax der Sprache* (1934, tr. *The Logical Syntax of Language*, 1937) he defined philosophy as "the logic of the sciences" and considered it a general language whose only legitimate concern could be to describe and criticize the language of the particular sciences. All propositions were held to be either tautological (embodying logical or mathematical systems), scientific (embodying philosophy properly understood), or nonsensical (embodying the non-verifiable propositions of traditional philosophy). Through an analysis of scientific, logical, and mathematical language he revealed the inadequacies of everyday speech. Carnap later modified this extreme view, which rejects almost all of traditional philosophy. His other works include *Introduction to Semantics* (1942), *Meaning and Necessity* (1947, 2d ed. 1956), *Logical Foundations of Probability* (1950), and *Einführung in die symbolische Logik* (1954, tr. *Introduction to Symbolic Logic and its Applications*, 1958). See studies by P. A. Schilpp, ed. (1963) and Richard Butrick (1970).

Carnarvon, George Edward Stanhope Molyneux Herbert, 5th earl of (karnar'vən), 1866-1923, English Egyptologist. With Howard Carter he excavated in the Valley of the Kings in Luxor, Egypt, from 1906 to 1922. The final and most famous of their discoveries was the tomb of Tutankhamen. Lord Carnarvon died before it was thoroughly explored. He collaborated with Howard Carter on the report *Five Years' Explorations at Thebes* (1912).

Carnarvon, Henry Howard Molyneux Herbert, 4th earl of, 1831-90, British statesman. As colonial secretary (1866-67) under the earl of Derby he intro-

duced the British North America Act, which made Canada a confederation. In the same office (1874-78) under Disraeli he was unsuccessful in an attempt to create a federation in South Africa. His policy as lord lieutenant of Ireland (1885-86) was conciliatory but failed to stem Irish nationalism. See correspondence, 1874-1878, ed. by C. W. de Kiewiet (1955), biography by A. H. Hardinge (1925).

Carnatic (karnāt'ik), region, SW India, on the Arabian Sea. The early European settlers sometimes applied the term Carnatic to all of S India. The region was the site of the earliest European settlements in India, those of Portugal. During the 18th cent the Carnatic plains became the arena for the struggle between Great Britain and France for supremacy in India.

carnation· see PINK

carnauba, WAX obtained from the wax palm, or carnauba (*Copernicia cerifera*), of Brazil. It is secreted by the leaves, apparently in defense against the hot winds and droughts of its native habitat, and the resultant coating is removed by drying and flailing. The hardest, highest-melting natural wax known, its many commercial uses include the production of polishes, lubricants, and floor waxes. A similar wax is obtained from the trunk of *Ceroxylon andicola*, the wax palm of the Andes.

Carneades (karnē'adēz), 113-129 B.C., Greek philosopher, b. Cyrene. He studied at Athens under Diogenes the Stoic, but reacted against Stoicism and joined the ACADEMY, where he taught a skepticism similar to that of Pyrrho. While denying the possibility of absolute certainty in knowledge, he held that probable knowledge was available to guide the actions of men. He recognized three degrees of probability, and his work anticipated modern discussions of the nature of empirical knowledge.

Carnegie, Andrew (karnā'gē), 1835-1919, American industrialist and philanthropist, b. Dunfermline, Scotland. His father, a weaver, found it increasingly difficult to get work in Scottish factories and in 1848 brought his family to Allegheny (now Pittsburgh), Pa. Andrew first worked in a cotton mill as a bobbin boy, then advanced himself as a telegrapher, and became (1859) a superintendent for the Pennsylvania RR. He resigned (1865) his railroad position to give personal attention to the investments he had made (1864) in iron manufactures. By 1873 he had recognized America's need for steel and, concentrating on steel production, began his acquisition of firms which were later consolidated into the Carnegie Steel Company. Carnegie's success was due in part to efficient business methods, to his able lieutenants, and to close alliances with railroads. Another factor was his partnership with Henry C. FRICK, Carnegie, concentrating on production rather than stock-market manipulations, further expanded his plants and consolidated his hold in the depression of 1893-97. By 1900 the Carnegie Steel Company was producing one quarter of all the steel in the United States and controlled iron mines, coke ovens, ore ships, and railroads. It was in these circumstances that the U.S. Steel Corp. was formed to buy Carnegie out. He had long been willing to sell—at his own price—and in 1901 he transferred possession for \$250 million in bonds and retired from business. He lived a large part of each year after 1887 in Scotland on his great estate on Dornoch Firth. His essay "The Gospel of Wealth" (1889) set forth his idea that rich men are "trustees" of their wealth and should administer it for the good of the public. Carnegie's benefactions (totaling about \$350 million) included Carnegie Hall (1892) in New York City, the Carnegie Institution of Washington (1902), the Carnegie Hero Fund Commission (1904), the Carnegie Foundation for the Advancement of Teaching (1905), the Carnegie Endowment for International Peace (1910), and over 2,800 libraries. See his autobiography (1920, repr. 1963), biographies by B. J. Hendrick (1932, repr. 1969), A. F. Harlow (1953), and J. F. Wall (1970).

Carnegie, borough (1970 pop. 10,864), Allegheny co., SW Pa., an industrial suburb of Pittsburgh, inc. 1894. A steel town, it also has coal mines and plants making chemicals and electrical equipment. The Neville House was the home of Gen. John Neville, an officer in the French and Indian and Revolutionary Wars. The borough was named for Andrew Carnegie.

Carnegie Corporation of New York, foundation established (1911) to administer Andrew Carnegie's remaining personal fortune for philanthropic purposes. Initially endowed with \$125 million, the foundation received another \$10 million from the residual estate. By 1970 its assets exceeded \$283 mil-

lion. Carnegie directed the foundation's activities until his death in 1919, in accordance with his early interests. He established the policy of grants for free public libraries and church organs. In the years following his death the trustees followed a more general policy leading to "the advancement and diffusion of knowledge and understanding." The foundation has financed many studies in its areas of main interest—U.S. education and underprivileged groups. Since 1917 a small portion of the foundation's income has been used for studies within the British Commonwealth. Andrew Carnegie also established the Carnegie Endowment for International Peace (1910), the Carnegie Foundation for the Advancement of Teaching (1905), and the Carnegie Hero Fund Commission (1904).

Carnegie Institute of Technology: see CARNEGIE-MELLON UNIV.

Carnegie-Mellon University, at Pittsburgh, Pa., est. 1967 through the merger of the Carnegie Institute of Technology (founded 1900, opened 1905) and the Mellon Institute of Industrial Research (founded 1913). The university is made up of six divisions and includes additional facilities for nuclear, computer, and educational research. The university was the first in the United States to offer academic degrees in the field of drama.

carnelian (karnēl'yən) or **cornelian** (kōr-, kar-), variety of red CHALCEDONY, used as a gem. It is distinguished from SARD by the shade of red, carnelian being bright red and sard brownish. The red coloring is apparently caused by iron oxide.

Carniola (karnēō'la), Croatian *Kranj*, historic region, NW Yugoslavia, in Slovenia. The history of this largely mountainous area is closely linked with that of SLOVENIA. The first known inhabitants, a Celtic tribe called the Carni, were displaced by the Romans, who made Carniola part of their province of Pannonia. Slovenes settled Carniola in the 6th cent. Charlemagne later incorporated it into his empire. The region became a march, or margraviate, under Bavarian suzerainty in the 10th cent. and in 1269 was acquired by Bohemia. It passed to the Austrian Hapsburgs in 1282 and was made (1364) a titular duchy. In 1849 its status was raised to a crown land. LJUBLJANA was its chief city. After World War I, Carniola was divided between Italy and Yugoslavia, but the Italian part passed to Yugoslavia in 1947.

Carnion (kar'nēōn)· see ASHTEROH KARNAIM

carnival, communal celebration, especially the religious celebration in Roman Catholic countries that takes place just before LENT. Since early times carnivals have been accompanied by parades, masquerades, pageants, and other forms of revelry that had their origins in pre-Christian pagan rites, particularly fertility rites that were connected with the coming of spring and the rebirth of vegetation. One of the first recorded instances of an annual spring festival is the festival of Osiris in Egypt; it commemorated the renewal of life brought about by the yearly flooding of the Nile. In Athens, during the 6th cent. B.C., a yearly celebration in honor of the god Dionysus featured a float dedicated to him that was wheeled through the city streets to the accompaniment of songs, dances, and ribald merrymaking. This is the first recorded instance of the traditional use of floats for spring festivals. It was during the Roman Empire that carnivals reached an unparalleled peak of civil disorder and licentiousness. Developing out of folk celebrations and the Greek mysteries of Dionysus, the major Roman carnivals were the Bacchanalia, the Saturnalia, and the Lupercalia. In Europe the tradition of spring fertility celebrations persisted well into Christian times, particularly in Teutonic regions, where carnivals reached their peak during the 14th and 15th cent. Because carnivals are deeply rooted in pagan superstitions and the folklore of Europe, the Catholic Church found it impossible to stamp them out and ultimately was driven to the position of having to accept many of them as part of church activity. The immediate consequence of church influence may be seen in the medieval Feast of Fools, which included a mock Mass and a blasphemous impersonation of church officials, and the Feast of the Ass, which retained many pagan rites and was at times very bawdy. Eventually, however, the power of the church made itself felt, and the carnival was stripped of its most offending elements. The church succeeded in dominating the activities of the carnivals, and eventually they became directly related to the coming of Lent. The major celebrations are generally on Shrove Tuesday (see MARDI GRAS), however, in Germany the carnival season, or *Fasching*, begins on the Epiphany (Jan. 6) in Bavaria and on Nov. 11

in the Rhineland. In recent times, the term *carnival* has also been loosely applied to include local festivals, traveling circuses, bazaars, and other celebrations of a joyous nature, regardless of their purpose or their season.

carnivore (kar'nāvōr'), term commonly applied to any animal whose diet consists wholly or largely of animal matter. In animal systematics it refers to members of the mammalian order Carnivora (see CHORDATA). This large order is divided into two suborders, the Fissipedia, or land carnivores, and the Pinnipedia, or fin-footed carnivores. The Fissipedia encompasses two superfamilies: one (Canioidea) includes the DOG, BEAR, RACCOON, and WEASEL families and the other (Feloidea) includes the CAT, CIVET, and HYENA families. The Pinnipedia, often classified as a separate order, includes the SEAL, SEA LION, and WALRUS families. The term *herbivore* refers to animals whose diets consist wholly or largely of plant matter, *omnivore* refers to animals that eat both animal and plant matter. Unlike the term *carnivore*, these terms do not refer to any one group in animal systematics.

carnivorous plants· see BLADDERWORT, PITCHER PLANT, VENUS'S FLYTRAP

Carnot, Hippolyte (ēpōlēt' karnō'), 1801-88, French statesman, son of Lazare Carnot. He shared his father's exile after 1815 and returned to France in 1823. A follower of Claude Henri de SAINT-SIMON, he participated in the July Revolution of 1830. He came to oppose the July Monarchy and was elected three times as an opposition member of the chamber of deputies. He took part in the radical agitation that led to the February Revolution of 1848 and became minister of education in the provisional government. Entering (1864) the *corps législatif*, he joined the liberal opposition to Emperor Napoleon III, after whose downfall he became a member of the constituent assembly (1871) and then a senator for life (1875).

Carnot, Lazare Nicolas Marguerite (lazar' nekōlā' margarēt'), 1753-1823, French revolutionary, known as the organizer of victory for his role in the FRENCH REVOLUTIONARY WARS. A military engineer by training, Carnot became the military genius of the Revolution and was chiefly responsible for the success of the French in the wars. A member of the Legislative Assembly, the Convention, and the Committee of Public Safety, he made himself almost indispensable through his military knowledge. After the fall of Maximilien Robespierre, who was primarily responsible for the Reign of Terror, Carnot managed to avoid punishment for his own part in the Terror and became a member of the DIRECTORY. He was ousted from the Directory in the coup d'état of 18 Fructidor (Sept., 1797) and fled abroad. He returned in 1799 and served as minister of war (1800) and in the tribunate under Napoleon Bonaparte (NAPOLEON I). In the next few years he wrote several works on mathematics and military engineering; in 1810 appeared his masterpiece, *De la défense des places fortes*, long considered the classic work on fortification. Carnot was the best-known advocate of the principle of active defense. In 1814 he returned to active service and conducted the defense of Antwerp. In the Hundred Days he served as minister of the interior. Exiled after the restoration of the monarchy, he died in Magdeburg, Prussia. See biographies by Huntley Dupre (1940) and Marcel Reinhard (2 vol., 1950-52, in French).

Carnot, Nicolas Léonard Sadi (nekōlā' lāōnār' sadē'), 1796-1832, French physicist, a founder of modern thermodynamics, son of Lazare N. M. Carnot. His famous work on the motive power of heat (*Reflexions sur la puissance motrice du feu*, 1824) is concerned with the relation between heat and mechanical energy. Carnot devised an ideal engine in which a gas is allowed to expand to do work, absorbing heat in the process, and is expanded again without transfer of heat but with a temperature drop. The gas is then compressed, heat being given off, and finally it is returned to its original condition by another compression, accompanied by a rise in temperature. This series of operations, known as Carnot's cycle, shows that even under ideal conditions a heat engine cannot convert into mechanical energy all the heat energy supplied to it, some of the heat energy must be rejected. This is an illustration of the second law of thermodynamics. Carnot's work anticipated that of Joule, Kelvin, and others.

Carnot, Sadi (sadē'), 1837-94, French statesman, president of the Third Republic (1887-94), son of Hippolyte Carnot. As minister of public works (1880-85) and of finance (1886), he remained untainted by the financial scandals of the time. He

succeeded Jules Grevy in the presidency, his tenure was disturbed by the agitation for General BOULANGER and by the Panama Canal scandal, concerning bribery of public officials. He was assassinated by an Italian anarchist. Jean Paul Pierre Casimir-Perier succeeded him.

Carnovsky, Morris (karnöv'skē), 1897-, American actor, b. St. Louis, Mo. After his New York City debut in *The God of Vengeance* (1922), he joined the Theatre Guild and later performed with The Group Theatre, of which he was a founding member. He worked as an actor and director for the Actors Laboratory Theatre in Hollywood (1945-50). Carnovsky has concentrated on Shakespearean roles since his first appearance at Stratford, Conn., in 1956. His films include *Cyrano de Bergerac* (1951).

Caro, Annibale (an-nē'balā ka'rō), 1507-66, Italian poet, friend of Cellini, Varchi, and Bembo. He is best known for his translation of the *Aeneid*, for his poems in praise of opposing royal houses, and for his letters, which were among the finest of his age.

Caro or Karo, Joseph ben Ephraim (ka'rō), 1488-1575, eminent Jewish codifier of law, b. Toledo, Spain. He left Spain as a child when the Jews were expelled (1492) and finally settled in Safed, Palestine. His literary works rank among the masterpieces of rabbinical literature. Chief among them are the *Beṭ Yosef* [house of Joseph] and *Shulhan Aruk* [the table set], parts of which are still used as the authoritative code for Orthodox religious and legal disputes. This code owes its fame and popularity as much to the opposition it aroused and the many commentaries it inspired as it does to its merits. Caro was also a noted cabalist (see CABALA) who claimed to have had heavenly visitations. He recorded much of this in a diary later edited to appear as a commentary on the Pentateuch (*Maggid Mesharim*, 1646). See study by R. J. Werblowsky (1962).

carob (kār'ab), leguminous evergreen tree (*Ceratonia siliqua*) of the family Leguminosae (PULSE family), native to Mediterranean regions but cultivated in other warm climates, including Florida and California. The large red pods have been used for food for animal and man since prehistoric times. The pods and their extracted content have numerous common names, e.g., locust bean gum and St. John's-bread—the latter from the belief that they may have been the "locust" eaten by John the Baptist in the wilderness (Mark 1:6). Carob is used also for curing tobacco, in papermaking, and as a stabilizer in food products. It has been claimed that the seeds were the original of the carat, the measure of weight for precious jewels and metals. Carob is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Rosales, family Leguminosae.

Carol I, 1839-1914, prince (1866-81) and first king (1881-1914) of Rumania, of the house of Hohenzollern-Sigmaringen. He is also called Charles I. A Prussian officer, he was elected to succeed the deposed Alexander John Cuza as prince of Rumania. He reformed the Rumanian constitution and laid the groundwork for the country's monetary system, military organization, and railroad network. Exploitation of Rumanian oil fields began in his reign. Economic development, however, did not improve the lot of the peasants, and an uprising in 1907 was cruelly suppressed. Carol sided with Russia in the Russo-Turkish War of 1877-78 and obtained at the Congress of Berlin (see BERLIN, CONGRESS OF) full independence for Rumania, which he declared a kingdom in 1881. Carol's wife was Princess ELIZABETH of Wied. He was succeeded by his nephew Ferdinand.

Carol II, 1893-1953, king of Rumania, son of King Ferdinand and Queen Marie. While crown prince, he contracted amorganatic marriage with Zizi La-brino but divorced her to marry (1921) Princess Helen of Greece. He soon formed a liaison with Magda Lupescu, with whom he lived in Paris after being forced (1925) to renounce his right of succession. On the death (1927) of King Ferdinand, Carol's son MICHAEL became king, but Carol, having divorced Queen Helen in 1928, returned to Rumania in 1930, supplanted his son, and had himself proclaimed king de jure since 1927. A turbulent period began (see RUMANIA). In 1938, Carol formed a royal dictatorship. A contest between the king and the fascist IRON GUARD ensued, with assassinations and massacres on both sides. Forced to call on Ion ANTONESCU to form a government (1940), Carol was deposed and fled abroad with Lupescu, whom he finally married in Brazil in 1947. Michael once more became king. Carol died in Portugal.

carol, popular hymn, of joyful nature, in celebration of an occasion such as May Day, Easter, or Christ-

mas. The earliest English carols date from the 15th cent. The carol is characterized by simplicity of thought and expression. Many are thought to be adaptations of pagan songs. Despite the folk-song character of true carols, many Christmas hymns composed in the 19th cent. have been called carols. The oldest printed carol is the *Boar's Head Carol*, printed in 1521 by Wynkyn de Worde. Carols of French origin are called noels. See W. J. Phillips, *Carols, Their Origins, Music and Connection with Mystery-Plays* (1921), R. L. Greene, *The Early English Carols* (1935), Percy Dearmer et al., ed., *The Oxford Book of Carols* (1928, repr. 1964), Edmonstone Duncan, *The Story of the Carol* (1911, repr. 1968).

Carol City, uninc. residential city (1970 pop. 27,361), Dade co., SE Fla., between Miami and Fort Lauderdale and near the Atlantic Ocean.

Carolina campaign, 1780-81, of the American Revolution. After Sir Henry Clinton had captured CHARLESTON, he returned to New York, leaving a British force under Cornwallis to subordinate the Carolinas to British control. Cornwallis swept north and capped his success in the battle of Camden on Aug. 16, 1780. The American force was completely routed, the gallant Baron de Kalb was mortally wounded, and the American commander, Horatio Gates, fled from the field, outdistancing officers and men in retreat. Patriot defense was broken in the Carolinas, where only the swift and secretly moving guerrilla bands of Francis Marion, Thomas Sumter, and Andrew Pickens harassed the invaders. The American cause spurred upward, however, with the remarkable battle of Kings Mt. (Oct. 7, 1780), where bands of frontier riflemen under Isaac Shelby, John Sevier, and William Campbell surrounded a British raiding party under Patrick Ferguson, the British commander fell, and his men surrendered. This victory prefaced the campaign fought in North Carolina by Gen. Nathaniel Greene (who had been appointed to succeed Gates) and his lieutenants, notably Light-Horse Harry Lee and Daniel Morgan. It was Morgan who at the head of a raiding party met and all but annihilated Cornwallis's raiders under Banastre Tarleton at Cowpens (Jan. 17, 1781). Cornwallis pushed north and at Guilford Court-house (March 15, 1781) won a Pyrrhic victory over Greene, the British had technically won but had to retreat to British-held Wilmington, N.C., and then to Virginia. Greene then joined the guerrilla leaders in freeing South Carolina. Again the Americans were defeated—by Lord Rawdon at Hobkirk's Hill (April 25, 1781) and by Col. Alexander Stewart at Eutaw Springs (Sept. 8, 1781)—and again the British had to retreat, returning to Charleston. The campaign was a British failure and was, moreover, a triumph for the patriots because it set the stage for the YORKTOWN CAMPAIGN.

Carolina parakeet, small, long-tailed bird, *Canopus carolinensis*, now believed extinct. The Carolina parakeet was the northernmost representative of the parrot family. It had green plumage with a yellow head and orange cheek patches and forehead. The largest specimens were 13 in. (33 cm) in length, including the tail feathers. It was formerly distributed throughout the SE United States, as far north as Virginia and as far west as Texas, the last specimens were seen in S Florida early in the 20th cent. A fruit eater, the Carolina parakeet was an agricultural pest and was therefore exterminated by farmers. It is classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Psittaciformes, family Psittacidae. See PARAKEET.

Caroline, Fort: see FORT CAROLINE

Caroline Affair. In 1837 a group of men led by William Lyon MACKENZIE rebelled in Upper Canada (now Ontario), demanding a more democratic government. There was much sympathy for their cause in the United States, and a small steamer, the *Caroline*, owned by U.S. citizens, carried men and supplies from the U.S. side of the Niagara river to the Canadian rebels on Navy Island just above Niagara Falls. On the night of Dec. 29, 1837, a small group of British and Canadians loyal to the Upper Canadian government crossed the river to the U.S. side where the *Caroline* was moored, loosed her, set fire to her, and sent her over the falls. One American was killed in the incident. Americans on the border were aroused to intense anti-British feeling, and soldiers under Gen. Winfield Scott were rushed to the scene to prevent violent American action. The affair passed over, though it had an aftermath, when one of the men who had taken part in the attack boasted of that fact when he was in the United States and was arrested as a criminal. That matter, too, was smoothed over, but the Caroline Affair and the

Aroostook War helped to make relations with Great Britain very tense in the years before the Webster-Ashburton Treaty.

Caroline Islands, archipelago (1969 est. pop. 66,900), c. 830 sq. mi. (2,150 sq. km), W. Pacific, just north of the equator, included in 1947 in the U.S. Trust Territory of the Pacific Islands (see PACIFIC ISLANDS, TRUST TERRITORY OF THE) under United Nations trusteeship. The Caroline Islands include four of the Trust Territory's six administrative districts: PALAU, YAP, TRUK, and PONAPE. The islands are fertile and rich in minerals. There are deposits of phosphate, guano, bauxite, and iron, coconuts, sugarcane, and tapioca are produced. The chief exports are dried bonito, copra, and tapioca. Most of the inhabitants are Micronesians, but in the eastern islands there are some Polynesians. There is evidence of Chinese contact with the western islands in the 7th cent. A.D. The first Europeans to visit the Carolines were the Spanish in 1526, but the islands did not come under Spain's control until 1886. After the Spanish-American War the islands were sold (1899) to Germany. They were occupied in 1914 by the Japanese, who in 1920 were given a League of Nations mandate over them. Annexed to Japan in 1935, the islands were heavily bombed prior to American occupation during World War II.

Caroline of Ansbach (ans'bak), 1683-1737, queen consort of GEORGE II of England, daughter of the margrave of Brandenburg-Ansbach. She married George in 1705 while he was electoral prince of Hanover and bore him three sons and five daughters. After his accession (1727) she gave active support to Sir Robert WALPOLE. Her political influence over the king lasted until her death. See biographies by R. L. Arkell (1939) and Peter Quennell (1940).

Caroline of Brunswick, 1768-1821, consort of GEORGE IV of England. The daughter of Charles William Ferdinand, duke of Brunswick, she married George (then prince of Wales) in 1795. She bore him one daughter, but the couple separated in 1796 and Caroline, deprived of her child, lived in retirement. An accusation that she had borne an illegitimate child occasioned a commission of inquiry (1806), which found her innocent but imprudent. Caroline went abroad in 1814, but when George became king in 1820 she returned to claim her rights as queen. The government immediately instituted proceedings against her in the House of Lords for divorce on the grounds of adultery. Caroline was probably guilty of the charge, but her persecution by a profligate husband aroused popular sympathy for her and the bill was dropped. See biographies by Joanna Richardson (1960) and E. F. L. Russell (1967), Roger Fulford, *The Trial of Queen Caroline* (1967).

Carolingian architecture and art. In the 8th cent. a gradual change appeared in Western culture and art, reaching its apex under CHARLEMAGNE. The new architecture, inspired by the forms of antiquity, abandoned the small boxlike shapes of the Merovingian period and used instead spacious basilicas often intersected by vast transepts. In some churches, such as Fulda and Cologne, the central nave ended in semicircular apses. An innovation of Carolingian builders, which was to be of incalculable importance for the later Middle Ages, was the emphasis given to the western extremity of the church. The facade, flanked symmetrically by towers, or simply the exterior of a massive complex (westwork), became the focal point of the structure. The function of the westwork is still debated. It had an elevation of several stories, the lowest a vaulted vestibule to the church proper, and above, a room reached by spiral staircases, which may have served as a chapel reserved for high dignitaries. The outstanding structure of the Carolingian period still in existence is the palatine chapel at Aachen, dedicated by Pope Leo III in the year 805. It is centralized in plan and surmounted by an octagonal dome. The throne of the emperor stood overlooking the central space within an upper gallery, which could be reached directly from the imperial apartments. The design of the palatine chapel appears to have been based in part on the 5th-century Church of San Vitale in Ravenna. Other important structures still partly preserved, or known through documentary evidence, include the churches of Saint-Denis, Corbie, Centula (Saint-Riquier), and Reichenau. The best-preserved artistic achievements of the age are works of small dimensions—manuscript illumination, ivory carving, and metalwork. Besides the imperial court, at Aachen, the leading centers of art were the monasteries in Tours, Metz, Saint-Denis, and near Rheims. The earliest liturgical manuscripts of the Carolingian period, such as the Gospel book

signed by the scribe Godescalc (written between 781 and 783), are characterized by a tentative and not always successful fusion of ornamental motifs of chiefly Anglo-Saxon and Irish origin and by figures derived from antiquity. Full-page portraits of the four evangelists were often designed. Later Carolingian miniatures show an increasing familiarity with the heritage of late antiquity and in some instances are perhaps influenced by Byzantine art. The manuscripts owe much of their beauty to the new minuscule form of writing, remarkable for its clarity and form. The most-influential work was the Utrecht Psalter, illustrated in a mode of nervous and flickering intensity quite unparalleled in earlier Western art. Closely allied in style to the miniatures were the ivory carvings, many of them originally part of book covers. Metalwork objects are rarer, although literary evidence shows that goldsmiths and enamel workers were active. The large golden altar of Sant' Ambrogio in Milan (executed in 835), the portable altar of Arnulf (now in Munich), several splendid book covers, and other sumptuously decorated objects provide insight into the artistic accomplishments of the period, which ended in the late 9th cent. See A. K. Porter, *Medieval Architecture: Its Origin and Development* (2 vol., 1909, 1912, repr. 1969), Adolph Goldschmidt, *German Illumination* (Vol. 1. *Carolingian Period*, 1928, repr. 1969), Roger Hinks, *Carolingian Art* (1935, repr. 1962), Howard Saalman, *Medieval Architecture* (1962).

Carolingians (kārālīn'jēanz), dynasty of Frankish rulers, founded in the 7th cent. by PÉPIN OF LANDEN, who, as mayor of the palace, ruled the East Frankish Kingdom of Austrasia for Dagobert I. His descendants, PÉPIN OF HERISTAL, CHARLES MARTEL, CARLOMAN, and PÉPIN THE SHORT, continued to govern the territories under the nominal kingship of the MEROVINGIANS. In 751, PÉPIN the Short deposed the last Merovingian king, Childeric III, and became sole Frankish king. The family was at its height under PÉPIN's son, CHARLEMAGNE, who was crowned emperor of the West in 800. His empire was divided by the Treaty of Verdun (843) after the death of his son, Emperor LOUIS I, among Louis's three sons: LOTHAR I inherited the imperial title and the middle part of the empire; LOUIS THE GERMAN founded a dynasty that ruled in Germany (kingdom of the East Franks) until 911, his successors being CHARLES III (Charles the Fat), ARNULF, and LOUIS THE CHILD. The third son of Louis I, CHARLES II (Charles the Bald), founded the French Carolingian dynasty, which ruled, with interruptions, until 987. Its rulers were LOUIS II (Louis the Stammerer), LOUIS III, CARLOMAN, CHARLES III (Charles the Simple), LOUIS IV (Louis d'Outremer), LOTHAR (941-86), and LOUIS V. In the Carolingian period feudal principles were formulated, and a landed economy was firmly established. The kings and emperors worked closely with church officials; Charlemagne became the pope's protector. See Heinrich Fichtenau, *The Carolingian Empire* (1949, tr. 1957, repr. 1965), E. S. Duckett, *Carolingian Portraits* (1962, repr. 1969), F. L. Ganshof, *The Carolingians and the Frankish Monarchy* (tr. 1971).

Carolus-Duran (karólus'-duran'), 1837-1917, French painter whose original name was Charles Auguste Émile Durand. He was influenced by Courbet and studied in Lille and Paris. In 1861 he won a pension and traveled in Italy and Spain. Best known as the teacher of many famous painters (including Sargent), he became the director of the Académie de France at Rome in 1905. The Louvre has many of his portraits. His study of Mrs. William Astor is in the Metropolitan Museum.

Carondelet, Francisco Luis Hector, baron de (franthēs'kō lōōēs' ēktōr' barōn' dā karōndālēt'), c. 1748-1807, governor of Louisiana (1791-97) and West Florida (1791-95), b. Noyelles, Flanders. He married into the Las Casas family, prominent in Spanish colonial affairs. He came to New Orleans from the governorship of Salvador and was unfortunately not well informed about Louisiana problems. Ignorant of the English language and local customs, and faced with conflicting rumors of American hostility, he became convinced in 1792 that the Americans were planning to invade Louisiana. With unwarranted aggressiveness, he stirred up the Indians of the Southwest, concluding an alliance with four great tribes and establishing Spanish posts in their territory. He revived intrigues with Kentucky frontiersmen looking toward the establishment of an independent state in the West. Relations between Spain and the United States were severely taxed. After Carondelet was replaced by Manuel Gayoso de Lemos, he was made president of the audiencia and governor general of Quito (1799-1807). See A. P.

Whitaker, *The Spanish-American Frontier, 1783-1795* (1927, repr. 1969).

Carossa, Hans (hāns karōs'a), 1878-1956, German poet and novelist. His autobiographical novel *Childhood* (1922, tr. 1930) and its sequels (1928, 1941) are noted for clear, graceful style. *Führung und Geleit* [guidance and companionship] (1933) contains warm vignettes of his literary mentors and friends, among them Mann, Rilke, and Hesse. Other works are *A Roumanian Diary* (1924, tr. 1929), the novel *Doctor Gion* (1931, tr. 1933), and volumes of poems (1938, 1949).

carotene, organic compound composed of carbon and hydrogen and found as an accessory pigment in many higher plants, particularly carrots, sweet potatoes, and leafy vegetables. Carotene is thought to assist in trapping light energy for photosynthesis or to aid in chemical reduction. It is important in animal biology as the main dietary source of vitamin A (see VITAMIN), which is produced by splitting one molecule of carotene into two molecules of vitamin A. Carotene that is thus converted is called provitamin A. This reaction occurs in either the liver or intestinal wall. The absorption of dietary carotene is dependent on the action of bile and is greatly decreased by the presence of mineral oil. Its absorption is less efficient than that of vitamin A. Margarine is sometimes artificially colored by the addition of carotene.

Carothers, Wallace Hume, 1896-1937, American chemist, b. Burlington, Iowa. He received his doctorate at the Univ. of Illinois in 1924, teaching there for the next two years as instructor in organic chemistry. Carothers then took a similar post at Harvard. In 1928 he was made head of the research group in organic chemistry of the E. I. du Pont de Nemours company in Wilmington, Delaware. His work there on compounds of high molecular weight led to the discovery of the first synthetic rubber, neoprene. While with du Pont, he also investigated the physical and chemical properties of polyamides, showing that these compounds could be melt-spun into fibers or made into transparent film. This work resulted in the discovery of nylon.

Carouge (karōōzh'), city (1970 pop. 14,055), Geneva canton, SW Switzerland, on the Arve River. It is an industrial center. Carouge was chartered in 1786 by King Victor Amadeus III of Sardinia and was joined to Geneva canton in 1816.

carp, hardy freshwater fish, *Cyprinus carpio*, the largest member of the MINNOW family. A native of Asia, the carp was introduced into Europe and America and has become so well established that it is called the English sparrow of the fishes. Many variations in color and form have developed. Carp have four barbels ("whiskers") around the mouth and are usually dark greenish or brown (occasionally yellowish or silvery), with red on some of the fins. Most carp are scaled, although the mirror carp has only a few scattered scales and the leather carp has none. Carp may reach a length of 3 ft (91 cm) and a weight of 25 lbs (11.3 kg). They are bottom feeders, eating chiefly aquatic plants but also insects and small animals, their habit of rooting in the mud often makes the water unfit for the feeding and spawning of other fishes. However, they are valued commercially as food fish, especially in Europe, where they are sometimes bred and raised for this purpose. Ornamental varieties are bred in Japan. Carp are classified in the phylum CHORDATA, class Osteichthyes, order Cypriniformes, family Cyprinidae.

Carpaccio, Vittore (vēt-tō'rā karpat'chō), c. 1450-1522, Venetian painter, influenced by Gentile and Giovanni Bellini. His delightful narrative paintings reflect the pageantry of 15th-century Venice. They also offer a fanciful view of the Orient, gained through contemporary drawings. His style is notable for its rich color, luminosity, and wealth of detail. Among his best paintings are the cycle depicting the life of St. Ursula, the St. George series, the *Presentation in the Temple* (all Academy, Venice), scenes from the life of St. Stephen (Louvre, Brera, Milan), *Meditation on the Passion* (Metropolitan Mus.), *Saint Washing* and other works (National Gall. of Art, Washington, D.C.). See T. Pignatti's *Carpaccio* (1958).

Carpathians (karpā'thēanz) or **Carpathian Mountains**, Czech, Pol., and Ukr. *Karpaty*, Rum. *Carpații*, major mountain system of central and E Europe, extending c. 930 mi (1,500 km) along the north and east sides of the Danubian plain. The geologically young mountains, part of the main European chain, link the Alps with the Balkans. The Carpathians begin in SE Czechoslovakia and extend NE to the Polish-Czechoslovak border. There the Northern Carpathians,

comprising the Beskids and the Tatras, run east along the border, then SE through the W Ukraine, USSR, in Rumania they are continued by the Transylvanian Alps (or Southern Carpathians), which extend SW to the Danube River. The highest peaks are Gerlachovka (8,737 ft/2,663 m) in the Tatras and Moldoveanu in the Transylvanian Alps. The Carpathians are rich in minerals and timber. The region's cold winters and hot summers make it a year-round resort. Although the Carpathians are a barrier to the southward movement of cold air masses, numerous low passes facilitate overland travel between the densely populated areas that flank the system. The Carpathians themselves are sparsely populated, with the greatest number of people found in the larger agricultural valleys to the south.

Carpathian Ukraine see ZAKARPATSKAYA OBLAST, USSR.

Carpathus, Greece see KÁRPATHOS.

Carpații see CARPATHIANS.

Carpeaux, Jean-Baptiste (zhan-bâtēst' kār-pō'), 1827-75, French sculptor and painter. He studied with François Rude and won the Prix de Rome. Carpeaux rose to fame with his *Ugolino* (1860-62, Louvre) and became a favorite of the Second Empire, receiving many portrait commissions. Of his sculpture groups, the best known is *The Dance on the facade of the Opera*, Paris. His *Neapolitan Shell Fisher* and his portrait busts of Napoleon III, Dumas fils, Gerôme, and Empress Eugénie are in the Louvre, along with numerous paintings, including *Bal costumé aux Tuileries*, *Les Trois Souverains*, and several portraits. The works of Carpeaux exhibit a freedom and force which distinguish them from the banality of his period.

carpe diem (kar'pē dēēm), a descriptive term for literature that urges readers to live for the moment [from the Latin phrase "seize the day," used by Horace]. The theme, which was widely used in 16th and 17th-century love poetry, is best exemplified by a familiar stanza from Robert Herrick's "To the Virgins, to Make Much of Time":

Gather ye rosebuds while ye may,
Old time is still a-flying,
And this same flower that smiles today
Tomorrow will be dying.

Shakespeare's version of the theme takes the following form in *Twelfth Night*:

What is love? 'Tis not hereafter,
Present mirth hath present laughter
What's to come is still unsure
In delay there lies no plenty,
Then come and kiss me, sweet and twenty,
Youth's a stuff will not endure.

Carpentaria, Gulf of (karpantār'ēa), arm of the Arafara Sea, 305 mi (491 km) wide and 370 mi (595 km) long, indenting the northern coast of Australia. On its eastern shore, near Weipa, lies a vast bauxite deposit. Willem Jansz explored the gulf in 1606.

Carpenter, Edward, 1844-1929, English author. Although ordained a minister in 1869, he became a Fabian socialist in 1874 and renounced religion. Among his works on social reform are *Towards Democracy* (1883-1902), a long unrhymed poem revealing the influence of his friend Walt Whitman, *England's Ideal* (1887), *Civilization: Its Cause and Cure* (1889), and *Love's Coming of Age* (1896), which treats relations between the sexes. See the autobiographical *My Days and Dreams* (1916), Émile Delavenay, *D. H. Lawrence and Edward Carpenter* (1971).

Carpenter, George Rice, 1863-1909, American educator, b. Labrador, grad. Harvard, 1886. After study abroad, he returned to teach at Harvard (1888-90) and Massachusetts Institute of Technology (1890-93). From 1893 he was professor of rhetoric at Columbia. He wrote a number of textbooks on literature and rhetoric and biographies of Longfellow, Whittier, and Whitman.

Carpenter, John Alden, 1876-1951, American composer, b. Park Ridge, Ill., pupil of J. K. Paine at Harvard and of Elgar. His music, refined and skillfully written, influenced by French impressionism, often conveys the spirit and the scenes of American life, in such works as the orchestral suite *Adventures in a Perambulator* (1914) and the ballets *Krazy Kat* (Chicago, 1921) and *Skyscrapers* (New York, 1926). A Spanish flavor and jazz, frequently elements in his music, are both found in *Patterns* (1932) for orchestra. Other important works are his ballet *The Birth day of the Infanta* (Chicago, 1919), a violin concerto (1937), a concerto for piano and orchestra (1915), songs, symphonies, and chamber music.

Carpenter, Malcolm Scott, 1925–, American astronaut, b. Boulder, Colo. The second American to go into orbital flight around the earth, he made his historic and suspenseful flight on May 24, 1962. In his three-orbit trip he repeated the earlier success of John GLENN. Carpenter's second orbit was under manual control, and during it he discovered that he could make small changes in the capsule's orientation in space by movements of his head and arms. On descending, his capsule, *Aurora 7*, overshot the pickup area by 250 mi (212 km) causing nationwide concern for his safety. A commander in the U.S. navy, Carpenter had served with an antisubmarine patrol during the Korean War. From 1965 to 1967 he was a member of the navy aquanaut project and in 1969 retired from the navy to go into private business.

Carpenter, Mary, 1807–77, English educator. She devoted her life to the establishment of schools and institutions and the promotion of educational reforms. In 1835 she organized the Working and Visiting Society, in 1846 opened a school for poor children, and in 1852 founded a juvenile reformatory (see her *Juvenile Delinquents: Their Condition and Treatment*, 1852). Her agitation for reformatory and industrial schools contributed to the passage of the Juvenile Offenders Act (1857) and furthered the movement for free day schools. She made four visits to India after 1866, interesting herself in Indian education, and also lectured in the United States. See biography by J. E. Carpenter (1879, 2d ed. 1881, repr. 1973).

Carpenter, Rhys, 1889–, American archaeologist and classicist, b. Cotuit, Mass., grad. Columbia (B.A., 1908, Ph.D., 1916). He taught classical archaeology at Bryn Mawr (1913–55) and was director of the American School for Classical Studies at Athens (1927–32, 1946–48). His writings include *The Humanistic Value of Archaeology* (1933), *Folktales, Fiction and Saga in the Homeric Epics* (1946), and *Greek Sculpture* (1960).

Carpentersville, village (1970 pop. 24,059), Kane co., NE Ill., on the Fox River, inc. 1887. Pumps and valves are the chief manufactures.

Carpentier, Alejo (alā'hō kārpeñtyār'), 1904–, Cuban novelist and musicologist. Carpentier was a journalist and professor of music history at the National Conservatory. Regarded as one of the most powerful Spanish-American writers of recent decades, he wrote novels that emphasized the exotic in Caribbean life. Among his works are *Ecue-Yamba-O* (1933), *La música en Cuba* (1946), *The Lost Steps* (1953, tr. 1956), *El acoso* (1956), *The Kingdom of This World* (1949, tr. 1957), and *War of Time* (1963, tr. 1970).

Carpentras (karpāNtras'), town (1968 pop. 22,130), Vaucluse dept., SE France, in Provence. It is an important farm market and a small industrial center. Of Gallo-Roman origin, it was an episcopal see from the 3d cent. and was ruled by its bishops until the French Revolution. The long conclave that elected Pope John XXII met in Carpentras. The town served as the capital of the Comtat Venaissin from 1229 to 1791. Of interest are St. Siffrein Church (15th cent.) and a Gallic arch with sculptures.

carpentry, trade concerned with constructing wood buildings, the wooden portions of buildings, or the temporary timberwork used during the construction of buildings. It comprises the larger and more structural aspects of woodworking, rather than the delicate assembling which is the province of cabinetmaking and JOINERY. The craft dates from the earliest use of tools. Though no actual examples of carpentry survive from antiquity, many remains of the earliest known stone architecture exhibit forms which are undoubtedly imitative of still earlier constructions in wood. This is especially apparent in most Asian architecture, and certain details of Greek temples are suggestive of carpentry prototypes. Some monumental wood buildings of the 7th cent. still stand in Japan, a country where intricate, beautiful carpentry has prevailed throughout its history. In the United States, expert carpentry has existed ever since the construction of dwellings by the colonists in the first half of the 17th cent. Rough carpentry refers to the "framing" of a wood building, namely, the erection of the structural frame or skeleton composed of the vertical members, or studs, the horizontal members of foundation sills, floor joists, and the like, the inclined members, or rafters, for the roof, and the diagonal members for bracing. Finished carpentry is the setting in place, over the rough frame, of all finishing members of both exterior and interior, such as sheathing, siding, stairs, the casings of doors and windows, flooring, wainscoting, and trim. The

amount of permanent carpentry required in many modern buildings has been greatly reduced by the use of such substitute materials as concrete and steel. However, the large amount of concrete used has resulted in a great increase in the amount of carpentry performed to make temporary forms in which the concrete can be cast. See CENTERING. See F. M. Mix, ed., *Practical Carpentry* (1963), R. J. De Cristoforo, *The Practical Handbook of Carpentry* (1969).

carpet or rug, thick fabric, usually woolen (but often synthetic), commonly used today as a floor covering. Carpets were formerly woven to protect the body from cold, to be spread on a dais or before a seat of honor, to cover a table, couch, or wall, or to form the curtains of a tent. There is evidence of the existence of handwoven carpets in antiquity. On the rock tombs of Beni Hassan, Egypt, c. 2500 B.C., men are depicted with the implements of rug weaving. Other evidence of the early use of rugs is seen in the drawings on the ancient palace walls of Nineveh. In the mountainous region of the East stretching from Turkey through Persia and central Asia into China, where the fleece of the sheep and the hair of the camel and goat grow long and fine, the art of carpet-weaving reached its height early in the 16th cent. The Oriental artist worked on a handloom consisting essentially of two horizontal beams on which the warp (the vertical threads) was stretched, on the lower one the finished carpet was rolled while the warp unrolled from the upper one. The yarn for the pile, spun and dyed by hand, was cut in lengths of about 2 in. (5.1 cm) and knotted about the warp threads, one tuft at a time, after one of the two established ways of tying—the Ghiordes, or Turkish, knot and the Senna, or Persian, knot. After a row of knots had been placed across the width of the loom, two or more weft, or horizontal, threads of cotton or flax were woven in and beaten into place with a heavy beater, or comb. The tufts, or pile, thus appeared only on the face of the fabric, which when completed was sheared to perfect smoothness. Although the hair of the camel and the goat was used in the weaving of Oriental rugs, the wool of the sheep was the essential component. Beautiful silk rugs interwoven with gold thread were made in the 16th and 17th cent. The quality of a carpet depends on the materials used and the number of knots per square inch of surface, which may vary from 40 to 1,000. In North America the Navahos and other Indian tribes have for generations produced substantial rugs without pile, woven somewhat in the manner of TAPESTRY on simple handlooms. In the palaces of Montezuma remarkable floor coverings were found that utilized the plumage of birds. The primitive use of rushes or straw has survived in the form of Chinese and Japanese matings. In 1608, King Henry IV of France established weavers in the Louvre. About 20 years later an old soap works, the Savonnerie, near Paris, was converted to carpet weaving, and its name remains attached to one of the finest types of handmade carpet, now made at the Gobelin tapestry factory. Tapestries for walls and floors were made at Aubusson at an early date. In 1685 the revocation of the Edict of Nantes scattered skilled Protestant carpet-makers over Europe. Centers of weaving were established in England, first at Kidderminster (1735) and later at Wilton and Axminster. Cheaper, more easily manufactured floor covering soon came into demand, and the making of ingrain, or reversible, carpets began at Kidderminster. The weavers of Flanders had made a loom that produced a pile by looping the worsted warp threads, and this loom, although guarded, was copied by a Kidderminster weaver, soon many looms in England were making Brussels carpet. Axminster was England's headquarters for imitation Oriental or tufted-pile carpet. Until about 1840 all carpets were made on handlooms with such devices and improvements as could be operated by hand or foot power, then Erastus Bigelow's power loom (first used in 1841), which made it possible for carpets to be mass produced, revolutionized the industry. A few classifications—Oriental, European handwoven, Brussels, Wilton, velvet, Axminster, chenille, ingrain, rag, hooked, straw, and fiber—embrace the entire range of carpets, both antique and modern. To the first class belong not only the genuine antique Orientals, now rare, but also the modern reproductions. The materials are dyed with aniline dyes instead of vegetable dyes and then woven. Many are washed in chlorine solutions to give an effect of age or in glycerine to simulate the luster of fine wool. Commercial methods have somewhat standardized and debased the character-

istic ancient patterns, but the modern Orientals are still commercially important. Some traditional Oriental rugs are still produced, incorporating the deep, rich color and intricate patterns of Persia, the brighter hues and conventionalized figures of Asian Turkey, the simpler designs and primitive colorings of Turkistan and the Caucasus, and the symbolic ornament of China. A limited number of European handwoven carpets, both Aubussons (tapestry) and Savonneries (pile), are now made in most Western countries. Modern commercial carpets are woven on complex and highly specialized machines, a development from Bigelow's power loom. Brussels carpet has a warp and weft of linen, with a pile of worsted yarn drawn into loops by means of wires. It is called three-, four-, or five-frame, depending on the number of bobbins carrying different colored warp threads, which make the pattern. Tapestry Brussels is an inexpensive single-frame sort, either yarn printed or piece printed. Wilton is made on the same principle, except that the loops that form the pile are cut as they are woven into place. Velvet is an equivalent of tapestry Brussels with the pile cut. Axminster, similar in effect to Oriental, uses unlimited colors in design made on machines that loop the tufts, one color at a time, and then interlock the weft about them. Chenille, or chenille Axminster, is made in two stages, first the chenille thread, or fur, as it is called, is made, then it is folded and ironed so that the woolen fibers are like a fringe along a cotton or linen chain. This fur is then woven into a strong backing of linen with the nap on the surface. Ingrain, no longer widely used, is a plain-weave fabric, of two- or three-ply woolen weft on a concealed cotton warp. Rag carpets, made of used rags sewn together for warp, were first woven on household looms, they became commercially important in the latter part of the 19th cent. Hooked rugs are made of narrow strips of woolen cloth drawn by a pointed hook through a canvas foundation on which a design is indicated. Although handmade rugs are still produced in some countries, e.g., Turkey, carpet manufacturing has become a highly mechanized industry, notably in the United States, Great Britain, Canada, Belgium, and Japan. See Wilhelm von Bode and Ernest Kühnel, *Antique Rugs from the Near East* (tr. of 4th rev. ed. 1970), George Robinson, *Carpets and Other Textile Floorcoverings* (2d rev. ed. 1972).

carpetbaggers, epithet used in the South after the Civil War to describe Northerners who went to the South during RECONSTRUCTION to make money. Although regarded as transients because of the carpetbags in which they carried their possessions (hence the name *carpetbaggers*), most intended to settle in the South and take advantage of speculative and commercial opportunities there. With the support of the Negro vote the carpetbaggers played an important role in the Republican state governments. The corrupt activities of some made the term *carpetbagger* synonymous with any outsider who meddles in an area's political affairs for his own benefit. See bibliography under RECONSTRUCTION.

carpet beetle, name for several BEETLES that are highly destructive to carpets and upholstery and are classified in the same family as the larder beetles. Adult beetles of this family are pollen eaters, but the larvae feed on a variety of animal matter. The red-dish to yellow-brown carpet beetle larvae feed on wool, fur, leather, and on plant fibers that are soiled with grease, doing more damage to household goods than the clothes moth. The adults, 0.08 to 0.2 in. (3–5 mm) long, solid black or black-and-white patterned, leave the house after emerging from the pupal stage. The larvae of the species commonly called larder beetles feed on meats and cheese, the larvae of other species in the family are pests in museums, feeding on dried insect collections. Carpet beetles are classified in the phylum ARTHROPODA, class Insecta, family Dermestidae, genera *Affagenus* and *Anthenus*.

carpincho (karpín'chō) see CAPYBARA

Carpini, Giovanni de Piano (jōvān'ē dā pyā'nō kārpe'nē), c. 1180–1252, Italian traveler and Franciscan monk, b. Pian del Carpin (now Piano della Magione), Umbria. He was a companion of St. Francis of Assisi and spread Franciscan teachings in Germany and Spain. In 1245 he was sent by Pope Innocent IV to the court of the MONGOLS. With a Pole, Friar Benedict, he started from Lyons, went to Kiev, then across the Dnepr to the Don and the Volga, where he found the camp of a Mongol prince. He then traveled across central Asia to the imperial court at Karakorum in Mongolia. A journey of c. 3,000 mi (4,830 km) was accomplished on horse-

back in 106 days At Karakorum he witnessed the installation (1246) of Jenghiz Khan's grandson as the great khan of the Mongols Carpini returned to Lyons in 1247, and his careful account of the journey, known as *Liber Tartarorum*, proved invaluable It is a full record of Mongol manners, history, policy, and military tactics, it was the first of such works to appear in Europe

Carpocrates (karpōk'rātēz), fl c 130-c 150, Alexandrian philosopher, founder with his son Epiphanes of a Hellenistic sect, notoriously licentious, related to Gnosticism Epiphanes wrote a treatise, *On Justice*, that advocated communal ownership of property, including women, he died, age 17, at Cephalonia and was long worshipped as a deity there The Carpocratians believed that men had formerly been united with the Absolute, had been corrupted, and would, by despising creation, be saved in this life or else later through successive transmigrations Jesus, they held, was but one of several wise men who had achieved deliverance

car puller: see WINCH

Carpus, man of Troas 2 Tim 4 13

Carr, Edward Hallett, 1892-, English political scientist and historian Educated at Cambridge, he was in the diplomatic service until 1936, professor of international relations (1936-47) at University College of Wales, Aberystwyth, and assistant editor for the *London Times* (1941-46) Carr's writings include biographies of Feodor Dostoyevsky (1931), Karl Marx (1934), and Mikhail Bakunin (1937), as well as important studies on international relations and on the Soviet Union His major work is the *History of Soviet Russia* (Vol I-IX, 1950-71), considered by many to be the definitive work in English on Soviet history

Carr, Emily, 1871-1945, Canadian painter She studied (1889-c 1895) at the San Francisco School of Art and later in London and in Paris In Victoria, British Columbia, she taught painting and visited Indian villages From her study of totem poles and other Indian art, she developed a powerful style marked by simplified forms and a fauvist intensity of color She wrote *Klee Wyck* (1941) and *The House of All Sorts* (1944) See her autobiography, *Growing Pains* (1946)

Carr, Eugene Asa, 1830-1910, Union general in the U S Civil War, b Concord, Erie co, NY, grad West Point, 1850 In the Civil War he distinguished himself at Wilson's Creek (1861) and Pea Ridge (1862), was made (March, 1862) a brigadier general of volunteers, and fought in the campaigns at Vicksburg (1863) and Mobile (1865) After the war Carr was a well-known cavalry leader and Indian fighter in the West Promoted to brigadier general in 1892, he was retired in 1893 See biography by J T King (1963)

Carr, Robert: see SOMERSET, ROBERT CARR, EARL OF

Carra, Carlo, 1881-1966, Italian painter Trained as a decorator, he became associated with the artists involved in the development of FUTURISM He then moved toward a more carefully structured art form, related to cubism but concerned with the dynamics of movement After meeting CHIRICO in 1916, Carra became a spokesman of the metaphysical school A prolific writer on art, he also exerted considerable influence as a teacher

Carracci (karat'chē), family of Italian painters of the Bolognese school, founders of an important academy of painting **Lodovico Carracci**, 1555-1619, a pupil of Tintoretto in Venice, was influenced by Correggio and Titian He also studied in Bologna, Padua, and Parma With his cousins, Agostino and Annibale, and with Anthony de la Tour, he established in Bologna an academy of painting that sought to unite in one system the preeminent characteristics of each of the great masters The school rapidly became one of the outstanding schools in Italy, and Lodovico remained its head until his death Its noted pupils include Guido Reni, Francesco Albani, and Domenichino Excelling as a teacher, Lodovico was also a painter of talent and energy Excellent examples of his art abound in the churches of Bologna and elsewhere in Italy Among the best are *Sermon of John the Baptist* (Pinacoteca, Bologna) and *Vision of St Hyacinth* (Louvre) His cousin Agostino Carracci, 1557-1602, left the goldsmith's trade and studied painting with Prospero Fontana He excelled in engraving and devoted most of his time to it until he joined his cousin and his brother in the founding of their academy and in the execution of numerous joint painting commissions In 1597 he went to Rome and collaborated with Annibale in the decorating of the Farnese Palace gallery, he executed the admirable frescoes *Tri-*

umph of Galatea and Rape of Cephalus (cartoons in the National Gall, London) He died in Parma just after completing his great work, *Celestial, Terrestrial, and Venal Love*, in the Casino Other notable examples of his art are *The Last Communion of St Jerome* (Pinacoteca, Bologna), *Adulteress before Christ*, and the masterly engraving of Tintoretto's *Crucifixion* His brother Annibale Carracci, 1560-1609, a pupil of Lodovico Carracci, was a painter of unusual skill and versatility He spent seven years studying the works of the masters, particularly those of Correggio and Parmigiano, in Venice and Parma Returning to Bologna, he aided in the conducting of the academy school until 1595, when he went to Rome to assist in the Farnese gallery The ceiling, for which he made thousands of preliminary drawings according to an elaborate structural system, was rich in illusionistic elements It included feigned architectural and sculptural forms which had great impact on later painters Well known among his numerous works are *Christ and the Woman of Samaria* (Brera, Milan), *Flight into Egypt* (Doria Gall, Rome), *The Dead Christ* (Louvre), and *The Temptation of St Anthony* (National Gall, London) See study by Donald Posner (2 vol 1971)

carrageen: see SEAWEED

Carrantuohill (kā'rāntōō'al), mountain, 3,414 ft (1,041 m) high, Co Kerry, SW Republic of Ireland, in Macgillcuddy's Reeks, highest peak in Ireland

Carranza, Venustiano (vānōōstyā'nō karan'sa), 1859-1920, Mexican political leader While senator from Coahuila, he joined (1910) Francisco I MADERO in the revolution against Porfirio Diaz When President Madero was overthrown (1913) by Victoriano HUERTA, Carranza promptly took the field against Huerta Fighting in the north, he was joined by other insurgents, notably Alvaro OBREGÓN and Francisco VILLA, Emiliano ZAPATA led a peon uprising in the south Huerta was finally forced to resign and Carranza assumed (Aug, 1914) the executive powers Villa and Zapata refused to recognize Carranza's authority, however, and plunged the country into another civil war Carranza, aided by Obregon, emerged supreme by Aug, 1915, although Zapata and Villa continued their rebellions in the south and north Carranza was pressed by Obregon to accept the Constitution of 1917, which contained potentially radical reform measures that Carranza opposed and subsequently failed to enforce In 1920, Carranza attempted to prevent Obregon from succeeding him as president, and Obregon revolted Carranza fled Mexico City, and was ambushed and murdered by a local chieftain in Tlaxcalantongo

Carranza de Miranda, Bartolomé de (bartōlōmā'dā karan'tha dā mēran'da), 1503-76, Spanish churchman He joined the Dominicans (1520) and taught at Valladolid He was active in the first part of the Council of Trent, where he distinguished himself for his vigorous support of the rule that bishops must reside in their sees In 1554, Philip II of Spain sent him to England to aid in the restoration of Roman Catholicism In 1558 he was made archbishop of Toledo (primate of Spain), the same year he attended Holy Roman Emperor Charles V in his last days His commentary on the catechism appeared in 1558, and it was apparently from passages in this that he was accused of heresy He was arrested in 1558 (with King Philip's permission), his case dragged on in Spain until 1564, when the archbishop appealed to Rome At length, in 1576, he was found not guilty of heresy but was compelled to renounce certain propositions

Carrara (kar-ra'ra), city (1971 pop 67,736), Tuscany, N central Italy, near the Ligurian Sea It is the most important center of the Italian MARBLE industry, the famous white Carrara marble is quarried in the nearby Alpi Apuane Chemicals and metal goods are also manufactured in Carrara With Massa, the city constituted the principality, later duchy, of Massa and Carrara (15th-19th cent) Carrara has a fine 12th-century cathedral, the former ducal palace (16th cent) now houses the Fine Arts Academy

Carrel, Alexis, 1873-1944, American surgeon and experimental biologist, b near Lyons, France, M D Univ of Lyons, 1900 Coming to the United States in 1905, he joined the staff of the Rockefeller Institute in 1906 and served as a member from 1912 to 1939 For his work in suturing blood vessels, in transfusion, and in transplantation of organs, he received the 1912 Nobel Prize in Physiology and Medicine In World War I he developed, with Henry D Dakin, a method of treating wounds by irrigation with a sodium-hypochlorite solution With Charles A Lindbergh he invented an artificial, or mechanical, heart,

by means of which he kept alive a number of different kinds of tissue and organs, he kept tissue from a chicken's heart alive for 32 years In 1939 he returned to France He wrote *Man the Unknown* (1935) and, with Lindbergh, *The Culture of Organs* (1938)

Carreño, Teresa (tārā'sa karā'nyō), 1853-1917, Venezuelan pianist, pupil of L M Gottschalk and Anton Rubinstein Her debut was made in New York in 1862 She appeared as an opera singer for a brief period but thereafter continued her piano career, becoming known as one of the foremost pianists of her time She composed a festival hymn for the Bolivar centenary, 1883, and was a teacher of Edward MacDowell See biography by Marta Milinowski (1940)

Carreño de Miranda, Juan (hwan karā'nyō dā mēran'da), 1614-85, Spanish baroque painter A protegee of Velázquez, Carreño eventually succeeded his master as painter to the Spanish court He is best known for his elegant portraits, such as that of the queen mother, Mariana (Prado) Carreño also painted numerous religious pictures and frescoes for the churches and palaces of Madrid, Segovia, and Toledo

Carrera, José Miguel (hōsā' mēgē'l'), 1785-1821, Chilean revolutionist With his brothers, Juan Jose and Luis, he overthrew the revolutionary junta headed by MARTÍNEZ DE ROSAS in 1813 and dominated Chile until replaced by Bernardo O'HIGGINS later that year He again seized control in 1814, precipitating a civil war that facilitated Spanish reconquest of Chile Later he was forbidden by Jose de San Martin to reenter Chile San Martin and O'Higgins ordered the execution at Mendoza of his brothers Involving Argentina in civil turmoil, Carrera was on the point of invading Chile when he too was captured and beheaded at Mendoza

Carrera, Rafael (rafaē'l'), 1814-65, president of Guatemala, a caudillo He led the revolution against the anticlerical liberal government of Guatemala, and his ultimate success in 1840 helped to destroy the Central American Federation Illiterate and of mixed blood, he received unquestioned support from the Indian masses, a conservative devoted to the church, he recalled the Jesuits and restored the power of the church in the state Until his death Carrera dominated Guatemala and was the most powerful figure in Central America, intervening to strengthen, restore, or install conservative governments in the other Central American countries

Carrera Andrade, Jorge (hōr'hā karā'ra andrā'thā), 1903-, Ecuadorian poet Carrera's early poems and some of his later work reveal his profound pro-Indian feeling and his interest in social revolution As he matured his concern with the purely aesthetic aspects of poetry was intensified His lyrics are graceful and charming and reveal a flair for original images Among his works are the essay collections *Latitudes* (1934) and *La tierra siempre verde* (1955), the poetry volumes *Secret Country* (1922, tr 1946), *Rol de la manzana* (1935), *Registro del mundo* (1940), and *Edades poeticas* (1958), and an autobiography (1970) See his *Selected Poems* (tr 1972)

Carrère, John Mervyn (karār'), 1858-1911, American architect, b Rio de Janeiro After graduating from the École des Beaux-Arts, Paris, he worked under McKim, Mead, and White in New York City, and from 1886 until his death practiced in partnership with Thomas Hastings The best-known works of Carrère and Hastings are the New York Public Library (commission awarded in competition, completed 1911), the office buildings of the Senate and the House, and the Carnegie Institution, Washington, D C

Carrero Blanco, Luis (lōōēs' kar-rā'rō blang'kō), 1903-73, Spanish statesman and naval officer After graduation (1922) from the Spanish naval academy, Carrero Blanco first gained distinction fighting the North African Berbers in the mid-1920s Following the Spanish civil war, during which he served in the Nationalist navy, he became chief of naval operations on the admiralty staff and one of Francisco Franco's intimate collaborators In 1951 he was appointed ministerial undersecretary in charge of coordinating the policies of the separate ministries Made vice admiral (1963) and admiral (1966), Carrero Blanco increasingly controlled government affairs as vice premier (1967-73) In June, 1973, when Franco separated the duties of chief of state and head of government, Carrero Blanco became premier Since he had been influential in developing contacts with monarchist groups, his appointment

was generally regarded as a step toward Franco's planned restoration of the monarchy under Juan Carlos. In Dec. 1973, he was assassinated in Madrid, apparently by Basque nationalists, in retaliation for the government's execution of Basque militants.

Carrhae (kâr'ê), Roman name for the ancient Mesopotamian city of HARAN. The name Carrhae is best known because of the battle of Carrhae in 53 B.C. M. Licinius Crassus (see CRASSUS, family) was defeated by the Parthians, who by their archery routed the Roman force.

carriage, wheeled vehicle, in modern usage restricted to passenger vehicles that are drawn or pushed, especially by animals. Carriages date from the Bronze Age; early forms included the two-wheeled cart and four-wheeled wagon for transporting goods. An early passenger carriage was the CHARIOT, but Roman road-building activity encouraged the development of other forms. From the fall of Rome, horses and litters were used exclusively until the 12th cent., when goods carts and wagons were gradually reintroduced. The coach, a closed four-wheeled carriage with two inside seats and an elevated outside seat for the driver, is believed to have been developed in Hungary and to have spread among the royalty and nobility of Europe in the 16th cent. The hackney coach, which was any carriage for hire, was introduced in London c.1605. During the 17th cent. coaches became lighter and less ornate and in England the public STAGECOACH became common. France developed the gig, a light two-wheeled carriage, which was the forerunner of the chaise, the sulky, and the Cuban volante. The numerous forms developed in the 18th cent. include the chariot, a closed carriage with one seat, the landau, a coach whose top folded back from the center in two sections, the barouche coach, which had a folding hood fixed at the back, and the phaeton, any member of a family of four-wheeled carriages, usually with low sides. The hansom cab, patented by J. A. Hansom in 1834, was a closed carriage with an elevated driver's seat in back. Lord Brougham based the carriage known by his name on the hansom. The victoria, popular after 1850, was similar to the phaeton but had only one seat for passengers. The carriage-building trade became firmly established in the United States after the War of 1812, the most distinctive model was a light four-wheeled buggy with open sides and a folding top. The term *carriage* is sometimes used to refer to railroad passenger cars.

Carrickfergus (kâr'rkfûr'gas), municipal borough (1971 pop. 15,162), Co. Antrim, E. Northern Ireland, on the shore of Belfast Lough. A minor fishing port, it has an important textile industry. There also are iron works, and rock salt is mined. A castle and church first built in the 12th cent. are still standing. John Paul Jones fought (1778) a victorious battle offshore from Carrickfergus.

Carrick-on-Shannon, county town (1971 pop. 6,411) of Co. Leitrim, N. Republic of Ireland. It is a farm market and a center for trout fishing.

Carrier, Jean Baptiste (zhân bâ'têst' kar'ê), 1756-94, French Revolutionary. An extreme Jacobin, he demanded the establishment of a revolutionary tribunal, and, as a revolutionary representative to Nantes in the Reign of Terror, he instituted noyades, or wholesale drownings, and committed other atrocities. Although he was denounced to the Convention, of which he was a member, and was recalled to Paris, he temporarily escaped punishment during the Thermidorian reaction (July, 1794, see THERMIDOR). In November, however, he was arrested and executed.

Carnera, Rosalba (rôzal'ba kar-rê'ra), 1675-1757, Italian portrait and miniature painter, one of the greatest of her day. At 24 she had achieved a reputation throughout Italy and abroad for her miniatures and crayon portraits. In 1705 she was elected to the Academy of St. Luke (Rome), the Academy of Bologna, and the Florence Academy. In 1720 she visited Paris, where she painted the portraits of the young Louis XV, the regent, and other court figures. Returning to Italy, she visited the courts of Modena, Parma, and Vienna, receiving honors and commissions wherever she went. Her portraits are delicate in color and vivacious. She is well represented in most of the European galleries. *Muse Crowned with Laurel* is in the Louvre.

Carrière, Eugène (ôzhên' kâr'yêr'), 1849-1906, French painter and lithographer. He is best known for his spiritual interpretations of maternity and family life. His figures and heads emerge from a brownish penumbra, usually with an expression of deep melancholy. Characteristic are his *Crucifixion*

and *Maternity* (both Louvre). He also painted some large canvases for the Sorbonne and the Hôtel de Ville, Paris. Among his works are many notable portraits, including those of Verlaine, Daudet, and Edmond de Goncourt (all Louvre).

carrier wave: see MODULATION

Carrington, Henry Beebe, 1824-1912, U.S. army officer and historian, b. Wallingford, Conn., grad. Yale, 1845, and afterwards studied at Yale Law School. Carrington ably reorganized the Ohio state militia and subsequently became adjutant general. In the Civil War he helped to save West Virginia for the Union by sending Ohio militia there. Later, as chief mustering officer of Indiana, he sent over 100,000 men to the war and was instrumental in quelling the operations of a secret society of Southern sympathizers. After the war, as commander of the Mountain Dist. of the Dept. of the Platte, he led the force that in 1866 attempted to open and guard the Bozeman Trail route to Montana. He planned and built forts C. F. Smith and Phil Kearney on this route. Blamed for the Fetterman massacre (see under FETTERMAN, WILLIAM JUDD), he was later exonerated. After his retirement from the army, Carrington was (1869-78) professor of military science at Wabash College. His *Battles of the American Revolution* (1876), supplemented by a volume of maps (1881), is a standard work. *Ab-sa-ra-ka* (1868), memoirs by his first wife, deals with his life on the plains.

Carroll, Anna Ella, 1815-93, alleged adviser to Abraham Lincoln in the Civil War. A member of the Protestant branch of the Carroll family of Maryland, she was a press agent for the Know-Nothing movement in the 1850s. It is claimed that Carroll was responsible for the successful Union strategy of the early Western campaigns and for numerous other decisions on high policy. See biography by Sydney Greenbie and Marjorie Greenbie (1952).

Carroll, Charles, 1737-1832, political leader in the American Revolution, signer of the Declaration of Independence, b. Annapolis, Md. After completing his education in France and England, he returned home (1765) and his father gave him a large estate near Frederick, Md., known as Carrollton Manor, he was afterwards styled Charles Carroll of Carrollton. As leader of the Roman Catholic element, he opposed support of the established Anglican Church, presenting his views in a series of articles written for the *Maryland Gazette*. He threw himself boldly into revolutionary activities, and in 1776 the Continental Congress appointed him, together with Benjamin Franklin and Samuel Chase, to seek Canadian support for the Continental cause. His journal is one of the chief sources for study of this unsuccessful mission. Carroll served (1776-78) in the Continental Congress, he refused to attend the Federal Constitutional Convention (1787), but he later supported the Constitution. He was U.S. Senator from Maryland, serving from 1789 until 1792. See biographies by K. M. Rowland (1898, repr. 1968), Joseph Gurn (1932), and E. H. Smith (1942, repr. 1971).

Carroll, James, 1854-1907, American bacteriologist and army surgeon, b. Woolwich, England, M.D. Univ. of Maryland, 1891. He went to Canada at 15 and later joined the U.S. army. A member of the Yellow Fever Commission under Walter Reed, he voluntarily submitted to the bite of an infected mosquito, contracted yellow fever, and recovered. This proved the mosquito to be the carrier of the disease. Carroll also proved that the infectious agent is a filterable virus.

Carroll, John, 1735-1815, American Roman Catholic churchman, b. Maryland. He studied as a child with Jesuits at Bohemia, Md., and later at Saint-Omer in Flanders, since Catholic secondary education was not allowed in Maryland. He joined the Jesuits in 1753, studied at Liege, and was ordained in 1769. After the suppression of the Jesuits he returned to America and traveled about, ministering to the scattered Catholics. He had a private chapel, for Catholic churches were forbidden by law. He ardently supported the American Revolution and accompanied Benjamin Franklin (who was his close friend) on the vain mission to Quebec (1776) to persuade the Canadians to join the Revolutionary cause. Seeing that American Roman Catholics should be free of supervision by the vicar apostolic of London, he led in petitioning Rome for the appointment of a priest in America with some episcopal powers. In 1784, Father Carroll was made superior of the missions in the United States. In the same year he published a controversial pamphlet, *An Address to the Roman Catholics of the United States of America*, to combat a paper impugning the loyalty of Catholics.

In 1790 he was consecrated bishop of Baltimore. He invited the Sulpicians, who opened a seminary at Baltimore, and he founded GEORGETOWN UNIV. He encouraged many communities and founded schools throughout his diocese. In 1808 he became archbishop, with suffragans at Boston, New York City, Philadelphia, and Bardonia, Ky. His last years were somewhat clouded by misunderstandings with the Catholics in Philadelphia and New York. See biographies by J. G. Shea (1888), P. K. Guilday (1922), and A. M. Melville (1955).

Carroll, Lewis, pseud. of Charles Lutwidge Dodgson, 1832-98, English writer and mathematician, b. Daresbury, Cheshire. Educated at Christ Church College, Oxford, he was nominated to a studentship (life fellowship) in 1852, and he remained at Oxford for the rest of his life. Although his fellowship was clerical, Carroll never proceeded higher than his ordination as a deacon in 1861. Shy and afflicted with a stammer, he felt himself unsuited to the demanding life of a minister. He did lecture in mathematics at Christ Church from 1855 until 1881. Among his mathematical works, now almost forgotten, is *Euclid and His Modern Rivals* (1879). Carroll is chiefly remembered as the author of the famous children's books *Alice's Adventures in Wonderland* (1865) and its sequel *Through the Looking Glass* (1872), both published under his pseudonym and both illustrated by Sir John Tenniel. He developed these stories from tales he told to the children of Dean Liddell, one of whom was named Alice. Many of his characters—the Mad Hatter, the March Hare, the White Rabbit, the Red Queen, and the White Queen—have become familiar figures in literature and conversation. Although numerous satiric and symbolic meanings have been read into Alice's adventures, the works can be read and valued as simple exercises in fantasy. Carroll himself said that in the books he meant only nonsense. He also wrote humorous verses, the most popular of them being *The Hunting of the Snark* (1876). His later stories for children, *Sylvie and Bruno* (1889) and *Sylvie and Bruno Concluded* (1893), though containing interesting experiments in construction, are failures. Carroll remained a confirmed and hard-working bachelor all his life. Because of his stammer he found association with adults difficult and was at ease only in the company of children, especially little girls. Early in 1856 he took up photography as a hobby, his photographs of children are still considered remarkable. See his complete works (ed. by Alexander Woolcott, 1939) and many recent editions, Martin Gardner, ed., *The Annotated Alice* (1960, repr. 1970), biographies by Derek Hudson (1954, repr. 1958) and F. B. Lennon (3d ed., 1972), Stuart Collingwood, *Life and Letters* (1898, repr. 1968), Robert Phillips, ed., *Aspects of Alice* (1971).

Carroll, Paul Vincent, 1900-1968, Irish playwright. His plays, vigorous commentaries on the conflicts of village life in Ireland, include *Shadow and Substance* (1937), *The White Steed* (1939), *The Wise Have Not Spoken* (1946), and *The Wayward Saint* (1955). See his *Irish Stories and Plays* (1958).

Carrollton, 1 City (1970 pop. 13,520), seat of Carroll co., W. Ga., on the Little Tallapoosa River, inc. 1897. A trade center for a fertile farm area, it has textile dyeing plants and factories making wires and chrome plating. West Georgia College is there. 2 City (1970 pop. 13,855), Dallas and Denton counties, N. Texas, a suburb of Dallas, in a rapidly growing and industrializing area. Metal products, aircraft parts, and electronic equipment are the major products.

carrot, common name for some members of the Umbelliferae, a family (also called the parsley family) of chiefly biennial or perennial herbs of north temperate regions. Most are characterized by aromatic foliage, a dry fruit that splits when mature, and an umbellate inflorescence (a type of flattened flower cluster in which the stems of the small florets arise from the same point, like an umbrella). The seeds or leaves of many of these herbs have been used for centuries for seasoning or as greens (e.g., ANGELICA, ANISE, CARAWAY, CHERVIL, CORIANDER, CUMIN, OIL, FENNEL, LOVAGE, and PARSLEY). The carrot, CELERY, and PARSNIP are vegetables of commercial importance. The common garden carrot (*Daucus carota sativa*) is a ROOT CROP, probably derived from some variety of the wild carrot (or QUEEN ANNE'S LACE). In antiquity several types of carrot were grown as medicinals, and in Europe carrots have long been grown for use in soups and stews. The custom of eating carrots raw as a salad has become widespread in the 20th cent. Carrots are a rich source of caro-

tene (vitamin A), especially when they are cooked. Several types of carrot have also been cultivated since ancient times as aromatic plants. Some are still

Carrot, *Daucus carota*

planted as fragrant garden ornamentals, such as the button snakeroot and sweet cicely. A few members of the Umbelliferae produce lethal poison, it was one of these, the poison hemlock, that Socrates was compelled to take. The water hemlock is also poisonous. Carrots are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Umbellales, family Umbelliferae.

Carson, Edward Henry Carson, Baron, 1854-1935, Irish politician. After a successful legal career in Dublin, he was elected to the British Parliament in 1892 and called to the English bar in 1893. He soon established himself as a prominent trial lawyer in London, especially after his brilliant and devastating cross-examination of Oscar Wilde in the Queensberry libel case (1895). Carson was solicitor general in the Conservative government from 1900 to 1905. He had long opposed Home Rule for Ireland, fearing dominance of Protestant Ulster by the Catholic South, and in 1912 he organized military resistance in Ulster against the attempt of the Liberal government to impose it. Faced with the threat of civil war, the government eventually conceded that Ulster should be excluded from the Home Rule settlement. During World War I, Carson served as attorney general (1915) in Herbert Asquith's coalition government and as first lord of the admiralty (1916-17) and member of the war cabinet (1917-18) under David Lloyd George. He resigned as leader of the Ulster Unionists in 1921, was made a baron in the same year, and served (1921-29) as lord of appeal in ordinary. See biographies by Edward Marjoribanks and Ian Colvin (3 vol., 1932-36) and H. M. Hyde (1953).

Carson, Kit (Christopher Carson), 1809-68, American frontiersman and guide, b. Madison co., Ky. In 1811 he moved with his family to the Missouri frontier. After his father's death, he was apprenticed to a saddler in Old Franklin, an outfitting point on the Santa Fe Trail, but in 1826 he ran away, joining a caravan for Santa Fe and continuing on to Taos, N. Mex., which became his home and his headquarters. For the next 14 years he made his living as a teamster, cook, guide, and hunter for exploring parties. In 1842, while returning from St. Louis by boat up the Missouri, he met J. C. FÉREMONT, who employed him as a guide for his Western expeditions of 1842, 1843-44, and 1845. He became famous as a result of Fremont's reports of his skill and courage.

After Los Angeles was taken in 1846 by U.S. military forces, he was ordered to Washington with dispatches. In New Mexico he met Gen. Stephen Kearny's troops, and Kearny commanded him to guide his forces to California. When Kearny's men were surrounded in California, Carson, E. F. Beale, and an Indian made their way by night through enemy lines to secure aid from San Diego. In 1847 and again in 1848, Carson was sent east with dispatches. He determined to retire to a sheep ranch near Taos, but plundering by Indians compelled him to continue as an Indian fighter. In 1853 he was appointed U.S. Indian agent, with headquarters at Taos, a position he filled with notable success. At the outbreak of the Civil War he helped organize and commanded the 1st New Mexican Volunteers, who engaged in campaigns against the Apache, Navaho, and Comanche Indians in New Mexico and Texas. At the end of the war he was made a brigadier general, in command (1866-67) of Fort Garland, Colo. See his autobiography (ed. by Blanche C. Grant, 1926, ed. by M. M. Quail, 1935), biographies by Stanley Vestal (1928) and M. M. Estergreen (1962, repr. 1967), E. L. Sabin, *Kit Carson Days* (rev. ed. 1935).

Carson, Rachel Louise, 1907-64, American writer and marine biologist, b. Springdale, Pa., M.A. Johns Hopkins, 1932. Her well-known books on sea life—*Under the Sea Wind* (1941), *The Sea Around Us* (1951), and *The Edge of the Sea* (1954)—combine keen scientific observation with rich poetic description. Her *Silent Spring* (1962) is a provocative study of the dangers involved in the use of insecticides. See Philip Sterling, *Sea and Earth* (1970), Paul Brooks, *The House of Life* (1972).

Carson, city (1970 pop. 71,150), Los Angeles co., S. Calif., an industrial and residential suburb of Los Angeles, inc. 1968. Oil refining is the major industry, but fabricated metals, paper and many other products are manufactured. Carson is the site of the largest branch of California State College (Dominguez Hills) and a junior college.

Carson City, city (1970 pop. 15,468), state capital, W. Nev., in the Carson valley, inc. 1875. The city is a trade center for a mining and agricultural area. The state government is a major employer, and tourism is important. The city was laid out in 1858 on the site of Eagle Station, a trading post established (1851) on the immigrant trail from Salt Lake City to California. It served as a supply station for miners in the valley, achieved importance with the discovery (1859) of the COMSTOCK LODE, and later became the terminus of the railroad carrying ore. In 1861, when the Territory of Nevada was created, the city was made the capital, and in 1864 it became the state capital—largely through the efforts of William Morris Stewart. A U.S. mint, which closed in 1893, is now occupied by the Nevada State Museum. By act of the legislature, following a statewide referendum, Carson City and Ormsby county were consolidated into one community in July, 1969.

Carson Sink, swampy area, c. 100 sq. mi. (260 sq. km), W. Nev., a remnant of ancient Lake Lahontan. Fallon National Wildlife Refuge is located there. The Carson River (c. 125 mi./200 km long), fed by melted snow, flows into the sink. The river's course was followed by California-bound travelers in the 1850s and 1860s. Lahontan Dam, part of the Newlands project, impounds river water for irrigation and produces electricity.

Carstares or Carstairs, William, 1649-1715, Scottish statesman and Presbyterian divine. While studying theology at Utrecht, he became a friend of William of Orange (later William III of England). He was imprisoned in Edinburgh (1674-79) for alleged coauthorship of *An Account of Scotland's Grievances* and again imprisoned and tortured in Edinburgh (1683) as a suspect in the RYE HOUSE PLOT. He returned to Holland where he was made chaplain to William of Orange. He accompanied William to England in 1688 and became so powerful in his efforts to reconcile the new king and the Scottish church and to frustrate the Episcopal Jacobites that he was nicknamed "the Cardinal." His influence continued under Queen Anne as he worked for the union of England and Scotland, served as principal of the Univ. of Edinburgh from 1703, and was four times moderator of the general assembly of the Church of Scotland. See biography by R. H. Story (1874).

Carstens, Asmus Jacob (as'mōōs ya'kōp kar'stəns), 1754-98, German historical painter and engraver, b. Schleswig. He studied in Copenhagen and in Italy. He was influenced by the work of Giulio Romano. Carstens was a popular professor at the Berlin Academy where, through such pupils as Peter von Corne-

lius, he had a great influence on German historical painting. *Homer Singing* is a characteristic work.

Carstensz, Mount, New Guinea. see DJAJA PEAK

Cartagena (kartahā'na), city (1968 est. pop. 256,600), capital of Bolívar dept., NW Colombia, a port on the Bay of Cartagena in the Caribbean Sea. Oil refining and the manufacture of sugar, tobacco, hides, textiles, and cosmetics are the principal industries. Tourism is also important. Cartagena was founded in 1533 and became the treasure city of the Spanish Main, where precious stones and minerals from the New World awaited transshipment to Spain. Although the harbor was guarded by 29 stone forts and the city was encircled by a high wall of coral, Cartagena suffered sackings and invasions—in 1544, 1560, and in 1586 (by Sir Francis Drake). In 1741 it withstood a three-month British siege. The city was the first of those in Colombia and Venezuela to declare (1811) absolute independence from Spain. Known as the Republic of Cartagena, it was one of the bases used by Simon Bolívar to launch his campaign to liberate Venezuela. In 1815 the city was besieged and captured by the Spanish general Pablo MORILLO, who inflicted savage reprisals on the population. Captured by rebel forces in 1821, Cartagena was incorporated into Colombia. After the revolution the city lost its importance and did not regain it until the 20th cent., with the improvement of communications and the laying of a pipeline to the oil fields of the Magdalena basin. Shady plazas and narrow cobblestone streets make Cartagena one of the most picturesque cities in Latin America. Points of interest include walls and fortifications from colonial times, a 16th-century cathedral, and the Univ. of Cartagena.

Cartagena (kartahā'na), Lat. Carthago Nova, city (1970 pop. 146,904), Murcia prov., SE Spain, on the Mediterranean Sea. A major seaport and naval base, it has a fine natural harbor, protected by forts, with a naval arsenal and important shipbuilding and metallurgical industries. Lead, iron, and zinc are mined and processed nearby, but the rich silver mines exploited in ancient times by Carthaginians and Romans are now almost exhausted. The city is an episcopal see. It was founded by Hasdrubal c. 225 B.C. and soon became a flourishing port, the chief Carthaginian base in Spain. Captured (209 B.C.) by Scipio Africanus Major, it continued to flourish under the Romans. The Moors, who took it in the 8th cent., later included it in Murcia. The Spaniards recovered it definitively in the 13th cent. Cartagena was sacked (1585) by Sir Francis Drake and figured later in the Peninsular and Carlist wars. It served as the Loyalist naval base during the civil war (1936-39). In the 20th cent. it has suffered from the competition of other Mediterranean ports (e.g., Barcelona, Malaga, and Valencia). The medieval Castillo de la Concepcion, whose ruins are surrounded by fine gardens, commands a splendid view of the city and harbor. No traces of the ancient city remain.

Cartago (karta'gō), city (1968 est. pop. 22,000), central Costa Rica. The raising of livestock and the production of coffee are its main industries. Cartago was founded in 1563. It was the political center of Costa Rica until independence was won from Spain in 1821 and has remained a conservative stronghold. It was destroyed by an eruption (1723) of Irazu volcano and was severely damaged by earthquakes in 1822, 1841, and 1910. Cartago's principal church is the scene of annual pilgrimages.

Cartan, Élie Joseph (ālē' zhōzēf' karta'n'), 1869-1951, French mathematician. The son of a village blacksmith, he graduated from the École normale and taught at the universities of Montpellier, Lyons, Nancy, and finally Paris, where he was professor from 1912 to 1940. He developed powerful methods of attacking problems in fields related to modern topology, notably Lie groups, differential systems, and differential geometry; his discoveries are basic to mathematical formulations of quantum mechanics and general relativity. New applications are still found for his work, which is collected in *Oeuvres complètes* (1952-55). The importance of his contributions was recognized belatedly with his election to the French Academy of Sciences in 1931.

Carte, Richard D'Oyly (dōi'lē kart), 1844-1901, English impresario. His choice of presentations did much to raise the level of English musical theater. In 1875 he produced *Trial by Jury*, the first operetta of Sir William S. GILBERT and Sir Arthur SULLIVAN, and he subsequently produced all their other works. In 1881 he built the Savoy Theatre (the first to be lighted electrically), which the operettas made famous. The D'Oyly Carte company still performs Gilbert and Sullivan's works.

cartel, national or international organization of manufacturers or traders allied by agreement to fix prices, limit supply, divide markets, or to fix quotas for sales, manufacture, or division of profits among the member firms. In that it often has international scope the cartel is broader than the TRUST, and in that it carries on manufacture it differs from the speculative CORNER or ring. Of German origin, the cartel achieved prominence in the world depression of the 1870s, which coincided with the unification of Germany and the growth of its economy. The existence of cartels is in opposition to classic theories of economic competition and the free market, and they are forbidden by law in many nations. In Germany, however, by the outset of World War II, nearly all industry was controlled by cartels closely supervised by the government. Opponents of cartels have alleged that they have driven competing firms out of existence, reduced volume of trade, raised prices to consumers, and protected inefficient members from competition. Cartels were blamed for having benefited German aggression by furnishing markets, profits, and technical data to Germany before World War II. Supporters of cartels claim that they protect the weaker participating firms, do away to an extent with limitations on trade resulting from high tariffs, distribute risks and profits equitably, stabilize markets, reduce costs, and hence protect consumers. The U.S. government legalized export associations in 1918 and has itself participated in agreements regulating production and international trade in foodstuffs, rubber, and other commodities. Because they imply the agreement and supervision of several governments, cartels in international trade are usually felt to be less harmful than those which tend to create monopolies in the home market for participants. Formal international agreements, involving governments as well as private firms, still control price, output, and distribution in some industries, notably in diamonds and in oil. Although not referred to as cartels, these agreements have the same general effect on world trade. See also **TARIFF**. See G. W. Stocking and M. W. Watkins, *Cartels or Competition?* (1948, repr. 1968), K. L. Mayall, *International Cartels* (1951), J. P. Miller, *Competition, Cartels and Their Regulation* (1962), Estes Kefauver, *In a Few Hands* (1965), Heinrich Kronstein, *The Law of International Cartels* (1973).

Carter, Elizabeth, 1717-1806, English poet and translator. Under the pen name Eliza she contributed for years to the *Gentleman's Magazine*. One of the group of 18th-century women known as the bluestockings, she was a friend of Johnson, Burke, Reynolds, and Horace Walpole. Collections of her poems appeared in 1738 and 1762. Her translations of Epictetus were published in 1758. See her memoirs (1807), study by Alice C. C. Gausson (1906), *Bluestocking Letters* (ed. by R. B. Johnson, 1926).

Carter, Elliott, 1908-, American composer, b. New York City. Carter is considered by many to be the most important contemporary American composer. He was a pupil of Walter Piston, E. B. Hill, and Gustav Holst at Harvard and studied with Nadia Boulanger in Paris (1932-35). Carter's mature music is organized into highly intellectualized contrapuntal patterns to which sympathetic listeners attribute great emotional power. He characteristically uses tempo as an element of form. Among his notable works are the ballet *Pocahontas* (1939), a cello and piano sonata (1948), three string quartets (1951, 1958-59, 1973), *Variations* (1953-55) for orchestra, a piano concerto (1966), and a concerto for orchestra (1969).

Carter, Hodding, 1907-72, American journalist and news publisher, b. Hammond, La. After teaching briefly at Tulane Univ., he worked as a newspaperman until starting (1932) his own paper, the *Hammond (La.) Daily Courier*, which was distinguished by its opposition to Huey Long's control of Louisiana. In 1936 he moved to Greenville, Miss., and started another paper, which became the *Delta Democrat-Times*. After service with the army bureau of public relations in World War II, he returned to his paper to write a series of articles on racial, religious, and economic intolerance that won him the 1945 Pulitzer Prize for distinguished reporting. Particularly cited was his plea for fairness for returning Nisei soldiers. Among his works—both fiction and nonfiction—are *Mississippi* (1942), *Where Main Street Meets the River* (1953), *The Angry Scar*, *The Story of Reconstruction* (1959), *First Person Rural* (1963), and *Doomed Road of Empire* (1971).

Carter, Howard, 1873-1939, English Egyptologist. He served (1891-99) with the Egyptian Exploration Fund and later helped to reorganize the antiquities

administration for the Egyptian government. Carter's successful excavations (1906-22) with Lord Carnarvon in the Valley of the Kings in Luxor, Egypt, include the tombs of Amenophis I, Hatshepsut, and Thutmose IV. His greatest achievement was the discovery in 1922 of the tomb of Tutankhamen. With A. C. Mace he wrote *The Tomb of Tutankhamen* (Vol. I-II, 1923, Vol. III, 1933, repr. 1963). See study by Barry Wynne (1972).

Carter, Mrs. Leslie, 1862-1937, American actress, b. Lexington, Ky., whose maiden name was Caroline Louise Dudley. She became a protegee of BELASCO and first appeared in 1890 in *The Ugly Duckling*. His *Heart of Maryland* (1895) brought her recognition, and her success continued in his productions of *Zaza* (1899), *Du Barry* (1901), and *Adrea* (1905). Their association ended with her second marriage in 1906, after which her stage popularity diminished.

Carter, Nick, fictional detective character in dime novels said to have been created by J. R. Coryell in the 1880s. The firm of Street & Smith, New York City, published over 1,000 stories about Nick Carter, written variously by F. V. R. Dey, E. T. Sawyer, G. C. Jenks, and others. The name Nicholas Carter was used as a pseudonym by many authors of dime novels.

Carter, Samuel Powhatan, 1819-91, American naval officer and Union general in the Civil War, b. Elizabethton, Tenn., grad. Annapolis, 1846. In the Civil War he was transferred from the navy to the War Dept., sent to organize Union troops in East Tennessee, made brigadier general of volunteers (May, 1862), and given command of a cavalry division in the Army of the Ohio. Discharged from service as brevet major general (1866), he returned to the navy. In 1882 he was made a rear admiral on the retired list. Carter is said to have been the only American who was both a major general and a rear admiral.

Carteret, Sir George (kär'tarēt), c. 1610-1680, proprietor of East Jersey (see NEW JERSEY). He served in the British navy, fought for the royalists, and became (1643) lieutenant governor of his native island of Jersey. In 1663, with several others, he was granted the proprietorship of Carolina and in 1664, in conjunction with Lord Berkeley, was granted part of New Jersey. His widow sold his claim to 12 purchasers who joined with 12 others as the 24 proprietors of East New Jersey.

Carteret, John: see GRANVILLE, JOHN CARTERET, 1ST EARL.

Carteret, Philip, 1639-82, first colonial governor of NEW JERSEY. Carteret, commissioned by the proprietor, Sir George Carteret, his fourth cousin, arrived in the province in 1665. He soon faced disputes over confused land titles and rebellion by tenant farmers against quitrents (fixed rents). After the division of New Jersey in 1676, he was made governor of East Jersey. Mounting difficulties with Sir Edmund ANDROS over the right to collect customs duties led to Carteret's imprisonment by Andros and his eventual restoration by the duke of York (later James II).

Carteret, borough (1970 pop. 23,137), Middlesex co., N. E. N. J., on Arthur Kill, opposite Staten Island, inc. 1906. It has oil and copper refineries and industries producing steel, chemicals, and cigars.

Cartesian coordinates (kär'tēzhən) [for René Descartes], system for representing the relative positions of points in a plane or in space. In a plane, the point P is specified by the pair of numbers (x, y) representing the distances of the point from two intersecting straight lines, referred to as the x -axis and the y -axis. The point of intersection of these axes, which are called the coordinate axes, is known as the origin. In rectangular coordinates, the type most often used, the axes are taken to be perpendicular, with the x -axis horizontal and the y -axis vertical, so that the x -coordinate, or abscissa, of P is measured along the horizontal perpendicular from P to the y -axis (i.e., parallel to the x -axis) and the y -coordinate, or ordinate, is measured along the vertical perpendicular from P to the x -axis (parallel to the y -axis). In oblique coordinates the axes are not perpendicular, the abscissa of P is measured along a parallel to the x -axis, and the ordinate is measured along a parallel to the y -axis, but neither of these parallels is perpendicular to the other coordinate axis as in rectangular coordinates. Similarly, a point in space may be specified by the triple of numbers (x, y, z) representing the distances from three planes determined by three intersecting straight lines not all in the same plane, i.e., the x -coordinate represents the distance from the yz -plane measured along a parallel to the x -axis, the y -coordinate represents the distance from the xz -plane measured along a parallel to the y -axis, and the z -coordinate represents the distance from

the xy -plane measured along a parallel to the z -axis (the axes are usually taken to be mutually perpendicular). Analogous systems may be defined for de-

Cartesian coordinates

scribing points in abstract spaces of four or more dimensions. Many of the curves studied in classical geometry can be described as the set of points (x, y) that satisfy some equation $f(x, y) = 0$. In this way certain questions in geometry can be transformed into questions about numbers and resolved by means of ANALYTIC GEOMETRY.

Cartesian philosophy: see DESCARTES, RENÉ.

Carthage (kär'thij), ancient city, on the northern shore of Africa, on a peninsula in the Bay of Tunis and near modern Tunis. The Latin name, Carthago or Cartago, was derived from the Phoenician name, which meant "new city" (the old city being Utica). It was founded (traditionally by DIDO) from Tyre in the 9th cent. B.C. The city-state built up trade and in the 6th and 5th cent. B.C. began to acquire dominance in the W. Mediterranean. Merchants and explorers established a wide net of trade that brought great wealth to Carthage. The state was tightly controlled by an aristocracy of nobles and wealthy merchants. Although a council and a popular assembly existed, these soon lost power to oligarchical institutions, and actual power was in the hands of the judges and two elected magistrates (suffetes). There was also a small but powerful senate. The greatest weakness of Carthage lay in the rivalry of two blocs of leading families that traditionally backed opposing policies. The most important division was between those favoring land expansion and those favoring sea power. The maritime faction was generally in control, and about the end of the 6th cent. B.C. the Carthaginians established themselves on Sardinia, Malta, and the Balearic Islands. The navigator Hanno in the early 5th cent. is supposed to have sailed down the African coast as far as Sierra Leone. The statesman Mago arrived at treaties with the Etruscans, the Romans, and some of the Greeks. However, Sicily, which lay almost at the front door of Carthage, was never brought completely under Carthaginian control. The move against the island, begun by settlements in W. Sicily, was brought to a halt when the Carthaginian general HAMILCAR (a name that recurred in the powerful Carthaginian family usually called the Barcas) was defeated (480 B.C.) by GELON, tyrant of Syracuse, in the battle of Himera. The Greek city-states of Sicily were thus preserved, but the Carthaginian threat continued and grew with the steadily increasing power of Carthage. Hamilcar's grandson, Hannibal (another name much used in the family), destroyed Himera (409 B.C.), and his colleague Himilco sacked Agragas (modern Agrigento) in 406 B.C. SYRACUSE resisted the conquerors, and a century later Carthage was threatened by the campaign (310-307?) of the tyrant Agathocles on the shores of Africa. After his death, however, Carthage had practically complete control over all the W. Mediterranean. In the 3d cent. B.C., Rome challenged that control in the PUNIC WARS (so called after the Roman name for the Carthaginians, Poeni, i.e., Phoenicians). The first of these wars (264-241) cost Carthage all remaining hold on Sicily. Immediately after the First Punic War a great uprising of the mercenaries occurred (240-238). HAMILCAR BARCA put down the revolt and compensated for the loss of Sicilian possessions by undertaking conquest in Spain, a conquest continued by HASDRUBAL. This growth of power again activated trouble with Rome,

and the Second Punic War took place (218–201). Although the Carthaginian general was the formidable HANNIBAL, Carthage was finally defeated, partly by the Roman generals Quintus Fabius Maximus Rullianus (see under FABIIUS) and SCIPIO AFRICANUS MAJOR, and partly by the fatal division of the leading families in Carthage itself, which prevented Hannibal from receiving proper supplies. After Scipio had won (202) the battle of ZAMA, Carthage sued for peace. All its warships and its possessions outside Africa were lost, but Carthage recovered commercially and remained prosperous. However, Rome (and particularly CATO THE ELDER) felt that to be a threat, and the Third Punic War (149–146 B.C.) ended with the total destruction of Carthaginian power and the razing of the city by SCIPIO AFRICANUS MINOR. Romans later undertook to build a new city on the spot in 122 B.C., but the project failed. A new city was founded in 44 B.C. and under Augustus became an important center of Roman administration. Carthage was later (A.D. 439–533) the capital of the Vandals and was briefly recovered (533) for the Byzantine Empire by Belisarius. Although practically destroyed by Arabs in 698, the site was populated for many centuries afterward. There are hardly any remains of the ancient Carthage. A few Punic cemeteries, shrines, and fortifications have been discovered, and there are some Roman ruins including baths, an amphitheater, and other buildings. Louis IX of France (St. Louis) died there when on crusade. A chapel in his honor stands on the hill that is traditionally identified as Byrsa Hill, site of the ancient citadel. The Lavagerie Museum is also there. See B. H. Warmington, *Carthage* (2d ed. 1969), T. A. Dorey and D. R. Dudley, *Rome against Carthage* (1971).

Carthage, city (1970 pop. 11,035), seat of Jasper co., SW Mo., on the Spring River, in a rich farm area, inc. 1873. Its gray marble quarries are the largest of their kind in the world, and Carthage marble is a major product. Carthage became county seat in 1842. A Civil War battle was fought there July 5, 1861, the city was burned and was rebuilt after the war. Points of interest include the log cabin courthouse (1842) and the George Washington Carver National Monument, site of Carver's birthplace, at nearby Diamond.

Carthusians (karthōō'zhānz), small order of monks of the Roman Catholic Church [Lat. abbr., =O. Cart]. It was established by St. BRUNO at La Grande Chartreuse (see CHARTREUSE, GRANDE) in France in 1084. The Carthusians are peculiar among orders of Western monasticism in cultivating a nearly eremitical life: each monk lives by himself with cell and garden and, except for communal worship, scarcely meets the others. No order is more austere. The Carthusian enclosure is called charterhouse in English, and its architecture differs necessarily from that of the Benedictine ABBEY. The CHARTERHOUSE of London was famous, and the CERTOSA DI PAVIA, Italy, is an architectural monument. The Carthusians are devoted mainly to contemplation. In 1973 they numbered 440 members throughout the world, of whom there were 10 in the United States, living at the Charterhouse of Arlington, Vt. They are unchanging in their rule, their independence, and their original way of life. There are a very few Carthusian nuns following a similar rule. CHARTREUSE is the well-known liqueur manufactured by Carthusians in France.

Cartier, Sir Georges Étienne (zhōrhzh ätyēn' kartyā'), 1814–73, Canadian statesman, b. Quebec prov. He was called to the bar of Lower Canada (Quebec) in 1835. He took part in the rebellion of 1837 inspired by Louis Joseph PAPINEAU and was forced to flee to the United States, but he returned to Canada in 1838. In 1848 he was elected to the legislative assembly of Canada, where he became a leader of the French Canadians. With Sir John A. MACDONALD, his ally in Upper Canada, he formed the Macdonald-Cartier ministry (1857–62). He was the leading French Canadian advocate of confederation of British North America, played a prominent role in the Charlottetown and Quebec conferences of 1864, and was mainly influential in persuading his compatriots to accept the federation proposals. On the other hand, in order to protect the French Canadians, he insisted on a federal system rather than a more centralized form of government. As one of Macdonald's most trusted colleagues, Cartier became minister of militia in the first dominion government. In 1868 he went to England with William McDougall to arrange for the purchase of the Hudson's Bay Company territory. He also had an important part in the projection of the Grand Trunk and Canadian Pacific railroads. See biographies by John Boyd (1914, repr. 1971) and A. D. DeCelles (1926).

Cartier, Jacques (zhak), 1491–1557, French navigator, first explorer of the Gulf of St. Lawrence and discoverer of the St. Lawrence River. He made three voyages to the region, the first two (1534, 1535–36) directly at the command of King Francis I and the third (1541–42) under the sieur de Roberval in a colonization scheme that failed. On the first voyage he entered by the Strait of Belle Isle, skirted its barren north coast for a distance and then coasted along the west shore of Newfoundland to Cape Anguille. From there he discovered the Magdalen Islands and Prince Edward Island and, sailing to the coast of New Brunswick, explored Chaleur Bay, continued around the Gaspé Peninsula, and landed at Gaspé to take possession for France. Continuing to Anticosti Island, he then returned to France. Hitherto the region had been considered cold and forbidding, interesting only because of the Labrador and Newfoundland fisheries, but Cartier's reports of a warmer, more fertile region in New Brunswick and on the Gaspé and of an inlet of unknown extent stimulated the king to dispatch him on a second expedition. On this voyage he ascended the St. Lawrence to the site of modern Quebec and, leaving some of his men to prepare winter quarters, continued to the Indian village of Hochelaga, on the site of the present-day city of Montreal, and there climbed Mt. Royal to survey the fertile valley and see the Lachine Rapids and Ottawa River. On his return he explored Cabot Strait, ascertaining Newfoundland to be an island. His *Brief Recit et succincte narration* (1545), a description of this voyage, was his only account to be published in France during his life. On his third trip he penetrated again to the Lachine Rapids and wintered in the same region, but gained little new geographical information. Roberval did not appear until Cartier was on his way home, and Cartier refused to join him. Although Cartier's discoveries were of major geographical importance and the claims of the French to the St. Lawrence valley were based on them, he failed in his primary object, the discovery of the Northwest Passage and natural resources. The region remained virtually untouched until the early 17th cent. The best edition of the voyages is H. P. Biggar, *The Voyages of Jacques Cartier* (1924).

Cartier-Bresson, Henri (aNRé' kartēā'-brēsōN'), 1908–, French photojournalist. Cartier-Bresson is renowned for his countless memorable images of 20th-century individuals and events. Achieved with the simplest of techniques, his works are remarkable for their flawless composition and for the sense they convey of the rush of time arrested. His photographs are uncropped and unmanipulated. In 1944, after escaping from a German prison camp, Cartier-Bresson organized underground photography units. He is the author of many photographic books including *The Decisive Moment* (1952), *People of Moscow* (1955), *China in Transition* (1956), *The World of Henri Cartier-Bresson* (1968), *The Face of Asia* (1972), and *About Russia* (1974). He was a founder of the Magnum photo agency. See François Nourissier, *Cartier-Bresson's France* (tr. 1971).

cartilage (kar'tālij), flexible semitransparent CONNECTIVE TISSUE without blood vessels or nerve cells that forms part of the skeletal system in man and other vertebrates, also called gristle. Temporary cartilage makes up the skeletal system of the fetus and the infant but is gradually replaced by bone as the body matures. Permanent cartilage remains throughout life, as in the external ear, nose, larynx, and windpipe. Cartilage is also present about the JOINTS, where it reduces friction and imparts flexibility.

Cartimandua, fl. 1st cent. A.D., British queen of the Brigantes. Ruler of the largest and most powerful tribe in Roman Britain (inhabiting the area that is now Yorkshire), she surrendered CARACTACUS to the Romans (A.D. 51). The Romans supported her rule as a client-queen in order to stabilize the region and quell dynastic conflicts. She was overthrown in A.D. 69 when she repudiated her husband, Venutius, for his armor-bearer. The Brigantes were then subjugated under direct Roman rule.

cartography see MAP

cartoon [Ital. cartone=paper]. In the fine arts, a full-sized preliminary drawing for a work to be afterwards executed in fresco, oil, mosaic, stained glass, or tapestry. Glass and mosaic are cut exactly according to the patterns taken from the cartoons while in tapestry the cartoon is inserted beneath the warp to serve as a guide. In FRESCO painting, the lines of the cartoon are perforated and transferred to the plaster surface by pouncing (dusting with powder through the perforations). The Italian Renaissance painters made very complete cartoons, and such works as

Raphael's cartoons for the Sistine Chapel tapestries (Victoria and Albert Mus.) are considered masterpieces. In England in 1843 a series of drawings appeared in *Punch* magazine that parodied the fresco cartoons submitted in a competition for the decoration of the new Houses of Parliament. In this way cartoon, in journalistic parlance, came to mean any single humorous or satirical drawing employing distortion for emphasis, often accompanied by a caption or a legend. Cartoons, particularly editorial or political cartoons, make use of the elements of CARICATURE. The political cartoon first appeared in 16th-century Germany during the Reformation, the first time such art became an active propaganda weapon with social implications. While many of these cartoons were crudely executed and remarkably vulgar, some, such as Holbein's *German Hercules*, were excellent drawings produced by the best artists of the time. In England, in the 18th cent., the cartoon became an integral and effective part of journalism through the works of Hogarth, Rowlandson, and Gillray. Daumier, in France, became well known for his virulent satirical cartoons. By the mid-19th cent. editorial cartoons had become regular features in American newspapers and were soon followed by sports cartoons and humorous cartoons. The effect of political cartoons on public opinion was amply demonstrated in the elections of 1871 and 1873 when the power of Tammany Hall was broken and Boss Tweed imprisoned largely through the efforts of Thomas Nast and his cartoons for *Harper's Weekly*. In 1922 the first Pulitzer Prize for editorial cartooning was won by Rollin Kirby of the *New York World*. Other noted political cartoonists include John T. McCutcheon, C. D. Batchelor, Jacob Burck, Bill Mauldin, Rube Goldberg, Tom Little, Patrick Oliphant, and Herblock (Herbert Block). Humorous nonpolitical cartoons became popular with the development of the color press, and in 1893 the first color cartoon appeared in the *New York World*. In 1896, R. F. Outcault originated *The Yellow Kid*, a large single-panel cartoon with some use of dialogue in balloons, and throughout the '90s humorous cartoons by such artists as T. S. Sullivan, James Swinnerton, Frederick B. Opper, and Edward W. Kemble began to appear regularly in major newspapers and journals. *The New Yorker* and the *Saturday Evening Post* were among the most notable American magazines to use outstanding single cartoon drawings. The single cartoons soon developed into the narrative newspaper COMIC STRIP, although the single-panel episodic tradition has been retained, exemplified by the work of humorists such as Charles Addams, Peter Arno, Saul Steinberg, James Thurber, William Steig, Helen Hokinson, Mary Petty, Whitney Darrow, the Englishmen Rowland Emmett and Ronald Searle, and the French cartoonists André François and 8il. See studies by David Low (1953), Osbert Lancaster (1964), R. E. Shikes, *The Indignant Eye* (1969), John Geipel (1972).

Cartouche (kartōosh'), 1693–1721, nickname of Louis Dominique Bourguignon, French highwayman. His band terrorized the Paris area until his capture. He was broken on the wheel. Cartouche's daring exploits have been celebrated in stories, dramas, ballads, and popular prints.

Cartwright, Edmund, 1743–1823, English inventor and clergyman. He was the inventor of an imperfect power loom that, when finally patented (1785), became the parent of the modern loom. It was the first machine to make practical the weaving of wide cotton cloth. A few of Cartwright's many other inventions were a wool-combing machine (1789), a machine for ropemaking (1792), and an engine (1797) that used alcohol as fuel. He cooperated with Fulton on his experiments with steam navigation.

Cartwright, John, 1740–1824, English reformer and pamphleteer, brother of Edmund Cartwright. He had an early career in the navy. He declined to fight the American colonists and wrote *American Independence: the Interest and Glory of Great Britain* (1774). A major in the Nottinghamshire militia (1775–92), he was deprived of his commission in the hysteria at the time of the French Revolutionary Wars. He came to be called the "father of reform" for his advocacy of universal manhood suffrage, parliamentary and army reform, and abolition of slavery. See F. D. Cartwright, ed., *The Life and Correspondence of Major Cartwright* (2 vol., 1826, repr. 1969), biography by J. W. Osborne (1972).

Cartwright, Peter, 1785–1872, American Methodist preacher, b. Virginia. He was a circuit rider in Kentucky, Tennessee, Indiana, Ohio, and Illinois for nearly 50 years. In 1846 he was defeated as a candidate for Congress by Abraham Lincoln. An interest in education led Cartwright to aid in founding Illi-

nois Wesleyan Univ and Illinois Conference Female Academy (now MacMurray College) The methods and experiences of the pioneer preacher are vividly recorded in his autobiography (1857) and other books See biographies by H H Grant (1931) and Sydney and Marjorie Greenbie (1955)

Cartwright, Sir Richard John, 1835-1912, Canadian politician, b Kingston, Ont He was elected as a Conservative to the legislative assembly of Canada (1863) and to the first dominion House of Commons (1867), but he later joined the Liberals He was minister of finance (1873-78) in Alexander Mackenzie's administration As minister of trade and finance (1896-1911) in Sir Wilfrid Laurier's government, Cartwright was acting prime minister on several occasions He entered the Senate in 1904 A noted public speaker, he was the Liberal party's spokesman on financial matters and an earnest advocate of trade reciprocity with the United States See his reminiscences (1912)

Cartwright, William, 1611-43, English author and divine An ardent royalist and a disciple of Ben Jonson, he had a high reputation in his day both as a preacher and as an author In addition to his poems, which are now almost entirely forgotten, Cartwright wrote plays, of which *The Ordinary* (1635?) and *The Royal Slave* (1636) were the most successful See his works (ed with an introduction by G Blakemore Evans, 1951)

Caruaru (karōōarōō'), city (1970 pop 142,808), Pernambuco state, NE Brazil, on the Ipojuca River It is a commercial center in an agricultural and cattle-raising area

Carucci, Jacopo: see PONTORMO, JACOPO DA

Carus (Marcus Aurelius Carus) (kār'ās), d 283, Roman emperor (282-83) Praetorian prefect under PROBUS, he was made emperor by the soldiers after the murder of Probus Leaving his son CARINUS in command of the West, Carus and another son, Numerianus, went on a campaign in the East He defeated the Sarmatians, successfully attacked the Parthians, and took Ctesiphon Soon afterward he died mysteriously

Carus, Paul, 1852-1919, American philosopher, born and educated in Germany For many years he was editor of the *Open Court* and the *Monist*, periodicals devoted to philosophy and religion His philosophy was monistic, seeking to establish religion on a scientific basis Among his many works were *Fundamental Problems* (1889), *The Religion of Science* (1893), *The Gospel of Buddha* (1900), *The History of the Devil* (1900), and *The Principle of Relativity* (1913)

Caruso, Enrico (karōō'sō, Ital ānrē'kō kārōō'zō), 1873-1921, Italian operatic tenor, b Naples The natural beauty, range, and power of his voice made him one of the greatest singers in the history of opera He studied for three years with Guglielmo Vergine and made his operatic debut in Naples in 1894 His first major success came in London in 1902, and he achieved even greater triumph with his American debut in 1903 at the Metropolitan Opera as the duke in *Rigoletto* He remained the reigning favorite at the Metropolitan until a short time before his death (from pleurisy) He also made guest appearances in Europe and Latin America, interrupting his busy career only for a throat operation in 1908-9 He sang more than 50 roles in Italian and French operas, such as *La Traviata*, *Aida*, *La Bohème*, *Tosca*, and *Carmen* After his death his recordings perpetuated his fame His highly emotional interpretation of *Cavito* in *I Pagliacci* perhaps won the most rapturous public applause, but roles in Verdi and Puccini operas and his recitals showed his artistry to better advantage See biographies by Dorothy Park Benjamin Caruso (new ed 1963) and Stanley Jackson (1972)

Carvajal, Francisco de (frānthēs'kō dā kārvāhāl'), 1464?-1548, Spanish conquistador For 40 years he fought in European wars before going to Mexico and subsequently to Peru, where he aided Francisco Pizarro He grew rich from the tributary labor of Indians, thousands of whom died in his mines at Potosí He supported (1542) VACA DE CASTRO against the revolt of Diego de Almagro the younger, but when the New Laws to protect the Indians were put in force in Peru (1544), he joined the revolt of Gonzalo PIZARRO He was captured with Gonzalo Pizarro and executed

carvel: see CARAVEL

Carver, George Washington, 1864?-1943, American agricultural chemist, b Diamond, Mo., grad Iowa State College (BS, 1894, MA 1896) Born a slave, he later, as a free man, earned his college degree In 1896 he joined the staff of Tuskegee Institute as director of the department of agricultural re-

search, retaining that post the rest of his life His work won him international repute Carver's efforts to improve the economy of the South (he dedicated himself especially to bettering the position of Negroes) included the teaching of soil improvement and of diversification of crops He discovered hundreds of uses for the peanut, the sweet potato, and the soybean and thus stimulated the culture of these crops He devised many products from cotton waste and extracted blue, purple, and red pigments from local clay From 1935 he was a collaborator of the Bureau of Plant Industry Carver contributed his life savings to a foundation for research at Tuskegee In 1953 his birthplace was made a national monument See biographies by Rackham Holt (rev ed 1966) and Lawrence Elliott (1966)

Carver, John, c 1576-1621, first governor of Plymouth Colony A wealthy London merchant, in 1609 he emigrated to Holland, where he soon joined the Pilgrims at Leiden His excellent character and his fortune, of which he gave liberally to the congregation, served to make him a leader Carver, the chief figure in arranging for the Pilgrim migration to America, secured the backing of merchant friends in London, enlisted a number of capable settlers who came directly from England, and hired and provisioned the *Mayflower* for the journey After the signing of the Mayflower Compact he was elected (1620) governor for one year and was probably responsible for the choice of the site at Plymouth On his death, William BRADFORD succeeded him See G F Willison, *Saints and Strangers* (1945)

Carver, Jonathan, 1710-80, American explorer, b Weymouth, Mass He served in the French and Indian War and in 1766 was hired by Robert ROGERS to undertake a journey to some of the Western tribes He journeyed to the Mississippi and up that river to a point several days' journey above the present site of Minneapolis In the spring of 1767 he returned to Prairie du Chien, where by Rogers's orders he joined the expedition to search out the "Western Ocean" When their journey northwestward was prevented by war between the Sioux and Chippewa, they ascended the Chippewa River and crossed to Lake Superior, the coast of which they followed to Grand Portage Carver went to London in 1769 with the intention of publishing a narrative of his travels and of pressing claims for compensation for his services, for Rogers, having exceeded his authority in employing Carver, could not pay him After nine years of struggle and poverty, Carver published the first edition of his *Travels through the Interior Parts of North America in the Years 1766, 1767, and 1768* (1778) The popularity of this book, the first English account of the upper Great Lakes and Mississippi region, is attested by the 32 editions, or more, through which it passed

Cary, Henry Francis, 1772-1844, English translator A graduate of Christ Church College, Oxford, he was assistant librarian in the British Museum from 1826 to 1837 He translated several classical writers, including Aristophanes and Pindar His blank-verse rendering (1814) of Dante's *Divine Comedy* is still a standard translation

Cary, Joyce (Arthur Joyce Lunel Cary), 1888-1957, English author From 1910 to 1920 he served as an administrator and soldier in Nigeria Several of his early works, including *Mister Johnson* (1939), reflect his African experiences Cary is perhaps best known for his two trilogies Both these works, full of humor and compassion, convey a sense of the gradual change in the social and political structure of modern England The first trilogy consists of *Herself Surprised* (1941), *To Be a Pilgrim* (1942), and *The Horse's Mouth* (1944), the last book featuring the visionary, iconoclastic painter Gully Jimson, the second trilogy consists of *Prisoner of Grace* (1952), *Except the Lord* (1953), and *Not Honour More* (1955) Cary wrote many other novels, in addition to political studies and poems A collection of his short stories, *Spring Song*, was published posthumously in 1960 See biography by Malcolm Foster (1968), studies by Robert L Bloom (1963), Jack S Wolkenfeld (1968), and R W Noble (1973)

Cary, Lucius: see FAULKLAND, LUCIUS CARY, 2D VISCOUNT
caryatid (kā'rēāt'īd), a sculptured female figure serving as an ornamental support in place of a column or pilaster It was a frequently used motif in architecture, furniture, and garden sculpture during the Renaissance, the 18th cent., and notably, the CLASSIC REVIVAL of the 19th cent., when caryatids were popular as mantelpiece supports The motif appeared in Egyptian and Greek architecture, the most celebrated example extant is the Porch of the Caryatids,

forming part of the ERECHTHEUM Here six beautifully sculptured figures, acting as columns, support an entablature on their heads They are considered the

Caryatid

only faultless examples of a form that ranks as somewhat questionable architecturally Caryatids were used also in two small treasures (6th cent B.C.) at Delphi

Casa, Giovanni della (jōvān'nē dēl'lā kā'zā), 1503-56, Italian cleric and poet He was archbishop of Benevento and papal nuncio to Venice He wrote lyric verse, a life of Bembo, and a treatise on etiquette, the *Galateo* (1560, tr 1576) His verse is often of great dignity and formal beauty See Lorna de' Lucchi, *An Anthology of Italian Poems* (1922)

casaba melon: see MELON

Casablanca (kā''sāblāng'ka, kā''za-, Span kā''-sāblāng'kā), Arab *Dar-al-Baida*, city (1970 est pop 1,395,000), W Morocco, on the Atlantic Ocean It is the largest city of Morocco and handles over two thirds of the country's commerce Phosphates comprise 75% of the total export traffic, and petroleum products are the major imports The city's leading industries produce textiles, glass, and bricks Casablanca is on the site of Anfa, a prosperous town that the Portuguese destroyed in 1468, they resettled it briefly in 1515 under its present name Almost destroyed by an earthquake in 1755, Casablanca was rebuilt (1757) by Muhammad XVI It was occupied by the French in 1907 During World War II, Casablanca was the scene of one of the three major Allied landings in North Africa (Nov., 1942) and of a conference between Franklin Delano Roosevelt and Winston Churchill (Nov., 1943)

Casablanca Conference, Jan 14-24, 1943, World War II meeting of U.S. President Franklin Delano Roosevelt and British Prime Minister Winston Churchill at Casablanca, French Morocco A joint declaration pledged that the war would end only with the unconditional surrender of the Axis states No agreement was reached on the claims for leadership of the rival French generals, Henri H Giraud and Charles de Gaulle, who also attended the conference

Casadesus, Robert (kā'sādāsūs'), 1899-1973, French pianist and composer, b Paris Casadesus was born into a family remarkable for its numerous celebrated musicians After study at the Paris Conservatory, he embarked in 1922 on a long and distinguished concert career After 1940, Casadesus lived in the United States, where he taught and composed He became director of the American Conservatory at Fontainebleau in 1945 Noted as a pianist of lyric sensitivity, he often appeared in concert with his wife, the pianist Gaby Casadesus Their son, Jean Casadesus, 1927-71, was also a well-known concert pianist

Casa Fuerte, Juan de Acuña, marqués de: see ACUÑA, JUAN DE

Casa Grande (kā'sā grān'dā), city (1970 pop 10,536), Pinal co., S Ariz., inc 1915 It lies in an irrigated farm

area near the Casa Grande Mts. The city was named after an excavated Indian pueblo that is now included in the nearby Casa Grande Ruins National Monument (see NATIONAL PARKS AND MONUMENTS, table). Casa Grande is a retail trade center of 5 central Arizona.

Casal, Julian del (hōōlyan' dēl kasal'), 1863-93, Cuban poet, b. Havana. A friend of Ruben Dario, Casal became a leader in MODERNISMO. He was greatly influenced by the French PARNASSIANS. Afflicted with a painful form of tuberculosis, he wrote verse expressing deep pessimism. To escape his agony he often chose subjects from antiquity and far-off lands, especially Japan. His best-known collections are *Hojas al viento* [leaves in the wind] (1890) and *Bustos y rimas* [busts and rhymes] (1893).

Casale Monferrato (kāsa'lā mōnfār-ra'tō) or **Casale**, city (1971 pop. 43,697), Piedmont, NW Italy, on the Po River. Manufactures include cement and electrical appliances, and much wine is produced in the region. It became the capital of the marquisate of MONTFERRAT in 1435 and was strongly fortified. In the mid-16th cent. the city came under Mantua, and in 1703 it passed to the house of Savoy. Of note are the Romanesque cathedral (12th cent.) and the citadel (15th cent., now a barracks).

Casals, Pablo (Pau) (pa'blō kasals', pou), 1876-1973, Spanish virtuoso cellist and conductor. Casals is considered the greatest 20th-century master of the cello and a distinguished composer, conductor, and pianist. A prodigy, he began his concert career in 1891. In 1905 he formed a chamber trio with Jacques Thibaud (1880-1953) and Alfred Cortot. His career as a conductor began in 1919, when the Orquesta Pau Casals, Barcelona, gave its first concert. Casals gained an international reputation for brilliant expressive technique that remains unsurpassed. His superb interpretations of the Bach unaccompanied cello suites brought him worldwide adulation. In 1939, Casals settled at Prades in S France, a voluntary exile in protest against the Spanish government. In 1950 he began to conduct annual music festivals in Prades. In 1956 he moved to Puerto Rico, where the following year he inaugurated annual music festivals at San Juan. He married his third wife, his student Martita Montañes, in 1957. He performed at the United Nations (1958) and the White House (1961), and conducted a celebrated concert of some 80 cellists at Lincoln Center (1972). See his memoirs (1970), biography by H. L. Kirk (1974), Lillian Littlehales, *Pablo Casals* (rev. ed. 1948).

Casanova de Seingalt, Giovanni Giacomo (kāza-nō'vā, Ital. jōvan'ne ja'kōmō kazanō'vā dā sāngalt'), 1725-98, Venetian adventurer and author. His first name also appears as Jacopo. He studied for the church but was expelled from school for immorality. A life of adventure took him all over Europe. He supported himself by gambling, spying, writing, and, especially, by his power to seduce women, and his personal charm affected the foremost persons of his time. Arrested (1755) in Venice, he accomplished the notable feat of escaping (1756) from the "leaden roofs" of the state prison. In Paris, where he enjoyed favor in court circles, he became director of the lottery and amassed a fortune. In 1785 Casanova retired to the castle of Dux, Bohemia, where his friend Count Waldstein employed him as librarian. A man of learning and taste, with interests ranging from mathematics, poetry, and literary and musical criticism to commercial and political projects, Casanova left many writings. His memoirs, written in French, became world-famous. Only abridged versions were published until 1960, when the complete memoirs began to appear in French and in German translation. Accurate as to history, the memoirs probably contain much invented personal matter. Other papers, in prose and verse, were released in 1930. See his autobiography tr. by W. R. Trask (12 vol. in 6, 1967-71), biographies by J. R. Childs (1961) and J. Masters (1969).

Casas, Bartolome de las see LAS CASAS

Casaubon, Isaac (ēzak' kazōbōn'), 1559-1614, English classical scholar and theologian, b. Geneva. He became professor of Greek at Geneva and at Montpellier and by his learning attracted the notice of Henry IV, who made him royal librarian. After Henry's death, he was invited to England by the archbishop of Canterbury. He joined the Church of England and in 1610 James I granted him a royal stipend. The next year Casaubon became an English subject, remaining in England the rest of his life. He was buried in Westminster Abbey. Casaubon's great works are his editions of the classics, particularly Athenaeus and the *Characters* of Theophrastus. His diary, *Ephemerides*, was edited by his son, Florence

Étienne Meric Casaubon, 1599-1671, who was also a classical scholar.

Casca (Publius Servilius Casca Longus) (kās'ka), d. c. 42 B.C., Roman politician, one of the assassins of Julius CAESAR. Casca was the first to stab Caesar. He died (presumably by suicide) soon after the battle of Philippi.

Cascade Range, mountain chain, c. 700 mi (1,130 km) long, extending S from British Columbia to N Calif., where it joins the Sierra Nevada; it parallels the Coast Ranges, 100-150 mi (161-241 km) inland from the Pacific Ocean. Many of the range's highest peaks are volcanic cones, covered with snowfields and glaciers. Lassen Peak, 10,457 ft (3,187 m) high, in Lassen Volcanic National Park, is still volcanically active. Mt. Rainier (14,410 ft/4,392 m), in Mount Rainier National Park, is the highest point in the Cascades. Mt. Shasta and Mt. Hood are other prominent peaks. The Klamath, Columbia, and Fraser rivers flow from east to west across the range. Of the many lakes in the Cascades, Crater Lake, in Crater Lake National Park, and Lake Chelan, in Lake Chelan National Recreation Area, are the most famous. Other Federal lands in this popular recreation area are North Cascades National Park, Ross Lake National Recreation Area, and Lava Beds National Monument, national forests cover an extensive area. Receiving more than 100 in. (254 cm) of precipitation annually, the Cascades are a major source of water in the U.S. Northwest. Hydroelectricity is generated on the western slope; irrigation is used in the fertile eastern side valleys. Timber is the region's chief resource. The Cascade Tunnel, 8 mi (12.9 km), is the longest railroad tunnel in North America.

Casco Bay (kās'kō), deep inlet of the Atlantic Ocean, 200 sq mi (518 sq km), SW Maine. The bay, with its more than 200 wooded, hilly islands, has many summer estates and resorts. Portland, Maine, is the principal harbor.

case, in language, one of the several possible forms of a given noun, pronoun, or adjective that indicates its grammatical function (see INFLECTION), it is usually a series of suffixes attached to a stem, as in Latin *amicus*, "friend" (nominative), *amicum* (accusative), *amici* (genitive), and *amico* (ablative and dative). In English, nouns have two cases, e.g., man (common or nominative) and man's (possessive or genitive), and a few pronouns have three, e.g., he (nominative), him (objective), and his (possessive). The fact that there are only two cases represents a loss in the English case system as Old English also used accusative, dative, and sometimes instrumental, cases. Latin has six cases, nominative, genitive, dative, accusative, ablative, and vocative. The hypothetical ancestor of the Indo-European languages had eight cases, the above six plus the instrumental and locative cases. The Altaic and Finno-Ugric language families also use case systems. German has four cases, Russian six, Finnish sixteen. In Europe, the concept was first introduced by the Greeks, although Sanskrit grammarians established it independently. The names of the most common cases derive from Greek by way of Latin translation, as does the term case itself.

casehardening: see HARDENING

casein (kā'sēn), well-defined group of proteins found in milk, constituting about 80% of the proteins in cow's milk, but only 40% in human milk. Casein is a remarkably efficient nutrient, supplying not only essential amino acids, but also some carbohydrates and the inorganic elements calcium and phosphorus. The calcium caseinates form an insoluble white curd when acidified by hydrochloric acid or sulfuric acid, or when milk is soured by bacterial contaminants. Acid casein is used widely in cheese, adhesives, water paints, for coating paper, and in printing textiles and wallpaper. In neutral solutions the enzyme rennin converts one of the caseins to an insoluble curd, most of the protein in cheese is RENNET casein curd. When treated with formaldehyde the curd forms casein plastic, used for manufacturing imitation tortoiseshell, jade, and lapis lazuli.

Case Institute of Technology: see CASE WESTERN RESERVE UNIV.

Casella, Alfredo (alf'rā'dō kasē'lā), 1883-1947, Italian composer, pianist, conductor, and writer on music, pupil of Gabriel Faure at the Paris Conservatory. He taught piano at the Paris Conservatory (1911-15) and at the St. Cecilia Conservatory, Rome (1915-23). In 1917 he organized a society, later known as *Corporazione delle Nuove Musiche*, to promote the recognition of contemporary music. He is the author of *The Evolution of Music throughout the His-*

tory of the Perfect Cadence (tr. 1924). His best-known compositions are the ballets *Il convento veneziano* (1912) and *La Giara* (Paris, 1924), the latter based on a novel by Pirandello. Other works are piano pieces, songs, chamber music, orchestral works, and concertos. See his memoirs, *Music in My Time* (tr. 1955).

Casement, Sir Roger David, 1864-1916, Irish revolutionary. While in British consular service, he exposed (1904) the atrocious exploitation of wild rubber gatherers in the Congo (thus helping to bring about the extinction of the Congo Free State in 1908) and later exposed similar conditions in South America. He was knighted for these services. Although an Ulster Protestant, Casement became an ardent Irish nationalist. After the outbreak of World War I he went first to the United States and then to Germany to secure aid for an Irish uprising. The Germans promised help, but Casement considered it insufficient and returned to Ireland in April, 1916, hoping to secure a postponement of the Easter Rebellion (see IRELAND). Arrested immediately after his landing from a German submarine, he was tried, convicted, and hanged for treason. To further blacken his name, some British agents had circulated his diaries, which showed him to be a homosexual. The diaries were probably genuine, but the manner of their use helped to inspire controversy about the possibility of forgery. See biographies by Peter Singleton-Gates and Maurice Girodias (1959) and Brian Inglis (1974).

Caserta (kazēr'ta), city (1971 pop. 62,928), capital of Caserta prov., Campania, S central Italy. It is an agricultural and commercial center and a transportation junction. The surrender of the German forces in Italy to the Allies took place there on April 29, 1945. Caserta is noted for its magnificent royal palace (built 1752-74) and gardens. There is an academy of aeronautics in the city.

Case Western Reserve University, at Cleveland, coeducational in most divisions, est. 1967 through the merger of the Case Institute of Technology (chartered 1880, opened 1881) and Western Reserve University (chartered and opened 1826). The university is made up of 13 schools and colleges, including three coordinate undergraduate resident colleges.

Casgrain, Henri Raymond (aNrē' rāmōn' kās-grān'), 1831-1904, French Canadian historian. He traveled widely in Europe, collecting documents relevant to Canadian history, and wrote enthusiastic histories, such as *Légendes canadiennes* (1861), *Un Pèlerinage au pays d'Évangéline* (1887), *Les Pionniers canadiens* (1876), and *Wolfe and Montcalm* ("Makers of Canada" series, rev. ed. 1926).

cash, popular term for ready MONEY. In commerce and banking the term is used in contradistinction to commercial paper. To "cash" such paper means to convert it into currency. In bookkeeping terms such as "petty cash" and "cashbook," the word has the same meaning. "Cash payment" is opposed to "credit," though cash payment may be made in coin, in notes, or by check.

Cashel (kā'shāl) [Irish, = castle], urban district (1971 pop. 2,693), Co. Tipperary, S central Republic of Ireland. Now an agricultural market, it was the ancient capital of the kings of Munster and was the stronghold of Brian Boru. On the Rock of Cashel, rising 300 ft (91 m) in the center of town, are the ruins of the 13th-century St. Patrick's Cathedral, a round tower (10th cent.), an ancient cross, and Cormac's Chapel (12th cent.). Below the Rock are the ruins of Hore Abbey (1272). Cashel is the seat of a Roman Catholic archbishop and of an Anglican bishop.

cashew (kāsh'ōō, kashōō'), tropical American tree (*Anacardium occidentale*) of the family ANACARDIACEAE (SUMAC family), valued chiefly for the cashew nut of commerce. The tree's acrid sap is used in making a varnish that protects woodwork and books from insects. The fruit is kidney-shaped, about an inch in length, and has a double shell. The kernel, which is sweet, oily, and nutritious, is much used for food in the tropics after being roasted to destroy the caustic juice. It yields a light-colored oil said to be the equal of olive oil and is utilized in various culinary ways. In the West Indies it is used to flavor wine, particularly Madeira, and is imported into Great Britain for this purpose. The nut grows on the end of a fleshy, pear-shaped stalk, called the cashew apple, which is white, yellow, or red, juicy and slightly acid, and is eaten or fermented to make wine. Cashews are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Sapindales, family Anacardiaceae.

Casilinum (kāsilī'nəm), ancient town, Campania, 5 Italy, 18 mi (29 km) N of present-day Naples.

Founded (c 600 B C) probably by the Etruscans, it became (5th cent B C) the capital of the Samnites. Under the Romans it was an important military station controlling the bridge of the Apennine Way over the Voltumo River. It was destroyed by the Saracens in the 9th cent A D, the inhabitants of nearby CAPUA moved there soon after and changed its name from Casilinum to Capua.

Casimir I (käs'ämër), c 1015-1058, duke of Poland (c 1040-1058), son of MIESZKO II. He succeeded in reunifying the central Polish lands under the hegemony of the Holy Roman Empire, but he was never crowned king. He is also called Casimir the Restorer. His son and successor was Boleslaus II.

Casimir II, 1138-94, duke of Poland (1177-94), youngest son of Boleslaus III. A member of the PIAST dynasty, he drove his brother Mieszko III from power at Krakow in 1177 and became the principal duke of Poland. At the Congress of Leczyca (1180) the nobility and clergy, in return for privileges he had granted them, vested Casimir's descendants with hereditary rights to the crown. Casimir himself was never crowned king.

Casimir III, 1310-70, king of Poland (1333-70), son of Ladislaus I and last of the PIAST dynasty. Called Casimir the Great, he brought comparative peace to Poland. By the Congress of Visegrad (1335) he promised to recognize the suzerainty over Silesia of John of Luxemburg, king of Bohemia, in return John renounced all claim to the Polish throne. In 1339, Casimir officially acknowledged John's power. By the Treaty of Kalisz (1343) with the TEUTONIC KNIGHTS, Casimir consolidated his territories, and later he acquired much of the duchy of Galich-Vladimir. He strengthened the royal power at the expense of the nobility and clergy, codified Polish law in the Statute of Wislica, alleviating the lot of the peasants (hence he was "king of the peasants"), improved the condition of the Jews, encouraged industry, commerce, and agriculture, and founded (1364) the Univ of Kraków. Casimir was succeeded by his Angevin nephew, King Louis I of Hungary.

Casimir IV, 1427-92, king of Poland (1447-92). He became (1440) ruler of Lithuania and in 1447 succeeded his brother Ladislaus III as king of Poland. He united the two nations more closely by placing them on an equal footing. With the Second Peace of Torun (1466) he ended a 13-year war against the Teutonic Knights in his favor, Poland gained territories and the Knights accepted Polish suzerainty over the area they retained. Calling (1467) the first Polish diet, he confirmed the privileges of the aristocracy. His marriage to an Austrian Hapsburg enabled his son Ladislaus to become king of Bohemia and later king of Hungary as Uladislav II. Casimir was succeeded by his sons John I (1492-1501), Alexander I (1501-5), and Sigismund I (1506-48).

Casimir-Perier, Jean Paul Pierre (zhaN pöl pyër kazëmër-përyä'), 1847-1907, French president (June, 1894-Jan., 1895). He held several cabinet posts before serving as premier in 1893. He created the ministry of colonies and acted to suppress anarchist activities. In 1894 he succeeded Sadi Carnot as president of the French republic. He was attacked by the increasingly important left-wing parties and resigned early in 1895. Felix Faure succeeded him.

casino or cassino (both kas'ë'nò), card game played with a full deck by two to four players. Four cards are dealt to each player, and four open cards are dealt to the table. Each player in turn must take in cards by matching his cards with cards of corresponding indices on the table (he may take two or more totaling his card's value), build, add to one or more table cards to total the index value of a card remaining in his hand (there are other building variations), or trail, lay a card face up on the table. The game ends after all the cards of the deck are dealt in successive hands of four cards each. The object is to take the greatest number of cards (counting 3 points), the greatest number of spades (counting 1 point), the ten of diamonds, or big casino (2 points), the two of spades, or little casino (1 point), and the aces (counting 1 point each). Casino probably originated in Italy.

Casiphra (käsif'ëä, käsif'ä), place, on the way from Babylon to Jerusalem. Ezra 8:17.

Casiquiare (käsëkyä'rä), river, c 100 mi (160 km) long, S Venezuela. Also called the Canal Casiquiare, it is a branch of the Orinoco and flows SW to the Rio Negro, thus linking the Orinoco and Amazon basins. The Casiquiare's flow was naturally diverted by the headward erosion of the Rio Negro.

Casket Letters see MARY QUEEN OF SCOTS.

Caslon, William (käs'läN), 1692-1766, English type designer, b Worcestershire. He worked first in Lon-

don as an engraver of gunlocks, then set up his own foundry. In 1716 the merits of Caslon's types were rediscovered after a brief eclipse in the popularity of John BASKERVILLE's types. Caslon's individual letters are less impressive than those of Baskerville and Giambattista BODONI, but their regularity, legibility, and sensitive proportions constituted a remarkable achievement in design. His typefaces were used for most important printed works from c 1740 to c 1800. One such example is the first printed version of the United States Declaration of Independence. Some Caslon types are still in use. His business was carried on by his eldest son, William (1720-78). See biography by Johnson 8all (1974).

Casluhim (käs'lyööhim, käslyöö'-), ancient unidentified tribe. Gen 10:14, 1 Chron 1:12.

Caso, Alfonso (alfön'sö kas'sö), 1896-1970, Mexican archaeologist. An authority on the ancient high civilizations of Mexico, he directed explorations at MITLA and MONTE ALBAN during the 1920s and 30s. Among his many books and articles are *The Religion of the Aztecs* (tr 1937), *Thirteen Masterpieces of Mexican Archeology* (tr 1938), and *The Aztecs: People of the Sun* (tr 1958).

Casona, Alejandro (älähän'drö kas'ö'na), 1903-, pseudonym of Alejandro Rodriguez Alvarez, Spanish poet and playwright, b Besulzo. Since 1937 he has lived in Latin America, spending much time writing and directing films in Argentina. Written with sensitivity and delicate irony, his plays combine poetic realism with philosophical ideas. They include *Nuestra Natacha* [our Natacha] (1936), *La barca sin pescador* [the boat without a fisherman] (1945), and *Carta a una desconocida* [letter to an unknown woman] (1957).

Casorati, Felice (fäil'e'chä käsö'ra'të), 1886-1963, Italian painter. Influenced by Beardsley and other English engravers, Casorati, together with CARRÀ, was involved in the symbolist movement. He was instrumental in the formation of the metaphysical school. An ironic tone and cool refinement are characteristic of his works (e.g., *Still Life*, c 1942-43, National Gall of Modern Art, Rome).

Caspar: see WISE MEN OF THE EAST.

Casper, city (1970 pop. 39,361), alt. 5,123 ft (1,561 m), seat of Natrona co., E central Wyo., on the North Platte River, inc. 1889. It is a rail, distributing, processing, and trade center in a farming, ranching, and mineral-rich area. An oil boom town since the first well was tapped in 1890, it has large oil refineries and many oil-affiliated industries. Open-pit uranium mining nearby is important, and gas, coal, and bentonite deposits are also exploited. The city has wool and livestock markets, meat-packing plants, and a growing tourist industry. At this fording place on the Oregon Trail the Mormons in 1847 established a ferry, which was in the 1850s superseded by Platte Bridge. The city was founded (1888) with the coming of the railroad and burgeoned with the discovery of oil at Salt Creek, followed by the Teapot Dome and Big Muddy finds. In 1948 wells in the Lost Soldier field of Sweetwater co. brought another boom. Casper has a junior college. Nearby are the Central Wyoming Fairgrounds, with a county pioneer museum, Old Fort Caspar Museum (the fort has been restored, a clerk's error accounts for the later spelling of the name), and Casper Mt. (c 8,000 ft/2,440 m high), with a recreational area. Tourist attractions in the surrounding area include Hell's Half Acre, a spectacular eroded area, Independence Rock, a granite landmark on the Oregon Trail, and a petrified forest of subtropical trees.

Caspian Gates see DERBENT, US5R.

Caspian Kara-Kum see KARA-KUM, US5R.

Caspian Sea, Lat. *Mare Caspium* or *Mare Hyrcanum*, salt lake, c 144,000 sq mi (373,000 sq km), US5R and Iran, between Europe and Asia, the largest inland body of water in the world. The largest part lies in Soviet territory, only the extreme southern shore belongs to Iran. The Caspian is 92 ft (28 m) below sea level. It reaches its maximum depth, c 3,200 ft (980 m), in the south, the shallow northern half averages only about 17 ft (5 m). The Caucasus rise from the southwestern shore, and the Elburz Mts parallel the southern coast. The Caspian receives the Volga (which supplies more than 75% of its inflow), Ural, Emba, Kura, and Terek rivers, but it has no outlet. The rate of evaporation is particularly high in the eastern inlet called KARA-BOGAZ-GOL, which is exploited for salt. Variations in evaporation account for the great changes in the size of the sea during the course of history. The construction of large dams and lakes on the Volga is the major reason for the recent lowering of the Caspian's water level, a problem that has reached serious propor-

tions. The chief ports on the Caspian are Baku, a major oil center, and Astrakhan, at the mouth of the Volga. The sea is an important transportation artery, oil and oil products are shipped across it from Baku to Astrakhan and up the Volga. The Caspian is also of great importance for its fisheries and sealeries. The northern part of the sea is the chief source of beluga caviar.

Cass, Lewis, 1782-1866, American statesman, b Exeter, N H. He established (1802) himself as a lawyer in Zanesville, Ohio, became a member (1806) of the state legislature, and was U S marshal for Ohio from 1807 to 1812. In the War of 1812, Cass's command was included against his will in the forces that Gen. William Hull surrendered to the British at Detroit in Aug., 1812. Cass later fought with distinction at the battle of the Thames (Oct. 5, 1813). Left in command at Detroit, Cass was also appointed governor of Michigan Territory, a post he filled ably for 18 years (1813-31). As Secretary of War (1831-36), he favored removal of the Indians beyond the Mississippi and supported President Jackson in the nullification crisis. Minister to France (1836-42) and U S Senator from Michigan (1845-48, 1849-57), Cass was the Democratic candidate for President in 1848, but because of the defection of the antislavery Democrats led by Martin VAN BUREN, who became the candidate of the FREE-SOIL PARTY, he lost the election to the Whig candidate, Zachary Taylor. President Buchanan made (1857) Cass his Secretary of State, but he resigned in Dec., 1860, in protest against the decision not to reinforce the forts of Charleston, S C. See biography by F. 8 Woodford (1951).

Cassander (kasän'där), 358-297 B C, king of Macedonia, one of the chief figures in the wars of the DIADOCHI. The son of Antipater, he was an officer under Alexander the Great, but there was ill feeling between them. After his father's death, Cassander engaged in vigorous warfare against Antipater's successor as regent, Polyperchon. He was successful, and by 318 he had a preponderant influence in Macedonia and Greece. Alexander's mother, Olympias, challenged this and put Philip III, Alexander's half brother, and many others to death. Cassander pursued her, crushed her army, and condemned her to death (316). Later, to strengthen his claim to the throne, he married Alexander's half sister, Thessalonica, and in 311 he murdered Alexander's widow, Roxana, and their son. He resisted the efforts of Antigonus I to rebuild the empire and was one of the coalition that defeated Antigonus and Demetrius at Ipsus in 301. Secure in his position, he founded the cities of Thessaloniki and Cassandreia (on the site of Potidaea) and rebuilt Thebes.

Cassandra (kasän'drä), in Greek legend, Trojan princess, daughter of Priam and Hecuba. She was given the power of prophecy by Apollo, but because she would not accept him as a lover, he changed her blessing to a curse, causing her prophecies never to be believed. While seeking refuge from the Greeks during the Trojan War, she was dragged from the temple of Athena and violated by the Locrian Ajax. After the war she was the slave of Agamemnon and was killed with him by his wife Clytemnestra.

Cassandre, Adolphe Mouron (adölf mööröN' käsaN'drä), 1901-68, French poster artist. b Russia. By 1923 he was celebrated as the artist of *Bücheron* [woodcutter], a poster made for a cabinetmaker. Later works include posters for tennis matches, fairs, magazines, wines, shoes, horse races, steamships, and railways. Cassandre's originality made his designs classics of advertising.

Cassandreia, ancient Greece. see POTIDAEA.

Cassano d'Adda (kas-sa'nò dad'da), town (1971 pop. 13,863), Lombardy, N Italy, on the Adda River. It is an agricultural and industrial center. At Cassano d'Adda the French under Vendôme defeated the imperial forces under Prince Eugene of Savoy in 1705 (see SPANISH SUCCESSION WAR OF THE). The town is also the site of the victory (1799) of the Russians under Suvarov over the French under Moreau during the French Revolutionary Wars.

Cassatt, Mary (kasät'), 1845-1926, American figure painter and etcher, b Pittsburgh. Most of her life was spent in France, where she was greatly influenced by her great French contemporaries, particularly Manet and Degas, whose friendship and esteem she enjoyed. She allied herself with the impressionists early in her career. Motherhood was Cassatt's most frequent subject. Her pictures are notable for their refreshing simplicity, vigorous treatment, and pleasing color. She excelled also as a pastelist and etcher, and her drypoints and color prints are greatly admired. She is well represented in public and private galleries in the United States. Her

best-known pictures include several versions of *Mother and Child* (Metropolitan Mus., Mus. of Fine Arts, Boston, Worcester, Mass., Art Mus.), *Lady at the Tea-Table* (Metropolitan Mus.), *Modern Women*, a mural painted for the Women's Building of the Chicago exposition, and a portrait of the artist's mother. See catalog by A. D. Breeskin (1970), biography by J. M. Carson (1966).

cassava (kása'və) or **manioc** (mān'ēōk), any plant of the genus *Manihot* of the family Euphorbiaceae (SPURGE family). The roots, which resemble sweet potatoes and are eaten in much the same way, yield cassava starch, a staple food in the tropics. The cassava is native to Brazil and has long been cultivated there by the Indians as a major food source. Cassava roots are also fermented to make an alcoholic beverage, are the source of TAPIOCA, or Brazilian arrowroot, and are utilized in other ways, e.g., for cotton sizing and laundry starch. Most cassava flour is made from *M. esculenta*, sometimes called bitter cassava because of the presence in the raw roots of prussic acid in sufficient quantities to be deadly. This poison is dispelled by cooking. Some cultivated varieties with a lesser acid content, called sweet cassava, are edible raw and can be used for fodder. Cassava is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Euphorbiales, family Euphorbiaceae.

Cassegrain focus: see TELESCOPE

Cassel, Gustav (gōs'taf ka'səl), 1866–1945, Swedish economist and authority on international monetary problems. He was a delegate to many world economic conferences and wrote valuable papers on foreign exchange. Among his books are *Money and Foreign Exchange after 1914* (1922), *Fundamental Thoughts on Economics* (1925), and *On Quantitative Thinking in Economics* (1935).

cassia (kash'a) see CINNAMON, SENNA

Cassian, John (kash'ən) (Johannes Cassianus), 360–435, Christian monk and theologian. He settled at Marseilles (415) and established religious houses for men and for women. He was attacked for Semi-Pelagianism (see PELAGIANISM), but he was trusted in Rome. His *Collations*, spiritual writings for monks, and his *Institutes*, on monasticism, had critical influence on the thought of St. Benedict, St. Gregory, and hence on all Benedictines, in matters touching ascetic and mystical life. He wrote against Nestorianism. See study by Owen Chadwick (2d ed. 1968).

Cassini (kas-sē'nē), name of a family of Italian-French astronomers, four generations of whom were directors of the Paris Observatory. **Gian Domenico Cassini**, 1625–1712, was born in Italy and distinguished himself while at Bologna by his studies of the sun and planets, particularly Jupiter, he determined rotational periods for Jupiter, Mars, and Venus. He was called to Paris in 1669 to supervise the building of the Royal Observatory and remained there to direct it. While at Paris he discovered four of Saturn's satellites, studied the division in the planet's ring system that now bears his name, and began the mapping of the meridian passing through Paris in order to verify the Cartesian hypothesis of the elongation of the earth. His son **Jacques Cassini**, 1677–1756, took over the observatory after 1700 and continued the mapping of the Paris meridian, adding to it a measurement of the perpendicular to the arc in 1733–34. The triumph of the opposing Newtonian hypothesis of the flattening of the earth caused him to retire in 1740, and he was replaced by his son, **César-François Cassini de Thury**, 1714–84, who continued his father's geodesic work and planned the first modern map of France. On his death, his son **Jean-Dominique Cassini**, 1748–1845, undertook the reorganization and restoration of the observatory. He completed his father's map of France and participated in the geodesic operations joining the Paris and Greenwich meridians. He lost his post in 1793 because of his monarchial views and was briefly imprisoned by the revolutionary government in 1794. He abandoned scientific work in 1800, becoming president of the General Council of Oise. He was decorated by Napoleon I and Louis XVIII and retired in 1818.

Cassini's division: see SATURN

Cassino (kas-sē'nō), town (1971 pop. 24,695), in Latium, central Italy, in the Apennines, on the Rapido River. It is a commercial and agricultural center. The peace between Emperor Frederick II and Pope Gregory IX was signed there in 1230. During World War II (late 1943) the town and the nearby Benedictine abbey of MONTE CASSINO were strongly defended by Germans blocking the Allied advance on Rome. After five months of concentrated ground attacks and attempts to divert German troops by landings at AN-

ZIO and NETTUNO, the Allies finally captured the German positions in May, 1944. Cassino was reduced to rubble but was largely rebuilt. Of note is the cathedral (18th cent., rebuilt after 1944), which contains the alleged remains of St. Benedict and his sister St. Scholastica. Until 1871, Cassino was called San Germano.

cassino. see CASINO

Cassiodorus (Flavius Magnus Aurelius Cassiodorus Senator) (kashōdō'ras), c. 485–c. 585, Roman statesman and author. He held high office under Theodoric the Great and the succeeding Gothic rulers of Italy, who gave him the task of putting into official Latin their state papers and correspondence. These he later collected as *Variae epistolae* (tr. by Thomas Hodgkin, 1886). After retiring to his estate he founded two monasteries, in one of these the monks devoted leisure time to copying old manuscripts, which were thus preserved. Among Cassiodorus' works were his *History of the Goths*, preserved in the abridgment by JORDANES, and a treatise on orthography.

Cassiopeia (kās'ēapē'a), in Greek mythology see ANDROMEDA

Cassiopeia, in astronomy, prominent northern CONSTELLATION located almost directly opposite the Big Dipper across the north celestial pole. Five bright stars in the constellation form a rough W (or M) in the sky. Some see in this formation the shape of a chair known as Cassiopeia's Chair. Tycho's Star, a SUPERNOVA, appeared in the constellation in 1572 and disappeared in 1574. In this constellation is located Cassiopeia A, a discrete radio source emitting 21-cm radiation with great intensity. Cassiopeia reaches its highest point in the evening sky in November, but because of its location near the pole it is visible throughout the year to most northern observers.

Cassirer, Ernst (ērnst kasēr'ər), 1874–1945, German philosopher. He was a professor at the Univ. of Hamburg from 1919 until 1933, when he went to Oxford, he later taught at Yale and Columbia. A leading representative of the Marburg Neo-Kantian school, Cassirer at first devoted himself to a critical-historical study of the problem of knowledge. This work bore fruit in the monumental *Das Erkenntnisproblem in der Philosophie und Wissenschaft der neueren Zeit* (3 vol., 1906–20) and *Substanzbegriff und Funktionsbegriff* (1910, tr. *Substance and Function*, 1923). In his chief work, *Philosophie der symbolischen Formen* (3 vol., 1923–29, tr. *Philosophy of Symbolic Forms*, 1953–57), he applied the principles of Kantian philosophy toward the formation of a critique of culture. His view that all cultural achievements (including language, myth, and science) are the results of man's symbolic activity led Cassirer to a new conception of man as the "symbolic animal." Cassirer wrote many other studies on science, myth, and various historical subjects. These include two written in English: *An Essay on Man* (1944) and *Myth of the State* (1946). See P. A. Schilpp, ed., *The Philosophy of Ernst Cassirer* (1949, repr. 1958), studies by C. H. Hamburg (1956) and S. W. Litzko (1971).

cassiterite (kasit'ərīt), heavy, brown-to-black mineral, tin oxide, SnO₂, crystallizing in the tetragonal system. It is found as short prismatic crystals and as irregular masses, usually in veins and replacement deposits associated with granites. Since it is hard, heavy, and resistant to weathering, it often concentrates in alluvial deposits derived from cassiterite-bearing rocks. It is the principal ore of tin and is mined in many countries, the most important sources are Malaysia, Thailand, China, Indonesia, Bolivia, and the USSR. Except for Bolivia, nearly all of this production is from alluvial deposits.

Cassites: see KASSITES

Cassius (kash'as), ancient Roman family. There were a number of well-known members. **Spurius Cassius Viscellinus**, d. c. 485 B.C., seems to have been consul several times. In 493 B.C. he negotiated a treaty establishing equal military assistance between Rome and the Latin cities. In 486 he proposed that land be distributed equally among the Roman and the Latin poor (see AGRARIAN LAWS). It is said that the patricians, outraged at the suggestion, accused Cassius of royal aspirations and had him executed. A descendant, **Quintus Cassius Longinus**, d. 45 B.C., won a reputation for greed and corruption when he was a quaestor in Spain (54 B.C.). He and ANTONY, as tribunes in 49 B.C., vetoed the attempts of the senate to deprive Julius CAESAR of his army. When the senate overrode the tribunes on Jan. 7, 49 B.C., Cassius and Antony fled to Caesar, who crossed the Rubicon and began the civil war. After Caesar's triumph, Cas-

sius was given (47 B.C.) a post in Farther Spain. There was a rebellion against him, and Caesar had to come from Italy to put it down. Cassius died in a shipwreck. Best known of all was Caius Cassius Longinus, d. 42 B.C., leader in the successful conspiracy to assassinate Julius Caesar. He fought as a quaestor under Marcus Licinius Crassus (see under CRASSUS, family) at CARRHAË in 53 B.C. and saved what was left of the army after the battle. He supported Pompey against Caesar but was pardoned after the battle of PHARSALA. He was made (44 B.C.) peregrine praetor and Caesar promised to make him governor of Syria. Before the promise could be fulfilled, Cassius had become ringleader in the plot to kill Caesar. The plot involved more than 60 men (including Marcus Junius Brutus, Publius Servilius Casca, and Lucius Tullius Cimber) and was successfully accomplished in the senate on the Ides of March in 44 B.C. When the people were aroused by Antony against the conspirators, Cassius went to Syria. He managed to capture DOLABELLA at Laodicea and coordinated his own movements with those of Brutus. Antony and Octavian (later AUGUSTUS) met them in battle at Philippi. In the first engagement Cassius, thinking the battle lost, committed suicide. Another of the conspirators was Caius Cassius Parmensis, d. 30 B.C. He fought at Philippi and later with Sextus Pompeius. He later sided with Antony in the naval battle off Actium and was killed by order of Octavian.

Cassius Dio Cocceianus: see DION CASSIUS

Cassivellaunus (kā'sivīlō'nəs), fl. 54 B.C., British chieftain, a leader in the resistance against the invasion of Julius Caesar in 54 B.C. Caesar crossed the Thames River into Cassivellaunus' home country. Aided by discontented British tribes, he attacked Cassivellaunus in his strong fort in the marshes (probably at Wheathampstead, Hertfordshire) and drove the Britons out with heavy losses. Cassivellaunus sued for peace, which Caesar granted in return for hostages and annual tribute.

cassone (kas-sō'nā), the Italian term for chest or coffer, usually a bridal or dowry chest, highly ornate and given prominence in the home. Major artists such as Uccello and Botticelli painted cassone panels, and prominent sculptors were also employed to carve elaborate chests. The cassone was usually decorated with mythological or historical episodes. It became one of the first means of bold secular expression in Renaissance art.

cassowary (kās'awār'ē), common name for a flightless, swift-running, pugnacious forest bird of Australia and the Malay Archipelago, smaller than the ostrich and emu. The plumage is dark and glossy and the head and neck unfeathered, wattled, and brilliantly colored, with variations in the coloring in different species. The head bears a horny crest. The female is larger than the male, though both sexes are similar in color. They are monogamous and nest in shallow nests of leaves on the ground in forests. Only the male incubates the female's three to six dark-green eggs. Cassowaries are primarily nocturnal. Their diet consists mainly of fruits and berries, although some eat insects and small animals. Cassowaries are notoriously vicious and have attacked and killed men with their sharp, spikelike toenails. They are fast runners, attaining speeds up to 30 mi (48 km) per hr. Cassowaries are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Casuariformes, family Casuariidae.

Castagno, Andrea del (andrē'a dēl kasta'nyō), c. 1423–1457, major Florentine painter of the early Renaissance. His first recorded painting (1440, now destroyed), effigies of hanged men, enemies to the Florentine regime, brought him fame in spite of its disconcerting subject. Two years later he was in Venice, frescoing the ceiling of the chapel in San Zaccaria. He returned to Florence and c. 1445 began the cycle of the *Passion of Christ* for the church of Sant' Apollonia. Best known of these scenes is the *Last Supper*. Castagno combined a rigorous perspective with harsh, metallic lighting that greatly intensified the drama of the scene. He decorated the hall of the Villa Pandolfini with heroic figures, including Pippo Spano, Dante, Petrarch, and Boccaccio. Here the influence of Donatello can be felt, particularly in the vitality and plastic rendering of forms. In the Annunziata Church there is a powerful conception of the *Savior and St. Julian*. His last dated work is the equestrian statue of Niccolò da Tolentino in the cathedral. Other examples of his art are *David* (National Gall. of Art, Washington, D.C.) and the *Resurrection* (Frick Coll., New York City).

Castaldi, Pamfilo (pam'fēlō kasta'dē), c. 1398–c. 1490, Italian humanist and printer. He was the first printer of the city of Milan. Some credit him with

the invention of movable type See GUTENBERG, JOHANN

Castalia (kăstă'lyă), in Greek mythology, spring on Mt Parnassus Named for a nymph, it was sacred to the MUSES and was said to give poetic inspiration to those who bathed in it

Castalion or **Castellio, Sébastien** (kăstă'l'yan, kăstěl'yô), 1515-63, French Protestant theologian Castalion was with Calvin at Strasbourg and Geneva until he split with Calvin over doctrinal differences and moved to Basel He obtained a chair of Greek literature in the university there Castalion is known for his defense of religious toleration in the preface to his Latin translation of the Bible (1551) In 1554 he published, under the pseudonym Martinus Bellius, *Concerning Heretics* (tr 1935), in which he protested the execution of Servetus The name also appears as Castellion and Châtillon See Stefan Zveig, *Right to Heresy* (1936)

castanets, percussion instruments known to the ancient Egyptians and Greeks, possibly of Oriental origin, now used primarily in Spanish dance music or

Castanets

imitations of it There are many kinds, the most common consisting of two small matching pieces of hard wood or ivory, joined at the inner edge and used with a thin strap in the player's hand, they are snapped together between the palm and fingers Castanets are also occasionally used in orchestral music

caste [Port casta=basket], ranked groups based on heredity within rigid systems of social stratification, especially those that constitute Hindu India Some scholars, in fact, deny that true caste systems are found outside India The caste is a closed group whose members are severely restricted in their choice of occupation and degree of social participation Marriage outside the caste is prohibited Social status is determined by the caste of one's birth and may only rarely be transcended Certain religious minorities may voluntarily constitute a quasi-caste within a society, but they are less apt to be characterized by cultural distinctiveness than by their self-imposed social segregation A specialized labor group may operate as a caste within a society otherwise free of such distinctions (e.g., the ironsmiths in parts of Africa) In general, caste functions to maintain the status quo in a society Nowhere is caste better exemplified by degree of complexity and systematic operation than in India The Indian term for caste is *jati*, which generally designates a group varying in size from a handful to many thousands There are thousands of such *jatis*, and each has its distinctive rules, customs, and modes of government The term *varna* (literally meaning "color") refers to the ancient and somewhat ideal fourfold division of Hindu society (1) the Brahmins, the priestly and learned class, (2) the Kshatriyas, the warriors and rulers, (3) the Vaisyas, farmers and merchants, and (4) the Sudras, peasants and laborers These divisions may have corresponded to what were formerly large, broad, undifferentiated social classes Below the category of Sudras were the untouchables, or Panchamas (literally "fifth division"), who performed the most menial tasks Although there has been much confusion between the two, *jati* and *varna* are different in origin as well as function The various castes in any given region of India are hierarchically organized, with each caste corresponding roughly to one or the other of the *varna* categories Traditionally, caste mobility has taken the form of movement up or down the *varna* scale Indian castes are rigidly differentiated by rituals and beliefs that pervade all thought and conduct (see DHARMA) Extreme upper and lower castes differ so widely in habits of everyday life and worship that only the close intergrading of intervening castes and the intercaste language communities serve to hold them together within the single framework of Indian society The explanation that Indian castes were originally based on color lines to preserve the racial and cultural purity of conquering groups is

inadequate historically to account for the physical and cultural variety of such groups Castes may reflect distinctiveness of religious practice, occupation, locale, culture status, or tribal affiliation, either exclusively or in part Divergence within a caste on any of these lines will tend to produce fission that may, in time, result in the formation of new castes Every type of social group as it appears may be fitted into this system of organizing society The occupational barriers among Indian castes have been breaking down slowly under economic pressures since the 19th cent., but social distinctions have been more persistent Attitudes toward the untouchables only began to change in the 1930s under the influence of Mohandas Gandhi's teachings Although untouchability was declared illegal in 1949, resistance to change has remained strong As increased industrialization produced new occupations and new social and political functions evolved, the caste system adapted and thus far has not been destroyed See McKim Marriott, ed., *Village India* (1955), M N Srinivas, *Social Change in Modern India* (1966), Anthony de Reuck and Julie Knight, ed., *Caste and Race* (1967), Louis Dumont, *Homo Hierarchicus: The Caste System and Its Implications* (1970)

Castelar y Ripoll, Emilio (ămē'lyô kăstălăr' ē rēpô'lyă), 1832-99, Spanish statesman and author A professor of history and philosophy at the Univ of Madrid and a republican leader, he was foreign minister and then president (1873-74) of Spain's first republic Ruling virtually as a dictator, he was partially successful in restoring order to the war-torn country, but he, and the republic, were overthrown by a military coup d'état After the restoration (1875) of Alfonso XII he was a member of the political opposition in the Cortes He wrote historical, political, and literary works

Castel Gandolfo (kăstěl' găndôl'fô), town (1971 pop 4,694), in Latium, central Italy, in the Alban Hills, overlooking Lake Albano Possibly occupying the site of ancient Alba Longa, it is the papal summer residence The papal palace (17th cent.), its magnificent gardens, the Vatican observatory (founded 1936), and the Villa Barberini enjoy extraterritorial rights The Church of St Thomas of Villanova was designed (17th cent.) by Bernini

Castellammare di Stabia (kăstěl'lam-mă'ră dē stă-byă), city (1971 pop 68,656), in Campania, S Italy, on the Bay of Naples A summer resort and spa, it has thermal mineral springs that have been used since Roman times It is also a commercial and industrial center, with navy yards founded in 1783 Manufactures include food products, paper, and cement The city was built on the site of Stabiae, a favorite Roman resort, which was buried in the eruption of Mt Vesuvius in A.D. 79 The royal villa, Quisisana (built 1310, rebuilt 1820), is now a hotel

Castellani, Sir Aldo, 1877-1971, British-Italian bacteriologist, b Florence, Italy He demonstrated the cause and mode of transmission of sleeping sickness (with Sir David Bruce and David Nabarro, 1903), discovered the spirochete of yaws (1905), and did other original work in bacteriology and in parasitic diseases of the skin He also lectured in tropical medicine in London and Ceylon, was professor of tropical medicine at Tulane Univ and at Louisiana State Univ, and founded in Rome the Royal Institute for Tropical Diseases With A J Chalmers he wrote *Manual of Tropical Medicine* (1910, 3d ed 1919) He was knighted in 1928 See his autobiography (1960)

Castello or **Castellion, Sébastien**: see CASTALION, SÉBASTIEN

Castello or **Castelli, Bernardo** (bărnăr'dô kăstěl'lô, -těl'lê), 1557-1629, Italian painter of the Genoese school, pupil of Cambiaso, whose style he imitated He was a friend of Tasso and made the designs for *Jerusalem Delivered*, some of which were subsequently engraved by Agostino Carracci Castello executed numerous works in the churches of Genoa His son, Valerio Castello, 1625-59, a painter of historical scenes, was influenced by Procaccini and Correggio but created a fine style of his own He executed many frescoes of high merit for the churches and monasteries of Genoa His best-known painting is *The Rape of the Sabines* (Genoa)

Castello, Giovanni Battista (jôvăn'ně băt-těs'ta), c 1509-c 1569 Italian painter and architect, called Il Bergamasco to distinguish him from Bernardo Castello, who also worked in Genoa Giovanni was born near Bergamo where many of his works still exist After a trip to Rome he returned to Genoa, where he worked with Luca Cambiaso on the Palazzo Imperiale Giovanni's propensity for grotesque

decorations is best seen in the Palazzo Pallavicino (now the Palazzo Garega-Cataldi) In 1567 he went to Spain, where he became architect and painter to Philip II

Castello, Valerio see CASTELLO, BERNARDO

Castellón de la Plana (kăstelyôn' dă lâ plă'nă), city (1970 pop 93,968), capital of Castellón de la Plana prov., E Spain, in Valencia, 3 mi (4.8 km) from its Mediterranean port of Grao It is a farm center with fishing, mining, and handicraft industries The city was reconquered (1233) from the Moors by James I of Aragon In 1251 it was moved 2 mi (3.2 km) from a hilltop to its present site on a plain (hence "de la Plana")

Castelnau, Michel de (mëshel' dă kăstelnô'), c 1520-1592, French diplomat and soldier He early attracted the favorable notice of the cardinal of Lorraine (Charles de Guise) and performed important services for Anne, duc de Montmorency, and King Henry II In the religious wars he went on missions to England, Scotland, the Netherlands, and Savoy and fought in the royal army, from 1575 to 1585 he served as ambassador to England Upon his return he fell out with the Guises and rendered valuable services against the Catholic League to kings Henry III and Henry IV Although a Catholic, he favored a policy of moderation toward the Huguenots He left valuable memoirs

Castelo Branco, Humberto (ômbêr'tôô kăstêl'brăng'kôô), 1900-1967, president of Brazil (1964-67) An army officer, he served as chief of staff of the Brazilian army before participating in the coup that ousted President João Goulart in April, 1964 Elected provisional president by Congress to succeed Goulart, he wielded enormous power, curtailing political freedoms and imposing sweeping economic reforms The latter, while stringent and unpopular, helped spur the country's economic growth, curb inflation, and reestablish Brazil's credit rating abroad He was succeeded in office by his war minister, Artur da Costa e Silva

Castel Sant' Angelo (kăstêl' sântăn'jălô), **Hadrian's Mausoleum**, or **Hadrian's Mole**, massive construction on the right bank of the Tiber in Rome Originally built (A.D. 135-39) by Emperor Hadrian as a MAUSOLEUM for himself and his successors, it was later decorated and fortified as a place of refuge for the popes and was connected to the Vatican by a secret passage It was used as a fortress and prison until 1870 and is now a museum

Castiglione, Baldassare, Conte (băldăs-sără kôn'tă kăstelyô'nă), 1478-1529, Italian soldier, author, and statesman attached to the court of the duke of Milan and later in the service of the duke of Urbino His famous *Libro del cortegiano* (1528, tr *The Courtier*, 1561), a treatise on etiquette, social problems, and intellectual accomplishments, is one of the great books of its time Written at a time when the author served as envoy to Pope Leo X, it gives a vivid and elegant picture of 15th- and 16th-century court life His book had enormous influence on behavior at courts as far away as England, where it contributed to an ideal of aristocracy embodied in the person and accomplishments of Sir Philip Sidney Castiglione's portrait was painted by Raphael (c 1515), his tomb designed by Giulio Romano, and his epitaph composed by Bembo

Castiglione, Giovanni Benedetto (jôvăn'nê bânădêt'tô), 1610?-1670, Italian painter and engraver of the Genoese school, called Il Grechetto In his later years Castiglione was court painter at Mantua He is best known for his landscapes and rural scenes with animals, but he also painted portraits and religious works, such as the *Nativity* (Genoa) His pictures are full of life and movement, their colors rich and glowing Castiglione's etchings, numbering about 70 and reflecting the influence of Rembrandt, are among the best produced in Italy during his century His treatment of light and shade is particularly fine A number of his oil-on-paper sketches are in the Royal Library at Windsor

Castiglione delle Stiviere (kăstelyô'nă dēl'lă stēvyē'ră), town (1971 pop 13,328), Lombardy, N Italy The French army under Napoleon I and Augereau defeated the Austrians there in 1796

Castile (kăstêl'), Span *Castilla* (kăstê'lyă), region and former kingdom, central and N Spain, traditionally divided into Old Castile (Span *Castilla la Vieja*) in the north and New Castile (Span *Castilla la Nueva*) in the south Old Castile (1970 pop 2,135,788) comprises the provinces of Ávila, Burgos, Logroño, Santander, Segovia, Soria, Valladolid, and Palencia, named after their chief cities New Castile (1970 pop 5,164,026) comprises the provinces and cities of Ciudad Real, Cuenca, Guadalajara, Madrid, and

Toledo Castile is generally a vast underdeveloped region surrounding the highly industrialized Madrid area. It includes most of the high plateau of central Spain, across which rise the rugged Sierra de Guadarrama and the Sierra de Gredos, forming a natural boundary between Old and New Castile. The upper Duero, the Tagus, and Guadiana rivers form the chief basins. The soil of Castile, ravaged by centuries of erosion, is poor, and the climate severe. Old Castile has grain growing and sheep raising, in more fertile areas, especially in New Castile, olive oil and grapes are produced. Scattered forests yield timber and naval stores. Agricultural methods are largely primitive, but irrigation, introduced by the Romans and the Moors, has progressed significantly in recent decades. Of the industries which flourished in the 14th and 15th cent (particularly wool and silk textiles), few have survived. Mineral resources, except for the rich mercury mines of Almaden, are of minor economic importance. The name Castile derives from the many castles built there by the Christian nobles early in the reconquest from the Moors (8th-9th cent.). Old Castile at first was a county of the kingdom of Leon, with Burgos its capital. Its nobles (notably Fernán González) secured virtual autonomy by the 10th cent. Sancho III of Navarre, who briefly annexed the county, made it into a kingdom for his son, Ferdinand I, in 1035. Leon was first united with Castile in 1037, but complex dynastic rivalries delayed the permanent union of the two realms, which was achieved under Ferdinand III in 1230. The Castilian kings played a leading role in the fight against the Moors, from whom they wrested New Castile. They also had to struggle against the turbulent nobles and were involved in dynastic disputes which plunged the country into civil war (see ALFONSO X). PETER THE CRUEL limited the vast privileges of the nobles, but they were permanently curbed only late in the 15th cent. In 1479, after Isabella I had defeated the dynastic claims of Juana la Beltraneja, a personal union of Castile and Aragon was established under Isabella and her husband, FERDINAND II of Aragon. The union was confirmed with the accession (1516) of their grandson, Charles I (later Emperor CHARLES V), to the Spanish kingdoms. Charles suppressed the uprisings of the COMUNEROS in 1520-21. With the decline of Catalan and Valencia during that period, Castile became the dominant power in Spain. It was the core of the Spanish monarchy, centralized in Madrid (the capital after the 16th cent.). Its dialect became the standard literary language of Spain, and the character of its people—proud and austere—has become typical of the entire Spanish nation.

Castilla, Ramon (ramón' kastē'ya), 1797-1867, president of Peru (1845-51, 1855-62). He fought under Antonio José de Sucre in the revolution against Spain (1821-24) in Peru and took part in the civil wars that followed. An army general, energetic and resolute, he twice eliminated his rivals by armed force to become president. He developed the guano, saltpeter, and nitrate industries, helped to reorganize finances, abolished slavery in Peru, and promulgated (1860) a new constitution that became the basis of future Peruvian government. Although he overlooked considerable administrative corruption, Castilla brought unwonted order and a measure of prosperity to the republic.

Castillejo, Cristóbal de (krēstō'bal dā kastēlyā'hō), c 1490-1550, Spanish poet of the Renaissance. As secretary to the king of Bohemia, Castillejo visited Vienna and other European cities. His poems are grouped under the titles *Obras de amores* [works of love] and *Obras morales y de devoción* [moral and devotional works]. His *Diálogo de la vida de corte* is a clever and perceptive picture of life at court. He championed the traditional Spanish as against the Italian verse form.

Castillo de San Marcos National Monument. see SAINT AUGUSTINE, FLA.

Castillon-la-Bataille (kastēyōn'la-batā'yā), town (1968 pop. 3,102), Gironde dept., SW France, in Guienne, on the Dordogne River. An ancient port, it has a wine and liqueur trade and a leather industry. There, in 1453, the French defeated the English in the final great battle of the Hundred Years War. It was formerly called Castillon or Castillon-et-Capitoulran.

casting or founding, shaping of metal by melting and pouring into a mold. Most castings, especially large ones, are made in sand molds. Sand, mixed with a binder to hold it together, is pressed around a wooden pattern that leaves a cavity in the sand. Molten metal is poured into the cavity and allowed to solidify. Permanent metal molds are used to make

many small, simple parts, shell molding gives greater accuracy for a large volume of semiprecision parts. A two-step process, investment casting, produces small, complex shapes. Wax or plastic replicas of the parts are molded in accurate metal molds. These replicas are covered with sand in a box to make the final mold. When the whole mold is heated, the replica melts, leaving behind a cavity into which metal is poured. Large numbers of small, precise parts of metals that have a low melting point, such as zinc, are made by DIE CASTING, in an automatic process, molten metal is forced under pressure into metal molds. Cast iron and cast steel are more brittle than forged iron and forged steel (see FORGING).

casting, plaster. see PLASTER CASTING

cast iron: see IRON

Castle, Barbara Anne, 1911-, British politician. She entered Parliament in 1945 as a Labour member and soon established herself as an influential member of the party's left wing. She served (1950) on the party's national executive committee and was (1958-59) party chairman. When the Labour party was returned to power in 1964, she became minister of overseas development. As minister of transport (1965-68), she instituted a breath-analyzer test for suspected drunken drivers. From 1968 to 1970 she served as minister for employment and productivity, in this capacity she administered the Labour government's wage-restraint policy in the face of trade-union opposition. While Labour was out of office (1970-74) she was opposition spokesman on social security, and she became minister for social security when the party returned to power in 1974.

Castle, Vernon, 1887-1918, English dancer, originally named Vernon Castle Blythe. He studied civil engineering, but turned to the stage and made his debut in 1907. In 1911 he married Irene Foote (1893-1969, b. New Rochelle, N.Y.), and in Paris in 1912 their versions of such dances as the "Texas Tommy" and the "Grizzly Bear" brought them fame. The team originated the "Castle walk," the one-step, and the "hesitation" waltz, and Mrs. Castle introduced bobbed hair and the slim, boyish figure to the ballroom and the world of fashion. Castle was a pilot during World War I and was killed during a training mission in Texas. See Irene Castle, *Castles in the Air* (1958).

castle, type of fortified dwelling characteristic of the Middle Ages. FORTIFICATION of towns had been devised since antiquity, but in the 9th cent. feudal lords began to develop the private fortress-residence known as the castle. It served the twofold function of residence and fortress because of the conditions of medieval life, in which war was endemic. The site of the castle was preferably on a defensible height. England and France, in general, did not afford such inaccessible locations as did the Rhine valley in Germany. The castle of W. Europe was a Norman creation, an outgrowth of the 10th- and 11th-century mound castle, which consisted of a great artificial mound of earth, the motte, surrounded by a dry ditch, or fosse, and surmounted by a wooden blockhouse and its encircling palisade. Until well into the 12th cent., the only English development was the occasional substitution of a massive masonry keep inside the palisade—a form typified in the Tower of London. As siegecraft (see SIEGE) was evolved, provisions were made for an aggressive defense. A castle that became the model for many English and Norman castles was the formidable castle built at Arques in Normandy by Henry I of England. A square donjon, or keep, was set against the strong outer walls of masonry, the entrance was protected by a double gate, two flanking round towers, and advanced earthworks. The place enclosed by the outer circuit of walls was usually divided into two courts, or baileys, by a palisade. Subterranean passages made detection of underground forays easy. In the Near East the Crusaders developed great castles with double circuits of curving outer walls and towers or turrets to overlook all sections of the wall. The form of these castles had an influence throughout the Continent and the British Isles. Thus early in the 13th cent. the medieval castle, a mixture of Norman, English, and Byzantine elements, reached its full flower, as typified in the Château Gaillard on the Seine in France and in Alnwick and the Conisborough in England. In general, the castle was planned for security, the living quarters were rude, poorly lighted, and without provisions for comfort. Typically, the keep contained the living quarters of the lord and his family, the rooms of state, and the prison cells. Two independent systems of walls, each a fortress in itself, extended around the keep, the sections of the walls were flanked by

towers, usually round, and the principal entrance was protected by strong gate towers, the massive gateway, with its PORTCULLIS and drawbridge, and the barbacan, or advanced outwork. The defenders operated from galleries at the tops of walls and from the flat roofs of towers, whose battlements were provided with recesses with flaring sides, called embrasures, and openings, or machicolations, for shooting and dropping missiles on the attackers. The fully developed castle was thus marked by successive series of defenses, the fall of the outer works did not necessarily mean the loss of the entire castle. With the use of gunpowder and consequent perfection of ARTILLERY, the castle lost its military importance. The manor house replaced the castle as the residence of the wealthy landowner, but the architectural influence of the castle has persisted even to the present day, when crenellations and towers are still found in country houses. See CHATEAU. See S. Toy, *History of Fortification from 3000 B.C. to A.D. 1700* (1955), W. D. Simpson, *Castles in Britain* (1966), Alberto Weissmüller, *Castles from the Heart of Spain* (1967), William Anderson, *Castles of Europe from Charlemagne to the Renaissance* (1971), Philip Warner, *The Medieval Castle* (1972).

Castlebar, urban district (1971 pop. 5,970), county town of Co. Mayo, W. Republic of Ireland. It is a market for a farm area. Cured bacon and manufactured hats are products of the town. Castlebar was occupied by the French in 1798.

Castle Clinton National Monument. see BATTERY, THE

Castleford, municipal borough (1971 pop. 38,220), West Riding of Yorkshire, central England, at the junction of the Aire and Calder rivers. Chartered as a municipal borough in 1955, it has bottleworks, chemical works, and collieries. The site of an ancient Roman town lies within its borders. In 1974, Castleford became part of the new metropolitan county of West Yorkshire.

Castlemaine, Barbara, countess of: see CLEVELAND, BARBARA VILLIERS, DUCHESS OF

Castle Pinckney, fortification at the harbor entrance of Charleston, S.C., built in 1797, when war with France seemed imminent, and named for the American diplomat Charles Cotesworth Pinckney. It was a factor in the confrontation at FORT SUMTER (1860), the start of the Civil War.

Castlereagh, Robert Stewart, 2d Viscount (kāsā lrā), 1769-1822, British statesman, b. Ireland. Entering the Irish Parliament in 1790 and the British Parliament in 1794, he was acting chief secretary for Ireland at the time of the Irish rebellion of 1798. Having worked for the Act of Union of England and Ireland (1800), he resigned with William Pitt in 1801 when George III refused to allow CATHOLIC EMANCIPATION. President of the India board of control from 1802 to 1806, he also served (1805-6, 1807-9) as secretary of war. In the latter office, he planned the reorganization and expansion of the army and the effective coordination of British land and sea power. He dispatched a British expedition to Portugal, and after the early disasters in the Peninsular War he succeeded in putting Arthur Wellesley (later duke of Wellington) in command. The opposition of his colleague George CANNING to Castlereagh's policies flared into a serious quarrel. Castlereagh accused Canning of political betrayal, and they fought (1809) a duel. Canning was wounded, and both resigned. As foreign secretary (1812-22), Castlereagh helped to organize the successful final coalition against Napoleon I, partly by secret treaties promising territorial changes. In the Treaty of Chaumont (1814) he obtained that "concert of Europe" later confirmed by the QUADRUPLE ALLIANCE. He advocated a moderate peace settlement for France, including restoration of the Bourbon monarchy and the limitation of France to her prewar boundaries. A dominant figure at the Congress of Vienna (1814-15, see VIENNA CONGRESS OF), Castlereagh worked for the establishment of the United Netherlands and the German Confederation. He favored an independent Poland but was compelled to accept a repartitioning of that country. Castlereagh placed great hope in the "congress system" agreed on at Vienna, by which the great powers would consult regularly for the maintenance of peace. However, he did not approve of outright intervention in the domestic affairs of other countries and protested, in increasingly explicit terms, the assumption of this right by the powers of the HOLY ALLIANCE. By the time of his death it is almost certain that he had decided to break with the wartime allies. In England, however, he was much criticized for his apparent cooperation with those same autocratic governments, and he was also blamed for repressive actions to curb un-

rest in England, though he was not directly responsible for them. He became (1821) the 2d marquess of Londonderry on his father's death, but committed suicide the next year. One of the foremost statesmen of his time, Castlereagh was cold in personality and lacked ability as an orator, he never gained an easy popularity. See biographies by J. A. R. Marriott (1936) and C. J. Bartlett (1966), H. A. Kissinger, *A World Restored* (1957, repr. 1964).

Castle Shannon, borough (1970 pop. 11,899), Allegheny co., SW Pa., a residential suburb S of Pittsburgh, inc. 1919.

castor, see BEAVER

Castor (käs'tar), bright star in the constellation GEMINI, Bayer designation α Geminorum, 1970 position RA 7^h32^m7^s, Dec. +31°57'. Slightly dimmer than POLLUX, with which it forms the Twins, Castor has an apparent MAGNITUDE of 1.58, which still makes it one of the 25 brightest stars in the sky. Castor is actually a six-star system, being a visual triple each component of which is a BINARY STAR, the three components are an eclipsing binary and a pair of spectroscopic binaries. The two brightest components are white, main-sequence stars of SPECTRAL CLASSES A1 and A5. The system is about 50 light-years distant.

Castor and Pollux (pöl'aks), in classical mythology, twin heroes called the Dioscuri, Castor was the son of Leda and Tyndareus, Pollux the son of Leda and Zeus. Pollux is the Latin name for the Greek Polydeuces. Castor excelled as a horseman and Pollux as a boxer. They were great warriors and were noted for their devotion to each other. In one version of the legend, after Castor was killed by Lynceus, Pollux, in accordance with the classical tradition that one of every set of twins is the son of a god and thus immortal, begged Zeus to allow his brother to share his immortality with him. Zeus arranged for the twins to divide their time evenly between Hades and Heaven, and in their honor he created the constellation Gemini. According to another legend, Castor was killed by Idas. The Dioscuri were widely regarded as patrons of mariners and were responsible for SAINT ELMO'S FIRE. They were especially honored by the Romans, on whose side they were said to have appeared miraculously during the battle of Lake Regillus.

castor bean, bean produced by *Ricinus communis*, a plant of the SPURGE family.

castoreum, see BEAVER

castor oil, yellowish oil obtained from the seed of the castor bean. The oil content of the seeds varies from about 20% to 50%. After the hulls are removed the seeds are cold-pressed. Medicinal castor oil is prepared from the yield of the first pressing, this is used as a purgative and laxative. Oil from the second pressing is used as a lubricant for machinery, as a softening agent in making artificial leather, in the dressing of genuine leather, in brake fluids, and in paints and plastic materials. The residue can be used as fertilizer and (after the poisonous substance, ricin, is removed) as cattle feed. Other products having similar properties and uses have been gradually replacing castor oil.

Castracani, Castruccio (kastroöt'chō kastraka'nē), 1281-1328, duke of Lucca. His early life was spent in exile. After his return he was made captain (1316), then lord of Lucca (1320) for life. In the political wars that plagued Italy in the 14th cent. he led the Ghibellines of all Tuscany (see GUELPHS AND GIBELINES), waged long wars against Florence, and conquered Volterra, Pistoia, and the Lunigiana. In 1327, Holy Roman Emperor Louis IV recognized him as duke of Lucca. After quelling a rebellion in Pistoia, he died. His principality disappeared with him.

castration, removal of the sex glands of an animal, i.e., testes in the male, or ovaries and often the uterus in the female. Castration of the female animal is commonly referred to as spaying. Castration results in sterility, decreased sexual desire, and inhibition of secondary sex characteristics. It is performed for the purpose of improving the quality of meat and decreasing the aggressiveness of farm animals, in pet animals it prevents unwanted mating behavior, reproduction, and wandering. Removal of the sex glands in humans is sometimes necessary to prevent the spread in the body of cancerous growths.

castrato (käs'trätō) [Ital., =castrated], a male singer with an artificially created soprano or alto voice, the result of castration in boyhood. The combination of the larynx of a youth and the chest and lungs of a man produced a powerful voice of great range and unique sound. Castrati were especially popular in churches and opera in Europe during the 17th and

18th cent. The greatest castrato was Carlo Broschi FARINELLI.

Castrén, Matthias Alexander (mätē'ās älēksan'dar käs'trān'), 1813-52, Finnish philologist, one of the first scholars to study the Finno-Ugric languages. Castrén was long a professor at the Univ. of Helsinki (now Helsinki).

Castres (kas'trā), city (1968 pop. 42,920), Tarn dept., SW France, on the Agout River. It has been a textile center since the 13th cent., and its machine tools are known worldwide. Wood products, especially furniture, are also manufactured. Once the site of a Roman encampment, Castres grew around a Benedictine monastery founded in 647 A.D. Protestantism took hold in the 16th cent. but was suppressed by Louis XIII. The revocation (1685) of the Edict of NANTES jeopardized the city's economy by expelling Protestants, but Castres prospered anew under Louis XIV. There are several 17th- and 18th-century churches.

Castries, town (1960 pop. 4,353), capital and commercial center of St. Lucia, British West Indies. Its excellent landlocked harbor is one of the best in the West Indies. Castries was founded by the French in 1650.

Castrioti, George: see SCANDERBEG

Castro, Américo (āmā'rēkō kas'trō), 1885-1972, Spanish philologist and literary critic, b. Brazil. His numerous works include *El pensamiento de Cervantes* [the ideas of Cervantes] (1925), *Iberoamérica su presente y su pasado* [Iberoamerica its present and past] (1941), and *España en su historia cristianas, moros y judios* (1948, tr. *The Structure of Spanish History*, 1954).

Castro, Cipriano (sēprēa'nō), 1858?-1924, president of Venezuela (1901-8). In 1899 he usurped the government, overthrowing Andrade. Called the Lion of the Andes by his followers, he was a stern and arbitrary caudillo, who nevertheless improved the country's economy. Castro's administration is notable because of the financial claims (see VENEZUELA CLAIMS) made by several foreign powers and his defiance of them. He retired briefly in 1906 and was succeeded by Juan Vicente GÓMEZ, but after having violent disagreements with Gómez, Castro again assumed power. In 1908 Castro went to Europe. Gómez immediately deposed him and took control. Castro died in exile.

Castro, Fidel (fēdē'l'), 1926-, Cuban revolutionary and political leader, premier of Cuba (1959-). A young lawyer, Castro openly criticized the dictatorship of Fulgencio BATISTA Y ZALDÍVAR in 1952. On July 26, 1953, he led an unsuccessful attack on an army post in Santiago de Cuba and was imprisoned. Released (1955) in a general amnesty, he went to Mexico where he organized the 26th of July movement. In Dec. 1956, he landed in SW Oriente prov. with a small group of rebels. Castro and 11 others, including his brother Raul and Ernesto "Che" GUEVARA, survived the initial encounter and hid in the mountains of the SIERRA MAESTRA, where, despite severe hardships, they built up a following and led the increasingly effective guerrilla campaign that toppled the Batista regime on Jan. 1, 1959. Widely hailed as a liberator, Castro soon proved to be extraordinary as a demagogue, he was a brilliant propagandist and a powerful orator. He established a totalitarian regime, directing the wholesale arrests and execution of Batista supporters, and—in a remarkably short time—he destroyed the old army structure and replaced it with his own military forces under the command of his brother Raul. He proceeded to collectivize agriculture, to expropriate all native and foreign industry, and to promote close ties with Communist countries. He instituted sweeping reforms, uprooting the Cuban social order to the advantage of the lower classes and the general disadvantage of the propertied classes, many of whom fled. In Dec. 1961, he openly declared himself to be a Marxist-Leninist. By constantly denouncing "Yankee imperialism," by aligning himself and the Cuban revolution with the underprivileged peoples of Latin America, Asia, and Africa, and by dramatizing the symbols of his struggles against Batista, he kept alive his image as a folk hero. He weathered his own disastrous economic experiments, the cancellation of the U.S. sugar quota, the rupture of diplomatic relations with the United States and almost all of the Latin American countries, the U.S. Bay of Pigs invasion (April, 1961), an economic blockade, an unexpected compromise by the USSR in the 1962 crisis over missile bases in Cuba, and a protracted shortage of food and consumer goods. His announced goal of extending the Cuban revolution to other countries suffered a severe setback with the capture

and death (1967) of "Che" Guevara in Bolivia. Although relying on Soviet aid, Castro maintained a remarkable degree of independence. While his initial enormous prestige dwindled, he remained an important charismatic symbol of revolution and social change. He wrote *Ten Years of Revolution* (1964) and *History Will Absolve Me* (1968). See Theodore Draper, *Castro's Revolution: Myths and Realities* (1962) and *Castroism: Theory and Practice* (1965), Lee Lockwood, *Castro's Cuba, Cuba's Fidel* (1967, repr. 1969), Andres Suarez, *Cuba: Castroism and Communism 1959-1966* (1967), Enrique Meneses, *Fidel Castro* (1968), H. L. Matthews, *Fidel Castro* (1969), P. W. Bonsal, *Cuba, Castro, and the United States* (1971), Maurice Halperin, *The Rise and Decline of Fidel Castro* (1972).

Castro, Inés de, or Inez de Castro (both ɪ'nēz də käs'trō, Port. ēnēsh' dī käs'h'trōō), d. 1355, Spanish noblewoman, a celebrated beauty, and a tragic figure in Portuguese history. She went (1340) to Portugal as a lady in waiting to Constance of Castile, wife of the heir to the Portuguese throne, Dom Pedro (later PETER I). He fell in love with her. Although his father, Alfonso IV, banished her from court, the prince continued to see her. After Constance died (1345), he established a household with her at Coimbra, where she bore him four children. Her brothers, however, gained political influence and aroused the opposition of Alfonso's advisers. Three of those advisers persuaded the king that Ines must be removed to preserve the legitimate succession to the throne and with his permission murdered Ines. Dom Pedro, overcome with grief and anger, led a rebellion against his father, but peace was restored, and the prince promised to forgive the murderers. When he became (1357) king, however, he extradited two from Castile and executed them horribly, the third escaped. Peter announced that he had been secretly married to Ines and had two tombs erected at Alcobaca depicting the life story of Ines in marble. It is not true that he had her disinterred and crowned as queen, but that story was immortalized in a drama of Juan Ruiz de Alarcón y Mendoza. The romantic story of the love affair has been a favorite theme of Portuguese writers and has been much used by Spanish and other writers also. Ines's sons subsequently contested the claim of their half brother, John I, to the Portuguese throne.

Castro, Rosalía de (rōsālē'ā də), 1837-85, Spanish poet and novelist. Castro's book of verse *Cantares gallegos* (1863) was the first important poetry in Galician since the 13th cent., it reflected the lyrical appeal of Galician folk songs. The melancholy *Follas novas* (1880) was followed by the despairing verse, in Castilian, of *En las orillas del Sar* (1884, tr. *Beside the River Sar*, 1937), written while Castro was suffering with terminal cancer. Her sensitive and compassionate poetry with its metrical innovations has exerted considerable influence on modern poets. Castro's novels of Galician life, e.g., *La hija del mar* [the daughter of the sea] (1859), are less significant.

Castro, Vaca de: see VACA DE CASTRO CRISTÓBAL

Castro, Greece: see KÁSTRON

Castro Alves, Antônio de (antō'nyōō dī käs'trōō al'vās), 1847-71, Brazilian poet. A disciple of Victor Hugo, he came to fame with *Esposas flutuantes* [tossing spume] (1871). The poems of Castro Alves are nationalist and socially conscious. Best known is *O navio negreiro* [the slave ship], which was instrumental in the abolition of slavery in Brazil. His study of law was cut short by his death, of tuberculosis, at 24.

Castrogiovanni: see ENNA, Italy

Castrop-Rauxel (käs'trōp-rouk'səl), city (1970 pop. 84,146), North Rhine-Westphalia, W. West Germany, on the Rhine-Rhine Canal, an industrial city of the RUHR district. Chemicals and other light industrial goods are produced there.

Castro Valley, uninc. city (1970 pop. 44,760), Alameda co., W. Calif., near San Francisco Bay. It is chiefly residential, with some light industry.

Castro y Bellvis, Guillén de (gēlyān' də kas'trō ē bēlvēs'), 1569-1631, Spanish dramatist, best known of the Valencian group of playwrights of the Golden Age. Three of his plays dramatize episodes from *Don Quixote*. His masterpiece, *Las mocedades del Cid* [the youthful adventures of the Cid], is a historical drama that furnished Corneille with the material for his play *Le Cid*. Castro enjoyed considerable success during his lifetime.

casuistry (kāzh'yōō'strē) [Lat. *casus*=case], art of applying general moral law to particular cases. Although most often associated with theology (it has been utilized since the inception of Christianity), it is also used in law and psychology. The function of

casuistry is to analyze motives so individual judgments can be made in accordance with an established moral code. The term is often used in a pejorative sense to indicate specious or equivocal reasoning.

cat, name applied broadly to the carnivorous mammals constituting the family Felidae, and specifically to the domestic cat, *Felis catus*. The great roaring cats, the LION, TIGER, JAGUAR, LEOPARD, and snow leopard are anatomically very similar to one another and constitute the genus *Panthera*. The clouded leopard, *Neofelis*, and the cheetah, *Acinonyx*, are big cats that do not roar. The medium-sized and small cats are classified by different zoologists in varying numbers of genera, but in the system most widely used at present they are all put in the single genus *Felis*, despite the great variation among them. Among these cats are the PUMA (or cougar), the LYNX (including the bobcat), the OCELOT, the JAGUARUNDI, the SERVAL, and many small species described by the name cat or wildcat, such as the golden cat and European wildcat, as well as the domestic cat. The small cats are generally ticked, striped, or spotted. Many of them can interbreed with the domestic cat, and some can be tamed if caught young. Of all the carnivores, cats are the most exclusive flesh-eaters and are the most highly adapted for hunting and devouring their prey. All cats have rounded heads, short muzzles, large eyes, sensitive whiskers about the mouth, and erect pointed ears. They have short, wide jaws equipped with long canine teeth and strong molars with sharp cutting edges. Their tongues are coated with sharp recurved projections called papillae that aid in drinking and grooming. Cats have five toes on the forefeet and four on the hind feet. The fifth toe is set high on the forefoot and does not touch the ground during walking, but it is used in grooming and capturing prey. The ends of the toes bear strong, sharp, curved claws. In all but the cheetah the claws are completely retractile, being withdrawn into protective sheaths when not in use. This mechanism is a distinguishing feature of the cat family, although it occurs in a less developed form in some civets. All cats, with the exception of the lynx and related species, have long tails which they use for balance. The musculo-skeletal system is extremely flexible, allowing cats to arch and twist their bodies in a variety of ways. Most cats have good vision and are able to see well in very dim light, their color vision is weak. Their sense of hearing is excellent and, at least in the small cats, can detect frequencies of up to 40,000 Hz or higher. The sense of smell is not as highly developed as in the dog, its keenness may vary from one species to another. Cats are extremely agile, they can run faster than any other mammal for short distances and are remarkable jumpers. They are also good swimmers and members of many species appear to enjoy bathing. All are able to climb trees, but they vary in their behavior from almost exclusively terrestrial (e.g., the lion) to largely arboreal (e.g., the clouded leopard). Most are more or less solitary, but cheetahs live in family groups and lions live in groups, called prides, of up to 30 individuals. Most cats stalk their victims with great stealth and silence, even the lion, which lives in open country, usually lies in concealment until it can pounce on its victim. Only the cheetah, the swiftest of all mammals, runs down its prey. Cats live in a wide variety of habitats, although they are most numerous in warm climates. Even a single species, such as the tiger, may range from cold northern regions to the tropics. All continents except Australia and Antarctica have native species.

Domestic cats. Cats have been domesticated since prehistoric times, perhaps for as long as 5,000 years. (Dogs are believed to have been domesticated for about 50,000 years.) They have been greatly valued as destroyers of vermin, as well as for their ornamental qualities. The ancient Egyptian domestic cat, which spread to Europe in historic times, was used as a retriever in hunting as well as for catching rats and mice. It was probably derived from *Felis lybica* or one of the other North African wildcats. The modern domestic cat, *F. catus*, is probably descended from this animal, perhaps with an admixture of other wildcat species, or of species domesticated at various times in other parts of the world. Cats were venerated in the ancient Egyptian and Norse religions; they have also been the object of superstitious fear, especially in the Middle Ages, when they were tortured and burned as witches. Cats vary considerably in size, males commonly weigh 9 to 14 lb (4.1–6.4 kg) and females 6 to 10 lb (2.2–4.5 kg). They have coats of varying length and a wide variety of colors: black, white, and many shades of red, yellow, brown, and gray. A cat may be

solid-colored or have patches or shadings of a second color. An extremely common pattern, probably derived from wild ancestors, is tabby—a red, brown, or gray background, striped with a lighter shade of the same color. The tortoiseshell pattern is a mixture of red, yellow, and black patches. The calico pattern is similar, but with large patches of white. Besides the common house cat, with its natural variation, the species *F. catus* includes recognized breeds with characteristics maintained by breeders and fanciers through selective mating. Breeds are established when particular traits breed true for several generations. The short-haired breeds are in general more slender and active than the long-haired. The long-haired breeds are the Persian and Himalayan, *angora* is an old term denoting any long-haired cat. Persians may be black, white, or any of a great variety of colors, including calico, tortoiseshell, tabby, and cameo (cream with red shadings). The Himalayan breed resulted from the crossing of a Siamese with a Persian cat. Himalayans have the stocky bodies and long hair of Persians, with Siamese coloring. All other breeds are short-haired. Abyssinians have long bodies and ruddy brown coats with ticking (marking on each hair) of darker brown or black. They are thought to be the most unchanged descendants of the ancient Egyptian domestic cat. Siamese are slender cats with almond-shaped blue eyes, and white, cream, or fawn-colored coats with brown or gray areas, called points, on the feet, tail, ears, and face. Show Siamese are divided according to color of their coats and markings into seal-, chocolate-, blue-, lilac-, and red-point types. Burmese are small, muscular, roundheaded cats with medium to dark brown coats. Manx are tailless cats of various colors, their hind legs are longer than their forelegs, so that the rump is elevated. They probably arose by mutation on the Isle of Man in the Irish Sea, although tailless cats also occur in the Orient. The Russian Blue has bright green eyes and an evenly blue-gray coat, distinguished for having two layers of short, thick fur. The Rex is a recent breed resulting from mutation and is the only curly-haired cat. Its short, woolly coat may be any color. Domestic shorthair is also a recognized category in American cat shows, cats of this group differ from the common household cat only in having known parentage for at least two generations. The known lineage of an animal is called its pedigree. The Maine coon cat is a non-pedigreed strain of large domestic cats found in Maine and believed to be descended from Persians, coon cats weigh up to 25 lb (11.3 kg). Maltese does not connote a breed but is a name applied indiscriminately to gray cats. Cat fanciers' associations exist to set standards, establish pedigrees, and conduct cat shows. There are seven such associations in the United States, one in Canada, and one in Great Britain. Cats are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Felidae. See Michael Boorer, *Wild Cats* (1970), Claire Necker, *The Natural History of Cats* (1970), A. M. Currah, ed., *The Cat Compendium* (1972), C. M. Ing and Grace Pond, *Champion Cats of the World* (1972), G. N. Henderson and D. J. Coffey, ed., *The International Encyclopedia of Cats* (1973), G. B. Schaller, *Golden Shadows, Flying Hooves* (1973).

catabolism, subdivision of METABOLISM involving all degradative chemical reactions in the living cell. Large polymeric molecules such as polysaccharides, nucleic acids, and proteins are first split into their constituent monomeric units, after which the monomers themselves can be broken down into such simple cellular metabolites as lactic acid, acetic acid, carbon dioxide, ammonia, and urea. The first set of reactions provides the necessary building blocks for the construction of new polymeric molecules. The second set of reactions usually involves the process of oxidation and is accompanied by a release of chemical free energy, not all of which is lost as heat, but is partially conserved through the coupled synthesis of ADENOSINE TRIPHOSPHATE. The hydrolysis of this compound is subsequently used to drive almost every energy-requiring reaction in the cell. Thus catabolism also provides the source of chemical energy necessary for the maintenance of the living cell.

catacombs (kat'akōmz), cemeteries of the early Christians, arranged in extensive subterranean vaults and galleries. Besides serving as places of burial, the catacombs were used as hiding places from persecution, as shrines to saints and martyrs, and for funeral feasts; it is doubtful, despite a widespread belief, that they were ever regularly used for religious services. Catacombs exist mainly at Rome but also at

Naples, Chiuri, and Syracuse and at Alexandria and Susa in N Africa as well as in Asia Minor and other areas inhabited by the early Christians. The cemeteries at Paris, once thought to be catacombs, are actually depleted stone quarries and were not used for burial until the late 18th cent. Although among Greeks and Romans cremation was the rule, there was no bar against burial for Christians or Jews (Jewish catacombs have also been found at Rome, although the term is most generally used for Christian burial places) and the catacombs were not constructed in secrecy. Ordinances forbade interment within the city limits. All the Roman catacombs consequently are outside the city gates. They lie from 22 to 65 ft (6.7–19.8 m) beneath ground level and occupy a space estimated at more than 600 acres (243 hectares), although much of this is in several levels, one above another. The oldest remains date from the 1st cent. A.D., and construction continued until the early 5th cent. Excavated in those places where the subsoil tufa or soft rock possessed the suitable granular structure, they consisted primarily of narrow passages, generally about 3 ft (91 cm) wide. Lining the walls of these passages, are the loculi, or recesses, for the bodies. These niches, arranged one above another in tiers, were sealed after the burials with slabs of marble or terra-cotta that bore painted or incised inscriptions. Some passages contained separate chambers or cubicles, usually about 12 ft (4 m) square but sometimes circular or polygonal, which were privately owned family vaults or contained the tomb of a martyr. In these the bodies were often in carved sarcophagi that stood within arched niches. The walls and ceilings were plastered, and sometimes open shafts for lighting extended to the ground above. In some catacombs rooms are arranged in groups, in the catacombs of Sant'Agnese such a group forms a miniature church. In addition, the intricate underground corridors undoubtedly served as possible refuges from anti-Christian violence. The spreading of the catacombs, the joining together of separate areas, and the cutting of passages, one above the other in as many as five successive levels, eventually produced burial places of labyrinthine character. The walls and ceilings of plaster were customarily painted with fresco decorations, and in these can be studied the beginnings of Christian art. Religious subjects started to appear in the 2d cent., the earlier frescoes being confined to the use of symbols. Even after official recognition of Christianity in 313, burials continued, through a desire for interment near the martyrs. The invasions of Goths, Vandals, Lombards, and Saracens brought about the plundering of the catacombs and the robbing of their graves for the bones of saints. Several popes worked at restoring these sacred places, but by the 8th cent. the bodies had been mainly transferred to churches, by the 10th cent. the catacombs, filled with debris, were forgotten. In 1578 they were rediscovered. Their preservation and maintenance have since been under control of the papacy in the Roman liturgy the requirement that Mass be said in the presence of lighted candles and over martyrs' relics is in conscious reminiscence of the catacombs. Exhaustive publications based upon researches in the catacombs were produced by the archaeologist Battista de Rossi (1822–94). The catacombs discovered in the vicinity of Rome in 1956 and 1959 contained frescoes of notable historical interest. See W. H. Adams, *Famous Caves and Catacombs* (1886, repr. 1972), Stephen Benko and J. J. O'Rourke, ed., *The Catacombs and the Colosseum* (1971).

Catalan art. In Catalonia and the territories of the counts of Barcelona, art flourished in the early Middle Ages and continued to flourish through the Renaissance. Some of the finest surviving altar-panel paintings of the Romanesque period are Catalan. Many of these are preserved in the Museo del Parque, Barcelona, together with numerous frescoes transferred from the apses of Romanesque churches. The small churches, often bare of sculptural ornament, were elaborately painted throughout, although usually only the decoration of the apse has survived. A fine example from Santa Maria del Mar, Barcelona, is in the Museum of Fine Arts, Boston. Superb examples of architectural sculpture also exist in many Catalan churches of the period. Also Romanesque is the famous illuminated Bible from the abbey of Farfa, now in the Vatican. Catalan art shares most of the characteristics of the international Romanesque style. A more obviously regional character is found in the Catalan painting of the 14th cent. and in the work of Ferrer Bassa and Jaime Serra, although Sienese influence is noteworthy. With the 15th cent., particularly in the paintings of

Jaime Huguet, of Jaime, Rafael, and Pablo Vergos, and of other masters, the school reached its maturity in a profuse and highly decorative religious art of great beauty. Only with Luis Dalmau in the middle of the century did direct Flemish influence appear, and it never gained ascendancy. The great period of Catalan painting as such ended with the 15th cent., although the province has never ceased to produce great individual artists. Several prominent artists of the 20th cent. were of Catalonian origin, notably Juan Gris, Joan Miró, and Salvador Dalí. See Chandler R. Post, *A History of Spanish Painting* (9 vol., 1930-47), Vol. VII, George Kubler and Martin Soria, *Art and Architecture in Spain and Portugal* (1959).

Catalan language (kät'älän,-län), member of the Romance group of the Italic subfamily of the Indo-European family of languages. It is spoken by close to 6 million people in the regions of Catalonia and Valencia in Spain, the Balearic Islands, the region of Roussillon in SE France, the city of Alghero in Sardinia, and lastly in Andorra (where it is the official tongue). Like the other ROMANCE LANGUAGES, Catalan is descended from Latin. It is written in the Roman alphabet. It is also the medium of a noteworthy literature. See William J. Entwistle, *The Spanish Language, Together with Portuguese, Catalan and Basque* (2d ed. 1962), Joan Gili, *Introductory Catalan Grammar* (3d ed. 1967).

Catalan literature, like the Catalan language, developed in close connection with that of Provence. In both regions the rhymed songs of the troubadours flourished as an art form from the 11th to the 14th cent. In the 13th cent. court chroniclers gave a fixed form to Catalan prose, and the language became an expressive literary medium in the works of the great Ramon LULL. At the end of the 14th cent. the art of the troubadours began to wane, and in the 15th cent. the influence of Dante and Petrarch was strong, particularly on the work of the poet Ausiàs MARCH. From the rise of Castile during the Renaissance, Catalan literature was eclipsed until the 19th cent., when it experienced a marked revival. The great writers of this period were the dramatist Àngel GUIMERÀ and the poet Mosen Jacinto VERDAGUER. In the 20th cent. Catalan literature flourished. The realistic regional novel had first-rate exponents in Narcís Oller (1846-1930), Joaquim Ruyra (1858-1939), and Prudenci Bertrana (1867-1941). Joan Maragall (1860-1911) was regarded by Miguel de Unamuno as the best lyric poet of the Iberian peninsula. A unique and exotic note was the aesthetic dilettantism advocated by Eugenio d'Ors. After the end of the Spanish civil war the regime of Francisco Franco persecuted Catalan authors and imposed a ban on Catalan books and publications. Although Catalan literary life proceeded underground, it was not until after World War II that normal activity was resumed. The postwar years saw the return of Catalan language and literature to the curriculum of Spanish universities and the establishment of numerous awards for achievement in Catalan literature, e.g., the City of Barcelona Prize for Catalan Poetry. Notable postwar poets include Josep Foix, Maria Marín, and Thomas Garces. See Arthur Terry, *Catalan Literature* (1972).

cataplexy (kät'älëpsë), pathological condition characterized by a loss of consciousness accompanied by rigidity of muscles that keeps limbs in any position in which they are placed. Attacks vary from several minutes to days and occur in a variety of clinical syndromes, most frequently in schizophrenia, epilepsy, and hysteria.

Catalina Island. see SANTA CATALINA.

catalog, descriptive list, on cards or in a book, of the contents of a library. Assurbanipal's library at Nineveh was cataloged on shelves of slate. The first known subject catalog was compiled by Callimachus at the Alexandrian library in the 3d cent. B.C. The library at Pergamum also had a catalog. Early in the 9th cent. A.D. the catalogs of the libraries of the monastery at Reichenau and of the abbey at Saint-Riquier, N. France, included summaries of the works cataloged. In 1472 the monastic library at Clairvaux was recataloged and one of the earliest union catalogs was made—of the contents of 160 Franciscan monastery libraries in England. In 1475 the Vatican librarian, Platina, cataloged that library's 2,527 volumes. About 1660, Clement, librarian of the Bibliothèque du Roi under Louis XV, compiled a subject catalog and inventory of manuscripts. The printing of the British Museum catalog was begun by PANIZZI as keeper (1837-56) of printed books. Charles A. CUTLER devised the modern dictionary catalog (with author, title, and subject arranged in one alphabet) for the Boston Athenaeum library. Melvil DAVEY devised his decimal system in the

1870s, the system was widely applied in smaller libraries and many large ones. In 1901 the Library of Congress began the practice of printing their catalog entries on cards 3 by 5 in. (7.6 by 12.7 cm) and distributing them to other libraries for a small fee. The National Union Catalogue, begun in 1952 by the Library of Congress, collates the card catalog entries of most large American libraries and prints the results in book form. Cataloging processes are currently being mechanized with the aid of computer systems to provide more extensive and generally superior bibliographic services. See Archer Taylor, *Book Catalogues: Their Varieties and Uses* (1957), *Anglo American Cataloguing Rules*, prepared by the American Library Association et al. (1970), M. F. Tauber and Hilda Feinberg, comp., *Book Catalogs* (1971).

Catalonia (kätälö'nëä), Span. *Cataluña*, region (1970 pop. 5,122,567), NE Spain, stretching from the Pyrenees at the French border southward along the Mediterranean Sea. It comprises four provinces, named after their capitals: BARCELONA, GERONA, LÉRIDÀ, and TARRAGONA. Barcelona is the historic capital. Mostly hilly, with pine-covered mountains, it also has some highly fertile plains. Cereals, olives, and grapes are grown, and one third of the wines of Spain are produced there. The beautiful 240-mi (386-km) seacoast has fine harbors and an active tourist trade. The Ebro, Segre, and Cinca rivers furnish hydroelectric power for the industries in Barcelona and Gerona. Chief products are textiles, automobiles, airplanes, locomotives, and foundry and other metal items. Trade has been active along the coast since Greek and Roman times. The history of medieval Catalonia (which, like Castile, took its name from its many castles) is that of the counts of Barcelona, who emerged (9th cent.) as the chief lords in the Spanish March founded by Charlemagne. United (1137) with Aragon through marriage (see RAYMOND BERENGAR IV), Catalonia nevertheless preserved its own laws, its cortes, and its own language (akin to Provençal). CATALAN ART and CATALAN LITERATURE flourished in the Middle Ages. In the cities, notably Barcelona, the burgher and merchant classes grew very powerful. Catalan traders rivaled those of Genoa and Venice, and their maritime code was widely used in the 14th cent. They, and adventurers like Roger de Flor, were largely responsible for the expansion in the Mediterranean of the house of Aragon (see ARAGÓN HOUSE OF). Catalonia failed in its rebellion (1461-72) against John II of Aragon, and after the union (1479) of Aragon and Castile, Catalonia declined. The centralizing policy of the Spanish kings, the shifting of trade routes with the consequent loss of commercial income, pirate attacks, and recurring plagues and famines were all major factors. Agitation for autonomy was always strong. In the Thirty Years War (1618-48), Catalonia rose against Philip IV, and in the War of the Spanish Succession it sided with Archduke Charles against Philip V, who in reprisal deprived it of its privileges. In the late 19th and 20th cent. it was a center of socialist and anarchist strength. In 1932 the Catalans established a separate government, first under Francisco Macià, then under Lluís Companys, which in 1932 won autonomy from the Spanish Cortes. A revolution (1934) for complete independence failed, but in 1936 autonomy was restored. In the civil war of 1936-39, Catalonia sided with the Loyalists and suffered heavily. Barcelona was the Loyalist capital from Oct., 1938, to Jan., 1939. Catalonia fell to Franco in Feb., 1939.

catalpa (kätäl'pə) see BIGNONIA

catalyst, substance that can cause a change in the rate of a CHEMICAL REACTION without itself being consumed in the reaction, the changing of the reaction rate by use of a catalyst is called catalysis. Substances that increase the rate of reaction are called positive catalysts or, simply, catalysts, while substances that decrease the rate of reaction are called negative catalysts or inhibitors. Catalysts work by changing the ACTIVATION ENERGY for a reaction, i.e., the minimum energy needed for the reaction to occur. This is accomplished by providing a new mechanism or reaction path through which the reaction can proceed. When the new reaction path has a lower activation energy, the reaction is said to be catalyzed, the rate of reaction will be increased because there will be a higher proportion of interactions (i.e., collisions) between reactants with enough energy to cause a reaction. If the activation energy for the new path is higher, the reaction rate is decreased and the reaction is said to be inhibited. Enzymes are the commonest and most efficient of the catalysts found in nature. Most of the chemical reactions that occur in the human body and in other

living things are high-energy reactions that would occur slowly, if at all, without the catalysis provided by enzymes. For example, in the absence of catalysis, it takes several weeks for starch to hydrolyze to glucose, a trace of the enzyme ptyalin, found in human saliva, accelerates the reaction so that starches can be digested. Some enzymes increase reaction rates by a factor of one billion or more. Enzymes are generally specific catalysts, that is, they catalyze only one reaction of one particular reactant or substrate. Usually the enzyme and its substrate have complementary structures and can bond together to form a complex that is more reactive due to the presence of FUNCTIONAL GROUPS in the enzyme, which stabilize the transition state of the reaction or lower the activation energy. Catalysis is also important in chemical laboratories and in industry. Some reactions occur faster in the presence of a small amount of an acid or base and are said to be acid catalyzed or base catalyzed. For example, the hydrolysis of esters is catalyzed by the presence of a small amount of base. In this reaction, it is the hydroxide ion, OH⁻, that reacts with the ester, and the concentration of hydroxide ion is greatly increased over that of pure water by the presence of the base. Although some of the hydroxide ions provided by the base are used up in the first part of the reaction, they are regenerated in a later step from water molecules, the net amount of hydroxide ion present is the same at the beginning and end of the reaction, so the base is thought of as a catalyst and not as a reactant. Finely divided metals are often used as catalysts, they adsorb the reactants onto their surfaces (see ADSORPTION), where the reaction can occur more readily. For example, hydrogen and oxygen gases can be mixed without reacting to form water, but if a small amount of powdered platinum is added to the gas mixture, the gases react rapidly. Hydrogenation reactions, e.g., the formation of hard cooking fats from vegetable oils, are catalyzed by finely divided metals or metal oxides. The commercial preparation of sulfuric acid and nitric acid also depends on such surface catalysis. Other commonly used surface catalysts, in addition to platinum, are copper, iron, nickel, palladium, rhodium, silica gel (silicon dioxide), and vanadium oxide. Some substances that are not themselves catalysts increase the activity of a catalyst when added with it to some reaction, such substances are called promoters. Alumina is a promoter for iron when it is used to catalyze the reaction of hydrogen and nitrogen to form ammonia. In some reactions one of the reaction products is a catalyst for the reaction, this phenomenon is called self-catalysis or autocatalysis. An example is the reaction of permanganate ion with oxalic acid to form carbon dioxide and manganous ion, in which the manganous ion acts as an autocatalyst. Such reactions are potentially dangerous, since the reaction rate may increase to the point of explosion. Inhibitors are also of interest to the chemist. Because oxygen is an inhibitor of free-radical reactions, many of which are important in the synthesis of polymers, such reactions must be performed in an oxygen-free environment, e.g., under a blanket of nitrogen gas. The toxicity of certain poisons, e.g., carbon monoxide and the nerve gases, is due to their inhibition of life-sustaining catalytic reactions in the body. Substances that react with catalysts to reduce or eliminate their effect are called poisons, arsenic compounds are catalytic poisons for platinum.

catamaran (kät'amarän'), watercraft made up of two connected hulls. Originally used by the natives of Polynesia, the catamaran design was adopted by Western boat builders in the 19th cent. Because the twin hulls of the Polynesian catamaran are actually logs or other pieces of wood, the vessel is more like a raft than a boat. An extremely stable craft, it can be paddled or sailed even in the heavy waves of the S. Pacific. The American Nathanael Herreshoff first built Western-type catamarans in the 1870s. The twin-hulled sailing or motor boat has since become a popular pleasure craft, largely because of its speed and stability. Catamarans range from 12 ft (3.7 m) to over 100 ft (30.5 m) in length and are among the world's fastest sailing craft.

Catamarca (kätämär'kä), city (1970 pop. 58,186), capital of Catamarca prov., NW Argentina. It is an agricultural and mining center located in a valley that produces wine, cotton, alfalfa, and livestock. Founded in 1683, Catamarca has a 17th-century Franciscan monastery and a church that is a pilgrimage site and a national monument. Tourists are attracted by the area's mineral springs.

catamount: see PUMA.

Catania (kätä'nyä), city (1971 pop. 397,939), capital of Catania prov., E Sicily, Italy, on the Gulf of Cata-

nia, an arm of the Ionian Sea, and at the foot of Mt. Etna. It is a busy port and a major commercial and industrial center. Manufactures include chemicals, silk and cotton textiles, and asphalt. The city also has a fishing industry. Founded (late 8th cent. B.C.) by Chalcidian colonists, Catania was a flourishing Greek town and was later a Roman colony. It was rebuilt after earthquakes in 1169 and 1693 and after a severe volcanic eruption in 1669. In 1862, Garibaldi organized at Catania his expedition to Rome that was stopped at Aspromonte. The city was heavily damaged in World War II. Points of interest include the extensive Bellini Gardens (named for the 19th-century composer, who was born in Catania), the cathedral (originally built in the 11th cent.), and Ursino castle, built (13th cent.) by Emperor Frederick II. The city has a university (founded 1444) and an observatory.

Catanzaro (kātānzā'rō), city (1971 pop. 85,316), capital of Catanzaro prov. and of Calabria, S. Italy, on a hill above the Ionian Sea. It is a commercial and industrial center, with flour mills and distilleries. Founded (10th cent.) by the Byzantines, Catanzaro was famous (11th–17th cent.) for its velvets and damasks.

catapult (kāt'apūlt'), mechanism used to throw missiles in ancient and medieval warfare. There were two major types in wide use. One, a large crossbow, shot spears at a low trajectory (see BOW AND ARROW). The other type threw large stones, pots of boiling oil, and Greek fire (a flammable mixture used by the Byzantine Greeks) at a high trajectory and was used for attacking or defending fortifications. Catapults were widely employed in SIEGE warfare, but with the introduction of artillery in the 14th cent. they passed from use. However, in the 20th cent. a form of catapult using hydraulic pressure was reintroduced as a means of launching aircraft from warships.

cataract, in medicine, opacity of the lens of the eye, which impairs vision. In the young, cataracts are generally congenital or hereditary, later they are usually the result of degenerative changes brought on by advanced age or systemic disease (diabetes). Cataracts brought on by aging are most common, most individuals over 60 exhibit some degree of lens opacity. Injury, extreme heat, X rays, nuclear radiation, inflammatory disease, and toxic substances also cause cataracts. Advanced cataracts are treated by surgical removal of the lens, and contact lenses are used to compensate for the missing lens.

Catargiu, Lascar (kātarjōō'), 1823–99, Rumanian statesman, of an ancient Walachian family. Unsuccessful as Conservative candidate (1859) against Alexander John Cuza for the rule of Moldavia, he became leader of the Conservative opposition. He served several times as premier of Rumania (May–July, 1866, 1871–76, 1889, 1891–95) and effected financial and agrarian reforms.

catastrophism (katās'trafizām), in geology, the doctrine that at intervals in the earth's history all living things have been destroyed by cataclysms, e.g., floods or earthquakes, and replaced by an entirely different population. During these cataclysms the features of the earth's surface, such as mountains and valleys, were formed. The theory, popularly accepted from the earliest times, was attacked in the late 18th cent., notably by James Hutton, who may be regarded as the precursor of the opposite doctrine of UNIFORMITARIANISM. Catastrophism, however, was more easily correlated with religious doctrines, e.g., the Mosaic account of the Flood, and remained for some time the interpretation of the earth's history accepted by the great majority of geologists. It was systematized and defended by the Frenchman Georges Cuvier, whose position as the greatest geologist of his day easily overbore all opposition. In the 19th cent. it was attacked by George Poulett Scrope and especially by Sir Charles Lyell, under whose influence the contrary doctrine gradually became more popular.

catatonia (kāt'atō'nēā), mental state characterized by statuesque posturing and muscular immobility, mutism, apparent stupor, and paralysis of the will. The muscles are held in a plant state of tonus called waxy flexibility, and the catatonic person obediently permits himself to be rearranged into awkward positions that he may subsequently hold for hours. In contrast to the above stuporous or withdrawn form of catatonia, catatonic excitements may occur in which continuous incoherent shouting, unrelenting psychomotor agitation, and a violent destructiveness toward persons and objects alike can lead to collapse and death if untreated. First described by Karl Kahlbaum in 1874 as catatonia, or tension insanity, the entity was included with hebephrenia

and paranoia in Emil Kraepelin's concept of dementia praecox. All of these were subsumed under Eugen Bleuler's concept of SCHIZOPHRENIA in 1911, when the important distinction was made that there was no dementia involved—no defect of memory or intellect. Indeed, the apparently stuporous and totally unresponsive catatonic will often later describe having been acutely sensitive to persons and events around him during the catatonic state.

Catawba Indians (katō'ba), North American Indians whose language belongs to the Siouan branch of the Hokan-Siouan linguistic stock (see AMERICAN INDIAN LANGUAGES). They occupied a region in South Carolina. A large and powerful group, they waged incessant but unsuccessful war against the Cherokee and the Indians of the Ohio River valley, sending war parties to great distances. Fighting and epidemics of smallpox reduced them to a small group in the 18th cent. Until 1962 the Catawba lived on a small reservation in South Carolina, at that time they terminated their relationship with the federal government and distributed the tribal estate among the remaining members. See D. S. Brown, *The Catawba Indians* (1966), C. M. Hudson, *The Catawba Nation* (1970).

cat bear: see PANDA

catbird: see MIMIC THRUSH

catch crop, any quick-growing crop sown between seasons of regular planting to make use of temporary idleness of the soil or to compensate for the failure of a main crop. It may be such rapid-maturing vegetables as radishes, onions grown from sets, or spinach (planted between rows of slower growing crops), quick-growing crops such as rye, millet, or buckwheat, or an annual legume, such as soybean, which is valuable as fodder or, when plowed under, increases the soil's fertility. See COVER CROP.

catchfly: see PINK

catchment area or drainage basin, area drained by a stream or other body of water. The limits of a given catchment area are the heights of land—often called drainage divides, or watersheds—separating it from neighboring drainage systems. The amount of water reaching the river, reservoir, or lake from its catchment area depends on the size of the area, the amount of precipitation, and the loss through evaporation (determined by temperature, winds, and other factors and varying with the season) and through absorption by the earth or by vegetation, absorption is greater when the soil or rock is permeable than when it is impermeable. A permeable layer over an impermeable layer may act as a natural reservoir, supplying the river or lake in very dry seasons. The catchment area is one of the primary considerations in the planning of a reservoir for water-supply purposes.

Cateau, Le (lə kätō'), town (1968 pop. 9,314), Nord dept., N. France, in French Flanders. It was formerly known as Le Cateau-Cambresis. It has textile, metallurgical, and ceramic industries. In a treaty signed there in 1559, the last English foothold on the continent was returned to France. Le Cateau was the scene of much fighting in World War I. A museum contains much of the work of Matisse, who was born there.

Cateau-Cambresis, Treaty of (kätō'-kaNbrāzē'), 1559, concluded at Le Cateau, France, by representatives of HENRY II of France, PHILIP II of Spain, and ELIZABETH I of England. It put an end to the 60-year conflict between France and Spain, begun with the ITALIAN WARS, in which HENRY VIII and later MARY I of England had intermittently sided against France. The terms were a triumph for Spain. France restored Savoy, except Saluzzo, to Duke EMMANUEL PHILIBERT, acknowledged Spanish hegemony over Italy, and consented to a rectification of its border with the Spanish Netherlands. CALAIS, however, was confirmed in French possession by England. Henry II's sister, Margaret, was given in marriage to Emmanuel Philibert of Savoy, Henry's daughter, Elizabeth of Valois, was given to Philip II of Spain.

catechism (kāt'akizām) [Gr., = oral instruction], originally oral instruction in religion, later written instruction. Catechisms are usually written in the form of questions and answers. Almost as old as Christianity, they were used especially for the instruction of converts and children. Catechisms were popular in the later Middle Ages and assumed even greater significance in the Reformation through Martin Luther's emphasis on the religious education of children. His *Small Catechism* (1529) is still the standard book of the Lutheran church. The greatest Calvinist catechism was the *Heidelberg Catechism* (1563). It was revised at Dort (1619) and was used in Dutch and German Reformed churches, other cate-

chisms are the Longer and Shorter Catechisms of 1647 and 1648, drawn up to supplement the Westminster Confession, they are used in the Presbyterian churches. The catechism for the Anglican Communion is included in the Book of Common Prayer. A catechism long in use in the Roman Catholic Church was that prepared by the Jesuit Peter Canisius, which appeared in 1555. The catechism of the Council of Trent, a document of high authority issued in 1566, is not really a catechism but a manual of instruction for use by the clergy. The best-known Catholic catechism in England is the Penny Catechism, adopted by the bishops of England and Wales, that in the United States is the Baltimore Catechism.

catecholamine (kāt'akōl'amēn), any of several compounds occurring naturally in the body that help regulate the sympathetic nervous system. The catecholamines include such compounds as EPINEPHRINE, or adrenaline, isoproterenol, norepinephrine, and dopamine. They resemble one another chemically in having an aromatic portion (catechol) to which is attached an amine, or nitrogen-containing group. Epinephrine and norepinephrine are secreted by the adrenal medulla and norepinephrine is also secreted by some nerve fibers. These substances prepare the body to meet emergencies such as cold, fatigue, and shock, and norepinephrine is probably a chemical transmitter at nerve synapses. Dopamine is an intermediate in the synthesis of epinephrine, in addition, a deficiency of dopamine in the brain is responsible for the symptoms of the condition PARKINSONISM. Medical administration of the drug L-DOPA, which is presumed to be converted to dopamine in the brain, relieves the symptoms. Epinephrine and isoproterenol are both used medically to stimulate heartbeat and to treat emphysema, bronchitis, and bronchial asthma and other allergic conditions. Epinephrine is also used in the treatment of the eye disease glaucoma.

catechu (kāt'achōō) or **cutch**, extract from the heartwood of *Acacia catechu*, a leguminous tree of the PULSACE family, native to India and Burma. Catechu is a fast brown dye used for various shades of brown and olive, including the familiar khaki, and also in tanning. White cutch is a synonym for gambier, a leaf extract of a shrub (*Uncaria gambir*) of the madder family, which is similarly used.

categorical imperative: see KANT, IMMANUEL

category, philosophical term that literally means predication or assertion. It was first used by Aristotle, whose 10 categories formed a list of all the ways in which assertions can be made of a subject. Immanuel Kant's 12 categories constitute an exhaustive list of the a priori forms through which a person knows the phenomenal world. The term has also been used in many other senses by various philosophers.

category, in taxonomy: see CLASSIFICATION

Catena, Vincenzo di Biagio (vēnchēn'tsō dē byā'jō kātā'nā), c. 1470–1531, Venetian painter. His early work, reflecting the influence of Giovanni Bellini, includes the two paintings of *Madonna and Child with Saints* in the Walters Art Gallery, Baltimore, and the Academy, Venice. In his later period Catena followed closely the style of Giorgione. The best works of this period are *The Doge Loredan Kneeling before the Madonna* (Correr Mus., Venice), *The Martyrdom of St. Christina* (Church of Santa Maria Mater Domini, Venice), and *Christ Giving the Keys to St. Peter* (Gardner Mus., Boston). See monograph by Giles Robertson (1954).

Caterham and Warlingham (kā'taram, wōrl'ing-am), urban district (1971 pop. 35,781), Surrey, SE England. A residential suburb of London, it has engineering, chemical, perfume, and printing industries.

caterpillar, common name for the LARVA of a MOTH or BUTTERFLY. Caterpillars have distinct heads and are segmented and wormlike. They have three pairs of short, jointed legs (retained in the adult) on the thorax, in addition, they have unjointed, fleshy appendages, called prolegs, on some abdominal segments. The prolegs end in clusters of tiny hooks. There is a row of simple eyes on either side of the body. Sawfly larvae are often mistaken for caterpillars, but their prolegs have no hooks and they have a single simple eye on each side. Almost all caterpillars are vegetarian and have strong jaws for chewing. The chewing mouth parts and the prolegs disappear during the PUPA stage, as the larva is transformed into an adult. Caterpillars have silk glands that open into a mouth part called the spinneret. The caterpillar exudes a silk strand continuously as it moves along, small caterpillars swing by the strand when dropping from a height. Many caterpillars use the thread

to build a cocoon in which to pupate. Most molt their skin (to accommodate growth) five or six times before pupation. Some caterpillars have smooth skin, others are hairy, such as the woolly bear, or hedgehog, caterpillar of the Isabella tiger moth. The caterpillars of the larger night-flying moths (e.g., the luna moth and polyphemus moth) are smooth and green and may be over 3 in (7.5 cm) long. Caterpillars are equipped with various protective devices. The io moth caterpillar has sharp spines connected with glands that secrete an irritating substance. Others have irritating bristles, and the SWALLOWTAIL BUTTERFLY larva emits a repellent odor when disturbed. Nevertheless, caterpillars form the major part of the diet of many birds and other animals. Caterpillars are voracious eaters and some cause considerable economic damage. Among these are the appleworm, the CUTWORM, and the larvae of the BEE MOTH, the CODLING MOTH, and the CLOTHES MOTH. Some moths and butterflies remain caterpillars for two or three months, others for about 10 months, hibernating through the winter in this stage. In the arctic regions are some forms that require two or three years to develop from egg to adult.

catfish, common name applied to members of the freshwater fish families constituting the suborder Nematognathi. The catfish is related to the SUCKER and the MINNOW and like them has a complex set of bones forming a sensitive hearing apparatus. Catfish are omnivorous feeders and are valuable scavengers. They are named for the barbels ("whiskers") around their mouths and have scaleless skins, fleshy, rayless posterior fins, and sharp defensive spines in the shoulder and dorsal fins. They are able to use the SWIM BLADDER to produce sounds. Some species, such as the stone and tadpole catfishes and the madtom, can inflict stings by means of poison glands in the pectoral spines. Catfish are usually dull-colored, though the madtoms of E North American streams are brightly patterned. Members of most madtom species are no more than 5 in (12.7 cm) long, some are less than 2 in (5 cm) long. Danube catfish called wels, or sheatfish, reach a length of 13 ft (4 m) and a weight of 400 lb (180 kg). The South American catfishes show great diversity. There are small, delicate species armored with bony plates, parasitic types that live in the gills of other fish, and one catfish of the E Andes in which the pelvic fins are modified into suckers that enable it to cling to rocks. African species include the ELECTRIC FISH and the Nile catfish, which swims upside down to feed at the water's surface and has a white back and a dark belly, the reverse of the normal coloration. Of the 30 American species the largest and most important is the blue, or Mississippi, catfish, an excellent food fish weighing up to 150 lb (70 kg). Best known is the smaller channel catfish, which reaches 20 lb (9 kg) and has a deeply forked tail and slender body. The stonecat, 10 in (25.4 cm) long, is found in clear water under logs and stones. The bullheads, or horned pouts, are catfish of muddy ponds and streams, feeding on bottom plants and animals. Bullheads have square or slightly rounded tails and may reach 1 ft (30 cm) in length and 2 lb (0.9 kg) in weight. The black, yellow, and brown bullhead species are common in the waters of the central and eastern states. There are no catfish in the Pacific except the introduced white catfish. Marine catfish found during the summer in bays and harbors of the Atlantic and Gulf states include the 2-ft (61-cm) gaff-top-sail catfish, named for its long, ribbonlike pectoral and dorsal fins, and the smaller sea catfish, a very common trash fish. The males of both these species carry the fertilized eggs in their mouths (and therefore do not eat) until well after the young hatch, a period of two months. In certain other species the eggs are embedded in the underside of the female. Some tropical catfish survive dry seasons by burrowing into the mud or by crawling overland in search of water. Catfishes are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Cypriniformes, suborder Nematognathi.

catgut or **gut**, cord made from the intestines of various animals (especially sheep and horses, but not cats). The membrane is chemically treated, and slender strands are woven together into cords of great strength, which are used for stringing musical instruments such as the violin and the harp. Roman strings, imported from Italy, are considered the best for musical instruments. Catgut is also used for stringing tennis rackets and for some surgical sutures.

Cathari (kăth'arī) [Gr., = pure], name for members of the widespread dualistic religious movement of the Middle Ages. Carried from the Balkans to Western

Europe, Catharism flourished in the 11th and 12th cent as far north as England. It was known by various names and in various forms (see BOGOMILS, ALBIGENSES). Catharism was descended from GNOSTICISM and MANICHAEISM and echoed many of the ideas of MARCION. The Cathari tended to reject not only the outward symbols of the Christian church, such as the sacraments and the hierarchy, but also the basic relationship between God and man as taught by Christianity. Instead, the Cathari believed in a dualistic universe, in which the God of the New Testament, who reigned over spiritual things, was in conflict with the evil god (or Satan), who ruled over matter. Asceticism, absolute surrender of the flesh to the spirit, was to be cultivated as the means to perfection. There were two classes of the Cathari, the believers and the Perfect. The believers passed to the ranks of the Perfect on acceptance of the *consolamentum*, a sort of sacrament that was a laying on of hands. The Catharist concept of Jesus resembled modalistic MONARCHIANISM in the West and ADOPTIONISM in the East. Persecution, such as that by the INQUISITION, and the efforts of popes like Innocent III wiped out Catharism by the 15th cent. See E. Holmes, *The Albigensian or Catharist Heresy* (1925), Jacques Madaule, *The Albigensian Crusade* (tr 1967), J. R. Strayer, *The Albigensian Crusades* (1971).

cathartic (kăth'ar'tīk) see LAXATIVE

Cathay (kăth'ā), medieval name for China, derived from the Khitai, a seminomadic people of S Manchuria whose rule under the Liao dynasty (937-1125) extended to N China. It was popularized by Marco Polo (c 1254-c 1324) and usually applied only to China N of the Yangtze River. S China was sometimes called Mangi.

cathedral, church in which a bishop presides. The designation is not dependent on the size or magnificence of a church edifice, but is entirely a matter of its assignment as the church in which the bishop shall officiate. Romanesque cathedrals (see ROMANESQUE ARCHITECTURE AND ART) were massive, block-like, domed and heavily vaulted structures based on the traditional BASILICA form, reflecting the style dominant in Europe from c 1050 to c 1200. The tall, wide nave arcade or colonnade, flanked by shallower, shorter aisles, ran from decorative exterior portals to a large ambulatory and an apse with radiating chapels. The nave was crossed by a TRANSEPT and illuminated by a CLERESTORY pierced by small windows so as not to diminish the strength of the supporting walls. The Romanesque cathedral is a strong visual whole with interrelated parts that emphasize its basic structural clarity. The great cathedrals of the 13th and 14th cent are the culminating expression of GOTHIC ARCHITECTURE. These buildings are distinctive in their consistent use of ribbed VAULTS, pointed ARCHES, ROSE WINDOWS, BUTTRESSES, geometric TRACERY, and variegated STAINED GLASS. All of these elements were combined into a design of

Floor plan of a cathedral

infinite complexity and richness. Gothic interior structure, also based on basilica form, included a long central arcade or colonnaded nave with flanking aisles, a transept, a choir, ambulatory, and apse with radiating chapels. Stained glass was used to create a light, lacy effect of spiderweb airiness, made possible by buttressing the comparatively thin walls. The exterior facade was ornamented with great portals covered with sculpture and surmounted by double towers. Further towers often rose above transepts and crossing, and the rear portion of the entire edifice was engulfed in a profusion of buttresses and pinnacles. The building's structure is entirely subordinated visually to the intricacy of its details. Among the most important medieval cathedrals are the following: *France*—Amiens, Beauvais, Bourges, Chartres, Le Mans, Notre-Dame de Paris, Rouen, Rheims, Strasbourg, *England*—Canterbury, Durham, Ely, Lincoln, Peterborough, Salisbury, Wells, Westminster Abbey, Winchester, York, *West Germany*—Bonn, Cologne, Mainz, Speyer, Ulm, Worms, *Belgium*—Antwerp, Brussels, Louvain, Ypres, *Italy*—Como, Florence, Milan, Monreale, Orvieto, Pisa, Siena, *Spain*—Ávila, Burgos, Barcelona, Salamanca, Seville, Toledo, *Sweden*—Lund, Uppsala. Among major cathedrals built in modern times and adhering to medieval styles of architecture are St. Patrick's Cathedral and the Cathedral of St. John the Divine (Episcopal) in New York City and the cathedrals of Washington, D.C., and Liverpool, England. See Auguste Rodin, *Cathedrals of France* (1960), G. H. Cook, *The English Cathedral through the Centuries* (1965), Wim Swaan, *The Gothic Cathedral* (1970).

Cather, Willa Sibert, 1876-1947, American novelist and short-story writer, b. Winchester, Va., considered one of the great American writers of the 20th cent. When she was nine her family moved to the Nebraska prairie frontier. She graduated from the Univ. of Nebraska in 1895 and worked as a journalist and as a teacher in Pittsburgh. In 1904 she went to New York City. The publication of *The Troll Garden* (1905), her first collection of short stories, led to her appointment to the editorial staff of *McClure's Magazine*. She eventually became managing editor and saved the magazine from financial disaster. After the publication of *Alexander's Bridge* in 1912, she left *McClure's* and devoted herself to creative writing. For many years she lived quietly in New York City's Greenwich Village. The first of her novels to deal with her major theme is *O Pioneers!* (1913), a celebration of the strength and courage of the frontier settlers. Other novels with this theme are *My Ántonia* (1918), *One of Ours* (1922, Pulitzer Prize), and *A Lost Lady* (1923). *The Song of the Lark* (1915) focuses on another of Cather's major preoccupations—the need of the artist to free himself from inhibiting influences, particularly that of a rural or small-town background, the tales collected in *Youth and the Night Medusa* (1920) and the novel *Lucy Gayheart* (1935) also treat this theme. With success and increasing age Cather became convinced that the beliefs and way of life she valued were disappearing. This disillusionment is poignantly evident in her novel *The Professor's House* (1925). She subsequently turned to North America's far past for her material to colonial New Mexico in *Death Comes for the Archbishop* (1927), widely regarded as her masterpiece, and to 17th-century Quebec for *Shadows on the Rock* (1931), in both novels blending history with religious reverence and loving characterizations. The volumes *My Mortal Enemy* (1926) and *The Old Beauty and Others* (1948) present her highly skilled shorter fiction. Her intense interest in the craft of fiction is shown in the essays in *Not Under Forty* (1936) and *On Writing* (1949). Cather herself was a master of that craft, her novels and stories written in a pellucid style of great charm and stateliness. See biographies by E. K. Brown (completed by Leon Edel, 1953) and J. L. Woodress (1970), studies by D. Daiches (1951), E. A. Bloom and L. D. Bloom (1962), and J. M. Schroeter (1967).

Catherine, Saint, 4th cent?, Alexandrian virgin martyr. Nothing certain is known of her life, and in 1969 her name was dropped from the liturgical calendar. According to tradition she was learned. She was condemned to die on the wheel and was saved by a miracle, but was later beheaded. Her principal shrine is the great monastery of Mt. Sinai. Attributes: sword, crown, palm, wheel, and book. The marriage of St. Catherine to Christ, a popular Renaissance subject, represents symbolically the dedication of her virginity. Feast Nov. 25.

Catherine I, 1683?-1727, czarina of Russia (1725-27). Of Livonian peasant origin, Martha Skavronskaya was a domestic when she was captured (1702) by

Russian soldiers As mistress of Aleksandr D. MENSHIKOV she met Czar Peter I (Peter the Great), who made her his mistress After her conversion from the Lutheran to the Orthodox Church (when she changed her name from Martha to Catherine), Peter, who had divorced his first wife, married her (1712) In 1724 he had her crowned czarina and joint ruler Her loyalty and devotion to her difficult husband were remarkable When Peter died without naming a successor, Menshikov and the imperial guards raised Catherine to the throne Her policy was dominated by Menshikov Peter II succeeded her, her daughter Elizabeth became czarina in 1741

Catherine II or Catherine the Great, 1729-96, czarina of Russia (1762-96) A German princess, she was the daughter of Christian Augustus, prince of Anhalt-Zerbst She emerged from the obscurity of her relatively modest background when, in 1744, Czarina Elizabeth of Russia, partly on the recommendation of Frederick II of Prussia, chose her as the wife of the future Czar PETER III Accepting the Orthodox faith, she changed her original name, Sophie, to Catherine Her successful effort to become completely Russian made her popular with important political elements who opposed her eccentric husband Neglected by the czarevich, Catherine read widely, especially Voltaire and Montesquieu, and informed herself of Russian conditions In Jan, 1762, Peter succeeded to the throne, but he immediately alienated powerful groups with his program and personality In June, 1762, a group of conspirators headed by Grigori ORLOV, Catherine's lover, proclaimed Catherine autocrat, and shortly afterward Peter was murdered Catherine began her rule with great projects of reform She drew up a document based largely on the writings of BECCARIA and Montesquieu to serve as a guide for an enlightened code of laws She summoned a legislative commission (with representatives of all classes except the serfs) to put this guide into law, but she disbanded the commission before it could complete the code Some have questioned the sincerity of Catherine's "enlightened" outlook, and there is no doubt that she became more conservative as a result of the peasant rising (1773-74) under PUGACHEV As a result, the nobility's administrative power was strengthened when Catherine reorganized (1775) the provincial administration to increase the central government's control over rural areas This reform established a system of provinces, subdivided into districts, which endured until 1917 In 1785, Catherine issued a charter that made the gentry of each district and province a legal body with the right to petition the throne, freed nobles from taxation and state service, made their status hereditary, and gave them absolute control over their lands and peasants Another charter, issued to the towns, proved of little value to them Catherine extended serfdom to parts of the Ukraine and transferred large tracts of state lands to favored noblemen The serfs' remaining rights were strictly curtailed She also encouraged colonization of ALASKA and of areas gained by conquest She increased Russian control over the Baltic provinces and the Ukraine Catherine attempted to increase Russia's power at the expense of its weaker neighbors, Poland and Turkey In 1764 she established a virtual protectorate over Poland by placing her former lover Stanislaus Poniatowski on the Polish throne as STANISLAUS II Catherine eventually secured the largest portion in successive partitions of Poland among Russia, Prussia, and Austria (see POLAND, PARTITIONS OF) Catherine's first war with Turkey (1768-74, see RUSSO-TURKISH WARS) ended with the Treaty of Kuchuk Kainarji, which made Russia the dominant power in the Middle East Catherine and her advisers, particularly POTEKIN, developed a program known as the Greek project, which aimed at a partition of Turkey's European holdings among Russia, Austria, and other countries However, her attempts to break up the Ottoman Empire met with only partial success In 1783 she annexed the Crimea, which had gained independence from Turkey by the Treaty of Kuchuk Kainarji Her triumphal tour of 5 Russia, accompanied by Potemkin, provoked the Turks to renew warfare (1787-92) The Treaty of Jassy (1792) confirmed the annexation of the Crimea and cemented Russia's hold on the northern coast of the Black Sea Catherine also extended Russian influence in European affairs In 1778 she acted as mediator between Prussia and Austria in the War of the Bavarian Succession, and in 1780 she organized a league to defend neutral shipping against Great Britain, which was then engaged in the war of the American Revolution Catherine increased the power and prestige of Russia by skillful diplomacy and by extending Russia's western boundary into

the heart of central Europe An enthusiastic patron of literature, art, and education, Catherine wrote memoirs, comedies, and stories, and corresponded with the French Encyclopedists, including Voltaire, Diderot, and d'Alembert (who were largely responsible for her glorious contemporary reputation) She encouraged some criticism and discussion of social and political problems until the French Revolution made her an outspoken conservative and turned her against all who dared criticize her regime Although she had many lovers, only Orlov, Potemkin, and P. I. Zubov (1767-1822) were influential in government affairs She was succeeded by her son Paul I See biographies by Kazimierz Waliszewski (tr 1894, repr 1968), Katharine Anthony (1925), Zoe Oldenbourg (1965), and L. J. Oliva (1971), G. S. Thomson, *Catherine the Great and the Expansion of Russia* (1947, repr 1962), M. E. von Almedingen, *Catherine, Empress of Russia* (1961), Marc Raef, ed., *Catherine the Great: A Profile* (1972)

Catherine de' Medici (dē mēd'ichē, Ital dā mē'-dēchē), 1519-89, queen of France, daughter of Lorenzo de' Medici, duke of Urbino She was married (1533) to the duc d'Orleans, later King Henry II Neglected during the reign of her husband and that of her eldest son, Francis II, she became (1560) regent for her son CHARLES IX, who succeeded Francis She remained Charles's adviser until his death (1574) Concerned primarily with preserving the power of the king in the religious conflicts of the time, with the aid of her chancellor Michel de L'HÔPITAL, she at first adopted a conciliatory policy toward the Huguenots, or French Protestants The outbreak (1562) of the Wars of Religion (see RELIGION, WARS OF), however, led her to an alliance with the Catholic party under François de GUISE After the defeat of royal troops by the Huguenot leader Gaspard de COLIGNY, Catherine agreed (1570) to the peace of St Germain Subsequently Coligny gained considerable influence over Charles IX Fearing for her own power, and opposed to Coligny's schemes for expansion in the Low Countries, which might lead to war with Spain, Catherine and Henri de Guise arranged Coligny's assassination When the first attempt failed, she took part in planning the massacre of SAINT BARTHOLOMEW'S DAY (1572) in which Coligny and hundreds of other Protestants were murdered After the accession of her third son, Henry III, she vainly tried to revive her old conciliatory policy See Edith Sichel, *Catherine de' Medici and the French Reformation* (1905, repr 1969) and *The Later Years of Catherine de' Medici* (1903, repr 1969), Paul Van Dyke, *Catherine de' Medici* (1922), Ralph Roeder, *Catherine de' Medici and the Lost Revolution* (1937), Sir J. E. Neale, *The Age of Catherine de' Medici* (1962), W. H. Ross, *Catherine de' Medici* (1973)

Catherine Howard, queen of England see HOWARD, CATHERINE

Catherine of Aragón: see KATHARINE OF ARAGÓN

Catherine of Braganza (brəgān'zə), 1638-1705, queen consort of Charles II of England, daughter of John IV of Portugal She was married to Charles in 1662 As part of her dowry England secured Bombay and Tangier Unpopular in England for her Roman Catholic faith, she also had to suffer the humiliation of her husband's infidelities and the disappointment of her own childlessness In 1678 she was accused by Titus OATES of a plot to poison the king but was protected from the charge by Charles himself After William III's accession she returned to Portugal, where she supported the commercial Treaty of Methuen (1703) with England, and in 1704 she acted as regent for her brother, Peter II

Catherine of Siena, Saint (sēēn'ə), 1347-80, Italian mystic and diplomat, a member of the third order of the Dominicans, Doctor of the Church The daughter of Giacomo Benincasa, a Siennese dyer, Catherine from early childhood had mystic visions and practiced austerities, she also showed the devotion to others and the winning manner that characterized her life From the age of about 19, Catherine devoted herself to the poor and the sick, not sparing her own frail health In 1370, in response to a vision, she began to take part in the public life of her time, sending letters to the great of the day She went to Avignon and exerted decisive influence in inducing Pope GREGORY XI to end the "Babylonian captivity" of the papacy and return to Rome in 1376 As papal ambassador to Florence, she helped bring about peace between Florence and the Holy See In the Great Schism, she adhered to the Roman claimant and helped to advance his cause In 1375 she is supposed to have received the five wounds of the stigmata, visible only to herself until after her death She was the center of a spiritual revival almost ev-

erywhere she went A formidable family of devoted followers gathered around her Her mysticism contains overwhelming love for humanity as well as love for God Though she never learned to write, she dictated hundreds of letters and a notable mystic work, commonly called in English *The Dialogue of Saint Catherine of Siena* or *A Treatise on Divine Providence* (or both as title and subtitle), which has been much used in devotional literature She was one of the major religious figures of the Middle Ages Feast April 30 The accounts of her life collected by her followers were used in a biography by her confessor, Fra Raimondo da Capua (1398) See *Saint Catherine as Seen in Her Letters* (ed by V. D. Scudder, 1905), biographies by Alice Curtayne (1929), Sigrid Undset (tr 1954), and J. M. Perrin (tr 1965), F. P. Keyes, *Three Ways of Love* (1963)

Catherine of Valois (vāl'wa, Fr vālwa'), 1401-37, queen consort of Henry V of England, daughter of Charles VI of France Married in 1420, she bore Henry the son who was to become Henry VI Some years after Henry V's death (1522), Catherine married the Welshman Owen TUDOR, from whom the Tudor kings of England were descended

Catherine Parr, queen of England see PARR, CATHERINE

Catherine Tekakwitha (tēk'akwīth'ə), 1656-80, American Indian holy woman, b. Auriesville, NY Her name is sometimes given as Kateri Tekakouita She was the daughter of a Mohawk chief and was baptized a Roman Catholic at the age of seven by a Jesuit missionary Her tribesmen jeered and stoned her for her adopted faith, and she eventually went to a missionary settlement in Canada Piety led her to the severest asceticism The movement for her beatification began in the 1930s See biography by M. C. Buehrle (1954)

Catherine the Great: see CATHERINE II

cathode, ELECTRODE through which current leaves an electric device In ELECTROLYSIS, it is the negative electrode in the electrolytic cell

cathode-ray tube, special-purpose electron tube in which electrons are accelerated by high-voltage anodes, formed into a beam by focusing electrodes, and projected toward a phosphorescent screen that forms one face of the tube The beam of electrons leaves a bright spot wherever it strikes the phosphor

Cathode-ray tube

screen To form a display, or image, on the screen, the electron beam is deflected in the vertical and horizontal directions either by the electrostatic effect of electrodes within the tube or by magnetic fields produced by coils located around the neck of the tube Some cathode-ray tubes can produce multiple beams of electrons and have phosphor screens that are capable of displaying more than one color Principally, these are made for color television receivers, but some are made for special-purpose OSCILLOSCOPES Cathode-ray tubes are also used in radar and sonar displays

Catholic Apostolic Church, religious community originating in England c 1831 and extending later to Germany and the United States (1848) It was founded under the influence of Edward IRVING, its members are sometimes called Irvingites Because of their prophetic gifts, 12 apostles (including Henry DRUMMOND) were in 1835 set aside as officers They were expected to survive until the Second Coming of Christ, but the last of them died in 1901 When the apostles began to die, a schism took place in Germany over the appointing of successors This led to the formation (1863) of the New Apostolic Church, the formal name of the present-day sect An angel, or bishop, presides over each congregation, he is assisted by pastors, teachers, and others Symbolism and mystery of worship characterize the elaborate liturgy, which has borrowed much from the Roman Catholic Church, including devotion to the Blessed Virgin Mary Much emphasis is given to the Second Coming of Christ The membership is about 50,000, half of which is in Germany See P. E. Shaw, *The Catholic Apostolic Church* (1946), R. A. Davenport, *Albany Apostles* (1970)

Catholic Church [Gr. = universal], the body of Christians, living and dead, considered as an organization. It is common for Christian groups to identify their particular churches (exclusively or not) as the Catholic Church. The word *catholic* was first used c.110 to describe the Church by St. Ignatius of Antioch. In speaking of the time before the Reformation, Catholic is technically used to mean orthodox (i.e., those accepting the decrees of Leo I and the Council of Chalcedon). Today in English it usually means the Roman Catholic Church. Protestants use the words in their original sense to designate the Christian Church taken as a whole.

Catholic Emancipation, term applied to the process by which Roman Catholics in the British Isles were relieved in the late 18th and early 19th cent. of civil disabilities. They had been under oppressive regulations placed by various statutes dating as far back as the time of Henry VIII (see PENAL LAWS). This process of removing the disabilities culminated in the Catholic Emancipation Act of 1829 (and some subsequent provisions), but it had begun a number of years before. Priest hunting, in general, ended by the mid-18th cent. In 1778, English Catholics were relieved of the restrictions on land inheritance and purchase. A savage reaction to these concessions produced the Gordon Riots (see GORDON, LORD GEORGE) of 1780, and the whole history of Catholic Emancipation is one of struggle against great resistance. In 1791 the Roman Catholic Relief Act repealed most of the disabilities in Great Britain, provided Catholics took an oath of loyalty, and in 1793 the army, the navy, the universities, and the judiciary were opened to Catholics, although seats in Parliament and some offices were still denied. These reforms were sponsored by William PITT the Younger, who hoped thereby to split the alliance of Irish Catholics and Protestants. But Pitt's attempt to secure a general repeal of the Penal Laws was thwarted by George III. Pope Pius VII consented to a royal veto on episcopal nominations if the Penal Laws were repealed, but the move failed. In Ireland the repeal (1782) of Poyning's Law (see under POYNINGS, SIR EDWARD) was followed by an act (1792) of the Irish Parliament relaxing the marriage and education laws and an act (1793) allowing Catholics to vote and hold most offices. By the Act of Union (1800) the Irish Parliament ceased to exist, and Ireland was given representation in the British Parliament. Then, since the Irish were a minority group in the British legislature, many English ministers began to advocate Catholic Emancipation, influenced also by the decline of the papacy as a factor in secular politics. Irish agitation, headed by Daniel O'CONNELL and his Catholic Association, was successful in securing the admission of Catholics to Parliament. In 1828 the TEST ACT was repealed, and O'Connell, although still ineligible to sit, secured his election to Parliament from Co. Clare. Alarmed by the growing tension in Ireland, the duke of WELLINGTON, the prime minister, allowed the Catholic Emancipation Bill, sponsored by Sir Robert PEEL, to pass (1829). Catholics were now on the same footing as Protestants except for a few restrictions, most of which were later removed. The Act of SETTLEMENT is still in force, however, and Catholics are excluded from the throne and from the office of lord chancellor. See studies by Bernard Ward (1911), Denis Gwynn (1929), J. A. Reynolds (1954, repr. 1970), and G. I. T. Machin (1964), S. L. Gwynn, Henry Grattan and His Times (1939, repr. 1971).

Catholic League, in French history, see LEAGUE.

Catholic University of America, at Washington, D.C., Roman Catholic, coeducational, the only university belonging to the U.S. hierarchy of the Roman Catholic Church, founded 1867 and opened 1889. It includes a college of arts and sciences as well as schools of canon law, sacred theology, and social science. The university has access to the facilities of the national laboratories at Oak Ridge, Tenn., and participates in a cooperative program with the Armed Forces Radiobiology Research Institute at Bethesda, Md.

Catiline (Lucius Sergius Catilina) (kāt'īlīn), c.108 B.C.–62 B.C., Roman politician and conspirator. At first a conservative and a partisan of Sulla, he was praetor in 68 B.C. and governor of Africa in 67 B.C. The next year he was barred from candidacy for the consulship by accusations of misconduct in office, charges that later proved false. Feeling with some justification that he had been cheated, he concocted a wild plot to murder the consuls. He and the other conspirators were acquitted (65 B.C.). Catiline became more bitter than ever against the conservatives and began to advocate popular demagogic proposals. When in 63 B.C. he ran again for

consul, he found CICEPO, the incumbent, and the conservative party anxious to stop his election at any cost. Catiline was defeated, prompting him to try for the consulship by force. He sent money for the troops in Etruria and spread lavish promises in Rome. Cicero became alarmed and on Nov. 8, with facts gained from Catiline's mistress, accused him in the senate (*First Oration against Catiline*). Catiline fled to Etruria. The conspirators remaining in the city did not cease activities but even approached some ambassadors of the Allobroges. The ambassadors reported the whole plot to Cicero, who arrested the conspirators and arraigned them in the senate on Dec. 3. On Dec. 5 they were condemned to death and executed, in spite of a most eloquent appeal from Julius CAESAR to use moderation. Cicero's haste and summary behavior were technically illegal, and it was on a charge (by CLODIUS) of executing these Roman citizens without due process of law that Cicero was exiled. Catiline did not surrender; he fell in battle at Pistoia a month later. The prime sources for Catiline's conspiracy are Cicero's four orations against him and Sallust's biography of him. Both of these are prejudiced and unreliable. Catiline's treason may be partly explained, although not condoned, by the ruthless and devious means used against him. The affair did little credit to any concerned, except for the honest and patriotic CATO THE YOUNGER and possibly for Julius Caesar, who made a daring plea to a vindictive and ruthless majority on behalf of the conspirators whom he scorned. See study by Lester Hutchinson (1957).

Catinat, Nicolas (nēkōlā' kātēnā'), 1637–1712, marshal of France. The son of a magistrate, he won promotion by merit rather than by wealth or descent. In the War of the Grand Alliance he commanded against Duke Victor Amadeus II of Savoy, whom he defeated in N. Italy at Staffarda (1690) and at Marsaglia (1693). Early in the War of the Spanish Succession, he commanded the French army in Italy, against Prince Eugene of Savoy, but after suffering reverses he was replaced. He retired in 1705 and later wrote his memoirs.

cation (kāt'Tān), atom or group of atoms carrying a positive charge. The charge results because there are more protons than electrons in the cation. Cations can be formed from a metal by oxidation (see OXIDATION AND REDUCTION), from a neutral base (see ACIDS AND BASES) by protonation, or from a polar compound by ionization. Cationic species include Na⁺, Mg²⁺, and NH₄⁺. The cations of the TRANSITION ELEMENTS have characteristic colors in water solution. SALTS are made up of cations and ANIONS. See ION.

Cat Island, see SAN SALVADOR, island.

Catledge, Turner, 1901–, American newspaperman, b. Ackerman, Miss. He worked for several southern newspapers before being hired by the New York Times in 1929. He became a political reporter, eventually heading the Times's Washington News Bureau. He was made managing editor, and later executive editor, and in 1968 became vice president of the New York Times Company. He has been semiretired since 1970, remaining a member of the board of directors of the Times. See his autobiography, *My Life and Times* (1971).

Catlin, George, 1796–1872, American traveler and artist, b. Wilkes-Barre, Pa. Educated as a lawyer, he practiced in Philadelphia for two years but turned to art study and became a portrait painter in New York City. He went west c.1832 to study and paint the Indians, and after executing numerous portraits and tribal scenes he took his collection to Europe in 1839. In 1841 he published *Manners, Customs, and Condition of the North American Indians*, in two volumes, with about 300 engravings. Three years later he published 25 plates, entitled *Catlin's North American Indian Portfolio*, and, in 1848, *Eight Years' Travels and Residence in Europe*. From 1852 to 1857 he traveled through South and Central America and later returned for further exploration in the Far West. The record of these later years is contained in *Last Rambles amongst the Indians of the Rocky Mountains and the Andes* (1868) and *My Life among the Indians* (ed. by N. G. Humphreys, 1909). Of his 470 full-length portraits of Indians and tribal scenes, the greater part constitutes the Catlin Gallery of the National Museum, Washington, D.C., some 700 sketches are in the American Museum of Natural History, New York City. His observations of the Indians have been questioned as to accuracy. He was the first white man to see the Minnesota pipestone quarries, and pipestone is also called catlinite. See Harold McCracken, *George Catlin and the Old Frontier* (1959), Robert Plate, *Palette and Tomahawk: the Life of George Catlin* (1962); M. C. Roehmer, *The Catlin Family Papers* (1966).

catnip or **catmint**, strong-scented perennial herb (*Nepeta cataria*) of the family Labiatae (mint family), native to Europe and Asia but naturalized in the United States. A tea of the leaves and flowering tops has long been used as a domestic remedy for various ailments. Catnip is best known for its stimulating effect on cats. Catnip is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Lamiales, family Labiatae.

Catoche, Cape (kātō'chā), extremity of Yucatán peninsula, SE Mexico. It was the first Mexican land seen by the Spanish (1517).

Catoctin Mountain Park: see NATIONAL PARKS AND MONUMENTS (table).

Catonsville (kāt'ānzvīl), uninc. city (1970 pop. 54,812), Baltimore co., N. Md., a suburb of Baltimore. A state hospital and park are nearby.

Cato Street Conspiracy: see THISTLEWOOD, RUTHUR.

Cato the Elder (kātō) or **Cato the Censor**, Lat. *Cato Major* or *Cato Censorius*, 234–149 B.C., Roman statesman and moralist, whose full name was Marcus Porcius Cato. He fought in the Second Punic War and later served as quaestor (204), aedile (199), praetor (198), consul (195), and censor (184). He was renowned for his devotion to the old Roman ideals—simplicity of life, honesty, and unflinching courage. He inveighed against extravagance and new customs, but his policy was not aimed at repression but rather at reform and the rebuilding of Roman life. He sought to restrict seats in the senate to the worthy and undertook much building, including the repair of the city sewers. He was sent on an official visit to Carthage in his old age. Upon his return he expressed stem disapproval of Carthaginian ways and told the senate to destroy Carthage. He thus helped to bring on the Third Punic War, in which Carthage was destroyed. Probably his detestation of luxury and cultivated ways inspired the deep hatred that he had for the Scipio family. He himself deliberately affected a rustic appearance and rustic manners. However, he complacently accepted class division and treated his servants harshly. He wrote many works, most of which are now lost. Probably the most influential was his history of early Rome. His *De agri cultura* or *De re rustica*, translated as *On Farming*, is a practical treatise that offers valuable information on agricultural methods and country life in his day.

Cato the Younger or **Cato of Utica**, 95 B.C.–46 B.C., Roman statesman, whose full name was Marcus Porcius Cato, great-grandson of Cato the Elder. Reared by his uncle Marcus Livius Drusus, he showed an intense devotion to the principles of the early republic. He had one of the greatest reputations for honesty and incorruptibility of any man in ancient times, and his Stoicism put him above the graft and bribery of his day. His politics were extremely conservative, and his refusal to compromise made him unpopular with certain of his colleagues. He was from the first a violent opponent of Julius CAESAR and, outdoing CICERO in vituperation of the conspiracy of CATILINE in 63 B.C., tried to implicate Caesar in that plot, although maintaining his fairness to all. As a result he was sent (59 B.C.) to Cyprus by CLODIUS in what amounted to exile. He and his party supported POMPEY after the break with Caesar. He accompanied Pompey across the Adriatic and held Dyrrhachium (modern Durazzo) for him until after the defeat at Pharsala. Then he and Quintus Caecilius Metellus Pius Scipio (see SCIPIO family) went to Africa and continued the struggle against Caesar there. Cato was in command at Utica. After Caesar crushed (46 B.C.) Scipio at THAPSUS, Cato committed suicide, bidding his people make their peace with Caesar. Cicero and Marcus Junius BRUTUS (Cato's son-in-law) wrote eulogies of him while Caesar wrote his *Anticato* against him, the noble tragedy of his death has been the subject of many dramas. He became the symbol of probity in public life. See biography by J. M. Conant (1953).

cat's-eye, gemstone that displays a thin band of reflected light on its surface when cut as a cabochon. Its name is derived from its supposed resemblance to the eye of a cat. The optical effect, known as chatoyancy, is caused by the reflection of light from very thin, closely spaced filaments in parallel arrangement within the stone. True cat's-eye, a variety of CHRYSOBERYL from Ceylon (now Sri Lanka) and Brazil, is the most valuable, but some quartz, tourmaline, and a few other minerals that display chatoyancy are also used as gems. A golden-yellow species called tiger's-eye is a type of naturally altered crocidolite asbestos.

Catskill (kāt'skīl), village (1970 pop. 5,317), seat of Greene co., SE N.Y., on the Hudson River; settled

17th cent by Dutch, inc 1806 Connected with the manufacturing town of Hudson, NY, by the Rip Van Winkle Bridge (completed 1935), it is a gateway to resorts in the Catskill Mts The Catskill Game Farm is nearby Thomas Cole lived and painted in the village

Catskill Aqueduct: see ASHOKAN RESERVOIR, NY

Catskill Mountains, dissected plateau of the Appalachian Mt system, SE NY, just W of the Hudson River, to which it descends abruptly in places This glaciated region, which is well wooded and rolling, with deep gorges and many beautiful waterfalls, is drained by the headstreams of the Delaware River and by Esopus, Schoharie, Rondout, and Catskill creeks Most of the summits are c 3,000 ft (910 m) above sea level, Slide Mt (4,180 ft/1,274 m) and Hunter Mt (4,040 ft/1,231 m) are the highest Close to New York City, the area is a popular summer and winter resort Ashokan Reservoir is a source of the New York metropolitan area's water supply Catskill Forest Preserve embraces some of the most impressive scenery of the Catskills, including the region of the Rip Van Winkle legend See Alf Evers, *The Catskills*, (1972)

Catt, Carrie Chapman, 1859-1947, American suffragist and peace advocate, b Carrie Lane, Ripon, Wis, grad Iowa State College, 1880 She was superintendent of schools (1883-84) in Mason City, Iowa In 1885 she married Lee Chapman, a journalist (d 1886), and in 1890, George Catt, an engineer (d 1905) From 1890 to 1900 an organizer for the National American Woman Suffrage Association, she became its president in 1900 She led the campaign to win suffrage through a Federal amendment to the Constitution After the ratification of the Nineteenth Amendment (1920), she organized the League of Women Voters for the education of women in politics At the Berlin convocation of the International Council of Women she helped organize the International Woman Suffrage Alliance, of which she was president from 1904 to 1923 After 1923 she devoted her efforts chiefly to the peace movement With Nettie R Shuler she wrote *Woman Suffrage and Politics* (1923) See biography by M G Peck (1944)

cattail or reed mace, any plant of the genus *Typha*, perennial herbs found in almost all open marshes The cattail (also called club rush) has long narrow leaves, sometimes used for weaving chair seats, and a single tall stem bearing two sets of tiny flowers, the male flowers above the female The pollinated female flowers form the familiar cylindrical spike of fuzzy brown fruits, the male flowers drop off and leave a naked stalk tip The starchy rootstock can be used for food Cattails are classified in the division MAGNOLIOPHYTES, class Liliatae, order Typhales, family Typhaceae

Cattaneo, Carlo (kat-tan-ē'ō), 1810-69, Italian nationalist and philosopher, b Milan He edited (1839-44) the journal *Il Politecnico*, and in 1848 he led the nationalist revolt in Milan against Austria, which he related in *L'insurrezione di Milano nel 1848* Forced into exile after the end of the first Italian war for independence, he eventually settled in Lugano, Switzerland, where he revived and edited (1860-63) *Il Politecnico* An empiricist and a social positivist, Cattaneo saw philosophy as having primarily a social role the philosopher's business is to deal with the problems of current history History was not conceived by Cattaneo as following from any first principles, its phenomena were plural and subject to change, so its problems were also continually different What is consistently true about the problems of history is that they are social, and the notion of a philosopher as a detached intelligence is both psychologically and practically untenable See C M Lovett, *Carlo Cattaneo and the Politics of the Risorgimento* (1973)

Cattermole, George, 1800-1868, English watercolor painter and illustrator His subject matter was varied, and his works were popular during his lifetime He painted picturesque scenes of antique subjects in a romantic mode He made illustrations for some of Dickens's works, including *Barnaby Rudge* Cattermole is represented in most of the important British galleries

cattle, name for the RUMINANT mammals of the genus *Bos*, and particularly those of the domesticated species, *Bos taurus* and *B. indica* The term oxen is used more or less synonymously, it sometimes includes other closely related animals, such as the BUFFALO and the BISON In more restricted usage, ox refers to a mature castrated male used for draft purposes In the nomenclature of domestic cattle a grown male is a bull, a grown female a cow, an infant a calf, and an animal between one and two

years old a yearling A female that has not given birth is a heifer, a castrated male is a steer Most cattle have unbranched horns consisting of a horny layer surrounding a bone extension of the skull, these horns, unlike those of deer, are not shed Some domestic breeds are naturally hornless, and some customarily have their horns removed Western, or European, domestic cattle (*Bos taurus*) are thought to be descended mainly from the AUROCHS, a large European wild ox domesticated during the Stone Age A smaller species, the Celtic shorthorn, was the most important domestic ox of the Stone Age and may also be involved in the ancestry of *B. taurus* The ZEBU, or Indian ox, *B. indica*, is the humped domestic species of Asia and Africa, in the United States this type of cattle is called Brahman The YAK, *B. grunniens*, exists in Asia in both wild and domestic forms There are also wild and semi-domesticated species in Asia Domestic cattle were first brought to the Western Hemisphere by Columbus on his second voyage Wealth has sometimes consisted chiefly of cattle and has been measured in terms of the number of cattle a person owns, the word *pecuniary* is derived from the Latin *pecus*, cattle, and the words *cattle*, *chatel*, and *capital* are related Breeding for improvement of beef and dairy qualities was practiced by the Romans but was not established on scientific principles until the middle of the 18th cent by English livestock breeder Robert Bakewell The principal beef breeds include the ANGUS and HEREFORD The principal dairy breeds include the Ayrshire, Brown Swiss, Guernsey, Holstein-Friesian, and Jersey The chief dual-purpose breeds include the Devon, Red Poll, and Shorthorn Associations have been formed by breeders interested in improving the various breeds Cattle are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae See also BEEF, DAIRYING See publications of the US Dept of Agriculture, A L Neumann and R R Snapp, *Beef Cattle* (6th ed 1969), J E Rouse, *World Cattle* (2 vol, 1970)

cattleya (kāt'lē-ā) see ORCHID

Catton, Bruce, 1899-, American historian, b Petoskey, Mich He studied at Oberlin College and then entered upon a varied career as a journalist (1926-42) and public official (1942-52) His service with the War Production Board during World War II led to his first major book, *The War Lords of Washington* (1948) After 1952 he devoted himself to full-time literary work, serving as an editor from 1954 (senior editor, 1959) of the *American Heritage* magazine In 1954 he received the Pulitzer Prize for his historical work, *A Stillness at Appomattox* (1953) Catton has written extensively on the military history of the Civil War, his many works include *Mr Lincoln's Army* (1951), *Glory Road* (1952), *This Hallowed Ground* (1956), *Grant Moves South* (1960), *Grant Takes Command* (1969), *The Centennial History of the Civil War* (3 vol, 1961-65), and *Prefaces to History* (1970)

Catullus (Caius Valerius Catullus) (kāt'ūl'ās), 84? B C-54? B C, Roman poet, b Verona Of a well-to-do family, he went c 62 B C to Rome, where he and other young writers formed a cult of youth He fell deeply in love, probably with Clodia, sister of the demagogue Publius Clodius She was a beautiful, notorious woman, suspected of murdering her husband Catullus wrote to his beloved, addressed as Lesbia (to recall Sappho of Lesbos), a series of superb little poems that run from early passion and tenderness to the hatred and disillusionment that overwhelmed him after his mistress was faithless Of the 116 extant poems attributed to him, three (18-20) are almost certainly spurious They include, besides the Lesbia poems, poems to his young friend Juventius, epigrams, ranging from the genial to the obscenely derisive, elegies, a few long poems, notably "Attis" and a nuptial poem honoring Thetis and Peleus, and various short pieces His satire is vigorous and flexible, his light poems gay and full-bodied He was influenced by the Alexandrians and drew much on the Greeks for form and meter, but his genius outran all models Catullus is one of the greatest lyric poets of all time Two of the most popular of his poems are the 10-line poem, touching and simple, which ends, "frater ave atque vale" [hail, brother, and farewell], and "On the Death of Lesbia's Sparrow" See translations by Peter Whigham (1966), James Michie (1969), Reney Myers and R J Ormsby (1970), studies by A L Wheeler (1934, repr 1964), Tenney Frank (1928, repr 1965), and Kenneth Quinn (1959, 1970, and 1972)

Catulus (käch'ōō-lās), family of ancient Rome, of the Lutatian gens Caius Lutatius Catulus was consul in

242 B C He won the great Roman naval victory over Carthage off the Aegates (modern Aegadian Isles) that ended the First Punic War Quintus Lutatius Catulus, d 87 B C, was consul in 102 B C His colleague in the consulship was MARIUS, with whom he went north to oppose a Germanic invasion He had to retreat before the Cimbri until Marius returned from Gaul The two then defeated the Cimbri near Vercelli in 101 B C He later opposed Marius in the Social War and favored Sulla Proscribed by the Marians, he either committed suicide or was killed He was the patron of a literary circle and was himself a writer and a philosopher Cicero praises his oratory His son, also Quintus Lutatius Catulus, d c60 B C, was consul in 78 B C He opposed the constitutional changes sought by Marcus Lepidus (d 77 B C, see under LEPIDUS), and when Lepidus led a revolt, Catulus and Pompey defeated him Catulus was censor in 65 B C He was the leader of the archconservative group He led the minority opposing the conferring of unusual powers on Pompey by the Manilian Law in 66 B C, and he was one of the bitterest opponents of Julius Caesar

Cauca (kou'kă), river, c 600 mi (970 km) long, rising in the Cordillera Central, near Popayan, W Colombia It flows north in a rift valley between the Cordillera Central and Cordillera Occidental to the Magdalena River It is navigable in its lower course and drains a fertile valley, coffee is the chief crop The valley has many minerals including gold There is a river-control and utilization scheme on the upper Cauca

Caucasia, see CAUCASUS

Caucasian and Caucasoid: see RACE

Caucasian Gates: see DARYAL

Caucasian languages, family of languages spoken by about five million people in the CAUCASUS region of the USSR The Caucasian languages take their name from the Caucasus Mountains, on the slopes of which their original homeland is believed to have been located This linguistic family was once considerably more extensive, however, only about 25 of its tongues have survived into modern times There are two major subdivisions of the Caucasian family of languages, northern and southern Whether or not these two branches are related linguistically is still disputed, but Georgian scholars since the 1930s have regarded as proved the kinship of all the Caucasian tongues The northern group consists of about 20 languages native to two million people Its most important members are Chechen and Abkhaz, which are spoken in the Soviet Union, and Adyghe (with its two dialects of Kabardin and Circassian), which is spoken not only in the USSR, but also to some extent in Turkey and Syria The southern group of Caucasian languages includes four tongues with some three million speakers Georgian, the leading member of the northern group, is the mother tongue of well over two million people in the Georgian SSR of the USSR and in neighboring areas of Turkey and Azerbaijan in Iran It is a modern representative of the language of the ancient Colchians, of whom the celebrated mythological figure Medea was one A literature in Georgian goes back to the 5th cent A D, and the language has two alphabets of its own, one of which is still in use, although increasingly the Cyrillic alphabet is being adopted In general, the Caucasian languages have inflection and tend to be agglutinative in that different linguistic elements, each of which exists separately and has a fixed meaning, are often joined to form one word Phonetically, the Caucasian tongues are distinctive, combining simplicity of vowels with abundant richness of consonants Many of the Caucasian languages are spoken by comparatively few people (that is, fewer than 100,000), and they are gradually giving ground to Russian The chances for survival for many of the Caucasian tongues are not considered good An exception is Georgian, which has a comparatively large number of speakers, whose cultural development is higher than that found among other Caucasian-speaking peoples See Bernhard Geiger et al, *Peoples and Languages of the Caucasus* (1959)

Caucasus (kō'kāsas), Rus Kavkaz, region and mountain system, SE European USSR The mountain system extends c 750 mi (1,210 km) from the mouth of the Kuban River on the Black Sea SE to the Apsheron peninsula on the Caspian Sea As a divide between Europe and Asia, the Caucasus has two major regions—North Caucasus and Transcaucasia North Caucasus, composed mainly of plain (steppe) areas, begins at the Manych Depression and rises to the south, where it runs into the main mountain range, the Caucasus mts This is a series of chains running

recall Much of his verse, very little of which remains, is in the *Canzone d'amore* [song of love] For translations, see his *Sonnets and Ballate* (tr by Ezra Pound, 1912) and *Lorna de' Lucchi, An Anthology of Italian Poems* (1922)

Cavalcaselle, Giovanni Battista (jōvān'ne bat-tēs'-ta kavalkasē'lā), 1820-97, Italian art critic and writer Cavalcaselle studied painting at the Academy of Venice and traveled extensively through Italy studying its art treasures He participated in the Revolution of 1848 and escaped to England, where he remained for several years While there he produced in collaboration with Joseph A Crowe their first joint work, *Early Flemish Painters* (1856) Cavalcaselle returned to Italy in 1857 The writings of Crowe and Cavalcaselle include the still basic *History of Painting in Italy* (3 vol., 1864-66)

Cavalier, Jean (zhaN kavalyā'), 1681?-1740, French Protestant soldier, a leader of the CAMISARDS From his home in the Cevennes region of France, he fled to Geneva (1701) when persecution of the Protestants became intolerable, but he returned when he knew that the Protestants were about to rebel As chief leader of the Camisards, he showed remarkable military genius In 1704 he made peace with Marshal Villars and received from King Louis XIV a commission as colonel and a pension The peace was repudiated by his followers because it did not restore the Edict of Nantes (see NANTES, EDICT OF) Distrustful of the king, Cavalier fled from France He fought for the duke of Savoy and later for England in Spain against the French His later years were spent in Great Britain, where he was given a pension, made major general, and appointed governor of the Isle of Jersey The *Memoirs of the Wars of the Cevennes*, published in 1726 and dedicated to Lord Carteret, is attributed to Cavalier See biography by A P Grubb (1931)

cavalier, in general, an armed horseman In the English civil war the supporters of Charles I were called Cavaliers in contradistinction to the ROUNDHEADS, the followers of Parliament The royalists used the designation until it was replaced by TORY

Cavaliere d'Arpino see CESARI, GIUSEPPE

Cavalieri, Francesco Bonaventura (franchās'kō bōnavāntōō'ra kavalyā'rē), 1598-1647, Italian mathematician, a Jesuit priest Professor at Bologna from 1629, he invented the method of indivisibles (1635) that foreshadowed integral calculus

Cavalieri, Lina (lē'na kavalyē'rē), 1874-1944, Italian operatic soprano After her debut in Lisbon in 1900 she achieved great success throughout Europe and in the United States in the lyric French and Italian roles Renowned as much for her great beauty and fiery temperament as for her light, pleasant voice, she sang with the Metropolitan Opera Company, New York City, (1906-8) and with Oscar Hammerstein's Manhattan Opera Company (1909-10)

cavalier King Charles spaniel, breed of small dog developed in the early 20th cent from the English toy spaniel It stands about 12 in (30 cm) high at the shoulder and weighs from 13 to 18 lb (6-8 kg) Its long, silky coat may be slightly wavy, but never curly, and forms a fringe of longer hair, or feathers, on the ears, legs, tail, and feet Although it is usually white with chestnut markings, it may have any of the color patterns of the English toy spaniel Around 1926 there began a revival of interest in the toy spaniel that had been popular in 17th cent England This dog, often depicted in the paintings of that period, was larger than the modern type and had a less domed skull and longer nose By selective breeding of modern toy spaniels that resembled this older type, a new breed, the cavalier, was developed in the relatively short span of approximately 20 years A widely popular dog in England that is also gaining recognition in the United States, the cavalier King Charles is exhibited in the miscellaneous class at dog shows sanctioned by the American Kennel Club See DOG

Cavalier poets, a group of English poets associated with Charles I and his exiled son Most of their work was done between c 1637 and 1660 Their poetry embodied the life and culture of upper-class, pre-Commonwealth England, mixing sophistication with naivete, elegance with raciness Writing on the courtly themes of beauty, love, and loyalty, they produced finely finished verses, expressed with wit and directness The poetry reveals their indebtedness to both Ben Jonson and John Donne The leading Cavalier poets were Robert Herrick, Richard Lovelace, Sir John Suckling, and Thomas Carew

cavalla (kavā'lā) see POMFANO

Cavalli, Pietro Francesco (pyē'trō franchēs'kō kaval'lē), 1602?-76, Italian composer, whose real name was Caletti-Bruni, pupil of Monteverdi, whom he succeeded as choirmaster of St Mark's, Venice He wrote many operas, including *Didone* (1641), *Giason* (1649), *Serse* (1654), and *Ercole Amante* (1662), all of which show the full development of the bel canto aria

Cavallini, Pietro (pyē'trō kaval'lē'nē), c 1250-c 1330, Italian painter and mosaicist Working in a classical style, he had an important influence on the art of Cimabue and Giotto His surviving works are frescoes in Santa Cecilia, Rome, and in Santa Maria Donnaregina, Naples He designed some beautiful mosaics in the Church of Santa Maria in Trastevere, Rome

cavalry, part of a military force, consisting of mounted troops trained to fight from horseback Cavalry was used by the ancient Egyptians, but it was more extensively employed by the ancient Hittites, Assyrians, Babylonians, and Persians Some of the Greek city-states had mounted troops, but the typical Greek force was heavy infantry The Romans also employed cavalry Horsemen were particularly useful in scouting and in pursuit of a routed enemy but remained at a disadvantage against well-disciplined infantry until saddles were introduced (4th cent AD) in the time of Constantine I The wide and expert use of cavalry in Europe came with the invaders from the East, the Huns, Avars, Magyars, and Mongols In medieval Europe the mounted knight became the typical warrior, and cavalry dominated in the incessant small wars With the re-introduction of mass fighting at the end of the Middle Ages, infantry came to the fore again The use of firearms did much to enhance the importance of infantry, but horsemen remained valuable for their rapid striking power and mobility Cavalry was prominent in the armies of Louis XIV and Frederick II (Frederick the Great), and particularly under Napoleon the cavalryman became the elite of the fighting forces, although most of the actual fighting was done by the infantry Gaily uniformed cuirassiers, dragoons, hussars, and lancers were prominent in European armies of the 19th cent, and most of these forces were recruited from the nobility and the landed gentry Cavalry was of great value during the 19th cent on the African, American, and British-Indian frontiers, where mobility was essential in fighting lightly armed natives It was also much used in the US Civil War However, the value of cavalry, already diminished by the development of rifles, plummeted with the introduction of machine guns and other automatic weapons at the end of the 19th cent In World War I, because of the trench warfare, horsemen were used only in small numbers on the plains of E Europe and the Middle East Cavalry was employed against Germany at the beginning of World War II by the Polish and Soviet armies However, it finally disappeared as a force in modern warfare when highly mobile tank units were introduced In 1946 the US army abolished the cavalry as a separate arm of the service, merging what remained of it with the armored forces See J D Lunt, *Charge to Glory* (1960), G C Anglesey, *A History of the British Cavalry* (vol 1, 1973)

Cavan (kāv'an), county (1971 pop 52,674), 730 sq mi (1,891 sq km), N Republic of Ireland The county town is Cavan It is a hilly region of lakes (Lough Oughter chief among them) and bogs, and the climate is extremely damp and cool Most of the soil is clay The Erne is the principal river, and the Shannon has its source in Cavan Pastoral agriculture is the chief occupation, very little land is under cultivation, and that mostly in very small farms Manufactures are negligible Cavan was organized as a shire of Ulster prov in 1584

Cavan, urban district (1971 pop 3,268), county town of Co Cavan, N Republic of Ireland It is a farm market and the seat of the Roman Catholic and Anglican dioceses

Cave, Edward, 1691-1754, English publisher He founded (1731) the *Gentleman's Magazine*, the first modern magazine in English Cave gave Samuel Johnson his first regular literary employment when he printed (1741-44) Johnson's parliamentary reports, "Debates in the Senate of Magna Lilliputia," in his periodical Later Cave published other works by Johnson

cave, a hollow, either above or below ground Caves may be formed by the chemical and mechanical action of a stream upon soluble or soft rock, of rainwater seeping through soluble rock to the groundwater level, or of waves dashed against a rocky shore Volcanic action (accompanied by the formation of gas pockets in lava or the melting of ice un-

der lava) and earthquakes or other earth movements are also sources of cave formation Limestone regions almost invariably have caves, some of these are notable for their STALACTITE AND STALAGMITE formations or for their magnitude and unearthly beauty Some caves were the means of preserving both the remains of prehistoric man and animals and indications of man's early culture Speleology, the scientific study of caves and their plant and animal life, contributes to knowledge of biological adaptation and evolution Some cave animals lack sight, and both plants and animals living where light is excluded show loss of pigment Among famous caves in the United States are Carlsbad Caverns National Park (N Mex.), Mammoth Cave National Park (Ky.), and Wind Cave National Park (Black Hills, S Dak.), Luray Caverns (Va.), and Wyandotte Cave (Ind.) In Europe there are celebrated caves in Belgium, Dalmatia, Gibraltar, Capri, Sicily, Pistoia, and England (Kent's Cavern and Kirkdale) The caves of the Pyrenees and the Dordogne are famed for their prehistoric paintings (see PALEOLITHIC ART), and those of Ajanta, India, and Tunhwang, China, for their Buddhist frescoes Fingal's Cave in the basalt of the Hebrides off Scotland is one of the many caves about which there are legends The caves of Iceland and Hawaii are volcanic See CAVE DWELLER See C E Mohr and T L Poulson, *The Life of the Cave* (1966), D R McClurg, *The Amateur's Guide to Caves and Caving* (1973)

cave art: see PALEOLITHIC ART, ROCK CARVINGS AND PAINTINGS

Cavedone, Giacomo (ja'kōmō kavādō'nā), 1577-1660, Italian painter, of the Bolognese school He assisted Guido Reni in Rome, but his reputation as a master of color and composition was won through his paintings in the churches of Bologna His paintings were strong in naturalistic detail and reflected Venetian influence *Virgin and Child with SS Alo and Petronius* is in the Pinacoteca Nazionale in Bologna

cave fish, common name for blind, cave-dwelling fishes of the family Amblyopsidae The Amblyopsidae are whitish fish, up to 5 in (13 cm) long With the exception of a single species, all members of the family live in the limestone cave region of the Mississippi basin The three species that live in caves have nonfunctioning rudimentary eyes The other two species, the springfish and the ricefish (or rice-ditch killifish), have small, functional eyes The ricefish, which superficially resembles the toothed minnows, is found in streams and swamps of the SE United States The cave fish and their relatives are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Cyprinodontiformes, family Amblyopsidae

Cavell, Edith (kāv'əl), 1865-1915, English nurse When World War I broke out, she was head of the nursing staff of the Berkendael Medical Institute in Brussels In 1915 she was arrested by the German occupation authorities and pleaded guilty to a charge of harboring and aiding Allied prisoners and assisting some 130 to cross the Dutch frontier She was shot Oct 11, 1915, despite the efforts of Brand Whitlock, US minister to Belgium, to secure a reprieve See biography by A E Clark-Kennedy (1965)

Cavendish (kāv'əndīsh), pseud of Henry Jones, 1831-99, English card game expert Jones studied medicine, practiced in London, and retired in 1868 He became a leading authority on card games and was the first man to formulate a system of playing whist He was the author of *Principles of Whist Stated and Explained by "Cavendish"* (1862) and later wrote books on piquet, écarté, billiards, lawn tennis, and croquet

Cavendish, Lord Frederick Charles see PHOENIX PARK MURDERS

Cavendish, George, 1500-1561?, English gentleman, usher to Cardinal Wolsey His biography of Wolsey, written in 1557, remained in manuscript until 1641 and first appeared in entirety in Christopher Wordsworth's *Ecclesiastical Biography* (1810) One of the great books of the English Renaissance, the work imparts tragic stature to Wolsey's life by contrasting the splendor of his early career with the ignominy of his last days The book was long attributed to Cavendish's brother William, but in 1814 Joseph Hunter clearly established its authorship See W Singer, ed., *The Life of Cardinal Wolsey* (1825)

Cavendish, Henry, 1731-1810, English physicist and chemist, b Nice He was the son of Lord Charles Cavendish and grandson of the 2d duke of Devonshire He was a recluse, and most of his writings were published posthumously His great contributions to science resulted from his many accurate experiments in various fields His conclusions were re-

markedly original. His chief researches were on heat, in which he determined the specific heats for a number of substances (although these heat constants were not recognized or so called until later), on the composition of air, on the nature and properties of a gas that he isolated and described as "inflammable air" and that Lavoisier later named HYDROGEN, and on the composition of water, which he demonstrated to consist of oxygen and his "inflammable air." In his *Electrical Researches* (1879) he anticipated some of the discoveries of Coulomb and Faraday. His experiments to determine the density of the earth led him to state it as 5.48 times that of water. His *Scientific Papers* were collected in two volumes (*Electrical Researches and Chemical and Dynamical*) in 1921. See biography by A. J. Berry (1960), J. G. Crowther, *Scientists of the Industrial Revolution* (1963).

Cavendish, Thomas, 1560-92, English navigator. He commanded a ship in the flotilla under Sir Richard Greenville sent (1585) by Sir Walter Raleigh to establish the first colony in Virginia. In 1586, in command of three vessels, he sailed from England on a voyage round the world (the third to be made), crossing from the coast of W. Africa to Patagonia, where he discovered a fine harbor that he named Port Desire. He ravaged Spanish towns and shipping on the west coast of South America and thence continued his journey by way of the Philippines, East Indies, and Cape of Good Hope, returning to England in 1588 after a voyage of more than two years. A second circumnavigation that commenced in 1591 ended disastrously, his fleet of five ships was dispersed, and he died at sea.

Cavendish, William: see NEWCASTLE, WILLIAM CAVENDISH, DUKE OF.

Cavendish Laboratory: see CAMBRIDGE UNIV.

Caventou, Joseph Bienaimé (zhōzé'f' byāNnāmā' kāvāNtō'), 1795-1877, French chemist. He was professor at the École de Pharmacie, Paris. With P. J. Pelletier he isolated quinine (from cinchona bark), strychnine, and brucine and studied the green pigment in plants (which they named chlorophyll).

Caves of the Thousand Buddhas: see TUN-HUANG. **caviar** or **caviare** (kāvē'ār), the roe (eggs) of various species of sturgeon prepared as a piquant table delicacy, especially in the Soviet Union and Iran. The ovaries of the fish are beaten to loosen the eggs, which are then freed from fibers, fat, and membrane by being passed through a sieve. The liquid is pressed off, and the eggs are mildly salted and sealed in small tins or kegs. Fresh caviar (the unripe roe), made in winter from high-grade eggs, is scarce and consequently expensive, especially when imported. Less choice varieties are cured with 10% salt. The eggs, black, green, brown, and the rare yellow or gray, may be tiny grains or the size of peas. The caviar in the Soviet Union comes chiefly from the vicinity of the Black and Caspian seas and from the Danube provinces. In the United States an imitation of sturgeon caviar is produced from the roe of other fish, such as paddlefish, whitefish, cod, and salmon.

Cavite (kāvē'tā), city (1970 est. pop. 77,100), Cavite prov., SW Luzon, the Philippines. The city, situated on a small peninsula in Manila Bay, has been important as a naval base and trade center since the days of the Spanish. In the Spanish-American War it was captured by Dewey on May 1, 1898. The United States established a major naval base at Sangley Point just opposite the city proper. In World War II this base was bombed (Dec. 10, 1941) by the Japanese and virtually destroyed—a major blow to the defense of the Philippines. After the Philippines acquired independence it was agreed (1947) that the United States would retain the base for a 99-year period, subsequent negotiations reduced the time to 25 years, beginning in 1967. The Philippine government also maintains a naval school center at Cavite.

Cavour, Camillo Benso, conte di (kāmə'lō bān'sō kōntā dē kāvōr'), 1810-61, Italian statesman, premier (1852-59, 1860-61) of Sardinia (see SARDINIA, KINGDOM OF). The active force behind King VICTOR EMANUEL II, he was responsible more than any other man for the unification of Italy under the house of Savoy (see RISORGIMENTO). Of a noble Piedmontese family, he entered the army early but came under suspicion for his liberal ideas and was forced to resign in 1831. He then devoted himself to travel, agricultural experimentation, and the study of politics. In 1847 he founded the liberal daily, *Il Risorgimento*, through which he successfully pressed King Charles Albert of Sardinia to grant a constitution to his people and to make war on Austria in 1848-49. A member of parliament briefly in 1848 and again in July of the following year, he became minister of

agriculture and commerce (1850), finance minister (1851), and premier (1852). As premier, he aimed at making the kingdom of Sardinia the leading Italian state by introducing progressive internal reforms. Having reorganized the administration, the financial and legal system, industry, and the army, he won for Sardinia prestige and a place among the powers through participation in the Crimean War (1855). Conscious of the failures of the 1848-49 revolution, Cavour probably did not believe that the creation of a unified Italy was feasible within his lifetime, until at least 1859 he strove rather for an aggrandized Italian kingdom under the house of Savoy. To achieve this goal he wooed foreign support against Austrian domination. In 1858, by an agreement reached at Plombières, he won the backing of Emperor Napoleon III of France for a war against Austria, promising in exchange to cede Savoy and possibly Nice to France. Austria was maneuvered into declaring war (1859), but Cavour refused to accept the separate armistice of VILLAFRANCA DI VERONA between France and Austria. He resigned the premiership but returned to office in 1860. In that year Tuscany, Parma, Modena, and the Romagna voted for annexation to Sardinia, and Giuseppe GARIBOLDI overran the Two Sicilies. Cavour, taking advantage of the auspicious circumstances for Italian unification, sent Sardinian troops into the Papal States, which, with the exception of Latium and Rome, were soon annexed to Sardinia. By his superior statesmanship Cavour convinced Garibaldi to relinquish his authority in the south and avoided foreign intervention in favor of the dispossessed rulers and of the pope, whose interests he professed to be safeguarding. The annexation (1860) of the kingdom of the Two Sicilies was consummated with the abdication (1861) of Francis II. Cavour's labors were crowned two months before his death, when the kingdom of Italy was proclaimed under Victor Emmanuel II. See studies by D. Mack Smith (1954 and 1971), Massimo Salvadori, *Cavour and the Unification of Italy* (1961).

cavy (kā'vē), name for several species of South American rodents of the family Caviidae, including the domestic GUINEA PIG. The wild cavy is usually small, rounded, and tailless, with fur of a uniform shade of brown. Nocturnal animals, they occupy a variety of habitats, especially dense vegetation. An unusual, large species is the Patagonian cavy, or mara (*Dolichotis patagonum*), a long-legged, hare-like animal that reaches a length of about 2½ ft (76 cm) and lives in arid regions. The CAPYBARA belongs to a related family. Some cavy is hunted for food in South America. Cavy is classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Caviidae.

Cawdor (kō'dər), village, Nairnshire, NE Scotland, SW of Nairn. Cawdor Castle, whose earliest construction dates from 1454, was represented by Shakespeare, following tradition, as the scene of the slaying (1040) of Duncan by MACBETH. In 1975, Cawdor became part of the Highland region.

Cawnpore, India: see KANPUR.

Caxias do Sul (kashē'ash dōō sōōl), city (1970 pop. 144,284), Rio Grande do Sul state, S Brazil. It is an important metallurgical center and has the most extensive vineyards in Brazil. There is little agriculture because of the rough terrain. The city was founded in 1875.

Caxton, William, c.1421-1491, English printer, the first to print books in English. He served apprenticeship as a mercer, and from 1463 to 1469 was at Bruges as governor of the Merchants Adventurers in the Low Countries, serving as a diplomat for the English king. He learned printing in Cologne in 1471-72, and at Bruges in 1475 he and Colard Mansion printed *The Recuyell of the Histories of Troye*, his own translation from the French, and the first book printed in English. In 1476 he returned to England, and at Westminster in 1477 he printed *Dictes or Sayengis of the Philosophres*, the first dated book printed in England. Caxton is known to have printed about 100 books, many dealing with themes of chivalry. He was the translator, from French, Latin, and Dutch, of about one third of the books that he printed, and for some he wrote original prologues, epilogues, and additions. His books are of superb craftsmanship and are carefully edited. One of the typesets used by Caxton is the original Old English type. The size of this type of Caxton's (14 point) is known as English WYNNYN DE WORDE, his successor as a printer, was his assistant at Westminster, and the printers Richard Pynson and Robert Copland refer to Caxton (possibly figuratively) as their master. See biographies by N. S. Auer (1926, repr. 1965),

H. R. Plomer (1925, repr. 1968), N. F. Blake (1969), and William Blades (1877, repr. 1971).

Cayenne (kiēn', kāēn'), city (1967 pop. 19,668), capital of FRENCH GUIANA, on Cayenne island at the mouth of the Cayenne River. The city has a shallow harbor, and deep-draft ships must anchor some distance out. Timber, rum, essence of rosewood, and gold are exported. Cayenne was founded by the French in 1643, but it was wiped out by an Indian massacre and was not resettled until 1664. Throughout the 17th cent. the city and its surrounding region were sharply contested by Great Britain, France, and the Netherlands. It was occupied (1808-16) by both the British and the Portuguese. From 1851 to 1946 the city was the center of French penal settlements in Guiana, and part of its population is made up of prisoners' descendants. Cayenne's development has long been hindered by internal strife, a hot, wet climate, and the prevalence of disease. In the city are the Pasteur Institute, which specializes in the study of tropical diseases, and several buildings from the colonial period. The city gives its name to cayenne pepper, a very sharp condiment found on the island in abundance.

Cayes, Haiti: see AUX CAYES.

Cayey (kiā'), town (1970 pop. 21,562), SE Puerto Rico, in the Sierra de Cayey Mts. It is a sugar, tobacco, and poultry center and a summer resort. Cigars and clothing are manufactured. Cayey was founded in 1774. Outside the town is a U.S. military reservation, Henry Barracks.

Cayley, Arthur (kā'lē), 1821-95, English mathematician. He was admitted to the bar in 1849. In 1863 he was appointed first Sadlerian professor of mathematics at Cambridge. His researches, which covered the field of pure mathematics, included especially the theory of matrices and the theory of invariants. The algebra of matrices was the tool Heisenberg used in 1925 for his revolutionary work in quantum mechanics. The concept of invariance is important in modern physics, particularly in the theory of relativity. Cayley's collected papers were published in 13 volumes (1889-98).

Cayley, Sir George, 1773-1857, British scientist. He is recognized as the founder of aerodynamics on the basis of his pioneering experiments and studies of the principles of flight. He experimented with wing design, distinguished between lift and drag, and formulated the concepts of vertical tail surfaces, steering rudders, rear elevators, and air screws. Although powered flight was impossible in his time because of the lack of an engine with a high enough power-to-weight ratio, he was able to calculate the power required for different speeds and loads. Cayley was also a founder of the Regent Street Polytechnic, London.

Caylus, Anne Claude Philippe de Tubières, comte de (ān klōd fēlēp' də tūbyēr' kōN də kālūs'), 1692-1765, French archaeologist and antiquarian. Caylus learned drawing from Watteau. He traveled in Europe and Asia and became known as an etcher and as a patron of the arts. He was the champion of classical purity and influenced the development of the Louis XVI style. He is said to have initiated the scientific study of the antique. His collections are in the Louvre. *Caylus's Recueil d'antiquités égyptiennes, étrusques, grecques, romaines, et galloises* (7 vol., 1752-67) is the major 18th-century work of antiquarian scholarship; it did much to encourage interest in and study of classical subjects.

Caylus, Marie Marguerite, comtesse de (māre mārghārēt' kōNtēs' də), 1673-1729, French writer and actress. A noted beauty and wit, she was lauded for her performance at Saint-Cyr in Racine's *Esther*. Her *Souvenirs* (1770), edited by Voltaire, describe the court of Louis XIV with vivacity and taste.

Cayman Islands (kā'mən), archipelago (1970 pop. 10,249), 100 sq mi (259 sq km), British West Indies. Georgetown, the capital and chief port, is on Grand Cayman, the other islands are Little Cayman and Cayman Brac. The inhabitants, who are of mixed European and black African descent, engage in shipbuilding, turtle and shark fishing, coconut raising, and lumbering; exports include green turtles, turtle shells, shark skins, coconuts, and dyewood. Tourism is also a major industry. The islands were discovered by Christopher Columbus in 1503.

Cayuga Indians: see IROQUOIS CONFEDERACY.

Cayuga Lake (kāyōō'gə, kī-, kə-), 38 mi (61 km) long and 1 to 3.5 mi (1.6-5.6 km) wide, W central N.Y., longest of the Finger Lakes. It is connected by canal and by the Seneca River with the Barge Canal to the north. Cornell Univ. and Wells College overlook Cayuga's clifflike banks. Near the southern end of the lake are Taughannock Falls, 215 ft (66 m) high.

cayuse (kīyōōs') see MUSTANG

Cayuse Indians (kīyōōs'), North American Indians who formerly occupied parts of NE Oregon and SE Washington. They were closely associated with the Nez Perce. They spoke a language belonging to the Sahaptin-Chinook branch of the Penutian linguistic stock (see AMERICAN INDIAN LANGUAGES). A mission was established (1836) among them by Marcus WHITMAN called Waiilatpu. In 1847 the Cayuse, blaming the missionaries for an outbreak of smallpox, attacked the mission and killed the Whitmans and their helpers. The settlers then declared war and subdued the Cayuse. In 1855 they were placed on the Umatilla Reservation, which they continue to share with the Wallawalla and Umatilla Indians, by the 1970s they numbered about 650. A small horse bred by them gave the name cayuse to all Indian ponies. See R. H. Ruby and J. A. Brown, *The Cayuse Indians* (1972).

Cb, formerly chemical symbol of the element columbium, now called NIOBIUM

Cd, chemical symbol of the element CADMIUM

CDP (cytidine diphosphate) see CYTOSINE

Ce, chemical symbol of the element CERIUM

Ceanannus Mor or Kells, urban district (1971 pop. 2,395), Co. Meath, NE Republic of Ireland, on the Blackwater River. It is a market town and was once a royal residence for Irish kings. Noteworthy are the relic of an ancient monastery founded in the 6th cent. by St. Columba, the round tower, and several ancient crosses. *The Book of Kells*, now one of the treasures of the Trinity College library in Dublin, is a beautifully illuminated manuscript of the Latin Gospels, with notes on local history, found in the ancient monastery and believed to have been written in the 8th cent. The manuscript is generally regarded as the finest example of Celtic illumination.

Ceará (sē'arā'), state (1970 pop. 4,366,970), 57,149 sq mi (148,015 sq km), NE Brazil, on the Atlantic Ocean. FORTALEZA (sometimes called Ceara) is the capital.

Ceausescu, Nicolae (nēkōlī' choushēs'kōō), 1918–, Rumanian statesman. The son of a peasant, he early became active in the Rumanian Communist movement and was arrested as a revolutionary, he spent the late 1930s and early 40s in prison, where he became acquainted with the future first secretary of the Rumanian Communist party, Gheorghe Gheorghiu-Dej. Escaping in 1944, Ceausescu held a variety of posts within Communist party and government ranks after the Communist takeover in 1948. He soon became a member of the party's central committee and then, in 1955, a member of the politburo. Upon Gheorghiu-Dej's death in March, 1965, he was chosen first secretary of the central committee of the Communist party and continued his mentor's policy of nationalism and independence from the USSR within the context of Marxism-Leninism. He promoted closer relations with the People's Republic of China and with the West, as well as industrial and agricultural development. In Dec., 1967, he assumed the office of president of the state council, or head of state.

Cebu (sābōō'), island (1970 pop. 1,632,642), 1,702 sq mi (4,408 sq km), one of the Visayan Islands, the Philippines, between Leyte and Negros. The coastal plains are intensely cultivated and densely populated. The island is a leading peanut and corn producer, rice, sugarcane, coconuts, and hemp are also grown. There are major coal and copper deposits. Fertilizer is made from local pyrite. Magellan landed on the island in 1521, the wooden cross he planted is a major tourist attraction. The island, with several small adjacent islands, comprises Cebu province, the capital of which is the city of Cebu (1970 pop. 342,116), the second (after Manila) most important harbor and city in the Philippines. With its excellent port, which handles both interisland and overseas shipping, it is the trade and manufacturing center of the Visayan Islands. The city has sugar mills, cement factories, shipyards, metalworks, and automobile repair and assembly plants. The first permanent Spanish settlement in the Philippines, it was founded in 1565 as San Miguel by Lopez de Legaspi, it was capital of the Spanish colony until 1571. As a major Japanese base in World War II, it was largely destroyed by U.S. bombs. It has been rebuilt and today is a charming mixture of old and new, East and West. A Roman Catholic archdiocese, it has a bishop's palace, a cathedral, and a church with a jewel-encrusted gold statue of the Holy Child, said to have been given by Magellan. Cebu is the seat of the Univ. of San Carlos (1595), the Univ. of the Southern Philippines, the Univ. of the Visayas, Southwestern

Univ., an institute of technology, several colleges, and many private schools.

Cecco d'Ascoli (chēk'kō das'kōlē), 1269?–1327, Italian astrologer, mathematician, poet, and physician, whose real name was Francesco degli Stabili, b. Ascoli. A teacher of astrology at several institutions in Italy, he was professor of mathematics and astrology at the Univ. of Bologna (1322–24). He was denounced as heretical largely because, in defending astrology against Dante's attack on it in the *Divine Comedy*, Cecco himself had accused the great poet of heresy, he was burned at the stake. His chief work was *L'acerba*, an allegorical didactic poem of encyclopedic range.

Čech, Svatopluk (svā'tōploōk chēkh), 1846–1908, Czech poet and novelist. His strong Pan-Slavism and his love for democracy and freedom won him great popularity. His political enthusiasms animate many of his writings. Among Čech's major epics are *The Adamites* (1873), *Žižka* (1879), and *Václav of Michalovice* (1880). He also wrote idyllic verse on Czech country life, notably *In the Shade of the Linden Tree* (1879), and satirical novels, including the utopian *Excursion of Mr. Brouček to the Moon* (1886).

Cecil, Lord David (Lord Edward Christian David Gascoyne Cecil), 1902–, English biographer. He was professor of English literature at Oxford (1948–70). Cecil's works are all distinguished for their astuteness as well as for their sound scholarship. His masterpiece is his life of Lord MELBOURNE, published in two volumes, *The Young Melbourne* (1939) and *Lord M* (1954). His other works include *Sir Walter Scott* (1933), *Jane Austen* (1935), *Walter Pater: Scholar Artist* (1955), and *Max* (1964), a study of Max Beerbohm. *The Cecils of Hatfield House, an English Ruling Family* (1973) is about his own family.

Cecil, Edgar Algernon Robert, 1st Viscount Cecil of Chelwood (sēs'al), 1864–1958, British statesman, known in his earlier life as Lord Robert Cecil, 3d son of the 3d marquess of Salisbury. A Conservative who held several ministerial posts, Cecil gained fame largely through untiring advocacy of internationalism. In 1919 he collaborated with U.S. President Woodrow Wilson in drafting the Covenant of the League of Nations. He was created a viscount in 1923 and awarded the Nobel Peace Prize in 1937. See his autobiography, *A Great Experiment* (1941).

Cecil, Robert: see SALISBURY, ROBERT CECIL, 1ST EARL OF CECIL, Robert Arthur Talbot Gascoyne-: see SALISBURY, ROBERT ARTHUR TALBOT GASCOYNE-CECIL, 3D MARQUESS OF

Cecil, William: see BURGHLEY, WILLIAM CECIL, 1ST BARON

Cecilia, Saint, 2d or 3d cent., Roman virgin martyr. An ancient and famous account of her life is factually valueless. As patron of music, she is represented at the organ. St. Cecilia is the subject of one of the *Canterbury Tales*, of a song by Dryden, and an ode by Pope. Cecily is an English form of her name. Feast Nov. 22.

Cecrops (sē'krōps), in Greek mythology, founder and first king of Athens. A primeval being, he was half man and half serpent. As a maker of laws, he abolished human sacrifice, established monogamy, and initiated burial of the dead.

cecum (sē'kam) see INTESTINE

cedar, common name for a number of trees, mostly coniferous evergreens. The true cedars belong to the small genus *Cedrus* of the family Pinaceae (PINE family). All are native to the Old World from the Mediterranean to the Himalayas, although several are cultivated elsewhere as ornamentals, especially the cedar of Lebanon (*C. libani*). This tree, native to Asia Minor and North Africa, is famous for the historic groves of the Lebanon mts., frequently mentioned in the Bible. The wood used in building the Temple and the house of Solomon (1 Kings 5, 6, and 7) may, however, have been that of the deodar cedar (*C. deodora*), native to the Himalayas. It has fragrant wood, durable and fine grained, and is venerated by the Hindus, who call it Tree of God. The name cedar is used (particularly in North America, where no cedars are native) for other conifers, e.g., the JUNIPER (red cedar), ARBORVITAE (white cedar), and others of the family Cupressaceae (CYPRESS family). Several tropical American trees of the genus *Cedrela* of the mahogany family are also called cedars. True cedars are classified in the division PINOPHYTES, class Pinopsida, order Coniferales, family Pinaceae.

Cedar Breaks National Monument: see NATIONAL PARKS AND MONUMENTS (table)

Cedar Creek, small tributary of the North Fork of the Shenandoah River, N of Strasburg, N Va. It was

the scene of a Civil War battle (Oct. 19, 1864) in which Union general P. H. Sheridan defeated J. A. Early.

Cedar Falls, city (1970 pop. 29,597), Black Hawk co., N Iowa, on the Cedar River, inc. 1854. It developed as a milling center in the late 19th cent. after the coming of the railroad. Its manufactures include pumps, farm machinery, tools and dies, golfing equipment, and refuse disposal equipment. Cedar Falls is the seat of the Univ. of Northern Iowa and of the Evangelical Campgrounds, scene of the annual Interdenominational Bible Conference.

Cedar Mountain: see BULL RUN, SECOND BATTLE OF

Cedar Rapids, city (1970 pop. 110,642), seat of Linn co., E central Iowa, on the Cedar River, inc. as a city 1856. It is named for the surging rapids in the river. One of Iowa's principal commercial and industrial cities, Cedar Rapids is a distribution and rail center for an extensive agricultural area. The city's major manufactures are cereals, communications equipment, farm and road machinery, syrup, plastic products, trampolines and other gymnastic equipment. Coe College, Mt. Mercy College, and Kirkwood Community College are there. Points of interest include a large Masonic library (1884), an art museum with a collection by the American artist Grant Wood, and the landscaped Municipal Island, a strip of land in the main channel of the Cedar River, on which the municipal building and a neoclassical war memorial are located. The Duane Arnold Energy Center, the first nuclear powered generator in Iowa, is in Cedar Rapids.

cedar waxwing: see WAXWING

Cedron (sē'drən) 1 The same as KIDRON. 2 Place, near Jamnia, fortified against the Maccabees. 1 Mac 15:39–41, 16:9.

Cefalù (chāfalōō'), town (1971 pop. 12,062), N Sicily, Italy, a port on the Tyrrhenian Sea. It is a commercial and fishing center and a seaside resort. Formerly known as Cephaloedium, it made an alliance with Carthage in 396 B.C. The town was later taken by the Arabs (mid-9th cent. A.D.) and the Normans (11th cent.). Its famous cathedral, started in 1131 by King Roger II, is one of the finest examples of Norman architecture in Sicily.

Cegled (tsēg'lād), city (1970 pop. 38,082), central Hungary. It is a road and rail hub and a trade center for agricultural products.

Ceiba, La (la sā'ba), city (1961 pop. 24,863), N Honduras, capital of Atlantida dept., on the Caribbean Sea. It is the commercial and processing center of a rich agricultural region. Coconuts and citrus fruits are exported. The city was Honduras's main banana port until disease ruined the surrounding plantations in the 1930s. La Ceiba is located at the foot of Peak Bonito (5,000 ft/1,524 m), has fine beaches, and is a departure point for the Bay Islands. More than 1,000 people were killed when the city was struck (1974) by Hurricane Fifi.

ceiling balloon: see WEATHER BALLOON

ceiometer (sēlōm'ītār), in aviation and meteorology, automatic instrument used to record ceiling, i.e., the altitude of the lowest cloud layer covering more than half of the sky. The ceiometer consists essentially of a projector, a detector, and a recorder. The projector emits an intense beam of light into the sky. The detector, located at a fixed distance from the projector, uses a photoelectric cell to detect the projected light when it is reflected from clouds. In the fixed-beam ceiometer, the light is beamed vertically into the sky by the projector and the detector is aligned at various angles to intercept the reflected light. In the rotating-beam ceiometer, the detector is positioned vertically and the light projected at various angles. In either case, trigonometry is used to determine the altitude of the clouds reflecting the light from a knowledge of the angle at which the light is detected and the distance between the projector and detector. The recorder is calibrated to indicate cloud height directly. False readings from extraneous light sources are reduced by modulating the projected light beam so that it can be recognized when it is reflected.

Cela, Camilo José (kamē'lō hōsā' thā'la), 1916–, Spanish novelist, short-story writer, and poet, b. Iria Flavia. Among the writers to emerge after the Spanish civil war, he won critical acclaim with the novel *La familia de Pascual Duarte* (1942, tr. *The Family of Pascual Duarte*, 1964). Its brutal realism and crudeness of language are characteristic of Cela's style. His other novels include *La colmena* (1951, tr. *The Hive*, 1953) and *Mrs. Caldwell habla a su hijo* (1953, tr. *Mrs. Caldwell Speaks to Her Son*, 1968). See studies by D. W. Foster (1967) and D. W. McPheeters (1969).

Celaenae (sil'ē'nē), ancient city of Asia Minor, in Phrygia, near the source of the Maeander River, in present-day W central Turkey. In the days of the Persian Empire, Cyrus the Great had a palace there, and Xerxes I built a fort. Alexander the Great conquered the city in 333 B.C. Seleucus I moved the inhabitants to neighboring Apamea. Modern Dinar is on the site.

Čelakovský, František (fran'tishěk chě'lakófskī), 1799-1852, Czech folklorist and poet. A disciple of Herder and a romantic Pan-Slavist, he collected Slavic folk songs from 1822 to 1827. These he later imitated in his own intricate free verses, *Echoes of Russian Song* (1829) and *Echoes of Czech Song* (1830). At Breslau he became (1841) the first professor of Slavic languages in a Central European university.

celandine, see POPPY

Celano, Thomas of: see THOMAS OF CELANO

Celaya (sā'lā'yā), city (1970 pop. 143,703), Guanajuato state, W central Mexico. In a region watered by the Lerma irrigation works, Celaya is the center of a prosperous bean, maize, and cereal growing area. Cattle raising and the associated dairy industry are also important. Founded in 1571, Celaya was frequently involved in Mexican wars. It was the first city to be captured (Sept. 28, 1810) by Hidalgo y Costilla. In 1915, Álvaro Obregón decisively defeated Francisco Villa at Celaya.

Celebes (sē'lā'bēs) or **Sulawesi** (sōō'lāwā'sē), island (1970 est. pop., including offshore islands, 8,925,000), c. 73,000 sq mi (189,070 sq km), largest island in E Indonesia, E of Borneo, from which it is separated by the Makasar Strait. MAKASAR is its chief city and port; other important towns are Manado, Gorontalo, and Palopo. Extremely irregular in shape, it comprises four large peninsulas separated by three gulfs—Tomini on the northeast, Tolo on the southeast, and Boni on the south. The terrain is almost wholly mountainous, with many active volcanoes. Mt. Rantemario (11,286 ft/3,440 m) and Mt. Rantekombola (11,335 ft/3,455 m) are the highest peaks. There are numerous lakes, of which Towuti is the largest and Tondano, with its waterfall, is the most beautiful. Asian and Australian elements are mingled in the fauna, which includes the babirusa (resembling swine), the small wild ox called anoa (found only in the Celebes), the baboon, some rare species of parrot, and a large number of crocodiles. Valuable stands of timber cover much of the island; many forest products are exported. Mineral resources include nickel, gold, diamonds, sulfur, and low-grade iron ore. The mountainous terrain, with only a few narrow coastal plains, limits agriculture; many inhabitants seek their livelihood from the sea, and there are trepang and mother-of-pearl industries. Celebes is, however, a major source of copra for the country, and corn, rice, cassava, yams, tobacco, and spices are grown. The inhabitants are Malayan, except for some primitive tribes in the interior. The largest ethnic group are the Makasarese-Bugis, who are renowned as seafaring traders; they are Muslim. In the north are the Minahassa, who are Christian. The Portuguese first visited the Celebes in 1512. The Dutch expelled the Portuguese in the 1600s and conquered the natives in the Makasar War (1666-69). In 1950, Celebes became one of 10 provinces of the newly created republic of Indonesia; it has since been divided into 4 provinces. The Univ. of North and Central Sulawesi is in Manado, and private universities are in Manado, Gorontalo, and Makasar. The Celebes Sea is north of the island, between it and the Philippines.

Celebrezze, Anthony Joseph (sālabrē'zē), 1910-, U.S. Secretary of Health, Education, and Welfare (1962-65), b. Anzi, Italy. He was taken to the United States as a child. He later practiced law in Cleveland before being elected (1951) to the Ohio state senate. A Democrat, he was elected mayor of Cleveland in 1953 and was reelected four times. In the 1961 election he received almost three quarters of the total vote and carried every ward in the city. President John F. Kennedy appointed him to the cabinet in 1962 to succeed Abraham A. Ribicoff. He resigned in 1965 to become a U.S. circuit court judge.

celery, biennial plant (*Apium graveolens*) of the family Umbelliferae (CARROT family), of wide distribution in the wild state throughout the north temperate Old World and much cultivated also in America. It was first cultivated as a medicinal, then (during the Middle Ages) as a flavoring, and finally as a food, chiefly for soups and salads. The seeds are still used for seasoning. Celery is a variety cultivated chiefly in N Europe for the large edible turnip-like root. Celery is classified in the division MAGNO-

LIOPHYTA, class Magnoliopsida, order Umbellales, family Umbelliferae.

celesta (sil'ē'stā), keyboard musical instrument patented in 1886 by Auguste Mustel of Paris. It consists of a set of steel bars fastened over wood resonators and struck by hammers operated from the keyboard.

Celesta

The compass is four octaves upward from middle C. Its tone is delicate and ethereal. Tchaikovsky, in his *Nutcracker Suite*, was one of the first composers to write for it.

celestial coordinate system: see ECLIPTIC COORDINATE SYSTEM

celestial equator: see EQUATORIAL COORDINATE SYSTEM

celestial horizon, one axis of the HORIZON COORDINATE SYSTEM. It is the great circle on the celestial sphere midway between the observer's zenith and nadir; it divides the celestial sphere into two equal hemispheres. The observer may be unable to see all the stars that lie above his celestial horizon because of obstructions such as buildings, trees, or mountains; he may be able to see some stars that lie below his celestial horizon because of atmospheric refraction.

celestial mechanics, the study of the motions of astronomical bodies as they move under the influence of their mutual GRAVITATION. Celestial mechanics analyzes the orbital motions of planets, comets, asteroids, and natural and artificial satellites within the solar system as well as the motions of stars and galaxies. Newton's laws of motion and his theory of universal gravitation are the basis for celestial mechanics. Calculating the motions of astronomical bodies is a complicated procedure because many separate forces are acting at once, and all the bodies are simultaneously in motion. The only problem that can be solved exactly is that of two bodies moving under the influence of their mutual gravitational attraction. A special case of the problem involving three bodies has been solved, and each of the 12 asteroids called the Trojan Group represent examples of it; they are characterized by being equidistant from both Jupiter and the sun. Since the sun is the dominant influence in the solar system, an application of the two-body problem leads to the simple elliptical orbits as described by KEPLER'S LAWS; these laws give a close approximation of planetary motion. More exact solutions, which consider the effects of the planets on each other, cannot be found in a straightforward way. However, methods accounting for these other influences, or PERTURBATIONS, have been devised; they allow successive refinements of an approximate solution to be made to almost any degree of precision. In computing the motions of stars and the rotations of galaxies, statistical methods are often used.

celestial meridian, VERTICAL CIRCLE passing through the north celestial pole and an observer's ZENITH. It is an axis in the HORIZON COORDINATE SYSTEM.

celestial pole, one of the two points at which the earth's axis of rotation intersects the CELESTIAL SPHERE. The celestial pole is important as a reference point in the EQUATORIAL COORDINATE SYSTEM; the celestial meridian passes through it, as do the hour circles of

the stars. The polestar (see POLARIS) lies within 0.5° of the north celestial pole. Although there is no bright star near the south celestial pole, the Southern Cross (see CRUX) points directly to it. The ALTITUDE of the celestial pole in an observer's hemisphere is equal to the observer's latitude on the earth.

celestial sphere, imaginary sphere of infinite radius with the earth at its center. It is used for describing the positions and motions of stars and other objects. For these purposes, any astronomical object can be thought of as being located at the point where the line of sight from the earth through the object intersects the surface of the celestial sphere. In ASTRONOMICAL COORDINATE SYSTEMS, the coordinate axes are great circles on the celestial sphere. In most systems of this type, the reference points are fixed on the sphere, so the two coordinates needed to locate a body are relatively constant.

Celestine I, Saint (sē'lā'stīn), d. 432, pope (422-32), an Italian, successor of St. Boniface I. The opposition of St. Cyril of Alexandria to NESTORIANISM inspired both sides to appeal to the pope, who judged that Nestorius should be excommunicated if he refused to retract. Celestine sent legates to the Council of Ephesus with orders not to discuss, but to judge. Celestine also advanced orthodoxy in the West by suppressing Semi-Pelagianism in Gaul and by sending Germanus of Auxerre to Britain. He was succeeded by St. Sixtus III. Feast: July 27.

Celestine V, Saint, 1215-96, pope (elected July 5, resigned Dec. 13, 1294), an Italian (b. Isernia) named Pietro del Morrone, successor of Nicholas IV. Celestine's election ended a two-year deadlock among the cardinals over a successor to Nicholas IV. Although he was known for his austere life as a hermit and for his extremist followers, who called themselves Celestines, he proved a most ineffectual pope and an easy prey to opportunists. King Charles II of Naples quickly dominated him and kept the pope in Naples. Celestine granted privileges and offices to who asked for them, turned the duties of his office over to a committee of three cardinals, and kept to his cell. His reign was so chaotic that he himself abdicated after only five months and ordered a new election. His successor, Boniface VIII, canceled his official acts and, to avert possible schism among Celestine's ardent followers, kept Celestine in confinement until his death. Celestine was canonized in 1313. Feast: May 19.

celite (sē'lā'stī) or **celestine** (sē'lā'stīn, -tīn), mineral appearing in blue-tinged or white orthorhombic crystals or in fibrous masses. The natural sulfate of strontium, SrSO₄, it is important as a source of strontium and of certain of its compounds, e.g., strontium hydroxide, used in refining beet sugar and strontium nitrate, used in red signal flares. Occurs in England, in Sicily, and in the United States on islands in Lake Erie and also in Pennsylvania, New York, and Ohio.

celiac disease: see SPRUE

celiac plexus: see SOLAR PLEXUS

celibacy, voluntary refusal to enter the married state with abstinence from sexual activity. It is one of the typically Christian forms of ASCETICISM. In ancient Rome the VESTAL virgins were celibates, and successful MONASTICISM has everywhere been accompanied by celibacy as an ideal. Among ancient Jews the SEPTUAGINT were celibates. In the Judaism of postexilic times, sexual activity in the married state was considered lawful and good, otherwise it was unlawful. This rule remained in Christianity. But the mainstream of Christian tradition from the start has interpreted the Gospels and epistles as teaching that voluntary celibacy, especially virginity, is peculiarly meritorious. 1 Cor. 7. In the Orthodox Eastern churches, monks and nuns are celibates, but the ordinary parish clergy are married; generally they may be married before ordination and may not remain Eastern bishops are widowers or unmarried, but they are usually from monasteries rather than parishes. In the West, celibacy has been common among the parish clergy since the 3d cent., and time passed, the Holy See became adamant in opposing the marriage of the secular clergy. The problem of reformers in the early Middle Ages was to end concubinage among the clergy, marriage of the clergy having fallen into disrepute; the violations were of the laws of chastity rather than of marriage. In the 12th cent. the most stringent laws enacted, and by the time of the Reformation popular opinion tolerated neither concubinage nor marriage in the clergy. The Roman Catholic Church the Roman rite allows no sacerdotal marriage, the clergy of Eastern rites united with the Holy

are often married before ordination. Protestants have rejected voluntary celibacy as an ideal. A standard apologetic explanation of the Western discipline of celibacy for parish priests is that marriage would prevent the priest from giving his complete attention to his parish. Since the Second Vatican Council, the Roman Catholic Church has restored the diaconate to a prominent place in the ministry and accepts married men into it. In the face of criticism, however, the council, Pope Paul VI, and various national groupings of bishops have insisted on the retention of celibacy for priests.

Céline, Louis Ferdinand (lɔ̃ʁ ʃɛʁdɛnɑ̃ ʁ sɑ̃lɛ̃n'), 1894-1961, French author, whose real name was Louis Ferdinand Destouches. Céline wrote sensationally misanthropic novels, such as *Journey to the End of Night* (1932, tr. 1934) and *Death on the Installment Plan* (1936, tr. 1938). Based on his experiences as a doctor during World War I, these works portray the violence of humanity through frank, often obscene, language. *Mea Culpa* (1937, tr. 1937) is a renunciation of Communism. His later works include the autobiographical novels *Castle to Castle* (1957, tr. 1968), *North* (tr. 1972), and *Rigadoon* (1961, tr. 1974), which form a trilogy recounting Céline's nightmarish journey through Germany to Denmark in the last days of the Third Reich. See study by Erika Ostrovsky (1967).

Celje (tsě'lyě), city (1971 pop. 157,515), NW Yugoslavia, in Slovenia. It is an industrial center where agricultural machinery, textiles, and chemicals are manufactured. Founded (1st cent. AD) by the Roman Emperor Claudius, it was the seat (1341-1456) of the powerful Slovenian counts of Celje (or Cilli). In the city are a 13th-century monastery and a 16th-century palace.

cell, in biology, the unit of structure and function of which all plants and animals are composed. The cell is the smallest unit in the living organism that is capable of carrying on the essential life processes sustaining metabolism for the production of energy and reproducing for the self-perpetuation of the organism. There are many unicellular organisms (e.g., BACTERIA and PROTOZOA) in which the single cell performs all the life functions. In higher organisms, a division of labor has evolved in which groups of cells have differentiated into specialized TISSUES, which in turn are grouped into organs and organ systems. Because almost all cells are microscopic, knowledge of the component cell parts has increased proportionately to the development of the MICROSCOPE and other specialized instruments and of allied experimental techniques. In both plants and animals, the cell is differentiated into the CYTOPLASM, the cell membrane, which surrounds it, and the nucleus, which is contained in it. In plant cells

there is, in addition to the membrane, a thickened cell wall, usually composed chiefly of CELLULOSE secreted by the cytoplasm. Included in the cytoplasm are many discrete bodies (called organelles), vacuoles containing cell sap, and inert granules and crystals. The most important of the organelles are the chloroplasts (occurring only in the cells of green plants) and the mitochondria. Both these organelles are the "power plants" of life that supply the organism with energy. The chloroplasts convert energy from sunlight by the process of PHOTOSYNTHESIS, the mitochondria extract energy by breaking down the chemical bonds in molecules of complex nutrients during oxidation and respiration (see ADENOSINE TRIPHOSPHATE). Other organelles in the cytoplasm are the lysosomes, which contain digestive enzymes, the centrosomes, which function during cell division, the Golgi apparatus, which functions in the synthesis, storage, and secretion of various cellular products, and, in plants primarily, other plastids in addition to the chloroplasts. The cytoplasm also contains ribosomes, which are the sites of protein synthesis, and the endoplasmic reticulum, a highly convoluted system of membranes believed to be responsible for the transmission of substances from outside the cell to the nucleus. It also appears to be the means by which the nucleus communicates with the rest of the cell, in its capacity as "director" of the cell's total activity. The nucleus itself, separated from the cytoplasm by an inner and outer nuclear membrane, consists of a nuclear ground substance in which may be contained one or more nucleoli as well as the long filaments of chromatin that coil tightly into CHROMOSOMES during MITOSIS. The chromatin directs the metabolic functions of the whole cell and, during cell division, passes on its "code" to the new cell by exactly replicating itself. Among those who contributed to early knowledge of cells through their use of the microscope were Antony van LEEUWENHOEK, Robert HOOKE, and Marcello MALPIGHI. In the 19th cent. Matthias J. SCHLEIDEN and Theodor SCHWANN developed what is now known as the cell theory. The very careful observations made by these and other men were primarily of the physical and mechanical attributes of the cell. Just as scientists now realize that atoms cannot be thought of only as physical units of matter but must also be described as manifestations of energy, so living cells too must be viewed as more than a complicated architecture of physical "building blocks" or components. It is now known that many processes, such as the passage of substances across the cell membrane, are a series of chemical and electrostatic phenomena rather than purely mechanical functions. The study of the cell is called cytology, the study of its chemical processes is cytochemistry. See A. G. Loewy and Philip Siekevitz, *Cell Structure and Function* (2d ed. 1969), C. P. Swanson, *The Cell* (3d ed. 1969), E. J. Ambrose and D. M. Easty, *Cell Biology* (1970), Ernest Borek, *The Sculpture of Life* (1973).

cell, in electricity, source of electric current that operates by chemical action, converting chemical energy into electrical energy. A cell consists essentially of two dissimilar substances, a positive ELECTRODE and a negative electrode, that conduct electricity, and a third substance, an ELECTROLYTE, that acts chemically on the electrodes. A group of several such cells connected together is called a battery. One simple form of cell consists of a glass jar containing a dilute solution of acid into which are introduced the electrodes of the cell, a strip of copper and a strip of zinc. When the two electrodes are connected externally by a conductor, such as a piece of copper wire, an electric current is produced in the wire. Electrons leave the zinc electrode and enter the wire. Upon reaching the copper electrode, they pass back into the solution. There they are captured by the hydrogen ions of the acid, forming hydrogen gas that evolves from the solution on and near the copper electrode. The zinc electrode diminishes in size as the action proceeds, the copper is unaffected, but the hydrogen bubbles, collecting rapidly in great numbers, form a covering over the copper electrode and interfere with the cell's action—a condition called polarization. There are several kinds of cells, differing in electrode material and electrolyte. The voltage, or electromotive force (abbreviated emf), depends upon the chemical properties of the substances used but is not affected by the size of the electrodes or the amount of electrolyte. The Leclanché cell is a single-fluid cell having a negative electrode of zinc, a positive electrode of carbon, and an electrolyte of ammonium chloride solution. It produces an emf of 1.46 volts. Similar to the Leclanché cell is the common dry cell, so

called because the electrolyte is in the form of a paste instead of a pure liquid solution. The cell parts are contained in a zinc cylinder that acts as the negative electrode. The cylinder is closed at one end and is lined on its entire inside surface with a layer of absorbent material. A carbon rod surrounded by manganese dioxide is inserted into the cylinder, forming the positive electrode of the cell. The manganese dioxide is mixed with carbon granules to improve its conductivity and to absorb the electrolyte. The electrolyte consists of a solution composed mainly of water, zinc chloride, and ammonium chloride. The open end of the cylinder is sealed with pitch, and the entire cell is enclosed in a jacket with a tin-plated top and bottom that enables the cell to be electrically connected to a circuit. The principal parts of an alkaline dry cell are a manganese dioxide positive electrode, a zinc negative electrode, and an electrolyte of alkaline potassium hydroxide. Such a cell can operate up to 10 times as long as a common dry cell. The principal parts of a mercury dry cell are a positive electrode of mercuric oxide, a negative electrode of zinc, and an electrolyte of potassium hydroxide. This cell has a relatively constant output voltage during most of its operating life, and it maintains its ability to generate current even after several years of storage. See BATTERY, ELECTRIC CIRCUIT, FUEL CELL, SOLAR CELL.

cella (sě'l'a), that portion of a Roman temple which was enclosed within walls, as distinct from the open colonnaded porticoes which formed the rest of it. It corresponds to the NAOS in Greek temples. The cella housed the statue of the deity to whom the temple was dedicated and was also used as a treasury. Sometimes it extended the whole width of the building, instead of being kept entirely within free-standing colonnades. The cella was generally a single chamber, but there were sometimes two chambers, or even three, as in the temple of Jupiter, on the Capitoline Hill.

cell division. See CELL, MITOSIS, MEIOSIS.

Celle (tsě'l'a), city (1970 pop. 57,155), Lower Saxony, N West Germany, on the Aller River. Its manufactures include food products, machinery, chemicals, and textiles. Celle was chartered in 1294. Its castle was the residence of the dukes of Lüneburg-Celle, a branch of the house of Braunschweig, from 1378 to 1705. The castle still houses a famous 17th-century Baroque theater.

Cellini, Benvenuto (chě'lě'ně, Ital. bānvānō'tō chāl-lě'ně), 1500-1571, Italian sculptor, metalsmith, and author. His remarkable autobiography, written between 1558 and 1562, reads like a picaresque novel. It is, in fact, one of the most important documents of the 16th cent. Cellini tells of his escapades with the frankness and consummate egoism characteristic of the Renaissance man. He was born in Florence, the son of a musician, he studied music until his 15th year, when he was apprenticed to a goldsmith. Banished from Florence after fighting a duel, he went from town to town working for local goldsmiths and in 1519 went to Rome. Under the patronage of Pope Clement VII he became known as the most skillful worker in metals of his day, producing medals, jewel settings, caskets, vases, candlesticks, metal plates, and ornaments. Imprisoned on false charges, he worked at the court of Francis I at Paris after his release. He returned to Florence in 1545 and remained until his death in 1571. The decorative quality of his work, its intricate and exquisite detail and workmanship, are typical of the best of the period. Unfortunately, most of his works have perished. The famous gold and enamel saltcellar of Francis I and the gold medallion of Leda and the Swan (both Vienna Mus.) are perhaps the best examples of those remaining. His sculptures, most of them executed in the later Florentine period, include the colossal bronze bust of Cosimo I (Bargello), the bronze bust of Altoviti (Gardner Mus., Boston), the *Nymph of Fontainebleau* (Louvre), the life-size *Crucifixion*, a white marble Christ on a black cross (Escorial), and the renowned *Perseus with the Head of Medusa* (Loggia dei Lanzi, Florence), a beautifully wrought bronze statue surmounting a marble pedestal lavishly adorned with statuettes and carvings. See translation of his autobiography by J. A. Symonds (1888, many later editions).

cello or 'cello. See VIOLIN.

cellophane, thin, transparent sheet or tube of regenerated CELLULOSE. Cellophane is used in packaging and as a membrane for DIALYSIS. It is sometimes dyed and can be moisture-proofed by a thin coating of PYROXYLIN. There are several steps in the preparation of cellophane from raw cellulose. The cellulose is first treated with an alkali, e.g., sodium hydroxide,

Animal cell

and mixed with carbon disulfide to form viscose (see *VISCOSE PROCESS*). The viscose is aged for several days and then forced through a straight or circular slit into a dilute acid solution. The dissolved cellulose precipitates, and this regenerated cellulose has a lower molecular weight and a less orderly structure than the cellulose from which it is formed.

cellosolve: see GLYCOL

celluloid [from *cellulose*], transparent, colorless synthetic PLASTIC made by treating cellulose nitrate with camphor and alcohol. Celluloid was the first important synthetic plastic and was widely used as a substitute for more expensive substances, such as ivory, amber, horn, and tortoise shell. It is highly flammable and has been largely superseded by newer plastics with more desirable properties. It has been used for combs, brush handles, billiard balls, knife handles, buttons, and other useful objects.

cellulose, chief constituent of the CELL walls of plants. Chemically, it is a carbohydrate that is a high molecular weight polysaccharide. Raw cotton is composed of 91% pure cellulose, other important natural sources are flax, hemp, jute, straw, and wood. Cellulose has been used for the manufacture of paper since the 2d cent. Insoluble in water and other ordinary solvents, it exhibits marked properties of absorption. Because cellulose contains a large number of HYDROXYL GROUPS, it reacts with acids to form ESTERS and with alcohols to form ETHERS. Cellulose derivatives include guncotton, fully nitrated cellulose, used for explosives, celluloid (the first plastic), the product of cellulose nitrates treated with camphor, collodion, a thickening agent, and cellulose acetate, used for plastics, lacquers, and fibers such as RAYON.

Celman, Miguel Juárez: see JUÁREZ CELMAN

Cheloron de Blainville, Pierre Joseph de (pyér zhôzêf' sâlarôN' da biâNvêl'), 1693–1759, French Canadian soldier, b. Montreal. He was commandant at Michilimackinac (1734–42), Detroit (1742–43, 1750–53), Niagara (1744–46), and Crown Point (1746–47). In 1739–40 he led a detachment south to what is now Tennessee to cooperate with the Sieur de Bienville in a campaign against the Chickasaw Indians and was decorated for his conduct. His most famous service was as leader of the expedition sent by the governor of New France in 1749 to take official possession of the Ohio valley and warn English traders to leave.

Celsius, Anders (an'dars sêl'sëus), 1701–44, Swedish astronomer. While professor of astronomy at the Univ. of Uppsala (1730–44), he traveled through Germany, France, and Italy, visiting great observatories. At Nuremberg in 1733 he published a collection of 316 observations of the aurora borealis made by himself and others. While in Paris he was instrumental in bringing about an expedition (of which he became a member) organized by the French Academy for the measurement of an arc of the meridian in Lapland (1736). He supervised the building of an observatory at Uppsala in 1740 and became its director, while there he pioneered in the measuring of the magnitude of stars, using photometric methods. In 1742 he invented the centigrade (or Celsius) thermometer. His works include *De observationibus pro figura telluris determinanda* (1738).

Celsius temperature scale (sêl'sëas), TEMPERATURE scale according to which the temperature difference between the reference temperatures of the freezing and boiling points of water is divided into 100 degrees. The freezing point is taken as 0 degrees Celsius and the boiling point as 100 degrees Celsius. The Celsius scale is widely known as the centigrade scale because it is divided into 100 degrees. It is named for the Swedish astronomer Anders Celsius, who established the scale in 1742. Temperatures on the Celsius scale can be converted to equivalent temperatures on the FAHRENHEIT TEMPERATURE SCALE by multiplying the Celsius temperature by 9/5 and adding 32° to the result, according to the formula $9/5C + 32 = F$.

Celsus (sêl'sas), 2d cent., Roman philosopher, an aggressive antagonist of Christianity. His works have been lost, but the substance of his *True Discourse* is given by Origen in his *Against Celsus*, ed. and tr. by Henry Chadwick (1953, repr. 1965).

Celsus, Aulus Cornelius, fl. A.D. 14, Latin encyclopedist. His only extant work, *De re medicina*, consists of eight books on medicine believed to have been written A.D. c. 30. He was not esteemed as a scientist in his time, but he was one of the first works to be rediscovered and printed (Florence, 1478) during the Renaissance and was very influential, largely because of its splendid Latin style. It was

translated by James Grieve in 1756 and by W. G. Spencer in 1935. Celsus' first name is also written Aurelius.

Celt (sêlt, kêlt) or **Kelt** (kêlt) 1 One who speaks a Celtic language or who derives ancestry from an area where a Celtic language was spoken, i.e., one from Ireland, the Scottish Hebrides and Highlands, the Isle of Man, Wales, Cornwall, or Brittany. 2 A member of a group of peoples first found early in the 2d millennium B.C. in SW Germany and E France. The Celts were a group of tribes speaking Indo-European dialects. Armed with iron weapons and mounted on horses, they spread rapidly over Europe, crossing into the British Isles, moving S over France, Italy, and Spain, fighting the Macedonians, and penetrating into Asia Minor, where they raided Hellenistic centers. The Celts introduced the newly developed iron industries. Their wealth from trade and from raiding helped to maintain their dominance over Central Europe during the Iron Age. The LA TÈNE culture developed among the Celts. Greek influences that stimulated Celtic culture included the introduction of the chariot and of writing. Art flourished in richly ornamented styles. The Celts lived in semifortified villages, with a tribal organization that became increasingly hierarchical as wealth was acquired. Priests, nobles, craftsmen, and peasants were clearly distinguished, and the powers of the chief became kinglike. The Celts believed in a demonic universe and relied on the ministry of the DRUIDS. Much Western European folklore is derived from the Celts. By the 4th cent. B.C. they could no longer withstand the encroaching Germanic tribes, and they lost most of their holdings in the north and in W Germany. From that time on, Celtic history becomes confused with that of the many unsettled tribes in Europe. Celtic language and culture were vanously dispersed among peoples of little historical identity, and until the 20th cent. historians obscured the very important differences among these groups by naming them all Celts. Further confusion has resulted from the designation of the Celts as a racial group. To the Greeks and Romans, the Celts were tall, muscular, and light-skinned, but it is believed that these were qualities of the Celt warriors rather than Celts in general. The term *Celtic* is actually a cultural one, unrelated to physical heredity. It implies a cultural tradition maintained through many centuries of common history in the same general area. See also IRON AGE. See T. G. E. Powell, *The Celts* (1958, rev. ed. 1959), Henri Hubert, *The Rise of the Celts* (1966), Nora Chadwick, *The Celts* (1970).

Celtes, Conradus Protucius (kôn'radôs prô'tôitsêas kêl'tas), pseud. of **Konrad Pickel** (kôn'rat pîk'el), 1459–1508, German scholar and humanist. He traveled widely, lectured at several universities, became librarian to Maximilian I, and founded various societies dedicated to classical learning. He was made (1487) first German poet laureate. Of his works—didactic, lyric, and dramatic—his odes in the manner of Ovid and Horace are noteworthy. Celtes discovered the works of the nun HROTSWITH or Roswitha von Gandersheim.

Celtic art. The earliest clearly Celtic style in art was developed in S Germany and E France by tribal artisans of the mid- to late 5th cent. B.C. With the dispersal of Celtic tribes during the next five centuries, their characteristically sophisticated designs were spread throughout Europe and the British Isles. Although some classical influence was evident in Celtic work, most of the complex, linear, highly ornamented pieces that survive reveal an inspiration of great originality and power. Stylized and fantastic plant and animal forms, as well as strong, geometrical, intertwining patterns, decorated the surfaces of household and ritual vessels, weapons, and body ornaments. The principal materials used in the surviving pieces of metalwork, most numerous of the remains, are gold and bronze. Some painted ceramics and enamel work survive as well from the early period. Frequently, Greek-inspired arabesque motifs were modeled in low relief. Artisans of the British Isles adapted Celtic design in the 3d cent. B.C., producing distinctive, vigorous works that soon owed little to Continental originals. Asymmetrical line engraving gained ascendancy in the 1st cent. B.C. for decorated weaponry and utensils. Two hundred years later Roman influence had effectively overwhelmed Celtic styles, although typical motifs were retained well into the medieval period. Numerous first-rate examples of Celtic craftsmanship may be seen at the British Museum. See J. R. Allen, *Celtic Art in Pagan and Christian Times* (1912), Paul Jacobsthal, *Early Celtic Art* (2 vol., 1944), George Bain, *The Methods of Construction of Celtic Art* (1951), C. F.

Fox, *Pattern and Purpose: A Survey of Early Celtic Art in Britain* (1958), Ian Finlay, *Celtic Art* (1973).

Celtic Church, name given to the Christian Church of the British Isles before the mission (597) of St. Augustine of Canterbury from Rome. Founded in the 2d or 3d cent. by missionaries from Rome or Gaul, the church was well established by the 4th cent. when it sent representatives to the Synod of Arles (314) and to the Council of Rimini (359). It continued to spread in the 5th cent. due to the work of St. Ninian in Scotland, St. Dyfrig in Wales, and St. Patrick in Ireland. The heresies of the 4th cent. that played a significant role in church affairs on the Continent seem to have had little influence in Britain, and although it was the home of Pelagius (see PELAGIANISM), his teachings did not gain followers there until 421 with an influx of refugees from the Continent. The missions of St. Germanus of Auxere (429 and 447) against the Pelagians in Britain and the spread of monasticism from Gaul attest to contacts with the church on the Continent. The Saxon invasions, beginning c. 450, all but destroyed Celtic culture, dealing a deathblow to the Celtic Church in England through the destruction of the towns in which it had gained its greatest following. The few small Christian communities that survived were to be found in Wales and Ireland and in N and SW Britain. The period of peace that followed the British defeat of the Saxons at Mons Badonicus (c. 500) once again allowed for growth of the Celtic Church (especially through the work of St. COLUMBA), although isolation from the Continent continued until the mission of St. Augustine. Having converted King Æthelbert of Kent to Christianity, St. Augustine attempted to convince the leaders of the Celtic Church to change those practices (such as the dating of Easter and the forms of baptism and tonsure) that were at variance with the Roman Church and to accept the imposition of a diocesan organization on the essentially monastic structure of their church. He failed, and it was not until the Synod of Whitby (664, see WHITBY, SYNOD OF) that such agreement was largely reached, although independent Celtic churches continued on for some time in Wales and Ireland. See N. K. Chadwick, *The Age of the Saints in the Early Celtic Church* (1961), James Bulloch, *The Life of the Celtic Church* (1963).

Celtic languages (sêl'tik, kêl'-), subfamily of the Indo-European family of languages. At one time, during the Hellenistic period, Celtic speech extended all the way from Britain and the Iberian Peninsula in the west across Europe to Asia Minor in the east, where a district still known as Galatia recalls the former presence there of Celtic-speaking Gauls. Later, however, in the course of the Roman conquest, Celtic speech tended to yield to Latin, and by the 5th cent. A.D. Celtic had virtually disappeared from continental Europe. Today the Celtic languages that have survived into the modern era are limited almost entirely to the British Isles and French Brittany, where these tongues are spoken by a total of about three million people. The Celtic subfamily is made up of three groups of languages: the Continental, the Brythonic (also called British), and the Goidelic (also called Gaelic). Continental Celtic, which includes all Celtic idioms on the Continent with the exception of Breton, died out following the fall of the Western Roman Empire in the late 5th cent. A.D. The principal example of this group is the now extinct language Gaulish, for little remains of any other Continental Celtic tongues. Gaulish was once the language of Gaul proper (now modern France). Evidence of Gaulish is found both in words and in personal and proper names referred to by ancient Greek and Latin writers as well as in more than a hundred Gaulish inscriptions from Gaul and N Italy (ranging in date from the 3d cent. B.C. to the 3d cent. A.D.). Coins and Greek and Latin inscriptions in Europe also preserve Celtic place-names and personal names. Yet the material as a whole is quite limited, furnishing only a number of proper names, a small vocabulary, and certain indications regarding the sounds and grammar of Gaulish and of Continental Celtic in general. The Brythonic group includes Breton, Cornish, and Welsh. They are all descendants of British, the Celtic language of the ancient Britons of Caesar's day. The emergence of Welsh, Cornish, and Breton from British as separate languages probably took place during the 5th and 6th cent. A.D. and was a result of the Germanic invasions of Britain. Breton today reaches more than one million people in Brittany, most of whom are bilingual, speaking also French. It is not surprising that Breton, unlike Welsh, has many loan words from French. Breton is by no means de-

scended from ancient Gaulish, but rather from the Celtic dialects taken by Welsh and Cornish immigrants from the British Isles who were fleeing Germanic invasions and found refuge in Armorica (now French Brittany) in the 5th and 6th cent. A.D. Surviving literary documents in Breton go back only as far as the 15th cent., but the earlier stages of the language are known through glosses and proper names (see BRETON LITERATURE). Cornish, once the Celtic language of Cornwall, became extinct in the late 18th cent. Cornish proper names in manuscripts of the 10th cent. A.D. are the oldest recorded traces of the language. A number of Cornish place-names have survived, and some Cornish words appear in the English spoken in Cornwall today. The Cornish language was written in the Roman alphabet. It is not noted for an outstanding literature (see CORNISH LITERATURE). Modern efforts to revive Cornish have had little success. Welsh (called *Cymraeg* or *Cymric* by its speakers) is the language today of about one million people, chiefly in Wales (a western peninsula of Great Britain) but also in the United States, to which a number of Welsh people have migrated. Most speakers of Welsh in Great Britain also use English, with perhaps 50,000 limiting themselves to Welsh. The oldest extant Welsh texts are from the 8th cent. A.D. (see WELSH LITERATURE). Welsh and Breton have discarded the originally numerous Indo-European cases for the noun and use only one case. Both employ the Roman alphabet for writing. The accent in Welsh and Breton generally falls on the next-to-last syllable, with the exception of a single Breton dialect that has the accent on the last syllable. The third group of the Celtic subfamily is Goidelic, to which Irish (also called Irish Gaelic), Scottish Gaelic, and Manx belong. The term *Erse* is used as a synonym for Irish and sometimes even for Scottish Gaelic. All the modern Goidelic tongues are descendants of the ancient Celtic speech of Ireland. It is thought that the Celtic idiom first came to Ireland shortly before the Christian era. An official language of Ireland, Irish is spoken by approximately 900,000 people in that country and by 50,000 more in Northern Ireland, though most speakers of Irish also use English (see IRISH LANGUAGE). Scottish Gaelic is the tongue of about 100,000 persons in the Highlands of Scotland and an additional 30,000 in Canada. Most of these people also speak English. Gaelic speech began to reach Scotland in the late 5th cent. A.D., when it was brought by the Irish invaders of that country. However, a truly distinctive Scottish Gaelic did not appear before the 13th cent. The chief difference between Scottish Gaelic and Irish results from the substantial Norse influence on the former. There are four cases for the noun (nominative, genitive, dative, and vocative) in Scottish Gaelic, which uses the Roman alphabet (see GAELIC LITERATURE). Manx is a dialect of Scottish Gaelic that was once spoken on the Isle of Man, but it has almost entirely died out there. First recorded in writing in the early 17th cent., Manx does not have an important literature. It shows a strong Norse influence and is written in the Roman alphabet. The rules of pronunciation for all the Celtic languages are extremely complicated. For example, the final sound of a word frequently brings about a phonetically changed initial consonant of the next word, as in Irish *fuil*, "blood," but ar *bhfuil*, "our blood." Another example is Welsh *pen*, "head," but *fy mhen*, "my head." In order to look up a word in the dictionary, one has to be familiar with these rules of phonetic change, or mutation. There are only two genders in the Celtic languages, masculine and feminine. Words of Celtic origin that have been absorbed by English include *bard*, *blarney*, *colleen*, *croak*, *dolmen*, *druid*, *glen*, *slogan*, and *whiskey*. An interesting feature of Celtic languages is that in several characteristics they resemble some non-Indo-European languages. These characteristics include the absence of a present participle and the use instead of a verbal noun (found also in Egyptian and Berber), the frequent expression of agency by means of an impersonal passive construction instead of by a verbal subject in the nominative case (as in Egyptian, Berber, Basque, and some Caucasian and Eskimo languages), and the positioning of the verb at the beginning of a sentence (typical of Egyptian and Berber). See INDO-EUROPEAN. See Henry Lewis and Holger Pedersen, *A Concise Comparative Celtic Grammar* (1937); K. H. Jackson, *Language and History in Early Britain* (1953).

Celtic religion: see DRUIDS

cement, hydraulic, building material typically made by heating a mixture of limestone and clay

until it almost fuses and then grinding it to a fine powder. Once it is mixed with water, cement will harden even if immersed in water. It may also be mixed with water and aggregates (crushed stone, sand, and gravel) to form CONCRETE. A cement made by grinding together lime and a volcanic product found at Pozzuoli on the Bay of Naples (hence called pozzuolana) was used in ancient Roman construction works, notably the Pantheon. During the Middle Ages the quality of cements declined. In the 18th cent. John Smeaton, an English engineer, was commissioned to rebuild the Eddystone lighthouse off the coast of Cornwall, England. In the course of the project he found that a natural cement made from clayey limestone was superior to other available cements for a building that must stand in water. The production of natural cement began in the United States c. 1820. It was made by processing cement rock from various deposits, such as those found in Rosendale, N.Y. In 1824, Joseph Aspdin, an English bricklayer, patented a process for making what he called portland cement, a natural cement with properties superior to its predecessors. Modern portland cement is made by mixing substances containing lime, silica, alumina, and iron oxide and then heating the mixture until it almost fuses. During the heating process dicalcium and tricalcium silicate, tricalcium aluminate, and a solid solution containing iron are formed. Gypsum is later added to these products during a grinding process. Portland cement is by far the most widely used hydraulic cement. Natural cement, although slower-setting and weaker than portland cement, is still employed to some extent and is occasionally blended with portland cement. Aluminous, or aluminite, cement is used when a quick-setting cement is necessary. It is made from limestone and bauxite.

cemetery, name used by early Christians to designate a place for burying the dead. First applied in Christian burials in the Roman CATACOMBS, the word *cemetery* came into general usage in the 15th cent. Group burials have been found in Paleolithic caves, and fields of prehistoric grave mounds, or BARROWS, are located throughout Europe, Asia, and North America. In the ancient Middle East, graves were often grouped around temples and sanctuaries. In Greece the dead were buried outside the city walls along the roads leading into the city in a necropolis (city of the dead). Christian belief in resurrection made chapel crypts and churchyards desirable for burial, but overcrowding and the rise of urban centers made it necessary to establish cemetery plots outside the city limits. Graveyards of all periods tend to reflect the familial and class groupings of their living society. Among the many beautiful and historic cemeteries of Europe are the Pere-Lachaise in Paris and the Campo Santo in Pisa. A noteworthy U.S. cemetery is the ARLINGTON NATIONAL CEMETERY. The National Park Service also maintains cemeteries (see NATIONAL PARKS AND MONUMENTS, table). See FUNERAL CUSTOMS, GRAVE, TOMB.

Cenchrea (sĕn'krĕā) or **Cenchreae** (-krĕ-ē'), port of ancient Greece, on the Saronic Gulf, ESE of Corinth. Acts 18:18, Rom. 16:1.

Cenci, Beatrice (bātrĕ'chā chān'chē), 1577-99, Italian noblewoman, tragic figure of the late Renaissance. Her father, Francesco Cenci (1549-98), was a Roman noble noted for his viciousness. In 1595 he imprisoned Beatrice and her stepmother Lucrezia in a lonely castle, his cruel treatment finally led Beatrice, with the complicity of her stepmother, her brothers, and perhaps her lover, to procure his murder. After a famous trial (1599) the conspirators were put to death. This tragedy, often cited as an example of the dissipation and cruelty of 16th-century Rome, is the subject of, among other works, Francesco D. Guerrazzi's novel *Beatrice Cenci*, Percy Bysshe Shelley's tragedy *The Cenci*, and Alberto Ginastera's opera *Beatrice Cenci*. A painting by Guido Reni in the Barberini Palace, Rome, is sometimes said to represent her. See Corrado Ricci, *Beatrice Cenci* (1923, tr. 1925).

Cendrars, Blaise (blĕz saNdrar'), 1887-1961, French writer. He was at various times an art critic, a journalist, and a film director, and he traveled widely, notably in China and Africa. For a while he was associated with *cubisme*, a movement that attempted to apply the principles of cubism to literature. He was particularly noted for his fast-paced adventure novels. His works include *Du Monde entier* (1919), poems, *Petits Contes negres pour les enfants blancs* (1928, tr. *Little Black Stories for Little White Children*, 1929), stories, and the novel *L'Or* (1925, tr. *Sutler's Gold*, 1926).

Cenis, Mont (mōN sənĕ'), Ital. *Moncenisio*, Alpine pass, 6,831 ft (2,082 m) high, on the French-Italian border. It is one of the great invasion routes in Italian history. Napoleon I built a new road there in 1810. The Mont Cenis railroad tunnel (c. 8 mi/13 km long) was built in 1871 and connects Turin, Italy, with Chambéry, France, via Modane, France; it is one of the world's longest railroad tunnels.

Cennini, Cennino (chān-nĕ'nō chān-nĕ'nĕ), c. 1370-1440, Florentine painter, follower of Agnolo Gaddi. None of his paintings is extant. He is most famous for having written the *Libro dell'arte* (written 1400?, tr. *The Craftsman's Handbook*, 1933). This treatise marks a transition between medieval and Renaissance concepts of art. Closely following the tradition of Giotto, he offers detailed advice about the established technique of painting. At the same time, Cennini was one of the first to call for imagination in art and to advocate the elevation of painting from artisanship to the fine arts.

Cenozoic era (sĕnəzō'ik, sĕn-), fifth and last major division of geologic time (see GEOLOGIC ERAS, table). Following the disturbances of the late MESOZOIC ERA, the geography of North America at the beginning of the Cenozoic attained substantially its present form. The only areas subjected to inundation by shallow marine waters were the Atlantic and Gulf coasts and a small area on the Pacific coast. It is in the Cenozoic era that man appeared. The life of this era has been dominated by the mammals, which were most numerous in the TERTIARY PERIOD and have declined, with the exception of a few specialized types, in the QUATERNARY PERIOD. The elapsed portion of the Cenozoic is about 65,000,000 years, less than half the estimated duration of the Mesozoic. See also GEOLOGY.

censor (sĕn'sər), title of two magistrates of ancient Rome (from c. 443 B.C. to the time of Domitian). They took the census (by which they assessed taxation, voting, and military service) and supervised public behavior. They also had charge of public works and filled vacancies among the senators and knights.

Censorinus (sĕnsōrī'nəs), fl. c. 238, Roman grammarian. He wrote *De die natali* [on the day of birth], an essay partly astrological, partly chronological, which affords much information on ancient methods of computing time.

censorship, official prohibition or restriction of any type of expression believed to threaten the political, social, or moral order. It may be imposed by governmental authority, local or national, by a religious body, or occasionally by a powerful private group. It may be applied to the mails, speech, the press, the theater, dance, art, literature, photography, the cinema, radio, or television. Censorship may be either preventive or punitive, according to whether it is exercised before or after the expression has been made public. The practice has been in use since ancient times, and was particularly thoroughgoing under autocratic and heavily centralized governments, from the Roman Empire to the totalitarian states of the 20th cent., especially Fascist Italy, Nazi Germany, and the Communist states. In other countries, censorship is accepted as inevitable in times of war, but it has been imposed to varying degrees even in peacetime. In the Middle Ages the attempts to uproot heresy and the establishment of the Inquisition were examples of censorship, as are the modern instances of book burning. The absolute monarchs of the 17th and 18th cent. imposed strict controls, and because the Reformation had resulted in a reshuffling of the relations between CHURCH AND STATE, these controls were used to persecute opponents of the established religion of a particular state, Roman Catholic or Protestant. A form of book banning was adopted by the Roman Catholic Church in the INDEX, a list of publications that the faithful were forbidden to read. The last edition of the Index was published in 1948. Pope Paul VI, in 1966, decreed that it would be discontinued but that papal lists of prohibited books would continue to be issued. Paradoxically, in the lands under Calvinist domination (such as Geneva, Scotland, and England of the Puritan period), where the ideals of liberty and freedom first blossomed, regulation of private conduct and individual opinion was rigorous, and censorship was strong. In the Soviet Union, Boris Pasternak's *Doctor Zhivago*, which won the 1958 Nobel Prize in Literature, was not permitted publication, and the novels of Aleksandr Solzhenitsyn, considered by many as masterpieces, have been banned since 1966. In Britain during the 19th and 20th cent., the object of censorship has most often been literature regarded as obscene. With the passage of the

Obscene Publications Act in 1857, there followed many criminal prosecutions and seizures of so-called obscene books. This law remained in effect for over a century when a new one superseded it in 1959. The new law provided that the opinion of artistic or literary experts could be submitted as evidence in deciding obscenity cases and that an alleged obscene work had to be judged as a whole rather than in part. However, in 1971 the editors of an underground periodical, *Oz*, were convicted in a much publicized trial for violating postal laws. An appeal court held that a periodical need not be judged as a whole, an apparent reversal of the 1959 act, which had stated otherwise. Censorship has existed in the United States since colonial times, but its emphasis has gradually tended to shift from the political to the sexual. Attempts to suppress political freedom of the press in the American colonies were recurrent, a notable example was the trial of John Peter Zenger. The Bill of Rights in the U.S. Constitution guarantees freedom of the press, of speech, and of religion. Nevertheless, there have been examples of official political censorship, notably in the actions taken under the Sedition Act of 1798 (see ALIEN AND SEDITION ACTS), suppression of abolitionist literature in the antebellum South, and local attempts to repress so-called radical publications in the 19th and 20th cent. Long before World War I there were vigilante attacks, such as those by Anthony COMSTOCK, on what was reckoned obscene literature, and the U.S. Post Office expanded (1873) its ban on the shipment of obscene literature and art, but it was after World War I that public controversy over censorship raged most fiercely. Until the Tarriff Act was amended in 1930, many literary classics were not allowed entry into the United States on grounds of obscenity. Even subsequently, attempts persisted, and *Ulysses* by James Joyce was not allowed into the country until after a court fight in 1933. Other works of literature involved in obscenity cases included *Lady Chatterley's Lover* by D. H. Lawrence, *Tropic of Cancer* by Henry Miller, and *Fanny Hill* by John Cleland. Beginning in 1957, the Supreme Court began a series of decisions that tended to relax restrictions on so-called obscene materials. Although these decisions covered a 15-year period, not all obscenity cases during this time were dismissed. In a famous case in the 1960s, Ralph Ginzburg was convicted of advertising in an obscene manner. As the Supreme Court decisions struck down many state obscenity laws, the states responded by passing laws prohibiting the sale of obscene materials to minors, and these were upheld (1968) by the Supreme Court. The liberalizing trend, however, was reversed in 1973, when the Supreme Court ruled that the individual states could decide, according to local standards, what is obscene. Another variety of censorship that was much attacked and much defended was the effort to keep out of schools and colleges textbooks and teaching that might be deleterious to what was termed "the American form of government" (see ACADEMIC FREEDOM). In the 1960s, the issue of sex education in schools became highly controversial. Films have also been the target of censorship. The producers of motion pictures, dependent for success upon widespread public approval, somewhat reluctantly adopted a self-regulatory code of morals (see HAYS WILLIAMS). Although the code has been relaxed and revised (1956, 1966, and 1970), the 1973 Supreme Court ruling on obscenity will certainly have an effect on the degree to which films will be censored at the local level. Another area of censorship involves radio and television broadcasting. Since 1934, local stations have operated under licenses granted by the Federal Communications Commission, which is expressly forbidden to exercise censorship. However, the required three-year review of a station's license invites indirect censorship. The issue of government secrecy was dealt with in the Freedom of Information Act of 1966, which stated that, with some exceptions, people have the right of access to government records. The issue was challenged in 1971, when a secret government study that came to be known as the PENTAGON PAPERS was published by major newspapers. The government sued to stop publication, but the Supreme Court ruled in favor of the newspapers (see PRESS FREEDOM OF THE). See Robert Downs, *The First Freedom* (1960), P. S. Jernison, *Freedom to Read* (1963), M. L. Ernst, *Censorship* (1964), Paul Boyer, *Purity in Print* (1968), Edward De Grazia, *Censorship Landmarks* (1969), E. J. R. Widmer, *Freedom and Culture* (1970).

census, periodic official count of the number of persons and their condition and of the resources of a country. In ancient times, among the Jews and Ro-

mans, such enumeration was mainly for taxation and conscription purposes. The introduction of the modern census—a periodic and thorough statistical review—began in the 17th cent. The first efforts to count people in areas larger than cities at regular periods were in French Canada (1665), Sweden (1749), the Italian states (1770), and the United States (1790). The first British census was taken in 1801. The Belgian census of 1846, directed by Adolphe QUETELET, was the most influential in its time because it introduced a careful analysis and critical evaluation of the data compiled. Most industrialized countries now take a census every 5 to 10 years. Scientific census taking in the United States began with the decennial census of 1850, when the scope and methods were greatly improved by making the individual the unit of study. In 1902 the Bureau of the Census was established in the Dept. of Commerce, and in 1972 the Bureau was combined with the Office of Business Economics to form the Social and Economic Statistics Administration. The census is considered the most vital source of statistical information about a nation, providing invaluable data to social scientists and government planners. See A. H. Scott, *Census USA* (1968), W. S. Holt, *The Bureau of the Census* (1929, repr. 1973).

centaur (sēn'tōr), in Greek mythology, creature, half man and half horse. The centaurs were fathered by Ixion or by Centaurus, who was Ixion's son. Followers of Dionysus, they were uncouth and savage, but some, such as Chiron, became friends and teachers of men.

Centaurus (sēn'tōr'ās), southern CONSTELLATION located N and E of Crux, the Southern Cross. It is known especially for its bright stars ALPHA CENTAURI and HADAR. It also contains Centaurus A, a radio galaxy, as well as a globular STAR CLUSTER visible to the naked eye. Centaurus reaches its highest point in the evening sky in May.

Centennial Exposition, International, held in Philadelphia from May to Nov., 1876, to celebrate the 100th anniversary of the Declaration of Independence. The buildings, in Fairmount Park, included the Main Building, covering 20 acres (8 hectares), Machinery Hall, Agricultural Hall, Horticultural Hall, and Memorial Hall, many state buildings, and buildings of 37 foreign countries. The total number of persons attending in 159 days was almost 10 million. This was the first of a series of world's fairs that the United States was to hold, and it set a high standard, exhibiting in graphic manner the technical advances and industrial growth of the nation. Memorial Hall, a Renaissance structure of granite, became part of the Pennsylvania Museum of Art.

center, in politics, a party following a middle course. The term was first used in France in 1789, when the moderates of the National Assembly sat in the center of the hall. It can refer to a separate party in a political system, e.g., the Catholic Center party of imperial and Weimar Germany, or to the middle group of a party consisting of several ideological factions.

centering, the framework of wood or of wood and steel built to support a masonry arch or vault during its construction. The centering itself must be rigidly supported, either by posts from the ground or by trusses when piers are available to receive their ends. After the centering is built, the setting of the masonry proceeds equally from the ends or sides toward the central point, where the keystone of the arch or the crowning blocks of the vault are finally wedged into position. The centering is removed after setting in the case of arches where the shape is dependent on the cement or concrete, but in other instances, e.g., where dressed stone is used with a lime mortar joint, it is better to remove the centering before setting, so that gravity will control the disposition of the stones. Removal of the centering is a delicate operation, since undue stress on one part endangers the whole structure. The Romans built vast domes and vaults of concrete with the aid of wood centerings and of integral brick ribs within the vault itself. Arches of steep rise may sometimes be built without centering. Brunelleschi is said to have dispensed with it in constructing the steep dome of the cathedral of Florence. Today inflatable plastic balloons are often used instead of centering.

Center Line, city (1970 pop. 10,379), Macomb co., SE Mich., a suburb of Detroit, inc. 1925.

center of gravity, see CENTER OF MASS.

center of mass, the point at which all the mass of a body may be considered to be concentrated in analyzing its behavior. Since mass is usually observed in a gravitational field, often the center of mass is also

called the center of gravity. The center of mass of a sphere of uniform density coincides with the center of the sphere. The center of mass of a body need not be within the body itself, the center of mass of a ring or a hollow cylinder is located in the enclosed space, not in the object itself. A body suspended or balanced at its center of mass will be stable, there will be no net MOMENT acting on it. Sometimes a problem may be analyzed from the point of view of the center of mass of an entire system of objects, such as several colliding elementary particles or a multiple-star system. For example, the complex motions of the earth and moon about the sun become somewhat simpler when viewed from the common center of mass of the earth-moon system, located about 1,000 mi (1,600 km) below the earth's surface. It is this point that is moving in an elliptical orbit around the sun rather than the center of mass of the earth alone.

Center Point, uninc. town (1970 pop. 15,675), Jefferson co., N. central Ala., a suburb of Birmingham.

Centerville, city (1970 pop. 10,333), Montgomery co., SW Ohio, a residential suburb of Dayton, inc. 1879. It has a small industrial park.

centigrade temperature scale: see CELSIUS TEMPERATURE SCALE.

centimeter, abbr. cm, unit of length equal to 0.01 METER, the basic unit of length in the METRIC SYSTEM. The centimeter is the unit of length in the CGS SYSTEM. It is approximately equal to 0.39 inch, or 1 inch equals about 2.54 centimeters.

centipede, common name for members of a single class, Chilopoda, of the phylum ARTHROPODA. Centipedes are widely distributed in temperate and tropical lands, living in the soil or surface litter, and under logs or rocks. The largest species, *Scolopendra gigantea*, may reach 12 in. (30 cm) in length, many other tropical species are over 6 in. (15 cm) long. Temperate species are usually only about 1 in. (2.5 cm) long. The flattened body is divided into a head and a trunk composed of segments, or somites. The head bears long antennae, jaws, and two pairs of maxillae used for food-handling. Although the name centipede means "hundred-legged," the average is actually about 35 pairs of legs, one pair on each body segment except for the last two, the pre-genital and genital segments. The appendages of the trunk's first segment are modified into claws that are equipped with poison glands and are used to kill or stun prey. Larger centipedes can cause a painful bite, but the poison is not powerful enough to cause death in humans. Centipedes are chiefly nocturnal and predominantly carnivorous, feeding on insects or other small arthropods, though the largest species can kill small vertebrates. Sexes are separate, and some species have extensive courtship ceremonies. Members of the orders Lithobiomorpha and Scutigermorpha have 15 pairs of legs as adults. These centipedes release eggs singly in the soil. Not all of the body segments are present at the time of hatching, and the young add somites and pairs of legs as they molt. Lithobiomorphs are widely distributed in temperate and subtropical regions. The swift scutigermorphs have very long legs, the last pair is often extended to the rear, serving as posterior tactile appendages. Although especially abundant in the tropics, they include *Scutigera forceps*, the rather common house centipede of temperate climates. The house centipede has long, delicate legs and compound eyes. It feeds on roaches, clothes moths, and other insects. Members of the orders Geophilomorpha and Scolopendromorpha produce clusters of eggs, which are guarded while they develop. A full set of body segments and legs is present at hatching. Geophilomorphs have very long, slender bodies with from 31 to over 180 pairs of short legs. They are burrowing forms and are found

Centipede, representative of the class Chilopoda

in the soil from temperate to tropical regions. The scolopendromorphs are also widely distributed, but are more abundant in the tropics. They have from 21 to 23 pairs of legs and include the largest and most colorful centipede species. Centipedes belong to the phylum ARTHROPODA, subphylum Mandibulata, class Chilopoda.

Central African Republic, republic (1973 est pop 1,700,000), 240,534 sq mi (622,983 sq km), central Africa. BANGUI is the capital. The landlocked nation is bordered by Chad in the north, Sudan in the east, Zaïre and the Congo Republic in the south, and Cameroon in the west. The terrain consists of a 2,000–3,000 ft (610–910 m) undulating plateau, mainly covered by savanna, dense tropical forests in the south, and a semidesert area in the east. The Bongo Massif in the northeast reaches a height of c 4,500 ft (1,370 m). The country is drained by numerous rivers, but only the Ubangi is commercially navigable. Rainfall is heavy in the south. There are no railroads, and the network of all-weather roads is inadequate; rivers are the chief means of transportation. Population density is only about six persons per square mile. The chief ethnic groups are the Mandjia-Baya, the Banda, the Mbaka, and the Zande. French is the official language, but Sangho is the lingua franca. More than half the population practices traditional animist religions, the remainder is predominantly Christian. The overwhelming majority of the people are engaged in agriculture, although only about 2% of the land is under cultivation. Cassava, millet, rice, and peanuts are grown for subsistence. The principal cash crops and exports are cotton and coffee, cocoa, rubber, and palm products are raised in the southwest. Timber is also an important product and export. There have been recent attempts to develop a livestock (mainly cattle) industry, despite unfavorable climate and the prevalence of the tsetse fly. Mining, formerly limited to diamonds (another leading export), has become increasingly important with extraction of uranium, begun in 1972. Industry is limited to food and mineral processing and to the production of light consumer goods. Inadequate transportation has been a major obstacle to the country's economic development. The Central African Republic belongs to the French franc zone and trades chiefly with France. Most exports are shipped via Pointe-Noire, in the Congo Republic, more than 1,100 mi (1,770 km) away. Among the country's educational institutions are a university at Bangui (founded 1970) and two agricultural colleges. Between the 16th and the 19th cent., much of the region was subject to devastating slave raids. The Baya people, seeking refuge from the Fulani of N Cameroon, arrived in what is now the Central African Republic in the early 19th cent., the Banda, fleeing the Muslim Arab slave raiders of Sudan, came later in the century. French expeditions, pushing out from the Congo and making treaties with local tribal chiefs, occupied the area in 1887. It was organized in 1894 as the colony of Ubangi-Shari and was united administratively with Chad in 1906 and incorporated into French Equatorial Africa in 1910. Chad later became a separate French territory. Much of the region was leased to French concessionaires, whose fostering of forced labor and other abuses sparked rebellions in 1928, 1935, and 1946. The population of Ubangi-Shari actively supported the Free French forces during

World War II. In 1946 the colony was given its own territorial assembly and representation in the French parliament. In the French constitutional referendum of 1958 the country opted for membership in the French Community. It received autonomy and took its present name. Full independence was attained on Aug 13, 1960, under President David Dacko. (The nationalist leader Barthélemy Boganda, founder of the country's only political party, the Mouvement d'évolution sociale de l'Afrique noire [MESAN], had been killed in a plane crash in 1959.) The Central African Republic had a parliamentary government until Dec., 1965, when a military coup led by Col Jean-Bedel Bokassa (Boganda's nephew) overthrew the Dacko regime, dissolved the national assembly, and abrogated the constitution. The military regime, with Bokassa as both president and head of MESAN, has dealt harshly with dissenters. There have been frequent cabinet changes and Bokassa has personally taken charge of various branches of the civil service. Close relations with France have been maintained. The Central African Republic is an associate member of the European Common Market and belongs to the French-oriented Afro-Malagasy Common Organization and the five-nation Central African Customs and Economic Union. It also holds membership in a monetary union with other equatorial African states and Cameroon, all of whom share a central bank and common currency. In 1968 the Central African Republic, Chad, and Zaïre formed a loose union of central African states. See Virginia Thompson and Richard Adloff, *The Emerging States of French Equatorial Africa* (1960), V T LeVine, *Political Leadership in Africa* (1967), Pierre Kalck, *Central African Republic* (tr 1971).

Central America, narrow, southernmost portion of the continent of North America, linked to South America by the Isthmus of Panama. It separates the Caribbean Sea from the Pacific Ocean. From a geological standpoint, Central America includes the land (c 276,400 sq mi/715,900 sq km) between the Isthmus of Tehuantepec, S Mexico, and the Isthmus of Panama, although it includes four states and one territory of Mexico and excludes the republic of Panama (which occupies an arm of South America), the term is generally applied to the colony of Belize (British Honduras) and the republics of Guatemala, Honduras, El Salvador, Nicaragua, Costa Rica, and Panama. The mountains of N Central America are an extension of the mountain system of W North America and are related to the islands of the West Indies. The middle portion of Central America is an active zone of volcanoes and earthquakes, it contains the Nicaragua Depression, which includes the huge lakes Nicaragua and Managua. The ranges of S Central America are outliers of the Andes Mts of South America. Tajumulco (13,846 ft/4,210 m high), a volcano in Guatemala, is the region's highest peak. Central America's climate varies with altitude from tropical to cool. The eastern side of the region receives heavy rainfall. Bananas, coffee, and cacao are the chief crops of Central America, and gold and silver are mined there. The Inter-American Highway traverses W Central America. See R C West and J P Augelli, *Middle America: Its Lands and Peoples* (1966), E G Squier, *Notes on Central America* (1855, repr 1969), H C Espy and Lex Greener, *Another World: Central America* (1970).

Central American Common Market (CACM), trade organization formed in 1960 by a treaty on economic integration between Guatemala, Honduras, Nicaragua, and Salvador. Costa Rica later became a member. By the mid-1960s the group had made impressive advances toward economic integration, and by 1970 trade between member nations had risen more than tenfold over 1960 levels. During the same period, imports doubled and a common tariff was established for 98% of the trade with non-member countries. In 1967, at the conference of American presidents at Punta del Este, Uruguay, it was decided that CACM, together with the LATIN AMERICAN FREE TRADE ASSOCIATION, would be made the basis for a comprehensive Latin American common market. However, by the middle of the 1970s little progress toward a Latin American common market had been made, and CACM, after a decade of economic gains, had been weakened by internal strife. After the Salvador-Honduras conflict of 1969, Honduras rescinded its CACM trade agreements—thus, in effect, withdrawing from CACM. In 1972 meetings were held to restructure the association.

Central American Federation or Central American Union, political confederation (1825–38) of the republics of Central America—Costa Rica, Guatemala, Honduras, Nicaragua, and Salvador. United

under a captaincy general in Spanish colonial times, they gained independence in 1821 and were briefly annexed to the Mexican empire formed by Agustín de Iturbide. The nations joined in a loose federal state, appointing (1825–29) as first president Manuel José Arce, who was succeeded (1830–38) by the liberal leader, Francisco MORAZÁN. Political and personal rivalries between liberals and conservatives, poor communication, and the fear of the hegemony of one state over another led to dissolution (1838) of the congress and the defeat (1839) of Morazán's forces by Rafael CARRERA. In 1842, Morazán made an abortive attempt to reestablish the federation from Costa Rica. Later efforts by Nicaragua, Honduras, and Salvador failed. The attempts of Justo Rufino BARRIOS (1885) and José Santos ZELAYA (1895) only increased existing enmities. At the Central American conference of 1922–23 the US recommendation of a union was not favorably received, partly because of earlier US policies in Panama and Nicaragua. Nevertheless, geography, history, and practical expedience are factors that constantly encourage union. In 1951 the organization of Central American States was formed to help solve common problems, and in 1960 the five nations established the CENTRAL AMERICAN COMMON MARKET. See T L Karnes, *The Failure of Union: Central America, 1824–1960* (1961), Nino Maritano, *A Latin American Economic Community* (1970).

Central Australia: see NORTHERN TERRITORY, Australia.

central bank, financial institution designed to regulate and control the fiscal and monetary activities of a nation. Usually state owned, central banks turn all or most of their profits over to the government. They are responsible for issuing notes to be used as legal tender, maintaining adequate reserve backing for the nation's banks, and controlling the flow of money and precious metals. Such responsibilities are met by regulating the discount rate, making reserve advances to commercial banks, trading in government obligations, clearing checks, and acting as the government's fiduciary agent in its dealings with other governments and other central banks. In essence, the central bank acts as a banker's bank and as its government's bank. Although the term was hardly known before 1900, the concept of central banking dates back to at least 1694, when the Bank of England was founded. Another early central bank was the Swedish Riksbank. Today every economically developed nation possesses the equivalent of a central bank, most of which have been modeled after the Bank of England. Notable central banks include France's Banque de France, Germany's Deutsche Bundesbank, and the US FEDERAL RESERVE SYSTEM (established 1913). Central banking in the United States developed as a result of the weakness of state banks following the lapse of the BANK OF THE UNITED STATES.

Central Falls, industrial city (1970 pop 18,716), Providence co., N R I., on the Blackstone River, set off from Lincoln and inc 1895. Electric light bulbs are made there.

Centralia (sēntrā'lēə) 1 City (1970 pop 15,217), Clinton and Marion counties, S Ill., in an oil, coal, farm, and fruit region, inc 1859. Founded in 1853 by the Illinois Central RR and named accordingly, it is the shipping center for the products of the area. Its railroad yards are still its major industry, but the city has varied manufactures, including clothing, candy, and stoves and heaters. A junior college is there. 2 City (1970 pop 10,054), Lewis co., SW Wash., at the confluence of the Chehalis and Skookumchuck rivers, inc 1889. It is a railroad junction and a farm trade center, with a great lumbering industry. A massive electric steam plant and two nearby dams make the city a major power center. A junior college and the county fairgrounds are there. A violent clash between townspeople and organized lumber workers occurred in Centralia on Nov 11, 1919.

Central Intelligence Agency (CIA), independent executive bureau of the US government established by the National Security Act of 1947. It replaced the wartime OFFICE OF STRATEGIC SERVICES (1942–45), the first US intelligence agency. The CIA was established to gather intelligence information abroad and report to the President and to the National Security Council, his advisory body. For secrecy, it was given (1949) special powers under the Central Intelligence Act, its director may spend the agency's funds without accounting for them, and the size of its staff is never divulged. Employees, exempt from civil service procedures, may be hired, investigated, or dismissed as the CIA sees fit. To

safeguard civil liberties in the United States, however, the CIA is denied domestic police powers, for operations in the United States it must enlist the services of the Federal Bureau of Investigation. Faulty intelligence reports prior to the Korean War led (1950) to the appointment of Gen. Walter Bedell Smith as director. Allen Welsh Dulles, a veteran intelligence agent who was director from 1953 to 1961, strengthened the agency and emboldened its tactics. The CIA has often been criticized for taking an active role in the internal affairs of foreign countries. The agency was heavily involved in the 1961 invasion of Cuba, the failure of which deeply embarrassed the United States. In 1971 the U.S. government acknowledged that the CIA had recruited and paid an army fighting in Laos. In 1973 the CIA came under Congressional investigation for its role in the PENTAGON PAPERS case. The agency had provided members of the White House staff, on request, with a personality profile of Daniel Ellsberg, defendant in the Pentagon Papers trial in 1973, and it had supplied materials that were used in the break-in at Ellsberg's psychiatrist's office in 1971 by members of a special unit established by the White House to investigate internal security leaks. The CIA's involvement in domestic affairs was a direct violation of the National Security Act of 1947, and efforts were begun in Congress to strengthen provisions barring the agency from domestic operations. Operations of the CIA again came under attack in 1974 when it was revealed that the agency had been involved in Chilean internal affairs during the administration of Salvador Allende Gossens. Further revelations of CIA domestic surveillance prompted President Ford to establish a commission of inquiry in Jan., 1975, at the same time Congress set up its own investigations. After Dulles's retirement John Alex McCone was (1961-65) director of the agency. He was succeeded by William F. Raborn (1965-66), Richard M. Helms (1966-72), James R. Schlesinger (1973), and William E. Colby (1973-). See Andrew Tully, *CIA: The Inside Story* (1962), L. B. Kirkpatrick, *The Real CIA* (1968), H. H. Ransom, *The Intelligence Establishment* (rev. ed. 1970), P. J. McGarvey, *CIA: The Myth and the Madness* (1972).

Central Michigan University, at Mount Pleasant, Mich., coeducational, est. 1892 as a normal school, became Central State Teachers College in 1927, achieved university status in 1959. From 1938 to 1958 graduate courses were offered in association with the Univ. of Michigan. The university maintains a forest of over 200 acres (81 hectares) used for botanical and biological research. The Clarke Historical Library contains material on the Old Northwest Territory.

Central nervous system: see NERVOUS SYSTEM

Central Park, 840 acres (340 hectares) largest park in Manhattan, New York City, bordered by 59th St. on the south, Fifth Ave. on the east, 110th St. on the north, and Central Park West on the west. The land, acquired by the city in 1856, was improved according to the plans of U.S. landscape architects Frederick L. Olmsted and Calvert Vaux. The park has rolling terrain with lakes and ponds, greeneries, bridle paths, walks, and park drives. There are many playgrounds and other recreational facilities, including the Wollman Skating Rink. The Metropolitan Museum of Art stands in the park on Fifth Ave., other points of interest include a formal garden, a zoo, an Egyptian obelisk called "Cleopatra's Needle," a New York City reservoir, and the Mall, where concerts are given. In the open-air Delacorte Theater, Shakespearean dramas and other plays are presented free of charge.

Central Powers, in WORLD WAR I, the coalition of Germany, Austria-Hungary, Bulgaria, and the Ottoman Empire.

Central Provinces and Berar: see MADHYA PRADESH

Central Treaty Organization (CENTO), international governmental organization, formed in 1955 for the military defense of the Middle East. The initial pact was signed by Turkey and Iraq. Great Britain, Pakistan, and Iran joined later that year. In 1956, although it did not become a full member, the United States pledged to cooperate. Originally known as the Middle East Treaty Organization, the association was based on the Baghdad Pact of 1955. After Iraq left the organization in 1959, the name was changed to CENTO, and headquarters were moved from Baghdad to Ankara. The CENTO powers are also pledged to economic and social cooperation in the Middle East.

Central Utah Project, N. central Utah, begun 1959 near Vernal, Utah, by the U.S. Bureau of Reclamation in conjunction with the COLORADO RIVER STORAGE PROJECT. Water, collected from streams in the

Uinta Mts., is carried across the Wasatch Range to the densely populated Salt Lake City region by a system of dams, reservoirs, tunnels, aqueducts, and canals. Strawberry Dam and Reservoir, in which the water is stored, provides water for domestic and industrial use, irrigation, hydroelectricity, fish and wildlife preservation, and flood control.

Central Valley, great trough of central Calif., c 450 mi (720 km) long and c 50 mi (80 km) wide, between the Sierra Nevada and the Coast Ranges. The Sacramento and San Joaquin rivers drain most of the valley before converging in a huge delta and flowing into San Francisco Bay. The delta is California's leading truck-farming and horticultural area. The Central Valley is the largest agricultural belt in California. With its long growing season and rich soil, the valley has the largest single concentration of fruit farms and vineyards in the United States; cotton, grain, and vegetables are also grown. Precipitation ranges from 30 in. (76 cm) in the north to 6 in. (15.2 cm) in the south. Two thirds of the valley's agricultural land is located in the south, while two thirds of the water is in the north. The Central Valley project attempts to remedy this problem by bringing water from the Sacramento basin in the north into the San Joaquin Valley in the south. The Tulare Lake basin in the extreme southern part of the valley is very dry and has alkaline conditions that make it almost totally unsuitable for irrigation. The Central Valley was first seen by Spanish explorers in the 1500s but remained virtually uninhabited until 1848, when gold was discovered nearby. In the late 1800s the valley became a rich agricultural region, with wheat as the main crop. Irrigation was introduced in the 1880s.

Central Valley project, central Calif., long-term general scheme for the utilization of the water of the Sacramento River basin in the north for the benefit of the farmlands of the San Joaquin Valley in the south, undertaken by the U.S. Bureau of Reclamation in 1935. The aims of the program are flood control, improvement of navigation, the development of hydroelectric power, irrigation, and municipal and industrial water supply, protection of the Sacramento delta from seawater encroachment, and the propagation and preservation of fish and wildlife. The project irrigates c 300,000 new acres (121,410 hectares) and supplements c 938,000 acres (379,610 hectares) of cultivated land. Shasta and Keswick dams on the Sacramento River, and Friant Dam with its reservoir, Lake Millerton, on the San Joaquin River, were among the first units built. Canals transport water throughout the valley, among the most important are the Friant-Kern Canal, the Madera Canal, the Delta Cross Channel (which uses Sacramento water to fight soil salinity in the delta), and the Delta-Mendota Canal. The Central Valley project, which will include 48 dams and reservoirs, 20 large canals, and numerous power plants, is still in progress. Among the newer hydroelectric dams are San Luis (424,000-kw capacity), Spring Creek (150,000 kw), and Judge Francis Carr (134,000 kw). Auburn Dam (240,000-kw capacity) was scheduled for completion in the mid-1970s. Folsom Dam (162,000-kw capacity) is one of several units constructed in the valley by the U.S. Corps of Engineers.

Centreville, city (1970 pop. 11,378), St. Clair co., SW Ill., a suburb of East St. Louis.

centrifuge (sên'trafyôj), device using centrifugal force to separate two or more substances of different density, e.g., two liquids or a liquid and a solid. The centrifuge consists of a fixed base or frame and a rotating part in which the mixture is placed and then spun at high speed. One type is used for the separation of the solid and the liquid parts of blood. Test tubes containing blood specimens are set in the rotating part in holders so arranged that when the rotary motion begins the test tubes swing into a slanted or a horizontal position with the open ends toward the axis of rotation; the heavier, solid part of the blood is thrown outward into the bottom of the tube and the lighter liquid part comes to the top. Another common type of centrifuge called the cream separator is used to separate cream from whole milk. Uranium-235, which is found in nature mixed with uranium-238, must be separated to be used to produce nuclear energy. The separation can be done by a centrifuging process in which the uranium, contained in gas molecules, is rotated at high speed in a chamber so that the more massive molecules containing uranium-238 concentrate near the outer edge of the chamber and the lighter molecules containing uranium-235 concentrate near the axis. Several stages of centrifuging are needed to effect the required degree of separation. The first successful centrifuge was built in 1883 by Carl G. P. de Laval, a Swedish engineer, whose design was used

chiefly for cream separators. The ultracentrifuge, devised in the 1920s by the Swedish chemist Theodor Svedberg, found wide application in scientific research. Using an optical system with it to observe sedimentation rates, Svedberg determined accurately the molecular weights of substances including proteins and viruses. Centrifuges are also used for such diverse purposes as simulating gravitational fields in space and for drying laundry.

centriole: see MITOSIS

centripetal force and centrifugal force, action-reaction force pair associated with circular MOTION. According to Newton's first law of motion, a moving body travels along a straight path with constant speed (i.e., has constant VELOCITY) unless it is acted on by an outside FORCE. For circular motion to occur there must be a constant force acting on a body, pushing it toward the center of the circular path. This force is the centripetal ("center-seeking") force. For a planet orbiting the sun, the force is gravitational; for an object twirled on a string, the force is mechanical; for an electron orbiting an atom, it is electrical. The magnitude F of the centripetal force is equal to the mass m of the body times its velocity squared v^2 divided by the radius r .

Centripetal and centrifugal forces. When a ball is swung in a circle at the end of a string, centripetal and centrifugal forces act as shown above.

of its path $F = mv^2/r$. According to Newton's third law of motion, for every action there is an equal and opposite reaction. The centripetal force, the action, is balanced by a reaction force, the centrifugal ("center-fleeing") force. The two forces are equal in magnitude and opposite in direction. The centrifugal force does not act on the body in motion; the only force acting on the body in motion is the centripetal force. The centrifugal force acts on the source of the centripetal force to displace it radially from the center of the path. Thus, in twirling a mass on a string, the centripetal force transmitted by the string pulls in on the mass to keep it in its circular path, while the centrifugal force transmitted by the string pulls outward on its point of attachment at the center of the path. The centrifugal force is often mistakenly thought to cause a body to fly out of its circular path when it is released; rather, it is the removal of the centripetal force that allows the body to travel in a straight line as required by Newton's first law. If there were in fact a force acting to force the body out of its circular path, its path when released would not be the straight tangential course that is always observed.

centumviri (sêntûm'vîrî) [Lat., = a hundred men], in ancient Rome, law court of a varying number of members that heard civil cases having to do with land and property claims. Each Roman tribe was represented in it. Under the empire the centumviri had to deal chiefly with inheritance. The last mention of it is in A.D. 395.

century plant: see AMARYLLIS

Ceos, Greece. See KÊA

cephalic index (səfāl'ik) [Gr. *kephale* = head], ratio of the breadth of the head to its length. Expressed as a percental number, it provides the simplest description of the geometric relation of two dimensions. The index is obtained by dividing the maximum width of the cranium by its maximum length and multiplying by 100. In ANTHROPOMETRY, the cephalic index has been the favored measurement. A cephalic index of 80 or more is called brachycephalic or broad; a measurement between 75 and 80 is mesocephalic; below 75 is considered dolicocephalic or long. The cranial index is the same ratio taken on a skull.

Cephalonia, Greece. See KEFALLINIA

cephalopod, member of the class Cephalopoda, the most highly organized group of mollusks (phylum MOLLUSCA), and including the SQUIDS, OCTOPUSES, CUTTLEFISH, and NAUTILUSES. The class as a whole has become adapted for a free-swimming existence. Cephalopods are able to move about rapidly, and most are aggressive carnivores. The part of the body that forms the foot in other mollusks is located ante-

Internal anatomy of a squid, *Loligo*, representative mollusk of the class Cephalopoda

riorly in cephalopods instead of ventrally. Part of the foot area surrounds the mouth and is modified into sucker-bearing tentacles, used to capture prey. The tentacles number 8 in octopuses, 10 in squids, and as many as 90 in nautilus. The rest of the foot forms a muscular funnel, or siphon, which expels water from the mantle cavity, permitting cephalopods to move about by a kind of jet propulsion. Only one existing genus, the nautilus, the sole survivors of an extinct group known as the nautiloids, possesses an external shell. In the squid and cuttlefish the shell has become internalized and reduced, and in the octopus it is completely absent. The cephalopod head is large and is equipped with prominent eyes that resemble those of vertebrate animals. The class Cephalopoda has a fossil record of 10,000 species, although only 400 exist today. The nautiloid group was dominant through Paleozoic times, and the AMMONITES flourished in the Mesozoic era.

cephalosporin (sēf'ālōspōr'īn), any of a group of ANTIBIOTICS derived from species of fungi of the genus *Cephalosporium* and closely related chemically to PENICILLIN. Cephalosporins act against both gram-positive and gram-negative bacteria (see GRAM STAIN) by inhibiting bacterial cell wall synthesis. They are used to treat urinary infections and infections of penicillin-resistant staphylococci, especially in patients sensitive to penicillin.

Cephalus (sē'faləs), in Greek mythology, husband of Procris. The two swore eternal fidelity, but Eos, who had fallen in love with Cephalus, persuaded him to test his wife. Cephalus disguised himself and offered to pay Procris to commit adultery. When she yielded, he angrily deserted her. Later they were reconciled, but eventually Procris became suspicious and followed Cephalus one night while he was hunting. Mistaking his wife for an animal, Cephalus killed her. He then wandered for many years but was unable to escape his grief and finally leaped to his death from a precipice.

Cephas (sē'fəs), Jesus' name for St. Peter. John 1:42.

cephheid variable (sē'fēid), rather small class of variable stars that brighten and dim in an extremely regular fashion. The periods of the fluctuations (the time to complete one cycle from bright to dim and back to bright) range from 1 to 50 days. These stars are important because the period of a cepheid depends on its intrinsic brightness, or absolute MAGNITUDE, in a known way the brighter the star, the greater its period. All cepheid variables with the same period have nearly the same intrinsic brightness, but their apparent brightnesses differ because they are at different distances. By observing a cepheid's period, one can determine how bright it actually is. By comparing this intrinsic brightness to how bright it appears to be, one can determine its distance. This property makes the cepheids invaluable in estimating interstellar and intergalactic distances, and they are often called the "yardsticks of the universe." The cepheid class takes its name from

the first one discovered (1784), which is located in the constellation Cepheus. Cepheids are yellow supergiant stars, and their fluctuations in luminosity result from an actual physical pulsation, with attendant changes in surface temperature and size. The stars are hottest and brightest when expanding at maximum rate midway between their largest and smallest size. The period-luminosity relation was discovered by studying the many cepheids in the Magellanic Clouds, the two closest galaxies, these stars are all almost equally distant. It was found that the brighter variables had the longer periods. The absolute magnitude of a few cepheids is required to infer absolute, rather than merely relative, distances. These absolute magnitudes were measured by a statistical study of the proper motions of cepheids within our own galaxy. Difficulties in this method caused an overestimation of the absolute magnitude of all cepheid variables. It was also found that there are two distinct classes of cepheids with different period-luminosity relations. The correction of these errors in the 1950s led to a dramatic doubling of estimated cosmological distances.

Cephisodotus (sēfīsō'dōtəs), Gr. *Kephisodotos*, fl. 4th cent. B.C., two Greek sculptors. The elder, the master and probably the father or the brother of Praxiteles, is noted for the statue *Irene and Plutus* (*Peace and Wealth*). The original was erected on the Areopagus at Athens c. 372 B.C. to celebrate the victory of Timotheus over the Spartans. The best copy is in Munich. Cephisodotus, the Younger, a son of Praxiteles, continued the Praxitelean tradition into the early 3d cent. B.C.

Ceram (sā'ram), island (1970 est. pop. including offshore islands, 100,000; c. 6,600 sq mi (17,100 sq km)), E. Indonesia, W. of New Guinea, second largest of the Moluccas. Its chief port and town is Waihai. Traversed by a central mountain range rising to more than 10,000 ft (3,050 m), the island is c. 210 mi (340 km) long and c. 40 mi (60 km) wide. The interior has dense rain forests and is largely unexplored. Copra, resin, sago, and fish are important commercial products. Oil is exploited in the northeast near Bula. Portuguese missionaries were active there in the 16th cent. Dutch trading posts were opened in the early 17th cent., and the island came under nominal Dutch control c. 1650. Variants of the name are Seran and Serang.

Ceramic Gulf· see CERAMICUS SINUS

ceramics (sērām'īks) includes all forms of POTTERY, from crude EARTHENWARE to the finest PORCELAIN. The term is usually applied to handmade objects, such as figurines and fine dinnerware.

Ceramicus Sinus (sērām'īkəs sī'nəs) or **Ceramic Gulf** (sērām'īk), ancient name of the Gulf of Kos, or of Kerme, SW Turkey, an inlet of the Aegean Sea. The celebrated city of Halicarnassus, capital of Carpatocia, was on the gulf.

Cerano, Il· see CRESPI, GIOVANNI BATTISTA

ceratotherium· see RHINOCEROS

Ceraunian Mountains (sērōn'ēən), Albanian Kanalet, coastal range, S. Albania, extending northwest c. 70 mi (110 km) from the Greek border to the Strait of Otranto, Mt. Çikes (6,726 ft/2,050 m) is the highest peak. At the northern end the rugged range forks around Vlore Bay, the west fork ends in Cape Lingua (Albanian *Gjuhezës*). The range is sometimes called the Acroceraunian Mts.

Cerberus (sēr'berəs), in Greek mythology, many-headed dog with a mane and a tail of snakes, offspring of Typhon and Echidna. He guarded the entrance of Hades. One of the 12 labors of Hercules was to capture him.

Cerdic (kūr'dīk, sūr'-), d. 534, traditional founder of the kingdom of Wessex. A Saxon, he and his son Cynric are said to have landed on the southern coast of England in 495. Little is certain about him except that later West Saxon kings traced their descent from him through his son Cynric and his grandson Ceawlin.

cerebellum (sēr'ābēl'am), portion of the BRAIN that coordinates movements of voluntary (skeletal) muscles. In the cerebellum, motor impulses from the cerebrum are organized and modulated before being transmitted to muscle. As the muscle tissue responds, sensory nerve cells in the muscle return information to the cerebellum. Thus throughout a period of muscular activity, the cerebellum is able to adjust speed, force, and other factors involved in movement. The overall result is smooth and balanced muscular execution. If the cerebellum is injured, an activity like walking becomes a series of jerks; the muscles involved contract too much or too little and operate out of sequence. Maintaining

muscle tone is also a function of the cerebellum. Filling most of the skull behind the brainstem and below the cerebrum, the human cerebellum approximates an orange in size and consists of two hemispherical lobes. The grooved surface of the cerebellum is gray matter, composed chiefly of nerve cells. The interior, dense with nerve fibers, is white matter. Three main nerve tracts link the cerebellum with other brain areas.

cerebral palsy (sarē'bral pōl'zē), disability caused by brain damage before or during birth, resulting in a loss of muscular control and coordination. Most cases are thought to be caused by oxygen deficiency during the birth process. The severity of the affliction is dependent on the extent of the brain damage. Those with mild cases may have only a few affected muscles, while severe cases can result in total loss of coordination or paralysis. Nowadays it is believed that there are six different forms of the disability, each caused by damage to a different area of the brain. The spastic type, accounting for over half of the cases, results from damage to the motor areas of the cerebral cortex and causes the affected muscles to be contracted and overresponsive to stimuli. Athetosis, caused by damage to the basal ganglia, results in sudden, exaggerated movements. The two types of ataxia cause either an impaired sense of balance or a lack of coordinated movements. In flaccid paralysis, the muscles are flabby and unresponsive, patients with spastic rigidity are unable to contract their muscles, while those with tremor suffer from repeated muscular contractions. About 25% of those affected suffer some degree of mental retardation. There is no cure for the disorder and treatment usually includes physical, occupational, and speech therapy. Sometimes appliances such as braces are helpful, as well as certain surgical procedures.

cerebrospinal meningitis· see MENINGITIS

cerebrum· see BRAIN

ceremony, expression of shared feelings and attitudes through more or less formally ordered actions of an essentially symbolic nature performed on appropriate occasions. A ceremony involves stereotyped bodily movements, often in relation to objects possessing symbolic meaning. For example, people bow or genuflect, tip hats, present arms, slaughter cattle, salute flags, and perform a myriad of other actions. Ceremonies express, perpetuate, and transmit elements of the value and sentiment system and aim at preserving such values and sentiments from doubt and opposition; moreover, they intensify the solidarity of the participants. Ceremonies are found in all societies.

Cerenkov radiation· see CHERENKOV RADIATION

Ceres, in astronomy, the first ASTEROID to be discovered. It was found on Jan. 1, 1801, by G. Piazzi. He took three distinct observations, on the basis of these the mathematician Gauss calculated Ceres' orbit with such accuracy that it was found one year later within 0.5° of the predicted position. Ceres is the largest and most massive of the asteroids; it has a diameter of c. 470 mi (750 km) and a mass 1/100,000 that of the earth. Its ORBIT has a semimajor axis of 2.78 ASTRONOMICAL UNITS and a period of 1,681 days.

Ceres (sēr'ēz), in Roman religion, goddess of grain, daughter of Saturn and Ops. She was identified by the Romans with the Greek Demeter. Her worship was connected with that of the earth goddess and involved not only fertility rites but also rites for the dead. Her chief festival was the Cerealia, celebrated on April 19, and her most famous cult was that of the temple on the Aventine Hill. There is much argument about the origins and nature of her cults.

cereus· see CACTUS

Cerignola (chārēnyō'la), city (1971 pop. 47,683), Apulia, S. Italy. It is an agricultural center and a transportation junction. The city suffered a severe earthquake in 1731 and was largely rebuilt. Nearby, in 1503, the Spanish under Gonzalo Fernández de Córdoba defeated the French under Louis XII (see ITALIAN WARS).

Cerinthus (sēr'īn'thəs), fl. A.D. c. 100?, Jewish-Christian religious leader, b. Ephesus. He held tenets influenced by Gnosticism and similar to those of the Ebionites. He taught that the Christ descended into Jesus at his baptism and left him again before the Passion.

cerium (sēr'ēəm) [from the asteroid Ceres], metallic chemical element, symbol Ce, at no. 58, at wt. 140.12, m.p. about 800°C, b.p. 3468°C, sp. gr. 6.77 at 25°C, valence +3 or +4. Cerium is a soft, malleable, ductile, iron-grey metal with hexagonal or cubic

crystalline structure. It is slightly harder than lead. It is the most abundant of the RARE-EARTH METALS of group IIIb of the PERIODIC TABLE. It does not tarnish rapidly in dry air but quickly loses its luster in moist air. It oxidizes slowly in cold water and rapidly in hot water. It is attacked by solutions of alkalis and by concentrated or dilute acids. When heated it burns with a brilliant flame to form the oxide (ceria) that exhibits incandescence and is used in making lamp mantles (see WELSBACH MANTLE). The metal is used as a core for the carbon electrodes of arc lamps. The element forms alloys with other metals. An alloy of cerium and iron is used as the flint in cigarette and gas lighters. Minute particles of this alloy ignite in the air when scratched from the surface of the larger mass. Cerium is prepared by electrolysis of the chloride or by reduction of the fused fluoride with calcium. Cerium was recognized in 1803 in the oxide (ceria) as a new metal by M. H. Klaproth and by J. J. Berzelius and Wilhelm Hisinger; it was named for the asteroid Ceres, which had been discovered only two years earlier. The metal was obtained in a very impure state by C. G. Mosander and by Friedrich Wöhler some thirty years later; the nearly pure metal was not obtained until 1875 by W. F. Hillebrand and T. H. Norton.

CERN: see EUROPEAN ORGANIZATION FOR NUCLEAR RESEARCH

Cernauti: see CHERNOVTSY, USSR

Cernuda, Luis (lōōēs' thārnōō'thā), 1904-, Spanish poet. Cernuda fled Spain after the Spanish civil war and taught abroad. His works include *La realidad y el deseo* [reality and desire] (1936), a collection of his delicate surrealist verse, and *Oknos el afarrero* (1943), a prose lyric. He has also written about contemporary Spanish poetry (1957) and English lyric poetry (1958). See *The Poetry of Luis Cernuda* (bilingual ed. 1971), studies by John A. Coleman (1964) and Philip Silver (1965).

Cernuschi, Henri (chārnōō'skē), 1821-96, Italian politician and economist. A strong republican, he was a leader in the Milan revolt of 1848 in support of Giuseppe Garibaldi. In 1850 he went to France, where he became a director of the Bank of France. Cernuschi vigorously advocated Bimetallism and is said to have coined the word. His writings include many pamphlets on the subject, notably *Silver Vindicated* (1876).

Cesari, Jean Gabriel (zhāN gābrēēl' sērā'), 1734-1805, frontiersman and trader in the American Midwest, b. Montreal, Canada. By 1755 he had established a fur-trading post at Kaskaskia, Ill., where for many years he was a prominent and powerful figure. He outfitted many traders and hunters for the Missouri region and maintained close relations with the Indians. The British made efforts to gain his support in the American Revolution, but he allied himself with the patriots and gave George Rogers Clark provisions and financial aid. Later he moved to St. Louis, where his influence was maintained until his death.

Cerro de Pasco (sēr'ō thā pās'kō), city (1961 pop. 21,363), capital of Pasco dept., central Peru. At an altitude of 13,973 ft (4,259 m), it is one of the highest cities in the world. Cerro de Pasco is noted for its silver mines, which, according to tradition, were discovered in 1630. When silver deposits declined late in the 19th cent., the exploitation of other metals, chiefly copper, again made Cerro de Pasco Peru's leading mining center. From the nearby Minasranga mines comes about 80% of the world's supply of vanadium.

Cerro Gordo (sār'ō gōr'thō), mountain pass, E Mexico, on the road between Veracruz and Jalapa, site of a decisive battle (April 17-18, 1847) of the Mexican War. General Santa Anna, having established himself firmly at and behind the pass, attempted to halt the advance of Gen. Winfield Scott from Veracruz to Mexico City. Although the Mexicans thought their position impregnable, the Americans were able to rout the weak left flank and take the pass from the rear. Santa Anna was defeated, and Jalapa occupied. Capt. Robert E. Lee (who scouted out a route for the flanking movement) and Lt. U. S. Grant took part in the battle.

Cerro Tololo Inter-American Observatory (sār'ō tōlō'lō), astronomical OBSERVATORY located on Cerro Tololo peak, Chile, with offices in La Serena, about 40 mi (64 km) to the west. It is operated by the Association of Universities for Research in Astronomy (AURA), which also operates Kitt Peak National Observatory in Arizona. The principal instrument is a 158-in (401-cm) reflecting telescope, the largest in the Southern Hemisphere and the twin of the 158-

in reflector at Kitt Peak. Other equipment of the observatory includes 60-in (152-cm), 36-in (91-cm), and twin 16-in (41-cm) reflectors, the 24-in (61-cm) Curtis-Schmidt telescope formerly at the Univ. of Michigan, and the Fabry-Perot interferometer. Also at Cerro Tololo, a half mile from the summit, is a 24-in reflector belonging to the Lowell Observatory. **Certosa di Pavia** (chārtō'zā dē pāvē'ā), former Carthusian abbey of Pavia. One of the most magnificent of all monastic structures, it has been maintained as a national monument since 1866. The church, forming its nucleus, was begun in the style of the Italian Gothic in 1396 by Gian Galeazzo Visconti, duke of Milan. Little more than the nave was executed in this style, since the Renaissance, diffusing its new taste, quickly dominated the design of the edifice. The facade seems to have been begun in 1491 by a group of architects and sculptors under the leadership of Giovanni Antonio Amadeo; it was finished in the mid-16th cent. Built of rich marbles and profusely ornamented with fine sculptural decorations, it is one of the masterpieces of Renaissance decorative design. The two large arched cloisters are of richly ornamented terra-cotta. The main choir was badly damaged in World War II but was restored between 1953 and 1959.

Cerussite (sēr'āsīt), colorless to white or gray mineral, sometimes yellowish or greenish, transparent to opaque, very brittle, crystallizing in the orthorhombic system and occurring also in granular and massive form. It is a carbonate of lead, PbCO₃, formed by the action of carbonate and bicarbonate solutions on galena. It is an important ore of lead widely distributed throughout the world and found associated with galena and other lead minerals.

Cervantes Saavedra, Miguel de (sərvān'tēs, Spān' mēgēl' dā thērvān'tās sāv'āvāthērā), 1547-1616, Spanish novelist, dramatist, and poet, author of *Don Quixote de la Mancha*, b. Alcalá de Henares. Little is known of Cervantes's youth. He went to Italy (1569), where, in the service of a cardinal, he studied Italian literature and philosophy, which were later to influence his work. In 1570 he enlisted in the army and fought in the naval battle of Lepanto (1571), receiving a wound that permanently crippled his left arm. While returning to Spain in 1575 he was captured by Barbary pirates and was sold as a slave; he eventually became the property of the viceroy of Algiers. After many attempted escapes, he was ransomed in 1580, at a cost that brought financial ruin to himself and to his family. As a government purchasing agent in Seville (1588-97), he proved less than successful; his unbusinesslike methods resulted in deficits, and he was imprisoned several times. His first published work was an effusive pastoral romance in prose and verse, *La Galatea* (1585). Between 1582 and 1587 he wrote more than 20 plays, only 2 of which survive. He was 58 when Part I of his masterpiece, *Don Quixote* (1605, Part II, 1615) was published. As a superb burlesque of the popular romances of chivalry, *Don Quixote* was an enormous and immediate success. A spurious Part II was published in 1614, probably spurring Cervantes to complete the work. *Don Quixote* is considered a profound delineation of man's two conflicting attitudes toward the world and his relationship to it: his idealism and his realism. The work has been appreciated as a satire on unrealistic extremism, an exposition of the tragedy of idealism in a corrupt world, or a plea for widespread reform. Whatever its intended emphasis, the work presented to the world an unforgettable description of the transforming power of illusion, and it had an indelible effect on the development of the European novel. *Don Quixote* is a country gentleman who has read too many chivalric romances. He and the peasant Sancho Panza, as his squire, set forth on a series of extravagant adventures. The whole fabric of 16th-century Spanish society is detailed with piercing yet sympathetic insight. The added idealism of *Don Quixote* and the earthy acquisitiveness of Sancho serve as catalysts for numerous humorous and pathetic exploits and incidents. Its panorama of characters, the excellence of its tales, and its vivid portrayal of human nature contribute to the enduring influence of *Don Quixote*. In later years Cervantes wrote other works of fiction, including *Novelas ejemplares* (1613), 12 original tales of piracy, gypsies, and human passions, drawn from his own experience and molded by his mature craftsmanship. Some of these stories in themselves prove him one of the great literary masters. Among the most acclaimed translations of *Don Quixote* are those by Samuel Putnam (1949) and J. M. Cohen (1950). See biographies by Luis Astrana Marín (in Spanish, 7 vol. 1948-58), Fernando Díaz Plaja (tr. 1970), Francisco Navarro y Ledesma (tr. 1973) and R. L. Predmore

(1973), studies by Lowry Nelson (1969), Angel Flores and M. J. Benardete, ed. (1948, repr. 1969), bibliographies by D. B. Drake (vol. I, 1968), R. L. Grismer (2 vol., 1942-43, repr. 1971).

Cervera y Topete, Pascual (pāskvāl' thērvā'rā ē tōpā'tā), 1839-1909, Spanish admiral. During the SPANISH-AMERICAN WAR of 1898 he was given command of the Atlantic fleet and sent, against his own advice, to Cuba. He was blockaded by the American fleet in the harbor of Santiago de Cuba from May until July 3. Then, in an attempt to run the blockade, he lost his entire fleet and was captured. After his release he was tried and absolved from responsibility for the disaster.

Cervin, Mont., or Monte Cervino: see MATTERHORN

Cerynean hind (sērīnē'ən), in Greek mythology, golden-horned hind sacred to Artemis. The fourth labor of Hercules was to capture the hind.

Césaire, Aimé (ēmā' sēzēr'), 1913-, West Indian poet and essayist who writes in French. After studying in Paris he became concerned with the plight of blacks in what he considers a decadent Western society. With Léopold SENGHOR and LÉON DAMAS he formulated the concept of *négritude*, which urges blacks to reject assimilation and cultivate consciousness of their own racial qualities and heritage. Césaire voiced this idea through poetry, collected in such volumes as *Les armes miraculeuses* (1946) and *Ferremets* (1960) and in the essay *Discours sur le colonialisme* (1950, tr. 1972). In addition to his literary output, which comprises poetry, plays, and historical essays on black leaders, Césaire has held a number of government positions in his native Martinique, including that of mayor of Fort-de-France. See study by Susan Frutkin (1973).

Cesalpino, Andrea: see CAESALPINUS, ANDREAS

cesarean section, delivery of an infant by surgical removal from the uterus through an abdominal incision. The operation is of ancient origin; a Roman law permitted the fetus to be delivered in this manner if the mother died in the last four weeks of pregnancy. The name of the operation derives from the legend that Julius Caesar was born in this fashion. The possibility of saving the mother by such an operation was slight until an improved technique was evolved in the late 19th cent. The procedure was also aided by antiseptics and other developments that made surgery as a whole more successful. Cesarean section is performed nowadays when factors that make natural childbirth too hazardous are present, such as an abnormally narrow pelvis, pelvic tumors, hemorrhage due to accident, or an abnormal position of the fetus within the uterus. Since the wall of the uterus is weakened in the area where the incision is made, subsequent deliveries are usually also by cesarean section.

Cesari, Giuseppe, called *Cavaliere d'Arpino* (jōōzēp'pā chā'zārē kāvālyā'rā dārpē'nō), 1568-1640, Italian late mannerist painter. Cesari's outstanding works are the frescoes in the Capitol and in the Borghese Chapel, Church of Santa Maria Maggiore, Rome. Other works are *Adam and Eve Expelled from Paradise* (Louvre), a self-portrait (Uffizi), and *Perseus and Andromeda* (Metropolitan Mus.). Several eminent baroque painters, including Caravaggio, were his pupils.

Cesena (chāzā'nā), city (1971 pop. 86,070), in Emilia-Romagna, N central Italy, on the Savio River. It is an agricultural market and a food-processing center. Cesena flourished (1379-1465) under the MALATESTA family, who built (15th cent.) a castle on a hill overlooking the city. The castle includes the splendid Renaissance-style Malatestiana Library, which contains numerous valuable manuscripts.

Cesis (tsā'sēs, -zēs), Ger. Wenden, town (1967 est. pop. 17,000), W European USSR, in Latvia, on the Gauja River. It is a rail terminus, an agricultural market town, and a popular summer resort. Founded in 1209, Cesis was the seat of the Livonian Knights and became a member of the Hanseatic League. In 1561 it passed to Poland-Lithuania. Attacked by the forces of Ivan the Terrible in 1577, the fortress was blown up by its own garrison. Cesis was transferred to Sweden in 1629, to Russia in 1721, and to newly independent Latvia in 1918. It was the site in 1919 of a Latvian victory over a German free corps.

cesium (sē'zēm) [Lat. =bluish gray], a metallic chemical element, symbol Cs, at no 55, at wt 132.905, m.p. 28.5°C, b.p. about 700°C, sp. gr. 1.873 at 20°C, valence +1. Cesium is a ductile, soft-as-wax, silver-white metallic element. It is in group Ia of the PERIODIC TABLE. An ALKALI METAL, it is the most

alkaline of all elements. Cesium liquefies in a warm room, mercury and gallium are the only other metals with this property. Chemically cesium resembles rubidium and potassium. It is the most reactive metal and is never found uncombined in nature. Pure cesium can be prepared by electrolysis of fused cesium cyanide in an inert atmosphere; the pure metal must be kept under an inert liquid or gas or in a vacuum to protect it from air and water. Cesium reacts readily with oxygen; it is sometimes used to remove traces of the gas from vacuum tubes and from light bulbs. It reacts with ice, it reacts explosively with water to form cesium hydroxide, the strongest base known. Cesium reacts with the halogens to form a fluoride, chloride, bromide, and iodide. It also forms a sulfate, carbonate, nitrate, and cyanide. The chloride is used in photoelectric cells, in optical instruments, and in increasing the sensitivity of electron tubes. Cesium compounds are used in the production of glass and ceramics and as antishock agents in conjunction with drugs containing arsenic. Cesium-137, a waste product of nuclear reactors, is a radioactive isotope used in the treatment of cancer. Cesium is found in the mineral pollux, or pollucite, which occurs on the island of Elba, in SW Africa, in the United States in Maine and South Dakota, and in Manitoba, Canada. Commercially useful quantities of inexpensive cesium are now available as a by-product of the production of lithium metal. Minute quantities of cesium chloride are found in mineral springs and in seawater. In 1860, R. W. Bunsen and G. R. Kirchhoff discovered the element (the first to be discovered by the use of the SPECTROSCOPE) and named it for the two bright blue lines characteristic of its spectrum. It was first isolated by Carl Seffnerburg in 1881 by electrolysis of its salts.

Česká Lípa (chě'ská lě'pa), Ger *Bohmisch-Leipa*, city (1970 pop 17,008), N Czechoslovakia, in Bohemia, near the East German and Polish borders. A railway junction, it manufactures railroad cars, mining equipment, and electrical instruments. The city has an old castle and an Augustinian monastery.

České Budějovice (chě'ská bōō'dyěōvitsě), Ger *Budweis*, city (1970 pop 78,037), SW Czechoslovakia, in Bohemia, on the Vltava (Moldau) River. An important road and rail hub and river port, České Budějovice is famous for its breweries. Other industries produce machinery, enamelware, food products, and pencils. The city was founded in the 13th cent. It is noted for its inner town, with an arcaded square, and for a nearby castle.

Český Les: see BOHEMIAN FOREST

Český Těšín: see TESCHEN

Céspedes, Carlos Manuel de (kar'lōs manwēl' dā sā'spāthās), 1819-74, Cuban revolutionist. He completed his education in Spain and there took part (1843) in a revolution led by Juan Prim. On returning (1868) to Cuba he began the revolt by proclaiming the demands of Cuban liberals. The TEN YEARS WAR followed. He was elected president by the revolutionists (1869), but other leaders, notably Ignacio Agramonte, disagreed with him, discontent increased, and he was deposed (1873). He was killed in 1874, probably by Spanish soldiers.

Céspedes, Carlos Manuel de, 1871-1939, president of Cuba (1933), b. New York City, son of Carlos Manuel de Céspedes (1819-74). He actively participated in the Revolution of 1895 and the Spanish-American War. When Gerardo MACHADO was overthrown in Aug., 1933, Céspedes became provisional president, but was forced to resign after a coup (Sept. 5) by a student junta supporting Ramon GRAU SAN MARTIN.

Céspedes, Pablo de (pa'blō dā thās'pāthās), 1538-1608, Spanish artist, poet, and scholar. He studied for the priesthood and subsequently studied painting with Federigo Zuccaro in Rome. There he spent some 20 years and won a considerable reputation as painter, architect, and sculptor. On his return to Spain in 1577, he was appointed canon of the Córdoba Cathedral, where the best of his surviving works remain, including the well-known *Last Supper*. He was the author of a comparison of ancient and modern painting, of a work on the Córdoba Cathedral, and of treatises on architecture.

cestus or **caestus**: see BOXING

Cetewayo, Cetywayo (both sē'tivā'ō, -wī'ō, kē-), or **Ketchwayo** (kēchwi'ō), c. 1836-1884, king of the Zulus. Cetewayo gained ascendancy in 1856, when he defeated in battle and killed his younger brother, who was the favorite of their father, Umpanda. On his father's death in 1872, Cetewayo took over. He

was determined to resist European advances in his territory, and in Dec., 1878, he rejected British demands that he disband his troops. The British attacked in 1879, and after losing two engagements they utterly defeated Cetewayo at Ulundi. After a period of exile he was reinstated (1883) in rule over part of his former territory. Discredited by his defeats in the eyes of his subjects, Cetewayo was soon driven out of Zululand to die in exile.

Cetine (tsē'tīnyē), town (1971 pop 22,032), SW Yugoslavia, in Montenegro. It grew around a monastery founded in 1485. The town became the residence of Montenegro's ruling prince-bishops and remained the capital of Montenegro until 1945. The monastery, the burial place of the Montenegrin princes, and the former royal palace (now a museum) remain.

Cetywayo: see CETEWAYO

Ceuta (thāōō'tā), city (1970 est. pop. 67,000), c. 7 sq mi (18 sq km), NW Africa, a possession of Spain, on the Strait of Gibraltar. An enclave in Morocco, Ceuta is administered as an integral part of Cádiz prov., Spain. It is located on a peninsula whose promontory forms one of the PILLARS OF HERCULES. The city, which has a European appearance, is a free port, with a large harbor and ample wharves; it is also a refueling and fishing port. Food processing is an important activity. Ceuta is connected with Tétouan, Morocco, by road and rail. Built on a Phoenician colony, the city was held by Carthaginians, Romans, Vandals, Byzantines, and Arabs (711). Taken by Portugal in 1415 (the first permanent European conquest in Africa), it then passed (1580) to Spain. It has remained Spanish despite several attacks, notably a prolonged siege (1694-1720) by the Sultan Moulay Ismail.

Cevennes (sāvēn'), mountain range, S France, bordering the Massif Central on the southeast. The Cevennes proper occupy the central section of a mountainous arc (average height 3,000 ft/910 m), swinging generally NE from the Montagne Noire (NE of Toulouse) to Mont Pilat (SW of Lyons). Between the Cevennes proper and the Montagne Noire are the Causses—barren limestone plateaus intersected by deep chasms and ravines. The Loire, Allier, Lot, Tarn, Aveyron, Hérault, Gard, and Ardèche rivers all radiate from the Cevennes or the Causses. Mont Lozère (5,584 ft/1,702 m) is the highest peak of the Cevennes proper; Mont Mezenc rises to 5,753 ft (1,754 m). The cultivation of silkworms and the manufacture of silk were characteristic of the area, but the silk industry has greatly declined. Exploitation of coal in the Grand Combe-Bessegès area has activated industry at Ales, making this area the most progressive in the Cevennes. Intensive sheep raising in the interior has worsened erosion.

Ceylon: see SRI LANKA

Cézanne, Paul (pōl sāzan'), 1839-1906, French painter, b. Aix-en-Provence. Cézanne was the leading figure in the revolution toward abstraction in modern painting. From early childhood he was a close friend of Emile Zola, who for a time encouraged the painter in his work. Cézanne went to Paris in 1861, there he met Pissarro, who was a continuing strong influence in his development. He divided his time between Provence and the environs of Paris until his retirement to Aix in 1899. Cézanne's early work is marked by a heavy use of the palette knife, from which he created thickly textured and violently deformed shapes and scenes of a fantastic, dreamlike quality. Although these impulsive paintings exhibit few of the features of his later style, they anticipate the expressionist idiom of the 20th cent. Through Pissarro, he came to know Manet and the impressionist painters. He was concerned, after 1870, with the use of color to create perspective, but the steady, diffused light in his works is utterly unrelated to the impressionist preoccupation with transitory light effects. *House of the Hanged Man* (1873-74, Louvre) is characteristic of his impressionist period. He exhibited at the group's show of 1874 but later diverged from the impressionist mode of expression and developed a firmer structure in his paintings. Cézanne sought to "re-create nature" by simplifying forms to their basic geometric equivalents, utilizing color and considerable distortion to express the essence of landscape (e.g., *Mont Sainte-Victoire*, 1885-87, Phillips Coll., Washington, D.C.), still life (e.g., *The Kitchen Table*, 1888-90, Louvre), and figural groups (e.g., *The Card Players*, 1890-92, one version, S. C. Clark Coll., New York City). Although his portraits are also geometric in approach, they remain vital studies of character, e.g., *Madame Cézanne* (c. 1885, S. S. and V. White Coll., Ardmore, Pa.) and *Amboise Vollard* (Musée du Petit Palais,

Paris). Cézanne developed a new type of spatial pattern. Instead of adhering to the traditional focalized system of perspective, he portrayed objects from shifting viewpoints. He created vibrating surface effects from the play of flat planes against one another and from the subtle transitions of tone and color. In all his work he revealed a reverence for the integrity and dignity of simple forms by rendering them with an almost classical structural stability. His *Bathers* (1898-1905, Philadelphia Mus. of Art) is the monumental embodiment of several of Cézanne's formal visual systems. Cézanne worked in oil, watercolor, and drawing media, often making several versions of his works. His influence upon the course of modern art, particularly upon CUBISM, is enormous and profound. His theories spawned a whole new school of aesthetic criticism, especially in England, that has ranked Cézanne among the foremost French masters. There are fine collections of his paintings in the Louvre, the Metropolitan Museum and the Museum of Modern Art, New York City, and the Barnes Foundation, Merion, Pa. See his letters, ed. by John Rewald (tr. 1941), his drawings, ed. by Adrien Chappuis (1973), his watercolors, ed. by Theodore Reff (1963), catalogue raisonné by Adrien Chappuis (2 vol., tr. 1973), biographies by John Rewald (new ed. 1967) and Jack Lindsay (1969), studies by Roger Fry (new ed. 1958), Meyer Schapiro (2d ed. 1962), and Wayne Andersen (1970).

Cf. chemical symbol of the element CALIFORNIUM

cgs system, system of units of measurement based on the METRIC SYSTEM and having the CENTIMETER of length, the GRAM of mass, and the SECOND of time as its fundamental units. Other cgs units are the DYNE of force and the ERG of work or energy. The units of the cgs system are generally much smaller than the comparable units of the MKS SYSTEM, the impracticality of their size has led most scientists to favor the mks system. The cgs system is still used for some calculations, however, for example, densities are often expressed in grams per cubic centimeter rather than the more complicated and less familiar mks equivalent.

Chadayev, Piotr Yakovlevich (pyō'ter ya'kav-lyivich chada'yēv), 1794-1856, Russian philosopher. An aristocrat by birth, he was converted to Roman Catholicism. In 1836 the first of his *Philosophical Letters* appeared in a Moscow journal. Its devastating attack on Russian institutions, such as autocracy, the church, and serfdom, created a sensation. Chadayev was declared insane and was confined to his home. His vigorous writings helped clarify the basic differences between the SLAVOPHILES AND WESTERNIZERS. See his major works, ed. by R. T. McNally (1969), study by R. T. McNally (1971).

Chaban-Delmas, Jacques (zhak shabaN'-dēlma'), 1915-, French political leader, whose name originally was Jacques Delmas. He joined the French resistance in 1940, using the nom de guerre "Chaban," which he later adopted legally. He entered the chamber of deputies as a Radical in 1946, but soon joined the party of General de Gaulle. From 1947 he was mayor of Bordeaux and also served in several cabinets. He was president of the national assembly from 1958 until his appointment in 1969 as premier by President Pompidou. His government faced several scandals, including charges that he had evaded personal income taxes. Although Chaban-Delmas won a vote of confidence in May, 1972, he was considered too liberal by many hard-line Gaullists, and Pompidou forced him to resign in July. In 1974 he ran unsuccessfully for the presidency.

Chabanel, Noel (St. Noel Chabanel) (nōēl' shabanēl'), 1613-49, French missionary in North America, a Jesuit. He entered the Society of Jesus in 1630, came as a missionary to New France in 1643, and worked among the Huron Indians. He was captured by the Iroquois and put to death. Chabanel was canonized in 1930 with other missionaries (including Isaac Jogues and Jean de Brebeuf) and laymen. As a group they are known as the Martyrs of North America. Feast Sept. 26 or (among the Jesuits) March 16.

Chabannes, Antoine de, comte de Dammartin (a'ntwan' dā shaban' kōnt dā dammartāN'), 1408?-1488, French soldier in the Hundred Years War. He served with Joan of Arc, distinguishing himself at the siege of Orléans in 1428-29, fought as a captain of *écourcheurs*, or armed bands, and took part in the PRAGUE revolt (1440). Pardonned by King Charles VII, he was appointed to various offices and presided over the committee that procured the conviction of the financier, Jacques CŒUR. After the accession (1461) of King Louis XI he was imprisoned. He escaped and joined (1465) the League of the Public Weal against LOUIS XI, but was pardoned once more and became one of the king's most trusted officers.

Chabas, Paul Émile (pōl āmēl' shābās'), 1869–1937, French academic painter. He is remembered chiefly for his nude, *September Morn*, which created a sensation when it was exhibited in 1912. It was sold to a Russian, hidden during the Russian Revolution, and in 1935 rediscovered in a private collection in Paris. It is now owned by the Metropolitan Museum.

Chablis (shāblē'), village (1968 pop. 1,982), Yonne dept., central France, in Burgundy. It is famous for the white wine named for it. There is a remarkable early Gothic church (12th cent.).

Chabot, Philippe de (fēlēp' də shābō'), also known as **Amiral de Brion** (brōn'), 1480–1543, count of Charny and of Suzançois, admiral of France. After a successful campaign (1536) in Savoy and Piedmont, he was, through the intrigues of Anne, duc de MONTMORENCY, accused and convicted (1541) of misconduct in office, but he was pardoned by King Francis I. Chabot was instrumental in arranging the voyages of Giovanni da VERRAZANO.

Chabrier, Alexis Emmanuel (ālēksē' emānūēl' shābrēā'), 1841–94, French composer. His best-known works are an orchestral rhapsody, *España* (1883), an opera, *Le Roi malgré lui* (1887), and piano pieces, such as *Habanera* (1885) and *Bourrée fantasque* (1891). Chabrier's works display vivid harmonic and orchestral color and musical drollery. His music influenced such French composers as Ravel and Satie.

Chacabuco, battle of, Feb. 12, 1817, fought between Chilean independence forces and Spanish troops. It took place just N of Santiago, Chile. José de SAN MARTÍN, with Bernardo O'HIGGINS, assaulted and decisively defeated the Spanish forces, thus gaining entry into Santiago, where O'Higgins was then installed as supreme director of Chile. One year later, to the day, the independence of Chile was proclaimed. The battle climaxed a torturous three-week march across the Andes from Argentina, where San Martín had trained his army.

Chaco; Chaco Austral; Chaco Boreal; Chaco Central; and Chaco War: see GRAN CHACO

Chaco Canyon National Monument: see NATIONAL PARKS AND MONUMENTS (table)

chaccone (shākōn') and **passacaglia** (pās'sakāl'yā), two closely related musical forms popular during the baroque period. Both are in triple meter time and employ a recurring harmonic pattern of four or eight bars. Compositions labeled *passacaglia* often have, in addition, a recurring sequence of pitches, called *ostinato*, usually in the bass line. J. S. Bach's *Chaconne* from the D Minor Violin Suite and his *Passacaglia* in C Minor for organ are the most famous examples of these forms.

Chad (chād, chād), Fr. Tchad, republic (1973 est. pop. 3,800,000), 495,752 sq mi (1,284,000 sq km), N central Africa. NIJAMENA is the capital. Chad is bordered by the Central African Republic on the south, Sudan on the east, Libya on the north, and Cameroon, Niger, and Nigeria on the west. The terrain in the south is wooded savanna; it becomes brush country near Lake Chad. The only important rivers are the Chari and the Logone, both of which flow into Lake Chad and are used for irrigation and seasonal navigation. Northern Chad is a desert that merges with the S. Sahara, areas of the mountainous Tibesti region there are 11,000 ft (3,353 m) high. The country has no railroads and few all-weather roads. Its landlocked position, great distance from the coast, poor transportation network, and inadequate natural resources have severely hampered economic development. The economy is based primarily on sedentary agriculture and nomadic pastoralism. The best farming zone is in the south, where rainfall is sufficient for the cultivation of cotton and peanuts (the country's leading cash crops) for export and some subsistence crops. Natron is the country's chief mineral; tungsten has been found in the arid Tibesti region. Industry is limited to food processing and the production of textiles and light consumer goods. Chad belongs to the French franc zone and is an associate member of the European Common Market. French is the official language. The country comprises two distinct, and often hostile, population groupings. In the politically dominant south, where the bulk of the population is concentrated, live sedentary agricultural black African peoples, including the Saras, Massa, and Moudang, they are mostly animists, but some are Christians. In the north are seminomadic and nomadic Muslim tribes, including Bedouin Arabs, Fulani, Tuareg, and Wadaians, herding is their main occupation. Traditionally, the region around Chad was a focal point for trans-Saharan trade routes. Arab traders penetrated

the area in the 7th cent. Shortly thereafter, nomads from N. Africa, probably related to the Berbers, entered the region; they eventually established the

state of Kanem, which reached its zenith in the 13th cent. Its kings converted to Islam, the religion also practiced by the successor state of Bornu. The Wadai and Bagirmi empires arose in the 16th cent., they warred with Bornu and in the 18th cent. surpassed it in power. By the early 1890s all of these states, weakened by internal dissension, fell under the control of the Sudanese conqueror Rabih. French expeditions advanced into the region in 1890, and French sovereignty over Chad was recognized by agreements among the European powers. In 1900, French forces defeated Rabih's army, and by 1913 the conquest of Chad was completed; it was organized as a French colony in French Equatorial Africa and remained under military rule. Chad was later linked administratively with Ubangi-Shari (now the Central African Republic), but in 1920 it again became a separate colony. It was granted its own territorial legislature in 1946. In the French constitutional referendum of 1958, Chad chose autonomy within the French Community. Full independence was attained on Aug. 11, 1960, with Ngarta Tombalbaye as the first president. Tombalbaye steadily strengthened his control over the country, and by 1965 it had become a one-party state. The president is chosen for a seven-year term by an electoral college composed of the national assembly, heads of urban and rural communities, and tribal chiefs. A council of ministers assists the president. The unicameral national assembly serves for five years. Chad is a member (with Cameroon, Niger, and Nigeria) of the Chad Basin Commission. Discontent among northern Muslim tribes with the increasing power of Tombalbaye's southern-dominated government evolved into a full-scale guerrilla war in 1966. Invoking its defense pact with France, the government of Chad requested French troops to help battle the guerrillas. These troops were withdrawn in 1971, and the revolt was over by 1973. Chad suffered severely from the W. African drought that began in the late 1960s and continued unabated in 1974. See Virginia Thompson and Richard Adloff, *The Emerging States of French Equatorial Africa* (1960), G. M. Carter, ed., *National Unity and Regionalism in Eight African States* (1966), Guy de Lusignan, *French-Speaking Africa since Independence* (1969), H. D. Nelson, ed., *Area Handbook for Chad* (1972).

Chad, Lake (chād, chād), N central Africa. It lies mainly in the Republic of Chad and partly in Nigeria, Cameroon, and Niger. The size of the lake varies seasonally from c. 4,000 to c. 10,000 sq mi (10,360–25,900 sq km). It is divided into north and south basins, neither of which is generally more than 25 ft (7.6 m) deep, although the lake was formerly much larger and attained a depth of c. 930 ft (285 m) in the 19th cent. The Chari River is the chief tributary of Lake Chad, which has no outlets.

Chadderton, urban district (1971 pop. 32,406), Lancashire, NW England. Cottons and electrical and aircraft equipment are manufactured. In 1974, Chadderton became part of the new metropolitan county of Greater Manchester.

Chadds Ford: see BRANDYWINE, BATTLE OF.

Chadwick, Sir Edwin, 1800–1890, English social reformer. For many years an assistant to Jeremy Ben-

tham, Chadwick applied Bentham's utilitarianism to the reform (1834) of the Poor Law and to the development of public health measures, particularly in his *The Sanitary Conditions of the Labouring Population* (1842). He was largely responsible for the passage of the Public Health Act of 1848, which established a board of health. Chadwick's chief writings were collected and edited by B. W. Richardson as *The Health of Nations* (1887). See biography by Samuel Finer (1952, repr. 1970).

Chadwick, Florence May, 1918–, American distance swimmer, b. San Diego, Calif. She began swimming at the age of six, and four years later she swam the San Diego Bay Channel, the first child to do so. On Aug. 8, 1950, she broke Gertrude Ederle's 24-year record for English Channel swims by women. Florence Chadwick covered the 20 mi (32 km) from France to England in 13 hr 20 min. She also swam (Sept., 1951) from England to France, the first woman to swim the channel in both directions. In 1952 she became the first woman to swim the 21-mi (34-km) Catalina Channel off Long Beach, Calif., breaking speed records for any swimmer (13 hr 47 min). She swam the Bosphorus, the Dardanelles, and the strait of Gibraltar in 1953.

Chadwick, George Whitefield, 1854–1931, American composer, b. Lowell, Mass., studied in Germany. In 1882 he joined the faculty of the New England Conservatory of Music, of which he was director from 1897 until his death. His chief compositions are the overtures *The Miller's Daughter* (1884) and *Rip Van Winkle* (1879), the opera *Judith* (1901), and especially *Symphonic Sketches* (1908) and the song *A Ballad of Trees and the Master* (1899). Although much influenced by German music, Chadwick's best works have been described as having Yankee humor and impudence.

Chadwick, Sir James, 1891–1974, English physicist, grad. Manchester Univ., 1908. He worked at Manchester under Ernest Rutherford on radioactivity. He was assistant director of radioactive research in the Cavendish Laboratory, Cambridge (1923–35), professor at the Univ. of Liverpool (1935–46), and master of Gonville and Caius College, Cambridge (1948–58). For his discovery of the NEUTRON in 1932 he received the 1935 Nobel Prize in Physics. He was knighted in 1935.

Chadwick, Lynn, 1914–, English sculptor. After studying architecture, Chadwick began his career as a sculptor in 1945. He first produced wire MOBILES, and after 1955 he turned to triangular works of great mass that are largely abstract. Several of his works are in the Museum of Modern Art, New York City.

Chaeronea (kērōnē'ā), ancient town of Boeotia, Greece, in the Cephissus (now Kifisos) River valley and NW of Thebes. There the Athenians and Thebans were defeated (338 B.C.) by the Macedonians under Philip II, and in 86 B.C. Sulla defeated the army of Mithridates VI of Pontus under Archelaus. Chaeronea was the birthplace of Plutarch.

Chaetognatha (kētōgnāth'ā), phylum of predominantly pelagic marine animals commonly known as arrowworms. Arrowworms have slender, transparent bodies, usually under 1 in. (2.5 cm) long. Lateral and caudal fins propel the animal in sudden darting

Anatomy of an arrow worm, *Sagitta*, representative of the phylum Chaetognatha.

movements. The well-developed head bears eyes and other sense organs, grasping spines used in the capture of prey, and rows of teeth flanking the mouth. A protective hood can be folded down over the bristles and teeth. The digestive system includes a glandular pharynx, a straight intestine, and a short, muscular rectum. The nervous system centers in a bilobed, dorsal brain and several other nerve ganglia. Although widely distributed, arrowworms prefer warm, shallow seas and are particularly plentiful in the Indo-Pacific region. They are voracious predators, some feed on freshly hatched fish nearly as large as themselves. They are influential planktonic consumers when abundant.

chaffinch: see FINCH

Chagai (cha'gi'), town, W Pakistan, near the border with Afghanistan, on the trade route to Afghanistan and Iran. Pastoral Baluchi and Brahui tribes inhabit the region, which is noted for its oriental alabaster and other ornamental stones. British forces occupied Chagai in 1897.

Chagall, Marc (mark shag'al'), 1889-, Russian painter. In 1907, Chagall left his native Vitebsk for St. Petersburg, where he studied under L. N. BAKST. In Paris (1910) he began to assimilate cubist characteristics into his expressionistic style. He is considered a forerunner of SURREALISM. After some years in Russia, Chagall returned to France in 1922, where he has spent most of his life. His frequently repeated subject matter is drawn from Jewish life and folklore, he is particularly fond of flower and animal symbols. His major early works include murals for the Jewish State Theater (now in the Tretyakov Mus., Moscow). Among his other well-known works are *I and the Village* (1911, Mus. of Modern Art, New York City) and *The Rabbi of Vitebsk* (Art Inst., Chicago). He designed the sets and costumes for Stravinsky's ballet *Firebird* (1945). Chagall's twelve stained-glass windows, symbolizing the tribes of Israel, were exhibited in Paris and New York City before being installed (1962) in the Hadassah-Hebrew Univ. Medical Center synagogue in Jerusalem. His two vast murals for New York's Metropolitan Opera House, treating symbolically the sources and the triumph of music, were installed in 1966. Much of Chagall's work is rendered with an extraordinary formal inventiveness and a deceptive fairy-tale naivete. Chagall has illustrated numerous books, including Gogol's *Dead Souls*, La Fontaine's *Fables*, and *Illustrations for the Bible* (1956). A museum of his work opened in Nice in 1973. His name is also spelled Shagall. See his autobiography (1931, tr. 1960), biography by Jean-Paul Crespelle (1970), studies by Franz Meyer (tr. 1964), J. J. Sweeney (1946, repr. 1970), and Werner Haftmann (1974).

Chahar (cha-har), Mandarin *Ch'a-ha-erh*, former province (109,527 sq mi/283,675 sq km), N China. Chang-chia-k'ou (Kalgan) was the capital. It was abolished as a province in 1952, most of it was incorporated in the Inner Mongolian Autonomous Region, and the rest was divided between Shansi and Hopeh provs. The Chinese, who constitute a majority of the population of the Chahar region, are concentrated in the southern tip of the territory, which contains Chang-chia-k'ou and lies between two sections of the Great Wall. This area, economically the most important, includes the eastern terminus of the main road to the Mongolian People's Republic and is well connected by rail. Kaoliang, wheat, and corn are raised in its fertile loess soil. The rest of the region, mainly inhabited by Mongolian herdsmen, is a high, almost barren plateau, where livestock raising and animal trapping are the chief economic activities, horses, hides, fur, and wool are exported.

Chaikovsky, Nikolai Vasilyevich see CHAYKOVSKY, NIKOLAI VASILYEVICH

Chaillé-Long, Charles (shayä'-lông), 1842-1917, American soldier, African explorer, and writer, b. Princess Anne, Md. After serving in the Civil War, he was commissioned (1869) in the Egyptian army under Gen. C. G. Gordon. Chaillé-Long explored the Victoria Nile and was awarded a medal by the American Geographical Society. In 1875 he crossed the Congo-Nile divide to the Bahr al Ghazal region. He returned to the United States, graduated from Columbia Law School, and became (1887-89) consul general and secretary to the legation in Korea. His travel narratives in English include *The Three Prophets* (1884), *My Life in Four Continents* (1912), and *Central Africa: Naked Truths of Naked People* (1876). Among his writings in French are *Les Sources du Nil* (1891), *L'Égypte et ses provinces perdues* (1892), and *La Corée ou Tschosen* (1894).

Chailu, Paul Belloni du see DU CHAILLU

Chain, Ernst Boris, 1906-, English biochemist, b. Berlin, Germany. In 1933 he left Germany and went to England, where he conducted research at Cambridge from 1933 to 1935 and at Oxford from 1935, he lectured (1936-48) in chemical pathology at Oxford. In 1951 he became director of the International Research Center for Chemical Microbiology, Istituto Superiore di Sanita, Rome. He was professor of biochemistry at the Univ. of London from 1961. For his work on penicillin, Chain shared with Sir Alexander Fleming and Sir Howard Florey the 1945 Nobel Prize in Physiology and Medicine.

chain, flexible series of connected links used in various ways, especially for the transmission of motive power, for hoisting (see PULLEY), and for securing or fastening. Commonly, mechanical energy from a motor or other source applied to a sprocket wheel is conveyed by means of an endless chain to another sprocket wheel for driving a mechanism. Examples of such an arrangement are found in bicycles, motorcycles, and conveyor belts. The chain in this application is so designed that each consecutive link fits over a sprocket, the distance between links being called the pitch. The relative speed of the wheels varies according to their relative circumferences and, thus, the number of sprockets on each. There are several types of chain for the transmission of power. A detachable-link chain has links that are simple rectangles, each with a connecting hook at one end by which it is attached to the next link. A pintle chain has links that are approximately U-shaped. The closed end of each link fits into the open end of the next one, a pin holds the two links together. A block chain consists of metal blocks that are joined together by side plates and pins to form links. A roller chain has links consisting of side plates with hollow cylindrical rollers between them. Pins pass through the rollers and side plates to hold the links together. A silent, or inverted-tooth, chain has links made of toothed metal plates. A number of these links are placed side by side to form a group. Each group is joined to another one by meshing the ends of the links of both groups and inserting a pin there. By repeating the process a chain can be formed. Its width can be varied by varying the number of links in a group. Although not completely silent, this type of chain is quieter than other power transmission chains. The coil chains used in hoists and for locking or fastening purposes are of the open-link type, comprising solid interlocked rings, or of the stud-link type, in which a stud, or bar, across the link keeps the chain from kinking.

chain compound: see ALIPHATIC COMPOUND

chain gang: see CONVICT LABOR

chain reaction, self-sustaining reaction that, once started, continues without further outside influence. Proper conditions for a chain reaction depend not only on various external factors, such as temperature, but also on the quantity and shape of the substance undergoing the reaction. A chain reaction can be of various types, but nuclear chain reactions are the best known. A line of dominoes falling after

the first one has been pushed is an example of a mechanical chain reaction, a pile of wood burning after it has been kindled is an example of a chemical chain reaction. In the latter case each piece of wood, as it burns, must release enough heat to raise nearby pieces to the kindling point. The wood, therefore, must be piled close enough together so that not too much heat is lost to the surrounding air. The conditions for a nuclear chain reaction can be understood by analogy. In the case of the fission of a nucleus, the reaction is begun by the absorption of a slow neutron. Each fission produces two or three fast neutrons. In order to sustain a chain reaction, a sample must be large enough to slow the neutrons so that one can be captured by another nucleus and produce a second fission. The sample must also be compact to prevent neutrons from escaping. The minimum quantity of a fissionable material necessary to sustain a nuclear chain reaction is called the critical mass. In a nuclear fission bomb, a chain reaction is started by forcing together two or more samples of fissionable material, each of less than critical mass, to form one sample of supercritical mass. The number of subsequent fissions produced by a single fission is always greater than one and increases rapidly (exponentially) with time. In a fission reactor, the number of subsequent fissions must be exactly one. If the rate is less, the chain reaction will stop; if greater, it will soon grow out of control. In one type of fission reactor, a combination of fuel rods and control rods are moved in or out of a solid block of moderating material to control the reaction rate. In another type of reactor, the temperature of a liquid moderator controls the reaction. See also NUCLEAR REACTOR. Nuclear-fusion chain reactions are initiated by very high temperatures. In a thermonuclear bomb, the necessary high temperatures are created by the explosion of a fission bomb within the fusion bomb. The principal problem in the development of controlled fusion reactors has been the containment and control of the fusion fuel at such temperatures, which are far above the melting point of any known solid. See also NUCLEAR ENERGY.

chain snake: see KING SNAKE

chain store: see STORE

chair, movable piece of furniture combining a seat with a supporting back, with or without arms, and usually designed to accommodate one person. Before the 17th cent. chairs were symbolic of wealth and authority, the ordinary person rested on a bench or stool or storage chest. The Egyptians created exquisite carved and painted chairs, the legs of which were fashioned to represent animal legs and feet, and the seats of which were adorned with valuable woven cloth or hide. The Greek *klismos*, as depicted on classical pottery, was an elegant, armless chair with an S-shaped profile of the rear leg and back. It was the prototype for the many Greek revival furniture styles. The Romans designed the curule with an X-shaped frame, a style that has also been frequently revived. Characteristic chairs of the

Chain reaction. A neutron (n) strikes the uranium nucleus (U-235), causing it to split into fission products A and B and release two neutrons. These neutrons can in turn cause further fissions. In some cases, a different pair of products, C and D, may be produced. The atomic numbers of the products always add up to 92, the atomic number of uranium.

Middle Ages had tall slab backs and sides and were often draped in velvet or canopied to provide warmth. Oriental influence, brought about by increased trade in the 17th cent., was reflected in curvilinear designs and the use of caning for back panels and seats. At the end of the century upholstery was introduced, and the "easy chair" became a popular item throughout the 18th cent. and later. Technological advances exerted a prodigious influence upon chair design of the 19th and 20th cent. Coiled springs, bent woods, papier-mâché, plastics, molded foam, prefabricated metal, and synthetic fabrics have all inspired furniture designers and architects (including Harry Bertola, Eero Saarinen, Marcel Breuer, and Alvar Alto) to create bold new chair forms, many created in keeping with the aesthetic of FUNCTIONALISM.

Chaitanya (chī'tūn'yā), 1485–1533, Indian mystic, also called Gaurāṅga ("the Golden"). He was born of Brahman parents in Nabadwip, Bengal, a center of Sanskrit learning. As a young man he attained prominence as a scholar, but at 22 he underwent a profound religious conversion and became an ecstatic devotee of KRISHNA. At 24 he became a renunciant and left Nabadwip on pilgrimage, finally settling in Puri, Orissa, where he lived the rest of his life. His charisma made him the leader of an important sect of Vaishnavites that is still active. He emphasized the importance of nonritualistic worship in the form of kirtan, or religious song and dance, and devotion focusing on the love of Krishna and his consort Radha as the archetype of mystical union. Chaitanya is regarded by his followers as an avatar (incarnation) of Krishna and Radha in a single form. See BHAKTI.

Chaka (shā'ka), d. 182B, paramount chief (1818–28) of the Zulus. He organized an army of some 40,000 tribesmen, and after reducing many enemy tribes to vassalage, he subjugated all of what is now Natal. Chaka was murdered by his half brother, Dingaan. The name is also spelled Shaka.

chakra: see YOGA

Chalcedon (kāl'sīdōn, -dān, kāl'sē'dān), ancient Greek city of Asia Minor, on the Bosphorus. It was founded by Megara on the shore opposite Byzantium in 685 B.C. Taken by the Persians and recovered by the Greeks, it was later a possession of the kings of Bithynia, from whom it passed (A.D. 74) to Rome. The Council of Chalcedon was held there in A.D. 451. The site is in the suburbs of Istanbul.

Chalcedon, Council of, fourth ecumenical council, convened in 451 by Pulcheria and Marcian, empress and emperor of the East, to settle the scandal of the Robber Synod and to discuss Eutychianism (see EUTYCHES). It deposed the principals in the Robber Synod and destroyed the Eutychian party. Its great work, however, was its definition regarding the nature and person of Jesus Christ. Based upon the formulation given by Pope St. Leo I in his famous *Tome* to Flavian, it declared (contrary to the view taken by Eutychianism) that the second Person of the Trinity has two distinct natures—one divine and one human. It was also proclaimed that these two natures exist inseparably in one person. This definition became the test of orthodoxy in the East and the West. The Roman Catholic Church has never admitted a decree of the council that made the patriarch of Constantinople single head of the Church in Eastern Europe.

chalcedony (kāl'sēd'ōnē) [from Chalcedon], form of quartz the crystals of which are so minute that its crystalline structure cannot be seen except with the aid of a microscope. Chalcedony has a waxy luster and is translucent to transparent. The name chalcedony is applied more specifically to white, gray, blue, and brown varieties. Some varieties differing in color because of the presence of impurities are AGATE, BLOODSTONE, CARNELIAN, CHRYSOPRASE, JASPER, ONYX, SARD, and SARDONYX.

Chalcidice, Greece. See KHALKIDIKI.

Chalcis, Greece. See KHALKIS.

Chalcol (kāl'kōl), the same as CALCOL.

chalcocopyrite (kāl'kōp'i'rīt, kāl'kōp'i'rīt) or **copper pyrites** (pī'rītēz, pā-), brass-yellow mineral, sometimes with an indolent tarnish. It is a sulfide of copper and iron, CuFeS₂. It crystallizes in the tetragonal system but is usually found in the massive form. Chalcocopyrite is of primary origin and occurs in igneous and metamorphic rocks and in metalliferous veins. It is an important ore of copper and is widely distributed throughout the world.

Chaldea or **Chaldea** (both. kāl'dē'ā), properly the southernmost portion of the valley of the Tigris and the Euphrates rivers. Sometimes it is extended to in-

clude Babylonia and thus comprises all S Mesopotamia, as in the Bible (e.g., Gen. 11:28, Jer. 50:10). The Chaldeans were a Semitic people who first came into S Babylonia c. 1000 B.C. With the death of Assur-bani-pal (626 B.C.), Nabopolassar seized the throne and established a new Babylonian or Chaldaean empire. The empire flourished under Nabopolassar's son Nebuchadnezzar II, but it declined rapidly thereafter and came to an end when Babylon fell to Cyrus the Great in 539 B.C. The study of astronomy and astrology was developed in this period, and "Chaldean" came to mean simply "astrologer," as in Daniel 1:4 and among the Romans. The term is also understood in the Bible to mean Aramaean.

Chaldean rite: see NESTORIAN CHURCH

Chaleur Bay (shalōōr'), inlet of the Gulf of St. Lawrence, c. 85 mi (140 km) long and from 15 to 25 mi (24–40 km) wide, between N.N.B. and the Gaspé Peninsula, E. Que., Canada. It is the submerged valley of the Restigouche River, which enters at its head. Chaleur Bay is a famous fishing ground for cod, herring, mackerel, and salmon, and there are many Acadian fishing villages on both coasts. The bay was discovered and named by Jacques Cartier in 1534.

Chalgrin, Jean François (zhāN fraNswā' shalgrāN'), 1739–1811, French architect. He studied under Servandoni and in Italy as a winner of the Grand Prix de Rome (1758). He rebuilt (1777) part of the Church of St. Sulpice in Paris. His most influential work was the Church of St. Philippe-du-Roule, in which he reintroduced a basilica plan to French ecclesiastical architecture. He also enlarged the buildings of the Collège de France and, after the Revolution, altered the palace of the Luxembourg to serve as headquarters for the Directory. In 1806 he was commissioned by Napoleon to design a commemorative arch to the victorious armies of France, and the executed scheme for the ARC DE TRIOMPHE DE L'ÉTOILE was chiefly Chalgrin's, although he died shortly after commencement of the actual construction.

Chalopin, Feodor Ivanovich (fyō'dar ēva'novich shalyā'pyin'), 1873–1938, Russian operatic bass. His powerful and supple voice, together with his tremendous physique, his gusto, and his superb ability as a naturalistic actor, made him one of the greatest performers in the history of opera. Taught by the singer Usatov, he first gained notice in 1894 in St. Petersburg, then he sang in Moscow and rapidly won an international reputation. After the Russian Revolution he was a lauded "artist of the people," but disagreement with the Soviet government caused him to remain outside Russia after 1921, although he maintained that he was not anti-Soviet. After an unspectacular American debut at the Metropolitan Opera in New York in 1907, he returned in 1921 and sang there with immense success for eight seasons. His most famous role was the lead in Moussorgsky's *Boris Godunov*, but he also won praise as Ivan the Terrible in Rimsky-Korsakov's *Maid of Pskov*, in the title role of Boito's *Mefistofele*, and as Mephistopheles in Gounod's *Faust*. His recitals, which included popular Russian music, were also highly successful wherever he performed. See his autobiography as told to Maxim Gorky, ed. by Nina Froud and James Hanley (1968).

chalice [Lat., =cup], ancient name for a drinking cup, retained for the eucharistic or communion cup. Its use commemorates the cup used by Jesus Christ at the Last Supper. Celebrated examples are the Great Chalice of Antioch (Syria), of embossed silver, excavated there in 1910 and attributed to the 1st cent., and an elaborately ornamented chalice found in 1868 at Ardagh, Ireland, and believed to be Celtic work of the 9th or 10th cent. See GRAIL. HOLY.

chalk, mineral of CALCIUM CARBONATE, similar in composition to limestone, but softer. It is characteristically a marine formation and sometimes occurs in great thickness, the chief constituents of these chalk deposits are the shells of minute animals called Foraminifera. Chalk has been laid down in all periods of geologic time, but most of the best-known deposits, e.g., the cliffs of the English Channel, date from the Cretaceous period. Chalk is used in the manufacture of putty, plaster, cement, quicklime, mortar, and rubber goods and also for blackboard chalk. Harder forms are used as building stones. Poor soils containing an excessive proportion of clay are frequently improved and sweetened by mixing chalk into them.

Chalkley, Thomas, 1675–1741, Quaker mariner and missionary preacher, b. England. He made his home

after 1701 in Philadelphia, Pa. He traded chiefly with the West Indies, navigating his own ship, and made preaching tours up and down the colonies from New England to the Carolinas and also through England, Scotland, and Wales. *Chalkley's Journal* (1747), simple in style and elevated in thought, was widely read by many generations of Quakers.

Chalk River Nuclear Laboratories, nuclear research center located on the Ottawa River in Ont., Canada, 125 miles (201 km) NW of Ottawa. Founded in 1944 by the Canadian government, it is now operated by a government corporation, Atomic Energy of Canada Limited. It is the largest nuclear research center in Canada and is devoted to exploring the peaceful uses of atomic energy.

Challenger expedition, British oceanographic expedition under the direction of the Scottish professor Charles Wyville Thompson and the British naturalist Sir John Murray. Taking place from 1872 to 1876, it opened the era of descriptive oceanography. The team sailed in the converted 18-gun corvette, *Challenger*, the first vessel specifically equipped for general oceanographic research. The expedition cruised almost 69,000 nautical mi (130,000 km) in the Atlantic, Pacific, and Antarctic oceans, gathering data on temperature, currents, water chemistry, marine organisms, and bottom deposits at 362 oceanographic stations scattered over 14 million sq mi (36 million sq km) of ocean floor. Its major contributions, covered in a 50-volume, 29,500-page report that took 23 years to compile, included the first systematic plot of currents and temperatures in the ocean, a map of bottom deposits that has not been changed much by more recent studies, an outline of the main contours of the ocean basins, incorporating the discovery of the mid-Atlantic Ridge and the then record 26,900-ft (8,200-m) Challenger Deep in the Mariana Trench, the discovery of 715 new genera and 4,717 new species of ocean life forms, and the discovery of prodigious life forms even at great depths in the ocean. See H. N. Mosely, *A Naturalist on the "Challenger"* (1879), Sir C. Wyville Thompson, *Voyage of the "Challenger"* (2 vol., 1877), Eric Linklater, *The Voyage of the Challenger* (1972).

Challoner, Richard (chāl'anar), 1691–1781, English Roman Catholic prelate. Brought up a Protestant, he became a Roman Catholic in his teens and was ordained in 1716. In 1730 he returned from Douai to England, where he was widely known for the number of conversions he made. In 1738 he was forced to leave England because he published an open reply to an anti-Catholic pamphlet by an Anglican. In 1739, Challoner was appointed coadjutor of the vicar apostolic in London. He was consecrated titular bishop of Debra in 1741. The rest of his life he spent working among his people (after 1758 as vicar apostolic) in the face of great difficulties. From 1765 to 1780 a series of efforts were instigated to molest English Catholics, and Bishop Challoner was involved, in the Gordon riots (1780) he had to flee London for his life. He was an indefatigable writer. He revised the Douay version of the Bible, his revision becoming the standard one chiefly used by English-speaking Catholics. His chief learned works are on English Catholicism since the Reformation, they did much to preserve the memory of English Catholics. He wrote a number of devotional works, *The Garden of the Soul* (1740) was especially popular. Bishop Challoner's translations of the *Imitation of Christ* were standard. See biography by Michael Trappes-Lomax (1936).

Chalmers, Thomas (chām'ar, chō'-), 1780–1847, Scottish preacher, theologian, and philanthropist, leader of the Free Church of Scotland. His preaching and his interest in philanthropic work during his ministry (1815–23) in Glasgow brought wide recognition. In 1823, Chalmers became professor of moral philosophy at St. Andrews Univ. and in 1828 was made professor of theology at the Univ. of Edinburgh. His Bridgewater treatise (1833) *On the Adaptation of External Nature to the Moral and Intellectual Constitution of Man* brought him a number of honors. Chalmers took a leading part (1843) in organizing the Free Church of Scotland, formed when, after much friction between church and state and trouble over patronage, 470 clergymen withdrew from the Established Church. His foresight had planned for the rapid organizing of the Free Church of Scotland, of which he was the first moderator. He was made principal (1843–47) of the New College (Free Church) at Edinburgh. His published works fill 34 volumes. See biographies by M. O. W. Oliphant (1893), Adam Philip (1929), and Hugh Watt (1943).

Chalmette National Historical Park: see NATIONAL PARKS AND MONUMENTS (table)

Châlons-sur-Marne (shalôn'-sur-märn), city (1968 pop. 54,075), capital of Marne dept., NE France, in Champagne, on the Marne River. It is a commercial and industrial center. Among its manufactures are electrodes, paper, hosiery, foundry products, and musical and precision instruments. There, in 451, the Huns under Attila were defeated by Aetius. Although badly damaged in both World Wars, it still retains its cathedral (13th-17th cent.) and many remarkable Gothic churches. An arts and crafts school is there.

Chalon-sur-Saône (shälôn'-sür-sôn), town (1968 pop. 52,746), Saône-et-Loire dept., E central France, in Burgundy, on the Saône River and the Canal Central. It is an inland port with a large wine and grain trade. The town contains a thermal power station, its many manufactures include metal products, electrical equipment, barges, textiles, chemicals, and glass. Of pre-Roman origin, it was the capital of King Guntram of Burgundy (6th cent.) and the scene of 10 church councils, most notably the one convoked by Charlemagne in 813. Its cathedral, begun in the 12th cent., was completed in the 15th cent.

Chalukya (chä'loōkyä), S Indian dynasty that ruled in the Deccan. It was founded by Pulakesin I (reigned 543-566), who established himself at Badami (in Bijapur). His grandson Pulakesin II (c. 608-642) expanded his domain while defending his northern frontier against HARSHA. He also captured (c. 624) Vengi (in E Andhra Pradesh) and gave it to his brother Vishnuvardhana, founder of the Eastern Chalukya dynasty, which ruled Vengi until the 11th cent. The Chalukyas of Badami were in constant conflict with the Palavas. The dynasty lost power to another family in 757, but it recovered ascendancy in the Deccan c. 973, its power now centered at Kalyani. The history of the Kalyani Chalukya kingdom was largely one of war with the Cholas and defense against the incursions of the Turks and Arabs who were plundering N India. The kingdom broke up in 1189, and the last Chalukya ruler died in 1200.

chalybite (käl'abīt') see SIDERITE

Cham (kām), pseud. of Amédée de Noé (amādä' də nōä'), 1819-79, French caricaturist and lithographer. He abandoned a military career to produce over 4,000 designs, many of them caricatures and sketches of French and Algerian life.

Chamavi see GERMANI

Chamberlain, Sir Austen (Joseph Austen Chamberlain), 1863-1937, British statesman, son of Joseph Chamberlain and half brother of Neville Chamberlain. He entered Parliament as a Conservative in 1892. He was chancellor of the exchequer (1903-5), secretary of state for India (1915-17), a member of Lloyd George's war cabinet (1918), again (1919-21) chancellor of the exchequer, and lord privy seal (1921-22). Although he succeeded Bonar Law as Conservative leader in 1921, he opposed the Conservative withdrawal that brought down Lloyd George's government in 1922. From 1924 to 1929, Chamberlain was foreign secretary under Stanley Baldwin. The LOCARNO PACT of 1925 was largely his work, and in the same year he was awarded (with Charles C. Dawes) the Nobel Peace Prize. He last held a cabinet position in 1931, but he continued to be influential in Parliament until his death. See his *Down the Years* (1935), *Politics from Inside* (1936), and *Seen in Passing* (1937), Sir Charles Petrie, *Life and Letters of Sir Austen Chamberlain* (1939-40).

Chamberlain, Houston Stewart, 1855-1927, Anglo-German writer, b. England. The son of a British admiral, he was educated in France and in Germany, where he settled. He became an admirer of Richard Wagner, he eventually married Wagner's daughter and became a German citizen. His chief work, *Foundations of the Nineteenth Century* (1899, tr. 1910), is a major document of racist doctrine. Aristocratic and anti-Semitic, Chamberlain glorified the Teutons and credited them with all modern achievement. His ideas on "racial purity" were adopted and reshaped as the racist policies of Adolf Hitler. His other works include a biography of Wagner (1896, tr. 1897).

Chamberlain, John, 1927-, American sculptor, b. Rochester, Ind. In the late 1950s, Chamberlain became known for his welded assemblages of smashed automobile parts and colored scrap metal. His work is represented in the Los Angeles County Museum and the Museum of Modern Art, New York City.

Chamberlain, Joseph, 1836-1914, British statesman. After a successful business career, he entered local politics and won distinction as a reforming mayor of Birmingham (1873-76). Entering Parliament as a Lib-

eral in 1876, Chamberlain advocated radical social reform and served under William Gladstone as president of the Board of Trade (1880-85). In 1886, however, he broke with Gladstone, leading the defection from the Liberal party of the Liberal Unionists (those Liberals who opposed Home Rule for Ireland). In 1887-88 he negotiated a treaty with the United States to settle the fisheries dispute between that country and Canada. Chamberlain became leader of the Liberal Unionists in the House of Commons in 1891, and in 1895 he joined the Conservative government as colonial secretary. While maintaining his interest in social reform at home, he pursued a vigorous colonial policy aimed at imperial expansion, cooperation, and consolidation. Although a parliamentary inquiry cleared him of complicity in the Jameson Raid (see JAMESON, SIR LEANDER STARR), there is some evidence that he was at least aware of the conspiracy. His subsequent attempts to reach a settlement with the Boers failed, resulting in the South African War (1899-1902). After the war he worked for a conciliatory peace. Chamberlain's belief in the need for closer imperial union led him to espouse the cause of imperial preference in tariffs. However, this proposed abandonment of Great Britain's traditional free trade policy provoked great controversy, and in 1903 he resigned from office to spend three years in an attempt, through the Tariff Reform League, to convert the country to his views. His campaign split the Liberal Unionist-Conservative bloc and contributed to its defeat in the election of 1906. Ill health ended Chamberlain's public life in 1906, but his tariff policy was adopted (1919, 1932) within the lifetime of his sons, Austen and Neville. See E. E. Guiley, *Joseph Chamberlain and English Social Politics* (1926), W. L. Strauss, *Joseph Chamberlain and the Theory of Imperialism* (1942, repr. 1971), biography (to 1903 only) by J. L. Garvin and Julian Amery (6 vol., 1932-51), studies by Peter Fraser (1966), Michael Hurst (1967), and R. V. Kubiček (1969).

Chamberlain, Joshua Lawrence, 1828-1914, Union general in the Civil War, b. Brewer, Maine, grad. Bowdoin, 1852, and Bangor Theological Seminary, 1855. He taught at Bowdoin from 1855 to 1862, when he became lieutenant colonel in the 20th Maine Infantry. Chamberlain was awarded the Congressional Medal of Honor for his defense of Little Round Top at Gettysburg (1863), and in June, 1864, Grant promoted him brigadier general of volunteers on the field for his gallantry before Petersburg. He was governor of Maine (1867-71) and president of Bowdoin (1871-83). He wrote *The Passing of the Armies* (1915), which deals with the final campaigns in the East. See biography by W. M. Wallace (1960).

Chamberlain, Neville (Arthur Neville Chamberlain), 1869-1940, British statesman, son of Joseph Chamberlain and half brother of Sir Austen Chamberlain. The first half of his career was spent in business and, after 1911, in the city government of Birmingham, of which he became lord mayor in 1915. In 1917 he served as director of national service, supervising conscription, and the following year, at the age of 50, he was elected to Parliament as a Conservative. During the 1920s he served both as chancellor of the exchequer (1923-24) and minister of health (1923, 1924-29). In the latter position, he enacted a series of important reforms that simplified the administration of Britain's social services and, simultaneously, systematized local government. In 1931 he again became chancellor of the exchequer and held that office until he succeeded Stanley Baldwin as prime minister in 1937. Chamberlain's belief that the German leader, Hitler, was a rational statesman like himself (and who, therefore, could not want another general war), resulted in the policy of "appeasement" that culminated in the MUNICH PACT. However, as German aggression continued, he changed his views and in March, 1939, pledged support to Poland in the event of German invasion. After the outbreak of World War II, Chamberlain remained as prime minister until, after the British debacle in Norway, he was forced to resign in May, 1940. He was lord president of the council under Winston Churchill until Oct., 1940, and died a few weeks later. See his *In Search of Peace* (1939), biographies by Keith Feiling (1946, repr. 1970), Iain Macleod (1961), and William R. Rock (1969).

Chamberlain, Wilton Norman (Wilt Chamberlain), 1936-, American basketball player, b. Philadelphia. At the Univ. of Kansas he was twice named to the All-America basketball team. He left (1958) college to join the Harlem Globetrotters. Beginning in 1959 he played a total of 14 seasons in the National Basketball Association (NBA) with the Philadelphia

Warriors, San Francisco Warriors, Philadelphia 76ers, and Los Angeles Lakers. He broke almost every scoring record. With his great height (over 7 ft 1 in./216 cm) and unusual agility he was the top NBA scorer in 7 consecutive seasons (1959-65) and led the league in field goal percentage for 9 seasons and in rebounds for 11. He scored more points than any other player (31,419) and achieved the highest scoring average in the game's history. Among his records are the most points (100) scored in one game and the most free throws (28) in one game. In 1973 he became player-coach of the San Diego Conquistadors of the American Basketball Association but was prevented from playing because of a legal dispute. He announced his retirement in 1974. See his autobiography (1973), biography by George Sullivan (rev. ed. 1971).

Chamberlain's Men, Elizabethan theatrical company for which Shakespeare wrote his plays and served as actor. Organized in 1594, they performed at the Globe Theatre and at the Blackfriars Theatre. Under the patronage of James I they became c. 1603 the King's Men. The members shared in the ownership of the theater and the profits, and usually all took part in the performances. Richard BURBAGE and Will Kemp were the most famous players. The most important rival company was the ADMIRAL'S MEN. See also QUEEN'S MEN.

Chamberlin, Thomas Chrowder, 1843-1928, American geologist, b. Mattoon, Ill., grad. Beloit College, 1866. He was professor of geology at Beloit (1873-82), president of the Univ. of Wisconsin (1887-92), and professor of geology and director of the Walker Museum at the Univ. of Chicago (1892-1919). Chamberlin was chief geologist of the geological survey of Wisconsin (1873-82) and the founder (1893) of the *Journal of Geology*. While studying glaciation and climates in past geologic times he noted defects in the nebular hypothesis of Laplace that led him to formulate, with the American astronomer F. R. Moulton, the planetesimal hypothesis of the origin of the SOLAR SYSTEM. Chamberlin wrote *The Geology of Wisconsin* (1873-82), *A Contribution to the Theory of Glacial Motion* (1904), *A General Treatise on Geology* (with Rollin D. Salisbury, 1906), *The Origin of the Earth* (1916), and *Two Solar Families* (1928).

chamber music, ensemble music for small groups of instruments, with only one player to each part. Its essence is individual treatment of parts and the exclusion of virtuosic elements. Originally played by amateurs in courts and aristocratic circles, it began to be performed by professionals only in the 19th cent. with the rise of the concert hall. In the broadest sense it existed as early as the Middle Ages. The *ricercare* and the concerted canzone of the 16th cent. are properly chamber music, although unlike later forms they were not for specific instruments but were usually performed by voices and whatever instruments were at hand. During the baroque period the chief type was the trio SONATA. About 1750 the string quartet with its related types—trio, quintet, sextet, septet, and octet—arose. As developed by Haydn and Mozart the quartet became the principal chamber-music form. It was used by Beethoven and Schubert, whose quartets are the last of the classical period, and by the chief composers of the romantic period—Mendelssohn, Schumann, Brahms, Dvořák, Franck, d'Indy, and Reger. In the early 20th cent. the coloristic possibilities of the quartet were exploited by Debussy and Ravel. More recently the different forms of chamber music have been used extensively for experiments in atonality, percussive rhythms, and serial techniques by such composers as Schoenberg, Bartok, Webern, Berg, Stravinsky, Sessions, and Piston. See D. F. Tovey, *Essays in Musical Analysis*, *Chamber Music* (1944, 4th impression 1956), W. W. Cobbett, ed., *Cyclopedic Survey of Chamber Music* (3 vol., 2d ed. 1963), H. E. Ulrich, *Chamber Music* (2d ed. 1966).

chamber of commerce, local association of businessmen organized to promote the welfare of their community, especially its commercial interests. Each chamber of commerce usually has a board of directors elected by the members, and work is done through committees. Among the activities frequently carried on by these committees are industrial surveys and efforts to attract new industries to the city, housing surveys, efforts to provide parking space and promote safety, and advertising the advantages of the city to tourists and to organizations as a convention site. The *chambre de commerce* of Marseilles (1599) was the first organization to use the name, the idea spread through France in the 17th and 18th cent. The first to be formed in Great

Britain was on the island of Jersey (1768). In America the first was the Chamber of Commerce of the State of New York, organized in 1768. By 1870 there were 40 throughout the United States. The local chambers are federated in the Chamber of Commerce of the United States (founded 1912), which maintains at its Washington, D.C., headquarters a technical staff and lobbies in the interests of its member organizations. Its organ is the *Nation's Business*. The International Chamber of Commerce (founded 1920) has its headquarters in Paris. See also TRADE ASSOCIATION.

Chambers, Sir Edmund Kerchever, 1866–1954, English literary critic and Shakespearean scholar. He wrote *The Mediaeval Stage* (1903), *The Elizabethan Stage* (1923), *Arthur of Britain* (1927), *William Shakespeare* (1930), and studies of S. T. Coleridge (1938) and Matthew Arnold (1947).

Chambers, Robert, 1802–71. See CHAMBERS, WILLIAM.

Chambers, Whittaker, 1901–61, U.S. journalist and spy, b. Philadelphia. He joined the U.S. Communist party in 1925 and wrote for its newspaper before engaging (1935–38) in espionage work for the USSR. He left the party in 1939 and began working for *Time* magazine. In 1948 he testified before the House Un-American Activities Committee (later House Committee on Internal Security) and accused Alger Hiss, then president of the Carnegie Endowment for International Peace and a former State Dept. official, of being a Communist party member. Hiss sued for libel, and Chambers then accused him of having been part of an espionage ring. Chambers led investigators to his Maryland farm where he produced from a hollowed out pumpkin State Dept. documents that he alleged were given to him by Hiss. This led to an indictment against Hiss for perjury, and after two trials he was found guilty (1950) and imprisoned. The case was extremely controversial, and both men were vehemently attacked and defended. See Chambers's autobiography, *Witness* (1952, repr. 1968), Alistair Cooke, *A Generation on Trial* (1950, 2d ed. 1952), Ronald Seth, *The Sleeping Truth* (1968).

Chambers, Sir William, 1723–96, English architect, b. Gothenburg, Sweden. He traveled extensively in the East Indies and in China making drawings of gardens and buildings, many of which were later published. He studied architecture in France and Italy and established (1755) his practice in England where he designed decorative architecture for Kew Gardens. From the founding (1768) of the Royal Academy to the end of his life, Chambers was a dominant figure in its councils. His *Treatise on the Decorative Part of Civil Architecture* (1759) became a standard and influential work on classic design. The foremost official architect of his day in England, he continued the neo-Palladian tradition, which he adapted to the prevailing classical taste. His chief work, Somerset House, is an extensive block of government offices, begun in 1776. He also had charge of various alterations at Trinity College, Dublin, and designed additions to Blenheim Palace, the observatory in Richmond Park, and casinos in many parks of the nobility. He became private architect to King George III and was made (1782) surveyor general. Chambers was buried in Westminster Abbey.

Chambers, William, 1800–1883, and **Robert Chambers**, 1802–71, Scottish authors and publishers. Their firm of W and R Chambers is best known for *Chambers's Edinburgh Journal*, which William started in 1832 and for which both brothers wrote, and *Chambers's Encyclopaedia* (10 vol., 1859–68), which has gone through several editions. Robert published several books on history and in geology, including the anonymous *Vestiges . . . of Creation* (1844), a forerunner of Darwin's *Origin of Species*. William, always interested in public improvement, was lord provost of Edinburgh, 1865–69.

Chambersburg, borough (1970 pop. 17,315), seat of Franklin co., 5 Pa., in a fertile farm area, settled 1730, inc. 1803. Food products, steam and pneumatic hammers, sheet-metal goods, clothing, and concrete and lumber products are manufactured. Chambersburg was the headquarters of abolitionist John Brown in 1859 and of Confederate Gen. Robert E. Lee before the battle of Gettysburg. The town was raided by Confederate cavalry in 1862 and again in July, 1864, when it was burned after refusing to pay an indemnity of \$100,000 in gold. It is the seat of Wilson College and of an adjoining junior college and girls' preparatory school. Caledonia State Park is to the east.

Chambéry (shānbārē'), town (1968 pop. 58,813), capital of Savoie dept., E France, in the Alpine trough. It is a communications center with many manufactures. An archiepiscopal see from the 5th

cent., it was the capital of Savoy from 1232 to 1562. Among its old edifices is a 16th-century cathedral.

Chambly (shānblyē'), city (1971 pop. 11,469), 5 Que., Canada, on the Richelieu River, E of Montreal. **Chambly Fort** was built in 1665 and was a strategic point in the defense of New France against the British and the Iroquois. The British captured it in 1760. It was seized by the invading Americans in 1775 and burned when they withdrew in 1776. The partially restored fort is a national historic site.

Chambord, Henri Charles Ferdinand Marie Dieudonné, comte de (ānrē' shārl fērdinān' mārē' dyōdōnā' kōntē dā shānbōr'), 1820–83, BOURBON claimant to the French throne, posthumous son of Charles Ferdinand, duc de BERRY. His original title was duke of Bordeaux. His grandfather, Charles X, abdicated in his favor during the Revolution of 1830, and he is known to the legitimists as Henry V, although he never held the throne. He accompanied Charles into exile and spent most of the rest of his life at Frohsdorf, Austria. In 1832 his mother, Caroline de BERRY, made an unsuccessful attempt to overthrow Louis Philippe. Efforts to reconcile his claims with those of the Orleanist pretender, Louis Philippe Albert d'ORLÉANS, after the February Revolution of 1848, met with little success. In 1871, after the fall of the Second Empire, Chambord's prospects improved, and in 1873 the Orleanist pretender relinquished his claims in Chambord's favor. However, his stubborn adherence to the Bourbon flag in preference to the national flag, the tricolor of the French Revolution, destroyed his chance of recognition. He died without issue, and his claims passed to the house of Bourbon-Orléans.

Chambord, château, park, and village (1968 pop. 267), all owned by the state, in Loir-et-Cher dept., N central France. The huge Renaissance château, built by Francis I and set in an immense park and forest (c. 13,600 acres/5,500 hectares), was used chiefly by Louis XIV and by Stanislaus I of Poland. Louis XV gave Chambord to Maurice de Saxe, who died there in 1750. Napoleon I later presented it to Marshal Berthier, and in 1821 it went by national subscription to the duke of Bordeaux, who took the title count of Chambord. Repurchased by the state in 1932, Chambord is now open to the public.

chameleon (kāmē'lēan, -mēl'yān), small- to medium-sized lizard of the family Chamaeleonidae. About eighty species are found in sub-Saharan Africa, with a few in S. Asia. The so-called common chameleon, *Chamaeleo chamaeleon*, is found around the Mediterranean. Chameleons have laterally flattened bodies and bulging, independently rotating eyes. They are variously ornamented with crests, horns, and spines. The toes are united into one bunch on either side of the foot, forming a pair of grasping tongs. Chameleons feed on small animals, chiefly insects, and they are unique among lizards in possessing very long, sticky tongues with which they capture their prey. Typical chameleons (members of the very large genus *Chamaeleo*) are arboreal and have long, prehensile tails. They move very slowly, with a rocking movement, grasping a branch with feet and tail. The changes in skin color, seen in certain other lizards as well, are under hormonal and nervous control. They are not affected by the color of the background but by stimuli such as light, temperature, and emotion. However, the shades of brown, gray, and green assumed by chameleons do generally blend with the forest surroundings. The American chameleon, or anole (*Anolis carolinensis*), is not a true chameleon, but a small lizard of the iguana family, found in the SE United States and noted for its color changes. True chameleons are classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Squamata, family Chamaeleonidae.

Chamfort, Sébastien Roch Nicolas (sābāstyān' rōk nēkōlā' shānfōr'), 1740–94, French writer. He is remembered only for his maxims and epigrams. His acute observations on literature, morals, and politics made him popular at court, despite his republican beliefs. In the Reign of Terror Chamfort was denounced, and he committed suicide.

Chamillart or Chamillard, Michel (both mēshēl' shāmēyār'), 1652–1721, French statesman. He was named controller general of finances (1699), minister of state (1700), and minister of war (1701). To raise funds Chamillart resorted to the sale of offices and titles, loans, lotteries, manipulation of the currency, and anticipation of revenues. To these means he added a wartime capitation tax, imposed from 1695 to 1698 and again after 1701, but he could not meet the mounting expenses of the government, especially after the outbreak (1701) of the War of the

Spanish Succession. The deficit and the national debt grew huge, and the marquis de Vauban censured the disorder of the tax system. Chamillart resigned the finances to Nicolas DESMARETS in 1708 and gave up his other offices in 1709.

Chaminade, Cécile Louise Stéphanie (sāsēl' lwēz stāfānē' shāmēnād'), 1857–1944, French composer and pianist, pupil of Benjamin Godard in composition. She was a popular concert pianist and wrote many graceful, romantic piano pieces and songs. Among her more ambitious compositions are a lyric symphony, *Les Amazones*, and a ballet, *Callirhoé* (both 1888), which includes *Scarif Dance*.

Chamisso, Adelbert von (Louis Charles Adelaide de Chamisso), (ā'dalbert fən shamī'sō), 1781–1838, German poet and naturalist, b. France. He served as page at the court of William II and, after army service and travels, became keeper of the royal botanical gardens. He edited (1804–6) the *Musen Almanach* and was a member of Mme de Staël's circle. His sentimental poetic cycle *Frauenliebe und Leben* (1830) was set to music by Schumann. *Peter Schlemihls wundersame Geschichte* (1814), his tale of a man who sold his shadow to the devil, has become legend. He also wrote plays, an account of his travels in the Pacific (1836), and a work on linguistics (1837).

Chamizal National Memorial: see NATIONAL PARKS AND MONUMENTS (table).

chamois (shām'ē), hollow-horned, hoofed mammal, *Rupicapra rupicapra*, found in the mountains of Europe and the E Mediterranean. It is about the size of a large goat and is light brown with a black tail, a black back stripe, and black markings on its face. In winter its coat is darker. Its uniquely shaped horns are erect, with terminal hooks pointed backward. The hooves can cling to rocky surfaces because of their elasticity, and the animal is able to leap with agility. It ranges to the snow line in summer, but in winter stays in lower areas. In autumn the adult males, which live apart from the herds of females and young, return for mating. The young are born in spring. The skin was the original chamois leather, but the name is now applied also to leather made from the skins of other animals. The chamois has been introduced into New Zealand. Chamois are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Bovidae.

chamomile or camomile (both kām'əmīl) [Gr., = ground apple], name for various related plants of the family Compositae (COMPOSITE family), especially the perennial *Anthemis nobilis*, the English, or Roman, chamomile, and the annual *Matricaria chamomilla*, the German, or wild, chamomile. Both are European herbs with similar uses. The former has an applelike aroma and is the chamomile most frequently grown for ornament (often as a ground cover) and for chamomile tea, made from the dried flower heads, which contain a volatile oil. The oil from the similar flowers of the wild chamomile was most often used medicinally, particularly as a tonic, today its chief use is as a hair rinse. Chamomile is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Asterales, family Compositae.

Chamonix (shāmōnē'), town (1968 pop. 8,403), Haute-Savoie dept., E France, at the foot of Mont Blanc. The principal base for climbing Mont Blanc and for visiting the Mer de Glace, it is a popular summer and winter resort. It has the world's highest (12,605 ft/3,842 m) aerial cable car and is linked by tunnel with Courmayeur, Italy.

Chamorro, Emiliano (āmēlyā'nō chāmō'rō), 1871–1966, president of Nicaragua (1917–20, 1926). A conservative army chief, Chamorro supported the revolt (1909) against José Santos Zelaya. Originally at odds with the United States, he was a signer of the Bryan-Chamorro Treaty, which granted the United States an option on the NICARAGUA CANAL. He opposed all liberal regimes, including that of Anastasio Somoza.

Chamoun, Camille (kāmē'yā shāmōn'), 1900–, Lebanese political leader. First elected to parliament in 1934, Chamoun held a variety of governmental posts before serving as president of Lebanon (1952–58). A Maronite Christian, Chamoun was opposed by Muslim leaders who disliked his pro-Western policies. The Muslim groups openly rebelled against Chamoun's government in 1958, and, in response to Chamoun's request for help, U.S. marines were sent to support the government. After 1958, Chamoun served as leader of Lebanon's Liberal Nationalist party.

Champa, the kingdom of the Chams, which flourished in Vietnam from the 2d cent. A.D. until the

17th cent. It was probably of Indian cultural origin, and at its greatest extent occupied ANNAM as far north as S North Vietnam. In its early period, Champagne mainly warred with China and was forced to change its capital several times, late in the 9th cent its capital was established in the neighborhood of Hue, and the later capital was Vijaya, farther south. Champa repeatedly made war on its stronger neighbor, Annam, it was sometimes allied and sometimes opposed to the KHMER EMPIRE. In the 12th cent the Chams invaded Cambodia and sacked Angkor, subsequently they fell for a time under Khmer rule. Decisively defeated by the Annamese in 1472, the Chams were forced to yield most of their territory N of Tourane (Da Nang). In the 17th cent the rest of the Cham kingdom fell to the Annamese, and the remnants of the people were scattered. Chams still form small, impoverished minorities in South Vietnam, but in Cambodia a large colony prospers. Although most of those in Annam worship Hindu gods, those of Cambodia are Muslim. Ruins of Cham temples, adorned with bas-reliefs and with statues, are found in 5 Annam. See Georges Maspero, *The Kingdom of Champa* (tr., 1949).

Champagne, Philippe de: see CHAMPAIGNE

Champagne (shaNpā'nyā), region and former province, NE France, consisting mainly of Aube, Marne, Haute-Marne, and Ardennes depts. The region is almost, but not fully, coextensive with the former provinces of Champagne and Brie. Abutting in the west on the Paris basin, Champagne is a generally arid, chalky plateau, cut by the Aisne, Marne, Seine, Aube, and Yonne rivers. Agriculture, except in the Ardennes dept., is mostly confined to the valleys. Crests divide the plateau from northwest to southeast into several areas. In the east, bordering on Lorraine, is the so-called Champagne Humide [wet Champagne], largely agricultural, and the Langres Plateau. In the center is the Champagne Pouilleuse [Champagne badlands], a bleak and eroded plain, traditionally used for sheep grazing, however, Troyes and Châlons-sur-Marne, its principal towns, are located in fertile valleys and are centers of the wool industry. A narrow strip along the westernmost crest of Champagne is extremely fertile, and the small area around Rheims and Eprenay furnishes virtually all of the champagne wine exported by France. Other fertile districts are around Reims and Sens. Champagne's central and open location made it a major European battlefield from the invasion by Attila's Huns, whom Aetius defeated at Châlons in 451, to World War I, which left vast areas scorched. Yet the same geographic position gave the towns of Champagne a commercial prosperity in direct contrast to the bleakness of the countryside. In the Middle Ages, Champagne was famous for its great fairs, held at Troyes (the capital), Provins, Lagny-sur-Marne, and Bar-sur-Aube. Merchants from all over western Europe met six times each year. Their laws regulating trade had a profound influence on later commercial customs, the troy weight for precious metals is still used. Prosperity was accompanied by cultural brilliance, culminating in the work of Chretien de Troyes and in the Gothic cathedral at Rheims. The county of Champagne had passed to the counts of Blois in the 11th cent., the main branch held Champagne after 1152. The domain was greatly extended, large parts of France, including Blois, Touraine, and Chartres, were dependent upon the Champagne counts. Most famous of the counts was Thibaut IV, who in 1234 inherited the crown of Navarre from his uncle Sancho VII. In 1286 the daughter and heir of Henry III, Count of Champagne and King of Navarre, married Philip IV of France. When their son ascended the French throne (as Louis X) in 1314, Champagne was incorporated into the royal domain. The bishoprics of Rheims and Langres were added later. Champagne declined in prosperity thereafter, however, the enduring popularity of its sparkling wine, which was developed at the end of the 17th cent., somewhat revitalized its economy. More recently, efforts have been made to reforest the area and reclaim it from erosion.

champagne (shāmpān'), sparkling white wine made from grapes grown in the old French province of Champagne. The best champagne is from that part of the Marne valley whose apex is Rheims, the center of the industry. Champagne was reputedly developed by a monk, Dom Pérignon, in the 17th cent. It is a mixture of black Pinot Noir and white Chardonnay grapes and is named for the vintners and shippers responsible for each blend. The small, slightly acid grapes are laboriously cultivated. After the first fermentation the wine is blended, it undergoes a

secondary fermentation, then is drawn off into bottles reinforced to withstand high internal pressure, and is sweetened to induce further fermentation. The carbonic acid retained in the bottle after the final fermentation renders champagne sparkling. The wine is matured in the labyrinthine tunnels of the old chalk quarries of Rheims. The sediment formed is collected on the cork by tilting the bottle neck downward and frequently rotating it by hand. After fermentation comes the *dégorgement* process, whereby the neck of the bottle is frozen and the cork is removed, the lump of frozen sediment shoots out, propelled by the pressure in the bottle. The space left is filled with the proper dosage of cane sugar dissolved in wine and usually fortified with cognac. Brut champagne is theoretically not sweetened, extra dry champagne, very lightly. An American sparkling wine called champagne is made in New York and California.

Champaign (shāmpān'), city (1970 pop. 56,532), Champaign co., E central Ill., inc. 1860. It adjoins the city of Urbana and is a commercial and industrial center in a fertile farm area. Its manufactures include metal products, academic apparel, and electrical equipment. The Univ. of Illinois at Urbana-Champaign and Parkland College are there. Champaign, founded in 1855 with the arrival of the Illinois Central RR, was first called West Urbana.

Champaigne or Champagne, Philippe de (both fēlēp' də shaNpā'nyā), 1602-74, French painter, b. Brussels, of Flemish parents. In 1621 he went to Paris, where he worked with Poussin on the Luxembourg Palace. In 1628 he became painter to the queen, Marie de' Medici. For her and for Richelieu he executed many religious paintings, still to be seen in French churches, and numerous portraits. From 1640 on he became absorbed in the Jansenist movement and has been called the painter of Port-Royal. His later work is characterized by sober realism, simplicity, and austerity. His best-known paintings include his frescoes at Vincennes and in the Tuileries, his portrait of his daughter, a nun at Port-Royal (1662), and a penetrating study of Richelieu (both Louvre). Basing his portrait style on patterns established by Rubens and Van Dyck, he rendered his subjects with an air of static majesty.

Champ-de-Mars (shaN-də-mars), former parade ground of Paris, France, between the École militaire and the Seine River. There, at the Fête de la Fédération (July 14, 1790), Louis XVI took an oath to uphold the new constitution. On its vast grounds several expositions were held, notably that of 1889, when the Eiffel Tower was erected there.

Champfleury: see HUSSON, JULES

Championnet, Jean Étienne (zhaN ätyēn' shaN-pyōnē'), 1762-1800, French general in the FRENCH REVOLUTIONARY WARS. Placed in command of the Army of Rome in 1798, he captured (1799) Naples from the Second Coalition and set up the PARTHENOPEAN REPUBLIC. However, he got into trouble with the Directory by denouncing the malpractices of one of its agents in Naples, moreover, his harsh rule caused popular discontent, and he was recalled in disgrace. Later acquitted, he commanded the Army of the Alps, but was unable to win success with this badly organized unit and resigned. He died shortly after.

Champlain, Samuel de (shāmplān', Fr. samuēl' də shaNplān'), 1567-1635, French explorer, the chief founder of New France. After serving in France under Henry of Navarre (King Henry IV) in the religious wars of the period, he was given command of a Spanish fleet sailing to the West Indies, Mexico, and the Isthmus of Panama. He described this three-year tour to the French king in *Bref Discours* (1859). In 1603 he made his first voyage to New France as a member of a fur-trading expedition. He explored the St. Lawrence River as far as the rapids at Lachine and, after his return to France, described his voyage in *Des Sauvages* (1603). With the sieur de Monts, who had a monopoly of the trade of the region, Champlain returned in 1604 to found a colony, which was landed at the mouth of the St. Croix River. In 1605 the colony moved across the Bay of Fundy to Port Royal (now Annapolis Royal, N.S.), and in the next three years Champlain explored the New England coast to Martha's Vineyard, discovering Mt. Desert Island and most of the larger rivers of Maine and making the first detailed charts of the coast. After the sieur de Monts's privileges had been revoked, the colony had to be abandoned, and through the efforts of Champlain a new one was established on the St. Lawrence River. In 1608, in the ship *Le Don de Dieu*, he brought his colonists to the

site of Quebec, where they started what was to be the capital of a great colony. In the spring of 1609, accompanying a war party of Huron Indians against the Iroquois, Champlain discovered the lake that bears his name, and near Crown Point, N.Y., the Iroquois were met and routed by French troops. The incident is believed to be largely responsible for the later hatred of the French by the Iroquois. In 1612, Champlain returned to France, where he received a new grant of the fur-trade monopoly. Returning in 1613, he set off on a journey to the Western lakes. He reached only Allumette Island in the Ottawa River that year, but in 1615 he went with Étienne Brule and a party of Huron Indians to Georgian Bay on Lake Huron, returning southeastward by way of Lake Ontario. Accompanying another Huron war party to an attack on an Onondaga village in present-day New York, Champlain was wounded and forced to spend the winter with the Indians. Thereafter he made no more explorations but devoted all his time to the welfare of the colony, of which he was the virtual governor. He helped to persuade Richelieu to found the Company of One Hundred Associates, which was to take over the interests of the colony. In 1629, Quebec was suddenly captured by the English, and Champlain was carried away to four years of exile in England, there he prepared the third edition of his *Voyages de la Nouvelle France* (1632). When New France was restored to France in 1632, Champlain returned. In 1634 he sent Jean NICOLET into the West, thus extending the French explorations and claims as far as Wisconsin. He died on Christmas Day, 1635, and was buried in Quebec. His works were issued by the Champlain Society (1922-36) with English and French texts. See C. W. Colby, *The Founder of New France* (1915), biographies by N. E. Dionne (1905, repr. 1963), Ralph Flinley (1924), L. H. Sharp (1944), Morris Bishop (1948), and S. E. Morison (1972).

Champlain, Lake, 125 mi (201 km) long and from 0.5 to 14 mi (0.8-23 km) wide, forming part of the N.Y.-Vt. border and extending into Quebec. It is the fourth-largest freshwater lake in the United States (490 sq mi/1,269 sq km). Lake Champlain lies in a broad valley between the Adirondacks and the Green Mts. A link in the Hudson-Saint Lawrence waterway, the lake is connected with the Hudson (at Fort Edward) by the Champlain division of the Barge Canal, the Richelieu River connects the lake with the St. Lawrence. Lake George drains into it through a narrow channel, and many islands dot its surface, including Grand Isle, Isle La Motte, and Valcour Island. The region is noted for its beautiful scenery and has many resorts. Plattsburgh, N.Y., and Burlington, Vt., are the largest cities on the lake's shores. The lake, discovered by Samuel de Champlain in 1609, was the scene of battles in the French and Indian War and the American Revolution at Crown Point and Ticonderoga, of a naval engagement in 1776, and of the important American victory of Thomas MACDONOUGH in the War of 1812.

champlevé (shaNlāvā'), technique for the ENAMEL decoration of metal objects. It was used by the Celts and Romans and employed by medieval metalworkers for jewelry and RELIQUARIES until the 14th cent. Champlevé is produced by hollowing out parts of a design in metal and filling in the hollows with enamel. The technique has been revived by 20th-century craftsmen.

Champney, Benjamin (chāmp'nē), 1817-1907, American painter, b. New Ipswich, N.H. Champney studied drawing and was apprenticed to a lithographer in Boston. He traveled to Europe in 1846, painting panoramic vistas of the Rhine and scenes of the Revolution of 1848.

Champollion, Jean François (zhaN fraNswā' shaNpōlyōN'), 1790-1832, French Egyptologist. He is considered the founder of the science of Egyptology. His first important accomplishment was his two-volume work on the geography of ancient Egypt, which appeared when he was 24. In 1821 by use of the Rosetta stone (see under ROSETTA) he established the principles for deciphering the Egyptian hieroglyphics. Champollion became director of the Egyptian museum at the Louvre and professor at the Collège de France. He is sometimes called Champollion le Jeune to distinguish him from his elder brother, who gave him his early training. Jean Jacques Champollion-Figeac (-fēzhak'), 1778-1867, was an archaeologist, a professor at Grenoble, and a curator of manuscripts at the Bibliothèque nationale. He also served as a professor of paleography at the École des Chartes and librarian at the Palace of Fontainebleau.

Champs Élysées (shāN zālēzā'), avenue of Paris, France, leading from the Place de la Concorde to the

Arc de Triomphe It is celebrated for its tree-lined beauty, its commodious breadth, the elegance of its cafes, theaters, and shops, and the fountain display at its center Begun by Louis XIV and completed by Louis XV, it led through open country until the early 19th cent

Chanakkale, Turkey see ÇANAKKALE

Ch'an Buddhism: see ZEN BUDDHISM

Chancay (chǎng-kí'), archaeological site in central Peru, center of the ancient Cuismancu empire Culturally influenced by the CHIMU, the Cuismancu dominated less territory and were not as powerful Nonetheless they built sizable cities and were somewhat more materially advanced than their southern neighbors, the Chincha (see ICA) The Cuismancu were conquered by the Inca in the 15th cent

chance, in mathematics see PROBABILITY

chancel, primarily that part of the church close to the altar and used by the officiating clergy In the early churches it was separated from the nave by a low parapet or open railing (*cancellus*), its name being thus derived San Clemente at Rome has one of the few preserved examples With the development of the choir, additional space was taken, between the SANCTUARY and the nave, for the accommodation of the canons and singers The chancel rail was moved forward, and the entire space became known as the choir, although it is also termed the chancel, there is no strict differentiation in the usage In the Middle Ages the chancel rail was replaced by lofty choir screens (see ROOD), especially in English cathedrals and in monastic churches

Chancellor, Richard, d 1556, English navigator When, largely under the inspiration of Sebastian Cabot, a group of men in England undertook to finance a search for the Northeast Passage to Asia, Chancellor was chosen as second in command under Sir Hugh Willoughby They sailed in 1553, and Chancellor and Stephen Borough, in the *Edward Bonaventure*, managed to get through dangerous arctic waters to the White Sea Chancellor then traveled overland across Russia to Moscow at the invitation of Ivan IV His negotiations prepared the way for trade with Russia and the formation of the MUSCOVY COMPANY Returning from a second voyage to Russia, he was shipwrecked and perished off the coast of Scotland Since Willoughby had earlier come to grief, it was Stephen Borough who continued the work of opening the northern route to Russia for the Muscovy Company

Chancellorsville, battle of, May 2-4, 1863, in the American Civil War Late in April, 1863, Joseph Hooker, commanding the Union Army of the Potomac, moved against Robert E Lee, whose Army of Northern Virginia (less than half the size of Hooker's) had remained entrenched on the south side of the Rappahannock River after the battle of FREDERICKSBURG Hooker, with four corps, crossed the river above Fredericksburg and took up a strong position near Chancellorsville, located 10 mi (16 km) W of Fredericksburg, he sent John Sedgwick, with two corps, to cross below Chancellorsville, with two corps, Lee did not retreat but, leaving 10,000 men under Jubal A Early to watch Sedgwick, moved on Hooker, who fell back to a defensive position in the wilderness around Chancellorsville Lee attacked on May 2 T J (Stonewall) JACKSON led his 2d Corps on a brilliant 15-mi (24-km) flanking movement against the Union right, while Lee, with his small remaining force, feinted along the rest of the line Jackson fell upon and routed the surprised Union troops but, unfortunately for the South, was mortally wounded by his own men The next day the Confederate wings united (James Ewell Brown STUART succeeding Jackson) and drove Hooker back further Hooker failed to use his superior forces, but called for Sedgwick, who drove Early from Marye's Heights (May 3) and reached Salem Church, 5 mi (8 km) W of Fredericksburg There part of Lee's force joined Early and repulsed Sedgwick (May 4-5) Sedgwick and Hooker then withdrew across the river Chancellorsville, Lee's last great victory, led to his invasion of the North in the GETTYSBURG CAMPAIGN See John Bigelow, *The Campaign of Chancellorsville* (1910), E J Stackpole, *Chancellorsville Lee's Greatest Battle* (1958)

chancery: see EQUITY

Chan Chan (chān chān), ruins of an ancient Indian city near Trujillo, N Peru The city was probably begun in the period from A.D. 800 to 1000, and it is estimated that it once contained 200,000 people Chan Chan is generally accepted as the capital of the CHIMU, a pre-Inca civilization It is on a large

plain of the coastal desert, which was made arable by ambitious and extensive irrigation works Covering c 11 sq mi (28 sq km), the city comprised at least 10 self-contained, walled-in units The walls, built of adobe brick, are decorated with relief designs

Chan-chiang or **Chankiang** (both chān-jēāng), Cantonese *Tsamkong*, official Chinese name for the former French territory of Kwangchowan (325 sq mi/840 sq km) on Kuang-chow Bay, S Kwangtung prov, China It was leased from China in 1898 for 99 years but was returned in 1945 Its chief city, Fort-Bayard, was renamed **Chan-chiang** (1970 est pop 220,000) and since 1955 has been developed as a major seaport, servicing ships up to 10,000 tons, and as a regional trade center The city has textile, chemical, shipbuilding, and electric power industries, and is linked by rail to Kwangsi prov

chancree: see SYPHILIS

chancroid: see VENEREAL DISEASE

Chanda (chān'dā), town, Maharashtra state, central India, on the Irar River It is a district administrative center Chanda is near the Wardha valley coal fields Its chief industries are rice milling and pig-iron casting The town is surrounded by a wall that acts as a flood barrier Chanda was the capital of the Gond kingdom from the 12th to the 18th cent The tombs of the Gond kings and several temples are in the town

Chandernagor (chūn'dərnəgôr') or **Chandan-nagar** (shāndərnāgôr'), town (1971 pop 75,960), West Bengal state, E India, on the Hooghly River, a suburb of Calcutta Founded by the French in 1686, it was of great commercial importance until the 19th cent It was ceded by France and became part of India in 1951

Chandigarh (chūn'dēgar), union territory (1971 pop 256,972), 44 sq mi (114 sq km) and city (1971 pop 218,807), NW India The city is the capital of both Haryana and Punjab states It was designed by the architect Le Corbusier and built largely in the 1950s on a site chosen for its healthy climate and plentiful water supply The city was constructed because the capital of Punjab in British India, Lahore, was given to Pakistan when India was partitioned in 1947 Punjab Univ is in Chandigarh The union territory is administered by the central government of India

Chandler, Albert Benjamin, 1898-, U.S. baseball commissioner (1945-51) and politician, b Corydon, Henderson co., Ky "Happy" Chandler was a lawyer in Versailles, Ky, when he went into politics He served as lieutenant governor (1931-35), governor (1935-39), and U.S. Senator (1939-45), before becoming baseball commissioner He retired after major league club owners refused to renew his contract From 1955 to 1959, Chandler was again governor of Kentucky

Chandler, Raymond Thornton, 1888-1959, American detective-story writer, b Chicago, educated in England After serving with the Canadian forces in World War I, he entered the oil business in California Bankrupt during the depression, he began writing and published his first detective story, *The Big Sleep*, in 1939 Subsequent novels include *Farewell My Lovely* (1940), *The High Window* (1942), *The Lady in the Lake* (1943), *The Little Sister* (1949), *The Long Goodbye* (1953), and *Playback* (1958) Well plotted and brutally realistic, Chandler's novels convincingly depict California's seedy lowlife They all feature Philip Marlowe, a tough yet honorable private detective with a brash sense of humor

Chandler, Zachariah, 1813-79, U.S. Senator from Michigan (1857-75, 1879) and Secretary of the Interior (1875-77), b Bedford, N.H. He moved to Detroit in 1833 and through merchandising, land speculation, and banking became a millionaire Mayor of Detroit (1851-52), he helped organize and was long the boss of the Republican party in Michigan Old Zack, as he was called, was an able and uncompromising abolitionist A leading radical Republican, most closely associated with Benjamin F. WADE, he was a member of the congressional committee on the conduct of the war, and he violently opposed Lincoln's Reconstruction program Chandler remained a powerful figure in the Senate until he was turned out by the Democratic landslide of 1874 He then entered the cabinet of President Grant and was also chairman of the Republican National Committee in the disputed election of 1876 See biographies by W.C. Harris (1917) and M.K. George (1969), T.H. Williams, *Lincoln and the Radicals* (1941)

Chandler, city (1970 pop 13,763), Maricopa co., S central Ariz., in the Salt River valley, inc 1920 It is a residential community in an area that produces cotton, alfalfa, and citrus fruit Sugar is processed, and

computer components, mobile homes, and containers are produced in Chandler Williams Air Force Base is nearby and contributes to the city's economy, as do tourists, who are especially attracted by the San Marcos Golf Resort Many of Chandler's citizens work in nearby Phoenix

Chandos, Sir John, d 1370, English soldier and administrator of English territories in France A friend of Edward the Black Prince, he won distinction in the Hundred Years War by his bravery at Poitiers (1356) and by his capture (1364) of Bertrand DU GUESCLIN at Auray He was made constable of Guienne in 1362 and seneschal of Poitiers in 1365 In the Spanish campaign of the Black Prince he again defeated and captured (1367) Du Guesclin at Najera He was mortally wounded in a battle with Gascon nobles at Lussac, near Poitiers.

Chandragupta (Chandragupta Maurya)(chāndragōp'tā), fl c 321 B.C.-c 298 B.C., Indian emperor, founder of the MAURYA dynasty and grandfather of Asoka The Greek form of his name is Sandracottus or Sandrocottus It is possible that he expelled the last of the garrisons Alexander the Great had established in NW India He conquered the Magadha kingdom (in modern Bihar) and eventually controlled all India N of the Vindhya Hills In c 305, Chandragupta, with a huge army, defeated SELEUCUS I (Nicator) who had invaded NW India in an attempt to regain Alexander's Indian provinces Seleucus had to yield parts of Afghanistan to Chandragupta, and some sort of marriage alliance followed From Megasthenes, a Seleucid envoy at the court of Chandragupta, comes much of the information about the period The emperor dwelt in an enormous, ornate palace at Pataliputra (Patna) and administered a highly bureaucratic government, which controlled the entire economic life of N India He was advised by Kautilya (also called Chanakya), a very able but unscrupulous Brahman, who is known as the author of the *Arthashastra*, a Machiavellian political tract Chandragupta established a vast secret service system and, fearing assassination, rarely left his palace Jain tradition says that he abdicated his throne, became a Jain monk, and fasted to death

Chandragupta I and II, two Indian emperors See GUPTA

Chanel, Gabrielle (Coco) see under FASHION

Chaney, Lon (chā'nē), 1883-1930, American film actor, b Colorado Springs, Colo Chaney was the son of deaf-mute parents He made more than 150 silent films A master of the use of grotesque, distorting makeup, he is best remembered for his work in horror films such as *The Phantom of the Opera* (1925) His son, Lon Chaney, Jr (1907-), made many horror films and westerns

Changarnier, Nicolas (nēkōlā' shāNgārn'yā'), 1793-1877, French general and politician He served in Algeria and was briefly (1848) governor general of Algeria, succeeding Louis Cavaignac Elected to the constituent assembly in 1848 after the FEBRUARY REVOLUTION, he resigned after the rising of the June Days to head the Paris national guard Later the regular army troops in Paris were added to his command A monarchist and Orleanist, Changarnier came to oppose the policies of Louis Napoleon and was exiled after the coup d'état of 1851 He returned in 1859 and took part in the defense of Metz (1870) in the Franco-Prussian War Again elected a deputy in 1871, he opposed a republic He was made a life senator in 1875

Chang-chia-k'ou or **Changkiakow** (both chāng-jēā-kou), Mongolian Kalgan, city (1970 est pop 1,000,000), NW Hopeh prov, China, near a gateway of the Great Wall and on the Peking-U55R RR A major trade center for N China and Mongolia, it has food-processing plants, machine shops, and tanneries The meeting place of caravans traveling from Peking to Ulan Bator, it was an important military center under the Manchu dynasty but declined somewhat after the opening (1905) of the Trans-Siberian RR In 1928 it became the capital of Chahar prov, which was abolished in 1952

Chang Chih-tung (jāng jūr-dōng), 1837-1909, Chinese Ch'ing dynasty statesman and educational reformer He occupied the high post of governor-general for over two decades, first of Kwangtung and Kwangsi provs (1884-89), and later of Hunan and Hubei provs (1889-1907) In that position he vigorously pressed the late Ch'ing self-strengthening program, establishing an arsenal, iron- and steelworks, military and naval academies, and schools of mining, agriculture, commerce, and industry Chang encouraged the early reform movement between 1895 and 1898 (see KANG YU-WEI), advocating a balance

between study of the Chinese heritage and adoption of Western scientific and technical knowledge. In the end, however, he supported the coup of Empress Dowager Tzu Hsi against the Hundred Days' Reform (1898), convinced that K'ang was surrendering too much to Western culture. After the disastrous Boxer Uprising he urged radical educational change including a public school system from kindergarten to university and abolition of the traditional civil service CHINESE EXAMINATION SYSTEM. He was appointed (1907) head of the new ministry of education. See W. Ayers, *Chang Chih-tung and Educational Reform in China* (1971).

Ch'ang-chou or **Changchow** (both *jang-jō*), city, S Kiangsu prov., E central China, on the Grand Canal. It is a food and textile center. Other manufactures include fertilizer, machine tools, and motor vehicles. Ch'ang-chou became industrialized in the late 19th cent. It was called Wutsin prior to 1949.

Changchow: see CH'ANG-CHOU, China

Ch'ang-ch'ün or **Changchün** (both *chang'-chōn*), city (1970 est. pop. 1,500,000), capital of Kirin prov., China, on the railroad between Harbin and Lu-ta. An industrial city, it is the country's major center of motor vehicle production, with enormous truck and tractor works. Railroad cars, tires, pharmaceuticals, and textiles are also manufactured. An aluminum plant is west of the city. Ch'ang-ch'ün is the "Hollywood" of China, with government-owned motion picture studios that produce propaganda films. As Hsinking [Chin. = new capital], it was the capital of the former state of Manchukuo (1932-45). During this period the city was rebuilt along modern lines. Many of the large administrative buildings have been converted into universities, these include Kirin Univ., a polytechnical university, a medical college, and several technical institutes.

changeling, in popular superstition, a fairy child substituted for a human baby. It was believed that evil fairies stole healthy unbaptized infants and left in their place a fairy child. Hence, sickly and peevish babies were sometimes called changelings.

change ringing: see BELL

Chang Hsueh-liang (chang' shue'-lyang'), 1898-, Chinese war lord, son of CHANG TSO-LIN. On the death (1928) of his father, he succeeded as military governor of Manchuria. He was then known as Chang Hsiao-liang but later changed his name. He supported Chiang Kai-shek against a rebellious northern army in 1929-30 and was made vice commander in chief of all Chinese forces and a member of the central political council. Ousted (1931) by the Japanese from Manchuria, he suffered loss of prestige. In 1936, with the help of Chinese Communists, he had Chiang kidnapped at Sian, allegedly to compel cooperation between the Kuomintang and the Communists and to force a declaration of war against Japan. Chiang Kai-shek was released unconditionally a few weeks later. Chang, tried and sentenced for his part in the affair, was pardoned but kept in custody. He was taken to Taiwan when the Nationalist regime fled there in 1949.

Ch'ang-hua or **Changhwa** (both *chang-hwa*), city (1969 pop. 133,514), central Taiwan. It is a transportation center as well as a market for rice, oranges, and pineapples. The city's industries produce wood and paper products, textiles, canned food, refined sugar, and machinery. Settled in the 17th cent., Ch'ang-hua was once an important port.

Changkiakow: see CHANG-CHIA-K'OU, China

Ch'ang-pai (chang'bi'), or **Changpai** mountain range, largely in NE China and partly in North Korea, Paitou Shan (9,003 ft/2,744 m) is the highest peak. The Ch'ang-pai range is economically important for timber and coal deposits. The Yalu, Tumen, and Sungari rivers rise there.

Ch'ang-sha or **Changsha** (both *chang-sha*), city (1970 est. pop. 850,000), capital of Hunan prov., S China, on the Hsiang River. The name, which means "long sandbank," is derived from an island in the river. Ch'ang-sha is an agricultural distribution and market center, an important stop on the Peking-Canton RR, and a river port. Rice is processed, meats are canned, and paper products, fertilizer, trucks, ceramics, and a wide variety of handicrafts are made. The city was founded in the early 3d cent. B.C. and has long been noted as a literary and educational center. As Tanchow it was the capital of the Chu kingdom (10th cent.). It became a treaty port in the early 1900s. Mao Tse-tung was educated in Ch'ang-sha, and in 1927 he led a Communist uprising there. The city is the birthplace of many notable Chinese literary figures and statesmen, including Chia Yi, a Han dynasty essayist, and Tseng Kuo-fan,

a 19th-century diplomat and general. Ch'ang-sha is the seat of several institutions of higher learning, notably Hunan Univ. and a medical college. An important Chinese air force base is there.

Ch'ang-te or **Changteh** (both *chang-dū*), city (1970 est. pop. 225,000), N Hunan prov., China, on the Yuan River. Formerly a treaty port, it is now a storage and shipping point for tung oil, medicinal herbs, and wood. Manufactures include ceramics, machine tools, textiles, leather, and processed foods. The city was founded during the Han dynasty.

Chang Tso-lin (jang dzō-līn), 1873-1928, Chinese general. Chang was of humble birth. As the leader of a unit of Manchurian militia he assisted (1904-5) the Japanese in the Russo-Japanese War. He held various military posts under the Chinese republic. From his appointment (1918) as inspector general of Manchuria until his death he controlled Manchuria, and from 1920 he constantly warred to extend his rule southward, joining in a three-way struggle with WU PEI-FU and FENG YU-HSIANG for control of the Peking government. His Fengtien army occupied the Peking-Tientsin area (1926) until driven out by the NORTHERN EXPEDITION OF CHIANG KAI-SHEK (1928). Chang died when the train in which he was retreating to Mukden before the Kuomintang army was bombed (for reasons still unclear) by officers of the Japanese army in Manchuria. His son, CHANG HSUEH-LIANG, succeeded to control of Manchuria.

Chankiang: see CHAN-CHIANG, China

channeling: see QUARRYING

Channel Islands, archipelago (1971 pop. 125,243), 75 sq mi (194 sq km), 10 mi (16 km) off the coast of Normandy, France, in the English Channel. The main islands are JERSEY, GUERNSEY, ALDERNEY, and SARK, and there are several smaller islands, including Herm, Jethou, and Lithou, all the islands are dependencies of the British crown. The mild and sunny climate (35-40 in./89-102 cm rainfall a year) and the fertile soil have made the islands chiefly agricultural. Large quantities of vegetables, fruits, and flowers are shipped to English markets. Dairying is the chief occupation of the islanders. The famous Jersey and Guernsey breeds of cattle are kept pure by local laws. The islands are a favorite resort of tourists and vacationers. The chief ports are ST. HELIER (Jersey) and ST. PETER PORT (Guernsey). The islands are divided into two administrative bailiwicks, one of which, Jersey, has more than half the total population. The other, Guernsey, includes all the islands except Jersey. Each bailiwick has its own lieutenant governor appointed by the crown, its own chief magistrate and legislature, and its own judicature. The inhabitants are mostly of Norman descent, but on Alderney the stock is mainly English. The English language is spoken everywhere, although French is the official language of Jersey. A Norman patois and Norman customs are still maintained by the natives. Christianization took place in the 6th cent., largely through the efforts of St. Helier and St. Sampson. In the 10th cent. the isles became possessions of the duke of Normandy. At the Norman conquest they were joined to the English crown, they remained under the control of King John and England in 1204 when Philip II of France confiscated the duchy of Normandy. The French attempted unsuccessfully to reestablish control in the 14th cent. and later. In World War II, after the evacuation of some 10,000 military and civilian personnel, the islands were occupied (1940) by German forces. See study by John Uttley (1966).

Channel Islands National Monument see NATIONAL PARKS AND MONUMENTS (table), SANTA BARBARA ISLANDS

Channing, Edward, 1856-1931, American historian, b. Dorchester, Mass., son of William Ellery Channing (1818-1901). He was a prominent teacher at Harvard from 1883 until his retirement in 1929, holding a professor's rank from 1897. Channing wrote *English History for American Readers* (with Thomas W. Higginson, 1893), *The United States of America, 1765-1865* (1896, 2d ed. 1930, repr. 1941), *Guide to the Study and Reading of American History* (with Albert B. Hart, 1896, rev. and augmented ed. by Channing, Hart, and Frederick J. Turner, 1912), an excellent brief bibliography of American history, *Students' History of the United States* (1898, 5th ed., rev. 1924), and *The Jeffersonian System, 1801-1811* ("American Nation" series, 1906, repr. 1968). Most of these books were, however, either incidental to, or preparation for, the great work to which Channing devoted most of his life—*A History of the United States* (6 vol., 1905-25), embracing the years from 1000 to 1845. Based throughout on the author's ex-

tensive knowledge of the sources, remarkably accurate in fact, and excellently written, it is generally considered one of the finest histories of the United States ever produced by one man. The final volume on the Civil War won a Pulitzer Prize in 1926.

Channing, William Ellery, 1780-1842, American Unitarian minister and author, b. Newport, R.I. At 23 he was ordained minister of the Federal St. Congregational Church in Boston, where he served until his death. He was a leader among those who were turning from Calvinism, and his sermon at Jared Sparks's ordination in Baltimore (1819) earned him the name "the apostle of Unitarianism." In 1820 he organized the Berry St. Conference of Ministers, which in 1825 formed the American Unitarian Association. Channing's plea was for humanitarianism and tolerance in religion rather than for a new creed. Not only a great preacher but a lucid writer, Channing influenced many American authors, including Emerson and other transcendentalists and Holmes and Bryant. Channing was not by nature a controversialist and never allied himself with the abolitionists, but his writings on slavery helped prepare for emancipation. In his denunciations of war, his discussion of labor problems, and his views on education, he was ahead of his time. His works (6 vol., 1841-43) passed through many editions. See his *Life with Extracts from His Correspondence* (ed. by W. H. Channing, 3 vol., 1848), biographies by J. W. Chadwick (1903), M. H. Rice (1961), and Jack Mendelsohn (1971), R. L. Patterson, *The Philosophy of William Ellery Channing* (1952, repr. 1972).

chansons de geste (shaNsōN' də zhěst) [Fr. = songs of deeds], a group of epic poems of medieval France written from the 11th through the 13th cent. Varying in length from 1,000 to 20,000 lines, assananced or (in the 13th cent.) rhymed, the poems were composed by trouvères and were grouped in cycles about some great central figure such as Charlemagne. The origin of the form is disputed, but probably the first chansons were composed after the year 1000 by the joint efforts of wandering clerks and jongleurs (itinerant minstrels) to attract pilgrims to shrines where heroes of the chansons were supposedly buried. Sung by jongleurs to the accompaniment of a primitive viol, they spread to England, Germany, Italy, and Iceland. The earlier chansons—epic, aristocratic, and militantly Christian—passed as real history to their medieval listeners, though much of the material was legendary. Some later chansons utilize fantastic adventure or reflect bourgeois elements. The oldest extant chanson, and also the best and most famous, is the *Chanson de Roland*, composed c. 1098-1100 (see ROLAND), others are *Raoul de Cambrai*, *Huon de Bordeaux*, *Aliscans*, and *Renaud de Montauban*. See W. C. Calin, *The Epic Quest: Studies in Four Old French Chansons de Geste* (1966) and Jessie Crosland, *The Old French Epic* (1971).

chant, general name for one-voiced, unaccompanied, liturgical music. Usually it refers to the liturgical melodies of the Orthodox, Roman Catholic, and Anglican branches of Christianity. Roman Catholic chant, commonly called Gregorian or PLAINSONG, is diatonic, modally organized (see MODE), and has a free rhythm determined by the text. Anglican chant is a harmonized, metrical adaptation to English texts of the Gregorian method of psalm singing, in which a short melody is adjusted to the length of different psalm verses by repeating one tone, the recitation tone, for any number of words in the text. The texts of Anglican chant, used in many Protestant churches, are from the BOOK OF COMMON PRAYER.

Chantaburi see CHANTHABURI, Thailand

chanter: see BAGPIPE

chanterey or **shanty** (both *shān'tē*), work song with marked rhythm, particularly one sung by a group of sailors while hoisting sail or anchor or pushing the capstan. Often it has solo stanzas sung by a leader, the chantereyman, with a chorus repeated after each by the entire group. Similar songs are sung by shore gangs and lumbermen, and all are related to the work chanting of group labor throughout the world, such as the barcaroles of Italian boatmen, the songs of West Indian shoremen, or the Oriental rope chants. Many universally known chantereyms, such as *Way, Haul Away* and *Wide Missouri*, are of American origin. See Robert Frothingham, ed., *Songs of the Sea and Sailor's Chantereyms* (1924), Frank Shay, ed., *American Sea Songs and Chantereyms* (1948), Stan Hugill, ed., *Shantereyms from the Seven Seas* (1961).

Chanthaburi (chantā'bōōrē'), town (1960 pop. 10,795), capital of Chanthaburi prov., SE Thailand, near the Gulf of Siam. It is an agricultural trade center in an area growing rice, pepper, and coffee. Pre-

cious gems (principally rubies and sapphires) are mined nearby. Originally part of the Khmer Empire, the town passed to Thailand in 1576. It was occupied by French forces from 1893 to 1905.

Chantrey, Sir Francis Legatt, 1781–1841, English sculptor, famous for his portrait busts and statues. Among his many well-known works are equestrian statues of Wellington and George IV (London), and a statue of George Washington (Statehouse, Boston).

Chanukah: see HANUKKAH

Chanute, city (1970 pop. 10,341), Neosho co., SE Kansas, on the Neosho River, inc. 1873 following the consolidation of four contiguous towns. It is a processing and trade center for a rich agricultural region, with a great variety of manufactures. A junior college is there. Nearby is the site of a mission (1824–29), the first in Kansas.

Chany (chānē'), saltwater lake, 1,280 sq mi (3,315 sq km), 5 Siberian USSR, in the Baraba Steppe. The Chulym River flows into the lake.

Chanzy, Antoine Eugène Alfred (aŋtwaŋ' ozhēŋ' alfréd' shānzē'), 1823–83, French general. After service in Algeria, Italy, and Syria, he was refused a major command in the FRANCO-PRUSSIAN WAR because he was distrusted by the emperor Napoleon III. After the fall of the empire he was put in command of the Army of the Loire and opposed the Prussians with great skill. Chanzy was elected to the national assembly. Captured by the Commune of Paris in 1871, he was detained for several days. Chanzy was later governor general of Algeria (1873–79) and ambassador to Russia (1879–81), and in 1875 he was made senator for life. Nominated for president without his approval in 1879, he received a large vote in the election.

Ch'ao-an or **Chaoan** (both chou-an), city, E Kwangtung prov., China, on the Han River. It is also called Chaochow (Ch'ao-chou). It is a trade center with textile, machinery, porcelain, and sugar-refining industries.

Chaochow: see CH'AO-AN, China

Chao K'uang-yin (iou kwang-yin), Chinese emperor (960–79), founder of the SUNG dynasty. A leading general during the short-lived Later Chou dynasty (951–60), he usurped the throne, and by the time of his death he had reunited most of China. Proper Chao's reign followed the FIVE DYNASTIES period (907–60), an era of frequent political change. His greatest accomplishment, and the reason for the longevity of the Sung, was his replacement of the system of autonomous local military commanders with large professional armies under the control of the central government.

Chao Phraya (chou praya'), **Mae Nam Chao Phraya**, or **Menam Chao Phraya** (both mā-nam'), chief river of Thailand, c 140 mi (230 km) long, formed by the confluence of the Ping (c 300 mi/480 km long) and the Nan (c 500 mi/800 km) rivers at Nakhon Sawan, W central Thailand. It flows 5 past Bangkok to the Gulf of Siam and is navigable for its entire length. With its tributaries, the Chao Phraya drains most of W Thailand, its valley is the country's main rice-producing region. The many distributaries of the Chao Phraya delta are interconnected by canals that serve both for irrigation and for transportation.

Chaos (kā'ōs), in Greek mythology, vacant, unfathomable space. From it arose all things, earthly and divine. There are various legends explaining it. In the Pelagian creation myth, EURYNOME rose out of Chaos and created all things. In the Olympian myth, Gaea sprang from Chaos and was the mother of all things. Eventually the word chaos came to mean a great confusion of matter out of which a supreme being created all life.

Chapais, Sir Thomas (shapā'), 1858–1946, Canadian politician and historian, b. Quebec prov., son of Jean Charles Chapais (1811–85). Thomas Chapais became professor of history at Laval Univ. He was appointed to the legislative council of Quebec in 1892, became speaker in 1895, and president of the executive council in 1896. In 1919 he was appointed to the Canadian Senate, and in 1930 he represented Canada in the Assembly of the League of Nations. He served as a cabinet minister in 1897 and from 1936 to 1939. A noted French Canadian historian, his most important works were his biographies *Jean Talon* (1904), *The Great Intendant* (1914), and *Montcalm* (1911), and his *Cours d'histoire du Canada* (8 vol., 1919–34). He was knighted in 1935.

Chapala (chāpālā), lake, c 50 mi (80 km) long and 8 mi (12.8 km) wide, W Mexico, in Jalisco and Michoacán states. It is the largest lake in Mexico. Set in a depression on the central plateau, Lake Chapala is

fed by the Lerma River, which flows into it from the east, and is drained by the Río Grande de Santiago, which flows out by the northeastern corner. It is a popular scenic resort. Fishing is an important native occupation. Since the early 1950s the waters have been receding at an alarming rate and the lake is rapidly becoming choked with water hyacinths; studies have been initiated to determine an effective conservation program. Towns along the shore range from Indian villages to American retirement colonies.

chaparral (chāpārāl'), type of plant community in which shrubs are dominant. It occurs usually in regions having from 10 to 20 in. (25–50 cm) of rainfall annually, which are thus more dry than forest regions and less dry than deserts. Where the rate of evaporation is high, chaparral may be found where the rainfall is well above 20 in. Generally chaparral country has most of its rainfall in the winter. The vegetation includes both evergreen and deciduous forms, the dominant species varying in different areas. Chaparral is well exemplified in parts of the W and SW United States, although similar growth is found in many parts of the world. Climax areas (see ECOLOGY) are well represented by the largely deciduous growths in Colorado, E Utah, and N New Mexico. A subclimax area extends from South Dakota to Texas and through part of the Great Basin. Among the chief species of plants in these regions are Gambel oak (*Quercus utahensis*), mountain mahogany (*Cercocarpus parvifolius*), squawbush (*Rhus trilobata*), western chokeberry (*Prunus demissa*), western serviceberry (*Amelanchier alnifolia*), and mesquite (*Prosopis glandulosa*). Evergreen shrubs are characteristic of the chaparral found in the southern half of California, especially near the coast, and extending into Nevada and Arizona. Among the dominant forms are several species of buckthorn (*Ceanothus*), manzanita (*Arctostaphylos tomentosa* and *A. pungens*), and the holly-leaved cherry (*Prunus ilicifolia*). A species of scrub oak (*Quercus dumosa*) is the chief deciduous form. Chaparral growth is sometimes so dense that it is almost impenetrable.

chapbook, one of the pamphlets formerly sold in Europe and America by itinerant agents, or "chapmen." Chapbooks were inexpensive—in England often costing only a penny—and, like the broadside, they were usually anonymous and undated. The texts were similar to those of current tabloid newspapers and therefore reveal much about the popular taste of the 16th, 17th, and 18th cent. The term is occasionally used to refer to old manuscripts showing national character through the use of vernacular expressions.

Chapei: see SHANGHAI, China

chapel, subsidiary place of worship. It is either an alcove or chamber within a church, a separate building, or a room set apart for the purpose of worship in a secular building. A movable shrine containing the *cappa*, or cloak, of ST MARTIN was first called a *cappella*, hence a sanctuary that is not called a church. Though the churches of the early Middle Ages possessed only the single altar of the apse, chapels became necessary with the increase of relics and of devotions at altars sacred to numerous saints. At first they appeared as minor apses, flanking the main apse. After the 10th cent., in order to accommodate the increasing number of pilgrims, a complex series of radiating chapels was developed behind the high altar. In the 13th cent. chapels were added to the side-aisle bays of choir and nave. In England the strongly projecting transepts provided the favored space for a relatively small number of chapels. In France the Lady Chapel (dedicated to the Virgin) is the central chapel of the chevet and is sometimes larger than the others, while in England it occurs directly behind the high altar. Peculiar to English cathedrals are the small chantry chapels, mostly of the 14th and 15th cent., either built and endowed by individuals for their private Masses or serving to enclose the tombs of bishops and other churchmen. From the early Middle Ages, members of royalty had the right to an independent private chapel. Such are the separate building of the Sainte-Chapelle, Paris, St. George's Chapel at Windsor, and Henry VII's magnificent chapel at Westminster, London. In addition, there were royal mortuary chapels, the most celebrated being that of Charlemagne (795–804), at Aachen, since converted into a cathedral. Numerous lords of medieval castles and manor houses established private chapels, over which episcopal jurisdiction was enforced as completely as possible. The two main chapels at the Vatican are the Pauline Chapel (1540), designed by Antonioda SANGALLO for Paul III, and the Sixtine Chapel (1473),

built by Sixtus IV and celebrated for its great fresco decorations by MICHELANGELO and other masters. Two of the most famous French modern chapels (built in the 1950s) are the chapel at Vence designed by Matisse and the one at Ronchamp by Le Corbusier, both are freestanding buildings.

Chapelain, Jean (zhaN shaplāN'), 1595–1674, French critic and poet. His works include *Pucelle* (1656), an epic poem about Joan of Arc. Chapelain was a founding member of the French Academy, for which he composed a celebrated attack upon Pierre Corneille's *Le Cid*.

Chapel Hill, town (1970 pop. 25,537), Orange co., central N.C., at the edge of the Piedmont, founded 1792, inc. 1851. It is the seat of the Univ. of North Carolina, which is the mainstay of the town's economy.

Chapin, Schuyler G., 1923–, American operatic manager, b. New York City. He studied music with Nadia Boulanger. In 1953 he joined Columbia Artists as tour manager, he also served with Columbia Records as director of artists and repertoire. From 1964 until 1969 he was vice president in charge of programming of Lincoln Center for the Performing Arts. Upon the death (1972) of Goeran Gentele (whose assistant he had been), Chapin succeeded him, first as acting general manager and then as general manager of the Metropolitan Opera.

Chaplin, Charlie (Sir Charles Spencer Chaplin), 1889–, English film actor, director, producer, writer, and composer, b. London. After appearing in London music halls, in 1910 Chaplin joined a pantomime troupe. While touring the United States, he was noticed by Mack Sennett. For the Keystone Company (1914–15) he created the famous wistful tramp characterized by derby, moustache, baggy trousers, and awkward walk. In 1918 Chaplin became an independent producer, releasing his films through United Artists, which he founded in 1919 with D. W. Griffith, Douglas Fairbanks, and Mary Pickford. Chaplin often composed his films' background music. His major films include *The Kid* (1920), *The Gold Rush* (1924), *The Circus* (1928), *City Lights* (1931), *Modern Times* (1936), *The Great Dictator* (1940, his first speaking part), *Monsieur Verdoux* (1947), and *Limelight* (1952). In 1966 he directed *A Countess from Hong Kong*. After much American press and government criticism of his politics and personal behavior, Chaplin settled in Switzerland in 1952. In 1975 he was knighted by Queen Elizabeth II. He is married to Oona O'Neill, daughter of Eugene O'Neill. See his *My Trip Abroad* (1922) and autobiography (1964), biographies by Charles Chaplin, Jr. (1960) and Parker Tyler (1947, repr. 1972), G. D. McDonald et al., *The Films of Charlie Chaplin* (1965).

Chapman, George, 1559?–1634, English dramatist, translator, and poet. His great contributions to English literature are his poetic translations of Homer's *Iliad* (1612) and *Odyssey* (1614–15). Chapman was a classical scholar, and his work shows the influence of the Stoic philosophers, Epictetus and Seneca. In his best-known tragedies, *Bussy D'Ambois* (1607) and *The Conspiracy and Tragedy of Byron* (1608), the hero is destroyed by his inability to control his inward passions and resist outward temptation. Chapman wrote and collaborated on nearly a dozen comedies, the most notable being *All Fools* (1605) and *Eastward Ho!* (1605), the latter written with Ben Jonson and John Marston. Included among his other works are several metaphysical poems, a completed version of Marlowe's *Hero and Leander* (1598), and translations of Petrarch and Hesiod. See studies by Millar MacLure (1966) and Charlotte Spivack (1967).

Chapman, John, 1774–1845, American pioneer, more familiarly known as Johnny Appleseed, b. Massachusetts. From Pennsylvania—where he had sold or given saplings and apple seeds to families migrating westward—he traveled c 1800 to present-day Ohio, sowing apple seeds as he went. For over 40 years Johnny Appleseed continued to wander up and down Ohio, Indiana, and W Pennsylvania, visiting his forest nurseries to prune and care for them and helping hundreds of settlers to establish orchards of their own. His ragged dress, eccentric ways, and religious turn of mind attracted attention, and he became a familiar figure to settlers. Scores of legends were told of him after he died. However, it was verified that in the War of 1812 he traveled 30 mi (48 km) to summon American troops to Mansfield, Ohio, thus forestalling a raid by Indian tribes who were allied with the British. He died near Fort Wayne, Ind. See biographies by H. A. Pershing (1930) and Robert Price (1954).

Chapman, John Gadsby, 1808–90, American painter, b. Alexandria, Va. Chapman is noted for his col-

ored etchings of the Roman compagna and the American landscape His historical painting *The Baptism of Pocahontas* is in the Capitol in Washington, D C

Chapman, John Jay, 1862-1933, American essayist and poet, b New York City, grad Harvard He was admitted to the bar in 1888 but after 10 years abandoned law for literature A friend of William James and other Boston intellectuals of the time, Chapman was a fiery and pertinent observer of his environment Among his works are *Emerson and Other Essays* (1898), *Memories and Milestones* (1915), *Greek Genius and Other Essays* (1915), *Songs and Poems* (1919), and *New Horizons in American Life* (1932) He also wrote several plays, including *The Treason and Death of Benedict Arnold* (1910) See his selected writings ed by J Barzun (new ed 1968), studies by R B Hovey (1959) and M H Bernstein (1964)

Chapman, Maria Weston, 1806-85, American abolitionist, b Weymouth, Mass In 1834 she became a close associate of William Lloyd Garrison, helped organize the Boston Female Anti-Slavery Society, and for several years was treasurer of the Massachusetts Anti-Slavery Society She edited (1877) the autobiography of her friend Harriet Martineau

Chapra (chā'pra), city (1971 pop 83,166), Bihar state, NE India, on the Gogra River near its junction with the Ganges It is a rail and road junction In the 18th cent the French, Dutch, Portuguese, and British had factories in the area that were destroyed by floods In the early 20th cent the city was ravaged by plague Chapra has two colleges affiliated with Bihar Univ

Chaptal, Jean Antoine (zhāN aNtwān' shaptāl'), 1756-1832, French chemist, industrialist, and statesman He became (1781) professor of chemistry at Montpellier, and during the Revolution he was active in gunpowder production Later, as minister of the interior (1801-9) and director general of commerce and manufactures (1815) under Napoleon I, he introduced far-reaching reforms in medicine, industry, and public works Chaptal's writings pioneered in the application of chemical principles to industrial processes

chapter house, a building in which the chapter of the clergy meets Its plan varies, the simplest being a rectangle At Worcester, England, the Norman builders created a circular chapter house (c 1100), with vaulting springing from a central pillar Subsequent examples, adopting this central support for their vaulted roofs but frequently having a polygonal plan, are among the most distinctive achievements of the English Gothic builders Those at Salisbury, Wells, and Westminster Abbey (1250) are octagonal, while that at Lincoln is decagonal At York, the octagonal room (c 1300) exhibits a departure in that it dispenses with the central column and is covered with a vaulted wooden roof

Chapultepec (chapōōl'tāpēk') [Aztec, = grasshopper hill], rocky hill S of Mexico City It was originally developed as a playground for Aztec emperors A castle built there in the late 18th cent as a summer home for the Spanish viceroys later became the traditional home of the rulers of Mexico Chapultepec, heavily fortified, was the scene of spectacular fighting during the MEXICAN WAR, US Gen Winfield SCOTT ordered the storming of Chapultepec on Sept 12, 1847, and it fell the next day Nevertheless, its heroic defenders, particularly the "boy heroes" from the adjoining military college who preferred death to surrender, became for Mexicans a symbol of glory Both Emperor Maximilian and, later, Porfirio Diaz, beautified the grounds and embellished the castle In 1937, Mexican President Lázaro Cardenas declared the castle a museum of colonial history and ethnography The Inter-American Conference on the Problems of War and Peace, which met in 1945, is commonly called the Chapultepec Conference (see PAN-AMERICANISM)

Chapultepec, Act of: see PAN-AMERICANISM

char: see SALMON

characin (kār'āsīn), common name for members of the Characidae, a large and diverse family comprising 700 species of freshwater fishes The characins are related to the carp and the catfish They are found in Africa and in tropical America, especially in the Amazon Most species are active and predacious Most notorious are the piranhas, or caribes (*Serrasalmus* species), with their powerful jaws and razor-sharp triangular teeth, capable of killing humans and cattle Various small, colorful characin species, called tetras, are used in aquariums A small characin found in Mexican streams is interesting for the stages of blindness it exhibits those which live

far back in caves are eyeless, those found near the entrance have imperfect eyes, and the specimens living in open water have normal eyes A cross of a blind with a normal specimen produces offspring with varying degrees of eye degeneracy Characins are classified in the phylum CHORDATA, class Osteichthyes, order Cypriniformes

charade (shārad'), verbal, written, or acted representation of a word, its syllables, or a number of words The object is to guess the idea being conveyed Winthrop M PRAED wrote many of the well-known charades, and a good description of the acted charade is found in Thackeray's *Vanity Fair* In the United States a charade acted in pantomime and having a set time limit had considerable popularity in the 1930s and 40s and is still a popular form of home amusement

Charashim (kāf'ashīm) (Heb, =craftsmen, cf Neh 11 35), unidentified valley, Palestine, probably near Lydda 1 Chron 4 14

Charbray cattle (shar'brā') see BRAHMAN CATTLE

Charcas (char'kas), Spanish colonial AUDIENCIA and presidency in South America, known also as Upper Peru and Chuquisaca Charcas roughly corresponded to modern Bolivia but included parts of present Argentina, Chile, Peru, and Paraguay, encompassing a territorial expanse that led to disputes and wars after independence had been won It was established in 1559 and was attached to the viceroyalty of Peru until joined (1776) to the newly created viceroyalty of La Plata The prosecutor of Charcas, Jose de Antequera y Castro, led (1721) the first major creole uprising against viceregal authority The city of SUCRE was sometimes called Charcas

charcoal, substance obtained by partial burning or destructive distillation of organic material It is largely pure CARBON The most common variety, wood charcoal, was formerly prepared by piling wood into stacks, covering it with earth or turf, and setting it on fire In this process volatile compounds in the wood (e.g., water) pass off as vapors into the air, some of the carbon is consumed as fuel, and the rest of the carbon is converted into charcoal In the modern method, wood is raised to a high temperature in an iron retort, and industrially important by-products, e.g., methanol (wood alcohol), acetone, and acetic acid, are saved by condensing them to their liquid form Charcoal, being almost pure carbon, yields a larger amount of heat in proportion to its volume than is obtained from a corresponding quantity of wood, as a fuel it has the further advantage of being smokeless Charcoal is also obtained from substances other than wood, that obtained from bones is called bone black, animal black, or animal charcoal Because of its porous structure, finely divided charcoal is a highly efficient agent for filtering the adsorption of gases and of solids from solution It is used in sugar refining, in water purification, in the purification of factory air, and in gas masks By special heating or chemical processes the adsorptive property can be greatly increased, charcoal so treated is known as activated charcoal

Charcot, Jean Baptiste (zhāN batēst' sharkō'), 1867-1936, French neurologist and explorer in the antarctic region, son of Jean Martin Charcot He became (1896) director of clinics at the Univ of Paris but soon gave up medicine for exploration In two voyages (1903-7, 1908-10) he surveyed the coast of Antarctica from Palmer Peninsula to Charcot Land, obtaining valuable scientific data After 1920, Charcot made seven scientific voyages to Greenland aboard his ship, the *Pourquoi Pas?* In 1935 he came out of retirement for a final expedition to Greenland Crashing into a reef, Charcot went down with his celebrated ship off the coast of Iceland His antarctic voyages were recorded in his *Le Pourquoi Pas? dans l'Antarctique* (1910, tr *The Voyage of the Why Not? in the Antarctic*, 1911)

Charcot, Jean Martin (zhāN martāN' sharkō'), 1825-93, French neurologist He developed at the Salpêtrière in Paris the greatest clinic of his time for diseases of the nervous system He made many important observations on these diseases, described the characteristics of tabes dorsalis, differentiated multiple sclerosis and paralysis agitans, and wrote on many neurological subjects Charcot's insight into the nature of hysteria is credited by Sigmund Freud, his pupil, as having contributed to the early psychoanalytic formulations on the subject See biography by Georges Guillain (1959), study by A R Owen (1971)

chard: see ARTICHOKE, BEET

Chardin, Jean-Baptiste-Siméon (zhāN-bātēst'-sēmāōN' shārdāN'), 1699-1779, French painter He was a major figure of 18th-century painting While

the Académie royale still advocated history painting as the noblest form of art, Chardin painted simple still lifes and domestic interiors His ability to evoke textures was extraordinary, as were his muted tones, delicate touch, and unusually abstract compositional skill His particular ability to render still-life forms naturalistically and simple genre scenes without sentimentality ensured his reputation A number of modern schools of painting are indebted to the abstract nature of Chardin's compositions The Louvre has many of his oils and pastel portraits, including *Benediction* and *Return from Market* *Blowing Bubbles* and a portrait of Mme Chardin are at the Metropolitan Museum Other paintings are in the National Gallery of Art, Washington, D C, and in the Museum of Fine Arts, Boston See studies by H E A Furst (1907) and G Wildenstein (1963, repr 1969)

Chardzhou (chārjō'ōō), city (1970 pop 96,000), capital of Chardzhou oblast, SW Central Asian USSR, in the Turkmen Republic, on the Amu Darya River An inland port, it has shipyards and is a cotton and silk manufacturing center Its superphosphate plant produces fertilizer for much of Central Asian USSR Chardzhou was founded in the late 19th cent as a fortress

Charente (sharaNt'), department (1968 pop 331,016), W France The capital is Angoulême The brandy distilled at COGNAC is world renowned

Charente, river, 220 mi (354 km) long, rising near Limoges, W France, and flowing W to the Bay of Biscay The river flows past Angoulême (the head of navigation), Cognac, Saintes, and Rochefort, and through an important cattle-raising region Along its western course are the celebrated vineyards from which cognac brandy is made The Charente carries little commercial traffic

Charente-Maritime (sharaNt'-marētēm'), department (1968 pop 483,622), W France, on the Atlantic coast, formerly Charente-Inférieure La Rochelle is the capital

Chares (kār'ēz, kā'-), fl 3d cent B C, Greek worker in bronze from Lindus, Rhodes, pupil of Lysippos He was the sculptor of the COLOSSUS of Rhodes and is said to have founded the Rhodian school of sculpture No known works have survived

charge, property of matter that gives rise to all electrical phenomena (see ELECTRICITY) The basic unit of charge, usually denoted by *e*, is that on the PROTON or the ELECTRON, that on the proton is designated as positive (+ *e*) and that on the electron is designated as negative (- *e*) All other charged ELEMENTARY PARTICLES have charges equal to + *e*, - *e*, or some whole number times one of these, with the possible exception of the quark, a hypothetical particle whose charge could be $\frac{1}{3}e$ or $\frac{2}{3}e$ Every charged particle is surrounded by an electric FIELD OF FORCE such that it attracts any charge of opposite sign brought near it and repels any charge of like sign, the magnitude of this force being described by COULOMB'S LAW (see ELECTROSTATICS) This force is much stronger than the gravitational force between two particles and is responsible for holding protons and electrons together in atoms and for chemical bonding When equal numbers of protons and electrons are present, the atom is electrically neutral, and more generally, any physical system containing equal numbers of positive and negative charges is neutral Charge is a conserved quantity, the net electric charge in a closed physical system is constant (see CONSERVATION LAWS) Whenever charge is created, as in the decay of a neutron into a proton, an electron, and an antineutrino, equal numbers of positive and negative charges must be created Although charge is conserved, it can be transferred from one body to another Electric current, on which much of modern technology is dependent, is a flow of charge through a conductor (see CONDUCTION) Although current is usually treated as a continuous quantity, it actually consists of the transfer of millions of individual charges from atom to atom, typically by the transfer of electrons A precise description of the behavior of electric charge in crystals and in systems of atomic and molecular dimensions requires the use of the QUANTUM THEORY

charge d'affaires: see DIPLOMATIC SERVICE

Chari or Shari (both shār'rē), longest river of interior drainage in Africa, c 650 mi (1,050 km) long, rising in the uplands of the Central African Republic, N central Africa It flows NW across 5 Chad, past Sarh (Fort Archambault), Bousso, and Ndjamena (Fort-Lamy), and enters Lake Chad through a wide delta The Logone River is its chief tributary During the summer rainy season, the river floods much of the surrounding area

Charikar (chā'rikār), city (1969 est. pop. 90,000), NE Afghanistan. It is noted for its pottery and high-quality grapes. During the 1960s Afghanistan's largest textile factory was built nearby, bringing a great increase in Charikar's population.

chariot, earliest and simplest type of carriage and the chief vehicle of many ancient peoples. The chariot was known among the Babylonians before the introduction of horses c. 2000 B.C. and was first drawn by asses. The chariot and horse introduced into Egypt c. 1700 B.C. by the Hyksos invaders undoubtedly contributed to their military success. Simultaneously the use of the chariot spread over the Middle East, chiefly as a war machine. The Assyrians are credited with introducing chariots with scythes mounted on the wheels as weapons, a type later adopted by the Persians. In Greece and Rome the chariot was never used to any extent in war, possibly because of generally unfavorable topography. It was, however, prominent in games and processions, becoming in Rome the inevitable carriage of the triumphal procession. Here also the chariot races of the circus were developed. The ancient chariot was a very light vehicle, drawn by two or more horses hitched side by side. The car was little else than a floor with a waist-high semicircular guard in front. British chariots were open in front, had a curved wall behind, often had seats, and sometimes had scythes on the wheels.

Charites: see **GRACES**

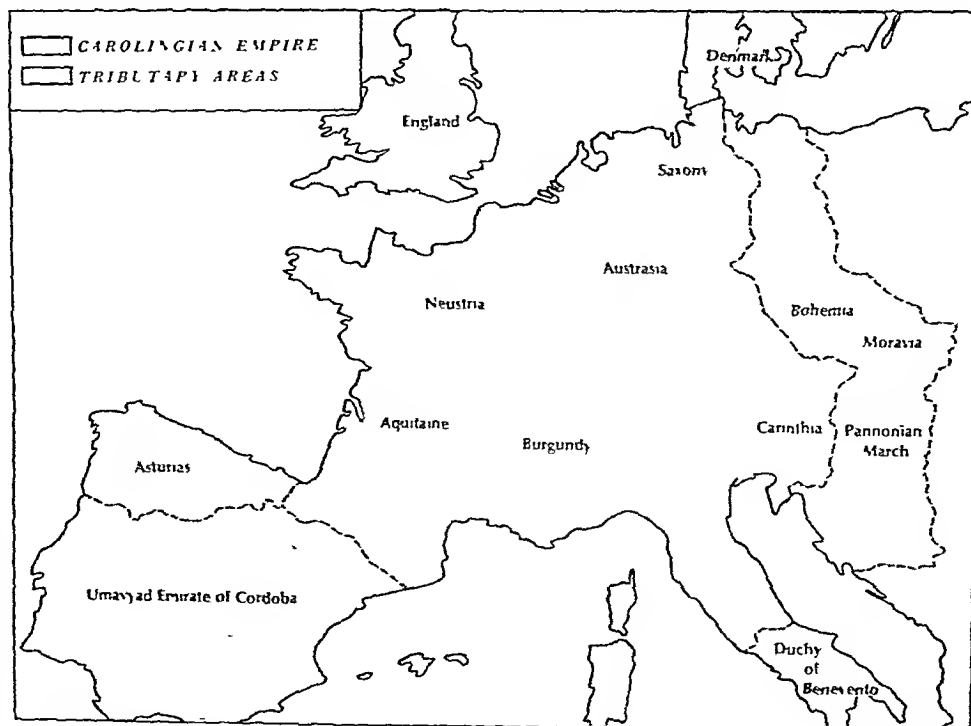

Charlemagne (Charles the Great or Charles I) (shār'-lamān) [O Fr. = Charles the great], 742–814, emperor of the West (800–814), Carolingian king of the Franks (768–814). Elder son of PEPIN THE SHORT and a grandson of CHARLES MARTEL, he shared with his brother CARLOMAN in the succession to his father's kingdom. At Carloman's death (771), young Charles annexed his brother's lands, disinheriting Carloman's two young sons, who fled with their mother to the court of DESIDERIUS, king of the Lombards. When Desiderius conquered part of the papal lands and attempted to force Pope ADRIAN I to recognize Carloman's sons, Charles intervened (773) on the side of the pope and defeated the Lombards. At Rome, Charles was received by Adrian as patrician of the Romans (a title he had received with his father in 754), and he confirmed his father's donation to the Holy See. Shortly afterward he took Pavia, the Lombard capital, and assumed the iron crown of the Lombard kings of Italy. In 778 he invaded Spain, hoping to take advantage of civil war among the Muslim rulers of that kingdom, but was repulsed at Saragossa. In later campaigns conducted by local counts, Barcelona was captured (801) and a frontier established beyond the Pyrenees. Charles's struggle with the pagan Saxons, whose greatest leader was WIDUKIND, lasted from 772 until 804. By dint of forced conversions, wholesale massacres, and the transportation of thousands of Saxons to the interior of the Frankish kingdom, Charles made his domination over Saxony complete. In 788 he annexed the semi-independent duchy of Bavaria, after deposing its duke, Tassilo. He also warred successfully against the Avars and the Slavs, establishing a frontier south of the Danube. Meanwhile the new pope, LEO III, was threatened with deposition by the Romans and in 799 appealed to Charles. Charles hastened to Rome to support Leo, and on Christmas Day, 800, was crowned emperor by the pope. His coronation legitimized Charles's rule over the former Roman empire in W. Europe and finalized the split between the Byzantine and Roman empires. After years of negotiation and war, Charles received recognition from the Byzantine emperor Michael I in 812, in return Charles renounced his claims to Istria, Venice, and Dalmatia, which he had held briefly. The end of Charles's reign was troubled by the raids of Norse and Danish pirates (see **NORSEMEN**), and Charles took vigorous measures for the construction of a fleet, which his successors neglected. His land frontiers he had already protected by the creation of marches. In his government he continued and systematized the administrative machinery of his predecessors. He permitted conquered peoples to retain their own laws, which he codified when possible, and he issued many **CAPITULARIES** (gathered in the **MONUMENTA GERMANIAE HISTORICA**). A noteworthy achievement was the creation of a system by which he might personally supervise his administrators in even the most distant lands, his *missi dominici* were personal representatives with wide powers who regularly inspected their assigned districts. He maintained contact with the lesser magnates through annual consultative assemblies. He tried to

help the poorer freemen by reducing their military obligations and by removing their obligation to attend county assemblies. He strove to educate the clergy and exercised more direct control over the appointment of bishops. Like the Byzantine emperors, he acted as arbiter in theological disputes by summoning councils, notably that at Frankfurt (794), where **ADOPTIOINISM** was rejected and the decrees of the Second Council of Nicaea (see **NICAEA SECOND COUNCIL OF**) were condemned. He stimulated foreign trade and entertained friendly relations with England and with HAPUN AR-RASHID. In 813, Charlemagne designated his son LOUIS I as co-emperor and his successor and crowned him at AACHEN. Charlemagne's court at Aachen was the center of an intellectual renaissance. The palace school, under the leadership of ALCUIN, became particularly famous; numerous schools for children of all classes were also established throughout the empire during Charles's reign. The preservation of classical literature was due almost entirely to his initiative. Prominent figures of the Carolingian renaissance, other than Alcuin, included PAUL THE DEACON and EINHARD. Charlemagne himself, although scarcely to be considered educated by later standards, showed great taste for learning and strove for purity in his Latin. In his daily life he affected the simple manners of his Frankish forebears, wore Frankish clothes, and led a frugal existence, except for his habit of keeping several wives and concubines. He was beatified after his death and in some churches has been honored as a saint. His physical appearance probably differed vastly from the bearded and patriarchal figure of the legend. Indeed, Charlemagne's actual achievements and prestige were of such magnitude that later generations enlarged them to fantastic proportions. Surrounded by his legendary 12 peers, he became the central figure of a cycle of romance. At first, legend pictured him as the champion of Christendom, later he appeared as a vacillating old man, almost a comic figure. His characterization in the *Chanson de Roland* (see **ROLAND**) has impressed itself indelibly on the imagination of the Western world. The vogue of the Charlemagne epic ebbed somewhat after the Renaissance but was revived again in the 19th cent. by Victor Hugo and other members of the Romantic school. Charlemagne's creation (or re-creation) of an empire was the basis of the theory of the HOLY ROMAN EMPIRE; it was his example that Napoleon I had in mind when he tried to assume his succession in 1804. Einhard wrote a contemporary biography of Charlemagne. See Heinrich Fichtenau, *The Carolingian Empire* (1949, tr. 1957), Donald Bullough, *The Age of Charlemagne* (1966), Jacques Boussard, *The Civilization of Charlemagne* (tr. 1968). For the literary aspect, see Thomas Bulfinch, *Legends of Charlemagne* (1863), and J. L. Weston, *The Romance Cycle of Charlemagne and His Peers* (1901).

Charleroi (shār'lər-wā'), town (1970 pop. 23,689), Hainaut prov., S Belgium, on the Sambre River and on the Charleroi-Brussels Canal. It is a commercial and industrial center and a rail junction. Manufactures include steel, glass, machinery, processed food, and chemicals. Coal and iron are mined in the region. Charleroi was founded in 1666 and named for Charles II of Spain. It was of strategic importance in the wars of the 17th and 18th cent. The Germans won a battle there (1914) in World War I. It is noted for its modern public buildings, such as the town hall (1936), and is the seat of a technical university. **Charles I**, emperor of the West and Frankish king; see **CHARLEMAGNE**.

Charles II or Charles the Bald, 823–77, emperor of the West (875–77) and king of the West Franks (843–77), son of Emperor LOUIS I by a second marriage. The efforts of Louis to create a kingdom for Charles were responsible for the repeated revolts of Louis's elder sons that disturbed the latter part of Louis's reign. When LOTHAR I, the eldest and heir to the imperial title, attempted to reunite the empire after Louis's death (840), Charles and LOUIS THE GERMAN marched against their brother and defeated him at Fontenoy (841). Reaffirming their alliance in 842 (see **STRASBOURG OATH OF**), they signed (843) with Lothair the Treaty of Verdun (see **VERDUN TREATY OF**), which divided the empire into three parts. The part roughly corresponding to modern France fell to Charles. He was almost continuously at war with his brothers and their sons, with the Norsemen (or Normans, as they came to be known in France), and with rebellious subjects. When Charles's nephew LOTHAR, son of Lothair I and king of Lotharingia, died in 869, Charles seized his kingdom but was forced by the Treaty of MERSEN (870) to divide it with Louis the German. In 875, at the death of his nephew Louis II, who had succeeded Lothair I as emperor, Charles secured the imperial crown. His reign witnessed the growth of the power of the nobles at the expense of the royal power and thus marked the rise of local feudalism. Charles's chief adviser was Archbishop HINCMAR.

Charles III or Charles the Fat, 839–88, emperor of the West (881–87), king of the East Franks (882–87), and king of the West Franks (884–87), son of LOUIS THE GERMAN, at whose death he inherited Swabia (876). He succeeded to the East Frankish or German kingship after the deaths of his brothers Carloman (880) and Louis the Younger (882), with whom he had shared the kingdom of Louis the German. He had also gained Italy from Carloman and was crowned emperor by Pope John VIII in 881. After the death of the heirs of CHARLES II in France, he became (884) West Frankish king, thus reuniting briefly the empire of Charlemagne. A weak ruler, he was unable to protect his lands from invasion and in 886,

Carolingian Empire (814)

when he went to relieve Paris, which was besieged by the NORSEMEN, he ransomed the city instead of fighting and allowed the invaders to ravage Burgundy. He was deposed in 887 and was succeeded in Germany by ARNULF and briefly in France by EUDÉS.

Charles IV, 1316–78, Holy Roman emperor (1355–78), German king (1347–78), and king of Bohemia (1346–78). The son of JOHN OF LUXEMBOURG, Charles was educated at the French court and fought the English at CRÉCY, where his father's heroic death made him king of Bohemia. Pope CLEMENT VI, to whom he had promised far-reaching concessions, helped secure his election (1346) by the imperial electors as antiking to Holy Roman Emperor LOUIS IV. Louis's death (1347), the popular desire for peace, which was fostered by the ravages of the Black Death (bubonic plague), and the absence of a strong leader to unite the opposition enabled Charles to make good his claim to the crown by 1349. In 1355 he journeyed to Rome, where, on Easter Sunday, he was crowned emperor by the papal legate (the pope was then residing at Avignon). His coronation with papal approval ended years of conflict between popes and emperors, during which time the imperial rulers had tried to regain control of Italy and the papacy. Although the emperors continued to be crowned at Rome, they were excluded from Italian affairs. At the same time, Charles's Golden bull of 1356 ended papal interference in the Holy Roman Empire by eliminating the need for papal approval and confirmation of emperors. Although he had virtually renounced imperial pretensions in Italy through his treaty with Clement VI, Charles supported the plans of Urban V to return the papacy from Avignon to Rome. Charles's major concern was to strengthen his dynasty. Through skillful diplomacy he acquired Brandenburg (1373) and added to his territories in Silesia and Lusatia. He ensured the succession of his son WENCESLAUS by bribing the electors to name him German king (1376). To raise the money for the bribes, he imposed even higher taxes on the cities. This led to a revolt by a league of Swabian cities. Charles obtained peace (1378) by granting concessions. During Charles's reign Bohemia flourished. His imperial capital was at Prague, where he founded (1348) CHARLES UNIVERSITY (the oldest in Central Europe) and rebuilt the Cathedral of St. Vitus. By introducing new agricultural methods and by expanding industries, he fostered economic life. He drew up a code of laws, the *Majestas Carolina* (1350)—which, however, was rejected by the diet—and he protected the lower classes by giving them courts in which to sue their overlords. Through Charles's efforts as margrave of Moravia, Prague was elevated (1344) to an archbishopric, thus gaining ecclesiastic independence. By the Golden Bull, which strengthened the electors at the expense of the emperor, he confirmed Bohemia's internal autonomy. As Holy Roman emperor, his reputation rests mainly on the Golden Bull, which, although it confirmed the weakness of the imperial power, provided a stable constitutional foundation for its exercise. See biographies by G. G. Walsh (1924) and Bede Jarett (with a translation of Charles's autobiography, 1935).

Charles V, 1500–1558, Holy Roman emperor (1519–58) and, as Charles I, king of Spain (1516–56), son of PHILIP I and JOANNA of Castile, grandson of Ferdinand II of Aragon, Isabella of Castile, Holy Roman Emperor Maximilian I, and Mary of Burgundy. He inherited a vast empire. The Netherlands, Luxembourg, Artois, and Franche-Comté (or Free County of Burgundy) came to him on the death (1506) of his father Aragon, Navarre, Granada, Naples, Sicily, Sardinia, Spanish America, and joint kingship with his mother (who was insane) over Castile devolved upon him at the death (1516) of Ferdinand II. On the death (1519) of Maximilian I he inherited the Hapsburg lands in Austria. Born at Ghent, Charles was brought up in Flanders by his aunt, MARGARET OF AUSTRIA, who was regent for him in the Netherlands. She and his tutor, Adrian of Utrecht (later Pope ADRIAN VI), were the chief influences in his youth. Arriving in Spain in 1517, Charles was distrusted as a foreigner. His initial actions only heightened the resentment against him. He brusquely dismissed Cardinal Jimenez de Cisneros, who was regent of Castile after Ferdinand's death, appointed Flemish favorites to high office, and increased taxation to finance his imperial ambitions. After bribing the ELECTORS, he was chosen Holy Roman emperor in succession to his grandfather Maximilian I, and in 1520 he departed for Germany. Charles sought to become leader of a universal empire. His imperial

dreams were encouraged by M. A. di GATTINARA, whose influence replaced that of Charles's Flemish advisers.

Struggle for Empire. The chief problems Charles faced were the Protestant REFORMATION in Germany, the dynastic conflict with King FRANCIS I of France, particularly for supremacy in Italy, and the advance of the Ottoman Turks. Shortly after his election Charles began his lifelong struggle with France (see ITALIAN WARS), which required immense expenditures. In 1520 he signed the Treaty of Gravelines with King HENRY VIII of England, and in 1521 he invaded N Italy, then controlled by France. The fiscal onus for the war rested on Spain and provoked violent reaction, particularly in Castile, which resented Charles's high-handedness in obtaining funds from the Castilian Cortes. Toledo, Segovia, and other Castilian cities revolted in the brief war (1520–21) of the *comuneros*. Initially aimed at limiting the royal power, the uprising was later marked by violent class warfare. It was put down at the battle of Villalar, Juan de PADILLA and other leaders were executed. Charles later won the loyalty of his Spanish subjects. In Germany, at the fateful Diet of Worms (see WORMS, DIET OF) in 1521, Charles secured a satisfactory compromise regarding the REICHSREGIMENT but unyieldingly opposed the doctrines of Martin Luther. In his written opinion, Charles declared himself ready to stake his dominions, friends, blood, life, and soul on the extinction of heresy. Late in May, 1521, he signed the Edict of Worms, outlawing Luther and his followers. However, Charles's preoccupation with the war with France prevented him from checking the spread of Luther's doctrines. Also, Charles was not always supported by the popes, who were concerned with the threat to their temporal power and independence posed by imperial domination of Italy. After the French defeat at Pavia (1525) and the capture of Francis I, Charles seemed triumphant in Italy. Francis signed (1526) the humiliating Treaty of Madrid, by which he renounced his Italian claims and ceded Burgundy to Charles. On his release, however, Francis repudiated the treaty and organized the anti-imperial League of Cognac. The pope, Venice, Milan, and Florence joined the league. Charles sent an imperial army to Italy composed mostly of German Lutherans. Led first by Georg von FRUNDSBERG and then by Charles de BOURBON, the army defeated the league and then marched on Rome, where the force sacked (1527) the city and besieged Pope CLEMENT VII. Although the "German Fury" was disavowed by Charles, he profited from the outrage, extorting large sums of money from the pope. The Treaty of Cambrai (see CAMBRAI, TREATY OF) with France and the Peace of Barcelona with the pope (both 1529) confirmed Charles's position in Italy and secured his coronation as Holy Roman emperor at Bologna (1530). Charles was the last German emperor to be crowned by the pope. His brother Ferdinand, king of Bohemia and Hungary (later Holy Roman Emperor FERDINAND II), was elected king of the Romans, or German king, in 1531. Charles, who had awarded Ferdinand the Austrian duchies in 1521, delegated increasing authority to him in Germany, which was then torn by religious and social struggles. The rebellion (1522–23) of Franz von SICKINGEN was followed by the more serious PEASANTS' WAR (1524–26), and the Swabian League in 1531 made way for the Lutheran SCHMALKALDIC LEAGUE. The Reformation progressed, and the breach between Catholics and Protestants widened. Before dealing with the religious problem, Charles had to make peace abroad. Ottoman assaults in Austria and Hungary and along the Mediterranean coast posed a serious threat to the Hapsburg lands. In 1535, Charles launched a successful expedition against Tunis. In E Europe, Ferdinand attempted to hold back the Ottomans. In 1536, war broke out with Francis I over the succession to Milan. Intent on recouping in Italy, Francis allied himself with the Ottoman sultan, SULAYMAN I. Although a truce ended the fighting with Francis in 1538, the Ottomans continued their assaults on the Italian coast. A second expedition by Charles, this time to Algiers, was unsuccessful (1541). In 1542, Francis, again allied with Sulayman, renewed warfare. Charles joined (1543) with Henry VIII and in 1544 forced Francis to make peace at CRÉPY. A subsequent truce with the Ottomans, however humiliating, gave Charles and Ferdinand some respite. At last the way opened for the Catholic Reformation, ardently desired by Charles and forwarded by St. Ignatius of Loyola, when the Council of Trent (see TRENT, COUNCIL OF) convened in 1545. Turning on the Protestant princes of Germany, Charles split their ranks by winning over MAURICE of Saxony and others, attacked

the Schmalkaldic League in 1546, defeated (1547) JOHN FREDERICK of Saxony at Muhlberg, and imprisoned PHILIP OF HESSE. At the Diet of Augsburg (1547) he secured the incorporation of the Netherlands into the Hapsburg hereditary possessions and forced through the Augsburg Interim (1548), a compromise profession of doctrine that he then tried to impose on the Protestants with the help of Spanish troops. In 1552, Maurice of Saxony changed sides again, called in Henry II of France, Francis's successor, and even attempted to capture Charles at Innsbruck.

Withdrawal from Power. Balked in his efforts to recapture Metz, which had been seized by Henry II, and realizing the necessity of compromising with Protestantism, Charles preferred to empower Ferdinand to treat, and he left Germany, never to return. Ferdinand negotiated the religious Peace of Augsburg (see AUGSBURG PEACE OF), but war with France continued. It ended after Charles's death, with the Treaty of CATEAU-CAMBRESIS (1559), a triumph for Spain. In his remaining years Charles made a series of abdications that left the Hapsburg dominions divided between Austria and Spain. In 1554 he gave Naples and Milan to his son Philip, whom he married to Queen Mary I of England, in 1555 he turned over the Netherlands to Philip, and in 1556 he made him king of Spain and Sicily as Philip II. In 1556 also, he practically surrendered the empire to Ferdinand, and in 1558 he formally abdicated as emperor. Although he retired (1556) to the monastery of Yuste, he took an active interest in politics until his death. Two of his illegitimate children were Don JOHN OF AUSTRIA and MARGARET OF PARMA. During Charles's rule the Spanish Empire was tremendously expanded in the New World. In Italy, Spanish power had become paramount. Even England seemed about to fall to Spain through Philip's marriage, and Charles's own marriage with Isabella of Portugal brought the Portuguese crown to Philip in 1580. Yet Charles failed in his purpose to return the Protestants to the Roman Catholic Church, and the human and financial cost of constant warfare drained Spanish resources; moreover, Charles's hopes for a universal empire were thwarted by the political realities of Western Europe. His integrity, strength of will, and sense of duty were conspicuous. His appearance has been made familiar by two portraits by TITIAN. The classic works on Charles V are the biography by Karl Brandt (1937, tr. 1939, repr. 1968) and R. B. Merriman, *The Rise of the Spanish Empire in the Old World and the New*, Vol. III (1926, repr. 1972), see also biographies by Gertrude von Schwarzenfeld (tr. 1957) and Otto von Hapsburg (tr. 1970).

Charles VI, 1685–1740, Holy Roman emperor (1711–40), king of Bohemia (1711–40) and, as Charles III, king of Hungary (1712–40), brother and successor of Holy Roman Emperor Joseph I. Charles was the last Holy Roman emperor of the direct Hapsburg line. In 1700 he was designated successor in Spain to King Charles II, who was childless. On his deathbed, however, Charles II left his throne to Philip of Anjou (PHILIP V), grandson of King LOUIS XIV of France. Philip was proclaimed king in Nov., 1700. War broke out immediately against Louis XIV and Philip (see SPANISH SUCCESSION, WAR OF THE). Although Charles, with the aid of British troops, invaded Spain and proclaimed himself king as Charles III in 1704, he was able to maintain himself only in Catalonia, with his capital at Barcelona. When Charles's brother Joseph I died (1711), Charles succeeded him as Holy Roman emperor. His accession led to England's withdrawal from the war since the English did not wish to see the reunification of the empire of CHARLES V. A treaty (see UTRECHT, PEACE OF, 1713) was signed between France and Charles's former allies, Holland and England. Charles continued fighting. He finally concluded peace in 1714. By the terms of the peace Philip V remained king of Spain and Charles received most of the Spanish possessions in the Low Countries and in Italy. Philip's subsequent attempt to overthrow the settlement in Italy resulted (1718) in the formation of the QUADRUPE ALLIANCE against him. The war was ended by the Treaty of The Hague (1720), which repeated the terms of 1713–14, except that Charles obtained Sicily from Savoy in exchange for Sardinia. In E Europe, Charles continued to defend his lands against Turkish invasions (1716–18). In a campaign against the Turks the imperial commander EUGENE OF SAVOY obtained for Hungary the Banat and N Serbia. Charles was later forced to return these lands to the Ottoman Empire (Turkey) after several defeats in the Turkish war of 1736–39. Near the end of his reign in the War of the

POLISH SUCCESSION (1733–35) Charles was again involved in a conflict with France and Spain. By the Treaty of Vienna (1738) he was forced to give up Sicily and Naples to Spain, but received Parma and Piacenza. Since Charles had no male heirs, one of his chief concerns was to secure the succession to the Hapsburg lands for his daughter, MARIA THERESA. His last years were spent in an effort to win European approval of the PRAGMATIC SANCTION of 1713, which made Maria Theresa his heir. Although the Pragmatic Sanction was guaranteed by the Treaty of Vienna, the succession was contested on his death (see AUSTRIAN SUCCESSION, WAR OF THE). Charles was a patron of learning and the arts, particularly of music. A mercantilist, he encouraged commerce and industry.

Charles VII, 1697–1745, Holy Roman emperor (1742–45) and, as Charles Albert, elector of Bavaria (1726–45). Having married a daughter of Holy Roman Emperor Joseph I, he refused to recognize the PRAGMATIC SANCTION of 1713 by which Holy Roman Emperor Charles VI (his wife's uncle) reserved the succession to the Hapsburg lands for his daughter, MARIA THERESA. On Charles VI's death (1740) he advanced his own claim and joined with Frederick II (of Prussia), France, Spain, and Saxony to attack Maria Theresa (see AUSTRIAN SUCCESSION, WAR OF THE). In 1742 he was elected Holy Roman emperor, but Bavaria was overrun by Austrian troops. Shortly before his death he regained his territories. Francis I, husband of Maria Theresa, was elected emperor to succeed him.

Charles I, 1887–1922, last emperor of Austria and, as Charles IV, king of Hungary (1916–18), son of Archduke Otto and grandnephew and successor of Emperor Francis Joseph. He married ZITA of Bourbon-Parma. The death (1914) of his uncle, FRANCIS FERDINAND, made Charles heir to the throne. He showed skill as a commander in World War I. After his accession he put out peace feelers. His correspondence with his brother-in-law, Prince SIXTUS OF BOURBON-PARMA, justified French claims to Alsace-Lorraine. The Allies published (April, 1918) the correspondence, thus causing friction between Austria and Germany and diminishing Charles's popularity. Charles vainly tried to save the Austro-Hungarian monarchy by proclaiming (Oct. 16, 1918) an Austro-Italian federative state. Hungary and Czechoslovakia declared their independence, and on Nov. 3, Charles had to consent to unconditional surrender in the armistice concluded with General Armando Diaz. Charles abdicated as emperor of Austria on Nov. 11 and as king of Hungary on Nov. 13, early in 1919 he and his family went into exile in Switzerland. After the triumph of the monarchists in Hungary in 1920, he attempted unsuccessfully to regain the Hungarian throne in March, 1921, and again in October, when the regent, HORTHY, had him arrested. Charles was exiled to Madeira and there died of pneumonia. His son, Archduke Otto, inherited his claim to the throne. See biographies by Herbert Vivian (1932) and Gordon Shepherd (1968).

Charles I, 1600–1649, king of England, Scotland, and Ireland (1625–49), second son of James I and Anne of Denmark. He became heir to the throne on the death of his older brother Henry in 1612 and was made prince of Wales in 1616. The negotiations for his marriage to the Spanish infanta were unpopular in England, and Charles himself turned against Spain after his unhappy visit to Madrid (1623) in the company of George Villiers, 1st duke of BUCKINGHAM. Apart from these negotiations, he took little part in politics before he succeeded (Feb., 1625) his father as king. A shy and dignified figure, he was popular at that time, but he immediately offended his Protestant subjects by his marriage to the Catholic HENRIETTA MARIA, sister of Louis XIII of France. Charles's favorite, Buckingham, was unpopular, and the foreign ventures under Buckingham's guidance were unfortunate, particularly the unsuccessful expedition to Cadiz (1625) and the two disastrous attempts to relieve French Protestants in La Rochelle (1627 and 1628). Nor would Parliament willingly grant money to help Charles's sister, Elizabeth of Bohemia, and the Protestants in the Thirty Years War. The reign quickly resolved itself into the bitter struggle for supremacy between the king and Parliament that finally resulted in the ENGLISH CIVIL WAR.

The Struggle with Parliament Parliament had the whip hand in its control of money grants to the king and adopted the tactic of withholding grants until its grievances were redressed. The Parliament of 1625 refused money, demanded ministers it could trust, and was soon dissolved by Charles. That of 1626 was dissolved when it started impeachment

proceedings against Buckingham. Charles, to meet his needs for money, resorted to quartering troops upon the people and to a forced loan, which he attempted to collect by prosecutions and imprisonments. Forced to call Parliament again in 1628, he was compelled to agree to the PETITION OF RIGHT, in return for a badly needed subsidy. Charles prorogued Parliament when it declared that his continued collection of customs duties was a violation of the Petition. Although Buckingham was assassinated (1628), the parliamentary session of 1629 was bitter. It closed dramatically with a resolution condemning unauthorized taxation and attempts to change existing church practices. Charles then governed without Parliament for 11 years, which were marked by popular opposition to strict enforcement of the practices of the Established Church by Archbishop William LAUD and to the ingenious devices employed by the government to obtain funds. The royally controlled courts of high commission and Star Chamber waged a harsh campaign against nonconformists and recusants, and large emigrations to America, of both Puritans and Catholics, took place. The trial (1637–38) of John HAMPDEN for refusal to pay a tax of ship money, greatly increased public indignation. Meanwhile Charles's deputy in Ireland, Thomas Wentworth, earl of STRAFFORD, was carrying out a wide program of reforms through his oppressive policy of "Thorough."

The Supremacy of Parliament Conditions in England reached a crisis when Charles attempted (1637) to force episcopacy upon the Scots, an attempt that was violently opposed by the Scottish COVENANTERS and that resulted in the BISHOPS WARS. Unable to wage war effectively, Charles summoned (1640) the so-called Short Parliament, which demanded redress of grievances before granting funds and was dissolved. Another attempt to carry on the war without Parliament failed, and the famous Long Parliament was summoned (1640). Under the leadership of John PYM, John Hampden, and Sir Henry VANE (the younger), Parliament secured itself against dissolution without its own consent and brought about the death of Strafford, the abolition of the courts of high commission and Star Chamber, and the end of unparliamentary taxation. Charles professed to accept the revolutionary legislation, though he was known to hold strong views on the divine right of monarchy. Parliament's trust in the king was further undermined when his queen was implicated in the army plot to coerce Parliament, and Charles was, quite unjustly, suspected of complicity in the Irish massacre (1641) of Protestants in Ulster. In 1641, Parliament presented its Grand Remonstrance, calling for religious and administrative reforms and reciting in full its grievances against the king. Charles repudiated the charges, and his unsuccessful attempt to seize five opposition leaders of Commons in violation of traditional privilege was the fatal blunder that precipitated civil war.

Civil War and Defeat There were no decisive victories in the war until Charles was defeated at Marston Moor (1644) and Naseby (1645). In 1646 he gave himself up to the Scottish army, which delivered him to Parliament. He was ultimately taken over by the English army leaders, who were now highly suspicious of Parliament. He escaped (Nov., 1647) to Cairnbrooke, on the Isle of Wight, where he concluded an alliance with the discontented Scots, which led to the second civil war (1648) and another royalist defeat. Parliament, now reduced in number by Pride's Purge (see under PRIDE, THOMAS) and controlled by Charles's most powerful enemies, established a special high court of justice (see REGICIDES), which tried Charles and convicted him of treason for levying war against Parliament. He was beheaded on Jan. 30, 1649. To the royalists he became the martyred king who wrote the Eikon Basilike. By his opponents he was considered a double-dealing tyrant. He was in some ways a stupid and obstinate man, unable to understand, much less control, the intense religious passions and rapid political development of his age. He listened to the foolish advice first of Buckingham and then of his wife but never gave his full trust to his ablest servants, Laud and Wentworth, and he indulged in dangerous halfway measures that undermined confidence in him. His downfall was as much due to the weakness of his character as to his sincere religious and political beliefs. See biographies by E. J. Simpson (1952) and Christopher Hibbert (1968), H. Ross Williamson, *Charles and Cromwell* (1946), Godfrey Davies, *The Early Stuarts, 1603–1660* (2d ed. 1959), Christopher Hill, *The Century of Revolution, 1603–1714* (1961), C. V. Wedgwood, *The Great Rebellion: The King's Peace, 1637–1641* (1955) and *A Coffin for King Charles* (1964).

Charles II, 1630–85, king of England, Scotland, and Ireland (1660–85), eldest surviving son of CHARLES I and Henrietta Maria. Prince of Wales at the time of the English civil war, Charles was sent (1645) to the W of England with his council, which included Edward Hyde (later 1st earl of CLARENDON) and Thomas Wriothsley, 4th earl of SOUTHAMPTON. In 1646, Charles was forced to escape to France, where he stayed with his mother and was tutored by the philosopher Thomas Hobbes. In 1649, Charles vainly attempted to save his father's life by presenting to Parliament a signed blank sheet of paper, thereby granting whatever terms might be requested. After his father's execution (1649), Charles was proclaimed king in Scotland and in parts of Ireland and England. He accepted the terms of the Scottish COVENANTERS and went (1650) to Scotland, where he was crowned (1651), after agreeing to enforce Presbyterianism in England as well as Scotland. In 1651 he marched into England but was defeated by Oliver Cromwell at the battle of Worcester. Charles then escaped to France, where he lived in relative poverty. The Anglo-French negotiations of 1654 forced Charles into Germany, but he moved to the Spanish Netherlands after he had concluded (1656) a treaty with Spain. In 1660 Gen. George MONCK engineered Charles's RESTORATION to the throne, and the king returned to England. Charles had promised a general amnesty in his conciliatory Declaration of Breda, and he and Clarendon, who became first minister, acted immediately to secure passage of the Act of Indemnity, pardoning all except the REGICIDES. Charles also favored religious toleration (largely because of his own leanings toward Roman Catholicism), but the strongly Anglican Cavalier Parliament, which first convened in 1661, passed the series of statutes known as the CLARENDON CODE, which was designed to strike at religious nonconformity. The king attempted unsuccessfully to suspend these statutes by the declaration of indulgence of 1662, which he was forced (1663) to withdraw. Charles's government endorsed the foreign policy of the Commonwealth with its NAVIGATION ACTS, which contributed to the outbreak (1664) of the second of the DUTCH WARS. While the war was being waged, London suffered the great plague of 1665 and the fire of 1666. Clarendon fell from power in 1667, the year the war ended, to be replaced by the CABAL ministry. Charles then took England into the Triple Alliance (1668) with Holland and Sweden, but he simultaneously sought the support of Louis XIV of France, with whom he negotiated the secret Treaty of Dover (1670). By this treaty, designed to free the king from dependence on Parliament, Charles was to adopt Roman Catholicism, convert his subjects, and wage war against the Dutch, for which Louis was to advance him a large subsidy and 6,000 men. In 1672 the third Dutch War began. Many suspected it to be a cloak for the introduction of arbitrary government and Roman Catholicism. Charles was forced to rescind (1672) his second declaration of indulgence toward dissenters, to approve (1673) the TEST ACT, and to sign (1674) a peace with the Dutch. Thomas Osborne, earl of DANBY, became chief minister on the disintegration of the Cabal and inaugurated a foreign policy friendly to Holland. Charles, unable to secure money from an increasingly hostile Parliament, signed a series of secret agreements with Louis XIV, by which he received large French subsidies in return for a pro-French policy, although he feigned sympathy with the anti-French movement at home. His alliance with Louis, however, was broken (1677) by the marriage of his niece Mary to his nephew (and Louis's archenemy) William of Orange (later William III). Anti-Catholic feeling in England exploded (1678) in the affair of the Popish Plot (see OATES, TITUS), in which Charles did not intervene until his wife, CATHERINE OF BRAGANZA, was accused. However, the affair was made use of by the 1st earl of SHAFTESBURY, who led a movement to exclude Charles's brother, the Catholic duke of York (later JAMES II), from succession to the throne, promoting instead the claim of Charles's illegitimate son the duke of MONMOUTH. In 1681 the king dissolved Parliament to block passage of Shaftesbury's Exclusion Act, and thenceforth Charles ruled as an absolute monarch, without a Parliament. His personal popularity increased after the exclusion crisis and particularly after the unsuccessful RYEHOUSE PLOT. He took steps to root out the supporters of exclusion (now known as the Whigs) from positions of power, coercing municipal governments into obedience by the threat that he would rescind the city charters. Charles died a Roman Catholic and was succeeded by his brother James. He had no legitimate offspring.

but many children by his various mistresses, who included Lucy WALTER, Barbara Villiers (duchess of CLEVELAND), Louise Keroualle (duchess of PORTSMOUTH), and Nell GWYN. Charles was a ruler of considerable political skill. His reign was marked by a gradual increase in the power of Parliament, which he learned to circumvent rather than manipulate. The period also saw the rise of the great political parties, WHIG and TORY, the advance of colonization and trade in India, America, and the East Indies, and the great progress of England as a sea power. The pleasure-loving character of the king set the tone of the brilliant Restoration period in art and literature. See contemporaneous accounts by Gilbert Burnet, John Evelyn, and Samuel Pepys, letters ed. by Arthur Bryant (rev. ed. 1955) and Hesketh Pearson (1960), G. N. Clark, *The Later Stuarts* (2d ed. 1956), David Ogg, *England in the Reign of Charles II* (2 vol., 2d ed. 1962), studies by D. T. Witcombe (1966), M. P. Ashley (1971), and Christopher Falkus (1972).

Charles I, Frankish king. See CHARLEMAGNE.

Charles II, French king. See CHARLES II, emperor of the West.

Charles III or **Charles the Fat**, French king. See CHARLES III, emperor of the West.

Charles III (Charles the Simple), 879-929, French king (893-923), son of King Louis II (Louis the Stammerer). As a child he was excluded from the succession at the death (884) of his half brother Carloman and at the deposition (887) of King CHARLES III (Charles the Fat), who succeeded Carloman. Instead, Eudes, count of Paris, succeeded Charles the Fat. In 893, however, Charles was crowned by a party of nobles and prelates and became sole king at the death of Eudes in 898. He put an end to Norse raids by the Treaty of Saint-Clair-sur-Epte (911), ceding to the Norse leader Rollo part of the territory later known as Normandy, and in 911 Charles acquired Lorraine. In 922 some of the barons revolted and crowned Robert I, brother of Eudes, king. In 923, at the battle of Soissons, Robert was killed, but Charles was defeated. RAOUL of Burgundy was elected king, and Charles was imprisoned.

Charles IV (Charles the Fair), 1294-1328, king of France (1322-28), youngest son of Philip IV, brother and successor of Philip V. Charles continued his brother's work of strengthening the royal power. He also increased the royal revenues, notably by debasing the coinage. Pope John XXII, having declared Holy Roman Emperor Louis IV deposed, offered (1324) to support Charles for emperor, but the plan came to nothing. Charles invaded (1324) Guienne (Aquitaine), a possession of the English king, and in 1327 he compelled England to cede to France the Guienne districts around Agen and Bazas and to pay a large indemnity. The English, however, retained the rest of Guienne. Charles, the last king of the Capetian dynasty, was succeeded by Philip VI, of the Valois line.

Charles V (Charles the Wise), 1338-80, king of France (1364-80). Son of King JOHN II, Charles became the first French heir apparent to bear the title of dauphin after the addition of the region of Dauphine to the royal domain in 1349. Regent during his father's captivity in England (1356-60, 1364), Charles dealt successfully with the JACQUERIE revolt, with the intrigues of King CHARLES II of Navarre, and with the popular movement headed by Etienne MARCEL, who had armed Paris against the dauphin. Becoming king in 1364, Charles stabilized the coinage and took steps to rid France of the companies of *eorcheurs*, marauding bands of discharged soldiers. Aided by his great general, Bertrand DU GUESCLIN, he almost succeeded in driving the English from France. Charles and his ministers, the MARMOUSETS, strengthened the royal authority, introduced a standing army, built a powerful navy, and instituted reforms that put fiscal authority more firmly in the hands of the crown. A patron of the arts and of learning, he established the royal library and interested himself in the embellishment of the Louvre and in the construction of the palace at Saint-Pol. However, his love of pomp and his lack of economy put a severe economic burden on the country. In the last year of his life he sided with Pope Clement VII against Pope Urban VI at the beginning of the Great Schism (see SCHISM GREAT). His son, Charles VI, succeeded him.

Charles VI (Charles the Mad or Charles the Well Beloved), 1368-1422, king of France (1380-1422), son and successor of King Charles V. During his minority he was under the tutelage of his uncles (particularly PHILIP THE BOLD, duke of Burgundy), whose policies drained the royal treasury and provoked popular uprisings in France and in Flanders. Charles

freed himself of this influence in 1388, took as his counselor his brother Louis, duc d'ORLÉANS, and recalled his father's ministers, the MARMOUSETS. After 1392, Charles suffered from recurrent insanity and was not active in the government. Philip of Burgundy returned to power. His rule was challenged by Louis d'Orléans and the conflict eventually resulted in war between Philip's successor, JOHN THE FEARLESS, and supporters of the Orleanists, known as Armagnacs (see ARMAGNACS AND BURGUNDIANS). The struggle was complicated by the invasion of France by King Henry V of England. In 1420, under the influence of the Burgundians, who were allied with Henry V and his wife ISABEL OF BAVARIA, Charles accepted the Treaty of TROYES, recognizing Henry V as his successor.

Charles VII (Charles the Well Served), 1403-61, king of France (1422-61), son and successor of Charles VI. His reign saw the end of the HUNDRED YEARS WAR. Although excluded from the throne by the Treaty of TROYES, Charles took the royal title after his father's death (1422) and ruled S of the Loire, while John of Lancaster, duke of BEDFORD, who was regent for King Henry VI of England, controlled the north and Guienne (Aquitaine). Vacillating and easily influenced by corrupt favorites, particularly Georges de LA TRÉMOILLE, Charles waged only perfunctory warfare against the English. He was prodded into action by the siege of Orleans (1429) in which JOAN OF ARC helped save the city from the English. After the capture of Orleans, Charles was crowned (1429) at Rheims. He reverted to his earlier inactivity until 1433, when La Tremoille was replaced by more scrupulous and energetic advisers, such as the comte de Richemont (later ARTHUR III, duke of Brittany) and the comte de DUNOIS. In 1435, Charles agreed to the Treaty of ARRAS, which reconciled him with the powerful duke, PHILIP THE GOOD of Burgundy, who had been an ally of the English. He recovered Paris the following year. In 1440, Charles suppressed the PRAGUERIE, and in 1444 a truce was signed with England, which lasted until 1449. By the battle of Formigny and the capture of Cherbourg (1450) the English were expelled from Normandy, and the battle of Castillon (1453) resulted in their withdrawal from Guienne. Charles, although dominated by his mistress, Agnes SOREL, proved an able administrator. He reorganized the army and remodeled French finances, established heavy taxation, particularly through the *taille*, a direct land tax. In 1438, Charles issued the PRAGMATIC SANCTION of Bourges, which established the liberty of the French Roman Catholic Church from Rome. In his reign commerce was expanded by the enterprise of Jacques CŒUR. The end of Charles's rule was disturbed by the intrigues of the dauphin, who succeeded him as LOUIS XI.

Charles VIII, 1470-98, king of France (1483-98), son and successor of Louis XI. He first reigned under the regency of his sister ANNE DE BEAUJEU. After his marriage (1491) to ANNE OF BRITTANY, he freed himself from the influence of the regency and prepared to conquer the kingdom of NAPLES, to which his father had acquired a claim through Charles, duke of Maine, from RENÉ of Naples. Urged by Ludovico SFORZA, he invaded (1494) Italy, after a triumphal march through Pavia, Florence, and Rome, he took (Feb., 1495) Naples. A league against him, formed by Milan, Venice, Spain, Holy Roman Emperor Maximilian I, and Pope Alexander VI, forced his hasty retreat, in which he distinguished himself against odds at the battle of Fornovo (July, 1495). His remaining troops in Naples were defeated, and at the time of his death he was forming new plans of conquest. He left no male heir and was succeeded by his cousin Louis XII. The conflict of France and Spain in Italy marked the beginning of the ITALIAN WARS. Charles's expedition fostered the introduction of the Italian Renaissance in France. The history of his reign was recorded by his contemporary, Philippe de COMINES. See J. S. C. Bridge, *A History of France from the Death of Louis XI*, Vol. I-II (1922-24).

Charles IX, 1550-74, king of France. He succeeded (1560) his brother FRANCIS II under the regency of his mother, CATHERINE DE MEDICI. She retained her influence throughout his reign. After 1570, however, Charles was temporarily under the sway of the French Huguenot leader Gaspard de COLIGNY. Catherine, fearing for her power, persuaded her weak son to approve the massacre of SAINT BARTHOLOMEW'S DAY in which Coligny and thousands of other Huguenots were murdered. Charles IX was succeeded by his brother Henry III.

Charles X, 1757-1836, king of France (1824-30), brother of King Louis XVI and of King Louis XVIII, whom he succeeded. As comte d'Artois he headed

the reactionary faction at the court of Louis XVI. He left France (July, 1789) at the outbreak of the French Revolution and became a leading spirit of the ÉMIGRÉ party. After his failure to aid the VENDÉE insurrection, he stayed in England until the Bourbon restoration (1814). During the reign of LOUIS XVIII he headed the ultraroyalist opposition, which triumphed after the assassination (1820) of Charles's son the duc de BERRY. The event caused the fall of the ministry of Élie DECAZES and the advent of the comte de VILLELE, who continued as chief minister after Charles's accession. Among the many attempts of Charles and Villele to reestablish the ancien régime, as the prerevolutionary order is called, the law (1825) indemnifying the émigrés for lands confiscated during the Revolution and measures increasing the power of the clergy met with particular disapproval. The bourgeoisie and the liberal press joined in attacking the Villele cabinet, which resigned in 1827. Villele's successor, the vicomte de MARTIGNAC, vainly tried to steer a middle course, and in 1829 Charles appointed an uncompromising reactionary, Jules Armand de POLIGNAC, as chief minister. To divert attention from internal affairs, Polignac initiated the French venture in ALGERIA. However, his dissolution (March, 1830) of the liberal chamber of deputies and his drastic July Ordinances, establishing rigid control of the press, dissolving the newly elected chamber, and restricting suffrage, resulted in the JULY REVOLUTION. Charles abdicated in favor of his grandson, the comte de CHAMBORD, and embarked for England. However, the duc d'Orléans, whom Charles had appointed lieutenant general of France, was chosen "king of the French" as LOUIS PHILIPPE. See studies by V. W. Beach (1967 and 1971).

Charles I, 1288-1342, king of Hungary (1308-42), founder of the ANGEVIN dynasty in Hungary, grandson of Charles II of Naples, who had married a daughter of Stephen V of Hungary. On the death (1301) of Andrew III, last of the Arpad dynasty, Charles was the candidate of Pope Boniface VIII for the crown of St. Stephen, but the Hungarians elected WENCESLAUS III of Bohemia, in 1308 the Hungarian diet at last chose Charles, who was crowned in 1310. He reorganized the army on a feudal basis, using the nobility for its personnel, and taxed the bourgeoisie. Silver and gold mines became state monopolies, and in 1338 gold became the accepted currency. He encouraged trade and increased the privileges of the cities. He married his second son to Joanna I of Naples and took as his second wife Elizabeth, daughter of King Ladislaus I of Poland. In 1339 he secured the succession to Casimir III of Poland for his eldest son, later Louis I of Hungary.

Charles II, king of Hungary. See CHARLES III, king of Naples.

Charles III, king of Hungary. See CHARLES VI, Holy Roman emperor.

Charles IV, king of Hungary. See CHARLES I, emperor of Austria.

Charles I (Charles of Anjou), 1227-85, king of Naples and Sicily (1266-85), count of Anjou and Provence, youngest brother of King Louis IX of France. He took part in Louis's crusades to Egypt (1248) and Tunisia (1270). After obtaining Provence by marriage (1246), he extended his influence into Piedmont. He became senator of Rome (1263, 1265-78) and undertook to champion the papal cause against MANFRED in the kingdom of Naples and Sicily. In reward, he was crowned king (1266) by Pope Clement IV. Charles defeated (1266) Manfred at Benevento and defeated and executed CONRADIN in 1268. As leader of the Guelphs, or papal faction, he gained political hegemony in Italy and won suzerainty over several cities in Tuscany, Piedmont, and Lombardy, but his overbearing policies led to a cooling of his relations with the papacy. Planning to establish his own empire, he allied himself with the deposed Byzantine emperor, BALDWIN II, against MICHAEL VIII and fought for years in the Balkans. Corfu, Epirus, and Albania were taken, but the crushing taxes necessitated by his wars and his appointment of oppressive French officials to exact them led to the SICILIAN VESPERS (1282). The ensuing war against the Sicilian rebels and PETER III of Aragon, chosen by the rebels as king of Sicily, continued under Charles's son and successor, Charles II. Charles I was the founder of the first ANGEVIN dynasty in Naples.

Charles II (Charles the Lame), 1248-1309, king of Naples (1285-1309), count of Anjou and Provence, son and successor of CHARLES I. In the war of the SICILIAN VESPERS between CHARLES I and Peter III of Aragon for possession of Sicily, Charles was captured (1284) in a naval battle by the Aragonese. His father died while he was in captivity and Charles

succeeded to the Neapolitan throne, although he was not crowned until 1289, following his release. The war in Sicily against James (JAMES II of Aragon), son and successor of Peter III, continued until James's renunciation of Sicily and recognition of Charles II as king in 1295. The Sicilians, however, refused to accept the reestablishment of French rule and set up James's brother, FREDERICK II, as king, war was resumed. Finally, in 1302, after the failure of a French expedition to Sicily sponsored by Pope Boniface VIII, the Peace of Caltabellotta was signed, Charles II and Pope Boniface VIII agreed that Frederick II would remain king, but Sicily was to go to Charles or his heir on Frederick's death.

Charles III (Charles of Durazzo), 1345-86, king of Naples (1381-86) and, as Charles II, of Hungary (1385-86), great-grandson of Charles II of Naples. Adopted as a child by JOANNA I of Naples, he later lived at the court of Louis I of Hungary. In 1380, Pope Urban VI summoned Charles to dethrone Joanna because of her support of the antipope, Clement IV. Joanna repudiated Charles as her heir in favor of Louis of Anjou (see LOUIS I, king of Naples). Charles conquered Naples, imprisoned Joanna, and was crowned (1381) by the pope. Joanna died by his order. Charles repulsed attacks on Naples by Louis of Anjou. In 1385, elected king of Hungary over SIGISMUND, Charles was crowned but was soon assassinated. He was succeeded in Naples by his son, Lancelot, and in Hungary by Sigismund.

Charles II (Charles the Bad), 1332-87, king of Navarre (1349-87), count of Évreux, grandson of King Louis X of France. He carried on a long feud with his father-in-law, John II, king of France, procuring the assassination (1354) of John's favorite, Charles de la Cerda, and forming an alliance with King Edward III of England. In 1356 Charles was treacherously seized by John and imprisoned, but he was rescued after the capture of John at Poitiers. He helped to suppress (1358) the JACQUERIE revolt and was chosen by Étienne MARCEL to defend Paris against the dauphin (later King Charles V), but he betrayed this trust. Until his death he was involved in quarrels with Charles V and with Castile and in intrigues with England.

Charles III (Charles the Good), 1361-1425, king of Navarre (1387-1425), count of Évreux, son and successor of Charles II. He settled (1404) his inherited differences with France and later tried to negotiate between the Armagnacs and Burgundians. His reign was peaceful and beneficent. His daughter Blanche and her husband, John (later John II of Aragon), succeeded him.

Charles I, 1863-1908, king of Portugal (1889-1908), son and successor of Louis I. A cultured man, learned in language and oceanography, Charles had little opportunity to display his administrative talents in a reign beset by political stagnation and financial troubles. Portuguese and British ambitions clashed over Africa, and in 1890, Great Britain issued an ultimatum demanding that the Portuguese cease attempts to expand their African empire. The Portuguese complied, but the issue raised strong feeling against Charles's rule. Financial affairs grew worse, and Germany sought to obtain part of the Portuguese African empire. After a revolt in 1906, Charles empowered João Franco, head of the Regenerator (conservative) party, to establish a dictatorial government. This provoked another revolt in 1908, in the course of which Charles and his eldest son were assassinated in a public square in Lisbon. Charles's second son, MANUEL II, succeeded to the throne.

Charles I and Charles II, kings of Rumania. see CAROL I and CAROL II.

Charles I, king of Spain. see CHARLES V, Holy Roman emperor.

Charles II, 1661-1700, king of Spain, Naples, and Sicily (1665-1700), son and successor of Philip IV. The last of the Spanish Hapsburgs, he was physically crippled and mentally retarded. His mother, Mariana of Austria, was regent for him and continued to rule after his majority. Her bias in favor of Austria aroused opposition, and she was forced into exile (1677) by Charles's illegitimate brother, JOHN OF AUSTRIA. After John's death (1679) she again exercised power. Charles's reign saw the continued loss of Spanish foreign power, as was evident in the War of Devolution and the War of the Grand Alliance, and a severe decline in Spain's economy, society, and intellectual life. The indolent grandees and the clergy regained a political role. Tax exemptions for privileged groups brought high taxes on industry and agriculture, and emigration increased. Before his death the childless Charles named Philip of Anjou as his heir. Philip's succession (as Philip V) provoked the War of the SPANISH SUCCESSION.

Charles III, 1716-88, king of Spain (1759-88) and of Naples and Sicily (1735-59), son of Philip V and ELIZABETH FARNESSE. Recognized as duke of Parma and Piacenza in 1731, he relinquished the duchies to Austria after conquering (1734) Naples and Sicily in the War of the POLISH SUCCESSION. His reign in Naples was beneficent. In 1759 he succeeded his half brother, Ferdinand VI, to the Spanish throne, Naples and Sicily passing to his third son, Ferdinand (later Ferdinand I of the Two Sicilies). Charles at first was neutral in the SEVEN YEARS WAR, but after concluding the FAMILY COMPACT of 1761 with France, he involved Spain in the war in time to share France's defeat. By the Treaty of Paris of 1763 he ceded Florida to England but received Louisiana from France. Territorial disputes with Portugal in the Rio de la Plata region were settled by the Treaty of San Ildefonso (1777). In the American Revolution, Charles entered (1779) the war on the American side and by the Treaty of Paris of 1783 regained Florida and Minorca. Spain prospered under the rule of Charles, who is regarded as the greatest Bourbon king of Spain and one of the "enlightened despots." His reign is noted for economic and administrative reforms and for the expulsion of the Jesuits (1767). Charles was ably assisted by ARANDA, FLORIDABLANCA, Campomanes, and Jovellanos. He was succeeded by his son Charles IV. See biography by C. A. Petrie (1971).

Charles IV, 1748-1819, king of Spain (1788-1808), second son of Charles III, whom he succeeded in place of his imbecile older brother. Unlike his father, Charles IV was an ineffective ruler and in 1792 virtually surrendered the government to GODÓY, his chief minister and the lover of his wife, Maria Luisa. Spain entered the French Revolutionary Wars in 1793, but in 1795 made peace with France in the second Treaty of Basel. By the Treaty of San Ildefonso (1796) Spain allied itself with France and became involved in the war with England. It suffered major naval defeats at Cape St. Vincent (1797) and Trafalgar (1805). The convention of Fontainebleau (1807) precipitated the events leading to the PENINSULAR WAR. As French troops marched on Madrid in March, 1808, a popular uprising led to a coup d'état at Aranjuez, the king was forced to abdicate in favor of his son, FERDINAND VII. Napoleon I tricked both father and son into a meeting with him at Bayonne, France, and forced them to abdicate in turn. The royal family was held captive in France until 1814, while Joseph Bonaparte was king of Spain. Charles IV and his family have been frankly portrayed by Goya, who enjoyed their favor.

Charles IX, 1550-1611, king of Sweden (1604-11), youngest son of Gustavus I. He was duke of Södermanland, Närke, and Värmland before his accession. During the reign of his brother, John III (1568-92), he opposed John's leanings toward Catholicism. After John's death he acted as regent, summoned (1593) an assembly of clergy and nobles to Uppsala, and had it establish Lutheranism as the state religion. This measure was passed in anticipation of the arrival (1594) of John III's Catholic son and heir, King SIGISMUND III of Poland, who was obliged to pledge himself to uphold Protestantism in Sweden as a condition for his coronation. Sigismund left Sweden in the same year, and Charles summoned the Riksdag, was made regent against the king's wishes, and ousted all Catholic officials. The Swedish nobles were loyal to Sigismund, but the people supported Charles. Sigismund landed an army at Kalmar (1598), was defeated by Charles at Stangebro, and was deposed by the Riksdag in 1599. To consolidate his power Charles had most of his opponents executed, but he refused to accept the Swedish crown until Sigismund's brother, John, renounced it in 1604. In 1600 he invaded Livonia and thus began the long Polish-Swedish wars that ended only with the Peace of OLIVA in 1660. Charles's claim to Lapland involved him in the unsuccessful Kalmar War (1611-13) with CHRISTIAN IV of Denmark. He died before the conclusion of the war and was succeeded by his son, Gustavus II.

Charles X, 1622-60, king of Sweden (1654-60), nephew of Gustavus II. The son of John Casimir, count palatine of Zweibrücken, he brought the house of Wittelsbach to the Swedish throne when his cousin, Queen CHRISTINA, abdicated in his favor. Before his accession, Charles had gained both military and diplomatic experience, fighting under TORSTENSSON in the Thirty Years War and serving under Chancellor OXENSTIERNA. As king Charles remedied Christina's loss of crown lands by securing their restitution at the Riksdag of 1655. He reopened hostilities with Poland and took Warsaw and Kraków

in 1655, but Polish resistance became formidable after the heroic and successful defense of CZĘSTOCHOWA. Charles's position deteriorated quickly. Czar Alexis of Russia invaded Livonia, FREDERICK III of Denmark declared war (1657) on Sweden, and Frederick William of Brandenburg deserted his alliance with Sweden. Charles hastened to Denmark, crossed the frozen sea to threaten Copenhagen, and forced the Danes to make peace. By the Treaty of Roskilde (1658) Sweden's southern boundary was extended to the sea, Denmark ceded to Sweden the provinces of Skåne, Halland, Blekinge, and Bohuslän and also Bornholm and part of Norway. Denmark's refusal to renounce an alliance with the Netherlands caused Charles to resume the war in 1658. England, the Netherlands, and France intervened in favor of Denmark. Charles, after concluding a truce with Russia (1658), began to negotiate for a general peace. He died suddenly before the negotiations were ended and was succeeded by his son, Charles XI. His wars were settled to the advantage of Sweden. By the Treaty of Copenhagen (1660) Sweden regained its four southern provinces from Denmark and by the Treaty of Kardis (1661) with Russia the two countries returned to the *prewar status quo* (FOR the settlement with Poland, see OLIVA, PEACE OF). During Charles's reign Sweden lost NEW SWEDEN in America to the Dutch.

Charles XI, 1655-97, king of Sweden (1660-97), son and successor of Charles X. Charles ascended the throne at the age of five, so a council of regency ruled until 1672. The regency ended Swedish wars with favorable peace treaties (see CHARLES X), but mismanaged internal affairs. On reaching his majority Charles obtained from the Riksdag the restitution of the crown lands that had been given away. Sweden was involved in the third of the DUTCH WARS as an ally of Louis XIV. Charles was defeated (1675) at Fehrbellin by FREDERICK WILLIAM of Brandenburg, who overran Swedish Pomerania, known also as Hither Pomerania. Against Denmark Charles was more successful, particularly at Landskrona (1677). At the Treaty of Saint-Germain (1679) with Brandenburg, Charles, through the influence of Louis XIV, regained Hither Pomerania. The Peace of Lund (1679) with Denmark drew the Scandinavian nations closer together, and in 1680, Charles married Princess Ulrika of Denmark. In Sweden Charles set about increasing the royal power at the expense of the nobles. The Riksdag of 1682 gave him absolute power, which he used efficiently. His son succeeded him as Charles XII.

Charles XII, 1682-1718, king of Sweden (1697-1718), son and successor of Charles XI. The regency under which he succeeded was abolished in 1697 at the request of the Riksdag. At the coronation he omitted the usual oath and crowned himself. Charles's youth and inexperience invited the coalition (1699) of PETER I of Russia, AUGUSTUS II of Poland and Saxony, and FREDERICK IV of Denmark that challenged Swedish supremacy in the Baltics. The resulting NORTHERN WAR quickly revealed Charles's abilities. In one of the most brilliant campaigns in history, Charles forced Denmark to make peace (Aug., 1700), defeated Peter I at Narva (Nov., 1700), subjugated Courland (1701), invaded Poland and, declaring Augustus II dethroned, secured the election (1704) of STANISLAUS I as king of Poland. In 1706 he invaded Saxony and forced Augustus to recognize Stanislaus as king, end his alliance with Russia, and surrender his adviser, PATKUL, whom Charles then had broken on the wheel. Charles then concentrated on his chief enemy, Peter I. He secured the alliance of the Cossack leader MAZIPEA and invaded Russia in 1708. The Swedish army was outnumbered, weakened by long marches and a cold winter, and without the active leadership of Charles, who was wounded, it suffered a disastrous defeat by the Russians at Poltava. Much of the army was captured, and Charles fled to Turkey, where he persuaded Sultan AHMAD III to declare war (1710) on Russia. After the Peace of the Pruth (1711) between Russia and Turkey, Charles, who had taken residence near Bender in Bessarabia, became an increasingly unwelcome guest. He was requested to leave Turkey but obstinately refused. A whole Turkish army was sent (1713) to dislodge him from his house, Charles defended it with a handful of men for several hours until he was forced by fire to make a sortie. Taken prisoner and detained near Adrianople, he feigned sickness for over a year. Late in 1714 he unexpectedly arrived at Swedish-occupied Stralsund and defended it against the Prussians and the Danes until Dec., 1715. When it fell he escaped to Sweden and proceeded to invade (1716) Norway. He was killed

in the Swedish trenches while besieging the fortress of Fredrikssten. He was succeeded by his sister, Ulrica Leonora, who was forced to recognize a new constitution that gave most of the power to the nobles and clergy. During her reign the Northern War ended (1721) with substantial Swedish losses. Charles's amazing military ability, his grandiose ambitions, and his perseverance through the greatest hardships have made him one of the heroes of modern times. His final failure cost Sweden its rank as a great power. The classic biography is Voltaire's *History of Charles XII*. See also biographies by R. N. Bain (1895, repr. 1969), J. A. Gade (1916), F. G. Bengtsson (tr. 1960), and R. M. Hutton (1968).

Charles XIII, 1748–1818, king of Sweden (1809–18) and Norway (1814–18). He became regent for his nephew, GUSTAVUS IV, after the assassination (1792) of his brother Gustavus III. He introduced some liberal policies, but these were abandoned at the end of his regency (1796). Called to the throne at the forced abdication (1809) of his nephew, Charles accepted a new constitution that limited the monarch's power, and he signed treaties with Denmark and France and a treaty ceding Finland to Russia. In 1810 he adopted the French marshal Bernadotte (later King Charles XIV) as his heir, and thereafter left all affairs in his hands.

Charles XIV (Charles John, Jear Baptiste Jules Bernadotte) (zhaN baptēs't' zhul bērnadōt'), 1763–1844, king of Sweden and Norway (1818–44), French Revolutionary general. Bernadotte rose from the ranks, served brilliantly under Napoleon Bonaparte in the Italian campaign (1796–97), was French ambassador at Vienna (1798), and was minister of war (1799). He had a prominent part in the victory of Austerlitz in 1805. Napoleon made him marshal of the empire (1804) and prince of Ponte Corvo (1806). However, his relations with the emperor were cool. While commanding in N. Germany he negotiated with the Swedes, who were impressed by his generous conduct. In 1809, GUSTAVUS IV of Sweden abdicated and was succeeded by his aged and childless uncle, Charles XIII. In need of both a suitable successor to Charles and an alliance with Napoleon, Sweden turned to Bernadotte. After receiving the support of Napoleon and joining the Lutheran Church the marshal accepted. He was elected crown prince by the Riksdag and adopted (1810) by Charles XIII as Charles John. The infirmity of the old king and the dissensions in the council of state put the reins of government in the hands of the crown prince. He favored the acquisition of Norway from Denmark rather than the reconquest of Finland from Russia, and thus he threw in his lot with Russia and England against Napoleon and Denmark. His Swedish contingent played an important part in the defeat of Napoleon at the battle of Leipzig (1813), and in 1814, having marched his army into Denmark, he forced the Danes to cede Norway in the Treaty of Kiel. Norway, which had declared its independence, was subdued, and by a majority vote of the Norwegian Storting (1814) the country was united with Sweden under a single king. The Congress of Vienna confirmed the union but restored the town of Ponte Corvo to the pope. He succeeded to the throne in 1818 as Charles XIV. He maintained peace throughout his reign, which was marked by internal improvements, notably the completion of the Gota Canal and a reform of the school system. However, his increasing opposition to the liberals made him unpopular by the end of his reign. The founder of the present Swedish dynasty, he was succeeded by his son, Oscar I. See D. P. Barton, *Bernadotte: The First Phase* (1914), *Bernadotte and Napoleon* (1920), and *Bernadotte, Prince and King* (1925), F. D. Scott, *Bernadotte and the Fall of Napoleon* (1935).

Charles XV, 1826–72, king of Sweden and Norway (1859–72), son and successor of Oscar I. A liberal and popular ruler, he consented to many reforms, including the creation of a bicameral parliament. He was succeeded by his brother, Oscar II.

Charles XVI Gustavus (Carl Gustaf), 1946–, king of Sweden (1973–), grandson and successor of Gustavus VI, son of Prince Gustaf Adolf of Sweden and Princess Sibylla of Saxe-Coburg-Gotha. Brought up by his grandfather and mother after the death of his father in 1947, he attended a Swedish boarding school, served in the armed forces, and studied for a year at Uppsala Univ. A new constitution, passed shortly before his grandfather's death and effective in 1975, made the king a ceremonial figurehead, divesting him of traditional status as supreme commander of the armed forces and of the right to formally nominate new premiers and to open the Swedish parliament.

Charles (Charles Philip Arthur George), 1948–, prince of Wales, eldest son of Queen Elizabeth II of Great Britain and heir apparent to the British throne. He was created prince of Wales in 1958 and invested with that title in a colorful ceremony at Caernarvon Castle in 1969. A graduate of Cambridge Univ., Charles entered the Royal Navy in 1971.

Charles, 1771–1847, archduke of Austria, brother of Holy Roman Emperor Francis II. Despite his epilepsy, he was the ablest Austrian commander in the French Revolutionary and Napoleonic wars, however, he was handicapped by unwise decisions imposed on him from Vienna. After the disastrous campaign of 1805, Charles was appointed minister of war and chief commander of the Austrian forces. He reorganized the army and headed the patriotic faction at court. In 1809 he defeated Napoleon I at Aspern (May) but was beaten at Wagram (July). In both battles he exacted a heavy toll from the French. Shortly afterward he retired because of political differences with Francis. He was also called Charles Louis. See F. L. Petre, *Napoleon and the Archduke Charles* (1908).

Charles I, 953–992?, duke of Lower Lorraine (977–91), younger son of King Louis IV of France. He claimed the French throne when his nephew, Louis V of France, died (987) without issue, but he was set aside in favor of HUGH CAPET. Charles seized Laon (988) and Rheims (989), but was betrayed (991) by the bishop of Laon, who turned him over to Hugh. Charles died in prison. With the death of his sons the French Carolingian dynasty ended.

Charles IV, 1604–75, duke of Lorraine. He succeeded to the duchy in 1624 but was to lose it several times because of his anti-French policy. In 1633, French troops invaded Lorraine in retaliation for Charles's support of Gaston d'ORLÉANS. Forced to make humiliating concessions to France, he abdicated (1634) in favor of his brother and entered the imperial service in the Thirty Years War. He briefly recovered his lands in 1641 and 1644, but he was excluded from the Peace of Westphalia (1648) at the war's conclusion. Although he joined the Spanish during the FRONDE, he communicated with the French government and as a result was imprisoned by the Spanish (1654–59). In 1661, at the price of heavy concessions to King Louis XIV, Charles recovered Lorraine and the duchy of Bar. Expelled once more by the French in 1670, Charles later helped to instigate the alliance of Spain and the Holy Roman emperor with the Dutch in the third of the DUTCH WARS. In 1675 he defeated François de Créqui at Konzer Brück.

Charles V (Charles Leopold), 1643–90, duke of Lorraine, nephew of Duke Charles IV. Deprived of the rights of succession to the duchy, he was forced to leave France and entered the service of the Holy Roman emperor. He was twice a candidate for the Polish crown (1669 and 1674). Although he took the ducal title on his uncle's death in 1675, France still held Lorraine. He was commander of the imperialist forces in the third of the Dutch Wars. At Nijmegen he refused (1678) to accept Lorraine on King Louis XIV's terms. He took part in the defense of Vienna (1683) and in expelling the Turks from Hungary. Charles V married (1678) Eleanor Maria, sister of Holy Roman Emperor Leopold I.

Charles, Jacques Alexandre Cesar (zhak alēksāN'drā sāzar' sharl'), 1746–1823, French physicist. He confirmed Benjamin Franklin's electrical experiments, became interested in aeronautics, and was the first to use hydrogen gas in balloons. In this type of balloon, known as the *Charlière*, he made an ascent in 1783 of almost 2 mi (3.2 km). He became professor of physics at the Conservatoire des Arts et Métiers, Paris. Inventor of a thermometric hydrometer, he also improved various devices, the *Gravésande* heliostat and Fahrenheit's aerometer among others, and anticipated Gay-Lussac's law of the expansion of gases. For Charles's law, see GAS LAWS.

Charles, Thomas, 1755–1814, Welsh nonconformist clergyman. He was brought up under Methodist influence, attended Oxford (1775–78), and was ordained in the Church of England. He held curacies in Somersetshire but resigned them and returned to Bala, Wales, where in 1784 he joined the CALVINISTIC METHODIST CHURCH. Gifted in working with children, he began (1785) to establish Welsh language schools. He secured and distributed thousands of Welsh Bibles and helped to found the British and Foreign Bible Society (see BIBLE SOCIETIES). At Bala in 1803, Charles established a printing press for Welsh textbooks. See William Hughes, ed., *Life and Letters of the Rev. Thomas Charles* (1881).

Charles, William, 1776–1820, American cartoonist, etcher, and engraver, b. Edinburgh, Scotland. He

probably came to the United States to avoid prosecution for his satirical drawings. He is best known for his cartoons of the War of 1812, in which he mocked the English in the rough, biting style of Gillray. An example of his work is *Admiral Cockburn Burning and Plundering Havre-de-Grace* (Maryland Historical Society).

Charles, river, c. 60 mi (97 km) long, rising in E. Mass. and flowing generally NE to Boston Bay. Boat races are held on the river.

Charles Albert, 1798–1849, king of Sardinia (1831–49), first king of the Savoy-Carignano line (see SAVOY, HOUSE OF). Although not entirely unsympathetic to the revolutionary movement in Sardinia, Charles Albert nevertheless informed his relative, King VICTOR EMMANUEL I, of the impending uprising of 1821. Upon Victor Emmanuel's subsequent abdication in favor of his brother Charles Felix, Charles Albert was temporarily appointed regent pending the new ruler's arrival. He granted a constitution, which Charles Felix repudiated. Having fallen into royal disfavor for this liberalism, Charles Albert went into exile and in 1823 participated in crushing a liberal regime in Spain to regain Charles Felix's good graces. After Charles Felix died, Charles Albert acceded to the throne. He issued a new code of law, abolished internal tariffs, and, to forestall a revolution, granted (1848) a constitution. He twice declared war on Austria, fighting two campaigns (1848, 1849) during the RISORGIMENTO. Successful at first, he was routed at Custoza (1848) and again at Novara (1849). Charles Albert then abdicated in favor of his son, Victor Emmanuel II, and went into exile in Portugal, where he soon died.

Charles Augustus, 1757–1828, duke and, after 1815, grand duke of Saxe-Weimar-Eisenach, friend and patron of Goethe, Schiller, and Herder. Though his duchy was small, he was important in German politics. He helped FREDERICK II of Prussia form (1785) the *Fürstentum* [league of princes] to check Austria's attempt under Holy Roman Emperor JOSEPH II to expand Austrian influence in the empire. He fought in the French Revolutionary Wars and against Napoleon I until 1806, when he was forced to join the CONFEDERATION OF THE RHINE. At the Congress of Vienna after Napoleon's defeat his duchy was enlarged and he was raised to a grand duke. Assisted by Goethe, he made WEIMAR a center of literature, science, art, and liberal political thought. In 1816 he introduced a constitution.

Charles Borromeo, Saint (bōrōmē'ō), 1538–84, Italian churchman, b. near Lago Maggiore. His uncle, PIUS IV, summoned Charles, a student at Pavia, to Rome in 1560. In rapid order he was made cardinal-deacon, administrator of the Papal States and of the archdiocese of Milan, and papal secretary of state. Despite a large personal fortune, St. Charles lived a simple, ascetic life. He was most zealous in encouraging reform in the church and was largely responsible for reopening (1560) the Council of Trent, of which he was the guiding spirit. In 1563 he was ordained priest, consecrated bishop, and then received the pallium for the see of Milan. He was 28 years old when, at Milan, he began introducing vigorous reforms, especially in the education of the clergy, enforcing the council's decrees for the institution of diocesan seminaries. He was exceedingly strict with the clergy, and he met much opposition. In 1569 some disaffected men tried to assassinate him. He worked untiringly to alleviate suffering in the pestilence of 1576. He was an exemplary pastor. There is a huge statue of him near Lago Maggiore and a monument to him in the cathedral at Milan, which he had completely redecorated. Feast Nov. 4.

Charlesbourg (sharl'bōōrg), city (1971 pop. 33,443), S. Que., Canada. It is a northern suburb of Quebec city. One of the oldest parishes in the province, it includes part of the seigniorie first granted to the Jesuits in 1626 and was settled in 1659. Its earlier name was Bourg Royal.

Charles d'Orléans· see ORLÉANS, CHARLES, DUC D'

Charles Edward Stuart· see STUART, CHARLES EDWARD

Charles Emmanuel I, 1562–1630, duke of Savoy (1580–1630), son and successor of EMMANUEL PHILIP BERT. He continued his father's efforts to recover territories lost to the duchy, but his reckless, although cunning, diplomacy undermined many of the sound economic and political achievements of the previous decades. His goal to incorporate Geneva, Saluzzo, and MONTFERRAT into Savoy caused him to oscillate in his alliances between France and Spain. In the long run he met with only limited success. In 1602 he tried unsuccessfully to reconquer Geneva.

by surprise attack. He recovered Saluzzo from the French by the Treaty of Lyons (1601), giving up, in exchange, Bresse, Bugey, Gex, and Pinerolo, but he lost Saluzzo just before his death. He waged war over the succession to Montferrat for much of the first quarter of the 16th cent. At the time of his death his duchy was overrun by the French. Charles Emmanuel, called the Great, was succeeded by his son, Victor Amadeus I.

Charles Martel (martēl') [O Fr. = Charles the Hammer], 688?-741, Frankish ruler, illegitimate son of PEPIN OF HERISTAL and grandfather of Charlemagne. After the death of his father (714) he seized power in Austrasia from Pepin's widow, who was ruling as regent for her grandsons, and became mayor of the palace. He subsequently subdued the W Frankish kingdom of Neustria and began the reconquest of Burgundy, Aquitaine, and Provence. Having subjugated many of the German tribes across the Rhine, he encouraged the activities of St. BONIFACE and other missionaries among them; he did not, however, support the papacy against the LOMBARDS. Charles Martel halted the advance of the Muslims of Spain by his victory in the battle of Tours (732). Although he never assumed the title of king, he divided the Frankish lands, like a king, between his sons Pepin the Short and Carloman. See Ferdinand Lot, *The End of the Ancient World and the Beginnings of the Middle Ages* (1927 tr 1961).

Charles Mound, hill, 1,241 ft (378 m) high, NW 1/4, near the Wis. line, highest point in the state.

Charles of Blois (Charles of Châtillon) (blwa, shā'tēyōn'), c.1319-1364, duke of Brittany, nephew of Philip VI of France. He was one of the chief participants in the War of the BRETON SUCCESSION and was killed at the battle of Auray. An extremely pious man, he has been beatified.

Charles of Valois (valwä'), 1270-1325, French prince and military leader, third son of Philip III and father of Philip VI. He dominated the reign in France of his nephew Louis X. On the excommunication (1284) of PETER III of Aragón, Pope Martin IV made Charles of Valois king of Aragón and Sicily. Charles, however, was defeated and in 1290 renounced his claim. In return he received Anjou and Maine as part of the dowry of his first wife (the daughter of Charles II of Naples). Later he unsuccessfully sought to obtain the crowns of the Byzantine and Holy Roman empires, which he held claim to through his second wife. At different times he also tried to secure the crowns of Arles and France, where he hoped to be regent after the death of Louis X. He campaigned for Pope Boniface VIII in Italy and took Florence in 1301.

Charles of Viana (vēā'nā), 1421-61, Spanish prince, heir of Navarre, son of Blanche of Navarre and John (later JOHN II) of Aragón. After his mother's death (1441) he ruled Navarre for his father, but serious differences between the two soon plunged the country into civil war. He was twice imprisoned by his father and died shortly after an uprising in Catalonia had forced John to recognize him as his heir.

Charles River Bridge Case, decided in 1837 by the U.S. Supreme Court. The Charles River Bridge Company had been granted (1785) a charter by the state of Massachusetts to operate a toll bridge. The state later authorized (1828) a competing bridge that would eventually be free to the public. The Charles River Bridge Company brought suit against the competing company, claiming that the state charter had given it a monopoly. The court upheld the state's authorization to the other company, holding that since the original charter did not specifically grant a monopoly, the ambiguity in the contract would operate in favor of the public, thus allowing a competing bridge. The holding modified the DARTMOUTH COLLEGE CASE, which held that a state could not unilaterally amend a charter.

Charles the Bad. see CHARLES II, king of Navarre

Charles the Bald, French king. see CHARLES II, emperor of the West

Charles the Bold, 1433-77, last reigning duke of Burgundy (1467-77), son and successor of PHILIP THE GOOD. As the count of Charolais before his accession, he opposed the growing power of King LOUIS XI of France by joining (1465) the League of Public Weal. In 1468 he had Louis arrested during their interview at Peronne and compelled him to help in subduing Liege, where Louis had incited a revolt. Charles allied himself with England by his marriage (1468) to Margaret, the sister of King Edward IV. Master of the Low Countries, Charles ruled Burgundy, Flanders, Artois, Brabant, Luxembourg, Hol-

land, Zeeland, Friesland, and Hainault; he dreamed of reestablishing the kingdom of LOTHARINGIA. He needed Alsace, Lorraine, and a royal title to achieve his goal. In 1473 he met Holy Roman Emperor Frederick III at Trier to arrange a marriage between his daughter Mary and Frederick's son, the future Maximilian I. Charles was to have been crowned king of Lotharingia. However, the emperor broke off negotiations, the marriage took place (1477) only after Charles's death. Meanwhile, Charles continued to conquer the lands that separated his possessions. His struggles with the Alsatian towns and his occupation (1473) of Lorraine alienated the Swiss cantons, which were allied with France. In 1474 war broke out between Charles and the Swiss. Charles's English ally, Edward IV, invaded France (1475), but accepted a bribe from Louis XI and ceased hostilities. Charles was routed (1476) by the Swiss at Grandson and Morat. Early in 1477, at Nancy, Charles was defeated utterly and killed by the Swiss and the Lorrainers. His heiress, MARY OF BURGUNDY, lost part of her possessions to France, the rest passing to the Hapsburgs through her marriage with Maximilian. Once powerful Burgundy ceased to exist as a state. Charles, who earned his surname by his impetuous gallantry, was a capable, though harsh, ruler, however, his achievements were short-lived. See the chronicles of Philippe de COMINES, biographies by J. F. Kirk (3 vol., 1863-68) and Richard Vaughan (1974), J. L. A. Calmette, *The Golden Age of Burgundy* (tr 1962).

Charles the Great, Frankish king, emperor of the West. see CHARLEMAGNE

Charleston. 1 City (1970 pop. 16,421), seat of Coles co., E Ill., inc. 1835. Shoes, electronic equipment, farm buildings, and tools are manufactured in this industrial, rail, and trade center located in an agricultural area, and Eastern Illinois Univ. is there. A Lincoln-Douglas debate was held in Charleston on Sept. 8, 1858. Local attractions include an enormous statue of Lincoln and nearby Lincoln Log Cabin State Park (the site of Thomas Lincoln's reconstructed farmhouse) and Fox Ridge State Park. 2 City (1970 pop. 66,945), seat of Charleston co., SE S.C., founded 1680, inc. 1783. The oldest city in the state and one of the chief ports of entry in the SE United States, Charleston lies on a low, narrow peninsula between the Ashley and Cooper rivers at the head of the bay formed by their confluence. In the bay, or bordering on it, are Sullivan's Island, site of Fort Moultrie, James Island, Morris Island, with a lighthouse, Fort Sumter, and Castle Pinckney. Many transportation routes converge at Charleston, and through its excellent, almost landlocked harbor an extensive coastal and foreign trade is carried on. Among the city's many and varied manufactures are fertilizers, chemicals, steel, asbestos, cigars, pulp and paper, and textiles and clothing. Charleston is the headquarters for the 6th U.S. naval district and for the U.S. air force defense command. The extensive military facilities include a Polaris submarine base and a huge navy yard (est. 1901). The English under William Sayle settled (1670) at Albemarle Point, on the western bank of the Ashley River, c. 7 mi (11 km) from modern Charleston. They later moved (1680) to Oyster Point, where their capital, Charles Town (as it was first called) had been laid out. The city, surviving Spanish and Indian threats, became the most important seaport in the Southern colonies (exporting indigo, rice, and deerskins) and the leading center of wealth and culture in the South. Non-English immigrants, among whom the French Huguenots were most prominent, added a cosmopolitan touch. Charleston was an early theatrical center, and the Dock Street Theatre (opened 1736) was one of the first theaters to be established in the country. In the American Revolution, after being successfully defended (1776, 1779) by William Moultrie, Charleston was surrendered (May 12, 1780) by Benjamin Lincoln to the British under Sir Henry Clinton, who held it until Dec. 14, 1782. The capital was moved to Columbia in 1790, but Charleston remained the social and economic center of the region. The South Carolina ordinance of secession (Dec., 1860) was passed in Charleston, and the city was the scene of the precipitating act of the Civil War, the firing on Fort Sumter (April 12, 1861). With its harbor blockaded and the city itself under virtual siege by Union forces (1863-65), Charleston suffered partial destruction but did not fall until Feb., 1865, after it had been isolated by Sherman's army. A violent earthquake on Aug. 31, 1886, took many lives and made thousands homeless, and peri-

odic hurricanes and tornadoes (one in 1938 was particularly severe) have also caused great damage. Despite these repeated devastations, many of the charming colonial buildings survive, outstanding among them are St. Michael's Episcopal Church (begun 1752), noted for its chimes, and the Miles Brewton house (1765-69). Among the many other points of interest are the Old Powder Magazine (1719), the Old Slave Mart Museum and Gallery, the Gibbes Art Gallery, the Charleston Museum (1773), one of the oldest museums in the country, and Fort Sumter National Monument (see NATIONAL PARKS AND MONUMENTS, table). The waterfront, called the Battery, and the Grace Memorial Bridge over the Cooper River are famous Charleston landmarks. Cabbage Row surrounds a court that was the original Catfish Row of DuBose Heyward's novel *Porgy*. The city's picturesque old homes and winding streets, historic attractions, and unique charm, together with its pleasant climate, nearby beaches, and beautiful gardens (especially the Middleton Place, Magnolia Gardens, and Cypress Gardens) attract thousands of visitors each year. The annual azalea festival is an important event. The city is the seat of the Citadel, the Medical Univ. of South Carolina, the Baptist College at Charleston, and the College of Charleston (1790), which in 1837 became the first municipal college in the United States. The Isle of Palms, a resort island E of Charleston, is noted for its fine ocean beaches. See R. G. Rhett, *Charleston: An Epic of Carolina* (1940), Robert Molloy, *Charleston: A Gracious Heritage* (1947), *This is Charleston* (rev. ed. by S. G. Stonery, 1970). 3 City (1970 pop. 71,505), state capital and seat of Kanawha co., W. central W. Va., on the Kanawha River where it is joined by the Elk River, inc. 1794. The second largest city in the state, Charleston is an important transportation and trading center for the highly industrialized Kanawha valley and a major chemical, glass, and metal production area. Additional manufactures are based on the salt, coal, natural gas, clay, sand, timber, and oil of the region. The city grew around the site of Fort Lee (1788). Daniel Boone lived there from 1788 to 1795. The capital was transferred there from Wheeling in 1870, moved back to Wheeling in 1875, then returned to Charleston in 1885 after an election to determine the permanent site. The capitol building (completed 1932) was designed by Cass Gilbert. The city is the seat of Morris Harvey College. The Sunrise cultural center contains an art gallery, museum, planetarium, and notable gardens. West Virginia State College is nearby.

Charleston, social dance of the United States popular in the mid-1920s. The Charleston is characterized by outward heel kicks combined with an up-and-down movement achieved by bending and straightening the knees in time to the syncopated 4/4 rhythm of ragtime JAZZ. The steps are thought to have originated with the Negroes living on a small island near Charleston, S.C. Performed in Charleston as early as 1903, the dance made its way into Harlem stage shows by 1913. It gained popularity when it was performed in the Negro musical *Runnin' Wild* on Broadway in 1923. The show's male chorus line danced and sang James P. Johnson's "Charleston" to the accompaniment of Southern-style clapping and stomping. Both dance and song became the rage throughout the United States. The dance was thought to express the reckless daring, abandon, and restlessness of the jazz-age flappers. During the peak of the Charleston craze a policeman in St. Louis performed the dance while directing traffic.

Charlestown, former city, now part of Boston, Middlesex co., E. Mass., on Boston Harbor, between the Mystic and the Charles rivers, settled 1629, included in Boston 1874. The oldest part of Boston, it was the site of the U.S. navy yard (est. 1801, closed 1973) where the U.S. Constitution was moored. The battle of BUNKER HILL was fought at Charlestown on June 17, 1775. Samuel Morse was born in Charlestown. **Charlestown**, town (1970 est. pop. 2,800) on the island of Nevis, British West Indies. It is a port that ships goods to St. Kitts. Cotton, sugarcane, livestock, and some food crops are raised. Alexander Hamilton was born in Charlestown.

Charles University, at Prague, Czechoslovakia, also called University of Prague. The oldest and one of the most important universities of central Europe, it was founded in 1348 by Holy Roman Emperor Charles IV, for whom it is named. The faculty was organized in four so-called nations, the Czech, Saxon, Bavarian, and Polish. The struggle between the German and Czech nationalities in Bohemia was reflected in the university when, in 1403, the Czech nation, including Jan HUS, was outvoted by the

three other nations in a controversy regarding John Wyclif's doctrines. When in 1409 the three foreign nations opposed the request of Holy Roman Emperor WENCESLAUS to take a neutral attitude between the two rival popes in the Great Schism, Wenceslaus changed the statutes of the university. By the Decree of Kutna Hora he gave three votes to the Czech nation and one vote to the other three nations. Shortly after that Czech victory, Huss himself became rector of the university. As a result of the Decree of Kutna Hora the Germans left the university and founded the Univ of Leipzig. The Germanization of the university, which began after the battle of the White Mt (1620), reached its peak in 1774 when German was made the language of instruction. In 1882 the university was divided into two branches—Charles Univ, which was Czech, and Ferdinand Univ, which was German. After the creation of independent Czechoslovakia in 1918 this division was maintained, although the Czech university received the greater facilities. The German university was abolished after World War II.

Charles William Ferdinand, 1735–1806, duke of Brunswick (1780–1806), Prussian field marshal. He had great success in the Seven Years War (1756–63) and was commander in chief (1792–94) of the Austro-Prussian armies in the FRENCH REVOLUTIONARY WARS. Although he sympathized with some of the goals of the Revolution, he led the German army in its ill-fated march into France in 1792 and issued a manifesto threatening severe reprisals against the revolutionaries. Defeated at Valmy (1792), in 1793 he routed the French at Kaiserslautern and Pirmasens. He again commanded the Prussian armies in 1806 and was defeated by the French marshal Davout at Auerstedt. He was blinded in the battle and died soon after. His son was FREDERICK WILLIAM, duke of Brunswick.

Charlet, Nicolas Toussaint (nēkōlā' tōōsān' sharlā'), 1792–1845, French lithographer and painter. He was famous for his lithographs depicting political and social subjects. Those concerning the Napoleonic Wars are among his best known. Charlet was an influential teacher as well as one of the most popular printmakers of his day.

Charleville-Mézières (sharlävēl'-māzyēr'), town (1968 pop 58,872), capital of Ardennes dept, NE France, on the Meuse River, in Champagne. It was formed in 1966 when the twin cities of Charleville and Mézières were merged, along with three small communities. It is a commercial and metalworking center. Mézières was an old fortified town, founded in the 9th cent. Charleville was founded (1606) by, and named for, Charles de Gonzague, duke of RetHEL. The area has often been captured by the Germans (1815, 1870, 1914, 1940), and Mézières in particular suffered heavy damage in both World Wars. Its recovery (1918) by the Allies marked the last major battle of World War I.

Charlevoix, Pierre François Xavier de (pyēr fraNswā' zavvā' də sharlāvwa'), 1682–1761, French Jesuit traveler and historian. He taught at the Jesuit college in Quebec and at the College Louis le Grand in Paris. In 1720 he journeyed to America to explore the West and visit the Jesuit missions. Voyaging up the St. Lawrence, through the Great Lakes, and along the Illinois River, he reached the Mississippi and descended it to New Orleans. After a shipwreck in the Gulf of Mexico he returned to France. In 1744 he issued his *Histoire de la Nouvelle France* (tr, 6 vol., 1900), which in a valuable appendix contains a detailed journal of his trip, the only full description of the interior of America in the first third of the 18th cent.

charlock: see MUSTARD

Charlotte (Charlotte Sophia), 1744–1818, queen consort of George III of England. The niece of Frederick, duke of Mecklenburg-Strelitz, she was married to George in 1761 and bore him 15 children. When the king became permanently insane in 1810, she was given charge of his person and his household.

Charlotte, 1896–, grand duchess of Luxembourg (1919–64). The second daughter of Duke William of Nassau-Weilburg and a Portuguese princess, Marie Anne of Braganza, she succeeded her sister, Marie-Adelaide, who had abdicated in her favor. In Nov., 1919, Charlotte married Prince Felix of Bourbon-Parma. During the German occupation in World War II, the grand duchess and her family went into exile, eventually settling in Montreal. They returned home in April, 1945. In Nov., 1964, Charlotte abdicated in favor of her son, Jean.

Charlotte (shar'lāt), city (1970 pop 241,178), seat of Mecklenburg co., S N C, inc. 1768. The largest city of the state and the foremost commercial and in-

dustrial center of the Piedmont region, Charlotte is a transportation hub and distribution point for the Carolina manufacturing belt, now the nation's leading textile area. The bountiful hydroelectric power from the Catawba River serves the city's industries. Its products include textiles, chemicals, apparel, machinery, food, and printed materials. Charlotte, named for Queen Charlotte, wife of King George III of England, was settled c 1750. The citizens of the county were among the most outspoken in their opposition to the British government, and it was at Charlotte that the MECKLENBURG DECLARATION OF INDEPENDENCE was signed in May, 1775. Hezekiah Alexander, a leading citizen of Charlotte, was the chief advocate of the declaration, his colonial home, the Rock House, is a historical museum. In his brief occupation of the city (Sept–Oct, 1780), British Gen. Charles Cornwallis called it a "hornet's nest of rebellion." The Univ of North Carolina at Charlotte, Queens College, Johnson C. Smith Univ, and a junior college are in the city. The Mint Museum of Art is a reproduction of the US Mint, located there from 1837 until 1913. The Charlotte Coliseum has one of the largest steel, aluminum, and precast concrete domes in the world. President James K. Polk was born in Charlotte.

Charlotte Amalie (əmal'ē), town (1970 pop 12,372), capital of the VIRGIN ISLANDS of the United States, on St. Thomas Island. It is the commercial center of the islands, a free port, and a popular tourist resort. Founded in the late 17th cent., Charlotte Amalie was a center of Danish colonial life. It became important as a trading center during the American Civil War. It was renamed St. Thomas in 1921, but the former Danish name was restored in 1937. The town still retains a Danish flavor in its architecture and street names.

Charlotte Elizabeth: see ELIZABETH CHARLOTTE OF BAVARIA

Charlottenburg: see BERLIN, Germany

Charlottesville (shar'latsvīl'), city (1970 pop 38,880), seat of Albemarle co., central Va., on the Rivanna River, in a Piedmont farm region known for its apples, founded 1762, chartered as a city 1888. Textiles are made there. Charlottesville is the seat of the Univ of Virginia. British Gen. John Burgoyne's captured army was quartered nearby in 1779–80, and in 1781 Sir Banastre Tarleton raided the city. Nearby are Monticello, home of Thomas Jefferson, Ash Lawn, home of James Monroe, the birthplaces of Meriwether Lewis and George Rogers Clark, and Michie Tavern Museum.

Charlottetown, city (1971 pop 19,133), capital and chief port of Prince Edward Island, E Canada, on the southern coast. Food processing and tourism are the main industries. The French established (c 1720) a fort and settlement across the harbor, known as Port la Joie. Charlottetown was laid out by the British in 1768 and named for Queen Charlotte, consort of George III. Its growth was slow until the middle of the 19th cent., when it became noted for the sailing vessels it built for fishing and lumber transport. In the city is the Univ of Prince Edward Island. The Charlottetown Conference of the Maritime Provs (1864) was the first step toward Canadian confederation.

Charlton, Bobby (Robert Charlton), 1937–, English soccer (football) player. He joined the Manchester United team in 1954, playing inside forward and was a vital power behind the team's successes. Holder of numerous championship medals, he wrote several books about the sport including *My Soccer Life* (1965), *Forward for England* (1967), *This Game of Soccer* (1967), and *The Book of European Football* (1969).

charm, magical formula or INCANTATION, spoken or sung, for the purpose of securing blessing, good fortune, or immunity from evil. It presupposes a belief in demons or malignant spirits. The formula was frequently inscribed upon an AMULET, talisman, or trinket to be worn for protection.

Charolais (sharōlā'), small region, Saône-et-Loire dept., E central France, in Burgundy, in the Massif Central, named after the town of Charolles. Cattle breeding is the chief occupation. The countship of Charolais was acquired by Philip the Bold, Duke of Burgundy, in 1390. In 1477 the county passed to the Hapsburgs, from then on it shared the fortunes of FRANCHE-COMTÉ until it was acquired from Spain by Louis XIV and was definitively united with France and incorporated into Burgundy in 1761.

Charolais cattle (shār'alā'), breed of beef animal with a rugged, muscular appearance and solid creamy to wheat-colored coat. Originated in France,

it was first imported to the United States in 1936 by way of Mexico.

Charon: see HADES

Charondas (kārōn'dās), 6th cent B C., Sicilian lawgiver, a native of Catana. His laws, which were admired by Aristotle, were used by the cities of Chalcidian foundation in Sicily and Italy.

Charpentier, Gustave (gustav' sharpaNtyā'), 1860–1956, French composer, pupil of Massenet. His best-known works are the opera *Louise* (1900), portraying bohemian Parisian life, and his orchestral suite *Impressions d'Italie* (1892).

Charran (kār'ān), variant of HARAN, the place Acts 7:24.

Charron, Pierre (pyēr sharōN'), 1541–1603, French Roman Catholic theologian and philosopher. He was an important contributor to 17th-century theological thought, combining an individual form of skepticism with a strict adherence to Catholicism based on the emphasis of the importance of faith over reason. After practicing law for several years, he took orders and soon gained a reputation as an eloquent preacher. He became chaplain to Margaret, wife of Henry IV. His *Traite des trois verites* (1594) set forth proofs, first, that there is a God and that a true religion exists, second, that no other religion than that of the Christians is true, and, third, that in the Roman Catholic Church alone is salvation found. In 1600 he published a collection of 16 sermons. In his most famous work, the *Traite de la sagesse* (1601), the influence of Montaigne, with whom he had a close relationship, appears. The skepticism of that work awoke criticism and later a summary and apology, *Petit traite de la sagesse*, was published.

chart, term referring to MAPS prepared for marine navigation and for air navigation. All charts show, in some convenient SCALE, geographic features useful to the navigator, as well as indications of direction, e.g., true north (the direction of the geographic North Pole), magnetic north (the direction indicated by the north-seeking end of a magnetic compass needle), and magnetic declination (the difference between these two directions). Data shown on marine charts include the outline and nature of coasts, with landmarks, currents and undercurrents (both direction and force), winds, tides, location and type of lighthouses, buoys, beacons, and lightships, position of rocks, bars, reefs, shoals, wrecks, or other dangers, contour and nature of bottom (mud, sand, rock, or gravel), and depth. Depth is indicated in great detail in harbors and shallow and intricate waterways, the value indicated is usually that at mean low water. Most national governments publish charts of their coasts and harbors, the British admiralty has done the most work along these lines. In the United States the Coast and Geodetic Survey and the Hydrographic Office of the Dept of the Navy issue charts, these are drawn using the gnomonic or Mercator MAP PROJECTIONS. Aeronautical charts show natural or man-made surface features by the use of various symbols. These charts give locations of radio-navigation stations and graphic representations of the directional information they broadcast, radio communication channels of airports and spacecraft centers, standard flight paths, and dangerous or forbidden areas (e.g., certain military installations). Elevations on the earth's surface are indicated by contour lines. The U.S. Coast and Geodetic Survey issues many kinds of aeronautical charts.

charter, document granting certain rights, powers, or functions. It may be issued by the sovereign body of a state to a local governing body, university, or other corporation or by the constituted authority of a society or order to a local unit. The term was widely applied to various royal grants of rights in the Middle Ages and in early modern times. The most famous political charter is the MAGNA CARTA of England. Chartered companies held broad powers of trade and government by royal charter. In colonial America, chartered colonies were in theory, and to an extent in fact, less subject to royal interference than were royal colonies.

chartered companies, associations for foreign trade, exploration, and colonization that came into existence with the formation of the European nation states and their overseas expansion. An association received its charter from the state and sometimes had state support. In the regulated company each member was an independent trader operating with his own capital and bound only by the general rules of the company charter. In the joint stock company the organization itself transacted the business, oper-

ating on the joint capital invested by members, each of whom shared proportionately in the profits and losses. The company received a monopoly of trade or colonization in a certain region and customarily exercised lawmaking, military, and treaty-making functions, subject to the approval of the home government, besides other privileges. The English Merchants Adventurers (1359) was more of a guild organization, but it foreshadowed such companies as England's Muscovy (1555), Levant (1581), East India (1600, perhaps the greatest of them all), and Hudson's Bay (1670) and Holland's Dutch East India (1602). Such colonizing companies as the Virginia Company (1606), the Massachusetts Bay Company (1629), the French Royal West Indian Company (1664-74), the Santo Domingo Company (1698), and the Dutch West India Company (1621) were more quickly taken over by their governments. Later 19th-century colonizing and trading companies, such as the British North Borneo (1881), Royal Niger (1886), British South Africa (1888), and German East Africa (1884), did not last long and had more restricted powers, but attested to the continuing significance of the chartered company. In a technical sense, the modern corporation is a chartered company. See George Cawston, *The Early Chartered Companies, 1296-1858* (1896, repr. 1968), Rudolph Robert, *Chartered Companies and their Role in the Development of Overseas Trade* (1969).

Charterhouse [Fr. = Chartreuse], in London, England, once a Carthusian monastery (founded 1371), later a hospital for old men and then a school for boys, endowed in 1611. The school, which became a large public school, was removed (1872) to Godalming, Surrey. W. M. Thackeray, a pupil at the school, describes it in *The Newcomes*.

Charter Oak, white oak tree that until 1856 stood in Hartford, Conn., and was thought to be 1,000 years old. There is a tradition that when Sir Edmund Andros, as governor general of New England, demanded (1687) that the charter of Connecticut be surrendered by the colonists at Hartford, the document was hidden in a hollow of the tree.

Chartier, Alain (ālān' shāryā'), b. c. 1385, d. c. 1433, French writer, secretary to Charles VII. His most popular work was the love poem *La Belle Dame sans mercy* (1424), which provided Keats with a title. *Le Quadrilogue invectif* (1422), a political pamphlet in vigorous prose, called for French solidarity to combat the turmoil of the Hundred Years War.

Chartier, Émile Auguste (āmēl' ōgüst'), 1868-1951, French essayist and philosopher who wrote under the pseudonym Alain. He is best known for thousands of aphoristic essays, called *propos*, which he contributed to his own weekly *Libres Propos* and other journals. These essays cover a variety of literary and political topics, many of them expressing Chartier's commitment to pacifism and distrust of official power. His many other works include *Système des beaux arts* (1920) and *Histoire de mes pensées* (1936). See *Alain on Happiness* (1973).

Chartism, workingmen's political reform movement in Great Britain, 1838-48. It derived its name from the People's Charter, a document published in May, 1838, that called for voting by ballot, universal male suffrage, annual Parliaments, equal electoral districts, no property qualifications for members of Parliament, and payment of members. The charter was drafted by the London Working Men's Association, an organization founded (1836) by William Lovett and others, but the movement gathered momentum largely because of the fervor and rhetorical talents of Feargus O'CONNOR. He traveled widely, especially in the north, where recurrent economic depressions and the constraints of the new POOR LAW (1834) had bred especially deep discontent, and recruited support for the charter. In Aug., 1838, the charter was adopted at a national convention of workingmen's organizations in Birmingham. The following February another convention, calling itself the People's Parliament, met in London. A Chartist petition was presented to Parliament (and summarily rejected), but the convention rapidly lost support as the multiplicity of aims among its members and rivalries among its leaders became apparent. Riots in July and a confrontation between Chartist miners and the military at Newport, Wales, in November led to the arrest of most of the Chartist leaders by the end of 1839. In 1840, O'CONNOR founded the National Charter Association (NCA) in an attempt to centralize the organization of the movement, but most of the other leaders refused to support his efforts. It was the NCA that drafted and presented to Parliament the second Chartist petition in 1842. It too was overwhelmingly rejected. By this time the vitality of

Chartism was being undermined by a revival of trade unionism, the growth of the Anti-Corn Law League, and a trend toward improvement in working-class economic conditions. O'CONNOR himself began to devote himself to a scheme for settling laborers on the land as small holders. The last burst of Chartism was sparked by an economic crisis in 1847-48. In April, 1848, a new convention was summoned to London to draft a petition and a mass demonstration and procession planned to present the petition to Parliament. The authorities took extensive precautions against trouble, but the demonstration was rained out and the procession, which had been forbidden, did not take place. This fiasco marked the end of Chartism in London, although the movement survived for a while in some other parts of the country. See G. D. H. Cole, *Chartist Portraits* (1941, repr. 1965), Asa Briggs, ed., *Chartist Studies* (1959), Mark Hovell, *The Chartist Movement* (3d ed. 1967), Dorothy Thompson, ed., *The Early Chartists* (1971), J. T. Ward, *Chartism* (1973).

Chartres, Robert d'Orléans, duc de: see ORLÉANS, family.

Chartres (shār'trā), city (1968 pop. 34,469), capital of Eure-et-Loir dept., NW France, in Orléanais, on the Eure River. Chartres is of great historic and artistic interest; it is also a regional market with many industries, including metallurgy, and the production of chemicals and electronic equipment. An ancient town, it was the probable site of the great assemblies of the DRUIDS. The Normans burned it in 858. During the Middle Ages Chartres was the seat of a countship, it became a possession of the French crown in 1286. Francis I made it a duchy in 1528. Chartres' fame today stems largely from its magnificent Gothic Cathedral of Notre Dame (12th to 13th cent.), remarkable for its two spires (375 ft/114 m and 350 ft/107 m), its stained glass windows, and its superb sculpture. Henry Adams in *Mont-Saint-Michel and Chartres* made it a symbol of the medieval spirit. Inside the cathedral St. Bernard of Clairvaux preached the Second Crusade (1146) and Henry IV was crowned king of France (1594).

chartreuse (shar'trōz'), LIQUEUR made exclusively by Carthusians at their monastery, La Grande Chartreuse, France, until their expulsion in 1903. The French distillery and trademark were sold, and the order set up a new plant in Tarragona, Spain. The monks' product is identified by the name *Liqueur des Peres Chartreux*. Readmitted to France in 1941, the Carthusians resumed manufacture there. Green chartreuse contains about 57% alcohol, the sweeter yellow variety, about 43%.

Chartreuse, Grande (grā'nd shānrōz'), mountainous massif, Isère dept., SE France, in the Dauphiné Alps, Chamechaude Peak (6,847 ft/2,087 m) is the highest point. There is a high valley St. Bruno founded (1084) the famous monastery, La Grande Chartreuse, the principal seat of the Carthusians until 1903, when the order was expelled from France. The Carthusians returned to their monastery in 1941. The monastery was destroyed several times, the present buildings (now a museum) date mainly from the 17th cent. Chartreuse liqueur originated there.

Charvaka (chār'vākā) see INDIAN PHILOSOPHY.

Charvadis (chār'b'dīs), in Greek mythology, a female monster. Because she stole Hercules' cattle, Zeus hurled her into the sea. There she lay under rocks across from Scylla and sucked in and spewed out huge amounts of water, creating a whirlpool.

Chase, Mary Ellen, 1887-1973, American educator and writer, b. Blue Hill, Maine, grad. Univ. of Maine, 1909. She taught (1918-26) English at the Univ. of Minnesota, where she received her Ph.D. in 1922. Her works set in Maine, excellent in their regional fidelity, include a biography and the novels *Mary Peters* (1934), *Silas Crockett* (1935), and *Windswept* (1941). She also wrote biblical studies such as *Life and Language in the Old Testament* (1955) and children's books like *The Story of Lighthouses* (1965). Her autobiographical volumes are *A Goody Heritage* (1932), *A Goody Fellowship* (1939), and *The White Gate* (1954). See biography by P. D. Westbrook (1965).

Chase, Philander, 1775-1852, American Episcopal bishop, b. Cornish, N.H. After experience as a missionary in the West, he was elected (1818) first bishop of Ohio, where he founded Kenyon College in 1824 with funds that he secured largely in England. In 1835, Chase became bishop of Illinois, from 1843 he was presiding bishop of the church. See his *Reminiscences* (2 vol., 2d ed. 1848), biography by L. C. Smith (1903).

Chase, Salmon Portland, 1808-73, American public official and jurist, 6th Chief Justice of the United States (1864-73), b. Cornish, N.H. Admitted to the bar in 1829, he defended runaway Negroes so often that he became known as "attorney general for fugitive slaves." Chase became prominent in the Liberty party and later in the Free-Soil party, and was elected by a coalition of Free-Soilers and antislavery Democrats to the U.S. Senate, where (1849-55) he eloquently opposed such proslavery measures as the Compromise of 1850 and the Kansas-Nebraska Act. He was elected governor of Ohio in 1855 at the head of a Republican ticket that was dominated by Know-Nothings, by 1857, when he was reelected, he was a leading member of the new Republican party. Chase was a splendid figure of a man, a "sculptor's ideal of a President," and few Americans have ever gone after that high office with more determination—or less success. He sought the Republican nomination in 1860, but since he lacked the full support of even his own state's delegation and since many considered him an extreme abolitionist, his chance passed quickly. Again elected to the Senate, he served only two days in March, 1861, before resigning to become Lincoln's Secretary of the Treasury. In that difficult position he took part in framing for Congress the new fiscal legislation necessitated by the Civil War, collected new taxes, placed unprecedentedly large loans with reluctant investors, and directed vast expenditures. To assist in government financing and also to improve the status of the currency, he proposed the national bank system (established in Feb., 1863), which is generally considered his greatest achievement. Ambition and a high regard for his own worth made Chase a difficult man to work with, after refusing four previous attempts, Lincoln finally accepted Chase's resignation on June 29, 1864. Chase failed in his effort to secure the presidential nomination, but he remained an important national figure, and on Dec. 6, 1864, after the death of Roger B. Taney, Lincoln appointed him Chief Justice of the United States. He took a moderate stand in most of the important Reconstruction cases. His dissenting opinion in the SLAUGHTERHOUSE CASES subsequently became the accepted position of the courts as to the restrictive force of the Fourteenth Amendment. On the other hand, his decision (1870) in *Hepburn vs. Griswold* (see LEGAL TENDER CASES) was soon reversed. For his fairness in presiding over the Senate in the impeachment trial of President Andrew Johnson, he was furiously denounced by his old radical friends. Chase persisted in seeking the presidency, but neither the Democrats in 1868 nor the Liberal Republicans in 1872 were interested in him. See biography by A. B. Hart (1899, repr. 1969), David Donald, ed., *Inside Lincoln's Cabinet: The Civil War Diaries of Salmon P. Chase* (1954, repr. 1970), J. W. Schuckers, *Life and Public Services of Salmon P. Chase* (1874, repr. 1970).

Chase, Samuel, 1741-1811, political leader in the American Revolution, signer of the Declaration of Independence, Associate Justice of the U.S. Supreme Court (1796-1811), b. Somerset co., Md. A lawyer, he participated in pre-Revolutionary activities and was a delegate to the First and Second Continental Congresses. In 1776 he was appointed, together with Benjamin Franklin and Charles Carroll of Carrollton, to win Canada over to the Revolutionary cause, but the plan failed. Chase helped to influence Maryland opinion to support independence from Great Britain. Although he opposed adoption of the U.S. Constitution, he later became a strong Federalist and President Washington appointed him (1796) to the U.S. Supreme Court. A series of brilliant and influential decisions established his leadership in the court until he was eclipsed by the rising genius of John Marshall. Chase was impeached (1804) by the U.S. House of Representatives for discrimination on the bench against Jeffersonians. Tried before the Senate (1805), he was found not guilty. This verdict discouraged further attempts to impeach justices for purely political reasons.

Chase, Stuart, 1888-, American economist and author, b. Somersworth, N.H., studied (1907-8) at Massachusetts Institute of Technology, grad. Harvard, 1910. He worked (1910-17) as a certified public accountant and later investigated (1917-22) the meat-packing industry for the Federal Trade Commission. He served as a consultant with the National Resources Committee (1934), the Resettlement Administration (1935), the Securities Exchange Commission (1939), the Tennessee Valley Authority (1940-41), and the United Nations Educational, Scientific, and Cultural Organization (1949). He is the author

of many articles and books on economics. Among his best-known works are *The Tragedy of Waste* (1925), *Your Money's Worth* (with F. J. Schlink, 1927), *Men and Machines* (1929), *The Economy of Abundance* (1934), *Rich Land, Poor Land* (1936), *Democracy under Pressure* (1945), *The Proper Study of Mankind* (1948), *Live and Let Live* (1960), *Money to Grow On* (1964), and *The Most Probable World* (1968).

Chase, William Merritt, 1849–1916, American painter, b. Williamsburg, Ind., studied in Indianapolis and in Munich under Piloty. In 1878 he began his long career as an influential teacher at the Art Students League of New York and later established his own summer school of landscape painting in the Shinnecock Hills on Long Island. Proficient in many media, Chase is best known for his spirited portraits and still lifes in oil. His *Carmencita*, *Lady in Black*, and portrait of Whistler (all Metropolitan Mus.) and *My Daughter Alice* (Cleveland Mus.) are characteristic. He was president of the Society of American Artists for 10 years and a member of the National Academy of Design. See K. M. Roof, *Life and Art of William M. Chase* (1917).

Chassériau, Théodore (tāōdōr' shasārēō'), 1819–56, French painter, b. Santo Domingo. He entered Ingres's studio at the age of 12, five years later he gained immediate recognition with the exhibition of his *Cain, Cursed and Return of the Prodigal*. Chassériau was the only artist of the age who successfully combined Ingres's sense of line and Delacroix's rich color and vitality and, at the same time, created his own personal style. After his visit to Algeria in the 1840s, he emphasized the exotic, romantic elements in his painting, while still adhering to classical techniques. Among his best-known works are the *Two Sisters*, *Arabian Challenge*, and *Tepidarum* (all Louvre). His mural decorations for the Cour des Comptes of the Palais d'Orsay, Paris, were destroyed except for a few fragments preserved in the Louvre. His untimely death cut short a brilliant career.

Chassidim, see HASIDIM.

Chastelard, Pierre de Boscosel de (pyēr dā bōskōzēl' dā shatālār'), c. 1540–1563, French gallant. Madly in love with Mary Queen of Scots, who exchanged verses with him, he hid in her bedchamber and was discovered and forgiven. When he repeated the offense, he was executed. The story was dramatized by Swinburne.

Chastellain, Georges (zhōrzh shatēlān'), c. 1405–1475, French chronicler, historiographer to the dukes of Burgundy. The surviving fragments of his *Grande Chronique* are a valuable 15th-century source.

chat, name applied to several Old World perching birds, such as the wheatear (see THRUSH), the whinchat, and the stonechat, and to a common American WARBLER.

château (shātō', Fr. shatō'), royal or seigniorial residence and stronghold of medieval France—the counterpart of the English CASTLE of the period. In such a fortress, peasants of the surrounding country took refuge during time of war. The early fortified château, called a *château-fort*, reached its culmination in the late 15th cent., when the magnificent feudal Pierrefonds was built near Compiègne. The 16th-century château, with its gardens and outbuildings, was usually surrounded by a moat, but was only lightly fortified. Notable châteaux of the transition period between the military château and the later country estate with extensive landed property are those of the Loire, Indre, and Cher valleys, such as Chambord, Amboise, Blois, Chenonceaux, Azay-le-Rideau, and Chaumont. See study by François Gebelin (tr. 1964).

Chateaubriand, François René, vicomte de (fraNswā' ranā' vëkōNī' dā shatōbrēāN'), 1768–1848, French writer. Chateaubriand was a founder of ROMANTICISM in French literature. Of noble birth, he grew up in his family's isolated castle of Combourg. In 1791 he visited the United States, supposedly to search for the Northwest Passage, although he apparently did not go beyond Niagara Falls. He returned to France but became an émigré and lived in England until 1800. There he published his first book, *Essai historique, politique, et moral sur les révolutions* (1797). *The Genius of Christianity* (1802, tr. 1856) made Chateaubriand the most important author of his time in France. Two tragic love stories included in this volume, "Atala" (1801) and "Rene" (1802), exemplify the melancholy, exotic description of nature and the evocative language that became a trademark of romantic fiction. His other works in-

clude *The Martyrs* (1809, tr. 1812, 1859), which celebrated the victory of Christianity over paganism, and *Les Aventures du dernier Abencérage* (1826), a narrative of romance set in Spain. In 1803, Napoleon appointed Chateaubriand secretary of the legation to Rome and then minister to Valaise, but in 1804, upon the execution of the duc d'Enghien, he resigned and became a bitter anti-Napartist. Later he supported the Bourbons and became a peer (1815), ambassador to London (1822), and minister of foreign affairs (1823–24). In 1830 he abandoned political affairs and spent his final years with Mme Recamier composing his *Memoires d'outre-tombe* [memoirs from beyond the tomb] (1849–50). Chateaubriand's musical prose enriched the French language. Although his accounts of travel were plagiaristic and partly imaginary, they were rich and moving. See his *Travels in America* tr. by R. Switzer (1968), his memoirs (ed. by Robert Baldick, 1961), biographies by Andre Maurois (1938) and Friedrich Sieburg (1961).

Château d'If (shatō'dēf'), castle built in 1524 on the small rocky isle of If, in the Mediterranean Sea off Marseilles, SE France. Long used as a state prison, it was made famous by Alexandre Dumas's *Count of Monte Cristo*.

Chateaugay, river, c. 50 mi (80 km) long, rising in Chateaugay Lake in the Adirondacks, NE NY, and flowing through Quebec to empty into the St. Lawrence 10 mi (16 km) below Montreal, opposite the mouth of the Ottawa River. In the War of 1812 the battle of Chateaugay was fought (1813) on the banks of the river in Quebec between an American invading force of 7,000 under Gen. Wade Hampton and some 750 Canadians and Indians. The Americans were defeated and had to abandon their plan to attack Montreal.

Château-Renault, François Louis Rousselet, marquis de (fraNswā' lwē rōōsēlā' markē' dā shatō'-ranō'), 1637–1716, French vice admiral and marshal. He escorted the deposed king of England, James II, to Ireland (1689), fought against the Anglo-Dutch fleet at Beachy Head (1690), and commanded the Franco-Spanish fleet that was destroyed (1702) at Vigo.

Châteauroux (shatōrōō'), city (1968 pop. 51,201), capital of Indre dept., central France, on the Indre River. It has textile, metal, and food-processing industries. Châteauroux grew around a 10th-century castle built by the lords of Deols. Historic buildings in the city include the Église des Cordeliers (a former church that is now a jewelry museum) and the church of St. Martial (12th–16th cent.).

Château-Thierry (shatō'-tyērē'), town (1968 pop. 11,629), Aisne dept., N France, on the Marne River. The town was the focal point of the second battle of the Marne (1918), which ended the last German offensive of World War I. An imposing monument to the U.S. soldiers who fought in the battle is just outside the town. The birthplace of Jean de La Fontaine is preserved as a museum.

Châtellerauld (shatēlrō'), town (1968 pop. 36,642), Vienne dept., W central France. It is an industrial center where armaments, cutlery, camping equipment, plywood, and clothing are produced. There are many buildings dating from the 15th to the 17th cent. in the old part of town, including the house (now a museum) where René Descartes spent his childhood.

Chatham, William Pitt, 1st earl of (chāt'am), 1708–78, British statesman, known as the Great Commoner. A member of a family whose wealth had been made in India, he entered Parliament in 1735. With his older brother he became a member of a group known as "Cobham's cubs" (after their leader Lord Cobham) or the "boy patriots," who opposed the ministry of Sir Robert Walpole, particularly its foreign policy, and supported Frederick Louis, prince of Wales, in his quarrel with King George II. After the fall (1742) of Walpole, Pitt was the leading critic of Lord Carteret (later earl of GRANVILLE) in his conduct of the War of the Austrian Succession. Although detested by the king, Pitt entered the government as postmaster general of the forces in 1746 and won great popularity by his unusual honesty in refusing the usual perquisites of that office. He was dismissed in 1755, but the early disasters in the SEVEN YEARS WAR gave him such an opportunity to denounce government policies in his eloquent speeches that in 1756 George II was forced to call on him to become a secretary of state. The next year he formed a coalition ministry with Thomas Pelham-Holles, duke of NEWCASTLE. Pitt wished to conduct the war primarily against the French to win imperial supremacy, a policy popular with the mercantile in-

terests and with the generally anti-French public. His subsidies to Frederick II of Prussia, his efficient handling of military supplies, his shrewd choice of commanders, his insistence on naval expansion, and his ability to raise English morale resulted in the defeat of the French power in India and the capture of the French provinces in Canada. After the accession of GEORGE III, however, Pitt was forced to resign (1761), and he fiercely denounced the terms of the Treaty of Paris (1763), by which the war was concluded. He joined the opposition in protesting the prosecution (1763) of John Wilkes and the imposition of the STAMP ACT (1765) on the American colonies. In 1766, Pitt was recalled to office as lord privy seal, accepted the title earl of Chatham, and formed such a broadly based ministry that it was soon impossibly divided. Troubled by increasing mental illness and gout, Chatham exercised little control over this administration, and his chancellor of the exchequer, Charles TOWNSHEND, not only sabotaged his plans to reorganize the East India Company but passed the ill-fated TOWNSHEND ACTS (1767). In virtual retirement from 1767, he resigned office in 1768. In his rare speeches in the House of Lords thereafter, he urged conciliation of the American colonies, and after the outbreak of the American Revolution he favored any peace settlement short of granting the colonies independence. On this issue he broke with the Whigs, and his last speech was a plea against the disruption of the empire he had done so much to build. At its conclusion he collapsed and was carried home to die. Proud, dramatic, and patriotic, Chatham excelled as a war minister and orator. He was the father of William Pitt. See biographies by Basil Williams (1913, repr. 1966), O. A. Sherred (1952), J. H. Plumb (1953, repr. 1965), and J. W. Derry (1962), D. A. Winstanley, *Lord Chatham and the Whig Opposition* (1912, repr. 1966).

Chatham, city (1971 pop. 35,317), S Ont., Canada, E of Detroit, Mich., on the Thames River. It is an industrial center in a rich mixed farming and fruit-raising region.

Chatham, municipal borough (1971 pop. 56,921), Kent, SE England, on the Medway River. Chatham, Rochester, and Gillingham form a contiguous urban area known as the Medway Towns. Chatham is a great naval station, with well-equipped dockyards, dry docks, and shipbuilding and repairing equipment. The Royal Naval Dockyard is the largest installation. The first dockyard was established by Elizabeth I in 1588. There are also flour mills and timber works. The Roman WATLING STREET ran through Chatham.

Chatham Island, see SAVAI.

Chatham Islands, island group (1968 est. pop. 500), 373 sq. mi (966 sq. km), South Pacific, c. 425 mi (680 km) E of New Zealand, to which it belongs. The two largest islands are Chatham Island, which has a large central lagoon, and Pitt Island. The chief town is Waitangi, on Chatham Island. The inhabitants engage mainly in sheep raising, sealing, and fishing. The islands were discovered by Britons in 1791. The native Moriori population was nearly exterminated when Maoris from New Zealand invaded in 1830.

Châtillon, Sébastien, see CASTILLON, SÉBASTIEN.

Châtillon-sur-Seine (shatēyōN'-sur-sēn), town (1968 pop. 6,746), Côte d'Or dept., N central France, in Burgundy, on the Seine River. It was a residence of the early dukes of Burgundy and has a 10th-century church. The town was the site of unsuccessful peace negotiations (1814) between Napoleon I and his opponents.

Chatsworth, estate, Derbyshire, central England, near Chesterfield. It is the seat of the dukes of Devonshire. The present Chatsworth House was begun in 1687. Its gardens, libraries, picture galleries, and collections of sculpture are noted.

Chattahoochee, river, 436 mi (702 km) long, rising in N Ga., and flowing generally south to join the Flint River in Lake Seminole on the Ga.-Fla. line, the combined waters form the Apalachicola River, c. 90 mi (140 km) long, which flows S to Apalachicola Bay, NW Fla. The Jim Woodruff Dam impounds Lake Seminole and has a capacity of 30,000 kw of electricity. The Columbia, Walter F. George, Bartlett's Ferry, and Goat Rock dams produce power and regulate navigation on the Chattahoochee. Buford Dam forms Lake Sidney Lanier (used for recreation) and is the source of Atlanta's water supply. The Flint River, 330 mi (531 km) long, rising in W central Georgia, is navigable to Bainbridge, Ga., and is a valuable source of power in W Georgia.

Chattanooga (chātānōō'gā), city (1970 pop. 119,082), seat of Hamilton co., E Tenn., on both sides of the Tennessee River near the Georgia line, inc.

1839 It is a port of entry and an important manufacturing and marketing center for a widespread area. Foremost among its many manufactures are textile and metal products, chemicals, and primary metals. It is also a resort center, almost entirely surrounded by mountains, with many historical and tourist attractions on or near Lookout Mt., Missionary Ridge, and Signal Mt. West of the city, the Tennessee River cuts through the Cumberland Plateau in a magnificent gorge, c 1,000 ft (300 m) deep. The Cherokees were defeated on this site in 1794, and a trading post was established in 1810, followed by the Brainerd mission in 1817. Regular steamship service began in 1835. A center first of salt shipping and then of cotton shipping, the city expanded with the arrival of the railroads in the 1840s and 50s. It was of great strategic importance in the Civil War (see CHATTANOOGA CAMPAIGN). Northern industrialists developed the iron industry there during the 1870s. Electric power, augmented by the Tennessee Valley Authority project after 1933, has played an important role in the city's development. Chickamauga Dam is nearby. Southeast and southwest of the city lies Chickamauga and Chattanooga National Military Park (est. 1890), part of which lies in Georgia. Other points of interest include the Rock City Gardens, with unusual lichen-covered sandstone formations, a wildlife sanctuary, historic cemeteries, and numerous old buildings. A U.S. coast guard station is on Lake Chickamauga. The Univ. of Tennessee at Chattanooga is there. Adolph S. Ochs owned the *Chattanooga Times* from 1878 until his death.

Chattanooga campaign, Aug.-Nov., 1863, military encounter in the American Civil War. Chattanooga, Tenn., which commanded Confederate communications between the East and the Mississippi River and was also the key to loyal E. Tennessee, had been an important Union objective as early as 1862 (see BUELL, DON CARLOS). In 1863, the Union general William ROSECRANS, commanding the Army of the Cumberland, forced Braxton BRAGG to withdraw his Confederate army from middle Tennessee (June-Aug.) and maneuvered him out of Chattanooga (Aug. 16-Sept. 8). Deceived into believing that Bragg was retreating upon Atlanta, Rosecrans pursued and was trapped by the Confederates at Chickamauga Creek, c 12 mi (20 km) S of Chattanooga. Strengthened by James Longstreet's corps, which had traveled some 650 mi (1,050 km) from Lee's army through Virginia and the Carolinas to join him, Bragg routed the Union right at the Battle of Chickamauga (Sept. 19-20). He could not crush the Union left under George H. THOMAS, however. Thomas held off the enemy until Rosecrans ordered him to withdraw to Chattanooga. Bragg then took up a position extending along Missionary Ridge across Chattanooga Valley to Lookout Mt. and laid siege to the town. In a historic movement, Joseph Hooker and two corps from the Army of the Potomac circled nearly 1,200 mi (1,900 km) via Indianapolis to bolster the Union forces. But Rosecrans had lost control of the situation, and an alarmed Federal administration at Washington called for U.S. GRANT, who arrived at Chattanooga on Oct. 23, 1863. Generals W. F. Smith and Joseph Hooker executed a coup (Oct. 26-29) that restored a sorely needed supply line on the Tennessee River, so Grant was ready to move by late November. Sherman, who had brought up reinforcements from Vicksburg, commanded the left, Thomas, the center, and Hooker, the right. Bragg's forces had been weakened by the departure of Longstreet on an unsuccessful expedition to Knoxville. On Nov. 24, Hooker drove the Confederates from Lookout Mt. in the Battle above the Clouds. On Nov. 25, Sherman could make no headway against Missionary Ridge from its northern end, so Grant ordered the center to advance. Thomas's men—Philip Sheridan conspicuous among them—displayed great courage and boldness, proceeding to carry Bragg's position at the top, where Hooker's forces joined them in routing the Confederates. By nightfall Bragg was in full retreat to Georgia. The victory left Chattanooga in Union hands for the rest of the war. See study by M. H. Fitch (1971), Fairfax Downey, *Storming of the Gateway* (1960, repr. 1969).

chattel (chăt'al), in law, any property other than a freehold estate in land (see TENURE). A chattel is treated as personal property rather than real property regardless of whether it is movable or immovable (see PROPERTY). Certain uses of the term (e.g., chattel mortgage) refer only to movable property. Otherwise the term also includes chattels real, i.e., those estates in land that do not constitute a freehold.

Chatterjee, Bankim Chandra (bang'kīm chūn'dra chā'tarjē), 1838-94, Indian nationalist writer, b. Bengal. He popularized a Bengali prose style that became the vehicle of the major nationalist literature of the region. Born a Brahman, he received an English education and his first novel was written in English. In 1872 he founded the *Bangadarshan*, a journal modeled on the *Spectator*. Chatterjee, who frequently used the pseudonym Ramchandra, wrote many novels that wedded political and philosophical commentary with historical romance. His favorite theme—India as a divine motherland—did much to reinforce Hindu orthodoxy and alienate the Indian Muslims. *Bandemataram* (Hail to the Mother), the title of a song in his novel *Anandamath* (1882), became a slogan of the Indian National Congress. The song was ultimately adopted as the Indian national anthem. Other writings include *The Poison Tree* (tr. 1884) and *Krishna Kanta's Will* (tr. 1895).

Chatterton, Thomas, 1752-70, English poet. The posthumous son of a poor Bristol schoolmaster, he was already composing the "Rowley Poems" at the age of 12, claiming they were copies of 15th-century manuscripts at the Church of St. Mary Redcliffe, Bristol. In 1769 he sent several of these poems to Horace Walpole, who was enthusiastic about them. When Walpole was advised that the poems were not genuine, he returned them and ended the correspondence. After this crushing defeat, Chatterton went to London in 1770, trying, with small success, to sell his poems to various magazines. On the point of starvation, too proud to borrow or beg, he poisoned himself and died at the age of 17. An original genius as well as an adept imitator, Chatterton used 15th-century vocabulary, but his rhythms and his approach to poetry were quite modern. The "Rowley Poems" were soon recognized as modern adaptations written in a 15th-century style, but the vigor and medieval beauty of such poems as "Mynstrelles Song" and "Bristowe Tragedie" revealed Chatterton's poetic genius. This gifted, rebellious youth later became a hero to the romantic and Pre-Raphaelite poets, several of whom, notably Keats and Coleridge, wrote poems about him. See his complete works, ed. by D. S. Taylor with B. B. Hoover (2 vol., 1971), biographies by E. H. W. Meyerstein (1930, repr. 1972) and John C. Nevill (1948, repr. 1973).

Chaucer, Geoffrey (jā'f'rē chōs'ər), c 1340-1400, English poet, one of the most important figures in English literature. The known facts of Chaucer's life are fragmentary and are based almost entirely on official records. He was born in London between 1340 and 1344, the son of John Chaucer, a vintner. In 1357 he was a page in the household of Prince Lionel, later duke of Clarence, whom he served for many years. In 1359-60 he was with the army of Edward III in France, where he was captured by the French but ransomed. By 1366 he had married Philippa Roet, who was probably the sister of John of Gaunt's third wife; she was a lady-in-waiting to Edward III's queen. During the years 1370 to 1378, Chaucer was frequently employed on diplomatic missions to the Continent, visiting Italy in 1372-73 and in 1378. From 1374 on he held a number of official positions, among them comptroller of customs on furs, skins, and hides for the port of London (1374-86) and clerk of the king's works (1389-91). The official date of Chaucer's death is Oct. 25, 1400. He was buried in Westminster Abbey. Chaucer's literary activity is often divided into three periods. The first period includes his early work (to 1370), which is based largely on French models, especially the *ROMAN DE LA ROSE* and the poems of Guillaume de Machaut. Chaucer's chief works during this time are the *Book of the Duchess*, an allegorical lament written in 1369 on the death of Blanche, wife of John of Gaunt, and a partial translation of the *Roman de la Rose*. Chaucer's second period (up to c 1387) is called his Italian period because his works then were modeled primarily on Dante and Boccaccio. His major works of the second period include *The House of Fame*, recounting the adventures of Aeneas after the fall of Troy, *The Parliament of Fowls*, which tells of the mating of fowls on St. Valentine's Day and is thought to celebrate the betrothal of Richard II to Anne of Bohemia, a prose translation of Boethius' *De consolazione philosophiae*, the unfinished *Legend of Good Women*, a poem telling of nine classical heroines, which introduced the heroic couplet (two rhyming lines of iambic pentameter) into English verse, the prose fragment, *The Treatise on the Astrolabe*, written for his son Lewis, and *Troilus and Criseyde*, based on Boccaccio's *Filostato*, one of the great love poems in the English language

(see *TROILUS AND CRESSIDA*). In *Troilus and Criseyde*, Chaucer perfected the seven-line stanza later called rhyme royal. To Chaucer's final period, in which he achieved his fullest artistic power, belongs his masterpiece, *The Canterbury Tales* (written mostly after 1387). This unfinished poem, about 17,000 lines, is one of the most brilliant works in all literature. The poem introduces a group of pilgrims journeying from London to the shrine of St. Thomas à Becket at Canterbury. To help pass the time they decide to tell stories. The pilgrims together represent a wide cross section of 14th-century English life. Their tales include a variety of medieval genres from the humorous fabliau to the serious homily, and they vividly indicate medieval attitudes and customs in such areas as love, marriage, and religion. Through Chaucer's superb powers of characterization the pilgrims—such as the earthy wife of Bath, the gentle knight, the worldly prioress, the evil summoner—come intensely alive. Chaucer was a master storyteller and craftsman, but because of a change in the language after 1400, his metrical technique was not fully appreciated until the 18th cent. Only in Scotland in the 15th and 16th cent. did his imitators understand his versification. The best editions of Chaucer's works are those of F. N. Robinson (1933) and W. W. Skeat (7 vol., 1894-97), of *The Canterbury Tales*, that of J. M. Manly and Edith Rickert (8 vol., 1940), of *Troilus and Criseyde*, that of R. K. Root (1926). See Charles Muscatine, *Chaucer and the French Tradition* (1960), G. G. Coulton, *Chaucer and his England* (1950, repr. 1963), M. A. Bowden, *A Reader's Guide to Geoffrey Chaucer* (1964), G. G. Williams, *A New View of Chaucer* (1965), Maurice Hussey et al., *Introduction to Chaucer* (1965), D. W. Robertson, Jr., *Chaucer's London* (1968), G. L. Kitzredge, *Chaucer and His Poetry* (1915, repr. 1970), Ian Robinson, *Chaucer's Prosody* (1971) and *Chaucer and the English Tradition* (1972), P. M. Kean, *Chaucer and the Making of English Poetry* (2 vol., 1972). Bibliographies for 1908 to 1953 by D. D. Griffith (rev. ed. 1954) and for 1954 to 1963 by W. R. Crawford (1967).

Chaudière (shōdyēr'), river, 115 mi (185 km) long, rising in Lac Mégantic, SE Que., Canada, near the Maine-Que. boundary and flowing generally N to the St. Lawrence River opposite the city of Quebec. A hydroelectric power plant at Chaudière Falls (130 ft/40 m high) supplies electricity to the Quebec city region.

Chaudière Falls, in the Ottawa River in the heart of the city of Ottawa, Ont., Canada. The river is narrowed by rocky cliffs to a width of c 200 ft (60 m) and drops 50 ft (15 m) in a series of cascades. Several bridges cross the river there, passing over the falls.

Chauliac, Guy de (gē da shōlyāk'), c 1300-1368, French surgeon. At Avignon he was physician to Pope Clement VI and to two of his successors. His *Chirurgia magna* (1363) was used as a manual by physicians for three centuries.

Chaumette, Pierre Gaspard (pyēr gāspār' shō-mēt'), 1763-94, French Revolutionary. A member of the *CORDELIERS*, he collaborated with Jacques HÉBERT to eliminate the royalists and to introduce (1793) the cult of Reason. Chaumette was general prosecutor (1792-94) and a chief leader of the Commune of Paris. Although he instituted social and moral reforms, his private life is reputed to have been less than pure. When Maximilien Robespierre turned upon the Hébertists, Chaumette tried in vain to escape the guillotine by renouncing Hébert.

Chaumonot, Joseph Marie (zhōzēf' mārē' shōmōnō'), 1611-93, French Jesuit missionary to the New World. He arrived in 1639 in Quebec. He worked first with BRÉBEUF among the Huron Indians near Georgian Bay until the time of the massacres and destruction by the Iroquois (1649), he escaped and led 400 Huron to the reservation appointed for them on the Île d'Orléans at Quebec. He next went into central New York to preach to the Iroquois (1655-58) and then returned to Quebec, where he remained. His autobiography is important, and his Huron grammar is unique.

Chaumont (shōmōn'), town (1968 pop. 27,569), capital of Haute-Marne dept., NE France, in Champagne, at the confluence of the Marne and Saône rivers. It is a railroad and light industrial center. Iron is mined nearby. The Treaty of Chaumont, signed on March 1, 1814, by England, Russia, Prussia, and Austria, laid the foundation for the HOLY ALLIANCE.

Chauncy, Charles, 1705-87, American Congregational clergyman, b. Boston. He was ordained as a minister of the First Church, Boston, in 1727 and remained in that pulpit for 60 years. Next to Jonathan Edwards, his great opponent, Chauncy was

probably the most influential clergyman of his time in New England. As an intellectual he distrusted emotionalism and opposed the revivalist preaching of the GREAT AWAKENING in his *Seasonable Thoughts on the State of Religion in New England* (1743) and other pamphlets. He became the leader of the "Old Lights" or liberals in theology in the doctrinal disputes following the Great Awakening. He was also the leader in the opposition to the establishment of an Anglican bishopric in the American colonies, writing his *Complete View of Episcopacy* (1771) and other works on the subject. A firm believer in the colonial cause, he clearly set forth the political philosophy of the American Revolution in sermons and pamphlets during the period. After the war he defended the doctrine of Universalism in two anonymous tracts *Salvation for All Men* (1782) and *The Mystery Hid from Ages and Generations* (1784). See Williston Walker, *Ten New England Leaders* (1901, repr. 1969).

Chausson, Ernest Amédée (ěrněš' amādă' shōsōn'), 1855-99, French composer. His various compositions reflect the influence of Cesar Franck and also suggest Debussy. Of his songs, perhaps the best known are *Les Heures* (1896) and *Oraison* (1896). His *Symphony in B Flat Major* is popular, and his *Jardin aux lilas* has been used for a ballet. He also wrote chamber music, church music, and poetic pieces for violin and for piano. See biography by J. P. Barricelli (1955, repr. 1973).

Chautauqua Lake, 18 mi (29 km) long and from 1 to 3 mi (1.6-4.8 km) wide, W N.Y., near Lake Erie, in a resort area. Grapes and other fruits are grown in the region.

Chautauqua movement, development in adult education somewhat similar to the LYCEUM movement. It derived its name from the institution at Chautauqua, N.Y. There, in 1873, John Heyl VINCENT and Lewis Miller proposed to the Methodist Episcopal camp meeting they were attending that secular as well as religious instruction be included in the summer Sunday-school institute. Established on that basis in 1874, the institute developed into an eight-week summer program, offering courses to adults in the arts, sciences, and humanities. Thousands attended the institution each year. For those who could not attend, there were courses for home study groups, and lecturers were sent out to supplement the material furnished from the organization's publishing house. Other communities were inspired to form local Chautauquas, and possibly two or three hundred were organized, though few were so successful as the original. To lecture to their members these local groups brought authors, explorers, musicians, and political leaders, and a variety of entertainment was furnished. The Chautauquas had something of the spirit of the revival meeting and something of the county fair. In 1912 the movement was organized commercially, and lecturers and entertainers were furnished to local groups on a contract basis. This commercial endeavor was extremely successful, persisting until c. 1924, soon after that the circuits ended, although the assembly at Chautauqua continued with a diminished membership. See J. H. Vincent, *The Chautauqua Movement* (1886, repr. 1971), A. E. Bestor, *Chautauqua Publications* (1934), Rebecca Richmond, *Chautauqua: an American Place* (1934), Gay McLaren, *Morally We Roll Along* (1938), Victoria Case and R. O. Case, *We Called It Culture: The Story of Chautauqua* (1948, repr. 1970), J. E. Gould, *The Chautauqua Movement* (1961).

Chautemps, Camille (kamě'ya shōtan'), 1885-1963, French politician. A Radical Socialist leader, he was premier in 1930 and in 1933-34, when the STAVISKY AFFAIR (in which he was not directly implicated) caused his resignation. A member of the first Popular Front cabinet of Socialists and Communists (1936-37) under Leon Blum, he headed the second, less radical, Popular Front cabinet (1937-38). Vice premier of the Vichy government, Chautemps came (1940) to the United States on a mission and did not return to France. He was subsequently expelled from the Radical party. In 1947 he was tried and convicted in absentia for collaborating with the Vichy regime. In 1954 his sentence was voided by the *statute of limitations*.

Chauveau, Pierre Joseph Olivier (pyě zhōzě' ôlěvya' shōvō'), 1820-90, French Canadian educator and politician, prime minister of Quebec (1867-73), b. Quebec. He became superintendent of education (1855) in Lower Canada. During his tenure normal schools were established and separate schools were created for English-speaking and French-speaking students. With the achievement of confederation

(1867), Chauveau became the first prime minister of the province of Quebec. He also held the portfolios of minister of education and provincial secretary. In 1873 he was appointed to the Canadian Senate, of which he was speaker (1873-74). In 1878 he became professor of Roman law at Laval Univ. Chauveau wrote the novel *Charles Guern* (1852), several biographies, poetry, and essays, including *L'Instruction publique du Canada* (1876).

chauvinism (shō'vānizəm), word derived from the name of Nicolas Chauvin, a soldier of the First French Empire. Used first for a passionate admiration of Napoleon, it now expresses exaggerated and aggressive nationalism. As a social phenomenon, chauvinism is essentially modern, becoming marked in the era of acute national rivalries and imperialism beginning in the 19th cent. It has been encouraged by mass communication, originally by the cheap newspaper. Chauvinism exalts consciousness of nationality, spreads hatred of minorities and other nations, and is associated with militarism, imperialism, and racism. In the 1960s, the term "male chauvinist" appeared in the women's liberation movement, it is applied to males who refuse to regard females as equals.

Chaux-de-Fonds, La (la shō-dā-fōn'), city (1971 pop. 42,347), Neuchâtel canton, NW Switzerland, in the Jura mts., near the French border. It is one of the largest watch-manufacturing centers in Switzerland.

Chavannes, Puvis de: see PUVIS DE CHAVANNES

Chávez, Carlos (kar'lōs sha'vās), 1899-, Mexican composer and conductor. In 1928, Chavez established the Symphony Orchestra of Mexico, which he conducted until 1949. He was also director (1928-34) of the National Conservatory of Music, where he radically reformed the curriculum. He used elements of Mexican Indian music and Indian instruments in his *Xochipilli Maculxochitl* (1940). The influence of Stravinsky is evident in several of his strongly rhythmic works. His most important compositions include the ballet *El fuego nuevo* (1921), the ballet-symphony *H.P. [horsepower]* (1926-27), *Sinfonia Antígona* (1933), a piano concerto (1938-40), a violin concerto (1948-50), the Fourth and Fifth symphonies (both 1953), and *Invention*, for string trio (premiere, 1965). Chávez is the author of *Toward a New Music* (1937) and *Musical Thought* (1961).

Chavez, Cesar Estrada (sā'sar āstrā'tha sha'vās), 1927-, American agrarian labor leader, b. near Yuma, Ariz. A migrant worker, he became involved (1952) in the self-help Community Service Organization (CSO) in California, working among Mexicans and Mexican-Americans, from 1958 to 1962 he was its general director. In 1962, he left the CSO to organize wine grape pickers in California and formed the National Farm Workers Association. Using strikes, fasts, picketing, and marches, he was able to obtain contracts from a number of major growers. In 1966 his organization merged with the Agricultural Workers Organizing Committee of the AFL-CIO to form the United Farm Workers Organizing Committee of the AFL-CIO. Chavez also launched (1968) a boycott against the table grape growers, mobilizing consumer support throughout the United States. In 1972 the United Farm Workers (UFW), with Chavez as president, became a member union of the AFL-CIO. Chavez expanded its efforts to include all California vegetable pickers and launched a lettuce boycott, as well as extending his organizational efforts to Florida citrus workers. His successes in California were sharply diminished, however, as the result of a jurisdictional dispute with the International Brotherhood of Teamsters over the organization of field workers, in 1973 the Teamsters cut heavily into UFW membership by signing contracts with former UFW grape growers, but Chavez renewed the grape workers' strike.

Chavin de Huantar (chavēn' dā wan'tar), archaeological site in the northeastern highlands of Peru. It was probably the chief ceremonial and urban center of the earliest civilization (fl. c. 700 B.C. - c. 200 B.C.) of the Andes, now called the Chavín. Highly developed and sophisticated, the Chavín built large temples with painted relief sculpture of mythical beasts, and produced boldly designed ceramics, gold objects, and textiles. See J. Alden Mason, *Ancient Civilizations of Peru* (1961), J. H. Rowe, *Chavin Art: An Inquiry into Its Form and Meaning* (1962), E. P. Benson, ed., *Dumbarton Oaks Conference on Chavin*, 1968 (1971).

Chaykovsky, Nikolai Vasilyevich (nyikālī' vasē-lyavich chikō'skē), 1850-1926, Russian socialist. As a student in St. Petersburg he joined (1869) a utopian socialist student group (later known as the "Chay-

kovsky circle") that influenced the development of the Narodniki (populist) movement. He emigrated to the United States and established (1875) a utopian community in Kansas. It failed, and Chaykovsky moved (1880) to England, becoming active in radical émigré activities but also coming under the influence of western notions of liberal democracy. In 1905 he returned to Russia and devoted himself to promoting the cooperative movement, also becoming a leader of the People's Socialist party. After the Bolshevik revolution he headed (1918-19) the anti-Bolshevik government at Archangel under the auspices of the Allied expeditionary force. He died in exile in Paris. The name is variously spelled Chaykovsky, Tchaikovsky, and Tschaykovsky.

Chazars: see KHAZARS

Cheadle and Gatley (chē'dal, gāt'lē), urban district (1971 pop. 60,648), Cheshire, NW England. The district is both residential and industrial. Industries include engineering works and the manufacture of chemicals, drugs, and bricks. It has a 17th-century hall and a church with a 16th-century nave and two chapels. In 1974, Cheadle and Gatley became part of the new metropolitan county of Greater Manchester.

Cheaha (chē'hō), peak, 2,407 ft (734 m) high, E Ala., in the Talladega Mts., highest point in Alabama. It is included in Talladega National Forest.

Cheb (khēp), Ger. Eger, city (1970 pop. 26,051), NW Czechoslovakia, in Bohemia, near the West and East German borders. A commercial and manufacturing center in a lignite-mining area, Cheb has industries producing woolen textiles, machinery, watches, and optical goods. The city is also an important railroad junction, serving Karlovy Vary and other famous spas nearby. Originally a Slavic village, Cheb was contested and alternately ruled (12th-14th cent.) by Bohemia and by the German emperors. It was finally incorporated into Bohemia in 1322 by John of Luxembourg. The city, which suffered greatly during the Hussite Wars, retained a privileged status until the 16th cent. Industrialization and the coming of the railroad stimulated rapid growth in the 19th cent. Present-day landmarks include the ruins of a 12th-century castle, two 13th-century monasteries, and the 17th-century castle in which Wallenstein was murdered in 1634.

Chebar (kē'bar), river of Mesopotamia, by which captive Jews were settled. Ezek. 1:3, 3:15.

Cheboksary (chēbōksa'rē), city (1970 pop. 216,000), capital of Chuvash Autonomous SSR, NW European USSR, a port on the Volga River. It is the center of an agricultural region and the site of a hydroelectric station. Founded in the 14th cent. as a fortress, the city has a 17th-century cathedral.

Chechaouen (shīshō'wān) or **Xauen** (hou'ān), town (1960 pop. 13,712), N Morocco, in the Rif Mts. Because Chechaouen is a holy city of Islam, its people long discouraged Christian visitors. It was founded c. 1471 as a bulwark against the Portuguese in Ceuta. Captured by the Spanish in 1920, the town fell (1924) to Abd el-Krim in the Rif War.

Chechen-Ingush Autonomous Soviet Socialist Republic (chichēn'-inggōsh'), autonomous republic (1970 pop. 1,065,000), 7,452 sq mi (19,301 sq km), SE European USSR, in the N Caucasus. GROZNY is the capital. The Grozny fields represent a major source of Soviet oil; the republic also has sizable deposits of natural gas, limestone, marl, gypsum, alabaster, and sulfur. Mineral waters make the region an important health center. Agriculture is concentrated mainly in the valleys of the Terek and the Sunzha, the republic's chief rivers. The republic's industries include oil refining, food processing, wine and cognac making, fruit canning, and the manufacture of chemicals and oil field equipment. The population, which is concentrated in the mountain foothills, consists of Russians, Chechen, and Ingush. More than 40% of the population is urban. Both the Chechen and Ingush are Sunni Muslims and speak a Caucasian language. Known since the 17th cent., the Chechen became the most active opponents of czarist Russia's conquest and occupation (1818-1917) of the Caucasus. They fought the Russians bitterly during the SHAMYL rebellion until its collapse in 1859. The Ingush, who first settled in the lowlands in the 17th cent., were for a long time not distinguished from the Chechen. The Bolsheviks seized the region in 1918 but were dislodged the following year by counterrevolutionary forces under Gen. A. I. Denikin. With Soviet power reestablished, the area was included in 1921 in the Mountain People's Republic. The Chechen Autonomous Oblast was created in 1922 and the Ingush Autonomous Oblast in

1924, the two were joined in 1934 to form the Chechen-Ingush Autonomous Oblast, which became an autonomous republic in 1936. As a result of collaboration by Chechen and Ingush units with the invading Germans during World War II, many Chechen and Ingush were deported (1944) to Central Asia after Soviet forces drove the Germans out of the Caucasus. The deportees were returned to the Caucasus in 1956, and the republic was reestablished in 1957.

Che-chiang: see CHEKIANG, province, China

check or cheque, bill of exchange (see DRAFT) drawn upon a bank or trust company or broker connected with a clearinghouse (see CLEARING). Upon presentation of a check, the bank or other drawee pays cash to the bearer or to a specified person. Payment is made from those funds of the maker or drawer that are in a primary demand deposit account (checking account) with the drawee. The check is intended for prompt presentation, rather than for use as a continuing currency. When the check is presented, the drawee pays the designated sum to the holder and cancels the check, which is then returned to the drawer as his receipt. To prevent fraud, checks are usually of tinted paper and are filled in with ink, the figures may be punched out of the paper or embossed. Many checks also have identifying code numbers that have been printed with magnetically active ink. The numbers enable banks to clear checks mechanically and thereby speed up operations. Whether or not the check will be paid by the bank depends upon its recognition of the drawer's signature and upon the bank's confidence in the person presenting the check for payment. A bank becomes primarily liable for payment only when it "certifies" on a check that the necessary funds are in the bank to the credit of the drawer. However, a bank is usually responsible to its depositor for paying forged checks. All local checks accepted by a bank are turned over daily to a clearinghouse, which cancels checks due from and to all banks of a given neighborhood, the balances alone being paid in cash. Banks settle out-of-town checking claims by means of entries made in the books of the appropriate Federal Reserve banks. Checks were probably used in Italy in the 15th cent. and in Holland in the 16th, from where their use spread to England and the American colonies in the 17th cent. Their rise to first place as a medium of exchange in industrialized nations took place in the 19th cent., their importance varying with differences in banking facilities, the density of population, and commercial activity. About 90 percent of all transactions in the United States are said to be effected by checks.

checkerberry: see WINTERGREEN

checkers, game for two players, known in England as draughts. It is played on a square board, divided into 64 alternately colored—usually red and black or white and black—square spaces, identical with a chessboard. Each player is provided with 12 pieces (in the form of disks) of his own color, and all play is conducted on the black squares. Players sit on opposite sides of the board and alternately move their pieces diagonally in a forward direction. Upon reaching the last rank of the board, pieces are "crowned," and the kings may move both backwards and forwards diagonally. The object is to eliminate from play the opponent's pieces by "jumping" them. The game has been played in Europe since the 16th cent., and the ancients played a similar game. See Edward Lasker, *Chess and Checkers: The Way to Mastery* (3d ed. 1960), Thomas Wiswell, *The Science of Checkers and Draughts* (1973).

Cheddar, village, Somerset, SW England. It is chiefly a tourist center. Limestone is quarried, and straw-berries are grown. Nearby Cheddar Gorge towers c 400 ft (120 m) high, with imposing limestone cliffs and numerous caves from which relics of prehistoric man have been excavated. The town gives its name to the famous cheese, which has been made there since at least the 16th cent.

Cheddar cheese, hard rennet cheese. It has been a noted product of Cheddar, district of Somerset, England, for over three centuries and is now made in many other countries, especially Australia, Canada, New Zealand, and the United States.

Chedorlaomer (kēd'arī'ōmār, -lāō'-), king of Elam. With him were allied Amraphel, king of Shinar, Arioch, king of Ellasar, and Tidal, "king of nations." They attacked the Cities of the Plain and were pursued and slain by Abraham. Gen. 14:1-16.

Cheektowaga (chēk'tōwā'gə), uninc. town (1970 pop. 113,844), Erie co., W. N.Y., E. of Buffalo.

cheese, food known from ancient times and consisting of the curd of milk separated from the whey. The milk of various animals has been used in the making of cheese: the milk of mares and goats by the ancient Greeks, camel's milk by the early Egyptians, and reindeer's milk by the Laplanders. Sheep's milk and goat's milk are still widely used, but cow's milk is most common. The milk may be raw or pasteurized, sweet or sour, whole, skimmed, or with cream added. The chief milk protein, casein, is coagulated by the enzyme action of RENNET or pepsin, by lactic acid produced by bacterial action, or by a combination of the two. The draining off of the whey (milk serum) is facilitated by heating, cutting, and pressing the curd. The yield of cheese is usually about 10 lb per 100 lb of milk and is higher for the soft cheeses, which retain more moisture. The numerous cheeses (often named for their place of origin) depend for their distinctive qualities on the kind and condition of the milk used, the processes of making, and the method and extent of curing. They may be divided into two classes, hard cheeses, which improve with age under suitable conditions, and soft cheeses, intended for immediate consumption. Very hard cheeses include PARMESAN and Romano, among the hard cheeses are CHEDDAR, Edam, Emmental, Gouda, Gruyere, Provolone, and Swiss. The semisoft cheeses include brick, Gorgonzola, Limburger, ROQUEFORT, Muenster, and STILTON, some of the soft cheeses are Brie, CAMEMBERT, COTTAGE, Neufchâtel, and ricotta. Microorganisms introduced, or permitted to develop, in cheese during the ripening process impart distinctive flavors and textures. Roquefort, Stilton, and Gorgonzola owe their bluish marbling to molds, Emmental and brick are ripened by bacteria that produce gas, which is entrapped in the curd and thus forms holes. Limburger attains a creamy consistency through bacteria-ripening. During the curing period the casein is broken down into a more digestible form by enzyme action. Cheese is valuable in the diet as a source of protein, fat, insoluble minerals (calcium, phosphorus, sulfur, and iron), and, when made from whole milk, vitamin A. Process cheese is a blend of young and ripened cheeses or of different varieties, ground, heated with water and up to 3% of emulsifying salts, and poured into molds, usually loaf-shaped. It is often homogenized and pasteurized. Cheese, especially in the United States, is increasingly made in the factory by application of the principles of microbiology and chemistry. Wisconsin is the largest producer of cheese in the United States. Whey, a by-product of cheese making, consists of water, lactose, albumin, soluble minerals, fats, and proteins. Formerly wasted or used in livestock feeding, whey is now used for the preparation of milk sugar, lactic acid, glycerin, and alcohol, or is condensed and added to process cheese. It may be made into cheese such as the Scandinavian primost and mysost. See A. L. Simon, *Cheeses of the World* (2d ed. 1965), B. H. Axler, *The Cheese Handbook* (1968).

cheetah (chē'tā), carnivore of the CAT family, *Acinonyx jubatus*, found in Africa S of the Sahara and in SW Asia as far east as India. The cheetah's method of hunting deviates from that of most cats in that it runs down its prey, rather than stalking it and pouncing upon it for the kill. This doglike method of hunting is suited to its habitat, which is open grassland. The swiftest four-footed animal alive, it can achieve bursts of speed of over 60 mi (95 km) per hr and is the only animal capable of running down black bucks and gazelles. It is also unique among cats in having nonretractile claws. An average cheetah is about 2½ ft (75 cm) tall at the shoulder and weighs about 100 lb (45 kg). It has long legs and a tawny coat with closely spaced round black spots. Cheetahs are tamable and have been used for centuries in India for hunting game, they are sometimes called hunting leopards. Formerly numerous all over their range, they are now nearly extinct in India. Cheetahs are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Felidae.

Cheever, John, 1912-, American author, b. Quincy, Mass. His expulsion from Thayer Academy was the subject of his first short story, published by the *New Republic* when he was 17. With meticulously rendered detail, Cheever writes about life in the affluent American suburbs. Although his works are usually comic, his view is that of a moralist, and he finds disintegration and evil in the world of plaid stamps and cocktail parties. There is often a surreal element in his stories. Among his works are the novels *The Wapshot Chronicle* (1957), *The Wapshot Scandal* (1964), and *Bullet Park* (1969), and the

short-story collections *The Brigadier and the Golf Widow* (1964) and *The World of Apples* (1973).

Chefoo: see YEN-T'AI, China

Cheju (chā'jōō), Jap. Saishu, island and province of South Korea (1970 pop. 365,522), c 700 sq mi (1,810 sq km), c 60 mi (100 km) SW of the Korean peninsula. Korea's largest island, Cheju is of volcanic origin and rises to c 6,400 ft (1,950 m) in Halla-san, an extinct volcano. Fishing, dairy farming, and livestock breeding are the chief occupations on the mountainous, heavily wooded island, agriculture is practiced on the slopes and in the valleys. The island was often used as a place of exile. After the Korean War it became a haven for refugees.

Cheka: see SECRET POLICE

Cheke, Sir John, 1514-57, English scholar. As professor of Greek at Cambridge he taught Roger Ascham and later was tutor to Edward VI. A Protestant, he was imprisoned by Mary I. Although most of his works are Latin translations from the Greek, his works in English are noted for their simple, lucid prose.

Chekhov, Anton Pavlovich (chēk'ōf, Rus. antōn' pāv'lavich chē'khav), 1860-1904, Russian short-story writer, dramatist, and physician, b. Taganrog. The son of a grocer and grandson of a serf, Chekhov earned enduring international acclaim for his stories and plays. His early works, broad humorous sketches and tales published under a pseudonym, were written to support himself and his family while he studied for his medical degree in Moscow. Under this strain he contracted tuberculosis, which ravaged him all his life. Chekhov's first large collection, *Motley Stories* (1886), brought him critical respect, it was followed by the collections *At Twilight* (1887) and *Stories* (1888), from which "The Steppe" won for him the Pushkin Prize. Chekhov's many hundreds of stories concern human folly, the tragedy of trivialities, and the oppression of banality. His characters are drawn with compassion and humor in a clear, simple style noted for realistic detail. In his plays as well as his stories Chekhov emphasizes character and mood, his plots describe the desolation of lonely men and the misunderstandings that accrue from self-absorption and desperation. His focus on internal drama was an innovation that had enormous influence on both Russian and foreign writing. Chekhov was an active humanitarian. In 1890 he wrote *The Island of Sakhalin*, a study of the lives of convicts that helped to effect social reform, as a physician he fought two cholera epidemics. Chekhov wrote several farces related to his early stories, but his first major drama to be produced was *Ivanov* (1887). His success as a dramatist was assured when the burgeoning Moscow Art Theatre took his works for their own and built superb productions of them, beginning with *The Seagull* in 1898. They followed this with his masterpieces *Uncle Vanya* (1899), *The Three Sisters* (1901), and *The Cherry Orchard* (1904), his last great work. Among the finest works of Chekhov's later years are his hundreds of letters to notable contemporaries. For the final three years of his life Chekhov was happily married to Olga Knipper, an actress with the Moscow Art company, and although they were often separated, they were together at a German health resort when he died, at 44. Most of Chekhov's works are available in English. Several lesser-known works appear in Avrahm Yarmolinsky, *The Unknown Chekhov* (1954). See his letters, ed. by Simon Karlinsky (1973) and Avrahm Yarmolinsky (1973), biographies by David Magarshack (1952, repr. 1960), E. J. Simmons (1962), and Daniel Gilles (tr. 1968), studies of his prose by T. G. Winner (1966) and V. L. Smith (1973), studies of his plays by Maurice Valency (1966), J. L. Styan (1971), and David Magarshack (1973), critical essays, ed. by R. L. Jackson (1967).

Chekiang (chē'kyāng', jū'jēang'), Mandarin *Che-chiang*, province (1968 est. pop. 31,000,000), c 40,000 sq mi (103,600 sq km), SE China, on the East China Sea. The capital is HANGCHOW. The province includes many islands, notably the CHOU-SHAN ARCHIPELAGO. Except for the level area in the north, which is part of the Yangtze deltaic region, Chekiang is mountainous, with only a few breaks to the heavily indented coast, chiefly at Ning-po and Wenchow. The province is drained by numerous rivers, including the Ch'ien-t'ang (the main river), the Wu, and the Ling. Over one third of the area is forested, pine and bamboo predominate. Most of Chekiang has a wet climate, with a long frost-free period and high summer temperatures. Rice is the leading food crop and tea the major industrial crop. The plains N of Hangchow receive less precipitation and have high cotton, wheat, and hemp production, most of the cotton is woven in Shanghai, although there are tex-

tile mills in Hangchow, the only population center in the province with any significant industry. Rape-seed, corn, and sweet potatoes are also grown. There are tung and mulberry trees, and silk is produced, although nowhere near prewar levels when Chekiang was the country's major silk-producing province. Fishing is extensive, with motorized junks now in use, the Chou-shan island area is one of the richest fishing grounds in China. Iron, aluminum, coal, and fluorspar are mined in the province. Chekiang is served by the Shanghai-Hangchow-Nanch'ang RR, which has a branch to Ning-po. Chekiang, part of the kingdom of Wu, passed into the Chinese orbit in the 3d cent. B.C. It flourished in the 12th and 13th cent. as the center of the Southern Sung dynasty. Originally called Yueh for its local tribes, Chekiang received its present name (the ancient name of the Ch'ien-t'ang River) in the Ming dynasty (1368-1644). It passed to Manchu control in 1645. Chekiang was devastated in the Taiping Rebellion (1850-65), was partly occupied by the Japanese in the Second Sino-Japanese War, and fell to the Communists in 1949. T'ienmu Mt. is a tourist and pilgrimage center, with many temples. Chekiang Univ. is in Hangchow.

Chelal (kē'lāl), Israelite of the return who married a foreign wife. Ezra 10:30.

Chelan, Lake, 55 mi (89 km) long and from 1 to 2 mi (1.6-3.2 km) wide, located in a deep narrow gorge in the Cascade Range, NW Wash., third-deepest freshwater lake in the United States. Fed by streams from the Cascade Range, the lake flows into the Columbia River via the Chelan River. Lake Chelan Dam, built at the lake's outlet, generates electricity. The northern part of the lake is part of the Lake Chelan National Recreation Area (see NATIONAL PARKS AND MONUMENTS, table).

chelating agents. Certain organic compounds are capable of forming coordinate bonds (see CHEMICAL BOND) with metals through two or more atoms of the organic compound, such organic compounds are called chelating agents. The compound formed by a chelating agent and a metal is called a chelate. A chelating agent that has two coordinating atoms is called bidentate, one that has three, tridentate, and so on. EDTA, or ethylenediaminetetraacetate, $(\text{O}_2\text{CH}_2)_2\text{NCH}_2\text{CH}_2\text{N}(\text{CH}_2\text{CO}_2^-)_2$, is a common hexadentate chelating agent. Chlorophyll is a chelate that consists of a magnesium ion joined with a complex chelating agent, heme, part of the hemoglobin in blood, is an iron chelate. Chelating agents are important in textile dyeing, water softening, and enzyme deactivation and as bacteriocides.

Chélif (shā'lēf'), river, c. 420 mi (680 km) long, N Algeria. It rises in the Amour mts. of the Saharan Atlas and empties into the Mediterranean Sea near Mostaganem. The Chélif, the longest river in Algeria, is not navigable, but its waters are used for irrigation and hydroelectric power.

Chellean-Abbevillian. see PALEOLITHIC PERIOD.

Chellean man: see HOMO ERECTUS.

Chelluh (kē'lā), Jew who married a foreign wife. Ezra 10:35.

Chelm (khēlm), Rus. *Kholm*, city (1970 pop. 38,789), E Poland. It is a railway junction and has industries manufacturing metals, farm tools, machinery, furniture, and liquors. An old Slavic settlement, Chelm was chartered in 1233. It passed to Poland in 1377, to Austria in 1795, and to Russia in 1815. The Treaty of Brest-Litovsk (1918) transferred the city to Ukraine, but it passed to Poland in 1921. After Chelm was freed from German occupation in World War II, the new Polish republic was proclaimed there (July 22, 1944) by the Polish Committee of National Liberation. Chelm is noted for its cathedral.

Chelmno, (khēlm'nō), Ger. *Kulm*, city (1970 pop. 38,800), N central Poland. Its industries manufacture metals, bricks, and farm tools. Chartered in 1223, it was transferred to the Teutonic Knights in 1228, passed to Poland in 1466, and was included in Prussia in 1772. It reverted to Poland in 1919. Among its historic buildings are two Gothic churches and a 16th-century town hall.

Chelmsford, Frederic John Napier Thesiger, 3d Baron and 1st Viscount (nā'pēār, thēs'ijār, chēlms'fārd), 1868-1933, British colonial administrator. After serving as governor of Queensland and New South Wales in Australia (1905-13), he went to India, becoming viceroy in 1916. His regime was noteworthy for the Montagu-Chelmsford Report (1918), produced in collaboration with Edwin Montagu, secretary of state for India, which recommended a large measure of self-government for the Indians. The ensuing reforms were limited, however,

dividing responsibility so as to make government difficult, and were opposed by Mohandas Gandhi. Before the reforms were implemented, growing disorders led to the massacre at AMRITSAR (1919). Chelmsford returned to England in 1921 and was created a viscount. He served as first lord of the admiralty in the Labour government of 1924.

Chelmsford, municipal borough (1971 pop. 58,125), county town of Essex, SE England. It is a market center (especially for cattle) for the surrounding agricultural district. Manufactures include electrical equipment, radios, ball bearings, rope, and agricultural equipment. Other industries are milling and malting. A Roman town on this site was excavated in 1849.

Chelmsford (chēmz'fārd, chēlmz'-), town (1970 pop. 31,432), Middlesex co., NE Mass., inc. 1655. It is chiefly a residential town with wool and nylon industries and granite quarries.

Chelsea, England. see KENSINGTON AND CHELSEA.

Chelsea, city (1970 pop. 30,625), Suffolk co., E Mass., a suburb of Boston, settled 1624, inc. as a town 1739, as a city 1857. Its industries include printing and the manufacture of rubber and plastic products, electrical machines, shoes and shoe accessories, and paint. Oil storage tanks line Chelsea's docks, which connect with the Atlantic by way of the Chelsea River. From 1624 to 1739, Chelsea was part of Boston and was called Winnisimmet. At the battle of Chelsea Creek (1775) Revolutionary forces made one of their first captures of a British ship. During the siege of Boston (1775-76), one wing of George Washington's army was stationed at Chelsea. George Washington slept at the Cary-Bellingham House, which was built in 1659 and remains standing.

Chelsea ware, chinaware made in the mid-18th cent. at a factory in Chelsea, London. The earliest specimens extant are dated 1745 and have the potter's mark of a triangle and the word *Chelsea*. Nicholas Sprimont in the late 1740s directed the factory's production. An extremely fine ware was developed, inspired perhaps by Sevres porcelain. The mid-1750s, during which a red anchor mark was employed, saw the production of what are considered to be among the best of European porcelains. They are often based on designs of Meissen ware and have a soft, clear white body and clean soft colors. There was also a deep blue, gold-decorated type. Characteristic figure subjects were produced, as were miniatures for curtain tiebacks, scent bottles, dressing-table accessories, and toys. The soft paste of which the china was made lent itself to both modeling and painting. The plant was merged with the Derby factory in 1770. See study by William King (1922).

Cheltenham (chēlt'nəm), municipal borough (1971 pop. 69,734), Gloucestershire, W central England. It has been a health and holiday resort since the discovery of mineral springs in 1716. Products include bricks, beer, rubber goods, and anesthetics. There are numerous Regency houses, Georgian squares, and parks and gardens. Cheltenham has three famous schools for boys and one for girls and two teacher training colleges. Cheltenham is the site of an annual Festival of British Contemporary Music, a Festival of Literature, and several other similar events.

Chelub (kē'lāb) 1. Judahite. 1 Chron. 4:11. 2. Father of David's officer Ezri. 1 Chron. 27:26.

Chelubai (kēlyōō'bī), the same as CALEB.

Chelyabinsk (chēlyā'bīnsk), city (1970 pop. 875,000), capital of Chelyabinsk oblast, W Siberian USSR, in the southern foothills of the Urals and on the Mias River. It also lies on the Trans-Siberian RR. One of the major metallurgical and industrial centers of the USSR, Chelyabinsk produces steel and agricultural machinery and processes ore. Founded in 1736 as a Russian frontier outpost, it was chartered in the 1740s and grew into an agricultural and coal-trading town. Its industrial growth began with the building of its first steel plant in 1930.

Chelyuskin, Cape (chēlyōō'skīn), northernmost point (lat. 77°43'N) of Asia, Krasnoyarsk Krai, N central Siberian USSR. It is named after the Russian navigator who discovered it in 1742.

Chemarims (kēm'ārims), Gentile priests, a term left untranslated in Zeph. 1:4 only.

chemical analysis, the study of the chemical composition and structure of substances. More broadly, it may be considered the corpus of all techniques whereby any exact chemical information is obtained. There are two branches in analytical chemistry: qualitative analysis and quantitative analysis. Qualitative analysis is the determination of those

elements and compounds that are present in a sample of unknown material. Quantitative analysis is the determination of the amount by weight of each element or compound present. The procedures by which these aims may be achieved include testing for the chemical reaction of a putative constituent with an admixed reagent or for some well-defined physical property of the putative constituent. Classical methods include use of the analytical balance, gas manometer, buret, and visual inspection of color change. Gas and paper chromatography are particularly important modern methods. Physical techniques such as use of the mass spectrometer are also employed. For samples in the gaseous state, optical spectroscopy provides the best technique for determining which atomic and molecular species are present.

chemical bond, mechanism whereby atoms combine to form MOLECULES. There is a chemical bond between two atoms or groups of atoms when the forces acting between them are strong enough to lead to the formation of an aggregate with sufficient stability to be regarded as an independent species. The number of bonds an atom forms corresponds to its VALENCE. The amount of energy required to break a bond and produce neutral atoms is called the bond energy. All bonds arise from the attraction of unlike charges according to Coulomb's law, however, depending on the atoms involved, this force manifests itself in quite different ways. The principal types of chemical bond are the ionic, covalent, metallic, and hydrogen bonds. The ionic bond results from the attraction of oppositely charged ions. The atoms of metallic elements, e.g., those of sodium, lose their outer electrons easily, while the atoms of nonmetals, e.g., those of chlorine, tend to gain electrons. The highly stable ions that result retain their individual structures as they approach one another to form a stable molecule or crystal. In an ionic crystal like sodium chloride, no discrete diatomic molecules exist; rather, the crystal is composed of independent Na^+ and Cl^- ions, each of which is attracted to neighboring ions of the opposite charge. Thus the entire crystal is a single giant molecule. A single covalent bond is created when two atoms share a pair of electrons. There is no net charge on either atom, the attractive force is produced as the electron pair shuttles back and forth between the two atoms. If the atoms share more than two electrons, double and triple bonds are formed, because each shared pair produces its own bond. By sharing their electrons, both atoms are able to achieve a highly stable electron configuration corresponding to that of an INERT GAS. For example, in methane (CH_4), carbon shares an electron pair with each hydrogen atom, the total number of electrons shared by carbon is eight, which corresponds to the number of electrons in the outer shell of neon, each hydrogen shares two electrons, which corresponds to the electron configuration of helium. In most covalent bonds, each atom contributes one electron to the shared pair. In certain cases, however, both electrons come from the same atom. As a result, the bond has a partly ionic character and is called a coordinate link. Actually, the only purely covalent bond is that between two identical atoms. The ionic and covalent bonds are idealized cases, most bonds are of an intermediate type. Covalent bonds are of particular importance in organic chemistry because of the ability of the carbon atom to form four covalent bonds. These bonds are oriented in definite directions in space, giving rise to the complex geometry of organic molecules. If all four bonds are single, as in methane, the shape of the molecule is that of a tetrahedron. The importance of shared electron pairs was first realized by the American chemist G. N. Lewis (1916), who pointed out that very few stable molecules exist in which the total number of electrons is odd. His octet rule allows chemists to predict the most probable bond structure and charge distribution for molecules and ions. With the advent of quantum mechanics, it was realized that the electrons in a shared pair must have opposite spin, as required by the PAULI EXCLUSION PRINCIPLE. THE MOLECULAR ORBITAL THEORY was developed to predict the exact distribution of the electron density in various molecular structures. The American chemist Linus Pauling introduced the concept of resonance to explain how stability is achieved when more than one reasonable molecular structure is possible. The actual molecule is a coherent mixture of the two structures and oscillates rapidly between them. Unlike the ionic and covalent bonds, which are found in a great variety of molecules, the metallic and hydrogen bonds are highly specialized. The metallic bond is responsible

for the crystalline structure of pure metals. This bond cannot be ionic because all the atoms are identical, nor can it be covalent, in the ordinary sense, because there are too few valence electrons to be shared in pairs among neighboring atoms. Instead, the valence electrons are shared collectively by all the atoms in the crystal. The electrons behave like a free gas moving within the lattice of fixed positive ionic cores. The extreme mobility of the electrons in a metal explains its high thermal and electrical conductivity. Hydrogen bonding is a strong electrostatic attraction between two independent polar molecules, i.e., molecules in which the charges are unevenly distributed, usually containing nitrogen, oxygen, or fluorine. These elements have strong electron-attracting power, and the hydrogen atom serves as a bridge between them. The hydrogen bond, which plays an important role in molecular biology, is much weaker than the ionic or covalent bonds. It is responsible for the structure of ice. See Linus Pauling, *The Nature of the Chemical Bond* (3d ed. 1960).

chemical engineering: see **ENGINEERING**

chemical equation, group of symbols representing a **CHEMICAL REACTION**. The chemical equation $2\text{H}_2 + \text{O}_2 \rightarrow 2\text{H}_2\text{O}$ represents the reaction of hydrogen and oxygen to form water. The arrow points in the direction of the reaction—from the reactants (substances that react) toward the product or products. In this case the reactants are hydrogen (written H_2 because each molecule consists of two atoms of hydrogen) and oxygen (written O_2 because each molecule consists of two atoms of oxygen) and the product is water. The coefficient 2 before the H_2 indicates that two molecules of hydrogen take part in the reaction, and the 2 before the H_2O indicates that two molecules of water are produced. When no number is written, as in front of the O_2 , a one is assumed, one molecule of oxygen takes part in the reaction. The equation shows that two molecules of hydrogen react with one molecule of oxygen to form two molecules of water. Because of the relationship between molecules and the **MOLE**, the equation also shows that two moles of hydrogen react with one mole of oxygen to form two moles of water. The same sort of relationship holds with the **GRAM-FORMULA WEIGHT**. There are three steps involved in writing a chemical equation. The first step is to decide which substances are the reactants and which are the products. For example, natural gas (cooking gas) burns in air, providing heat and producing no visible products. The natural gas is principally methane, and the portion of the air that reacts (supports combustion) is oxygen. These are the reactants. Products of the reaction are heat and two invisible gases, carbon dioxide and water vapor. We can now write the word equation methane + oxygen → carbon dioxide + water vapor + heat. The next step is to determine the correct formula for each substance and substitute it for the name. The equation now becomes $\text{CH}_4 + \text{O}_2 \rightarrow \text{CO}_2 + \text{H}_2\text{O}$ (A notation for heat is often omitted.) The final step is to balance this equation. As the equation is now written, three oxygen atoms are produced from two, and four hydrogen atoms become only two. This cannot occur, since atoms are not created or destroyed in chemical reactions. The equation is already balanced for carbon, since there is one carbon atom on the reactant side and one carbon atom on the product side. There are four hydrogen atoms in the methane molecule on the reactant side, so there must be four hydrogen atoms in water molecules on the product side (since water is the only product containing hydrogen), thus there must be two water molecules, each containing two hydrogen atoms. The equation can now be written $\text{CH}_4 + \text{O}_2 \rightarrow \text{CO}_2 + 2\text{H}_2\text{O}$. It is not yet balanced, since there are only two oxygen atoms shown as reactants and four as products. The equation is completely balanced by showing two oxygen molecules (four atoms) as reactants $\text{CH}_4 + 2\text{O}_2 \rightarrow \text{CO}_2 + 2\text{H}_2\text{O}$. There are a number of other symbols used in chemical equations. A symbol written above or below the reaction arrow indicates special reaction conditions. For example, when mercuric oxide is heated it decomposes into mercury metal and oxygen gas, this reaction is shown by the equation $2\text{HgO} \xrightarrow{\Delta} 2\text{Hg} + \text{O}_2 \uparrow$. The Greek letter delta under the arrow represents the heating. The upward-pointing arrow after the O_2 indicates that this product is gaseous and escapes. When a precipitate is formed by a reaction, the substance that precipitates is often followed by a downward-pointing arrow, e.g., $\text{AgNO}_3 + \text{NaCl} \rightarrow \text{AgCl} \downarrow + \text{NaNO}_3$. The H_2O above the arrow shows that the reaction takes place in the presence of water—in this case, in water solution. The formulas AgNO_3 , NaCl , and NaNO_3 do not

represent molecules, since these substances are almost completely ionized in water solution (See **ION**). When **CHEMICAL EQUILIBRIUM** occurs in a reaction, the double arrow (\rightleftharpoons) is used instead of the single arrow. For example, liquid water dissociates to form hydronium ions (H_3O^+) and hydroxide ions (OH^-). These ions exist in equilibrium with water molecules. The equation is $2\text{H}_2\text{O} \xrightleftharpoons{\text{H}_2\text{O}} \text{H}_3\text{O}^+ + \text{OH}^-$. The sign \rightleftharpoons is sometimes used in place of the double arrow.

chemical equilibrium, state of balance in which two opposing reversible **CHEMICAL REACTIONS** proceed at constant equal rates with no net change in the system. For example, when hydrogen gas, H_2 , and iodine gas, I_2 , are mixed, and gaseous hydrogen iodide, HI , is formed according to the equation $\text{H}_2 + \text{I}_2 \rightarrow 2\text{HI}$, no matter how long the reaction is allowed to proceed some quantity of hydrogen and iodine will remain unreacted. The reason reactants in a reversible reaction are never completely converted to product is that an opposing reaction is taking place simultaneously, i.e., some of the newly formed HI is being converted back into hydrogen and iodine. For any particular temperature, a point of equilibrium is reached at which the rates of the two opposing reactions are equal and there is no further change in the system. This equilibrium point is characterized by specific relative concentrations of reactants and products and will also be reached from the opposite direction, i.e., if one starts with hydrogen iodide and allows it to decompose into hydrogen and iodine. The equilibrium point can be described by the mass action expression, which defines the equilibrium constant, K_{eq} , in terms of the ratio of the molar concentrations of the products to those of the reactants. For the reversible reaction used as an example, the equilibrium constant is $K_{eq} = [\text{HI}]^2 / [\text{H}_2][\text{I}_2]$, for the general reversible reaction $n\text{A} + m\text{B} \rightleftharpoons p\text{C} + q\text{D}$, the equilibrium constant is

$$K_{eq} = \frac{[\text{C}]^p [\text{D}]^q \dots}{[\text{A}]^n [\text{B}]^m}$$

where $[\text{A}]$, $[\text{B}]$, $[\text{C}]$, $[\text{D}]$, are the molar concentrations of the substances and n , m , p , q , are the coefficients of the balanced chemical equation. The larger the equilibrium constant for a given reaction, the more the reaction is favored, since a larger value of K_{eq} means larger concentrations of the products relative to the reactants. The equilibrium constant is related to the change in the standard free energy, G° , of the system by the equation $\Delta G^\circ = -RT \ln K_{eq}$, where R is a constant, T is the temperature in degrees Kelvin, and $\ln K_{eq}$ is the natural logarithm of the equilibrium constant. Chemical equilibrium can be defined for many types of chemical processes, such as dissociation of a weak acid in solution, solubility of slightly soluble salts, and oxidation-reduction reactions. In all of these cases, the equilibrium constant or its analogue is defined for certain conditions of temperature and other factors. If any of these factors change, the system will respond to establish a new equilibrium, in accordance with **LE CHÂTELIER'S PRINCIPLE**.

chemical kinetics: see **CHEMICAL REACTION**

chemical reaction, process by which one or more substances may be transformed into one or more new substances. Energy is released or is absorbed, but no loss in total molecular weight occurs. When, for example, water is decomposed, its molecules, each of which consists of one atom of oxygen and two of hydrogen, are broken down, the hydrogen atoms then combine in pairs to form hydrogen molecules and the oxygen atoms to form oxygen molecules. In a chemical reaction, substances lose their characteristic properties. Water, for example, a liquid which neither burns nor supports combustion, is decomposed to yield flammable hydrogen and combustion-supporting oxygen. In some reactions heat is given off (exothermic reactions), and in others heat is absorbed (endothermic reactions). Furthermore, the new substances formed differ from the original substances in the energy they contain. Chemical reactions are classified according to the kind of change that takes place. When a compound, which consists of two or more elements or groups of elements, is broken down into its constituents, the reaction is called simple decomposition. When two compounds react with one another to form two new compounds, the reaction is called double decomposition. In so-called replacement reactions the place of one of the elements in a compound is taken by another element reacting with the compound. When elements combine to form a compound, the reaction is termed chemical combina-

tion. **OXIDATION AND REDUCTION** reactions are extremely important. Reversible reactions are those in which the chemical change taking place may be paralleled by another change back to the original substances. The rates at which chemical reactions proceed depend upon various factors, e.g., upon temperature, pressure, and the concentration of the substances involved and, sometimes, upon the use of a chemical called a **CATALYST**. In some chemical reactions, such as that of photographic film, light is an important factor. The changes taking place in a chemical reaction are represented by a **CHEMICAL EQUATION**. An element's activity, i.e., its tendency to enter into compounds, varies from one element to another.

chemical warfare, employment in war of flame, incendiaries, smoke, poison gases, and other toxic substances. In earliest recorded history, armies attacking or defending fortified cities threw burning oil and flaming fireballs upon each other. A primitive type of **FLAMETHROWER** was employed as early as the 5th cent. B.C., modern types are still in use. In the Middle Ages before the introduction of gunpowder a flammable composition known as **GREEK FIRE** was widely used. Smoke from burning straw or other material was employed in early times, but its effectiveness is uncertain. By the middle of the 19th cent. the potentialities of **POISON GAS** were envisioned. It was effectively employed during World War I, when the Germans released (April, 1915) chlorine gas against the Allies. The Germans also introduced **MUSTARD GAS** later in the war. Afterward, the major powers continued to stockpile gases for possible future use. Lethal types were not employed during World War II. The Germans did, however, invent and stockpile a form of nerve gas during the war, it is odorless and colorless and attacks the body muscles, including the involuntary muscles. It is the most lethal and insidious weapon of chemical warfare. Besides potentially lethal gases, which attack the skin, blood, or nervous or respiratory system and require hospitalization of the victim, there are also nonlethal incapacitating agents, which, like **TEAR GAS**, cause temporary physical disability or, like **LSD-25**, produce temporary mental effects, such as confusion, fright, or stupor. Such agents may be employed in riot control as well as in warfare. Various forms of defoliants can also be used to destroy crops or clear away heavy vegetation, the latter operation was employed by the United States as an antiguerrilla tactic during the Vietnam War. The potential effectiveness of chemical warfare is increased by the development of modern methods of dissemination, e.g., chemical agents can be disseminated in artillery shells, grenades, or missiles, or by burning-type generators that use heat to vaporize and spread the chemical. See Stockholm International Peace Research Institute (SIPRI), *The Problems of Chemical and Biological Warfare* (Vols. I, IV, V, 1971-).

chemin de fer (shāmān' də fūr, Fr. shāmāN' də fēr) [Fr. = railroad], gambling card game popular in France. It differs from **BACCARAT**, which it replaced in popularity, in that there are usually ten or more players and the bank moves from player to player in rotation.

Chemin des Dames (shāmāN' də dam) [Fr. = ladies' road], road running along a crest between the Aisne and Ailette rivers, N. France. Built during Roman times, the road was the site of the battle (57 B.C.) in which Julius Caesar defeated the Gauls. Chemin des Dames received its name in the 18th cent. when Louis XV's daughters traveled along the road to Bove Castle with their ladies-in-waiting. During World War I the Germans held the road.

chemistry, branch of **SCIENCE** concerned with the properties, composition, and structure of substances and the changes they undergo when they combine or react under specified conditions. Chemistry can be divided into branches according to either the substances studied or the types of study conducted. The primary division of the first type is between inorganic and **ORGANIC CHEMISTRY**. Divisions of the second type are physical chemistry and analytical chemistry. The original distinction between organic and inorganic chemistry arose as chemists gradually realized that compounds of biological origin were quite different in their general properties from those of mineral origin, organic chemistry was defined as the study of substances produced by living organisms. However, when it was discovered in the 19th cent. that organic molecules can be produced artificially in the laboratory, this definition had to be abandoned. Organic chemistry is most simply defined as the study of the compounds of carbon.

Physical chemistry is concerned with the physical properties of materials, such as their electrical and magnetic behavior and their interaction with electromagnetic fields. Subcategories within physical chemistry are thermochemistry, ELECTROCHEMISTRY, and chemical kinetics. Thermochemistry is the investigation of the changes in ENERGY and ENTROPY that occur during chemical reactions and phase transformations (see STATES OF MATTER). Electrochemistry concerns the effects of electricity on chemical changes and interconversions of electric and chemical energy such as that in a voltaic cell. Chemical kinetics is concerned with the details of chemical reactions and of how equilibrium is reached between the products and reactants. Analytical chemistry is a collection of techniques that allows exact laboratory determination of the composition of a given sample of material. In qualitative analysis, all the atoms and molecules present are identified, with particular attention to trace elements. In quantitative analysis, the exact weight of each constituent is obtained as well. Stoichiometry is the branch of chemistry concerned with the weights of the chemicals participating in chemical reactions. The earliest practical knowledge of chemistry was concerned with METALLURGY, pottery, and dyes, these crafts were developed with considerable skill, but with no understanding of the principles involved, as early as 3500 B.C. in Egypt and Mesopotamia. The basic ideas of element and compound were first formulated by the Greek philosophers during the period from 500 to 300 B.C. Opinion varied, but it was generally believed that four elements (fire, air, water, and earth) combined to form all things. Aristotle's definition of a simple body as "one into which other bodies can be decomposed and which itself is not capable of being divided" is close to the modern definition of element. About the beginning of the Christian era in Alexandria, the ancient Egyptian industrial arts and Greek philosophical speculations were fused into a new science. The beginnings of chemistry, or ALCHEMY, as it was first known, are mingled with occultism and magic. Interests of the period were the transmutation of base metals into gold, the imitation of precious gems, and the search for the elixir of life, thought to grant immortality. Muslim conquests in the 7th cent. A.D. diffused the remains of Hellenistic civilization to the Arab world. The first chemical treatises to become well known in Europe were Latin translations of Arabic works, made in Spain A.D. c. 1100, hence it is often erroneously supposed that chemistry originated among the Arabs. Alchemy developed extensively during the Middle Ages, cultivated largely by itinerant scholars who wandered over Europe looking for patrons. In the hands of the "Oxford Chemists" (Robert Boyle, Robert Hooke, and John Mayow) chemistry began to emerge as distinct from the pseudoscience of alchemy. Boyle (1627-91) is often called the founder of modern chemistry (an honor sometimes also given Antoine Lavoisier, 1743-94). He performed experiments under reduced pressure, using an air pump, and discovered that volume and pressure are inversely related in gases (see GAS LAWS). Hooke gave the first rational explanation of COMBUSTION—as combination with air—while Mayow studied animal respiration. Even as the English chemists were moving toward the correct theory of combustion, two Germans, J. J. Becher and G. E. Stahl, introduced the false phlogiston theory of combustion, which held that the substance phlogiston is contained in all combustible bodies and escapes when the bodies burn. The discovery of various gases and the analysis of air as a mixture of gases occurred during the phlogiston period. Carbon dioxide, first described by J. B. van Helmont and rediscovered by Joseph Black in 1754, was originally called fixed air. Hydrogen, discovered by Boyle and carefully studied by Henry Cavendish, was called inflammable air and was sometimes identified with phlogiston itself. Cavendish also showed that the explosion of hydrogen and oxygen produces water. C. W. Scheele found that air is composed of two fluids, only one of which supports combustion. He was the first to obtain pure oxygen (1771-73), although he did not recognize it as an element. Joseph Priestley independently discovered oxygen by heating the red oxide of mercury with a burning glass, he was the last great defender of the phlogiston theory. The work of Priestley, Black, and Cavendish was radically reinterpreted by Lavoisier, who did for chemistry what Newton had done for physics a century before. He made no important new discoveries of his own, rather, he was a theoretician. He recognized the true nature of combustion, introduced a new chemical nomenclature, and wrote the first

modern chemistry textbook. He erroneously believed that all acids contain oxygen. The assumption that compounds were of definite composition was implicit in 18th century chemistry. J. L. Proust formally stated the law of constant proportions in 1797. C. L. Berthollet opposed this law, holding that composition depended on the method of preparation. The issue was resolved in favor of Proust by John Dalton's atomic theory (1808). The atomic theory goes back to the Greeks, but it did not prove fruitful in chemistry until Dalton ascribed relative weights to the atoms of chemical ELEMENTS. Electrochemical theories of chemical combinations were developed by Humphry Davy and J. J. Berzelius. Davy discovered the alkali metals by passing an electric current through their molten oxides. Michael Faraday discovered that a definite quantity of charge must flow in order to deposit a given weight of material in solution. Amedeo Avogadro introduced the hypothesis that equal volumes of gases at the same pressure and temperature contain the same number of molecules. William Prout suggested that all elements are composed of hydrogen atoms. Organic chemistry developed extensively in the 19th cent., prompted in part by Friedrich Wohler's synthesis of urea (1828), which disproved the belief that only living organisms could produce organic molecules. Other important organic chemists include Justus von Liebig, C. A. Wurtz, and J. B. Dumas. In 1852, Edward Frankland introduced the idea of valency (see VALENCE), and in 1858 F. A. Kekule showed that carbon atoms are tetravalent and are linked together in chains. Kekule's ring structure for benzene opened the way to modern theories of organic chemistry. Henri Louis Le Châtelier, J. H. van't Hoff, and Wilhelm Ostwald pioneered the application of thermodynamics to chemistry. Further contributions were the phase rule of J. W. Gibbs, the ionization equilibrium theory of S. A. Arrhenius, and the heat theorem of Walther Nernst. Ernst Fischer's work on the amino acids marks the beginning of molecular biology. The PERIODIC TABLE of the elements is the culmination of a long effort to find regular, systematic properties among the elements. PERIODIC LAWS were put forward almost simultaneously and independently by J. L. Meyer in Germany and D. I. Mendeleev in Russia (1869). An early triumph of the new theory was the discovery of new elements that fit the empty spaces in the table. William Ramsay's discovery, in collaboration with Lord Rayleigh, of argon and other inert gases in the atmosphere extended the periodic table. At the end of the 19th cent., the discovery of the ELECTRON by J. J. Thomson and of RADIOACTIVITY by A. E. Becquerel revealed the close connection between chemistry and PHYSICS. The work of Ernest Rutherford, H. G. J. Moseley, and Niels Bohr on atomic structure (see ATOM) was applied to molecular structures. G. N. Lewis, Irving Langmuir, and Linus Pauling developed the electronic theory of CHEMICAL BONDS, directed valency, and molecular orbitals (see MOLECULAR ORBITAL THEORY). Transmutation of the elements, first achieved by Rutherford, has led to the creation of elements not found in nature, in work led by Glenn Seaborg, elements heavier than uranium have been produced. See Linus Pauling, *College Chemistry* (3d ed 1964), J. H. Hildebrand and R. E. Powell, *Principles of Chemistry* (7th ed 1964), Isaac Asimov, *A Short History of Chemistry* (1965), J. R. Partington, *A Short History of Chemistry* (3d ed 1960, repr 1965), A. J. Berry, *From Classical to Modern Chemistry* (1954, repr 1968), J. V. Quagliano and L. M. Vallarino, *Chemistry* (3d ed 1969), L. P. Eblin, *The Elements of Chemistry* (2d ed 1970), M. J. Sienko and R. A. Plane, *Chemistry* (4th ed, 1971).

Chemnitz or **Kemnitz**, Martin (both kēm'nīts), 1522-86, German Lutheran theologian. Under the tutelage of Philip MELANCHTHON, he accepted and defended Lutheran doctrine, both in lecturing and in writing. Largely through his endeavors the Formula of Concord, one of the nine creeds of the Book of Concord, was adopted by the Lutherans of Saxony and Swabia.

Chemnitz: see KARL MARX STADT, East Germany.

Chemosh (kēm'ōsh), god of the Moabites. Solomon erected an altar to him at Jerusalem, Josiah destroyed it. Num. 21:29, 1 Kings 11:7, 2 Kings 23:13, Jer. 48:7,13,46. See MILCOM.

chemosphere: see ATMOSPHERE.

chemosynthesis: see AUTOTROPH.

chemotaxis: see TAXIS.

chemotherapy, treatment of disease with chemicals or DRUGS. One chemotherapeutic approach is the development of selectively toxic substances, i.e., substances that can destroy or inhibit infecting or-

ganisms or, as in cancer, malignant tissue, but do not damage normal host tissue. In treating infection, selectively toxic agents may block a biochemical reaction necessary to the viability of the pathogen but not to that of the host, for example, PENICILLIN blocks synthesis of bacterial cell walls, a component animal cells lack. Other chemotherapeutic substances differentially affect biochemical reactions in different tissues, thus antimetabolites such as METHOTREXATE and CYTOXAN are more toxic to rapidly proliferating cells such as those associated with cancer than to normal cells. Other drugs act in various ways to produce effects that initiate or enhance some normal body function, for instance, neostigmine blocks the action of an enzyme limiting transmission of nerve impulses and thereby acts as a nervous system stimulant. The usefulness of chemotherapeutic agents also depends on their pharmacological action, e.g., their rate of absorption, rapidity of action and rate of excretion, degree of storage in the body, effects of products of their metabolic breakdown, and potential for causing HYPERSENSITIVITY reactions. Some drugs are given prophylactically, to prevent infection, e.g., penicillin is given to rheumatic fever patients to prevent reinfection by the causative organism, the streptococcal bacterium.

chemotroph: see AUTOTROPH.

Chemulpo: see INCHON, Korea.

Chemung (shīmūng'), river, c. 45 mi (70 km) long, formed in S central N.Y. by the junction of the Cohocton and Tioga rivers near Corning, N.Y., and flowing SE past Elmira to the Susquehanna River near Sayre, Pa. The Chemung valley was the scene of fighting in the Revolutionary campaign of John Sullivan, the battle of Newtown occurred in 1779 near the site of Elmira.

chemurgy (kēm'arjē), branch of applied chemistry concerned with preparing industrial products from agricultural raw materials. Among such products are plastics manufactured from casein and soybean, soaps derived from animal and vegetable fats, cellulose fiber products made from, for example, straws, stubble, cobs, and hulls, and starches derived from surplus grains. Chemurgy is a wide-ranging discipline involving chemistry, genetics, bacteriology, and physics.

Chenaanah (kēnā'ānā, -nā-ā'-) 1 'Benjamite' 1 Chron 7:10. 2 Father of Zedekiah, Ahab's false prophet. 1 Kings 22:11,24, 2 Chron 18:10,23.

Chenab (chēnāb'), one of the "five rivers" of the Punjab, 675 mi (1,086 km) long, rising in the Punjab Himalayas, W Kashmir, and flowing NW, then SW through Pakistan; Punjab to join the Sutlej River. The Ravi and Jhelum rivers are the chief tributaries. The Chenab supplies water for an important irrigation system.

Chenanai (kēnā'nī), Levite. Neh 9:4.

Chenaniah (kēnānī'ā), Levite. 1 Chron 15:22, 26:29.

Chen-chiang (jūn-jāng) or **Chinkiang** (chīn'-kyāng', jīn-jāng'), city (1970 est. pop. 250,000), S Kiangsu prov., China, a port at the junction of the Grand Canal with the Yangtze River. It is also on the Shanghai-Nanking RR. An important commercial and industrial center, it is known for its silk, vinegar, and pickled vegetables. Other processed foods, pharmaceuticals, machine tools, and paper products are also made. Chen-chiang was known in the Sung dynasty (12th cent.), flourished under the Ming and Manchu dynasties, was held by the Taipings and ravaged (1857), and was opened to foreign trade in 1859. It was a British concession until 1927 when it was returned to China. It declined in the late 19th cent. when the Grand Canal lost its importance, but flourished again as capital (1928-49) of Kiangsu. The Kiangsu medical college is there.

cheng, Chinese stringed instrument similar to the zither. It is also spelled *jeng* and *tseng*. See also SHENG, an altogether different instrument for which the spelling *cheng* is occasionally used.

Cheng, Chi (jē jūng), 1943-, Taiwanese track athlete. Considered the best woman athlete in Taiwan at age 18, she went to the United States to train and study. She was bronze medal winner in the 1968 Olympic games, and in 1970 she set the women's world record for the 100-meter hurdles (26.2 sec), the 100-yd/91-m dash (10 sec), and the 200-yd/183-m dash (22.6 sec).

Cheng-chou or **Chengchow** (both jūng-jō), city (1970 est. pop. 1,500,000), capital of Honan prov., E central China. An important railroad center, the city is at the junction of the Lung hai (east-west) and the Peking-Canton (north-south) railroads. The textile center of Honan prov., and a flourishing industrial city, Cheng-chou has grown about sevenfold since 1949. In addition to textiles, manufactures include

chemicals, aluminum, fertilizer, processed meats, agricultural machinery, and electrical equipment. An opencut coal mine is nearby. An agricultural institute and a medical college are in the city. Chengchow was formerly called Chenghsien.

Chengchow: see CHENG-CHOU, China

Chenghsien: see CHENG-CHOU, China

Ch'eng-te or **Chengteh** (both chūng-dū), city (1970 est. pop. 200,000), N Hopeh prov., China, near the Luan River. It is a distribution center for lumber products, fruits, and pharmaceuticals, and has an iron mine. The city is N of Peking, with which it is connected by rail. The former summer capital of the Ch'ing dynasty (1644-1911), Ch'eng-te is surrounded by large parks with lakes, palaces, and pavilions. The most notable building is a Lamaist temple duplicating the main shrine in Lhasa, Tibet. Until 1956 the capital of former Jehol prov., Ch'eng-te was formerly called Jehol.

Ch'eng-tu (chūng-dōo) or **Chengtu**, city (1970 est. pop. 2,000,000), capital of Szechwan prov., SW China, on the Min River. It is a port and the commercial center of the Ch'eng-tu plain, the main farming area of Szechwan. Products include textiles, processed foods, chemicals, machinery, and paper. High-grade iron ore is mined at nearby Lu-ku. Ch'eng-tu, an old walled city, was in existence during the Ch'un-ch'iu period (770-475 B.C.). It was the capital of the Shu Han dynasty (3d cent. A.D.) and one of the earliest (9th cent. A.D.) printing centers in China. A cultural seat since ancient times, it is commonly called "little Peking." Its numerous institutions of higher learning include Szechwan Univ., Ch'eng-tu Technical Univ., and two medical colleges. The cottage where Tu Fu wrote his poetry (8th cent.) was restored in 1955.

Chénier, André (āndrā' shānyā'), 1762-94, French poet, by some critics considered the greatest in 18th-century France. He was born in Constantinople, where his father was consul general, and was educated in France. From 1787 to 1790 he was attached to the French embassy in London. Active in the early phase of the French Revolution, he was later horrified by Jacobin excesses. In 1792 he contributed denunciatory pamphlets to the *Journal de Paris*, organ of moderate royalism. He was arrested in March, 1794, by order of Robespierre, and was guillotined only three days before the end of the Terror. Chénier vivified the French classical tradition in his *Élégies* and *Bucoliques*. The fables are stirring political satires in verse. Most of his works were published after his death. *La Jeune Captive*, one of his most moving poems, appeared in 1795 and the first collected edition of his works in 1819. His life inspired the opera *Andrea Chénier* by Umberto Giordano. See biographies by V. Loggins (1965) and F. Scarfe (1965).

Chénier, Marie Joseph (mārē zhōzēf'), 1764-1811, French poet and dramatist, b. Constantinople, brother of André Chénier. A member of the Convention, the Council of Five Hundred, and the Tribunate during the French Revolution, he wrote a number of political and historical plays, notably *Charles IX* (1789). Besides the comprehensive *Tableau historique de l'état et des progrès de la littérature française depuis 1789* (1816), he is famous for his songs of the Revolutionary period, particularly the *Chant du départ*.

Chennault, Claire Lee (shēn'ōit'), 1890-1958, American general, b. Commerce, Texas. In World War I he was a pioneer in air pursuit tactics. Retired (1937) from the army, he went to China and organized air defenses for Chiang Kai-shek. He formed there (1941) the American Volunteer Group (known as the Flying Tigers). Recalled (1942) to duty, he headed the U.S. air task force in China and retired (1945) as a major general. See biography by R. L. Scott (1959, repr. 1973), study by his wife Anna Chennault (1963).

Chenonceaux (shānōNsō'), village, Indre-et-Loire dept., W central France, on the Cher River. It is famous for its château (built 1515-22), the residence, successively in the 16th cent., of Diane de Poitiers and Catherine de' Medici. The wing of the château over the river was added by Catherine in 1560.

Ch'en Tu-hsiu (chūn dōo-shyō), 1879-1942, Chinese educator and Communist party leader. He was active in the republican revolution of 1911 and was forced to flee to Japan after taking part in the abortive "second revolution" of 1913 against YUAN SHIH-KAI. In 1915 he founded the journal *New Youth* in Shanghai. Articles by Ch'en, LI TA-CHAO, HU SHIH, and others encouraged Chinese youth to create a new culture free from Confucianism. He was dean of the school of arts and sciences of Peking Univ. from

Jan., 1917, until forced to resign under conservative pressure in March, 1919. Ch'en was converted to Marxism in the period following the student-led intellectual revolution known as the MAY FOURTH MOVEMENT (1919). He founded (1920) two Marxist groups, and in 1921 representatives of these groups met with representatives of groups organized by LI TA-CHAO (neither Ch'en nor Li were present) to found the Communist party. He was dismissed from party leadership and withdrew from the party in 1927 over his opposition to the COMINTERN-ordered policy of armed insurrection.

Ch'en Yi (chūn yē), 1901-72, Chinese Communist general and statesman. Ch'en was a political instructor (1925) in the Kuomintang Whampoa Military Academy and participated in the NORTHERN EXPEDITION. After the Kuomintang-Communist alliance collapsed (1927), he joined the Fourth Red Army (1928) and was an early supporter of Mao Tse-tung. One of the outstanding Communist military commanders, Ch'en became acting commander (1941) and then commander (1946) of the New Fourth Army. After 1949 he was mayor of Shanghai and a dominant figure in E. China. He succeeded CHOU EN-LAI as foreign minister (1958), serving during a period of intense rivalry between China and Russia for influence among the nations of the Middle East, Africa, and Latin America. Ch'en was severely criticized during the CULTURAL REVOLUTION. After 1967 his role was eclipsed by Chou, who resumed direction of foreign policy in his capacity as prime minister.

Cheops: see KHUFU

Chephar-haamonai (kē'fār-hāām'ōnā), town of Benjamin. Joshua 18:24

Chephirah (kēfī'ra), town of Benjamin, NW of Jerusalem. Joshua 9:17, 18:26, Ezra 2:25, Neh. 7:29

Chephren: see KHAFRE

cheque: see CHECK

Cher (shēr), department (1968 pop. 304,601), central France, in BERRY. Chief cities are VIERZON and BOURGES, the capital.

Cher, river, c. 200 mi (320 km) long, rising in the Massif Central and flowing generally NW across central France to join the Loire below Tours. The Berry Canal parallels part of the river.

Cheran (kēr'ān), Horite. Gen. 36:26, 1 Chron. 1:41

Cherbourg (shērbōōr'), city (1968 pop. 38,243), Manche dept., NW France, in Normandy, on the English Channel, at the tip of the Cotentin peninsula. It is a naval base and seaport with related industries. The site has been settled since ancient times and was frequently fought over by the French and English because of its strategic value. Fortifications were begun under Louis XIV.

Cherchel or **Cherchell** (both shērshēl'), town (1966 pop. 11,667), N Algeria, a port on the Mediterranean Sea. Settled by Carthaginians, it became the capital of Mauretania before and during Roman times and was named Caesarea in 25 B.C. It remained an important military and commercial port under the Romans. Taken by Barbarossa (1516), it became a corsair refuge. French forces occupied the town in 1832. Cherchel is rich in relics, especially of the Roman period.

Cheremiss: see MARI AUTONOMOUS SOVIET SOCIALIST REPUBLIC, USSR

Cheremkhovo (chērīmkō'vā), city (1970 pop. 99,000), SE Siberian USSR, on the Trans-Siberian RR. The center of the Cheremkhovo coal basin, the city forms part of an industrial complex based mainly on coal, oil refining, and chemical production.

Cherenkov, Pavel Alekseyevich (pā'vil ālyīksyā'yāvīch chārēng'kaf), 1904-, Soviet physicist. He shared with the Soviet physicists I. M. Frank and I. Y. Tamm the 1958 Nobel Prize in Physics for his discovery (1934) of CHERENKOV RADIATION. His research opened the way to new studies of high-energy subatomic particles and of cosmic rays.

Cherenkov radiation or **Cerenkov radiation** (for P. A. Cherenkov), light emitted by a transparent medium when charged particles pass through it at a speed greater than the speed of light in the medium. The effect, discovered by Cherenkov in 1934 while he was studying the effects of gamma rays on liquids and explained in 1937 by I. E. Tamm and I. M. Frank, is analogous to the creation of a SONIC BOOM when an object exceeds the speed of sound in a medium, and the light is emitted only in directions inclined at a certain angle to the direction of the particles' motion, just as the sonic shock wave is restricted to certain angles. Cherenkov radiation is produced by electrons of the transparent medium that have been displaced by gamma rays rather than by the gamma rays themselves, and it is not depen-

dent on temperature. It is used in the Cherenkov counter, a device for detecting fast particles and determining their speeds or distinguishing between particles of different speeds.

Cherepovets (chērīpavyēts', chērīpō'vyīts), city (1970 pop. 188,000), NE European USSR, on the Rybinsk Reservoir. A rail and water transportation center of the Volga-Baltic Waterway, it has an iron and steel complex that supplies Leningrad's metallurgical industries. Chemical plants for the production of fertilizers are also there. Cherepovets arose (14th cent.) as a settlement around a monastery.

Chéret, Jules (zhūī shārā'), 1836-1932, French painter and draftsman, originator of the modern POSTER. His colorful, sophisticated designs for the theater and opera influenced Toulouse-Lautrec. Chéret introduced color lithography into France in 1866.

Cherethims (kēr'āthīmz), the same as the Cherethites.

Cherethites and **Peletithes** (kēr'āthīts, pēl'āthīts), David's officers. 2 Sam. 8:18, 15:18, 20:7, 23, 1 Kings 1:38, 44, 1 Chron. 18:17. The Cherethites, or Cherethims, are mentioned alone in 1 Sam. 30:14, Ezek. 25:16, and Zeph. 2:5.

Cheribon: see TJIREBON, Indonesia

Cherith (kērīth), brook flowing into the Jordan opposite Samaria. 1 Kings 17:3, 5

Cherkassy (chīrkā'sē), city (1970 pop. 158,000), capital of Cherkassy oblast, in Ukraine, S European USSR, a port on the Dnepr River. Situated on the shore of the Kremenchug Reservoir, Cherkassy has important chemical-fiber and fertilizer industries. Founded at the end of the 13th cent., Cherkassy was a fortress in the 14th cent. and served as the seat of the Ukrainian hetmans of right-bank UKRAINE from 1386 to 1694. The city passed to Russia in 1793.

Cherkess Autonomous Oblast: see KARACHAY-CHERKESS AUTONOMOUS OBLAST

Cherkessk (chīrkā'sē), city (1970 pop. 67,000), capital of Karachayevo-Cherkess Autonomous Oblast, Stavropol' Kray, SE European USSR, on the Kuban River. Founded in 1825 as Batalpashinsk, it manufactures electrical equipment and shoes and has food-processing plants.

Chernigov (chīmyē'gaf), Ukr. *Chernihiv*, city (1970 pop. 159,000), capital of Chernigov oblast, W central European USSR, in the Ukraine, on the Desna River. It is a rail junction, a river port, and an air and highway transport hub. Industries include ship repairing, woodworking, food and wool processing, and the manufacture of metal goods and machinery. First mentioned in 907, Chernigov is one of the oldest cities of Kievan Russia. From the 11th to 13th cent., Chernigov was the capital of a principality of the same name, but the city declined after the Mongol invasion of 1239. It passed to Lithuania in the 14th cent. and to Russia in the 16th cent. It was under Polish control during part of the 17th cent. Chernigov's architectural monuments include the 11th-century Spasski Cathedral, the Church of the Assumption in the Yelets Monastery (11th cent.), and Ivan Mazepa's baroque army building (17th-18th cent.).

Chernov, Viktor (vēk'tar chīrnōf'), 1876-1952, Russian revolutionary. One of the founders of the SOCIALIST REVOLUTIONARY PARTY, he served as minister of agriculture under Kerensky in the provisional government set up after the overthrow of the czar in Nov., 1917 (Oct., 1917, O.S.). He was president of the short-lived constituent assembly (Jan., 1918). After its dissolution, Chernov headed an anti-Bolshevik government in Samara (now Kuibyshev). Early in 1921 he fled abroad. He died in New York City. Chernov wrote *The Great Russian Revolution* (tr. 1936).

Chernovtsy (chīrnōf'tsē), Ger. *Czemowitz*, Rumanian *Cernăuți*, city (1970 pop. 187,000), capital of Chernovtsy oblast, SW European USSR, in the Ukraine, on the Prut River and in the Carpathian foothills. It is a rail junction and the economic, cultural, and scientific center of the region of Bukovina. Industries include woodworking, food processing, and the manufacture of machinery, textiles, chemicals, footwear, and hosiery. One of Russia's oldest towns, Chernovtsy was part of Kievan Russia. It passed to Austria in 1775 and in 1849 became the capital of Bukovina. During the 19th and early 20th cent., the city was a center of the Ukrainian national movement. With the dissolution of Austria-Hungary in 1918, Chernovtsy was transferred to Rumania, which held it until the USSR seized N Bukovina in 1940. The city has a university (est. 1875), a 13th-century fortified castle, a 17th-century wooden church, and a 19th-century Orthodox Eastern cathedral.

chernozem (chĕr'nazĕm'') or **black earth**, variety of soil rich in organic matter in the form of HUMUS. It is generally a modified type of LOESS. True chernozem is black in color, but there are various grades, shading off into gray and chestnut-brown soils. It forms in areas that have cold winters, hot summers, and rapid evaporation of precipitation, generally only tall grass is found native on chernozem. It has large quantities of nutrients, excellent structure, and good water-holding capacity, making it very suitable for agriculture. It is most widely distributed in Russia, where it forms a large part of the good agricultural soil, but soils similar to the Russian are also found in India and the central and N central United States.

Chernyaiev, Mikhail Grigoryevich: see TCHERNAIEV

Chernyshevsky, Nikolai Gavrilovich (nyĭkāl'i' gavrĕ'lovich chĕrnĭshĕf'skĕ), 1828-89, Russian socialist reformer. He was the leading disciple of Visarion BELINSKY inside Russia, from 1853 to 1857 he wrote for the radical journal *Contemporary*, presenting and expanding the principles of Belinsky, who himself also wrote for the journal. Chernyshevsky advocated basic agrarian reform and emancipation of the serfs, and he envisioned the village commune as a transition to socialism. In 1862 he was arrested and was later sent to Siberia. In prison he formulated his ideas in the vastly influential novel *What Is to Be Done?* (1863, rev. tr. 1961). His *Selected Philosophical Works* was published in English in Moscow in 1953. Chernyshevsky is looked upon as a forerunner of the Russian revolutionary movement. See biographies by F. B. Randall (1967) and W. F. Woehrlin (1971).

Cherokee (chĕr'akĕ), language belonging to the Iroquoian branch of the Hoka-Siouan linguistic family. See AMERICAN INDIAN LANGUAGES.

Cherokee Indians, largest and most important single Indian group in the SE United States, formerly occupying the mountain areas of North and South Carolina, Georgia, Alabama, and Tennessee. The Cherokee language belongs to the Iroquoian branch of the Hoka-Siouan linguistic stock (see AMERICAN INDIAN LANGUAGES). By the 16th cent. they had a settled, advanced culture based on agriculture. Hernando de Soto visited them in 1540. They were frequently at war with the Iroquois tribes of New York, but generally sided with the British against the French and proved valuable allies. Soon after 1750 they suffered a severe smallpox epidemic that destroyed almost half the tribe. Formerly friendly with the Carolina settlers, the Cherokee were provoked into war with the colonists in 1760, and two years of warfare followed before the Cherokee sued for peace. In 1820 they adopted a republican form of government and in 1827 established themselves as the Cherokee Nation under a constitution. This instrument provided for an elective principal chief, a senate, and a house of representatives. Much of their progress was due to the invention of a Cherokee syllabary or syllabic alphabet by SEQUOYAH, also known as George Guess. Its 85 characters represented all the sounds in the Cherokee language and permitted the keeping of tribal records and, later, the publication of newspapers in Cherokee. The discovery of gold in Cherokee territory resulted in pressure by the whites to obtain their lands. A treaty was extracted from a small part of the tribe, which bound the whole tribe to move beyond the Mississippi River within three years. Although the Cherokees overwhelmingly repudiated this document and the U.S. Supreme Court upheld the nation's autonomy, the state of Georgia secured an order for their removal, which was accomplished by military force. President Andrew Jackson refused to intervene, and in 1838 the tribe was deported to the Indian Territory (later in Oklahoma). Their leader at this time and until 1866 was Chief John Ross. Thousands died on the march or from subsequent hardships. They made their capital at Tahlequah, instituted a public school system, published newspapers, and were the most important of the Five Civilized Tribes. In the U.S. Civil War their allegiance was divided between North and South, large contingents serving on each side. By a new treaty at the close of the war they freed their Negro slaves and admitted them to tribal citizenship. In 1892 they sold their western territorial extension, known as the Cherokee Strip, and in 1906 disbanded as a tribe, becoming then U.S. citizens. About 4,500 Cherokee are still in W North Carolina, the descendants of the few who successfully resisted removal or returned after the removal. See M. L. Starkey, *The Cherokee Nation* (1946, repr. 1972), H. T. Malone, *Cherokees of the Old South* (1956), John Gulick, *Cherokees at the Crossroads*

(1960), D. H. Corkran, *The Cherokee Frontier: Conflict and Survival, 1740-1762* (1962), G. S. Woodward, *The Cherokee* (1963), Irvin Peithmann, *Red Men of Fire* (1964), Thurman Wilkins, *Cherokee Tragedy* (1970).

cheroot (shar'oot') see CIGAR AND CIGARETTE

cherry, name for several species of trees or shrubs of the genus *Prunus* (a few are sometimes classed as *Padus*) of the family Rosaceae (ROSE family) and for their fruits. The small round red to black fruits are botanically designated drupes, or stone fruits, as are those of the closely related peach, apricot, and plum. The cherry is one of the most commonly grown home-orchard fruits. About 600 varieties are cultivated, practically all derived from two species—*P. avium* (sweet cherries) and *P. cerasus* (sour cherries). Both are believed to be native to Asia Minor and have long been cultivated; they were mentioned in the writings of the ancients. Sour cherries are harder and more easily grown than sweet cherries and are mostly self-fertile, while many sweet cherries must be cross-pollinated to bear well. The fruit is popular raw, in preserves, and in pies, cherry cider and liqueurs (see MARASCHINO) are also made. Europe is the largest producing area. Several species of the flowering cherry, many native to the Far East, are cultivated as weeping or erect trees for their beautiful, usually double flowers. The Japanese make a national festival of cherry-blossom time, the city of Tokyo presented a number of trees to Washington, D.C., where they have become a popular spring attraction. The species of American wild cherry include the chokecherry, pin cherry, and wild black cherry. These have smaller fruits than the cultivated cherries and are seldom used except for jelly. Wood of the wild black cherry, or rum cherry (*P. serotina*), usually reddish in color, is fine grained and of high quality. It takes a high polish and is prized for cabinetwork. The aromatic bark and leaves contain hydrocyanic acid, characteristic of many cherries. The cherry laurel (*P. laurocerasus* or *Laurocerasus officinalis*) is an Old World evergreen species cultivated elsewhere in many varieties as an ornamental. The leaves are sometimes used as a flavoring and in making cherry laurel water. The American cherry laurel (*P. or L. caroliniana*), called mock orange in the South, is similar but larger. For the cherry plum, or myrobalan, see PLUM. Cherries are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Rosales, family Rosaceae.

Chersiphron (kŭr'sīfrŏn), fl. 6th cent. B.C., Cretan architect. According to tradition he was the builder of the original archaic Ionic temple of Artemis at Ephesus in Asia Minor (550 B.C.). He and his son Metagenes were said to be coauthors of a treatise on architectural engineering.

Cherson: see SEVASTOPOL, USSR

Chersonese (kŭrsŏnĕs') or **Chersonesus** (-nĕ'səs) [Gr. = peninsula], name applied in ancient geography to several regions. See CRIMEA (Chersonesus Taurica or Scythia), GALLIOLI PENINSULA (Chersonesus Thracica), MALAY PENINSULA (Chersonesus Aurea), JUTLAND (Chersonesus Cimbrica).

chert. see FLINT

Chertsey (chŭrt'sĕ), urban district (1971 pop. 44,886), Surrey, SE England. Its market gardens serve London. There are varied engineering works.

cherub, plural **cherubim**, kind of ANGEL. Cherubim were probably thought of, anciently, as composite creatures like the winged creatures of Assyria. In Jewish tradition, they are described (Ezek. 10) as having four faces and four wings and also as beautiful young men, but late Christian art made plump children of them, as in Raphael's *Sistine Madonna*. With the seraphim (see SERAPH) they are said to be in the very presence of God. The color surrounding them is traditionally blue. See Gen. 3:24, Ex. 25:18-22, 37:6-9, 1 Kings 6:23-28, Pss. 18:10, 80:1.

Cherubini, Luigi (lwĕ'jĕ kĕrŏbĕ'nĕ), 1760-1842, Italian composer, who lived in Paris after 1788. Before he was 16 he wrote masses and other sacred works, and he later composed Italian opera. In Paris he assimilated French operatic tradition and wrote operas of broad dramatic scope with rich orchestration, such as *Medee* (1797) and *Les Deux Journées* (1800), which influenced Beethoven's vocal music. In 1816 he became professor of composition at the Paris Conservatory and in 1822 its director. Renowned for his contrapuntal skill, in his later years he wrote mostly sacred music, including his masses in F Major (1809) and A Major (1825) and his Requiem in D Minor (1836).

chervil, name for two similar edible Old World herbs of the family Umbelliferae (CARROT family).

The salad chervil is *Anthriscus cerefolium*. Its leaves, like those of the related dill and parsley, are used for seasoning. The turnip-rooted chervil (*Chaerophyllum bulbosum*) is cultivated for its edible root. Other species of *Chaerophyllum* [Gr. = gladdening leaf, for the fragrant foliage] are also called chervil, e.g., the native American *C. procumbens*. Chervil is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Umbellales, family Umbelliferae.

Chesalon (kĕs'ālŏn), town of Judah, called also Mt. Jearim, W of Jerusalem. Joshua 15:10.

Chesapeake (chĕs'apĕk), city (1970 pop. 89,580), independent and in no county, SE Va., inc. 1963. Chesapeake was created (1963) by merging the former city of South Norfolk with all of Norfolk co. Within its vast area are residential sections, much farmland, with related agricultural industries, and a large part of the Great Dismal Swamp. There are also industries manufacturing a great variety of products, including fertilizer, chemicals, lumber and wood items, steel equipment, and cement. The Battle of Great Bridge was fought (1775) in Chesapeake. The Dismal Swamp Canal was completed in 1822.

Chesapeake, U.S. frigate, famous for her role in the Chesapeake affair (June 22, 1807) and for her battle with the H.M.S. *Shannon* (June 1, 1813). The *Chesapeake* left Norfolk, Va., for the Mediterranean under the command of James BARRON in June, 1807. Just outside U.S. territorial waters the H.M.S. *Leopard* stopped her and demanded the right to search her for British deserters. Barron refused to allow this, and shortly afterwards the *Leopard* opened fire. Unprepared for action, Barron was forced to submit and allow the impressment of four of his crew (two of whom were American-born). The incident caused intense indignation, and war seemed imminent. In the War of 1812, the refitted *Chesapeake*, commanded by James LAWRENCE, engaged (June 1, 1813) the H.M.S. *Shannon* outside Boston harbor. Lawrence was mortally wounded, and his last command is reportedly the famous "Don't give up the ship!" The *Chesapeake* was, however, captured. See studies by Kenneth Poolman (1961), Peter Padfield (1968), and H. F. Pullen (1970).

Chesapeake and Delaware Canal, sea-level canal, 19 mi (31 km) long, 250 ft (76 m) wide, and 27 ft (8.2 m) deep, connecting the head of Chesapeake Bay with the Delaware River. Built in 1824-29, the canal was bought by the Federal government in 1919 and later was enlarged and modernized. It is part of the Intracoastal Waterway and can accommodate oceangoing vessels. See study by R. D. Gray (1967).

Chesapeake and Ohio Canal, former waterway, c. 185 mi (300 km) long, from Washington, D.C., to Cumberland, Md., running along the north bank of the Potomac River. A successor to the Potomac Company's (1784-1828) navigation improvement project, the Chesapeake and Ohio Canal was planned to extend W to Pittsburgh. Work was begun in 1828, but financial and labor problems (leading in 1834 to the first use of Federal troops to settle a labor dispute), as well as opposition from the rival Baltimore and Ohio RR, delayed completion to Cumberland until 1850. Although extension to Pittsburgh proved impractical, the canal experienced a busy period in the 1870s carrying coal from the Cumberland mines. The canal was used until it was damaged by floods in 1924. It was sold in 1938 to the U.S. government. The canal, partially restored, was made a national monument in 1961. In 1971 it became a national historic park. See study by G. W. Ward (1899, repr. 1973).

Chesapeake & Ohio Railway (C&O), U.S. transportation company with railroad lines in eight states, Washington, D.C., and Ontario, Canada. Founded as the Louisa RR Company in Virginia in 1836, the railroad changed its name to the Virginia Central Company in 1850. It served the Confederate armies during the Civil War and was severely damaged by Union raids. In 1869 financier Collis P. Huntington purchased the line, it received its present name in 1878. The C&O, one of the most solvent railroads in the United States, receives nearly all of its net income from carrying freight and is the nation's largest carrier of bituminous coal. In 1963 the C&O acquired control of the BALTIMORE & OHIO RR.

Chesapeake Bay, inlet of the Atlantic Ocean, c. 200 mi (320 km) long, from 3 to 30 mi (4.8-48 km) wide, and 3,237 sq mi (8,384 sq km), separating the Delmarva Peninsula from the mainland, E Md. and E Va. The bay is the drowned mouth of the Susquehanna River and also is fed by many other rivers including the Potomac, Rappahannock, and James. Chesapeake Bay is entered from the Atlantic Ocean through a 12-mi-wide (19-km) gap between capes

Henry and Charles, Va. The CHESAPEAKE BAY BRIDGE-TUNNEL runs across the mouth of the bay. An important part of the Intracoastal Waterway, the bay is linked with the Delaware River by the Chesapeake and Delaware Canal. Baltimore, Md., is the largest city and main port on the bay. Norfolk, Va., is an important port and naval base. Commercial fishing (oysters and crabs) is important; the bay is also used for recreation. The English colonist John Smith explored and charted Chesapeake Bay in 1608, a year after the first white settlement at Jamestown, Va., was established.

Chesapeake Bay Bridge-Tunnel, 18 mi (29 km) long, across the mouth of Chesapeake Bay, E Va., connecting Cape Charles with Norfolk, Va. Opened in 1964, the complex consists of a chain of low trestle bridges, two high bridges, and two tunnels (each 1 mi/1.6 km long) under the shipping channels. The tunnels are anchored on four man-made islands.

Chesapeake Bay retriever, breed of large SPORTING DOG developed in the United States. It stands about 24 in. (61 cm) high at the shoulder and weighs about 65 lb (29.5 kg). Its thick, short double coat ranges in color from a very dark brown to the faded tan called deadgrass. Webbed feet, powerful shoulders and hindquarters, and an oily outercoat that tends to shed water, combine to make the Chesapeake a very efficient retriever in the iciest water. Although bred to retrieve ducks, it is also widely used to hunt on land and has been trained as a guide dog. See DOG.

Chesed (kě'sēd), nephew of Abraham. Gen. 22:22.

Chesha Bay (chě'shā), Rus. *Cheshskaya Guba*, inlet of the Barents Sea, 84 mi (135 km) wide and 62 mi (100 km) long, Nenets National Okrug, N central European USSR. It receives the Chesha, Vizhas, Oma, and Pesha rivers.

Cheshire (chě'shā) or **Chester**, county (1971 pop. 1,542,624) W central England. The county town is CHESTER. The terrain is generally low, flat, and fertile. Its chief rivers are the Mersey and the Dee, which separates Cheshire from Wales. The Wirral peninsula separates the estuaries of the two rivers. The county is important agriculturally and industrially. It engages extensively in dairy farming and grows potatoes and wheat. The chief industries are engineering, salt mining, shipbuilding, oil refining, and the manufacture of railroad cars, textiles, textile machinery, soap, paper, and chemicals. The principal industrial centers are NORTHWICH, BIRKENHEAD, STOCKPORT, CREWE, and MACCLESFIELD. Communication by road, rail, and canal (the MANCHESTER SHIP CANAL) is excellent. Cheshire was made a palatinate by William I and maintained some of its privileges as such until 1830. The numerous black-and-white-timbered manor houses attest to the county's prosperity in the 16th and 17th cent. In the last century the population of the county greatly increased with the industrialization and suburbanization of the Wirral peninsula and the part of Cheshire just S of Manchester. In 1974, most of Cheshire became part of the new nonmetropolitan county of Cheshire, NW Cheshire (including Birkenhead) became part of the new metropolitan county of Merseyside, and NE Cheshire (including Stockport) became part of the new metropolitan county of Greater Manchester.

Cheshire, town (1970 pop. 19,051), New Haven co., S central Conn., in a farm area, settled 1695, inc. 1780. It is chiefly residential, with some machine shop manufactures. The painter John Frederick Kensett was born in Cheshire.

Cheshunt (chě'shənt), urban district (1971 pop. 44,947), Hertfordshire, SE England. A suburb of London, it is a prominent market-gardening district. Theobalds Park, an 18th-century mansion, is noteworthy.

Chesil (kě'sil), the same as BETHEL 2.

Chesney, Francis Rawdon, 1789-1872, British soldier and explorer in Asia. His examination of a route for the Suez Canal (1829) demonstrated the feasibility of building a canal and led the vicomte de LESSEPS to undertake the project. In 1835, Chesney commanded an expedition to survey N Syria. He proved the navigability of the Tigris and Euphrates and urged the adoption of a Euphrates route to India. In 1856 and 1862 he was associated with a Euphrates valley railroad project, but the scheme fell through. His works include *The Expedition for the Survey of the Rivers Euphrates and Tigris* (2 vol., 1850) and *Narrative of the Euphrates Expedition* (1868). See biography by his wife and his daughter (ed. by Stanley Lane-Poole, 1885).

Chesnut, Charles Waddell, 1858-1932, American author, b. Cleveland, Ohio. In 1887 he was admitted to the Ohio bar. Chesnut is considered the first

American Negro novelist. He is best known for *The Conjure Woman* (1899), a series of dialect stories about Negro slave life. His other works include *The Wife of His Youth* (1899), a group of stories, a biography of Frederick Douglass (1899), and several novels.

Chess, game for two players played on a square board composed of 64 square spaces, alternately dark (commonly designated as Black) and light (White) in color. The board is placed so that a light-colored square is in the corner to the right of each player, who is provided with 16 pieces, or chessmen, of his own color. At the outset of the game eight pieces are set down in the horizontal row of squares, or rank, nearest each player. The pieces (and their abbreviations) are two rooks (R), or castles, in the corner squares, two knights (N, Kt, or S) in the adjoining squares, two bishops (B) next to the knights, the queen (Q) on the remaining square corresponding to her color, and the king (K) on the other remaining center square, one pawn (P) is placed immediately in front of each of these pieces. Each type of piece is moved according to specific rules and is removed from the board when it is displaced by the move of one of the opposing pieces into its square. The object in chess is to trap, or checkmate, the opponent's king. Several systems of notation are used to describe the moves of the pieces. The most popular one is the descriptive system, also called English notation. According to that system each vertical row of squares, or file, is named for the pieces on it at the beginning of the game. The ranks are numbered 1 through 8 away from the player, either White or Black, who is moving. A move is described by naming the piece that is moved and the square that it is moved to. The square is designated by the name of its file and the number of its rank, with each player counting from his side of the board. When only one piece of a kind can make a particular move, the piece's original position is not specified in the notation. The symbol - means "to" and the symbol x means "takes," indicating a capture. If, for example, White's first move were to advance the pawn in front of his king two squares, the notation would read P-K4. Various players are known for their openings, middle games, or end games, with many of the moves named for the great players who have originated them or for countries, as in the Ruy Lopez opening or the Sicilian defense. Chess has fascinated people for centuries, and there is evidence that a game similar to modern chess was played in the 6th and 7th cent. It probably originated in India, spreading to Persia and then to the Levant, and it may have been introduced into Europe by the Muslims. By the 13th cent., it was played all over Western Europe and had undergone little change from the game as played by the Persians. Outstanding players of their day who were considered world champions were 1747-95, François Philidor of France, 1815-20, Alexandre Deschappelles of France, 1820-40, Louis de la Bourdonnais of France, and 1843-51, Howard Staunton of England. The first modern international chess tournament was held in London in 1851. Since then official world champions have been 1851-58 and 1862-66, Adolph Anderssen of Germany, 1858-62, Paul C. Morphy of the United States, 1866-94, Wilhelm Steinitz of Austria, 1894-1921, Emanuel Lasker of Germany, 1921-27, Jose R. Capablanca of Cuba, 1927-35 and 1937-46, Alexander A. Alekhine of France, 1935-37, Max Euwe of the Netherlands, 1948-57, 1958-60, 1961-63, Mikhail Botvinnik of the USSR, 1957-58, Vasily Smyslov of the USSR, 1960-61, Mikhail Tal of the USSR, 1963-69, Tigran Petrosian of the USSR, 1969-72, Boris Spassky of the USSR, and 1972-74, Robert J. Fischer of the United States. The 1972 World Chess Championship match, held in Reykjavik, Iceland, received unprecedented worldwide coverage and brought Fischer, the winner, a purse of over \$156,000. Fischer resigned the title in 1974, the first player ever to do so. Chess has an extensive literature. A good book for beginners is Capablanca's *A Primer of Chess* (1935, repr. 1963). See H. J. R. Murray, *A History of Chess* (1913, repr. 1962), H. A. Davidson, *A Short History of Chess* (1949, repr. 1968), Fred Reinfeld, *Complete Book of Chess Stratagems* [1958, repr. 1972], Israel A. Horowitz and P. L. Rothenberg, *Complete Book of Chess* (1969), Anne Suencks, ed., *Encyclopedia of Chess* (1970), Larry Evans, *Chess World Championships 1972 Fischer-Spassky* (1972), Edward Lasker, *The Game of Chess* (1972), H. C. Schonberg, *Grandmasters of Chess* (1973).

Chester, county borough (1971 pop. 62,696), county town of Cheshire, W central England, on a sandstone height above the Dee River. It is a railroad

junction. Its manufactures include electrical switchgear, paint, and window panes. Tourism is also economically important. Formerly Chester had great military importance, and it was a significant port for centuries. Under the name Castra Devana or Deva it was the headquarters of the Roman 20th legion. It was ravaged by Æthelfrith of Northumbria in the 7th cent. and the Danes in the 9th cent. Æthelflaed of Mercia fortified Chester again in the 10th cent. William I took it in 1070 and the following year granted it to his nephew, Hugh Lupus, as a palatine earldom. Chester served the English crown as a defensive bastion and was used as a base for operations against Wales from 1275 to 1284. During the ENGLISH CIVIL WAR Parliamentarians took Chester by siege in 1646. Ireland was the town's primary trading partner. Its role as a port peaked from c. 1350 to 1450, silting and the rise of Liverpool contributed to the end of this role by the late 18th cent. Modern Chester is medieval in appearance. It is the only city in England that still possesses its entire wall. Interesting features are the red sandstone wall with a walk along the top, Agricola's Tower, 15th- and 16th-century timbered houses, the cathedral, with architecture of styles from Norman to Late Perpendicular, the Roodee, on which races have been held since 1540, St. John's Church (formerly a cathedral), Grosvenor Museum, and "The King's School," a public school founded by Henry VIII in 1541. Characteristic of Chester are the Rows, a double tier of shops formed by recessing the second stories of the buildings along the main streets. This creates a sheltered walk upon the roofs of the street-level stores. The Chester Plays (see MIRACLE PLAY) originated in the town. In 1974, Chester became part of the new nonmetropolitan county of Cheshire.

Chester, city (1970 pop. 56,331), Delaware co., SE Pa., on the Delaware River, an industrial suburb of Philadelphia, settled c. 1644 by Swedes, inc. as a city 1866. It is a port of entry and has an important shipbuilding industry that dates from before the Civil War. In addition to one of the largest shipyards and drydocks in the United States, there are steel mills, oil refineries, automobile assembly plants, and factories making a huge variety of products, including aircraft parts, chemicals, and electrical equipment. The oldest city in the state, Chester (established as Upland) was the site of William Penn's first landing (1682) in America. Penn renamed the settlement and convened (1682) the first assembly of the province there. Historic attractions include the foundations of the original settlement, in Governor Printz Park, the Morton Homestead (1654), the Caleb Pusey House, at Landingford Plantation (1683), the old courthouse (1724), and the Washington House (1747), where Washington wrote his report (1777) on the battle of Brandywine.

Chesterfield, Philip Dormer Stanhope, 4th earl of, 1694-1773, English statesman and author. A noted wit and orator, his long public career, begun in 1715, included an ambassadorship to The Hague (1728-32), a seat in Parliament, and a successful tenure as lord lieutenant of Ireland (1745-46). His literary fame rests upon his letters to his illegitimate son, Philip Stanhope (first pub. 1774), designed for the education of a young man, and upon his letters to his godson (pub. 1890). See edition of his letters by Bonamy Dobree (6 vol., 1932) and additional letters edited by S. L. Gulick, Jr. (1938), study by Samuel Shellabarger (rev. ed. 1951, repr. 1971).

Chesterfield, municipal borough (1971 pop. 70,153), Derbyshire, central England. An important industrial center, the borough produces mining equipment, railroad cars, metal products, and many other goods. Of interest are the Stephenson Memorial Hall (named in honor of the inventor George Stephenson, who lived and is buried in Chesterfield), the 16th-century grammar school, and the 14th-century church with a twisted spire.

Chesterfield Inlet, Canadian government post in the Keewatin dist., Northwest Territories, at the mouth of Chesterfield Inlet of Hudson Bay.

Chester Plays: see MIRACLE PLAY.

Chesterton, Gilbert Keith, 1874-1936, English author. Conservative, even reactionary, in his thinking, Chesterton was a convert (1922) to Roman Catholicism and its champion. He has been called the "prince of paradox" because his dogma is often hidden beneath a light, energetic, and whimsical style. A prolific writer, Chesterton wrote studies of Browning (1903) and Dickens (1906), several novels including *The Napoleon of Notting Hill* (1904) and *The Man Who Was Thursday* (1908), a noted series of crime stories featuring Father Brown as detective, many poems, collected in 1927, and his famous es-

says, collected in *Tremendous Trifles* (1909), *Come to Think of It* (1930), and other volumes. He was the editor of *G. K.'s Weekly*, an organ of the Distributist League, which advocated the small-holding system. An amusing artist, he illustrated books by Hilaire BELLOC, his friend and collaborator. See his autobiography (1936), biography by Dudley Barker (1973), studies by Christopher Hollis (1970), A. M. Bogaerts (1940, repr. 1972), and Julius West (1915, repr. 1973).

chestnut, name for any species of the genus *Castanea*, deciduous trees of the family Fagaceae (BEECH or oak family) widely distributed in the Northern Hemisphere. They are characterized by thin-shelled, sweet, edible nuts borne in a bristly bur. The common American chestnut, *C. dentata*, is native E of the Mississippi but is now nearly extinct because of the chestnut blight, a disease from Asia caused by the fungus *Endothia parasitica*. Efforts are being made to breed a type of American chestnut resistant to the disease, by crossing it with the blight-resistant Chinese and Japanese chestnuts, in order to replace the old chestnut forests, some of which are still standing as dead, or "ghost," forests. The dead and fallen logs are still the leading domestic source of tannin. Chestnut wood is porous, but it is very durable in soil and has been popular for fence posts, railway ties, and beams. Edible chestnuts are now mostly imported from Italy, where the Eurasian species (*C. sativa*) has not been destroyed. The CHIN QUAPIN belongs to the same genus. Chestnuts are classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Fagales, family Fagaceae.

Chesulloth (kēsūl'ōth), town, N Palestine, the same as CHISLOTH-TABOR. Joshua 19:18.

Chesuncook Lake (chēsūn'kōōk), 22 mi (35 km) long and from 1 to 4 mi (1.6–6.4 km) wide, N central Maine. The western branch of the Penobscot River flows through the lake, which is in a noted hunting and fishing region. Baxter State Park is nearby.

Chevalier, Guillaume Sulpice. see GAVARNI.

Chevalier, Maurice (shavāl'yā, Fr. mōrēs' shavalyā'), 1888–1972, French singer and film actor. He made his debut in 1900 singing and dancing at the Casino de Tourelles, Paris. As the dancing partner of Mistinguett and as the star of several Paris music halls, he won his public by his charm and inimitable smile, by 1928 his reputation was international. Among his later films are *Love in the Afternoon* (1956), *Gigi* (1958), *Can-Can* (1959), and *Fanny* (1961). See his autobiographies *With Love* (1960) and *I Remember It Well* (1970), study by Gene Ringgold (1973).

Chevalier, Michel (mēshēl'), 1806–79, French economist. An ardent Saint-Simonian as a youth, he later favored a form of welfare capitalism. He advocated industrial development as the key to social progress. Also a proponent of free trade, he negotiated with Richard Cobden the Anglo-French trade treaty of 1860. His *Lettres sur l'Amérique du Nord* (1836) extols the United States.

Cheverus, Jean Louis Anne Madeleine Lefebvre de (zhān lwē an madēlēn' ləfēvrə də shāvrus'), 1768–1836, French churchman, first Roman Catholic bishop of Boston (1810–23). He was ordained in France and had to flee (1792) during the French Revolutionary Wars. In England he lived by teaching until 1796, when he went to Boston. He worked all over New England and was known for his work with the Indians in Maine. He was also highly esteemed as a physician. In 1810 he was consecrated bishop of Boston. At length his health began to fail, and he asked for transfer to France. Catholics and Protestants in the United States begged him to remain, but he accepted a transfer to the see of Montauban (1823). In 1826 he became archbishop of Bordeaux and in 1836 cardinal. He did much to extend the tolerance of Roman Catholicism in America. See biography by A. M. Melville (1958).

Cheves, Langdon (chī'vīs), 1776–1857, American statesman, b. Abbeville District (now Abbeville co.), S.C. Admitted to the bar in 1797, he became one of the leading lawyers of Charleston. In the U.S. House of Representatives (1810–15) he was one of the "war hawks" who agitated for hostilities with Britain. He served as chairman of the Ways and Means Committee and in 1814 succeeded Henry Clay as speaker. In this capacity Cheves cast the deciding vote against Alexander J. Dallas's bill for establishing the Second Bank of the United States, but it was chartered anyway in 1816. The bank was badly mismanaged until Cheves, elected a director and president in 1819, restored its credit. On his resignation in 1822, Nicholas Biddle took over the bank.

Cheviot (shēv'ēat, shēv'-), city (1970 pop. 11,135), Hamilton co., extreme SW Ohio, a residential sub-

urb of Cincinnati, settled early 1800s, inc. 1904. It has diverse light manufacturing industries.

Cheviot Hills (chēv'ēat, chēv'-), range, c. 35 mi (56 km) long, extending along part of the border between Scotland and England. The highest point is The Cheviot (2,676 ft/816 m). The North Tyne and branches of the River Tweed rise there. Since World War II the hills have been reforested. Northumberland National Park (398 sq mi/1,031 sq km, est. 1956) and Border National Forest Park occupy most of the hills. The Cheviots have been the scene of much border strife. They are celebrated in the ballad "Chevy Chase." A fine type of sheep, the cheviot, is bred there.

Chevreul, Michel Eugene (mēshēl' ōzhēn' shāvrol'), 1786–1889, French chemist. He studied under L. N. Vauquelin, was director of the Gobelins tapestry works, and from 1830 was professor, and from 1860 to 1879 director, at the natural history museum at Paris. Noted for his researches in the composition of animal fats (by which he contributed to the development of the soap and candle industry), he discovered and named olein and stearin and wrote *Recherches sur les corps gras d'origine animale* (1823). He also worked and wrote on color contrasts; the results of his studies influenced the neoimpressionist painters Seurat and Signac.

Chevreuse, Marie de Rohan-Montbazou, duchesse de (marē' də rōān'-mōnbazōn' dushēs' də shavroz'), 1600–1679, French beauty and politician, an intimate of the French queen, Anne of Austria. Her continuous intrigues in opposition to King Louis XIII's minister, Cardinal Richelieu, caused her to be banished repeatedly from the court and to be exiled. She proved to be even more dangerous abroad because of her intrigues with France's enemies, notably Duke Charles IV of Lorraine. In the FRONDE she at first served as a link with Spain against Cardinal Mazarin, Richelieu's successor, but subsequently she became Mazarin's ally. See biography by Michael Charol (1971).

chevrotain, name for four species of small, ruminant mammals of Africa and SE Asia. Although they are also called mouse deer, chevrotains are not closely related to true deer, and are classified in a family of their own. The smallest of the hoofed mammals, they stand 8 to 14 in. (20–66 cm) high at the shoulder, depending on the species. The body is rabbitlike, with an arched back, the legs are very slender and end in small feet, the snout is tapered and somewhat piglike. The reddish-brown coat is spotted with white in most species. Chevrotains lack antlers but have tusklike upper canine teeth, used by the males for fighting. The upper incisors are lacking. Solitary, nocturnal animals of thick forests, chevrotains browse on leaves, twigs, and fruit. They sometimes rest in the branches of low trees. The water chevrotain (*Hyemoschus aquaticus*) of Africa is always found near water and takes to the water when pursued. The other chevrotains (*Tragulus* species) are found from India to Indonesia and the Philippines. Chevrotains are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Artiodactyla, family Tragulidae.

Chevy Chase (chēv'ē), village (1970 pop. 16,424), Montgomery co., W central Md., a residential suburb of Washington, D.C., inc. 1914.

Chew, Benjamin, 1722–1810, American public official and judge, b. Anne Arundel co., Md. He read law in Philadelphia under Andrew Hamilton and was admitted (1746) to the bar. After practicing law at New Castle and Dover, Del., Chew returned to Philadelphia, where he held several public offices and was attorney general (1755–69). He was chief justice of the Pennsylvania supreme court from 1774 until the outbreak of the American Revolution, when he was suspected of Loyalist sympathies. He was arrested but was discharged soon afterward. He later served (1791–1808) as president of the high court of errors and appeals of Pennsylvania. See biography by B. A. Konkle (1932).

chewing gum, confection consisting usually of CHICLE, flavorings, and corn syrup and sugar (although there are gums with artificial sweeteners on the market). Prehistoric people are believed to have chewed resins. Spruce resin was chewed as a thirst quencher by American Indians, from whom pioneers adopted the custom. Refined paraffin was later used and then chicle, which was probably first imported into the United States through Mexico. A chicle gum was patented in 1869 by William and Sempie. In the present-day manufacture of chewing gum blocks of chicle are ground, melted, and cleared in a whirling vat, and then the flavorings (e.g., fruits, licorice, mints) and other ingredients are

added. The gum is rolled through sheeting machinery and chopped into sticks or into candy-coated pellets. Insoluble plastics may be mixed with or substituted for the chicle. Although the United States is the major producer, exporter, and consumer, the industry has also been established in Canada, Japan, Egypt, West Germany, and especially the Latin American countries.

Cheyenne (shīān', -ēn'), city (1970 pop. 40,914), alt. 6,062 ft (1,848 m), state capital and seat of Laramie co., SE Wyo., near the Colo. and Nebr. lines, inc. 1867. It is a market for sheep and cattle ranches and a shipping center with good transportation facilities. The city sprang up after the Union Pacific RR selected this site for a division point in 1867. It was made territorial capital in 1869. In the 1870s the development of the area as a cattle-ranching section and the opening of the Black Hills gold fields stimulated the city's growth. Cheyenne revives its past annually with a Frontier Days celebration, first held in 1897. Landmarks include the state capitol and the supreme court building, housing the state historical museum and library. Nearby are Francis E. Warren Air Force Base, a veterans hospital, and a U.S. horticultural station.

Cheyenne, river, 527 mi (848 km) long, rising in E Wyo. and flowing NE to the Missouri River near Pierre, S. Dak. The Cheyenne basin is part of the Missouri River basin project. The U.S. Bureau of Reclamation has established a project on the Belle Fourche River, the Cheyenne's main tributary, the Rapid Valley irrigation project in the Cheyenne valley, and the Angostura Dam, for irrigation, hydroelectric power, and flood control, on the Cheyenne itself.

Cheyenne Indians, North American Indians whose language belongs to the Algonquian branch of the Algonquian-Wakashan linguistic stock (see AMERICAN INDIAN LANGUAGES). The Cheyenne abandoned their settlements in Minnesota in the 17th cent., leaving the region to the hostile Sioux and Ojibwa. Gradually migrating W along the Cheyenne River and then south, they established earth-lodge villages and raised crops. After the introduction of the horse (c. 1760) they eventually became nomadic buffalo hunters. The tribe split (c. 1830) when a large group decided to settle on the upper Arkansas River and take advantage of the trade facilities offered by Bent's Fort. This group became known as the Southern Cheyenne. The Northern Cheyenne continued to live about the headwaters of the Platte River. For the next few years the Southern Cheyenne, allied with the Arapaho, were engaged in constant warfare against the Kiowa, Comanche, and Apache. Peace was made c. 1840, and the five tribes became allies. The Cheyenne were generally friendly toward white settlers, until the discovery of gold in Colorado (1858) brought a swarm of gold seekers into their lands. By a treaty signed in 1861 the Cheyenne agreed to live on a reservation in SE Colorado, but the U.S. government did not fulfill its obligations, and the Indians were reduced to near starvation. Cheyenne raids resulted in punitive expeditions by the U.S. army. The indiscriminate massacre (1864) of warriors, women, and children at SAND CREEK, Colo., was an unprovoked assault on a friendly group. The incident aroused the Indians to fury, and a bitter war followed. Gen. George CUSTER destroyed (1868) Black Kettle's camp on the Washita River, and fighting between the whites and the Southern Cheyenne ended, except for an outbreak in 1874–75. The Northern Cheyenne joined with the Sioux in massacring Custer and his 7th Cavalry at the Battle of the Little Bighorn in 1876. They finally surrendered in 1877 and were moved south and confined with the Southern Cheyenne in what is now Oklahoma. Plagued by disease and malnutrition, they made two desperate attempts to escape and return to the north. A separate reservation was eventually established for them in Montana. See G. B. Grinnell, *The Fighting Cheyennes* (1915, repr. 1956) and *The Cheyenne Indians* (2 vol., 1923, repr. 1972), E. A. Hoebel, *The Cheyennes* (1960), D. J. Berthrong, *The Southern Cheyennes* (1963), Joseph Millard, *The Cheyenne Wars* (1964), John Stands in Timber and Margot Liberty, *Cheyenne Memories* (1967), P. J. Powell, *Sweet Medicine* (2 vol., 1969).

Cheyne, Thomas Kelly (chā'nē), 1841–1915, English clergyman and biblical critic, educated at Oxford. While studying at Göttingen, he was influenced by Georg Ewald and gained a view of German biblical criticism little known at the time in England. From 1885 to 1908 he was Oriel professor of the interpretation of Scripture at Oxford as well as canon of Rochester. He was the author of many books of bib-

lical criticism, his most celebrated work was on the Major Prophets and on the Psalms. He also wrote *Jewish Religious Life after the Exile* (1898) and *The Reconciliation of Races and Religions* (1914). With J. S. Black, Cheyne edited the *Encyclopaedia Biblica* (4 vol., 1899-1903).

Chezib (kě'zīb), probably the same as ACHIZIB 2

Chiabrera, Gabriello (gabrē-ēl'ō kyabrē'ra), 1552-1638?, Italian poet. He adapted classical forms to Italian verse and wrote graceful lyrics in the manner of Anacreon. Wordsworth translated some of his verse.

Chia-hsing (jĕa-shĭng) or **Kashĭng** (ka'shĭng'), town, N Chekiang prov., SE China, at the junction of the Grand Canal, the Whangpoo River, and the Hangchow-Shanghai RR. An important marketing center for rice and silk, it has textile mills, food-processing establishments, and cement plants.

Chia-i or **Chiayi** (both jĕa-ē), city (1969 pop. 234,359), S Taiwan. It is an agricultural market for rice, peanuts, vegetables, sugarcane, and timber from the surrounding area. The city is also the headquarters for the Chia-i irrigation system and is a transportation center.

Chia-ling (jĕa-lĭng) or **Kialing** (kya'lĭng), river, c. 450 mi (720 km) long, rising in S Kansu prov., central China, and flowing S through Shensi and Szechwan provs. to join the Yangtze River at Chungking, it receives the Fou and Ch'u rivers. One of the Yangtze's chief tributaries, the Chia-ling is navigable up through the Szechwan basin, an important agricultural and industrial area.

Chia-mu-ssu (jĕa-mōō-sōō) or **Kiamusze** (kya'mōō-sōō, jĕa'-), city (1970 est. pop. 275,000), E Heilungkiang prov., China. It is the chief port on the lower reaches of the Sungari River; the city has coal, aluminum, lumber, paper, textile, farm machinery, and beet-sugar-processing industries. There are rail connections to Harbin, to North Korea, and to the Soviet Union. Nearby Santaokang is the site of a huge state farm that was equipped by the USSR. The city was formerly the capital of Hokiang prov.

Chi'an or **Kian** (both jĕ-an), city (1970 est. pop. 100,000), central Kiangsi prov., China. It is a major commercial port on the Kan River and an important road hub. There are coal mines in the vicinity. Chi'an is known for its pagoda. The city was formerly called Luling.

Chiang Ching (jĕang jĭng), c. 1913-, Chinese Communist political leader, wife of Mao Tse-tung. Born Li Yun-ho, she changed her name to Lan Ping when she began an acting career in the 1930s. She joined the Communist party in 1938, the same year that she adopted her present name. In 1939 she married Mao Tse-tung and thereafter remained in the background of Chinese Communist affairs until the outbreak of the Cultural Revolution (1966-69). Appointed deputy director (1966) of the Cultural Revolution, she established herself as a leading radical figure. She replaced practically all earlier works of drama, art, and music with works designed specifically to spread Maoist doctrine. She has been a member of the politburo since 1969, and is considered one of the most powerful political figures in China.

Chiang Ching-kuo (jĕang jĭng-gwō), 1909-, Chinese Nationalist leader, eldest son of CHIANG KAI-SHEK. After spending 12 years in the Soviet Union, he returned to China (1937) and served in minor government posts. Following the Nationalist retreat to Taiwan (1949), he rose to control the armed forces and intelligence agencies, and became a powerful figure within the Kuomintang party. He served as Nationalist China's defense minister from 1965 until his appointment as premier in 1972. He is considered Chiang Kai-shek's probable successor as leader of the Nationalist government on Taiwan.

Chiang Kai-shek (jĕang kī-shĕk, jĕang), 1887-, Chinese Nationalist leader. He is also called Chiang Chung-cheng. He was graduated (1909) from a military academy in Japan, and was then assigned for field training with a regiment of the Japanese army. He returned to China in 1911 and took part in the revolution against the Manchus. Chiang was active (1913-16) in attempts to overthrow the government of YUAN SHIH KAI. When SUN YAT-SEN established (1917) the Canton government, Chiang served as his military aide. In 1923 he was sent by Sun to the USSR to study military organization and to seek aid for the Canton regime. On his return he was appointed commandant of the newly established (1924) Whampoa Military Academy; he grew more prominent in the KUOMINTANG after the death (1925) of Sun Yat-sen. In 1926 he launched the NORTHERN EXPEDITION, leading the victorious Nationalist army

into Hankow, Shanghai, and Nanking. Chiang, following the original policy of Sun Yat-sen, cooperated with the Chinese Communists and accepted Russian aid, but in 1927 he dramatically reversed himself, initiating the long civil war between the Kuomintang and the Communists. By the end of 1927, Chiang controlled the Kuomintang, and in 1928 he became head of the Nationalist government at Nanking and generalissimo of all Chinese Nationalist forces. Thereafter, under various titles and offices, he exercised virtually uninterrupted power as leader of the Nationalist government. In 1936, Gen. CHANG HSUEH-LIANG seized him at Sian, supposedly to force him to terminate the civil war against the Communists and to establish a united front against the encroaching Japanese. A partial truce was concluded between Chiang and the Communists, and Chiang was released. Despite the outbreak of the Sino-Japanese War in 1937 the agreement soon broke down, and, by 1940, Chiang's best troops were being used against the Communists in the northwest. After the Japanese took Nanking and Hankow, Chiang moved his capital to Chungking. As the Sino-Japanese War merged with World War II, Chiang's international prestige increased. He attended the Cairo Conference (1943) with Franklin Delano Roosevelt and Winston Churchill. He and his wife, who had been Soong Mei-ling (see SOONG, family), were the international symbols of China at war, but Chiang was bitterly criticized by Allied officers, notably Joseph W. Stilwell, and argument raged over his internal policies and his conduct of the war. After the war ended Chiang failed to achieve a settlement with the Communists, and civil war continued. In 1948, Chiang became the first president elected under a new, liberalized constitution. He soon resigned, however, and his moderate vice president, Gen. LI TSUNG-JEN, attempted to negotiate a truce with the Communists. The talks failed, and, in 1949, Chiang resumed leadership of the Kuomintang to oppose the Communists, who were sweeping into S. China in strong military force and reducing the territories held by the Nationalists. By 1950, Chiang and the Nationalist government had been driven from the mainland to the island of TAIWAN (Formosa). On Taiwan, Chiang took firm command and established a virtual dictatorship. He reorganized his military forces with U.S. aid and then instituted limited democratic political reforms. Chiang continued to promise reconquest of the Chinese mainland and at times landed Nationalist guerrillas on the China coast, often to the embarrassment of the United States. His international position was weakened considerably in 1972 when the United Nations, reversing its former policy, expelled his regime and accepted the Communists as the sole legitimate government of China. His writings have appeared in English as *China's Destiny* (1947) and *Soviet Russia in China* (1957). See biographies by Robert Berkov (1938), H. K. Tong (rev. ed. 1953), and Richard Curtis (1969), P. P. Y. Loh, *The Early Chiang Kai-shek* (1971).

Chiangmai (jĕang'mī) or **Chiangmai** (jĕang'-), city (1970 pop. 89,272), capital of Chiangmai prov., N Thailand, on the Ping River, near the Burmese border. It is Thailand's third largest city and the economic, cultural, and religious center of the northern provinces. The terminus of a railroad from Bangkok, Chiangmai is also linked to the capital by air and highway. The city is a shipping point for the agricultural products of the surrounding region. Long the center of Thailand's teak industry, Chiangmai also produces silver and wood articles, pottery, and silk and cotton goods. Chiangmai's population is mainly Lao. The city, a center of a Lao kingdom from the 11th cent., became after the 14th cent. a target of dispute between the Burmese and the Siamese. The Burmese invasions ceased in the 19th cent., and Chiangmai was fully incorporated into Thailand. The city consists of an 18th-century walled town on the right bank of the Ping and a new town on the left bank that developed around the railroad station. The Univ. of Chiangmai (1963), a teachers college, and a technical institute are in the city.

Chianti, Monti (mōn'tē kyan'tē), small range of the Apennines, c. 15 mi (25 km) long, in Tuscany, central Italy, W of the Arno River, rises to c. 3,000 ft (915 m). The celebrated Chianti wines are produced on its slopes.

Chiapas (chē'pas), state, (1970 pop. 1,578,180), 28,732 sq mi (74,416 sq km), SE Mexico, on the Pacific Ocean between Guatemala and the Isthmus of Tehuantepec. Tuxtla is the capital. Chiapas is crossed by mountain ranges rising from the isthmus and extending SE into Guatemala. They are sepa-

rated by low, subtropical valleys. Paralleling the coastal plain is the Sierra Madre de Chiapas, a range reaching its greatest height in Tacaná volcano. The state's principal river valley is the Grijalva, northeast of which are the central highlands, populated predominantly by Indians. Farther to the northeast, in the El Desierto region, are lower ranges, lakes, and valleys, falling away toward the Usumacinta River and the jungle plains of Tabasco. This sparsely inhabited region contains valuable forests of dye-woods and hardwoods and is also the site of several Mayan cities (notably PALENQUE). The area is also the retreat of the Lacandonese, a gradually disappearing Indian group often thought to be related to the ancient Maya. The climate of Chiapas, except for the highlands, is excessively hot. Rainfall is heavy from June to November. Subsistence crops are grown, and coffee (of which Chiapas is a leading national producer), rubber, and cacao are economically important, as is livestock breeding. The state's rich mineral resources, especially silver, gold, and copper, remain mostly unexploited. In general, economic development has been hindered by remoteness and inadequate communication, but railroads, airlines, and the Inter-American Highway link Tuxtla with the highland towns and are opening up the interior. Conquered with difficulty by the Spanish, Chiapa, as it was then called, was attached to the captain generalcy of Guatemala. Never ethnologically, geographically, nor politically a part of colonial Mexico, Chiapas maintained a quasi independence during the political anarchy that followed the collapse in 1823 of the empire of Agustín de Iturbide. This status separated Chiapas from the Central American states and oriented it toward Mexico. Interesting archaeological sites have been discovered near the Indian village of Chiapa de Corzo. The state's Indians are known for their colorful dances and costumes.

chiaroscuro (kyarōskō'rō) [Ital., =light and dark], term once applied to an early method of printing woodcuts from several blocks and also to works in black and white or monotone. Today it is used loosely to refer to the distribution of light and dark in painting. The works of Caravaggio and Rembrandt exemplify the dramatic use of chiaroscuro effects.

chiasma (kĭā'z'mə) see CROSSING OVER

Chiatura (chĕātō'rā), city (1970 pop. 25,000), SE European USSR, in Georgia, on the Kvirila River. One of the world's largest manganese producers, Chiatura alone accounted for half of the world's manganese trade before World War I. The ore is shipped to the Black Sea port of Poti for export to the Ukraine and abroad.

Chiavenna (kyavān'na), town (1971 pop. 7,166), Lombardy, N Italy. It is a commercial center. Historically a strategic point, it commands both the Splügen and Maloja passes between Italy and Switzerland.

Chiba (chĕ'ba), city (1970 pop. 482,089), capital of Chiba prefecture, central Honshu, Japan, on Tokyo Bay. It is a manufacturing center noted for textiles and paper products. It was the residence of the Chiba daimyo from the 12th to the 16th cent. The city retains an 8th-century Buddhist temple. Chiba prefecture (1970 pop. 3,365,282), 1,954 sq mi (5,061 sq km), is a fertile agricultural region and a resort area. Chiba, the port of Choshi, and Funabashi are the major cities.

Chibcha (chĭb'chā), group of Indian tribes of the eastern cordillera of the Andes of Colombia. Although trade with neighboring tribes was common, the Chibcha seem to have evolved their culture in comparative isolation. They were the most highly developed of the Colombian Indians, practicing agriculture, melting and casting gold and copper ornaments, mining emeralds, weaving textiles, and making pottery. They evolved a stratified society of overlords and vassals, in which succession to office was matrilineal and inheritance of personal property was patrilineal. Among the commoners, or farmers, organization was patrilineal. The priesthood constituted a hereditary noble class. Religious ceremonies included human sacrifice. The source of the legend of *El Dorado* is attributed to them, probably because of a Chibcha ceremony, also partly legendary, in which a new ruler was covered with gold dust each year, and then washed in a sacred lake. The Chibcha were conquered by the Spanish conquistador Gonzalo JIMÉNEZ DE QUESADA between 1536 and 1541. The Chibcha languages, a separate language family, are spoken in Colombia and spread northward to other areas. Surviving Chibcha-speaking tribes, such as

the Cuna and Lenca of Central America, have experienced much cultural change since the Spanish conquest

Chicago (shīka'gō, shīkō'gō), city (1970 pop 3,369,359), seat of Cook co., NE Ill., on Lake Michigan, inc 1837. The second largest city in the country and the heart of a metropolitan area of almost 7 million people, it is the commercial, financial, industrial, and cultural center for a vast region and a great midcontinental shipping point. It is a port of entry, a major Great Lakes port, located at the junction of the St. Lawrence Seaway with the Mississippi River system, the busiest air center in the country, and an important rail and highway hub. An enormous variety of goods are manufactured there and shipped all over the world. Chicago has large grain mills and elevators, iron- and steel-works, steel-fabrication plants, stockyards, meat-packing establishments, and printing and publishing houses. Among its many other products are machinery, musical instruments, electronic equipment, furniture, chemicals, household appliances, foods, and clothing. Chicago covers over 200 sq mi (520 sq km), it extends more than 20 mi (32 km) along the lakefront, then sprawls inland to the west. Its metropolitan area stretches in the north to Evanston and other residential cities and in the south to industrial suburbs on the border of Indiana and beyond. The city's arteries are its boulevards, expressways, and a system of elevated railways (part of it a subway). The elevated lines extend into the heart of the city, making a huge rectangle for passenger convenience in transferring from one to another. This is the celebrated Loop, which gives its name to the downtown section. In or near the center of the city are the Merchandise Mart, the world's largest commercial building, the Chicago Public Library, which has neighborhood and traveling branches, the John Crerar Library of scientific books, the Chicago Board of Trade building, and the Chicago Civic Opera. La Salle St. is the financial center, State St. is known for its shops, and Randolph St. for its theaters. On the lakefront, which has many beaches, are Grant Park, with the Art Institute of Chicago, the Chicago Natural History Museum, the Adler Planetarium, the Buckingham Memorial Fountain, and the John G. Shedd Aquarium. Nearby is the huge stadium of Soldier Field, home of the Chicago Bears, the city's major-league professional football team. To the north along the lakefront is Michigan Boulevard, which, leaving the towering skyscrapers behind, proceeds past the rich hotels of the "gold coast" and enters the residential district of the north. In this section lies Lincoln Park, with the Chicago Historical Society building, the Chicago Academy of Sciences, a zoological garden, and a conservatory; sculpture in the park includes the noted standing figure of Abraham Lincoln (1887) by Augustus Saint-Gaudens and the John P. Altgeld memorial monument (1915) by Gutzon Borglum. The south side of Chicago is the seat of the Univ. of Chicago, with its imposing Gothic buildings and attractive spaciousness. Nearby is Jackson Park, with the Museum of Science and Industry. Much of the south side is, however, given over to industry and to poor residential areas, including the homes of most of Chicago's large black population. There, also, are the Union Stock Yards (founded 1865) and, at the southern edge of the city, enormous iron- and steel-works. The west side extends over a vast area and is usually spoken of as a region of nationalities because the many groups living there, though crowded next to each other physically, are more or less separate culturally. These neighborhoods grew up rapidly in the late 19th and early 20th cent. In the west, too, are large industrial areas and two well-known parks—Garfield Park, with its noted conservatory, and Humboldt Park. The west is famous for Hull House, the settlement house founded (1889) by Jane Addams. In 1961 the Hull House location, part of an urban renewal project, was selected as the site of a branch of the Univ. of Illinois in Chicago. The west stretches out in a series of suburbs, both poor and well-to-do. Other points of interest in Chicago are O'Hare International Airport, busiest in the nation, McCormick Place, the mammoth convention and exhibition center on the lakefront, the Auditorium, designed by Louis H. Sullivan, St. Patrick's Church (dedicated 1856), and the ugly but beloved water tower that survived the great fire. Notable as dividing lines in the city are the two branches of the Chicago River. In early days the river was of great value because the narrow watershed between it and the Des Plaines River (draining into the Mississippi through the Illinois River) offered an easy portage that led explorers, fur traders, and missionaries to the great central plains. Father Marquette and Louis

Jolliet arrived there in 1673, and the spot was well known for a century before Jean Baptiste Pointe du Sable (or Point du Sable) set up a trading post at the mouth of the river. John Kinzie, who succeeded him as a trader, is usually called the father of Chicago. The military post, FORT DEARBORN, was established in 1803. In the War of 1812 its garrison perished in one of the most famous tragedies of Western history. Fort Dearborn was rebuilt in 1816, and the construction of the Erie Canal in the next decade speeded the settling of the Middle West and the growth of Chicago. Harbor improvements, lake traffic, and the peopling of the prairie farmlands brought prosperity to the city. The Illinois and Michigan Canal, authorized by Congress in 1827 and completed in 1848, was soon rendered virtually obsolete by the railroads. By 1860 a number of lines connected Chicago with the rest of the nation, and the city was launched on its career as the great midcontinental shipping center. Gordon S. Hubbard had already contributed to the establishment of the meat-packing industry, with its large stockyards. In 1871 the shambling city built of wood was almost entirely destroyed by a great fire (which legend says was started when Mrs. O'Leary's cow kicked over a lantern). The fire, one of the most famous disasters of U.S. history, killed several hundred people, rendered 90,000 homeless, and destroyed some \$200 million worth of property. Chicago was rebuilt as a city of stone and steel. Industries sprang up, attracting thousands of immigrants. Many peoples have contributed to the modern city, including Germans, Scandinavians, Irish, Jews, Italians, Poles, Czechs, Lithuanians, Croats, Greeks, Chinese, and American Negroes. With industry came labor troubles, highlighted by the HAYMARKET SQUARE RIOT of 1886 and the great strikes at Pullman in 1894 (see DEBS, EUGENE V., and ALTGELD, JOHN P.). Upton Sinclair's novel of the Chicago stockyards, *The Jungle*, aroused public indignation and led to investigations and subsequent improvements. The city, although proud of its reputation for brawling lustiness, was also the center of Middle Western culture. Theodore Thomas and the Chicago Symphony Orchestra founded a great musical tradition. Chicago's literary reputation was established in the early 20th cent. by such men as Carl Sandburg, Theodore Dreiser, Eugene Field, Edgar Lee Masters, and James T. Farrell. Most notable in the development of American thought and taste in art was the WORLD'S COLUMBIAN EXPOSITION of 1893. One of the architects at the fair was Louis H. Sullivan who, together with D. H. Burnham, John W. Root, Frank Lloyd Wright, and others, made Chicago a leading architectural center, it was there that one of the distinctive U.S. contributions to architecture, the skyscraper, came into being. Chicago's continuing interest in this type of structure is seen in the John Hancock Center (1968), the Standard Oil building (1973), and the Sears Tower (1974). The city has long been an important printing center, and the circulation of the Chicago *Tribune* is now among the largest in the country. The city has many colleges and universities, including, besides the Univ. of Chicago, De Paul Univ., Northeastern Illinois Univ., Illinois Institute of Technology, Loyola Univ. of Chicago, Mundelein College, Roosevelt Univ., St. Xavier College, Chicago State Univ., Columbia College, North Park College, parts of Northwestern Univ., and several branches of the Univ. of Illinois. There are a number of theological seminaries, schools of music, art, and law, and numerous junior colleges. The noted Newberry Library and the Library of International Relations are in Chicago. The first decade of the 20th cent. saw the development of many agencies concerned with civic improvement, among them the City Club (1903), the Chicago Association of Commerce (1908), and the City Plan Commission (1909), which directs the development of the city. However, between World War I and 1933, Chicago earned unenviable renown as the home ground of gangsters—Al Capone being perhaps the most notorious—and its reputation for gangster warfare persisted long after that violent era had passed. Despite the worldwide depression of the 1930s, Chicago's world's fair, the Century of Progress Exposition (1933-34), proved how greatly the city had prospered and advanced. Perhaps the single most significant event in World War II occurred (Dec. 2, 1942) under the west stand of the Univ. of Chicago's Stagg Field, when a group of scientists working on the government's atomic bomb project achieved the world's first nuclear chain reaction. With the war came a considerable growth of the Chicago metropolitan area. In 1954 the Lyric Opera of Chicago was established, reviving the city's tradition of having its own opera company. Chicago's many cultural at-

tractions and points of interest help make it a popular convention city. Among the many political conventions held there were the Republican national conventions of 1952 and 1960, and the Democratic national conventions of 1952, 1956, and 1968. See Lloyd Lewis and H. J. Smith, *Chicago: The History of Its Reputation* (1929), M. M. Quaife, *Chicagou From Indian Wigwam to Modern City, 1673-1835* (1933), Ernest Poole, *Grants Gone: Men Who Made Chicago* (1942), Alton J. Smith, *Chicago's Left Bank* (1953), B. L. Pierce, *A History of Chicago* (3 vol., 1937-57), H. M. Mayer, *The Port of Chicago and the St. Lawrence Seaway* (1957), R. A. Cromie, *The Great Chicago Fire* (1958), H. M. Karlen, *The Governments of Chicago* (1958), T. A. Herr, *Seventy Years in the Chicago Stockyards* (1968), H. M. Mayer, *Chicago: Growth of a Metropolis* (1969).

Chicago, river, formed in Chicago by the junction of its North Branch (24 mi/39 km long) and South Branch (10 mi/16 km long), and flowing southeast via a canal into the Des Plaines River at Lockport, Ill. The river formerly flowed east, then northeast via a channel, into Lake Michigan. Its course was reversed by the Chicago Sanitary and Ship Canal, built (1892-1900) on the South Branch to prevent the pollution of Lake Michigan by Chicago's sewage, locks prevent the river from entering the lake. The use of Lake Michigan's water to flush the canal was a heated political and interstate issue in the 1920s. The controversy was settled in 1930 when the U.S. Supreme Court ordered a reduction in the amount of water being diverted from the lake, this decision forced Chicago to build sewage treatment plants. The canal, 30 mi (48 km) long, 22 ft (6.7 m) deep, and from 162 to 290 ft (49-88 m) wide, is an important part of the Illinois Waterway. The channels of the Chicago River and the North Branch have been improved to aid deep-draft vessels and barges. The old Illinois and Michigan Canal, opened in 1848, was the earlier shipping link and ran parallel to the present waterway.

Chicago, Art Institute of: see ART INSTITUTE OF CHICAGO

Chicago, University of, at Chicago, coeducational, inc 1890, opened 1892 primarily through the gifts of John D. Rockefeller. Because of the progressive programs and distinguished faculty established under its first president, William R. Harper (1891-1906), the Univ. of Chicago immediately achieved prominence in American education. Under Robert M. Hutchins (1929-51) it established a unique program of admitting students to the undergraduate division after only two years of high school and granting B.A. degrees at the age of 18 or 19. Survey courses were developed and comprehensive examinations were substituted for regular course requirements. However, under Lawrence Kimpton (1951-60), this program was largely abandoned. Significant among the university's graduate and research facilities are the Pritzker School of Medicine, the Enrico Fermi Institute for Nuclear Studies, the McDonald Observatory, at Fort Davis, Texas, the Yerkes Observatory, at Williams Bay, Wis., and the school of education.

Chicago Heights, city (1970 pop 40,900), Cook co., NE Ill., S of Chicago, settled in the 1830s, inc as a city 1901. It is an industrial community where steel, automobile bodies, castings, railroad cars, and chemicals are manufactured. Prairie State College is in Chicago Heights.

Chicago Natural History Museum. see FIELD MUSEUM OF NATURAL HISTORY

Chicago Portage Railroad National Historic Site: see NATIONAL PARKS AND MONUMENTS (table)

Chicago Sanitary and Ship Canal: see CHICAGO, river

Chicago Symphony Orchestra, founded in 1891 by Theodore Thomas, who conducted it until 1905. Orchestra Hall was built for it in 1904 with funds raised by public subscription. Frederick Stock, Thomas's assistant, succeeded him and conducted the orchestra until 1942. Rafael Kubelick, its conductor from 1950 to 1953, was followed by Fritz Reiner, who conducted until his death in 1963. In 1968, Georg Solti was named conductor. The orchestra plays a summer season at Ravinia, a suburb of Chicago.

chicha (chē'cha), term applied to various alcoholic beverages in use among the Indians of Bolivia, Colombia, and Peru. It is made by fermenting a mixture of water, sugar, and masticated grains or berries. In pre-Columbian times it was used in religious ceremonies. The ancient Incas strictly controlled its use, but later consumption was unregulated.

Chichen Itza (chē'chān' ētsā'), city of the ancient MAYA, central Yucatán, Mexico. It was founded

around two large cenotes, or natural wells. According to one system of dating, it was founded c.514, probably by the ITZ'Á and after being abandoned (692) and reoccupied (c.928) was chosen by Kulkulcan (see QUETZALCOATL) as his capital sometime between 968 and 987. After being defeated by Mayapan in 1194, the Itz'á abandoned the city for the last time. Spanning two great periods of Maya civilization, Chichén Itz'a shows both Classic and Post-Classic architectural styles. The Classic style is massive, with heavy decorative sculpture and cramped interiors. The later buildings have plainer, more austere lines, with the sculpture based on the Mexican feathered-serpent motif and columns. TOLTEC influence is strong. The Castillo, or principal temple of Kulkulcan, is representative of the period. Rare among Maya buildings is the round tower called the Caracol (snail shell), built in the Post-Classic period, it was probably an astronomical observatory. Into Chichén Itz'a's sacred well, mecca of countless pilgrimages from Central America and the Mexican plateau, were thrown jade and metal offerings. Humans were also sacrificed. Dredgings of the well in modern times have yielded a valuable collection of artifacts. See Donald Ediger, *The Well of Sacrifice* (1971).

Chicherin, Georgi Vasilyevich (gëör'gë vasë'l'ya-vich chëch'är'in), 1872-1936, Russian diplomat. Of noble origin, he entered the Russian foreign office but resigned (1904) after joining the Social Democratic party. He was in London during the October Revolution of 1917, was arrested for "enemy associations" after the Russian armistice with Germany, and was finally released by the British authorities. He returned to Russia in Jan., 1918, as Trotsky's aide and soon succeeded him as foreign commissar. An able diplomat, Chicherin successfully ended the diplomatic isolation of the USSR by gaining formal recognition for his country from W. European nations. He negotiated the Treaty of Rapallo (see RAPALLO, TREATY OF, and GENOA, CONFERENCE OF) with Germany in 1922. He ceased to conduct foreign affairs in 1928 because of illness and was succeeded by his assistant, Maxim LITVINOV, in 1930.

Chichester (ch'ich'star), municipal borough (1971 pop. 20,547), county town of West Sussex, S. England. Chichester is an agricultural and yachting center and has some light industry. The Regnum of the Romans, it was conquered by Ælla and his sons, who landed near Selsey in 477 and later (c.491) founded the kingdom of the South Saxons. In the Middle Ages Chichester was an important port, trading in wheat and wool. A portion of the medieval walls still stands. The 13th-century cathedral stands upon the site of an ancient monastery. Chichester has a teacher training college and a theological college.

Chichi, island, Japan. See BONIN ISLANDS.

Chichibu (chë'chëb'öö), city (1970 pop. 60,867), Saitama prefecture, central Japan, on the Ara River. It is a center for agricultural products and for the manufacture of silk fabrics. The city's Chichibu (Shinto) Shrine is a major tourist attraction.

Chichicastenango (chë'chëkästänäng'gö), town, SW Guatemala. In the heart of the highlands, Chichicastenango became the spiritual center of the QUICHÉ after their defeat (1524) by Pedro de Alvarado. The town, often called Santo Tomas, is quaint and charming, with a maze of winding streets surrounding the main plaza, the site of one of the most colorful town markets in Central America. In the Dominican monastery (founded 1542) was discovered the famous Popul-Vuh manuscript of Maya-Quiché mythology. There are several excellent collections of Indian relics, especially of carved jade. Chichicastenango is popular with tourists.

Ch'i-ch'i-ha-erh (chë'chë'här) or **Tsitsihar** (tsë'tsë'här), city (1970 est. pop. 1,500,000), S. central Heilungkiang prov., China, a port on the Nen River near the Great Khingan Mts. It is connected by rail with Harbin, Shen-yang (Mukden), and Ta-lien (Dairen) and is a processing center for soybeans, grain, and sugar beets. Manufactures include locomotives, machine tools, paper products, and cement. The adjacent town of Fu-la-erh-chi (Fulark) has steel works and plants that make heavy machinery. Ch'i-ch'i-ha-erh was founded in 1691 as a Chinese fortress and was formerly the capital of Hokiang and Heilungkiang provs.

Chichimec (chëchëmëk'), general term for the peoples of the Valley of Mexico between the periods of TOLTEC ascendancy and AZTEC ascendancy. Before the 11th cent. the Chichimec were nomadic peoples on the northern fringes of the valley. Although Aztec tradition has it that they were part of the Chichi-

mec, the Aztecs were actually farmers and military aids to the Toltecs. The Chichimec period (c.950-1300) was one of intertribal warfare and political confusion, but it prepared the way for the tributary empire of the Aztec.

chickadee (chik'ädë'), small North American bird of the TITMOUSE family. The black-capped chickadee (*Parus atricapillus*), lively and gregarious, is a permanent resident over most of its range in the East. Both sexes have black caps, gray backs and wings, and fluffy white to buff underparts. They often swing upside down from branch tips, searching for the insects that form more than half their diet. Their call note gives the bird its name. Other species are the Carolina, the boreal, or brown-capped (of the Northeast), and the western chestnut-backed chickadees. Chickadees are classified in the phylum CHORDATA, subphylum Vertebrata, class Aves, order Passeriformes, family Paridae.

Chickahominy (chik'höm'inä), river, c.90 mi (140 km) long, rising NW of Richmond, Va., and flowing SE to the James River. In the Civil War there was heavy fighting (1862) along its banks.

Chickahominy Indians, North American Indians whose language belongs to the Algonquian branch of the Algonquian-Wakashan linguistic stock (see AMERICAN INDIAN LANGUAGES). They were members of the Powhatan Confederacy. The Chickahominy were among the first Indian peoples with whom the English settlers in Virginia became acquainted.

chickaree: see SQUIRREL.

Chickasaw Indians (chik'äsö), North American Indians whose language belongs to the Muskogean branch of the Hoka-Siouan linguistic stock (see AMERICAN INDIAN LANGUAGES). They occupied N. Mississippi and were closely related in language and culture to the Choctaw. The Chickasaw warred constantly with the Choctaw, the Creek, the Cherokee, and the Shawnee. The decline of the Chickasaw can be traced to the conflict for control of interior North America between France and Great Britain. Probably because British traders were established in their country before the settlement of Louisiana, the Chickasaw fought on the side of Great Britain, and French attempts to make peace with them were unsuccessful. After 1834 they moved, according to treaty arrangements, to Oklahoma, where they constituted one of the Five Civilized Tribes. See A. M. Gibson, *The Chickasaws* (1971).

Chickasha (chik'ashä), city (1970 pop. 14,194), seat of Grady co., S. central Okla., on the Washita River, inc. 1898. It lies in an agricultural and oil-producing area. Chickasha has an industrial park, the city's manufactures include mobile homes, transistor and microradio components, lenses, and shock absorbers. The Oklahoma College of Liberal Arts is in Chickasha.

chicken: see POULTRY.

chickenpox or **varicella** (vär'äsë'l'ä), infectious disease usually occurring in childhood. It is believed to be caused by the same herpes virus that produces shingles. Chickenpox is highly communicable and is characterized by an easily recognizable rash consisting of blisterlike lesions that appear two to three weeks after infection. Usually there are also low fever and headache. When the lesions have crusted over, the disease is believed to be no longer communicable, however most patients simultaneously exhibit lesions at different stages of eruption. Chickenpox is usually a mild disease requiring little treatment other than medication to relieve the troublesome itching, but care must be taken that the rash does not become secondarily infected by bacteria. Pneumonia and encephalitis are rare complications.

chick-pea, annual plant (*Cicer arietinum*) of the family Leguminosae (PULSE family), cultivated since antiquity for the somewhat pea-like seeds, which are often used as food and forage, principally in India and the Spanish-speaking countries. The seeds are boiled or roasted and have been substituted for coffee. Other names are ceci, garbanzo, and gram pea. Chick-peas are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae.

chickweed: see PINK.

Chichayo (chëklä'yö), city (1969 est. pop. 135,000), capital of Lambayeque dept., NW Peru. On the coastal desert between the Andes and the Pacific, Chichayo may go years at a time with no rainfall. However, by utilizing short Andean streams for irrigation, Chichayo raises considerable sugarcane and a major part of the country's rice.

chicle (chik'al), name for the gum obtained from the latex of the sapodilla tree (*Achras zapota*), a tropical

American evergreen. The sapodilla (known also by many other common names) is widely cultivated in tropical regions, including S. Florida, for its fruit, which is plum-sized with translucent yellow-brown flesh. Large-scale cultivation of the tree for latex is impractical because it can be tapped only infrequently and varies widely in yield. Chicle is collected during the rainy season from wild trees in the rain forests. Natives, called *chicleros*, cut zigzag gashes in the tree trunk and collect the sap in bags. The collected material is boiled until it reaches the correct thickness and is then molded into blocks. These are exported, chiefly to the United States, for use in making CHEWING GUM. Unsystematic and excessive tapping of the sapodilla (especially in the Yucatan peninsula, where it was most abundant) is leading to its depletion and has necessitated increasing use of chicle substitutes from other latex-producing plants.

Chico (chë'kō), city (1970 pop. 19,580), Butte co., N. Calif., in a region noted for its almond production, inc. 1872. Principal manufactures are processed almonds, matches, and wood products. California State Univ. at Chico and a U.S. botanical experiment station are in the city, and a junior college is in nearby Durham. Lassen Volcanic National Park lies to the northeast.

Chicopee (chik'äpë), industrial city (1970 pop. 66,676), Hampden co., SW Mass., at the confluence of the Chicopee and the Connecticut rivers, settled c.1641, set off from Springfield 1848, inc. as a city 1890. It includes the villages of Willimansett, Fairview, Aldenville, Chicopee Center, and Chicopee Falls. Rubber and rubber products, sporting goods, machinery, and firearms are among the city's manufactures. The College of Our Lady of the Elms is there. The author Edward Bellamy was born and lived in Chicopee Falls.

chicory or **succory**, Mediterranean herb (*Cichorium intybus*) of the family Compositae (COMPOSITE family), naturalized in North America, where the tall stalks of usually blue flowers are common along waysides and are known as blue-sailors. It is extensively grown in Europe for its root, which, roasted and powdered, is used as a coffee substitute and adulterant. Chicory is also used as a potherb and salad plant, the common type that is blanched for salads is witloof, or French endive. True endive (*C. endivia*), a salad vegetable since antiquity, is cultivated in several broad-leaved and curly-leaved varieties. It is also called escarole. Chicory is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Compositae.

Chicoutimi (shik'öö'timë'), city (1971 pop. 33,893), S. Que., Canada, at the confluence of the Chicoutimi and Saguenay rivers. The city is the cultural and economic center of the Saguenay area. It has aluminum plants and pulp and paper mills. A Jesuit mission was established there in 1676. In the city is a branch of the Université de Québec.

Chicoutimi, river, c.100 mi (160 km) long, rising in the Laurentian Mts. and flowing N into Lake Kenogami, then E into the Saguenay River at Chicoutimi. A hydroelectric facility on the falls (50 ft/15 m high) just above Chicoutimi supplies power to the region's aluminum and wood-processing industries.

Chidambaram (chidüm'baram), town (1971 pop. 48,819), Tamil Nadu state, SE India. It markets rice and produces textiles, cement, and brassware. Its temples are among the oldest examples of Dravidian art. Annamalai Univ., a leading school of S. India, is in the town.

Chidley, Cape, headland on the north coast of Labrador, E. Canada, at the entrance to Hudson Strait, named by the explorer John Davis in 1587.

Chidon (k'ï'dön) see PEREZ-UZZA.

chief or **chieftain**, political leader of a band, tribe, or confederation of tribes. At the simpler levels of social organization, the band or tribe usually lacks centralized authority and is ruled by the totality of adult males or of family or CLAN heads. Sometimes a temporary headman is chosen for a special occasion such as a hunting or war party. When authority is concentrated in one individual on a more permanent basis, the chief may have limited functions, such as the organization and supervision of work parties, religious ceremonies, or the collection and distribution of goods. A community may possess several chiefs among whom various functions are divided. Chieftainship may be achieved through inherent qualities of leadership, through the display of powers considered supernatural (see SHAMAN), through rank or wealth, or through hereditary succession. The power of chiefs is usually checked by custom and by kinship allegiances. The term *chief-*

dom is sometimes used in political anthropology to designate a particular degree of social organization, intermediate between tribe and state. See L. P. Mair, *Primitive Government* (2d ed 1964), Morton Fried, *The Evolution of Political Society* (1967), Marshall Sahlins, *Tribesmen* (1968), Elman Service, *Primitive Social Organization* (2d ed 1971).

Chiemsee (kēm'zā), lake, 31 sq mi (80 sq km), SE West Germany, SE of Munich, the largest lake entirely within West Germany. It is drained by the Alz River. Many resorts are along its shores. On the largest of three islands is a palace built by Louis II of Bavaria in imitation of Versailles.

Ch'ien-fo-tung: see TUN HUANG, China

Chiangmai: see CHIANGMAI, Thailand

Ch'ien Lung (ch'ien lōng), 1711-99, reign title of the fourth emperor (1735-96) of the Ch'ing dynasty, whose given name was Hung-li. Under his vigorous military policy, China attained its maximum territorial expanse, SINKIANG in the west was conquered, and Burma and Annam in the south were forced to recognize Chinese suzerainty. He restricted Western merchants to Canton in 1759, and he rejected British overtures for expanded trade and diplomatic ties in 1793. Ch'ien Lung was a patron of scholarship and the arts, some of China's finest porcelain and cloisonné were produced for his collections, and vast anthologies were edited, partly to censor seditious references to the Manchus. Despite the surface splendor of cultural achievement and imperial expansion, his reign in later years was characterized by growing official corruption, loss of military efficiency, and fiscal imbalance. See S. A. Hedin, *Jehol City of the Emperors* (1932), L. C. Goodrich, *The Literary Inquisition of Ch'ien Lung* (1935), E. H. Pritchard, *The Crucial Years of Early Anglo-Chinese Relations, 1750-1800* (1936).

Ch'ien-tang (ch'ien-tang) or **Tsientang**, river, 285 mi (459 km) long, Chekiang prov., SE China. An important commercial artery, it flows NE to the East China Sea at Hangchow. The tide rushing into the river from the bay causes a bore from S to 15 ft (1.5-4.6 m) high, which sweeps past Hangchow and menaces shipping in the harbor.

Chieti (kyē'tē), city (1971 pop. 50,976), capital of Chieti prov., Abruzzi region, central Italy, on the Pescara River, near the Adriatic Sea. It is a commercial and industrial center. Manufactures include textiles, iron goods, and construction materials. The city occupies the site of the Roman Teate Marrucinorum, of which ruins remain. Chieti was in the duchy of Benevento (7th cent.), fell to the Normans (1078), and thereafter was in the kingdom of Naples. It has a fine Romanesque cathedral (11th cent.), a 14th-century tower, and a university. The order of the Theatine Brothers (founded 1524) takes its name from the ancient Roman town.

Chifeng: see CH'IH-FENG, China

chiffon, plain-weave, lightweight, sheer, transparent fabric made of cotton, silk, or man-made fiber, it is made of fine, highly twisted, strong yarn. Chiffon is difficult to handle, but it drapes and wears well and is very durable despite its light weight. It is pieced or piece-printed and may be given a soft or stiff finish. Among its uses are in evening dresses, formal blouses, trimmings, and scarfs.

Chigasaki (chīga'sa'kē), city (1970 pop. 129,621), Kanagawa prefecture, central Honshu, Japan, on Sagami Bay. It is a fashionable resort with a large electronics industry.

chigger, minute, six-legged, reddish larva of the harvest MITE, one of various RED BUGS widely distributed throughout the world and common in the S United States. Attaching itself by its mouthparts to the skin of its vertebrate host, the chigger injects saliva that destroys cells and may cause an intense irritation known as red-bug dermatitis. The food of the chigger consists of the cellular contents and tissue fluid of the host. Certain Oriental species carry minute organisms (rickettsias) that cause scrub typhus, a disease of man. The chigger is sometimes confused with the CHIGOE, or jigger, a burrowing flea. Chiggers are classified in the phylum ARTHROPODA, class Arachnida, order Acarina, family Trombididae.

Chigirin (chīgīrēn'), Ukr. *Chyhyryn*, city, S central European USSR, in the Ukraine, on the Tyasmin River, a tributary of the Dnepr. It has food-processing plants and various light industries. Founded in 1589 as a fortress, Chigirin served as the residence of the hetman of Ukraine from 1649 (when it was so designated by the Treaty of Zborov between Hetman Bohdan CHMIELNICKI and the Polish king) until 1687. It was thus the capital of right-bank UKRAINE. The city passed to Russia in 1795.

Chignecto (shīgnēk'tō), isthmus connecting N S, Canada, with the Canadian mainland, between Chignecto Bay and Northumberland Strait. It is c 17 mi (27 km) across at its narrowest point near Amherst, the chief city of the isthmus.

chigoe (chīg'ō) or **jigger**, small parasitic FLEA of tropical America and the S United States. Man and his domestic animals are the main hosts. The fertilized female bores into the flesh (usually of the feet or legs) and feeds on the blood causing a painful, pustulous sore. She retains her eggs in her abdomen, which swells to the size of a pea. The eggs are expelled outside the host and hatch in the soil, undergoing complete metamorphosis. The chigoe is sometimes confused with the CHIGGER. The chigoe is classified in the phylum ARTHROPODA, class Insecta, order Siphonaptera.

Chigwell, urban district (1971 pop. 53,620), Essex, SE England. It is a residential suburb of London. Portions of Epping and Hainault forests are in the district. The Chigwell public school was founded in 1629. Part of the urban district was included in Redbridge, a borough of Greater London, in 1965.

Ch'ih-feng or **Chifeng** (both ch'ih-fung), city, W Liaoning prov., China. It is an agricultural distribution center, trading in wool, furs, hides, and grain. Coal and gold mines are nearby. It was called Ulan Hada by the Mongols, but in about 1778 it was colonized by the Chinese. Before the 1969-70 redistricting it was in the Inner Mongolian Autonomous Region.

Chihli: see HOPEH, China

Chihli, Gulf of, China: see PO HAI

Chihuahua (chēwa'wa), state (1970 pop. 1,730,012), 94,831 sq mi (245,612 sq km), N Mexico, on the border of N Mex. and Texas. The city of Chihuahua is the capital. Largest of the Mexican states, Chihuahua is divided into two regions—the mountains of the Sierra Madre Occidental to the west, and the vast, cactus-and-greasewood desert basins, broken by scattered barren ranges, to the north and east. In extreme E Chihuahua and W Coahuila is a desolate basin, the Bolson de Mapimi. Chihuahua is a leading national mineral producer, the mines of the Sierra Madre yield silver, gold, copper, lead, and manganese and constitute the state's most valuable industry. Cattle raising on the wide plains, which was practiced from the 16th cent. until it was virtually halted by the depredations of Francisco Villa, has now been revived. Long considered unsuitable for agriculture, the state has seen reclamation of some river valleys, notably that of the Conchos. The newly irrigated areas and upland mountain valleys produce grains, cotton, sugarcane, and tropical fruits. Chihuahua is now one of Mexico's chief agricultural states. Some timber is cut in the mountains. Chihuahua was first known to the Spanish through Cabeza de Vaca, and after the settlement of Durango in 1562 by Francisco de Ibarra, Chihuahua and Durango were called Nueva Vizcaya. Chihuahua became a state after the Mexican revolution against Spain. During the 19th cent. the Apache and Yaqui Indians kept the inhabitants in a recurrent state of terror, today the Tarahumara Indians inhabit some of the remote regions of Chihuahua. Of considerable importance to Chihuahua's economic and political development was the westward expansion of the United States, during the 19th and early 20th cent. foreign investment was considerable, with the border city of JUÁREZ as the commercial link. Chihuahua was occupied by American forces in the Mexican War and played a prominent part in the turbulent years following the revolution in 1910. In 1961, in an attempt to open some of the most valuable timber and mining lands in the nation, Mexico inaugurated the 560-mi (901-km) Chihuahua-Pacific RR, which borders the gigantic Barranca del Cobre (Copper Canyon). At Casas Grandes, in NW Chihuahua, is a vast archaeological site. See study by R. H. Schmidt (1973).

Chihuahua, city (1970 pop. 288,657), capital of Chihuahua state, N Mexico. It lies in a valley almost encircled by hills. Chihuahua is the only large rail and commercial center of a vast northern area. Although agriculture is important, the city's economy depends chiefly on nearby mines, smelting and other mining processes constitute the main industries. Founded in the early 18th cent., Chihuahua prospered despite Indian raids. The revolutionist Hidalgo y Costilla was executed in the city in 1811. Chihuahua was occupied briefly by U.S. forces in 1846 and served as the headquarters of Benito Juárez until French troops took it in 1865, it now has many American residents. There are several good exam-

ples of 18th-century colonial architecture, including the aqueduct.

Chihuahua (chāwa'wā), a breed of small TOY DOG probably of oriental origin and introduced into Mexico by Spanish settlers. It stands about 5 in. (12.7 cm) high at the shoulder and weighs from 1 to 6 lb (0.5-2.7 kg). There are two varieties: the smooth, with a short, close-lying, glossy coat, and the long-coated, with soft-textured, flat or slightly wavy hair that forms a fringe of longer hair on the neck, legs, and tail. The coat may be any color but is usually tan. Named after the state of Chihuahua, Mexico, this tiny dog was long believed to have been indigenously Mexican. However, there exist no archaeological remains to support this belief, the animal generally claimed to be the Chihuahua depicted in Toltec and Aztec art and described in the writings of early explorers of Mexico is most probably a variety of rodent. It is much more likely that the ancestors of the breed were brought by Spanish merchants by way of their trade route from China, where the practice of dwarfing both plants and animals has had a long history. Today the Chihuahua is widely popular as a house pet. See DOG.

Chikamatsu, Monzaemon (mōn'zāemōn' chē'-kama'tsō), 1653-1725, the first professional Japanese dramatist. Chikamatsu wrote primarily for the puppet stage in the Tokugawa shogunate. His literary work is divided into historical romances (*jidaimonō*) and domestic tragedies of love and duty (*sewamono*). Author of 110 *yoruri* [puppet plays] and 30 kabuki plays, he profoundly influenced the development of the modern Japanese theater. Among his best-known works are the *Kokusenya-kassen* [battles of Coxinga], a historical drama concerned with the conquests of a famous Chinese warlord, and the domestic tragedy *Shinju Ten no Amijima* [the love suicides at Amijima]. See *Major Plays of Chikamatsu* (tr. by Donald Keene, 1961), Donald Keene, *Bunraku, The Art of the Japanese Puppet Theatre* (1965).

Child, Francis James, 1825-96, American scholar, b. Boston, grad. Harvard, 1846. At Harvard he was professor of rhetoric (1851-76) and English literature (1876-96). He greatly influenced modern methods of Chaucer study. He is best known, however, for his *English and Scottish Popular Ballads* (5 vol., 1883-98). This is a major source on folklore in which Child defined, with examples, some 305 types of ballads, including complete textual variations.

Child, Sir John, d. 1690, English administrator in India. In 1680 he was appointed the British East India Company's agent at Surat, then the company's main factory (i.e., trading station) in W India. In 1685, Sir John moved the company's seat of government from Surat to Bombay, and in 1686 he was given authority over all the company's possessions in India. His tyrannical methods alienated many, his defeat by the Mogul emperor led to a demand that he be removed from India, but he died before the issue was settled. Sir John's activities were supported in England by Sir Josiah Child, 1630-99, who was possibly his brother. A merchant and early mercantilist, he made a fortune supplying the navy and from 1681 to 1690 virtually ruled the East India Company, of which he was deputy governor (1684-86, 1688-90) and governor (1681-83, 1686-88). His *New Discourse of Trade* (final form, 1693) was an early plea for some of the principles of free trade. See study by William Letwin (1959).

Child, Lydia Maria, 1802-80, American author and abolitionist, b. Lydia Maria Francis, Medford, Mass. She edited (1826-34) the *Juvenile Miscellany*, a children's periodical. She and her husband (David Lee Child, whom she married in 1828) were devoted to the antislavery cause, she wrote widely read pamphlets on the subject in addition to editing (1841-49) the *National Anti-Slavery Standard*, a New York City weekly newspaper. Other writings include several historical novels and a book on the history of religions. Her *Frugal Housewife* (1829) went through many editions. See her letters (with introduction by J. G. Whittier, 1883, repr. 1970), biographies by H. G. Baer (1964) and Milton Meltzer (1965).

child abuse, physical maltreatment of children by parents or guardians. Such treatment often results in physical or mental impairment and is sometimes fatal. By the 1970s in the United States there were over 60,000 reported cases per year, a rate that probably represents only a fraction of actual occurrence. Children in child abuse cases are generally less than three years of age. The most common characteristic of child abusers is a history of physical abuse in their own childhood. A number of universities have undertaken child abuse prevention programs. In 1973 the U.S. Congress authorized funds for a pro-

gram directed at prevention and treatment of child abuse

child actors. A distinction should be made between child actors who fill the ordinary subsidiary children's roles and those who emerge in periods when performing children become a dominant fad. An example of the latter is the boys' companies of the Elizabethan period. These companies dominated the English stage from c 1576 to c 1610. Many had their origins in grammar and choir schools connected with cathedrals. Particularly well-known were the Children of Paul's and the Children of the Chapel. The companies often performed plays by important authors such as John Lyly and Ben Jonson. In Shakespeare's *Hamlet*, Rosencrantz describes these troupes to Hamlet:

"but there is, sir, eyrie of children,
little eyases, that cry out on the top of question
and are most tyrannically clapped for't. These
are now the fashion."

During the first quarter of the 18th cent. children were commonly advertised as novelties on the English stage. The famous French dancer and actress Marie Salle appeared as a child at the theater in Lincoln's Inn Fields in 1716 and 1717. It became the fashion at that time to present children who had never acted before. In 1804 a great sensation on the London stage was caused by 13-year-old William Henry West Betty, known as "Young Roscius." He played roles such as Richard III and Hamlet and had a multitude of successors (e.g., Infant Hercules, Infant Billington). Many famous adult performers of the late 19th and early 20th cent. had earlier careers as child stars (e.g., Maud Adams, Helen Hayes, and Buster Keaton). However, the American movies of the 1920s and 30s created a craze for exasperatingly cute child actors who often sang and danced, among them were Jackie Cooper, Shirley Temple, Freddie Bartholomew, and Jane Withers. A sinister caricature of the Hollywood moppet is found in Nathaniel West's novel *The Day of the Locust* (1939) in the character Adore Loomis, a velvet-suited, sadistic child star who precipitates a riot in which he himself is kicked to death. The careers of many child film actors—Deanna Durbin, Margaret O'Brien, Bobby Driscoll, Claude Jarman, Jr., and Hayley Mills—ended before they reached adulthood. The most noted example of a short-lived career is undoubtedly that of Baby LeRoy, who achieved stardom at eight months and retired when three years old. Other child stars like Jackie Cooper, Judy Garland, Mickey Rooney, Roddy McDowall, and Elizabeth Taylor managed successfully to weather the transition to maturity. A superb performance by a child can be extremely affecting and appealing, e.g., Skip Homeier as a young Nazi in *Tomorrow, the World* (play, film, 1944), Patty Duke as the child Helen Keller in *The Miracle Worker* (play, film, 1962), and Tatum O'Neal as a juvenile con artist in *Paper Moon* (film, 1973). See Marc Best, *Those Endearing Young Charms* (1971).

childbirth see BIRTH

Childe, Vere Gordon, 1892–1957, British archaeologist, b. Australia. An Oxford graduate, he taught at the Univ. of Edinburgh (1927–46) and the Univ. of London (1946–56). He gained renown for his monumental synthesis of European prehistory, *The Dawn of European Civilization* (1925, 6th ed. 1957), and *The Prehistory of European Society* (1958). His studies in Asian archaeology led to *New Light on the Most Ancient East* (1929, rev. ed. 1953), and he interpreted human history in two popular works, *Man Makes Himself* (1937, rev. ed. 1951) and *What Happened in History* (1942).

Childebert I (chil'dabart), d. 558, Frankish king, son of Clovis I. On his father's death (511) he and his three brothers shared equally in the Frankish kingdom. His capital was at Paris. When his brother Clodomir died (524), he and another brother Clotaire I murdered Clodomir's sons and seized his lands. With Clotaire he shared in the reconquest and partition of Burgundy and Provence (534) and unsuccessfully campaigned in Spain (542).

Childebert II, 570–95, Frankish king of Austrasia (575–95) and Burgundy (593–95), son of Sigebert I and Brunhilda. His mother actually ruled for him. Chaos and warfare marked his reign.

Childeric I (chil'darik), c. 436–481, Merovingian king of the Salian Franks (c. 457–481), a Germanic tribe, son of Meroveus and father of Clovis I. Information on him is mostly legendary. His rule was that of a tribal chieftain. He defeated (463) the Visigoths at Orleans as an ally of the Roman general Aegidius.

Subsequently he defeated the Saxons and the Alemanni. His tomb, containing armor and ornaments, was discovered in 1653 at his capital, near Tournai, Belgium.

Childers, Robert Erskine (chil'darz), 1870–1922, Irish politician and author. Born into a Protestant family, he was a clerk in the House of Commons (1895–1910). Gradually becoming convinced of the need for Irish Home Rule, he resigned to work for it, engaging in gun-running for the Irish Volunteers in 1914. After serving in the British forces during World War I, he represented the Irish cause at Versailles and was a member of the Irish delegation that negotiated the treaty with Britain (1921). By this time he was opposed to anything other than republic status for Ireland and urged rejection of the treaty. He fought in the Irish Republican Army in the civil war that followed the creation of the Irish Free State, and was court-martialed and shot as a traitor in 1922. Childers wrote on Irish politics and on military matters, but his best-known work is *Riddle of the Sands* (1903, repr. 1971), a spy novel. His son, Erskine Hamilton Childers, 1905–74, became a naturalized Irish citizen and a member of the Dail in 1938. He held a succession of cabinet posts in the Fianna Fail governments from 1944 on and in 1973 was elected president of Ireland.

child labor, use of young workers in factories, farms, and mines. Child labor was first recognized as a social problem with the introduction of the factory system in late 18th-century Great Britain. In the Eastern and Midwestern United States, child labor became a recognized problem after the Civil War, and in the South after 1910. Children had formerly been apprenticed or had worked in the family, but in the factory their employment soon constituted virtual slavery, especially among British orphans. This was mitigated by acts of Parliament in 1802 and later. Similar legislation followed on the European Continent as countries became industrialized. Legislation concerning child labor in other than industrial pursuits, e.g., in agriculture, has lagged. Nearly all member nations of the International Labor Organization regulate the employment of children in industry, most also regulate commercial work, some, work in the street trades and a few, agricultural and household work. Despite such regulation attempts, children constitute from 2% to 10% of the labor force in parts of Africa, Asia, Latin America, and the Middle East. Although most European nations had child labor laws by 1940, the material requirements necessary during World War II brought many children back into the labor market. In the United States congressional child labor laws were declared unconstitutional by the Supreme Court in 1918 and 1922. A constitutional amendment was passed in Congress in 1924 but was not approved by enough states. International efforts also failed. The First Labor Standards Act of 1938 set a minimum age limit of 18 for occupations designated hazardous, 16 for employment during school hours for companies engaged in interstate commerce, and 14 for employment outside of school hours in nonmanufacturing companies. See Walter Trattner, *Crusade for the Children* (1970), also annual reports of the National Child Labor Committee.

children, delinquent. see JUVENILE DELINQUENCY

children, dependent. Until the end of feudalism religious institutions provided the only organized care for children orphaned, deserted, neglected by their parents (see FOUNDLING HOSPITAL), or born into such poverty that their parents could not support them. In England the poor law (1601) recognized the state's obligation to the needy. Under this law overseers of the poor could apprentice older children and provide for younger ones by farming them out, putting them in poorhouses, or giving home relief. Until about the end of the 18th cent. in both Great Britain and the English colonies in North America, the chief methods were still indenture (binding the child out to a master who expected a return in labor for expenses) or placing them in poorhouses. Children were sometimes indentured as infants and were not free until they were 21 years old or more. About 1800 an orphanage was organized in New York City, the first of many in the United States. Although only a small percentage of these institutions have ever been publicly administered, in most areas they later came under city and state regulation. In the 1850s the Children's Aid Society of New York began sending dependent children from Eastern cities to homes in the West. One criticism of this work—that it separated children permanently from their relatives—was met later by the foster home system, in such homes children can be placed

whose parents are temporarily unable to care for them, as well as children who are orphaned or deserted. The tendency in orphanages has for some time been away from regimentation and institutionalism. In current ideal circumstances, each child's situation is evaluated individually, and if he cannot remain with his own family he is placed in a foster home or child care institution, depending on which type of care is best suited to his needs and personality. Following the enactment in 1911 of a Missouri law authorizing financial assistance to the needy parents, similar laws were enacted by other states. By the time of the enactment of the Social Security Act in 1935, most states had such legislation. The Social Security Act provided for Federal grants matching those made by states to aid the parents of dependent children under approved statewide plans. These grants are now administered at the national level by the Community Services Administration of the U.S. Dept. of Health, Education, and Welfare. State and local departments of public welfare administer these programs locally. An issue was raised in the 1970s over whether or not so-called illegitimate children were qualified to receive aid. The U.S. Supreme Court ruled in 1973 that these children could not be denied such aid. On an international level the United Nations International Children's Emergency Fund (UNICEF) was established in 1946 to supply aid for the emergency needs of children in devastated countries. To date, it has helped feed children in over 50 nations, besides food aid, UNICEF also staffs projects to prevent the spread of disease among children. See SOCIAL SECURITY and CHILD WELFARE. See Winifred Bell, *Aid to Dependent Children* (1965).

children's book illustration. Among the first picture books intended for children is Comenius' *Orbis Pictus*, a primerlike text written in Latin about 1657 or 1658. Earlier works meant for adults but suitable for children include the Japanese *Scroll of Animals* (12th cent.) with animated sketches by Toba Soja and the first English edition of Aesop's *Fables*, printed by William Caxton in 1484 and illustrated with woodcuts. John Newbery included woodcuts in *The Renowned History of Little Goody Two Shoes* (1765). The earliest illustrators of children's books were usually anonymous, but with the appearance of Thomas BEWICK's art for *Pretty Book of Pictures for Little Masters and Misses*, or, *Tommy Trip's History of Beasts and Birds* (1799), well-known artists began to receive credit for their work in this field. William BLAKE printed, engraved, and hand-colored his own *Songs of Innocence* (1789). *The Butterfly's Ball* (1807), by William Roscoe, was illustrated by William MULREADY, and illustrations for the first English version of *Grimm's Fairy Tales* (1824) were created by George CRUIKSHANK. John TENNIEL's remarkable drawings for Lewis Carroll's *Alice's Adventures in Wonderland* (1865) remain unsurpassed. His art creates a visual framework through which the characters of the story come to life. Illustrations for children's books usually enhanced or explained the text, but in the latter quarter of the 19th cent. three artistic giants, Walter CRANE, Kate GREENAWAY, and Randolph CALDECOTT, gave a new dimension to illustration. They produced the picture storybook in which interdependent text and illustration are given equal emphasis. Crane's nursery-song prints in *Baby's Bouquet* (1908) combine soft colors with bold composition. Greenaway's *Under the Window* (1878) is enhanced by delicate garden colors. In the 1870s and 80s Caldecott's nursery books displayed harmonious linear composition and warm color. The exquisite watercolors in Beatrix Potter's *Peter Rabbit* books reveal her careful observation of small wild animals. The grandeur and dignity of Howard PYLE's portraits intensify the heroic adventures of *Robin Hood* (1883) and *Men of Iron* (1890). Two of Pyle's students were Jessie Wilcox, who illustrated Robert Louis Stevenson's *Child's Garden of Verses* (1905) and N. C. WYETH, whose dramatization of individuals and landscape enriched *Treasure Island* (1917), *Robinson Crusoe* (1920), and many other works. The master illustrator Arthur RACKHAM produced a host of magnificent books beginning in 1900 with *The Fairy Tales of Grimm*. His work is noted for brilliant use of color and dramatic, detailed composition. Ernest Shepard's drawings for A. A. Milne's *Winnie-the-Pooh* (1926) and for an edition of Kenneth Grahame's *Wind in the Willows* (1931) are warm and humorous. After a decline during the early 1920s, the golden age of the picture book began with the publication of Wanda Gag's *Millions of Cats* (1928). In 1938 the American Library Association instituted the Caldecott Medal for the most distinctive American picture book for chil-

dren The first recipient was Dorothy Lathrop for *Animals of the Bible* (1937). A number of major illustrators whose works are still popular emerged in the 1930s. Kurt Wiese illustrated Kipling's *Mowgli Stories* (1936). Helen Sewell employed a realistic style for *The First Bible* (1934). Maud and Miska Petersham's *The Christ Child* (1931) and Jean de Brunhoff's broadly drawn, delightful *Story of Babar, the Little Elephant* (1931) were among the outstanding books of the 30s. Robert Lawson's *Ben and Me* (1939) was the first of many witty books that he wrote and illustrated, including *Rabbit Hill* (1944) and *The Fabulous Flight* (1949). Dr. Seuss's popular, cleverly drawn books for young children began with *And to Think that I Saw It on Mulberry Street* (1937). Boris Artzybasheff illustrated *Aesop and The Seven Simeons* (both 1937) with bold woodcuts. In the next decade Robert McCloskey produced superb illustrations for *Make Way for Ducklings* (1941). Garth Williams's realistic, expressive drawings brought to life E. B. White's *Stuart Little* (1945) and *Charlotte's Web* (1952). The painter Maxfield Parrish created a series of glowing and colorful illustrations for a children's version of *The Arabian Nights* (1947). Wesley Dennis created powerful watercolors for many horse books by Marguerite Henry. The first book in the charming *Madeleine* series, written and illustrated in a broad, painterly style by Ludwig Bemelmans, appeared in 1939, his *Parsely* (1953), the story of a moose, incorporates a colorful catalog of wild flowers. Marcia Brown's *Puss in Boots* (1952) is light and whimsical. During the 1960s a number of seldom-used techniques were introduced, and color printing was much improved. Drawing was freed from the constraints of realistic representation, and fantastic imagery flourished. Photography enriched texts, as in Astrid Sucksdorff's *Chendru* (1960). Illustrations combining graphic art and collage graced Ezra Jack Keats's *The Snowy Day* (1962) and Leo Lionni's *Inch by Inch* (1960). Outstanding folk and fairy tales in a picture-book format include Adrienne Adams's *Shoemaker and the Elves* (1960) and Evaline Ness's *Tom Tit Tot* (1965). A landmark in illustrated books of the 1960s is Maurice Sendak's *Where the Wild Things Are* (1963), depicting a surreal and menacing world of make-believe creatures. Sendak's *Higglety Pigglety Pop!*, or, *There Must Be More to Life* (1967) is a fantasy reminiscent of Tenniel's work. His *In the Night Kitchen* (1970) depicts a dream world in robust detail; it was the first children's book to portray nudity. Sendak's style has had a profound influence on contemporary illustration, as in Harriet Pincus's doll figures for Carl Sandburg's *The Wedding Procession of the Rag Doll and the Broom Handle and Who Was in It* (1967) and Mercer Mayer's comic *A Boy, a Dog, a Frog, and a Friend* (1967). Mayer's book spawned a number of books in which the story is carried entirely by pictures. In the mid-1960s a new kind of picture book emerged in which the illustrations dominate the text. Ben Montresor's illustrations for *Cinderella* (1965) and for Stephen Spender's *The Magic Flute* (1966) are based on his opera stage designs and incorporate the glittering color of that medium. Brian Wildsmith made expressive use of intense, jewel-like colors for many works including La Fontaine's *The Lion and the Rat* (1963) and *Little Wood Duck* (1972). Among artists who choose to interpret a single type of book to which their styles are best suited, is Nancy Ekholm Burkert, whose specialty is fantasy and fairy tales, in *Snow-White and the Seven Dwarfs* (1972) her sweeping design and minute detail recall the works of Rackham. Margot and Harve Zemach illustrate and retell folk stories, including the rollicking *Duffy and the Devil* (1973). By the 1970s children's book illustration had developed into an artistic feast of incredible variety and richness, expressive of a particularly imaginative range of individual creativity. See Bettina Hurlimann, *Picture Book World* (1965), R. S. Freeman, *Children's Picture Books* (1967), Brian Doyle, *The Who's Who of Children's Literature* (1968), Miriam Hoffman and Eva Samuels, *Authors and Illustrators of Children's Books* (1972).

Children's Crusade: see CRUSADES

children's literature. The earliest of what came to be regarded as children's literature was first meant for adults. Among this ancient body of oral literature were myths and legends created to explain the natural phenomena of night and day and the changing seasons. Ballads, sagas, and epic tales were told by the fireside or in courts to an audience of adults and children eager to hear of the adventures of heroes. Many of these tales were later written down and are enjoyed by children today. The first litera-

ture deliberately written for children was intended to instruct them. During the Middle Ages the Venerable Bede, Aelfric, St. Aldhelm, and St. Anselm all wrote school texts in Latin, some of which were later used in schools in England and colonial America. More enjoyable and enduring fare came later when William Caxton, England's first printer, published *Aesop's Fables* (1484) and Sir Thomas Malory's *Morte d'Arthur* (1485). The HORNBOOK, invented at the end of the 15th cent., taught children the alphabet, numerals, and the Lord's Prayer. Alphabet books were popular in battle-dore and in CHAPBOOK form. *The New England Primer* (c. 1691) taught the alphabet along with prayers and religious exhortations. The first distinctly juvenile literature in England and the United States consisted of gloomy and pious tales—mostly recounting the deaths of sanctimonious children—written for the edification of Puritan boys and girls. Out of this period came one classic for both children and adults, John Bunyan's *Pilgrim's Progress* (1678). Later works written for adults but adapted for children were Daniel Defoe's *Robinson Crusoe* (1719) and Jonathan Swift's *Gulliver's Travels* (1726). In 1729 the English translation of Charles Perrault's *Tales of Mother Goose* became popular in England. A collection of MOTHER GOOSE rhymes was published in 1765 by John Newbery, an English author and bookseller. Newbery was the first publisher to devote himself seriously to publishing for children. Among his publications were *A Pretty Little Pocket Book* (1744) and *The Renowned History of Little Goody Two Shoes* (1765). Pirated editions of Newbery's works were soon published in the United States by Isaiah Thomas and others. By the end of the 18th cent., juvenile literature, partly under the influence of Locke and Rousseau, had again become didactic. This time the didacticism was of an intellectual and moralistic variety, as evidenced in the sober, uplifting books of such authors as Thomas Day, Mary Sherwood, and Maria Edgeworth in England and in the United States by Samuel Goodrich (pseud. Peter Parley) and Martha Finley (pseud. Martha Farquarson), who wrote the famous *Elsie Binsmore* series. Contrasting with this movement was 19th-century romanticism, which produced a body of literature that genuinely belonged to children. For the first time children's books contained fantasy and realism, fun and adventure, and many of the books written at that time are still popular today. Folk tales collected in Germany by the brothers Grimm were translated into English in 1823. The fairy stories of Hans Christian Andersen appeared in England in 1846. At the end of the 19th cent. Joseph Jacobs compiled English folk tales. Andrew Lang, a folklorist, began a series of fairy tales. Edward Lear's *Book of Nonsense* (1846) and Robert Louis Stevenson's *Child's Garden of Verses* (1885) set the style for much of the poetry written for children today. Lewis Carroll's twin masterpieces *Alice's Adventures in Wonderland* (1865) and *Through the Looking Glass* (1872) combine lunacy and fantasy with satire and word games. Victorian family life is realistically depicted in Louisa May Alcott's *Little Women* (1868), whereas Mark Twain's *Adventures of Tom Sawyer* (1876) and Robert Louis Stevenson's *Treasure Island* (1880) emphasize adventure, all three books present fully developed characters. At the turn of the century several children's magazines were being published, the most important being the *St. Nicholas Magazine* (1887–1943). Translations widened the world of the English-speaking child from the 19th cent. on, popular translated works include J. D. Wyss's *Swiss Family Robinson* (tr. from the German, 1814), Carlo Collodi's *Pinocchio* (tr. from the Italian, 1892), Felix Salten's *Bambi* (tr. from the German, 1928), Antoine de Saint-Exupéry's *Little Prince* (tr. from the French, 1943), Astrid Lindgren's *Pippi Longstocking* (tr. from the Swedish, 1950), and Herta von Gebhardt's *The Girl from Nowhere* (tr. from the German, 1959). The contributions and innovations of the 19th and 20th cent. have achieved a distinct place in literature for children's books and have spawned innumerable genres of children's literature. New collections of tales that reach back to the oral roots of literature have come from Europe, Asia, Africa, and the Caribbean. Fantasy for children includes L. Frank Baum's *Wonderful Wizard of Oz* (1900), A. A. Milne's *Winnie-the-Pooh* (1927), P. L. Travers's *Mary Poppins* (1934), J. R. R. Tolkien's *The Hobbit* (1937), Lloyd Alexander's *Book of Three* (1964), E. B. White's *Charlotte's Web* (1952) and *The Trumpet of the Swan* (1970), and such works of science fiction as Madeleine L'Engle's *A Wrinkle in Time* (1962) and C. S. Lewis's *Narnia* series. Popular collections of humorous verse are Laura Richards's *Tirra Lirra* (1932),

Hilaire Belloc's *Cautionary Verses* (1941), John Gardner's *Reason for the Pelican* (1959), and Arnold Spilka's *Rumbudgin of Nonsense* (1970). Adventure and mystery are found in such works as Armstrong Sperry's *Call It Courage* (1941) and E. L. Konigsburg's *From the Mixed-Up Files of Mrs. Basil E. Frankweiler* (1968). The novel for children now includes many of the literary, psychological, and social elements found in its adult counterpart. Books with sophisticated emphasis on plot, mood, characterization, or setting are Kenneth Grahame's *Wind in the Willows* (1908), Esther Forbes's *Johnny Tremain* (1944), Joseph Krumboltz's *And Now Miguel* (1953), and Scott O'Dell's *Island of the Blue Dolphins* (1961). Mature treatment of the emotions of growing up characterizes Irene Hunt's *Up a Road Slowly* (1966), whereas William Armstrong's *Sounder* (1970) realistically portrays the experiences of a black sharecropper and his family. During the 1960s and 70s "socially relevant" children's books appeared, treating subjects like death, drugs, sex, urban crisis, environment, and female liberation. Some critics consider these books as didactic as the children's books of the 17th and early 19th cent. Another trend has been books written by children, especially poetry. Richard Lewis's *Miracles* (1966) is a collection of poems written by children of many countries. Large numbers of nonfiction books are now published, completing the cycle of instruction begun in the Middle Ages. The Newbery Medal, an award for the most distinguished work of literature for children, was established by Frederic Melcher in 1922; in 1938 he established a second award, the Caldecott Medal, for the best picture book of the year. An international children's book award, the Hans Christian Andersen Award, was given in 1970 for the first time to an American, Maurice Sendak, in recognition of his contribution to children's literature. Magazines that review and discuss children's literature are *The Horn Book*, *The Bulletin of the Center for Children's Books*, and the *School Library Journal* in the United States and *The Junior Bookshelf* in Great Britain. See also CHILDREN'S BOOK ILLUSTRATION. See Anne Carol Moore, *My Roads to Childhood* (1939), Annis Duff, *Bequest of Wings* (1944), Lillian Smith, *The Unreluctant Years* (1953), Paul Hazard, *Books, Children, and Men* (4th ed. 1960), Bettina Hurlimann, *Three Centuries of Children's Books in Europe* (1967), Shela Egoff, G. T. Stubbs, and L. F. Ashley, *Only Connect* (1969), Cornelia Meigs, *A Critical History of Children's Literature* (rev. ed. 1969), Jean Karl, *From Childhood to Childhood* (1970), May Hill Arbutnot and Zena Sutherland, *Children and Books* (4th ed. 1972).

child welfare, services provided for the care of disadvantaged children. Founding institutions for orphans and abandoned children were the earliest attempts at child care, usually under religious auspices. At first the goal was to provide minimum physical subsistence, but services have been expanded to include social and psychological help. In the late 18th cent., a movement developed around the idea that children should not simply be regarded as small adults, and such educators as Rousseau, Pestalozzi, and Froebel were discussing children's special needs at the same time that the Industrial Revolution was exploiting CHILD LABOR. In the 19th cent. many institutions were organized, either under religious auspices or through private charity, to take care of children who were orphaned, destitute (see CHILDREN, DEPENDENT), or handicapped. In child-welfare legislation, the British Children's Charter Act of 1908 and the Ohio Children's Code Commission of 1911 marked a new era. The idea that it was the responsibility of the community to provide children with the advantages that their parents could not supply is a 20th-century development. In this category are free school lunches, medical, dental, and psychiatric services and child guidance clinics in schools, playgrounds, children's courts, special schools for handicapped children, and care in foster families for children of broken homes. Infant and child clinics are often provided by municipalities. Many welfare agencies finance summer camps for both healthy and handicapped children. In the United States child welfare services are administered through the Community Services Administration within the U.S. Dept. of Health, Education, and Welfare. Since 1909 decennial child-welfare conferences have been held at the White House. Under the Social Security Act (1935), the Federal government makes grants to states with approved plans of assistance to dependent children. In addition to those programs, a series of new child-welfare programs were passed by Congress in the 1960s (e.g., the Child Nutrition Act,

the Head Start Program, and the Foster Grandparent Program) The International Union for Child Welfare was founded in 1920 with the aim of organizing relief for child victims of major international and national disasters The United Nations International Children's Emergency Fund (UNICEF) was established in 1946 to alleviate malnutrition and to help reestablish children's services destroyed in the war See Jean Packman, *Child Care Needs and Numbers* (1968), Dorothy Zietz, *Child Welfare* (2d ed 1969), Alfred Kadushin, *Child Welfare Services* (1970), Lela Costin, *Child Welfare* (new ed 1972)

Chile (chīl'ē, Span chē'lā), republic (1972 pop 10,044,940), 292,256 sq mi (756,945 sq km), S South America, west of the continental divide of the Andes mts SANTIAGO is the capital and the largest city A long narrow strip of land (no more than c 265 mi/430 km wide) between the Andes and the Pacific Ocean, Chile stretches c 2,880 mi (4,630 km) from near lat 18°S to Cape Horn (lat 56°S), including at its southern end the Strait of Magellan and TIERRA DEL FUEGO, an island shared with Argentina Chile is bordered by Peru on the north, Bolivia on the north-east, and Argentina on the east In the Pacific Ocean, which forms the nation's western and southern borders, are Chile's several island possessions, including EASTER ISLAND, the JUAN FERNÁNDEZ islands, and the Diego Ramírez islands Chile also claims a sector of Antarctica The country is composed of three distinct and parallel natural regions—from east to west, the Andes, the central lowlands, and the Coast Ranges The Chilean Andes contain many high peaks and volcanoes, Ojos del Salado (22,539 ft/6,870 m high) is the second highest point of South America Chile is located along an active zone in the earth's crust and experiences numerous earthquakes, some of great magnitude The climate, which varies from hot desert in the north through Mediterranean-type in the central portion to the cool and humid marine west coast type in the south, is influenced by the cold Peruvian (or Humboldt) Current along the coast of N Chile and by the Andes Precipitation increases southward, the desert in the north is practically rainless, while S Chile receives abundant precipitation throughout the year However, along the coast of N Chile high humidity and dense fogs modify the desert climate The Andes are an orographic barrier, and the western slopes and the peaks receive much precipitation, permanently snow-capped mountains are found along Chile's length The rivers of Chile are generally short and swift flowing, rising in the well-watered Andean highlands and flowing generally west to the Pacific Ocean, the Loa and Baker rivers are the longest, but those in the central portion of the country are much more important because of their use for irrigation and power production In N Chile is the southern portion of the extensive desert zone of W South America It is occupied mainly by the sun-baked Desert of ATACAMA, which, toward the south, gradually becomes a semiarid steppe with limited vegetation The barren landscape of the north extends from the coast to the Andes, where snow-capped peaks tower above the desert The Loa River is N Chile's only perennial stream The region's scanty population is concentrated along the coast and in oases, the ports of IQUIQUE and ANTOFAGASTA (the chief link between Bolivia and the Pacific), the mining towns of ARICA and CHUQUICAMATA, and the industrial town of LA SERENA are the chief population centers The people of the region are almost totally dependent on supplies from the outside N Chile, the economic mainstay of the nation, is rich in a variety of minerals, including copper, nitrates, iron, manganese, molybdenum, gold, and silver Chuquicamata, the world's largest copper-mining center, produces much of Chile's output The middle portion of the country, roughly between lat 30°S and 38°S, has a Mediterranean-type climate and fertile soils, and is the nation's most populous and productive region as well as the political and cultural center It contains Chile's largest cities—Santiago, VALPARAISO, and CONCEPCIÓN Mineral deposits (in particular copper, coal, and silver) are found in central Chile, and the rivers, especially the Bío-Bío, have been harnessed to generate electricity The region, the most highly industrialized section of Chile, produces a large variety of manufactured products, especially in and around Santiago, Concepción, and Valparaíso (which is also Chile's chief port) Between the Andes and the Coast Ranges is the Vale of Chile, a long valley divided into basins by Andean spurs The valley is the heart of the republic, having the highest population density and the highest agricultural and industrial output The valley's rich alluvial soils account for nearly all of Chile's agricultural

production S Chile, extending from the Bío-Bío River to Cape Horn, is cold and humid, with dense forests, heavy rainfall, snow-covered peaks, glaciers, and islands Sections of this region, which is in the direct path of moist westerly winds, receive more than 100 in (254 cm) of precipitation annually Because of subsidence of the earth's crust, the Coast Ranges and the central lowlands have been partially submerged, forming the extensive archipelago of S Chile, an area of craggy islands (notably CHILOÉ), numerous channels, and deep fjords The Chilean lake district is a noted resort area Although all of S Chile is forested, only the drier northern part has exploitable timber resources, PUERTO MONTT and TEMUCO are major timber-handling centers The rest of the region is a virtually untouched wilderness of mid-latitude rain forest Because of the climate, agriculture is limited, oats and potatoes are the chief crops Livestock raising (cattle and pigs) is an important activity A portion of extreme S Chile lies in the rain shadow of the Andes and is covered by natural grasslands, extensive sheep grazing is carried on, with wool, mutton, and skins the chief products This area also yields petroleum More than half of S Chile's small population is found on the island of Chiloe VALDIVIA, a port on the Pacific Ocean, is the fourth largest industrial center of Chile, PUNTA ARENAS on the Strait of Magellan is the world's southernmost city The majority of Chile's population is mestizo, a result of frequent intermarriage between early Spanish settlers and native Indians Many Chileans are also of German, Italian, Irish, British, or Yugoslav ancestry Three small indigenous groups are still distinguishable—the ARAUCANIAN INDIANS of central Chile (the largest and long the strongest group), the Changos of N Chile, and the Fuegians of Tierra del Fuego By the 1970s, Chile was predominantly urban, more than a third of the total population was concentrated in and around Santiago and Valparaíso Chile is overwhelmingly Christian, with more than 85% of the people at least nominally Roman Catholic Spanish is the country's official language The country has one of the highest literacy rates (about 85%) of South America, the result of a well-established education system at all levels The economy is based on the export of minerals, which accounts for more than 85% of the total value of exports (Chile is the world's second largest producer of copper) The country has great potential for the development of hydroelectric power, which already accounts for more than half of its electrical output Although agriculture is the main occupation of about a third of the population, it only accounts for about 10% of the national wealth and produces less than half of the domestic needs, the production of an adequate food supply remains Chile's major economic problem Wheat, potatoes, corn, sugar beets, and oats are the chief crops, a variety of vegetables, fruits, and grains are grown in the Vale of Chile, the country's primary agricultural area The vineyards of the valley are the basis of Chile's growing wine industry Sheep raising is the chief pastoral occupation, providing wool and meat for domestic use and for export Fishing is an important economic activity, Chile consumes the largest amount of fish of any South American nation Since World War I, Chile has developed an industrial capacity to process its raw materials and to manufacture various consumer goods The major industrial products are processed food, fish meal, textiles, iron and steel, paper, lumber, chemicals, and leather goods Chile's economic growth has long been hindered by high inflation, which has greatly cut down the country's spending power Chile's main imports are food, machinery, and transportation equipment The chief trading partners are the United States, West Germany, Great Britain, Japan, and Argentina

History Before the arrival of the Spanish in the 16th cent, the Araucanian Indians had long been in control of the land Diego de ALMAGRO, who was sent by Francisco Pizarro from Peru to explore the southern region, led a party of men through the Andes into the central lowlands of Chile but was unsuccessful (1536) in establishing a foothold there In 1540, Pedro de VALDIVIA marched into Chile and, despite stout resistance from the Araucanians, founded Santiago (1541) and later established La Serena, Concepción, and Valdivia In spite of discouragement and incessant warfare with the Indians the Spanish persevered and succeeded The Indians were pacified, but violent outbreaks occurred, the Araucanians remained hostile until near the end of the 19th cent Although Chile was unattractive to the Spanish because of its isolation from Peru to the north and its lack of precious metals (copper was discovered much later), the Spanish developed a pastoral soci-

ety there based on large ranches and haciendas worked by Indians, the yields were shipped to Peru During the long colonial era, the mestizos became a

tenant farmer class, called *inquilinos*, although technically free, most were in practice bound to the soil During most of the colonial period Chile was a captaincy general dependent upon the viceroyalty of Peru, but in 1778 it became a separate division virtually independent of Peru Territorial limits were ill-defined and were the cause, after independence, of long-drawn-out boundary disputes with Peru, Bolivia, and Argentina The movement toward independence began in 1810 under the leadership of Juan MARTÍNEZ DE ROZAS and Bernardo O'HIGGINS The first phase (1810-14) ended in defeat at RANCAGUA, largely because of the rivalry of O'Higgins with José Miguel CARRERA and his brothers In 1817, José de SAN MARTÍN, with incredible hardship, brought an army over the Andes from Argentina to Chile The following year he won the decisive battle of MAIPÚ O'Higgins, who had been chosen supreme director, formally proclaimed Chile's independence Feb 12, 1818, at Talca and established a military autocracy that characterized the republic's politics until 1833, O'Higgins ruled Chile from 1818 until 1823, when strong opposition to his policies forced him to resign During this time the British expatriot Lord Cochrane, commanding the Chilean navy, cleared (1819-20) the coast of Spanish shipping, and in 1826 the remaining royalists were driven from Chiloe island, their last foothold on Chilean soil The colonial aristocracy and the clergy had been discredited because of royalist leanings The army, then, plus a few intellectuals, established a government devoid of democratic forms Yet with the centralistic constitution of 1833, fashioned largely by Diego PORTALES on Chile's particular needs, a foundation was laid for the gradual emergence of parliamentary government and a long period of stability During the administrations of Manuel BULNES (1841-51) and Manuel MONTT (1851-61) the country experienced governmental reform and material progress The war of 1866 between Peru and Spain involved Chile and led the republic to fortify its coast and build a navy Chileans obtained the right to work the nitrate fields in the Atacama, which then belonged to Bolivia Trouble over the concessions led in 1879 to open war (see PACIFIC WAR OF THE) Chile was the victor and added valuable territories taken from Bolivia and Peru, a long-standing quarrel also ensued, the

TACNA ARICA CONTROVERSY which was finally settled in 1929. Chile also became involved in serious border troubles with Argentina, it was as a sign and symbol of the end of this trouble that the **CHRIST OF THE ANDES** was dedicated in 1904. With the exploitation of nitrate and copper by foreign interests, chiefly the United States, prosperity continued. The Transandine Railway was completed (1910), and many more railroads were built. Industrialization, which soon raised Chile to a leading position among South American nations, was begun. Meanwhile, internal struggles between the executive and legislative branches of the government intensified and resulted (1891) in the overthrow of Jose BALMAEDA. A congressional dictatorship (with a figurehead president and cabinet ministers appointed by the congress) controlled the government until the constitution of 1925, which provided for a strong president. Former president Arturo ALESSANDRI (who had instituted a program of labor reforms during his tenure from 1920 to 1924, and who commanded widespread popular support) was recalled (1925) as a caretaker until elections were held. Although Chile enjoyed economic prosperity between 1926 and 1931, it was very hard hit by the world economic depression, largely because of its dependence on mineral exports and fluctuating world markets. Large-scale unemployment had occurred after World War I when the nitrate market collapsed. The rise of the laboring classes was marked by unionization, and there were many Marxists who advocated complete social reform. The struggle between radicals and conservatives led to a series of social experiments and to counterattempts to suppress the radicals (especially the Communists) by force. During Alessandri's second term (1932-38) a measure of economic stability was restored, however, he turned to repressive measures and alienated the working classes. A democratic-leftist coalition, the Popular Front, took power after the elections of 1938. Chile broke relations with the Axis (1943) and declared war on Japan in 1945. Economic stability, the improvement of labor conditions, and the control of Communists were the chief aims of the administration of Gabriel Gonzalez Videla, who was elected president in 1946. His efforts, as well as those of his successors, Carlos Ibañez del Campo (1952-58) and Jorge Alessandri (1958-64), were hampered by chronic inflation and repeated labor crises. In the 1964 presidential election (in which Eduardo FREI MONTALVO was elected) and in the 1965 congressional elections, the Christian Democratic party won overwhelming victories over the Socialist-Communist coalition. Frei made advances in land reform, education, housing, and labor. Under his so-called Chileanization program, the government assumed a controlling interest in U.S.-owned copper mines while cooperating with U.S. companies in their management and development. In 1970, Salvador ALLENDE GOSSENS, head of the Popular Unity party, a coalition of leftist political parties, won a plurality of votes in the presidential election and became the first Marxist to be elected president by popular vote in Latin America. Allende, in an attempt to turn Chile into a socialist state, nationalized many private companies, instituted programs of land reform, and, in foreign affairs, sought closer ties with Communist countries. His policies were resisted from the start by many factions within Chilean society. Continuing, widespread domestic problems, including spiraling inflation, lack of food and consumer goods, and stringent government controls, led to a series of violent strikes and demonstrations. As the situation worsened, the traditionally neutral Chilean military began to pressure Allende, he yielded to some of their demands and appointed military men to several high cabinet positions. In Sept., 1973, the armed forces staged a coup that resulted in Allende's death (by suicide, according to the military junta that succeeded him) and in the execution, detention, or expulsion from Chile of thousands of people. Gen. Augusto Pinochet Ugarte took control of the country, promising a more moderate economic policy and the restoration of a pro-Western foreign policy. However, in 1974, the economy continued to deteriorate, even though the government sought to return private enterprise to Chile by denationalizing many industries and by compensating businesses taken over by the Allende government. Work proceeded on the drafting of Chile's third constitution, which was to include articles preventing the election of a minority government. In June, 1974, Pinochet became the undisputed leader of Chile by assuming the position of head of state. In July, Chile's 25 existing provinces were reorganized into 12 regions and the Santiago metropolitan

area. See Luis Galdames, *A History of Chile* (tr. 1941, repr. 1964), H. R. Pocock, *The Conquest of Chile* (1967), E. H. Korth, *Spanish Policy in Colonial Chile* (1968), J. F. Morris, *We Must Make Haste Slowly: The Process of Revolution in Chile* (1973), Kenneth Medhurst, ed., *Allende's Chile* (1973).

Chileab (kīl'ēāb), son of David and Abigail. 2 Sam. 33. Daniel 1 Chron. 31.

Chile saltpeper: see SODIUM NITRATE

chiliasm: see MILLENNIUM

chili con carne (chīl'ē kōn kar'nē) [Span., = hot peppers with meat], Mexican food popular in the United States and now manufactured and canned commercially. It consists mainly of beef, beans, chilies (see PEPPER), garlic, and spices, although the ingredients may be varied.

Chi-lin (jē-līn) or **Kirin** (kē'rīn'), city (1970 est. pop. 1,200,000), central Kirin prov., China, on the Sungari River. It is a shipping port, a railroad junction, and a commercial and industrial center, with large chemical plants. Oil is refined, and fertilizer, cement, lumber, and sugar are also produced. Chi-lin was the capital of Kirin prov. until 1954. It was formerly called Yung-ki.

Chilon (kīl'yōn), Ruth's brother-in-law. Ruth 1:2, 5, 49.

Chilkoot Pass, alt. c. 3,500 ft (1,070 m), in the Coast Mts., on the British Columbia-Alaska line. It was long used by the Chilkoot Indians as a link between the Pacific coast and the Yukon River valley, the first non-Indian traversed the pass in 1878. After the Klondike gold strike (1896), the pass became a much-used route to the interior. See Archie Satterfield, *Chilkoot Pass: Then and Now* (1973).

Chillán (chēyān'), city (1970 pop. 102,361), capital of Ñuble prov., S. central Chile. Located in Chile's central valley, the city is a leading agricultural and commercial center. Founded in the 16th cent., it was destroyed by earthquake and flood in 1751 but was rebuilt and played a prominent role in the revolution against Spain. Bernardo O'Higgins, the liberator of Chile, was born in Chillán. One of the world's worst earthquakes leveled Chillán in 1939, claiming 10,000 lives. The city was subsequently rebuilt.

chill hardening: see HARDENING

Chillicothe (chīl'ikōth'ē), city (1970 pop. 24,842), seat of Ross co., S. central Ohio, on the Scioto River, inc. 1802. It is the trade and distribution center of a farming area that specializes in raising cattle and hogs and growing corn. Long noted for its large paper mills, Chillicothe also manufactures aluminum cooking utensils, shoes, floor tiles, and railroad-car springs. Founded in 1796 by settlers from Virginia, Chillicothe derives its name from the Shawnee Indian word meaning "principal town." In 1800 it became the capital of the NORTHWEST TERRITORY, from 1803 to 1810 and from 1812 to 1816 it was the capital of Ohio. Chillicothe grew in the 19th cent. as an inland port on the Ohio and Erie Canal and a pork packing center. During World War I, Camp Sherman, a large Army training base, was built in Chillicothe, after the war a veterans hospital, still in use, was built on part of the site. Adena State Memorial, the home of Thomas Worthington, Ohio's first U.S. Senator and sixth governor, and Ross County Historical Society Museum, which contains exhibits of pioneer crafts and rifle making, are in Chillicothe. Just outside the city is Mound City Group National Monument, containing prehistoric Indian burial mounds. (See NATIONAL PARKS AND MONUMENTS, table.) Chillicothe also has a state prison and a branch of Ohio Univ.

Chillingworth, William, 1602-44, English theologian. He was converted to Roman Catholicism and in 1630 went to Douai to study. Under the influence of his godfather, William Laud, he abjured that faith in 1634, and took holy orders (1638) in the Church of England. In 1638 he published *The Religion of Protestants a Safe Way to Salvation*, a defense of the Protestant view that the Bible is the sole authority in matters of religion and that the right of interpretation is reserved to the individual. He served as chaplain in the king's army in the civil war, was taken prisoner (1643), and died in detention. See study by R. R. Orr (1967).

Chilliwack (chīl'iwāk), city (1971 pop. 9,135), SW British Columbia, Canada, on the Fraser River. It is

an agricultural, dairying, and logging center. The main industry is food processing.

Chilmad (kīl'mād), city or state that traded with Tyre. Ezek. 27:23.

Chiloé (chēlōā'), island (3,241 sq mi/8,394 sq km), a part of Chile prov., off S. Chile. It is separated from the mainland by the Corcovado and Ancud gulfs and the Chacao channel. It is the largest of the Chilean islands and the only one that has been successfully settled. A rainy climate favoring the growth of wet and dense evergreen forests makes it one of the world's last virgin frontiers. Nevertheless the settlers have been able to raise wheat and potatoes, and to export timber. The population is concentrated around Ancud, the capital, and Castro, the former was totally destroyed and the latter badly damaged by an earthquake in 1960. Wrested from the Indians by the Spanish in 1567, Chiloé was the last stronghold of Spanish royalists, who were not driven out until 1826.

Chilon (kī'lōn), 6th cent. B.C., one of the SEVEN WISE MEN OF GREECE. He was a Spartan and brought greater strictness to Spartan training. As an ephor (c. 556 B.C.) he strengthened the power of that position, and for the first time the ephors directed policy with the king.

Chilpancingo (chēl'pānsēng'gō), city (1970 pop. 56,904), capital of Guerrero state, S. Mexico. Nearby aboriginal ruins indicate that the city was once the center of a culture higher than the Aztec. Its full name is Chilpancingo de los Bravos, in honor of its heroes in the war against Spain—three brothers, of whom Nicolas Bravo was most prominent. During the war, the Congress of Chilpancingo, convened in 1813 by Morelos y Pavon, briefly established a constitutional republic based on the reforms of Hidalgo y Costilla.

Chilperic I (chīl'pērīk), d. 584, Frankish king of Neustria (561-84), son of Clotaire I. He feuded bitterly with his brother SIGEBERT I, who had inherited the E. Frankish kingdom that came to be known as Austrasia. Their struggle became savage after Chilperic and his mistress and future wife, FREDEGUNDE, murdered (567) Chilperic's second wife, Galswintha, she was the sister of Sigebert's wife, BRUNHILDA. In the wars between the two brothers, Sigebert overran Neustria before his death (575). Later, Chilperic was murdered, probably at the instigation of Brunhilda. The feud was inherited by Chilperic's son and successor, CLOTAIRE II.

Chiltern Hills, range of chalk hills, c. 45 mi (70 km) long and 15 to 20 mi (24-32 km) wide, S. England, NW of London, extending NE from Goring Gap. Its highest elevation is Coombe Hill (852 ft/260 m), SE of Aylesbury. Chiltern timber supports the local furniture industry. Roman works have been found in the hills.

Chiltern Hundreds, the obsolete (since the 19th cent.) administrative districts of Stoke, Burnham, and Desborough in Buckinghamshire, S. central England. The stewardship of the Chiltern Hundreds is an obsolete office with only a nominal salary. It is, however, legally an office of profit under the crown and, as such, may not be held by a member of Parliament. Since members of Parliament may not resign, "applying for the Chiltern Hundreds" or for the similarly obsolete stewardship of the Manor of Northstead is the method by which a member gives up his seat.

Chi-lung (jē-lōōng), **Kilung**, or **Keelung** (both kē'-), city (1969 pop. 317,780), N. Taiwan, on the East China Sea. Because of its excellent harbor it is the principal port and naval base of Taiwan. Shipbuilding is an important industry. Chemicals, machinery, fertilizers, and marine products are also produced. Coal and gold are mined nearby. The city has extensive rail connections and is a major commercial center. Occupied by the Spanish in 1626, it passed (1641) to the Dutch, who lost it to invading Chinese under Koxinga in 1662. It passed to the Manchus in 1683. The port was opened to Western trade in 1860. Captured by the Japanese in 1895 and renamed Kirun, Chi-lung remained under their rule until 1945.

chimaera (kīmēr'a), cartilaginous marine fish, related to the sharks. Also called ratfishes, chimaeras are found in temperate oceans throughout the world, mostly in deep water. They have large heads, long, thin, ratlike tails, and large, fanlike pectoral fins. In many species there is a poison spine in front of the first dorsal fin. Their slippery skins are black, gray, or silver, often with stripes or spots. The largest reach a length of about 6½ ft (2 m). Chimaeras resemble sharks in certain fundamental respects. They have cartilage skeletons, males have claspers for internal fertilization of females, and females lay eggs.

encased in leathery cases. However, they resemble the bony fishes in having the upper jaw fused to the skull, the gill slits opening into a single chamber, a bony covering, or operculum, over the gill slits, and separate anal and urogenital openings. A distinctive feature of chimaeras is the presence of extra claspers in the male, one in front of each pelvic fin and a prominent one on the forehead. The function of these appendages is not known, but they are thought to play a role in courtship. Chimaeras form the subclass Holocephali of the phylum CHORDATA, subphylum Vertebrata, class Chondrichthyes.

Chimay, princesse de. see TALLIEN, THÉRÈSE CABAR-RUS

Chimborazo (chëmbörä'sō), inactive volcano, 20,577 ft (6,272 m) high, central Ecuador, the highest in Ecuador. Its summit is always snow-capped. First explored by Alexander von Humboldt in 1802, it was first scaled in 1880 by Edward Whymper. It is frequently associated with nearby Cotopaxi, although the two volcanoes have different shapes.

chime, in music. see BELL

Chimera. see BELLEROPHON and TYPHON

Chimham (kî'm'hām), Barzillai's son. 2 Sam 19:37,38,40. The "habitation of Chimham" was a place near Bethlehem. Jer 41:17.

Chimkent (chîmkyënt'), city (1970 pop 247,000), capital of Chimkent oblast, Central Asian USSR, in Kazakhstan, on the Turkistan-Siberia RR. It has large zinc and lead smelters and machine, chemical, and textile industries. Founded in the 12th cent., Chimkent was a Kokand fortress before it was taken by Russia in 1864.

chimpanzee, an APE, genus Pan, of the equatorial forests of central and W Africa. The common chimpanzee, Pan troglodytes, lives N of the Congo River. Full-grown animals of this species are up to 5 ft (1.5 m) tall and weigh about 150 lb (68 kg); they have an arm spread of up to 9 ft (2.7 m) and are much stronger than humans. They are covered with long, black hair over most of the body and have naked faces ranging in color from nearly white to nearly black. The pygmy chimpanzee, P. paniscus, lives south of the Congo. It is much smaller and more slenderly built, with a black face. Chimpanzees spend much time on the ground, where they walk on all fours, using the soles of the feet and the knuckles of the hands; they can also stand on two legs and sometimes walk this way for short distances, especially when carrying things. They climb trees in pursuit of food and for nesting and can swing by their hands from one branch to the next. Their diet consists largely of fruit and other plant matter, but they also hunt and eat small animals, including monkeys. They use and even make tools, for example, they collect termites using twigs that they have gathered and stripped of leaves. Chimpanzees move about the forest in bands of varying composition, usually numbering six to ten individuals. There is a social hierarchy among the males of a group, and they engage in dominance contests involving much screaming and stamping. Family groups consist of mothers and children, females mate with many males during their fertile periods. A single infant is born every two or three years, young chimpanzees ride about on their mothers' backs. Under ideal circumstances chimpanzees may live 50 years. Chimpanzees are noisy, excitable animals both in the wild and in captivity. They may develop affection for humans, but are likely to become dangerous after maturing in captivity. They are considered the most intelligent of apes; they have excellent memories and reasoning powers and enjoy performing. Although they are incapable of speech beyond their own simple system of cries, captive chimpanzees have been taught to communicate in a language using visual rather than verbal symbols. Because of their close relationship to humans they are often used for medical and behavioral experimentation. Chimpanzees are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Primates, family Pongidae. See G. H. Bourne, *The Chimpanzee* (6 vol., 1973); Jane Van Lawick-Goodall, *In the Shadow of Man* (1971); R. M. Yerkes, *Chimpanzees: A Laboratory Colony* (1943, repr 1971).

Chimu (chëmōō'), ancient Indian civilization on the desert coast of N Peru. It is believed to have begun c 1200. The MOCHICA, an earlier civilization, was previously known as early Chimu or proto-Chimu. After the decline of the Mochica (c 800), there was a long

transition period about which relatively little is known except that it was probably influenced by TIAHUANACO. The Chimu were urban dwellers and apparently had a powerful military and a complex, well-organized social system. They built many well-planned cities, the largest and most impressive was their capital, CHAN CHAN. The Chimu exerted considerable influence on the Cuismancu empire, centered at CHANCAY. The last phases of Chimu civilization were contemporaneous with the rise of the INCA empire, by which it was absorbed c 1460. See V. W. Wolfgang, *The Desert Kingdoms of Peru* (1965); E. P. Lanning, *Peru Before the Incas* (1967).

Ch'in (chîn), dynasty of China, which ruled from 221 B.C. to 207 B.C. The word *China* is derived from Ch'in, the first dynasty to unify the country. The Ch'in, a vigorous people from the northwest, moved into the rich plain of the Wei River in the 4th cent. B.C. By 221 B.C. the Ch'in army, led by Prince Cheng, had unified China by conquering the warring feudal states of the late CHOU period. The prince took the title Shih Hwang-ti [first emperor] and established his capital near modern Sian, Shensi prov. In all matters of state he was counseled by Li Ssu (d. 208 B.C.), a brilliant Chinese scholar. Until Shih Hwang-ti died in 210 B.C. he was engaged in vast projects. He had built much of the Great Wall (see CHINA, GREAT WALL OF), had extended his empire W to Kweichow, N to Kansu, and S to Tonkin in what is now North Vietnam, and had made his capital the most splendid city of China. He also built a network of roads and canals that converged on the capital. To centralize his administration he abolished feudalism and established the pyramidal governmental system that has been the model for later unifying dynasties. He attempted to unify Chinese culture by standardizing the written language and to combat traces of the feudal past by destroying all philosophical works, especially those of Confucius. Shih Hwang-ti was succeeded by a weakling son, who was quickly overthrown (207 B.C.). Soon after, the HAN dynasty came to power in China. See Derk Bodde, *China's First Unifier* (1938, repr 1967); Leonard Cottrell, *The Tiger of Ch'in* (1962).

Chin, dynasty of China (265-420). see TSIN

China, Mandarin *Chung Hua jen Min Kung Ho Kuo* [central glorious people's united country, i.e., people's republic], country (1974 est. pop. 800,000,000), 3,691,502 sq mi (9,561,000 sq km), E Asia. This article concerns mainland China, now called the People's Republic of China, the Republic of China, or Nationalist China, is on the island of TAIWAN (see separate article). The capital of mainland China is PEKING. The most populous country in the world and the second largest (after the USSR), China has a 4,000-mi (6,400-km) coast that fronts on the Yellow Sea, the East China Sea, and the South China Sea. It is elsewhere bounded on the E by the USSR and North Korea, on the N by the USSR and the Mongolian People's Republic, on the W by the USSR and Afghanistan, and on the S by Pakistan, India, Nepal, Sikkim, Bhutan, Burma, Laos, and North Vietnam. Off the coast is the large island of HAINAN. China comprises 21 provinces (ANHWEI, CHEKIANG, FUKIEN, HONAN, HOPEI, HUNAN, HUPEH, KANSU, KIANGSI, KIANGSU, KWANGTUNG, KWEICHOW, SHANSI, SHANTUNG, SHENSI, SZECHWAN, TSINGHAI, YÜNNAN, and, in MANCHURIA, HEILONGKIANG, KIRIN, and LIAONING) and five autonomous regions (TIBET, the INNER MONGOLIAN AUTONOMOUS REGION, the NINGXIA HUI AUTONOMOUS REGION, the KWANGSI CHUANG AUTONOMOUS REGION, and the Sinkiang Uigur Autonomous Region [see SINKIANG]). China may be divided into the following geographic regions: the 12,000-ft-high (3,660-m) Tibetan plateau, bounded in the N by the Kunlun mountain system, the Tarim and Dzungarian basins of Sinkiang, separated by the Tien Shan mts., the vast Inner Mongolian tableland, the eastern highlands and central plain of Manchuria, and what has been traditionally called China proper. This last region, which contains some four-fifths of the country's population, falls into three divisions. North China, which coincides with the Huang Ho (Yellow River) basin and is bounded in the S by the Tsingling mts., includes the loess plateau of the northwest, the N China plain, and the mountains of the Shantung peninsula. Central China, watered by the Yangtze River, includes the basin of Szechwan, the central Yangtze lowlands, and the Yangtze delta. South China includes the plateau of Yünnan and Kweichow and the valleys of the Si and Canton rivers. To the extent that a general statement about the climate of such a large country can be made, China may be described as wet in the summer and dry in the winter. Regional differences are found in the highlands

of Tibet, the desert and steppes of Sinkiang and Inner Mongolia, and in China proper. There the Tsingling mts. are the major dividing range not only between semiarid N China and the more humid central and S China but also between the grain-growing economy of the north and the rice economy of the south, overpopulation in the south, due to migrations from the north, has often prompted emigration to SE Asia and elsewhere. Agriculture is by far the leading occupation in China, involving about 80% of the population, although extensive rough, high terrain and large arid areas—especially in the west and north—limit cultivation to only about 11% of the land surface. Except for the oasis farming in Sinkiang and Tsinghai, some irrigated areas in Inner Mongolia and Kansu, and sheltered valleys in Tibet, agricultural production is restricted to the east. China is the world's largest producer of rice, sweet potatoes, kaoliang, millet, barley, peanuts, and tea. Those, together with wheat (in which China ranks third in world production), other grains, corn, soybeans, and potatoes, are the most important crops. Cotton is the most valuable cash crop, followed by oilseeds, silk, tea, tobacco, ramie, jute, hemp, sugarcane, and sugar beets. Livestock raising on a large scale is confined to the border regions and provinces in the north and west; it is mainly of the nomadic pastoral type. China ranks third in world production of sheep and fifth in cattle production. Horses, donkeys, and mules are work animals in the north, while oxen and water buffalo are used for plowing chiefly in the south. Hogs and poultry are widely raised in China proper, furnishing important export staples, such as hog bristles and egg products. Fish supply most of the animal protein in the diet, and both inland and marine fishing are important. China is one of the world's major mineral-producing countries; there has been extensive exploration since 1950 and significant new deposits have been found. Coal is the most abundant mineral (China ranks with the United States and the USSR in production and reserves), high-quality, easily-mined coal is found throughout the country, but especially in the north and northeast. China also has extensive iron-ore deposits, the largest mines are at AN-SHAN and PEN-CH'U, in Liaoning prov. China used to import about 90% of its petroleum, but new fields were discovered in the 1960s, and the country is approaching self-sufficiency in crude oil. Refining operations are being improved. Offshore exploration has become important, massive deposits off the coasts are believed to exceed all the world's known oil reserves. China's leading export minerals are tungsten (China has the world's largest supply), antimony, tin, molybdenum, bismuth, mercury, magnesite, and salt. China is among the world's three top producers of tin, tungsten, antimony, and magnesite, and ranks second (after the United States) in the production of salt, seventh in manganese, and eighth in lead ore. There are large deposits of uranium in the northwest, especially in Sinkiang; new mines have also opened in Kiangsi and Kwangtung provs. Aluminum is found in many parts of the country, the largest reduction plant is at FU-SHUN, in Liaoning prov. China also has deposits of gold, zinc, copper, fluorite, asbestos, phosphate rock, pyrite, and sulfur. Coal is the single most important energy source, coal-fired thermal electric generators provide close to 70% of the country's electric power. China has extensive hydroelectric energy potential, notably in Yunnan, W Szechwan, and E Tibet. Hydroelectric projects are in all the provinces served by major rivers where near-surface coal is not abundant. Perhaps the most spectacular project is the huge dam at the San-men Gorge on the Huang Ho. Important industrial products are manufactures that serve agriculture (farm machinery, fertilizers, etc.), as well as machine tools, iron and steel, textiles, processed foods, and building materials. Before 1945 heavy industry was concentrated in the northeast (Manchuria), but important centers have now been established in other parts of the country, notably in SHANGHAI and WU-HAN. Since the 1960s the emphasis has been on regional self-sufficiency, and many factories have sprung up in rural areas. The iron and steel industry is organized around eight major centers (including An-shan, one of the world's largest), but thousands of small iron and steel plants have also been established throughout the country. Brick, tile, cement, and food-processing plants are found in almost every province. Shanghai and CANTON are the traditionally great textile centers, but many new mills have been built, concentrated mostly in the cotton-growing provinces of N China and along the Yangtze River, the largest mill is now in Wu-han.

The domestic handicraft industry produces most of the consumer goods and such export products as porcelain and lacquer articles. Most of China's large cities, e.g. Shanghai, TIENTSIN, and Canton, are also the country's main ports. Other leading ports are rail termini, such as LU-TA (a conurbation of LU-SHUN, formerly Port Arthur, and TA-LIEN), on the South Manchuria RR, and CH'ING-TAO, on the line from CHI-NAN. In the northeast (Manchuria) are large cities and rail centers, notably SHEN-YANG (Mukden), HARBIN, and CH'ANG-CH'UN. Great inland cities include Peking and the river ports of NANKING, CHUNG-KING, and Wu-han. T'AI-YUAN and HSI-AN are important centers in the less populated interior, and LAN-CHOU is the key communications junction of the vast northwest. Rivers and canals (notably the Grand Canal, which connects the Huang Ho and the Yangtze rivers) remain important transportation arteries. The east and northeast are well served by railroads and highways, and there are now major rail and road links with the interior. There are railroads to North Korea, the USSR, the Mongolian People's Republic, and North Vietnam, and road connections to Pakistan, India, Nepal, and Burma. Although a British crown colony, HONG KONG has long been a major maritime outlet of S. China. The Han Chinese (so called for the Han dynasty) make up approximately 94% of the total population. They are linguistically homogeneous in the north, where they speak Mandarin dialects (the basis of the new national language of China), while in the south Cantonese, Wu, and Hakka are only a few of the many dialects spoken (some 108 dialects are spoken in Fukien prov. alone). The written language is universal, Chinese ideographs are common to all the dialects. The non-Chinese groups represent only 6% of the population, but the interior regions in which they live constitute more than half of the total area of the country. Among the main non-Chinese minorities are the Chuang, a Thai-speaking group, found principally in Kwangsi, the Uigurs, who live mainly in Sinkiang, the Hui (Muslims), found chiefly in Ninghsia, the Yi (Lolo), who live on the borders of Szechwan and Yunnan, the Tibetans, concentrated in Tibet and Tsinghai, the Miao, widely distributed throughout the mountainous areas of S. China, the Mongols, found chiefly in the Mongolian steppes, and the Koreans, who are concentrated in Manchuria. The Manchus have been sinicized and are now considered as Han. The constitution of the People's Republic of China provides for religious freedom, but religious practice is not encouraged; traditionally, Confucianism, Buddhism, Taoism, and ancestor worship were practiced in an eclectic mixture with varying appeals. Islam, the largest monotheistic sect, is found chiefly in the northwest. Christianity, which had a small number of adherents, has been repressed.

Origins and History The fossils of *Sinanthropus pekingensis* (see MAN, PREHISTORIC) found in N. China are the earliest discovered protohuman remains in NE Asia. About 20,000 years ago, after the last glacial period, modern man appeared in the Ordos desert region. The subsequent culture shows marked similarity to that of the higher civilizations of Mesopotamia, and some scholars argue a Western origin for Chinese civilization. However, since the 2d millennium B.C. a unique and fairly uniform culture has spread over almost all of China. The substantial linguistic and ethnological diversity of the south and the far west result from their having been infrequently under the control of central government. China's history is traditionally viewed as a continuous development with certain repetitive tendencies, as described in the following general pattern. The area under political control tends to expand from the E. Huang Ho and Yangtze basins, the heart of Chinese culture, and then, under outside military pressure, to shrink back. Conquering barbarians from the north and the west supplant native dynasties, take over Chinese culture, lose their vigor, and are expelled in a surge of national feeling. Following a disordered and anarchic period a new dynasty may arise. Its predecessor, by engaging in excessive warfare, tolerating corruption, and failing to keep up public works, has forfeited the right to rule—in the traditional view, he has lost "the mandate of Heaven." The administrators change, central authority is reestablished, public works constructed, taxation modified and equalized, and land redistributed. After a prosperous period disintegration reappears, inviting barbarian intervention or native revolt. Although traditionally supposed to have been preceded by the semilegendary Hsia dynasty, the SHANG dynasty (c. 1523–1027 B.C.) is the first in

documented Chinese history. During the succeeding, often turbulent, CHOU dynasty (c. 1027–256 B.C.), CONFUCIUS, LAO-TZE, and MENCIUS lived, and the literature that until recently formed the basis of Chinese education was written. The use of iron was the main material advance. The semibarbarous CH'IN dynasty (221–207 B.C.) first established the centralized imperial system that was to govern China during stable periods. The Great Wall (see CHINA, GREAT WALL OF) was begun in this period. The native HAN dynasty period (202 B.C.–A.D. 220), traditionally deemed China's imperial age, is notable for long peaceable rule, expansionist policies, and great artistic achievement. The THREE KINGDOMS period (A.D. 220–65) opened four centuries of warfare among petty states and of invasions of the north by the barbarian Hsiung-nu (Huns). In this inauspicious time China experienced rapid cultural development. Buddhism, which had earlier entered from India, and Taoism, a native cult, grew and seriously endangered Confucianism. Indian advances in medicine, mathematics, astronomy, and architecture were adopted. Art, particularly figure painting and decoration of Buddhist grottoes, flourished. Feudalism partly revived under the TSIN dynasty (265–420) with the decay of central authority. Under the SUI (581–618) and the T'ANG (618–906) a vast domain, much of which had first been assimilated to Chinese culture in the preceding period, was unified. The civil service examination system based on the Chinese classics and a renaissance of Confucianism were important developments of this brilliant era. Its fresh and vigorous poetry is especially noted. The end of the T'ang was marked by a withdrawal from conquered border regions to the center of Chinese culture. The period of the Five Dynasties and the Ten Independent States (906–60), chaotic and depraved, was followed by the SUNG dynasty (960–1279), a time of scholarly studies and artistic progress, marked by authentication of the Confucian literary canon and the improvement of printing techniques through the invention of movable type. The poetry of the Sung period was derivative, but a new popular literary form, the novel, appeared at that time. Neo-Confucianism developed systematically. Gunpowder was first used for military purposes in this period. While the Sung ruled central China, barbarians—the Khitai, the Jurchen, and the Tangut—created northern empires that were swept away by the MONGOLS under JENGHIZ KHAN. His grandson KUBLAI KHAN, founder of the YUAN dynasty (1260–1368), retained Chinese institutions. The great realm of Kublai was described in all its richness by one of the most celebrated of all travelers, Marco POLO. Improved roads and canals were the dynasty's main contributions to China. The MING dynasty (1368–1644) set out to restore Chinese culture by a study of Sung life. Its initial territorial expansion was largely lost by the early 15th cent. European trade and European infiltration began with Portuguese settlement of MACAO in 1557 but immediately ran into official Chinese antiforeign policy. Meanwhile the MANCHU peoples advanced steadily south in the 16th and the 17th cent. and ended with complete conquest of China by 1644 and with establishment of the CH'ING (Manchu) dynasty (1644–1912). Under emperors K'ang Hsi (reigned 1662–1722) and CH'EN LUNG (reigned 1735–96), China was perhaps at its greatest territorial extent.

Foreign Intervention in China The Ch'ing opposition to foreign trade, at first even more severe than that of the Ming, relaxed ultimately, and in 1834, Canton was opened to limited overseas trade. Great Britain, dissatisfied with trade arrangements, provoked the OPIUM WAR (1839–42), obtained commercial concessions, and established EXTRATERRITORIALITY. Soon France, Germany, and Russia successfully put forward similar demands. The Ch'ing regime, already weakened by internal problems, was further enfeebled by European intervention, the devastating TAI-PING REBELLION (1848–65), and Japan's military success in 1894–95 (see SINO-JAPANESE WAR, FIRST). Great Britain and the United States promoted the Open Door Policy—that all nations enjoy equal access to China's trade, this was generally ignored by the foreign powers, and China was divided into separate zones of influence. Chinese resentment of foreigners grew, and the BOXER UPRISING (1900), encouraged by Empress T'ZU HSI, was a last desperate effort to suppress foreign influence. Belated domestic reforms failed to stem a revolution long-plotted, chiefly by SUN YAT-SEN, and set off in 1911 after the explosion of a bomb at Wu-ch'ang. With relatively few casualties, the Ch'ing dynasty was overthrown and a republic was established. Sun, the first president, resigned early in 1912 in favor of YUAN SHIH-

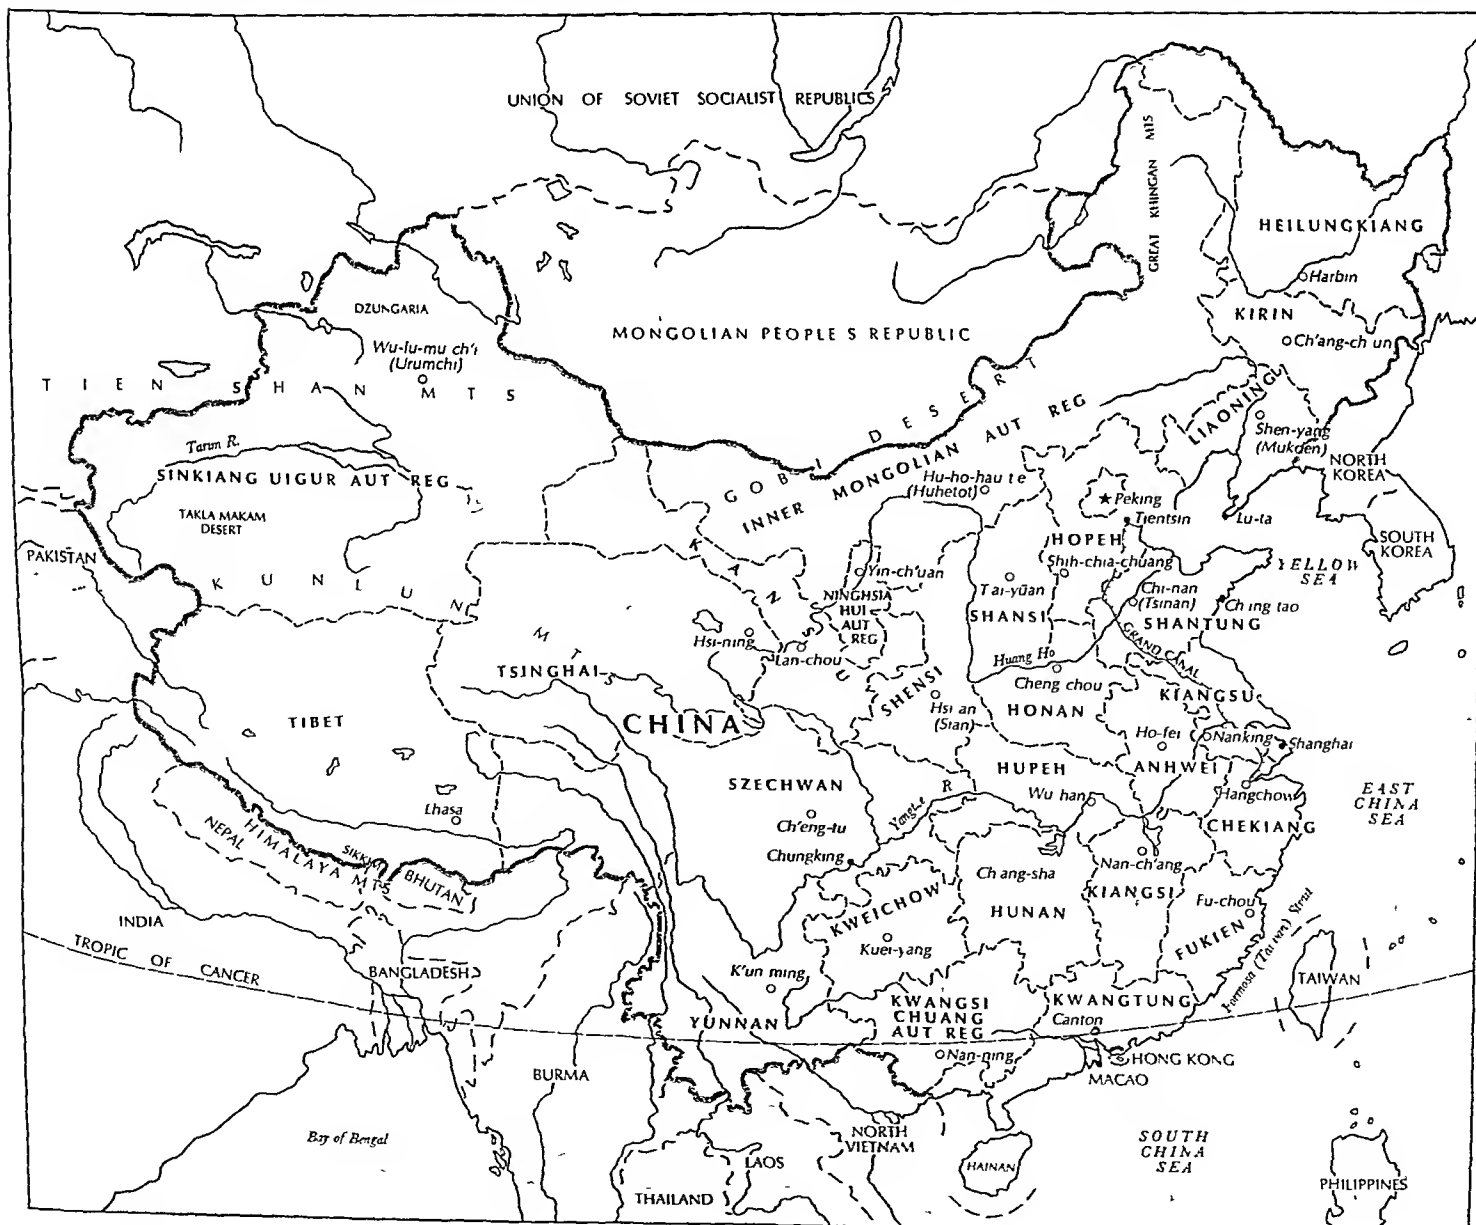

K'AI, who commanded the military power, Yuan established a repressive rule, which led Sun's followers to revolt sporadically. Early in World War I, Japan seized the German leasehold in Shantung prov. and presented China with TWENTY-ONE DEMANDS, designed to make all of China a virtual Japanese protectorate. China was forced to accept a modified version of the Demands, although the treaties were never ratified by the Chinese legislature. China entered World War I on the Allied side in 1917, but at the Versailles peace conference was unable to prevent Japan from being awarded the Shantung territory. Reaction to this provision in the Versailles treaty led to Nationalist flare-ups and the May Fourth Movement of 1919. At the Washington Conference (1921–22), Japan finally agreed to withdraw its troops from Shantung and restore full sovereignty to China. The Nine-Power Treaty, signed at the Conference, guaranteed China's territorial integrity and the Open Door Policy. Meanwhile, Yuan had died in 1916 and China was disintegrating into rival warlord states. Civil war raged between Sun's new revolutionary party, the KUOMINTANG, which established a government in Canton and received the support of the southern provinces, and the national government in Peking, supported by warlords (semi-independent military commanders) in the north. As cultural ferment seethed throughout China, intellectuals sought inspiration in Western ideals, HU SHIH, prominent in the burgeoning literary renaissance, began a movement to simplify the Chinese written language. Labor agitation, especially against foreign-owned companies, became more common, and resentment against Western religious ideas grew. In 1921, the Chinese Communist party (see COMMUNIST PARTY, in China) was founded. Failing to get assistance from the Western countries, Sun made an alliance with the Communists and sought aid from the USSR. In 1926, CHIANG KAI-SHEK led the army of the Kuomintang northward to victory. Chiang reversed Sun's policy of cooperation with the Communists and executed many of their leaders. Thus began the long civil war between the Kuomintang and the Communists. Chiang established (1928) a government in Nanking and obtained foreign recognition. A Communist government was set up in the early 1930s in Kiangsi, but Chiang's continued military campaigns forced (1934) them on the LONG MARCH to the northwest, where they settled in Shensi. Japan, taking advantage of China's dissension, occupied Manchuria in 1931 and established (1932) the puppet state of MANCHUKUO (see SINO-JAPANESE WAR, SECOND). While Japan moved southward from Manchuria, Chiang chose to campaign against the Communists. In the "Sian Incident" (Dec. 1936), Chiang was kidnapped by Nationalist troops from Manchuria and held until he agreed to accept Communist cooperation in the fight against Japan. In July, 1937, the Japanese attacked and invaded China proper. By 1940, N. China, the coastal areas, and the Yangtze valley were all under Japanese occupation, administered by the puppet regime of WANG CHING-WEI. The capital was moved inland to Chungking. After 1938, Chiang resumed his military harassment of the Communists, who were an effective fighting force against the Japanese. With Japan's attack (1941) on U.S. and British bases and the onset of World War II in Asia, China received U.S. and British aid. The country was much weakened at the war's close. The end of the Japanese threat and the abolition of extraterritoriality did not bring peace to the country. The hostility between the Chinese Nationalists and the Communists flared into full-scale war as both raced to occupy the territories evacuated by the Japanese. The United States, alarmed at the prospect of a Communist success in China, arranged through ambassadors Patrick J. Hurley and George C. Marshall for conferences between Chiang and the Communist leader MAO TSE-TUNG, but these proved unsuccessful. When the Russians withdrew from Manchuria, which they had occupied in accordance with agreements reached at the YALTA CONFERENCE, they turned the Japanese military equipment in that area over to the Chinese Communists, giving them a strong foothold in what was then the industrial core of China. Complete Communist control of Manchuria was realized with the capture of Shen-yang (Mukden) in Nov., 1948. Elsewhere in the country, Chiang's Nationalists, supplied by U.S. arms, were generally successful until 1947, when the Communists gained the upper hand. Sweeping inflation, increased police repression, and continual famine weakened public confidence in the Nationalist government, and much of the population came to at least passively support the Communists. Peking fell to the Communists without a fight in Jan., 1949, followed (April–Nov., 1949) by the major cities of Nan-

king, Han-k'ou, Shanghai, Canton, and Chungking. In Aug., 1949, when little Nationalist resistance remained, the U.S. Dept. of State announced that no further aid would be given to Chiang's government. The Communists, from their capital at Peking, proclaimed a central people's government on Oct. 1, 1949. The seat of the Nationalist government was moved to Taiwan in Dec., 1949. The new Communist government was immediately recognized by the USSR, and shortly thereafter by Great Britain, India, and other nations. Recognition was, however, refused by the United States, which maintained close ties with Taiwan. By April, 1950, the last pockets of Nationalist resistance were cleaned out, and all of mainland China was secure for the Communists.

Communism in China. The Communists brought the soaring inflation under control and effected a more equitable distribution of food. A land-reform program was launched, and police control was tightened. During the first five-year plan (1953-57), agriculture was collectivized and industry was nationalized. With USSR assistance, construction of many modern large-scale plants was begun, and railroads were built to link the new industrial complexes of the north and northwest. On the international scene, Chinese Communist troops took possession of Tibet in Oct., 1950. That same month Chinese forces intervened in the KOREAN WAR to meet a drive by United Nations forces toward the Manchurian border. Large-scale Chinese participation in the war persisted until the armistice of July, 1953, after which China emerged as a diplomatic power in Asia. CHOU EN-LAI became internationally known through his role at the Geneva Conference of 1954 and at the Bandung Conference of 1955. The Great Leap Forward, an economic program aimed at

making China a major industrial power overnight, was underway by 1958. It featured the expansion of cooperatives into communes, which disrupted family life but offered a maximum use of the labor force. The program was not successful. The worst weather conditions in a century brought three successive crop failures (1959-61), with the ensuing food shortages dramatizing the dangers of neglecting agricultural development while emphasizing industrial expansion. The industrialization program, pushed too fast, resulted in the overproduction of inferior goods and the deterioration of the industrial plant. A severe blow was the termination of Soviet aid in 1960 and the withdrawal of Soviet technicians and advisers—events that revealed a growing ideological rift between China and the USSR. The rift, which began with the institution of a destalinization policy by the Soviets in 1956, widened considerably after the USSR adopted a more conciliatory approach toward the West in the COLD WAR. There were massive military buildups along the USSR-Chinese border, and border clashes erupted in Manchuria and Sinkiang. Meanwhile, hostility continued between Communist China and the Nationalist government of Chiang Kai-shek, who pledged himself to the reconquest of the mainland. The Communist government insisted upon its right to Taiwan, but the United States made clear its intention to defend that island against direct attack, having even given (1955) a qualified promise to defend the Nationalist-held offshore islands of Quemoy and Matsu as well. China's relations with other Asian nations, at first cordial, were affected by China's encouragement of Communist activity within their borders, the suppression of a revolt in Tibet (1959-60), and an undeclared border war with India

in late 1962 over disputed territory. In the VIETNAM WAR, China provided supplies, armaments, and technical assistance as well as militant verbal support to North Vietnam. In the late 1960s and early 1970s the emphasis of China's foreign policy changed from revolutionary to diplomatic, new contacts were established, and efforts were made to improve relations with many governments. China continued to strengthen its influence with other underdeveloped nations, extending considerable economic aid to countries in South America, Africa, and Asia. Important steps in Chinese progression toward recognition as a world power were the successful explosions of China's first atomic bomb (1964) and of its first hydrogen bomb (1967), and the launching of its first satellite (1970). Internal dissension and power struggles were revealed in such domestic crises as the momentous Cultural Revolution (1966-69), the death (1971) in an airplane crash of defense minister LIN BIAO while he was allegedly fleeing to the Soviet Union after an abortive attempt to assassinate Mao and establish a military dictatorship, and a major propaganda campaign launched in 1973, which mobilized the masses against such widely ranging objects of attack as Lin Biao, the teachings of Confucius, and cultural exchanges with the West. Economically, the emphasis in the 1960s and early 1970s was on agriculture. After the Cultural Revolution, economic programs were initiated featuring the establishment of many small factories in the countryside and stressing local self-sufficiency. Both industrial and agricultural production records were set in 1970, and, despite serious droughts in some areas in 1972, output continued to increase steadily. Long-standing objections to the admission of Communist China to the United Na-

The key to pronunciation appears on page xi

tions were set aside by the United States in 1971, that October, Communist delegates were seated as the representatives of all China and, despite the opposition of the United States, which favored a "two-China" membership, the Nationalist delegation was expelled. A breakthrough in the hostile relations between the United States and Communist China came with the dramatic visit of President Richard M. Nixon to Peking in Feb. 1972. Although U.S. support of Taiwan remained a sensitive issue, the visit resulted in a joint agreement to work toward peace in Asia and to develop closer economic, cultural, and diplomatic ties. Political power in the People's Republic of China resides in the Chinese Communist party, which operates through the government structure, the party has been dominated since the 1930s by Mao Tse-tung. Although Mao resigned his position as chairman of the People's Republic during the failures of the Great Leap Forward, as chairman of the central committee of the Communist party he remains the most powerful political figure in China (Liu Shao-ch'i, who succeeded Mao as chairman of the Republic in 1959, was deposed during the Cultural Revolution.) Chou En-lai, premier and chief administrator of the country, is now second only to Mao in the power hierarchy. A new constitution, adopted in Jan. 1975, abolished the position of head of state and enhanced the power of Mao and Chou. For aspects of Chinese culture not treated in this article, see CHINESE ARCHITECTURE, CHINESE ART, CHINESE LITERATURE, CHINESE MUSIC. China, Great Wall of, fortifications, c. 1,500 mi (2,400 km) long, winding across N China from Kansu prov. to Hopeh prov. on the Yellow Sea. The wall, running mostly along the southern edge of the Mongolian plain, was erected to protect China from northern nomads. It is an amalgamation of many walls built in ancient times, the first unified wall was built in the 3d cent. B.C. by the CH'IN dynasty. Laborers were conscripted from all over China to build it, and many of them died during the project. The wall's present form dates substantially from the Ming dynasty (1368-1644). It averages 25 ft (7.6 m) in height and is 15 to 30 ft (4.6-9.1 m) thick at the base, sloping to 12 ft (3.7 m) at the top. Guard stations and watchtowers are placed at regular intervals. The eastern part of the wall is earth and stone faced with brick, but in the west it is merely an earth mound. Successive invasions of China from the north demonstrated that the Great Wall had little military utility. Since 1949 a section N of Peking has been reconstructed and is open to visitors.

china clay, one of the purest of the clays, composed chiefly of the mineral KAOLINITE. Usage of the terms *china clay* and *kaolin* is not well defined, sometimes they are used synonymously for a group of similar clays, and sometimes kaolin refers to those obtained

in the United States and china clay to those that are imported. Some authorities term as china clays only the more plastic of the kaolins. China clays are much used in the ceramic industry, especially in fine porcelains, because they can be easily molded, have a fine texture, and are white when fired. These clays are also used as a filler in making paper. In the United States, deposits are found in Georgia, North Carolina, and Pennsylvania and in smaller quantities in some other states; in Europe they are found especially in England (in Cornwall) and in France.

China grass, see NETTLE

China Incident, see SINO-JAPANESE WAR, SECOND

china marks, potter's trademark or signature, incised in the plastic clay before firing or printed before glazing on the bottom of the piece to identify it as his product. The practice was adopted by potters and silversmiths for establishing the genuineness of their wares. Books on pottery or porcelain usually include a list of the china marks of the important factories.

Chi-nan (jê-nan) or **Tsinan** (tsin'an'), city (1970 est. pop. 1,500,000), capital of Shantung prov., E China. It lies 3 mi (4.8 km) S of the Huang Ho (Yellow River) and is a railroad junction on the network linking Shanghai and Nanking with Tientsin; it has connections to Ch'ing-tao and Yen-t'ai. Chi-nan is a light and heavy industrial center with textile mills, food-processing establishments, machine shops, paper mills, and plants making trucks, agricultural machinery, chemicals, and fertilizer. An ancient walled city, Chi-nan was a provincial center as early as the 12th cent. It fell to the Communists in Sept., 1948, with the loss of some 75,000 Nationalist troops. Chi-nan is the seat of Chi-nan Technical Univ., a medical college, and two technical institutes.

chinaware, hard, white, translucent pottery with soft GLAZE, known as PORCELAIN. It originated in China but is now produced in various countries. Its composition is of kaolin and petuntse.

Chincha, see ICA

chinch bug, small North American BUG, *Blissus leucopertus*, of the seed bug family. It feeds on small grains, corn, and other grasses, sucking the plant juices and doing much damage to crops, particularly in the Midwest. The adults, about 1/8 in. (3.5 mm) long, have black bodies with black and white wings, red legs, and red spots at the bases of the antennae. Both long- and short-winged forms occur. There are two generations a year. The adults overwinter in sheltered places, emerging in spring to feed on early maturing grains, such as wheat and oats. They lay their eggs on the bases of the grasses or in the ground, and the nymphs, or larvae (see INSECT), emerge in about a week. Red when they emerge, the nymphs mature in five stages, turning gray or brown. They feed on the same grasses as their parents. When they reach the adult stage, in about six weeks, they migrate on foot to later-maturing grains, such as corn, which are still tender, there they lay the eggs that give rise to the second generation of the season. The BEDBUG, a member of a different bug family, is sometimes called chinch in the South. Chinch bugs are classified in the phylum ARTHROPODA, class Insecta, order Hemiptera, family Lygaeidae.

chinchilla (chinchil'a), small burrowing rodent of South America. It lives in colonies at high altitudes (up to 15,000 ft/4,270 m) in the Andes of Bolivia, Chile, and Peru. One of the costliest of all furs, its soft gray pelt has been valued since the days of the Inca. The wild chinchilla was nearly exterminated before protective laws were passed. At one time over 200,000 pelts were exported from Chile. Wild chinchilla coats have cost as much as \$100,000. Chinchillas are now raised on farms in South America and the United States, and this has resulted in lower prices for the skins, which are still considered among the most valuable. Chinchillas are classified in the phylum Chordata, subphylum Vertebrata, class Mammalia, order Rodentia, family Chinchillidae.

Ch'in chiu-shao (ch'in chyô-shou), c. 1202-1261, Chinese mathematician. He pioneered in the study of indeterminate analysis in his *Mathematical Treatise in Nine Sections* of 1247. The text existed only in manuscript form for several centuries and still has not been fully translated or investigated. Like many traditional Chinese mathematical works, it reflects a Confucian administrator's concern with calendrical, mensural, and fiscal problems.

Chinchon, Luis Jerónimo Fernández de Cabrera Bobadilla Cerda y Mendoza, conde de (lôôës' hâro'nêmô fârnân'dâs dâ kâbrâ'ra bôbâthé'ya sârdâ ç mëndô'sâ kôn'dâ dâ chênchôn'), d. 1647, viceroy of Peru (1629-39). He sent Cristóbal de Acu-

ña on the Teixeira expedition down the Amazon. In 1638, Chinchon's wife, suffering from persistent fever, was treated with a native remedy made from quinaquina bark. As a result, the malaria-curing qualities of quinine became known in Europe. Linnaeus called the genus of quinine-producing trees *Cinchona* in her honor.

chinchona, see CINCHONA

Chindaswinth (chîn'daswînth), d. 653, Visigothic king of Spain (642-53). His reign began violently as factions of the nobility sought to dominate royal policy. Chindaswinth prevailed and together with his son RECCESWINTH, whom he admitted to joint rule in 649, inaugurated a program designed to reduce the differences between his Visigothic and Spanish-Roman subjects. He is therefore sometimes designated by historians a "Romanist" as opposed to a "Gothic nationalist." Unification of the diverse population was furthered by legislation. Chindaswinth seems to have been responsible for revoking the BREVIAIRY OF ALARIC, the compilation of Roman law principles for only Roman subjects, promulgated by Alaric II in 506. Instead he began the compilation of a code fusing Roman and Germanic law and binding upon all subjects. Eventually promulgated by Recceswinth c. 654, it was known as the *Liber iudiciorum* (later as the *Liber* or *Forum iudicum*).

Chinde (chîn'dâ), city (1960 pop. 25,617), E central Mozambique, on the Zambezi River delta. Founded c. 1890, it served as the chief port for Malawi and Zambia when they were British colonies. It is now an export center for sugarcane.

Chindwin (chîn'dwîn), river, c. 550 mi (890 km) long, rising in the hills of N Burma and flowing generally S into the Irrawaddy (of which it is the chief tributary) at Myingyan. It is an important commercial waterway.

Chinese, subfamily of the Sino-Tibetan family of languages (see SINO-TIBETAN LANGUAGES), which is also sometimes grouped with the Tai, or Thai, languages in a Sinitic subfamily of the Sino-Tibetan language stock. Chinese comprises a number of variants, those that are mutually unintelligible are considered separate languages by some linguists but are classed among the many dialects of Chinese by others. The most widespread form of Chinese is Mandarin, which may be regarded as modern standard Chinese. It has several dialects and is spoken by about 655 million people in central and N China, claiming more native speakers than any other language (English is second, with 265 million speakers). Almost one person in six speaks Mandarin Chinese as his mother tongue. Originally the language of the court at Peking during the imperial period, Mandarin was then called *kuan hua* [official speech]. After the Nationalists seized control in 1911, the name was changed to *kuo yu* [national tongue]. The Communists have renamed the language *p'u t'ung hua* [generally understood speech]. It is thought that at least 70% of the people of mainland China now speak *p'u t'ung hua*. Mandarin is the official language of both Communist China and Nationalist China. It is also employed as an official language, along with four others, by the United Nations. Other leading forms of Chinese include Wu, the tongue of more than 55 million people in Kiangsu and Chekiang provs., Fukienese, with some 50 million speakers distributed in Fukien prov., Taiwan, and SE Asia, Cantonese, spoken by 55 million persons residing in Kwangsi and Kwangtung provs., Hong Kong, SE Asia, and the United States, Hakka, the language of 20 million in Kwangtung and Kiangsi provs., and Amoy-Swatow, the mother tongue of 15 million in Fukien and Kwangtung provs., Taiwan, and the South Pacific. The various forms of Chinese differ least in grammar, more in vocabulary, and most in pronunciation. Like the other Sino-Tibetan languages, Chinese is tonal, i.e., different tones distinguish words otherwise pronounced alike. The number of tones varies in different forms of Chinese, but Mandarin has four tones: a high tone, a rising tone, a tone that combines a falling and a rising inflection, and a falling tone. When Chinese is transcribed into the Roman alphabet, a superscript number is often attached to each word to designate its tone. For example, *ta* pronounced with the first, or high, tone (written as *ta¹*) means "assist" or "raise"; *ta* with the second, or rising, tone (*ta²*) means "answer"; *ta* with the third, or falling and rising, tone (*ta³*) signifies "strike" or "do"; and *ta* with the fourth, or falling, tone (*ta⁴*) means "great." Again like the other Sino-Tibetan languages, Chinese is strongly monosyllabic. Chinese often uses combinations of monosyllables that result in polysyllabic compounds having different meanings from

their individual elements. For example, the word for "explanation," *shue' ming'*, combines *shue'* ("speak") with *ming'* ("bright"). These compounds can embrace three and even four monosyllables: *shuo' ch'u' lai'*, the word for "describe," is made up of *shuo'* ("speak"), *ch'u'* ("out"), and *lai'* ("come"). This practice has greatly increased the Chinese vocabulary and also makes it much easier to grasp the meaning of spoken Chinese words. Grammatically, Chinese lacks inflection to indicate person, number, gender, case, tense, voice, and so forth. Suffixes are commonly used to denote some of these features. For example, the suffix *-le* is a sign of the perfect tense of the verb. Subordination and possession can be marked by the suffix *-te*. The position and use of a word in a sentence may determine its part of speech and its meaning. The Chinese writing system developed more than 4,000 years ago; the oldest extant examples of written Chinese are from the 14th or 15th cent. B.C., when the Shang dynasty flourished. Chinese writing consists of an individual character or ideogram for every syllable; each character representing a word or idea rather than a sound, thus, problems caused by homonyms in spoken Chinese are not a difficulty in written Chinese. The written language is a unifying factor culturally, for although the spoken languages and dialects may not be mutually comprehensible in many instances, the written form is universal. The characters are written in columns that are read vertically and from right to left, although the Communists on the mainland permit horizontal lines that read from left to right. This difficult system of writing has proved to be an obstacle to mass literacy, for one needs to know at least several thousand characters to read a newspaper and even more to read literary works. In an attempt to deal with this problem, Communist China in 1956 introduced a plan to simplify a large number of commonly used characters. This was intended as a transitional phase until a workable alphabet could be devised and adopted. Also in 1956 an alphabet based on Roman letters was developed in mainland China. However, its purpose was the phonetic transcription of Chinese characters rather than the replacement of them. Since alphabetic writing requires a standardized spoken language, the local differences in the pronunciation of Chinese present a serious obstacle to the development of a satisfactory alphabet. The People's Republic of China is making a great effort to standardize the pronunciation of Mandarin, which is essentially a spoken language, and to have it adopted throughout China. The Peking dialect of Mandarin was chosen because it is already the most widely used. The literary language of Chinese differs greatly from the spoken form. Known as *wenyan*, the literary language is the same for all variants of Chinese as far as vocabulary, grammar, and the system of writing are concerned, but pronunciation differs locally according to the dialect. Under Nationalist leadership a movement began in 1917 to employ the popular, everyday speech (called *paihua*) in literature instead of *wenyan*. Since 1949, under the Communists, *paihua* has been used for all writing, including governmental, commercial, and journalistic texts as well as literary works. See Bernhard Karlgren, *The Chinese Language* (tr. 1949), J. F. De Francis, *Beginning Chinese* (rev. ed. 1963) and *Advanced Chinese* (1966), Iakov Brandt, *Introduction to Literary Chinese* (1964), F. X. Keelan, *Chinese Characters Explained* (1967), H. C. Fenn et al., *Speak Mandarin* (3 vol., 1967), Paul Kratochvil, *The Chinese Language Today* (1968), C. F. Hockett and Chaoying Fang, *Spoken Chinese* (new ed. 1973).

Chinese architecture. As a result of wars and invasions, there are few existing buildings in China predating the Ming dynasty (1368–1644). Insubstantial construction, largely of wood and rice-paper screens, also accounts for the tremendous loss. One early structure that remains is the Great Wall (see CHINA, GREAT WALL OF). The background of Chinese architecture has been clarified to some extent as a result of the increase of archaeological activity since the Communists came to power in 1949. Discoveries in 1952 near Hsi-an have brought to light a complete Neolithic village near Pan-p'o. Two kinds of mud-walled dwellings were found—of round and rectangular shapes. As in later construction, buildings were usually oriented to the south, probably as a protection against the north wind. As early as the Neolithic period, a basic principle of Chinese architecture was already established, wherein columns spaced at intervals, rather than walls, provided the support for the roof. Walls came to serve merely as enclosing screens. Although the typical Chinese roof was probably developed in the Shang (c. 1523–

1027 B.C.) or the Chou (1027–c. 256 B.C.) period, its features are unknown to us until the Han dynasty (202 B.C.–A.D. 220). Then it appeared in the form that we recognize today as a hallmark of Chinese architecture—a graceful, overhanging roof, sometimes in several tiers, with upturned eaves. The roof rests on a series of four-part brackets, which in turn are supported by other clusters of brackets set on columns. Decorative possibilities were soon realized in the colorful glazed tiling of roofs and the carving and painting of brackets, which became more and more elaborate. During the Han dynasty the characteristic ground plan was developed; it remained relatively constant through the centuries, applied to palaces and temple buildings in both China and Japan. Surrounded by an exterior wall, the building complex was arranged along a central axis and was approached by an entrance gate and then a spirit gate. Behind them in sequence came a public hall and finally the private quarters. Each residential unit was built around a central court with a garden. Based on imperial zoos and parks, the private residential garden soon became a distinctive feature of the walled complex and an art form in itself. The garden was laid out in a definite scheme, with a rest area and pavilions, ponds, and semi-planned vegetation. Evidence of early architectural development is provided by representations in Han bronze vessels, tomb models, carvings, and tiles. In the first centuries after Christ, the coming of Buddhism did not strongly affect the Chinese architectural style. Although there was considerable building activity, temples continued to be constructed in the native tradition. The only distinctly Buddhist type of building is the PAGODA, which derived from the Indian STUPA. Several masonry pagodas are extant that date from the 6th cent. In the T'ang period (618–906), pagodas were usually simple, square structures, they later became more elaborate in shape and adornment. In the 11th cent. a distinctive type of pagoda was created in the Liao territory. Built in three different stages, with a base, a shaft, and a crown, the structure was surmounted by a spire. Its plan was often octagonal, possibly as a result of the influence of Tantric Buddhism in which the cosmological scheme was arranged into eight compass points rather than four. One of the finest Liao structures is the White Pagoda at Ch'eng-te. Through the T'ang and Sung dynasties, Chinese architecture retained the basic characteristics already developed in the Han, although there was a greater technical mastery and a tendency toward rich adornment and complexity of the system of bracketing. Though little survives of the wooden structures, our knowledge of their appearance comes from detailed representations in painted scrolls, especially by the Li school of artists in the T'ang period and their followers (see CHINESE ART). Extant monuments in Japan, profoundly influenced by Chinese architecture, also reflect the progress of Chinese building techniques. Examples are the 7th-century monastery of Horyu-ji and the 8th-century monastery of Toshodai-ji. In the Ming period the complex of courtyards, parks, and palaces became labyrinthian in scope. Little remains of the imperial palaces at Nan-king, the capital of the Ming dynasty until 1421. Peking then became the capital, and its group of imperial buildings, known as the Forbidden City, remains a remarkable achievement. Around its main courtyard and many smaller courts are grouped splendid halls, galleries, terraces, and gateways. White marble, wall facings of glazed terra-cotta, roofs of glazed and colored tiles, and woodwork finished with paint, lacquer, and gilding unite to create an effect of exceptional richness. Notable among these buildings is the group constituting the Temple of Heaven, including the Hall of the Annual Prayers (added in the late 19th cent.), a circular structure on a triple platform surmounted by a roof in three tiers covered with tiles of an intense blue glaze. Since the late 19th cent. the Chinese have adopted European architectural styles. Under Communist rule they have tended to imitate modern Soviet buildings. The trend is toward the impressively massive and the clearly functional in public buildings (e.g., the Great Hall of the People, 1959, Peking). In such buildings only in the detailing around window frames and doorways can traditional features still be seen. See Johannes Prip-Møller, *Chinese Buddhist Monasteries* (1937), D. G. Mirams, *A Brief History of Chinese Architecture* (1940), A. C. H. Boyd, *Chinese Architecture and Town Planning* (1962), N. I. Wu, *Chinese and Indian Architecture* (1963), Laurence Sickman and Alexander Soper, *The Art and Architecture of China* (3d ed. 1968), Michele Pirazzoli-Serstevens, *Living Architecture* (Chinese) (1971).

Chinese art, the oldest in the world, has its origins in remote antiquity (For the history of Chinese civilization, see CHINA.) Excavations in Kansu and Honan have revealed a Neolithic culture with painted pottery that exhibits dynamic swirling or lozenge-shaped patterns. Our knowledge of ancient Chinese art is largely limited to works in pottery, bronze, bone, and jade. Excavations in the city of AN-YANG have yielded numerous ritual bronze vessels that indicate a highly advanced culture in the SHANG dynasty in the 2d millennium. The art of bronze casting of this period is of such high quality that it suggests a long period of prior experimentation. It constitutes the clearest extant record of stylistic development in the Shang, CHOU, and Early HAN dynasties. The adornment of the bronzes varies from the most meager incision to the most ornate plastic embellishment and from the most severely abstract to some naturalistic representations. The Later Han dynasty marks the end of the development of this art, although highly decorated bronze continued to be produced, often with masterly treatment of metal and stone inlays. The advent of Buddhism (1st cent. A.D.) brought a need for art of a different character. Works of sculpture, painting, and architecture of a more distinctly religious nature were created. The human figure, which had appeared rarely in ancient Chinese art, now became most important. Sculpture as an isolated art prior to Buddhism survives chiefly in tomb carvings and monumental tomb guardians in stone. With Buddhism, the representation of the Buddha and of the bodhisattvas became the great theme of sculpture. The forms of these figures came to China from India by way of central Asia, but in the 6th cent. A.D. the Chinese artists succeeded in developing a national style in sculpture. This style reached its greatest distinction early in the T'ANG dynasty. Figures, beautiful in proportion and graceful in gesture, show great precision and clarity in the rendering of form, with a predominance of linear rhythms. Gradually the restraint of the 7th cent. gave way to more dramatic work. For about 600 years Buddhist sculpture continued to flourish, then in the MING dynasty sculpture ceased to develop in style. After this time miniature sculpture in jade, ivory, and glass, of exquisite craftsmanship, but lacking vitality of inspiration, was produced in China, as in Japan. The origins of Chinese painting are lost. Although the arts thrived during the Han dynasty, little painting remains except for tomb decorations in Manchuria and N. Korea, some skillfully painted LACQUER ware, and tiles. It is only from the 5th cent. A.D. that we can trace a clear historical development. Near TUN-HUANG, more than a hundred caves (called the Caves of a Thousand Buddhas) contain Buddhist frescoes and scrolls dating mainly from the late 5th to the 8th cent. They show, first, simple hieratic forms of Buddha and of the bodhisattvas and, later, crowded scenes of paradise. The elegant decorative motifs and certain figural elements reveal a Western influence. While Chinese painting never consistently followed the rigid laws of Western PERSPECTIVE, a highly organized system of representing objects in space was evolved. Rendering of natural effects of light and shade is almost wholly absent in this art, which relies rather on its incomparable mastery of line and silhouette. One of the earliest artists about whom anything is known is the 4th-century master KU KAI CHIH, who is said to have excelled in portraiture. The art of figure painting reached a peak of excellence in the T'ang dynasty (618–906). Historical subjects and scenes of courtly life were popular, and the human figure was portrayed with a robustness and monumentality unequalled in Chinese painting. Animal subjects were also frequently represented. The 8th-century artist Han Kan is famous for his painting of horses. The T'ang dynasty also saw the rise of the great art of Chinese landscape painting. Lofty and craggy peaks were depicted, with streams, rocks, and trees carefully detailed in brilliant greens and blues. These paintings were usually executed as brush drawing and color washes. Little if anything remains of the work of such famous masters as YEN LI-PEN, Tung Yuan, Wu Tao-tzu, and Wang Wei. In the SUNG dynasty (960–1279), landscape painting reached its greatest expression. A vast yet orderly scheme of nature was conceived, reflecting contemporary Taoist and Confucian views. Sharply diminished in scale, the human figure did not intrude upon the magnitude of nature. The technique of ink monochrome was developed with great skill, with the utmost economy of pictorial means, suggestion of mood, misty atmosphere, depth, and distance were created. During the Sung dynasty the monumental detail began to emerge. A single bamboo shoot,

flower, or bird provided the subject for a painting. Among those who excelled in flower painting was the Emperor Hui-tsung, who founded the imperial academy. Hundreds of painters contributed to its glory, including LI T'ANG, HSIA KUEI, and MA YUAN. Members of the Ch'an (Zen) sect of Buddhism executed paintings often sparked by an intuitive vision. With rapid brushstrokes and ink splashes, they created works of vigor and spontaneity. With the ascendancy of the YUAN dynasty (1260-1368), painting reached a new level of achievement, and under Mongol rule many aspects cultivated in Sung art were brought to culmination. The human figure assumed greater importance, and landscape painting acquired a new vitality. Still-life compositions came into greater prominence, especially bamboo painting. During this time, much painting was produced by the literati, gentlemen scholars who painted for their own enjoyment. Under some of the emperors of the MING dynasty (1368-1644), a revival of learning and of older artistic traditions was encouraged and connoisseurship was developed. We are indebted to the Ming art collectors for the preservation of many paintings that have survived into our times. Bird and flower pictures exhibited the superb decorative qualities so familiar to the West. TUN CH'ANG, SHEN CHOU, and Tai Chin are but a few of the many great masters of this period. Under the CHING dynasty (1644-1912) a high level of technical competence was maintained, particularly in the applied arts, until the 19th cent., when the output became much more limited. The famous four Wangs imitated the great Yuan masters. Among painters of small-scale landscapes, CHU TA was outstanding as an artist of remarkable personal vision. However, there was little innovation in painting. Throughout the history of Chinese painting one characteristic has prevailed—the consummate handling of the brushstroke. Paintings were executed in a dry or wet-brush technique, with an incredible versatility, ranging from swirling patterns to staccato dots. The mastery of brushwork was directly related to calligraphy, traditionally regarded by the Chinese as an art form. Reliance on calligraphic techniques, however, produced a sterile art of overworked formulas in painting of the 19th cent. Elegant inscriptions and poems were often included within the painting, which took the form of a hand scroll, hanging scroll, or an album leaf, made of silk or paper. The fine art of Chinese pottery making followed to some degree the development of painting, reaching its highest perfection in the Sung dynasty and its extreme technical elaboration and decorative style in the Ming. In ENAMEL ware, lacquer ware, JADE, IVORY, textiles, and many other of the so-called minor arts, the world owes an incalculable debt to China. The influence of Chinese art upon other cultures has been profound, it has extended to the Muslim countries and, since the 14th cent., to Western Europe. Western influence on Chinese art has been evident since the late 17th cent., but not of major significance until comparatively recent times. The 19th cent. produced no major Chinese masters but many competent traditionalists. Early 20th-century artists copied Western styles without real comprehension, and attempts to combine them with Chinese subject matter were largely unsuccessful. After the Communists came to power in 1949, the graphic arts useful to political propaganda were encouraged, and Western influence in the arts was strictly discouraged. Within the limits of government restrictions two painters, LI K'o-jan and Ch'eng Shih-fa, have produced works of considerable individuality. Chinese artists working outside China, including Tseng Yu-ho in Hawaii and Chao Wu-chi in France, have produced abstract works based on calligraphy that reveal some Western influence. See articles on individual artists, e.g., MA YUAN. See Laurence Sickman and Alexander Soper, *The Art and Architecture of China* (1956), Osvald Siren, *Chinese Painting* (7 vol., 1956-58), P. C. Swann, *Chinese Monumental Art* (tr. 1963), William Willett, *Foundations of Chinese Art* (1965), Michael Sullivan, *The Arts of China* (rev. ed. 1973).

Chinese Communist party: see COMMUNIST PARTY, in China

Chinese examination system, civil service recruitment method and educational system employed from the Han dynasty (206 B.C.-A.D. 220) until it was abolished by the Ch'ing dowager empress Tz'u Hsi in 1905 under pressure from leading Chinese intellectuals. The concept of a state ruled by men of ability and virtue was an outgrowth of Confucian philosophy. The examination system was an attempt to recruit men on the basis of merit rather than on the basis of family or political connection. Because

success in the examination system was the basis of social status and because education was the key to success in the system, education was highly regarded in traditional China. If a person passed the provincial examination, his entire family was raised in status to that of scholar gentry, thereby receiving prestige and privilege. The texts studied for the examination were the Confucian classics. In the T'ang dynasty (618-906) the examination system was reorganized and more efficiently administered. Because some scholars criticized the emphasis on memorization without practical application and the narrow scope of the examinations, the system underwent further change in the Sung dynasty (960-1279). WANG AN-SHIH reformed the examination, stressing the understanding of underlying ideas and the ability to apply classical insights to contemporary problems. In the Ming dynasty (1368-1644) the commentaries of the Sung Neo-Confucian philosopher CHU HSI were adopted as the orthodox interpretation of the classics. Although only a small percentage of students could achieve office, students spent 20 to 30 years memorizing the orthodox commentaries in preparation for a series of up to eight examinations for the highest degree. By the 19th cent. the examination system was regarded as outdated and inadequate training for officials who faced the task of modernizing China. After it was abolished, mass education along with a Western type curriculum was promoted. See W. T. DeBary, ed., *Sources of Chinese Tradition* (1960), Wolfgang Franke, *The Reform and Abolition of the Traditional Chinese Examination System* (1960), J. M. S. Meskill, *The Chinese Civil Service* (1963), E. A. Kracke, Jr., *Civil Service in Early Sung China, 960-1067* (1968), I. C. Y. Hsu, *The Rise of Modern China* (1970).

Chinese exclusion, policy of prohibiting immigration of Chinese laborers to the United States, initiated in 1882. From the time of the U.S. acquisition of California (1848) there had been a large influx of Chinese laborers to the Pacific coast. They were encouraged to emigrate because of the need for cheap labor, and were employed largely in the building of transcontinental railroads. By 1867 there were some 50,000 Chinese in California, most of them manual laborers. Their numbers continued to increase after the conclusion in 1868 of the Burlingame Treaty with China, which guaranteed the right of Chinese immigration, it did not, however, grant the right of naturalization. In the following decades a great deal of anti-Chinese sentiment arose in California, partly because the growing American labor force had to compete with cheap Chinese labor and partly because many Americans were opposed to further immigration by what they considered to be an inferior people. In 1877 anti-Chinese riots occurred in San Francisco. Efforts were made to ban Chinese immigration, and in 1879 Congress passed a bill to that effect. It was vetoed, however, by President Hayes on the grounds that it violated the Burlingame Treaty. In 1880 a new treaty with China was concluded, it allowed the United States to regulate, limit, or suspend the entry of Chinese labor, but not to prohibit it. In 1882, however, the Chinese Exclusion Act banned immigration of Chinese laborers for 10 years. Some of the later acts (1888 and 1892) were flat violations of the 1880 treaty. A new treaty was signed in 1894 by which China agreed to exclusion of Chinese laborers for 10 years. When that period expired, Congress continued the exclusion unilaterally until the immigration law of 1924 excluded, in effect, all Asians. In 1943 the acts were repealed when a law was signed setting an annual immigration quota of 105 and extending citizenship privileges to Chinese. See R. D. McKenzie, *Oriental Exclusion* (1928), S. C. Miller, *The Unwelcome Immigrant* (1969), B. L. Sung, *The Story of the Chinese in America* (1971).

Chinese literature. It is not known when the current system of writing Chinese first developed. The oldest written records date from about 1400 B.C. in the period of the SHANG dynasty, but the elaborate system of notation used even then argues in favor of an earlier origin. From short inscriptions on bone and tortoiseshell (used for divination), characters standing for individual words have been deciphered and are traceable through many notations to modern forms. Most of the oldest surviving works of literature were not written until the later centuries of the CHOU dynasty (c. 1027-256 B.C.). At this time was written most of what scholars of the Han dynasty (202 B.C.-A.D. 220) made into the canonical literature of CONFUCIANISM (which also included their own commentaries), although the current versions of these works, traditionally classified as the *Wu Ching* [five classics], contain later interpolations.

The *Wu Ching*, traditionally attributed to CONFUCIUS either as author or compiler, consist of diverse books. The *Ch'un Ch'iu* [spring and autumn annals] is an unadorned chronology of Lu, Confucius's native state. The *I Ching* [classic of changes] explains, often in a mystifying way, a system of divination, based upon the study of 64 hexagrams of whole and broken lines. The *Li Chi* [book of rites] describes ceremonials and an ideal Confucian state. The *Shu Ching* [classic of documents or book of history] contains historical records, many of them known to be later forgeries. While some of these works contain verse, the main collection of poetry in the *Wu Ching* is the *Shih Ching* [classic of songs or book of odes], made up of 305 poems. Written in simple rhyming stanzas, they tell of the peasant's life, of love, and of the wars of the feudal states. During the SUNG dynasty (960-1279), selections from the *Li Chi* and two other works were formed into the *Shih Shu* [four books], they were thought to embody the quintessence of Confucian teachings. They are the *Ta Hsueh* [great learning] and the *Chung Yung* [doctrine of the mean] from the *Li Chi*, the *Lun Yu* [analects of Confucius], and the *Book of Mencius* (see MENCIUS). Other important early books include the *Tao Te Ching* [classic of the way and its power], traditionally ascribed to LAO TZE and the work of CHUANG-TZE. These two books, which form the chief literature of TAOISM, probably circulated in their present form from the 2d cent. B.C. The early Chinese books originally appeared in the cumbersome form of strips of bamboo. Silk was substituted as a writing material in the 2d cent. B.C., and the invention of paper in the 2d cent. A.D. was responsible for a great increase in books. The method of printing whole pages from wooden blocks was discovered under the T'ang dynasty (618-906) and was perfected and in widespread use by the 10th cent., it permitted an enormous increase in the number of copies available of any book. In time the literary and vernacular languages diverged sharply. Literary style was exceedingly concise and unmatched for its vigor, richness, and symmetry. Historical and literary allusions abounded, and finally special dictionaries were required for their elucidation. In poetry the freedom of the Chou period was followed by minutely prescribed forms. The lines, which rhymed, had to be matched syllable by syllable in both part of speech and intonation. By the T'ang period the prosodic rules no longer suited the spoken structure of the everyday language, they continued to be observed in spite of changes in pronunciation. It is generally agreed that China's greatest poetry was written in the T'ang dynasty. WANG WEI, LI PO, TU FU, PO CHU-I are masters of this period. In the succeeding Sung dynasty SU TUNG-PO was perhaps the foremost poet. Translations of T'ang and Sung poetry strongly influenced the modern imagist school in English (see IMAGISTS). Chinese lyrics are generally very short, unemphatic and quiet in manner, and limited to suggesting a mood or a scene by a few touches rather than painting a detailed picture. Intellectual themes and narratives are comparatively rare. Many varieties of learned prose have also been written in China. Notable for accuracy and objectivity are the series of dynastic histories produced since Han times, the famous *Shih Chi* [records of the historian] (c. 100 B.C.) by SSU MA CH'EN, served as their model. Chinese lexicography developed in response to the multiplication of characters. The last of a great series of dictionaries (still in standard use) was produced in the reign of K'ang Hsi (1662-1722). So-called encyclopedias, actually extracts from existing works, have been occasionally compiled, one such work of the MING dynasty (1368-1644) ran to over 11,000 short volumes and appeared in three manuscript copies. While the literati were cultivating polite literature during the T'ang and Sung periods, prose and verse of a popular nature began to appear. It was written in the spoken vernacular rather than in the classical literary language, and scholars regarded it with scorn. Springing from story cycles made familiar by professional storytellers, this vernacular literature first emerged as a full-fledged art in the drama of the Yuan dynasty (1260-1368) (see ORIENTAL DRAMA). It later developed into the great novels of the Ming period that followed. Both the drama and the novel proved immensely popular. Thus the 13th cent. witnessed the emergence of the resources of the living language of the people. The vernacular novels, although they had their roots in the Yuan epoch, took shape gradually during the Ming era until they were finally given their finished form, perhaps anonymously by some talented traditional scholar. An early and outstanding example of the novel is the *San Kuo Chih Yen I* (tr. *San Kuo*, or

Romance of the Three Kingdoms, 1925) set in the THREE KINGDOMS period (220-265), which recounts heroic deeds and chivalrous exploits. Another historical romance is the *Shui Hu Chuan* (tr. *All Men Are Brothers*, 1937), a picaresque tale of men forced by the venality of officials to become bandits. The *Hsi Yu Chi* (tr. *Monkey*, 1943) is an allegorical tale, full of the supernatural, concerning the adventures of a Buddhist pilgrim on a journey to India. The *Chin Ping Mei* (tr. *The Golden Lotus*, 1939) by contrast portrays domestic life and amorous intrigue, and is marked by realistic incident and the interplay of human relationships. The greatest Chinese novel is, however, considered to be *Hung Lou Meng* (tr. *Dream of the Red Chamber*, 1958), an 18th-century work chiefly by the hand of TS'AO MSUEH-CH'IN. With an unrivaled gift for subtle characterization and plot construction, the author recounts the declining fortunes of an aristocratic family. After the republican revolution authors turned away from the classical modes of composition, and many writers (notably HUSHIH and LUSIN) advocated writing in the pihua vernacular. The change in Chinese education from preoccupation with the classic literature to scientific and technological subjects reduced mastery of the traditional literary skills as did the abolition of the civil service examinations for official posts, which had been based on a knowledge of the Four Books of the Confucian canon. The use of characters instead of an alphabet persisted, however, this made older writings accessible and permitted the Chinese, who speak widely different dialects, amounting to different languages, to communicate with one another. The use of pihua has proved especially effective in prose. Translations of Western books frequently appeared in China, and the novelists of the republican period were greatly influenced by European writers. Among the most distinguished writers of modern China are Lusin (1881-1936), Kuo Mo-jo, Mao Tun, Lao She (1899-1966), Shen Ts'ung-wen, and Pa Chin. Under the Communist government, Chinese literature has suffered from the government-sponsored concept of SOCIALIST REALISM. A pioneering translator of the classic Confucian and Taoist texts is James Legge, whose works, still standard, appear in many volumes. More recent translations of individual classics include Arthur Waley, tr., *The Book of Songs* (1937), and *The Analects of Confucius* (1938), Richard Wilhelm and C. F. Baynes, tr., *The I Ching or Book of Changes* (1950), Bernhard Karlgren, tr., *The Book of Odes* (1950), W. I. Ch'ian, tr., *The Way of Lao Tzu* (1963), W. A. C. H. Dobson, tr., *Mencius* (1963), and Burton Watson, tr., *The Complete Works of Chuang Tzu* (1968). General anthologies of Chinese literature in translation include Lin Yutang, ed., *The Wisdom of China and India* (1942) and Cyril Birch, ed., *Anthology of Chinese Literature* (2 vol., 1961-72). Collections of short stories, new and old, include Edgar Snow, ed., *Living China. Modern Chinese Stories* (1936), and Christopher Levenson, Wolfgang Bauer, and Herbert Franks, tr., *The Golden Casket. Chinese Novellas of Two Millennia* (1964). Anthologies of Chinese poetry include Witter Bynner and K. H. Kiang, tr., *The Jade Mountain. A Chinese Anthology, Being Three Hundred Poems of the T'ang Dynasty* (1929), David Hawkes, tr., *Ch'u Tzu'u. The Songs of the South, an Ancient Chinese Anthology* (1959), A. R. Davis, ed., *The Penguin Book of Chinese Verse* (1962), S. S. Liu, tr., *One Hundred and One Chinese Poems* (1967) and Burton Watson, ed., *Chinese Rhyme-Prose* (1971). Bibliographical guides to translations and criticisms of modern Chinese literature include Martha Davidson, comp., *A List of Published Translations from Chinese into English, French, and German* (2 vol., 1952-57), and T. L. Yuan, comp., *China in Western Literature. A Continuation of Cordier's Bibliotheca Sinica* (1958). See also J. R. Hightower, *Topics in Chinese Literature. Outlines and Bibliographies* (1950), Burton Watson, *Early Chinese Literature* (1962), Lai Ming, *A History of Chinese Literature* (1964), W. C. Liu, *An Introduction to Chinese Literature* (1966), C. T. Hsia, *A History of Modern Chinese Fiction* (1961) and *The Classic Chinese Novel* (1968), and H. L. Boorman, ed., *Biographical Dictionary of Republican China* (4 vol., 1967-71).

Chinese music can be traced back as far as the third millennium B.C. Manuscripts and instruments from the early periods of its history are not extant, however, because in 212 B.C. Shih Hwang-ti of the Ch'in dynasty caused all the books and instruments to be destroyed and the practice of music to be stopped. Certain outlines of ancient Chinese music have nevertheless been ascertained. Of primary significance is the fact that the music and philosophy of China have always been inseparably bound, musical the-

ory and form have been invariably symbolic in nature and remarkably stable through the ages. The single tone is of greater significance than melody, the tone is an important attribute of the substance that produces it. Hence musical instruments are separated into eight classes according to the materials from which they are made—gourd (sheng), bamboo (panpipes), wood (*chu*, a trough-shaped percussion instrument), silk (various types of zither, with silk strings), clay (globular flute), metal (bell), stone (sonorous stone), and skin (drum). Music was believed to have cosmological and ethical connotations comparable to those of Greek music. The failure of a dynasty was ascribed to its inability to find the proper *huang chung*, or tone of absolute pitch. The *huang chung* was produced by a bamboo pipe that roughly approximated the normal pitch of a man's voice. Other pipes were cut, their length bearing a definite mathematical ratio to it. Their tones were divided into two groups—six male tones and six female. These were the *lūs*, and their relationship approximated the Pythagorean cycle of fifths. Legend ascribes their origin to birdsong, six from that of the male bird and six from that of the female, and the tones of the two sets were always kept separate. The *lūs* did not constitute a scale, however. The scale of Chinese music is pentatonic, roughly represented by the black keys on a piano. From it, by starting on different notes, several modes may be derived. The melody of vocal music is limited by the fact that melodic inflection influences the meaning of a word. Likewise, quantitative rhythms are not easily adaptable to the Chinese language. Several types of notation were used. Singers used the syllabic symbols for the five notes of the pentatonic scale, as did players of pipes. Players of the stone and bell chimes, which were tuned to the *lūs*, used symbols that represented the pitch names of the *lūs*. Players of flutes and zithers used a kind of tablature. None of this notation indicated rhythm. The ancient Chinese hymns were slow and solemn and were accompanied by very large orchestras. Chamber music was also highly developed. Chinese opera originated in the 14th cent. as a serious and refined art. Throughout the political and social turmoil following World War I, Western (classical and popular) and Japanese sources dominated Chinese music. At present, Western concepts of harmony are in active use but are generally applied to vocal genres, such as cantatas and music dramas, which have educational as well as musical value. The Peking Opera has produced numerous new works since 1949, most of them concerning political topics. It is one of the few forums of traditional performance style, although there is an ongoing effort directed by the Peking Institute of National Music to preserve the few remainders of ancient musical practice. See Curt Sachs, *The Rise of Music in the Ancient World* (1943), J. H. Lewis, *Foundations of Chinese Musical Art* (2d ed. 1964), Elizabeth Halson, *Peking Opera* (1966), bibliography by Fredric Lieberman (1970).

Ch'ing (ch'ing) or **Manchu** (mǎn'ch'ōō', mǎn'-ch'ōō'), dynasty of China that ruled from 1644 to 1912. It was established by the MANCHU, a people of Manchuria, who invaded China and captured Peking in 1644. All China was occupied and the remnants of the Ming dynasty destroyed by 1659, but disorders in S. China and Taiwan were not finally suppressed until 1683. The Manchu introduced few important changes in China. One notable political innovation, however, was the system of administration involving joint Manchu-Chinese control of military and civil affairs. Emperor K'ang Hsi (reigned 1661-1722) consolidated the Manchu regime by suppressing (1673-81) rebellions and defeating the Mongols and Tibetans. When Jesuit missionaries appeared he issued (1692) an edict of toleration. Under Emperor CHIEN LUNG (reigned 1735-96), China attained its maximum territorial expansion. China's wealth and luxury goods, notably porcelain and silk, attracted the attention of European maritime powers, but the dynasty was at first opposed to trade. In 1759 an imperial edict allowed maritime trade only at the port of Canton. By the 19th cent. Great Britain had established profitable trade relations with China, but its repeated attempts (1793, 1816, 1834) to obtain a liberal trade policy were unsuccessful. British dissatisfaction over trade restrictions, as well as the insularity of the Manchu officials, precipitated the OPIUM WAR (1839-42). China's defeat in the war resulted in the cession of Hong Kong to Great Brit-

ain and the establishment of EXTRATERRITORIALITY for other Western nations. The Manchu regime, already weakened by Western encroachments, was further enfeebled by internal rebellions. The Taiping Rebellion (1850-65) nearly brought the dynasty to an end. However, the Manchu regime suppressed the major rebellions and embarked on a policy of diplomatic, technological, and military modernization led by Tseng Kuo-fan (1811-72) and Li Hung-chang (1823-1901). These statesmen played important roles in the T'ung Chih restoration (1862-74), during which the dynasty tried to restore the traditional order by reasserting Confucian social values. China yielded to Western demands for permanent diplomatic representation in Peking (1860) and continued to suffer territorial encroachments. Russia occupied Ili, Japan incorporated the Ryukyu islands, France made Annam a protectorate, and Great Britain completed its annexation of Burma. The First Sino-Japanese War (1894-95) deprived China of its control over Korea, and the war was followed by the partition of mainland China into foreign spheres of influence. The general agreement was that Great Britain should predominate in the Yangtze valley, France in the extreme south, and Russia in Manchuria. After the Russo-Japanese War (1904-5), Japan took over Russia's sphere. Efforts to strengthen the dynasty against foreign imperialism were undertaken by K'ang Yu-wei (1858-1927) with the support of the emperor KUANG HSU. These efforts, however, were frustrated by the dowager empress TZ'U HSI, who aborted the reform movement in a coup d'état (1898). She supported the BOXER UPRISING, however, in a vain attempt to dislodge the foreign powers (1898-1900). Following foreign suppression of the Boxers, Tz'u Hsi changed course and allowed some moderate educational and administrative reforms. However, the dynasty acted slowly upon the demand of intellectuals, social leaders, and progressive provincial governors for a national assembly and a change to constitutional monarchy. From abroad Sun Yat-sen led a movement for revolutionary overthrow of the Manchus and establishment of a republic. His coalition, which included moderate leaders in S. China, revolutionary students who had returned from the West, and military officers finally overthrew the dynasty in the Revolution of 1911. With the collapse of the Ch'ing, China abandoned its 2,000-year tradition of monarchic rule in favor of a republican form of government. See S. Y. Teng and J. K. Fairbank, *China's Response to the West* (1954), Franz Michael, *The Origin of Manchu Rule in China* (1965), Albert Feuerwerker, *Approaches to Modern Chinese History* (1967), Henry McAleery, *The Modern History of China* (1968), I. C. Y. Hsu, *The Rise of Modern China* (1970).

Ch'ing Hai, lake, China: see KOKO NOR

Chingola (ching-gō'la), city (1972 est. pop., with suburbs, 130,000), N. central Zambia. It is a copper-mining center, located on the COPPERBELT.

Ch'ing-tao (ching-dou) or **Tsingtao** (ts'ing'tou', ching'dou'), city (1970 est. pop. 1,900,000), SE. Shantung prov., E. China, on the Yellow Sea. With an excellent ice-free harbor, it is a major port of China, connected by rail with Yen-t'ai and Chi-nan. The leading industrial city of Shantung, it has textile mills, food-processing and tobacco-processing establishments, machine shops, paper mills, and plants making diesel locomotives and railroad cars, tires, fertilizers, rubber products, chemicals, and metal items. Leased to Germany in 1898 as part of the Kiaochow territory, Ch'ing-tao became the administrative center of the leasehold and developed into a modern city. The Japanese held it from 1914 to 1922. Ch'ing-tao was a marine and naval base for the United States from 1945 to 1949, when it was abandoned and fell to the Communists. In the city are an astronomical observatory, two marine museums, Shantung Univ., Ch'ing-tao Technical Univ., a medical college, and several technical institutes.

Ching-te-chen (jing-dū-jün) or **Fowliang** (fōo'-lāng'), city (1970 est. pop. 300,000), NE. Kiangsi prov., China, on the Chang River. It is world famous for its fine porcelain, made since the Han dynasty (202 B.C.-A.D. 220) from the white clay, kaolin, found near Po-yang lake to the west. Coal is mined in the region. The city reached its greatest fame under the Northern Sung dynasty (c. 1000), when it supplied porcelain to the royal household. It declined after heavy damage in the Taiping Rebellion. **Chinhae** (chên'hǎ'), city (1970 est. pop. 92,000), SE. South Korea, on the Korea Strait. It is an important fishing port and naval base.

Chin Hills, mountain range, W Burma, along the boundary between Burma and Assam, India. It rises to 10,018 ft (3,053 m) in Mt Victoria. The range is covered with pine and teak forests. The Chin Hills Special Division (c 14,000 sq mi/36,260 sq km, 1969 est pop 354,000), a mountainous region dotted with small villages, is inhabited by Chin tribes, a Tibeto-Burman people. Falam is the capital. This district is a special division of Burma and has become largely autonomous, with representatives in the Burmese cabinet.

Chin-hua (jīn-hwa) or **Kinhwa**, town, central Chekiang prov., SE China. A transportation hub on the Chekiang-Kiangsi RR, Chin-hua has been famous for two centuries for its hams. Other products are fertilizer, machine tools, and textiles.

Ch'in-huang-tao or **Chinwangtao** (both chīn-wang-dou), city, NE Hopenh prov., China, on the Po Hai, an arm of the Yellow Sea. It is an ice-free port in an important coal area.

Chi-ning (jī-níng) or **Tsinling**, city, Inner Mongolian Autonomous Region, China. It is an important railroad center at the junction of the system connecting Peking and Lan-chow, with the line traversing the Mongolian People's Republic to the USSR. Industries include meat-packing, tanning, and the production of textiles.

Chinju (chēn'jō'), city (1970 pop 121,622), capital of South Kyongsang prov., S South Korea. It is a transportation and agricultural center, with industries producing food products and textiles.

Chinkiang. see CHEN CHIANG

Ch'in Ling, mountain range, China. see TSINLING

Chinmoy: see GHOSE, CHINMOY

Chinnampo. see NAMPO, North Korea

Chinnereth (kīn'ārēth) or **Chinneroth** (-rōth). 1 See GALILEE, SEA OF. 2 Town, near the Sea of Galilee. Deut 3:17, Joshua 11:2, 19:35. Chinneroth 1 Kings 15:20.

Chino (chē'nō), city (1970 pop 20,411), San Bernardino co., S Calif., founded 1887, inc 1910. It is the business and processing center of a diversified farming (notably dairying) area. Mobile homes, plumbing hardware, machine products, and wool items are manufactured. A state prison is located in Chino, nearby is a state game-bird farm.

chinoiserie (shēnwazrē'), decorative work produced under the influence of Chinese art, applied particularly to the more fanciful and extravagant manifestations. Intimations of Eastern art reached Europe in the Middle Ages in the porcelains brought by returning travelers. Eastern trade was maintained during the intervening centuries, and the East India trading companies of the 17th and 18th cent. imported Chinese lacquers and porcelains. Dutch ceramics quickly showed the influence of Chinese blue-and-white porcelains. In the middle of the 18th cent. the enthusiasm for Chinese objects affected practically every decorative art applied to interiors, furniture, tapestries, and *bibels* and supplied craftsmen with fanciful motifs of scenery, human figures, pagodas, intricate lattices, and exotic birds and flowers. In France the Louis XV style gave especial opportunities to chinoiserie, as it blended well with the established rococo. Whole rooms, such as those at Chantilly, were painted with compositions in chinoiserie, and Watteau and other artists brought consummate craftsmanship to the style. Thomas Chippendale, the chief exponent in England, produced a unique and decorative type of furniture. The craze early reached the American colonies. Chinese objects, particularly fine wallpapers, played an important role in the adornment of rooms, and especially in Philadelphia the style had a pronounced effect upon design. See study by Hugh Honour (1961).

Chinon (shēnōn'), town (1968 pop 5,435), Indre-et-Loire dept., W central France, in Touraine, on the Vienne River. Chinon was an important medieval town and many buildings (notably three churches) from that period are preserved. Its castle, overlooking the river, consists of three distinct fortresses built from the 11th to the 15th cent.—the Château Saint-Georges, the Château du Milieu, and the Château du Coudray. The builders of the castle included Philip II of France, Richard I of England (the Lionhearted), and Henry II of France (who died there in 1159). In the Château du Milieu in 1429 Joan of Arc presented herself to Charles VII of France and correctly identified him although he was disguised. In La Devinière, a nearby hamlet, stands the house where the poet Rabelais was born (c 1490).

chinook (shīnōōk', chī-), warm, dry air mass that descends the eastern slopes of the U.S. and Cana-

dian Rocky Mts after having lost moisture by condensation over the western slopes. Chinooks occur mainly in winter. They sometimes replace the cold continental air mass over the western plains, causing rapid melting of snow and temperature increases as great as 40°F (4°C) within a few hours. Similar winds occurring in the Alps and elsewhere are known as foehn winds. The term *chinook* was originally applied by Oregon settlers to a moist Pacific wind blowing from the direction of a Chinook Indian camp.

Chinook Indians, North American Indian tribe of the Penutian linguistic stock. Altogether twelve main tribes spoke Chinook languages, all were in the Columbia River valley. The Chinook themselves were on the lower extremity of the river and, with the Clatsop Indians, constituted the now extinct Lower Chinook branch of the linguistic stock (see AMERICAN INDIAN LANGUAGES). The village was their main social unit, and a wealthy chief might control several. The Chinook practiced head flattening, and slavery was common. Their food consisted mostly of fish, roots, and berries. They were skilled with canoes, were noted traders, and practiced the custom of POTLATCH. They lacked the totemic art and the secret societies of their neighbors. They were well known to the traders on the Pacific coast in the late 18th cent. and a corrupted form of their language known as Chinook jargon served as a trade language from the Columbia River to Alaska.

Chinook jargon, LINGUA FRANCA of early traders on the Northwest Coast of the United States and Canada. It included Chinook, Nootka, English, and French words, with various borrowings.

chinquapin (chīng'kəpīn) [Algonquian], name for certain American species of the CHESTNUT genus of the family FAGACEAE (BEECH family) and for a related species, the golden chinquapin (*Castanopsis chrysophylla*), an evergreen of the Pacific states. The common chinquapin is *Castanea pumila*, native to the E United States. Its wood and fruit are used like those of the chestnut. The bush chinquapin (*C. alnifolia*) has a more southern range. Chinquapin is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Fagales, family Fagaceae.

chintz (chīnts) [probably Hindustani, =variegated], originally a painted or stained calico from India. Esteemed for its bright colors and designs, it was used in Europe for bedcovers and draperies. Reproductions of Indian designs and also original patterns were soon produced. Especially noted was toile de Jouy, manufactured from 1700 to 1843 at Jouy, near Paris. Both flower motifs and characteristic pictorial scenes are prized by collectors and imitated in modern prints. Modern chintz is usually made up of bright prints on a light background.

Chinwangtao. see CH'IN-HUANG-TAO, China

Chioggia (kyōd'ja), city (1971 pop 49,288), Venetia, NE Italy, on a small island at the southern end of the Lagoon of Venice (an arm of the Gulf of Venice), connected to the mainland by a bridge. It is an important fishing port and has a steel industry. In 1379-80 several naval battles were fought off Chioggia in the war between Venice and Genoa. The liberation of the town from the Genoese turned the war in favor of Venice. Old houses and churches, canals, and sailboats help make Chioggia a picturesque tourist spot.

Chios, Greece. see KRÍOS

Chipeyan Indians, North American Indians of the ATHABASCAN branch of the Nadene linguistic stock (see also AMERICAN INDIAN LANGUAGES). Scattered Chipeyan groups ranged W Canada between Great Slave Lake and the Churchill River. They were nomadic hunters in rivalry with the Woodland Cree. They are not to be confused with the Chippewa or Ojibwa Indians.

chipmunk, rodent of the family SCIRIIDAE (SQUIRREL family). The chipmunk of the E United States and SE Canada is of the genus *Tamias*. The body of the common Eastern chipmunk, *Tamias striatus*, is about 5 to 6 in (13-15 cm) long, the upper parts are reddish brown or grayish brown with a median black stripe and two black stripes separated by a whitish band along each side. The tail, 4 to 5 in (10-13 cm) long, is hairy and flattened. Food is transported in the expandable cheek pouches. Chipmunks make underground burrows, often with concealed entrances beneath stone walls or trees. Although chipmunks are usually found near the ground, they are excellent climbers. In its northern range the chipmunk goes underground about the end of October, but sleeps deeply only during the coldest period. Food for the winter is stored in the burrow. Chipmunks eat nuts, seeds, berries, and insects. Although

they are numerous, these animals are not serious threats to crops. The typical life span is 5 years. The chipmunks of W North America belong, like those of E Asia, to the genus *Eutamias*. Chipmunks are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Rodentia, family Sciuridae.

Chippawa (chīp'əwə), village (1966 pop 3,877), S Ont., Canada, just above Niagara Falls. It was first settled in 1794 and was the scene of an American victory (1814) in the War of 1812.

Chippendale, Thomas, 1718-79, celebrated English cabinetmaker. His designs were so widely followed that a whole general category of 18th-century English furniture is commonly grouped under his name. Chippendale's *Gentleman and Cabinet-Maker's Director*, an illustrated trade catalog first published in 1754, was widely influential in England and America. Among the numerous pieces stamped with his style, it is possible to assign unquestionably to his own workshop only those for which the original bills still remain, as in the case of Harewood House and Nostell Priory, whose furnishings were created by him. While he based his work upon the general Queen Anne and Georgian characteristics of sober design and thoroughly fine construction, retaining many of the early 18th-century details, Chippendale's distinction was to introduce many other forms. For these he used three outside inspirations—Chinese, Gothic, and contemporaneous French ROCOCO. The first two resulted naturally from the general mid-18th-century enthusiasms for CHINOISERIE decoration and pseudo-Gothic architecture. Chippendale's name is emphatically identified with the extensive variety of chair types that he developed—from geometrical to Chinese, lattice, or sumptuously carved and interlaced forms. Chippendale's varied output also included desks, mirror frames, hanging bookshelves, settees, with which he was especially successful, china cabinets and bookcases, frequently with fretted cornices and latticework glazed doors, and tables with delicately fretted galleries and distinctive cluster-column legs of Gothic inspiration. The last phase of his career shows the influence of the designs of Robert Adam. Chippendale's style, quickly imported to America, was imitated by a number of expert cabinetmakers. See studies by Oliver Brackett (1924) and Anthony Coleridge (1968).

Chippewa (chīp'əwə), river, c 200 mi (320 km) long, rising in several forks in the lake region of N Wis., and flowing SW to the Mississippi, which it enters at the foot of Lake Pepin. Eau Claire and Chippewa Falls are on its banks. The river was once important in the lumbering industry.

Chippewa Falls, city (1970 pop 12,351), seat of Chippewa co., W central Wis., on the Chippewa River, settled 1837, inc as a city 1869. Originally a lumbering town, Chippewa Falls once had the world's largest sawmill. Today it is a trade and transportation center in a region of beef- and dairy-cattle farms. Its industries include meat packing and the manufacture of shoes, plastics, tools, and dies. Wisconsin State Park, which includes Lake Wissota, Wisconsin's largest artificial lake, is nearby.

Chippewa Indians. see OJIBWA INDIANS

Chirchik (chīrchēk'), city (1970 pop 107,000), Central Asian USSR, in Uzbekistan. It is an industrial center with large chemical plants and machinery factories. There is a chain of hydroelectric stations on the Chirchik River. The city was founded in 1932 on the site of the village of Kirgiz-Kulak.

Chiricahua Indians. see APACHE INDIANS

Chiricahua National Monument. see NATIONAL PARKS AND MONUMENTS (table)

Chirico, Giorgio de (jōr'jō dā kē'rēkō), 1888-, Italian painter, b. Vólos, Greece. Chirico developed his enigmatic vision in Munich and Italy and from 1911 to 1915 he worked and exhibited in Paris. His powerful, disturbing paintings employ steep perspective, mannequin figures, empty space, and forms used out of context to create an atmosphere of mystery and loneliness. His work exercised a considerable influence on early surrealist painters but was never successfully imitated. In Ferrara, Chirico developed what he termed metaphysical painting, in which he consciously exploited the symbolism of his art. Chirico is represented in leading galleries throughout the world. See his memoirs (tr 1972), studies by J. T. Soby (1955, repr 1967) and Isabella Far (tr 1971).

Chiron (kī'rōn), in Greek mythology, centaur, son of Cronus. He was a renowned sage, physician, and prophet. Among his pupils were Hercules, Achilles, Jason, and Asclepius. When Hercules accidentally wounded Chiron, the pain was so great that Chiron

surrendered his immortality to Prometheus and died Zeus then set him among the stars as the constellation Sagittarius

chiroprody: see PODIATRY

chiropractic (kīrāprāk'tik) [Gr, =doing by hand], medical practice based on the theory that all disease results from a disruption of the functions of the nerves. The principal source of interference is thought to be displacement (or subluxation) of vertebrae of the spine, although other areas such as joints and muscle tissue may also be the sites of nerve interference. The method of treatment is by adjustment of displaced vertebrae. The chiropractor seeks to relieve the pressure on the nerves and thereby remove the cause of some specific ailment. Massage and manipulation by hand, exercise, and the application of heat, cold, and light are some of the healing techniques used. The early chiropractors believed that psychic energy, a force beyond human understanding, flowed from the brain, through the nerves, to all parts of the body and that it was interference with this force that caused disease. In 1953 the theory was revised to state that the health of body tissues is controlled by nerve impulses, and that interference in the nerve impulses causes disease. Chiropractic was introduced in the United States by D. D. Palmer in 1895 and carried on by his son, Bartlett Joshua Palmer. There are institutions for training students in the profession of chiropractic, which has legal recognition in the United States and in many other parts of the world. See B. J. Palmer, *Text Book on the Palmer Technique of Chiropractic* (1920); A. E. Homewood, *The Chiropractor and the Law* (1965); H. S. Schwartz, ed., *Mental Health and Chiropractic* (1971).

chiru: see ANTELOPE

Chiryu (chēryō), city (1970 pop 41,896), Aichi prefecture, S central Honshu, Japan. The city was formed in 1970 by the merger of a number of smaller towns.

Chishima: see KURIL ISLANDS

Chisholm, Shirley Anita St. Hill (chīz'am), 1924–, U.S. Congresswoman (1969–), b. Brooklyn, N.Y. An expert on early childhood education, she worked (1959–64) as a consultant to the New York City bureau of child welfare before serving (1964–68) in the state assembly. Elected (1968) to the U.S. House of Representatives as a Democrat, Chisholm became the first black woman to serve in that body. She quickly gained national attention as a vocal critic of the war in Vietnam and the House seniority system and as an outspoken advocate of the interests of the urban poor. An active member of the black Congressional caucus, Chisholm made an unsuccessful bid for the 1972 Democratic presidential nomination. She is the author of *Unbought and Unbossed* (1970) and *The Good Fight* (1973).

Chisholm Trail, route over which vast herds of cattle were driven from Texas to the railheads in Kansas after the Civil War. It took its name from Jesse Chisholm, a part-Cherokee Indian trader who, in the spring of 1866, drove his wagon, heavily loaded with buffalo hides, through the Indian territory that is now Oklahoma to his trading post near Wichita, Kansas, the wheels cutting deep ruts in the prairie. These marked a route followed for almost two decades by traders and by drovers bringing cattle to shipping points and markets in Kansas. Hundreds of thousands of Texas longhorns were driven over the trail annually, and it became celebrated in frontier lore and cowboy ballads. With the development of railroads and the introduction of wire fencing, the trail fell into disuse, although traces of it can still be seen. See studies by Wayne Gard (1954) and B. J. Fletcher (1968).

Chishtī, Muin ad-Din Hasan (mōbēn' ād-dīn hāsān' chīsh'tē), 1142–1236, Indian Muslim saint, b. Seistan, Iran. He founded a Sufi mystic order in India. After traveling extensively in the Middle East and Central Asia he went to Lahore, then later settled in Ajmer. His splendid mausoleum there is an important center of pilgrimage.

Chisinau: see KISHINEV, USSR

Chislon (kī'slōn), Benjamite Num 34:21

Chisloth-tabor (kī'slōth-tā'bar), town, N Palestine, plausibly identified with Iksal, W of Mt. Tabor, Israel. Joshua 19:12. See also CHESULOTH.

chi-square test: see STATISTICS

Chistopol (chēstō'pal), city (1970 pop 60,000), Tatar Autonomous SSR, E European USSR, on the Kama River. It is a grain-trading center and has machinery plants. Chistopol was chartered in 1781.

Chisum, John Simpson (chīz'am), 1824–84, American cattleman, b. Tennessee. In 1837 he moved with his family to Texas. He had no formal education but worked as a builder and contractor, building the first courthouse in Paris, Texas. In 1854 he entered the cattle business, beginning in 1866, in partnership with Charles Goodnight, he drove herds into New Mexico, Colorado, and Wyoming, selling them to government food contractors for Indian reservations. When, in 1883, he established his ranch near Roswell, N. Mex., he became one of the first cattlemen in that region, and his became one of the largest herds. He was a prominent figure in the Lincoln co. cattle war, and at one time Billy the Kid was employed by him, however, Chisum cooperated with the authorities to end lawlessness in the cattle business.

Chiswick Press: see WHITTINGHAM, CHARLES

Chita (chē'tā'), city (1970 pop 241,000), capital of Chita oblast, SE Siberian USSR, at the confluence of the Chita and Ingoda rivers and on the Trans-Siberian RR. Machines and food-processing equipment are manufactured. Founded in 1653, Chita was a place of exile of the 19th-century Decembrist rebels.

Ch'i-t'ai (chē-tī) or **Kitai** (kē'tī'), town and oasis, N Sinkiang Uigur Autonomous Region, China, in the Dzungarian basin. It is a road hub and a trading center (furs, skins, raisins, and tea). Gold mines are nearby.

chitin (kī'tan), main constituent of the shells of arthropods. Chitin, a POLYSACCHARIDE analogous in chemical structure to CELLULOSE, consists of units of a glucose derivative (N-acetyl-D-glucosamine) joined to form a long, unbranched chain. Like cellulose, chitin contributes strength and protection to the organism. In arthropods the chitinous shell, or exoskeleton, covers the surface of the body, does not grow, and is periodically cast off (molted). After the old shell is shed, a new, larger shell is secreted by the epidermis, providing room for future growth. The chitin is rigid except between some body segments and joints where it is thin and allows movement of adjacent parts. Chitin is also found in the cell walls of some fungi.

chiton (kī'tan), common name for rock-clinging marine mollusks of the class Amphineura. Chitons are abundant on rocky coasts throughout most of the world, from the intertidal zone to a depth of about 1,200 ft (400 m). They range in length from ½ in. to

characteristic molluscan mantle, a fleshy outfolding of the body wall. The lower edge of the mantle, called the girdle, extends below the edge of the shell and aids the foot in gripping. The girdle may be very wide and extend upward over the shell, in some species it is smooth or covered with scales, hairs, or spines that give the animal a shaggy appearance. The many gills are arranged in two rows within the mantle, one on either side of the body. The mouth, located on the ventral surface in front of the foot, contains a toothed, tongue-like scraping organ, the radula. Chitons crawl slowly by means of muscular undulations in the foot. Most are herbivorous, feeding on algae scraped from rocks and shells with the radula, some are carnivorous or omnivorous. Most feed at night and shelter under rock ledges by day. Chitons are classified in the phylum MOLLUSCA, class Amphineura, order Polyplacophora.

Chitose (chē'tō'sā), city (1970 pop 56,118), Hokkaido prefecture, central Hokkaido, Japan, on the Chitose River. It is a communications center with a major airport.

Chitré (chē'trā'), city (1970 pop 12,379), S Panama, near the Gulf of Panama. It is a district capital on the Pan-American Highway and is the commercial and processing center for an agricultural area.

Chittagong (chī'tā'gōng), city (1969 est. pop 437,200), capital of Chittagong division, SE Bangladesh, on the Karnafuli River near the Bay of Bengal. An important rail terminus and administrative center, it is the chief port of Bangladesh, with modern facilities for oceangoing vessels. Jute, tea, and skins and hides are the major exports; imports include cotton and other piece goods, machinery, and construction materials. Offshore oil installations were set up during the 1960s. Besides an oil refinery and oil-blending plants, the city has large cotton- and jute-processing mills, tea and match factories, chemical and engineering works, an iron and steel mill, and fruit-canning, leather-processing, and shipbuilding industries. Power for Chittagong's industry is supplied by the Karnafuli hydroelectric project. The port was known to the civilized world by the early centuries A.D. and was used by Arakan, Arab, Persian, Portuguese (who called it Porto Grande), and Mogul sailors. Originally part of an ancient Hindu kingdom, Chittagong was conquered (9th cent.) by a Buddhist king of Arakan. It passed (13th cent.) to the Mogul empire, was retaken (16th cent.) by the Arakans, and again became part of the Mogul empire in the 17th cent. British control began in 1760. In the city are notable Hindu temples, Buddhist ruins, several fine examples of Mogul art, a university (founded 1966), and many arts and professional colleges. The Chittagong Hill Tracts District occupies a narrow coastal strip of parallel ranges along the Bay of Bengal and the Indian and Burmese frontiers. Valuable timber, bamboo, and cane forests, which cover the upper reaches of the hills, support a paper industry. Cotton, rice, tea, and oilseeds are raised in the valleys between the hills, and natural gas deposits lie along the shore. The cottage industries of the hill people produce woven cotton goods and bamboo nets and baskets.

Chittenden, Thomas, 1730–97, governor of Vermont, b. East Guilford, Conn. After moving to Vermont in 1774, he was active in the Windsor Convention, which declared (1777) Vermont independent. He and Ira Allen drew up the constitution, and Chittenden was elected (1778) first governor. He remained one of the Allen party, and he held office (except 1789–90) through Vermont's period of independence and early statehood until a few weeks before his death.

Chittim (kī'tim), variant of KITIM

Chittoor (chī'tōr'), city (1971 pop 63,041), Andhra Pradesh state, SE India, in the Poini River valley. Chittoor is on the Bangalore-Madras highway. It is a market for grain, sugarcane, and peanuts. The city is surrounded by mango and tamarind groves, and cattle are bred in the area. Chittoor, a district administrative center, was a British military post until 1884.

Chiu-chiang (jēō-jāng) or **Kiukiang**, city (1970 est. pop 120,000), N Kiangsi prov., China, on the Yangtze River, near P'o-yang lake. A major river port, it is connected by rail with Nan-ch'ang. In a major tea-growing area, it is a large processing, marketing, and shipping point. Other exports include rice, tobacco, cotton, ramie cloth, and tungsten ore. Machine tools are manufactured. The city was held by the Taipings from 1850 to 1854. It became a treaty port with a British concession in 1861. Chiu-chiang has notable botanical gardens and an arboretum. Just south is the wooded mountain of Lü Shan, the location of the resort of Ku-ling and of the White

A Dorsal view of a chiton, representative mollusk of the class Amphineura

B Internal anatomy of a chiton

12 in. (1.2–30 cm), according to the species, but most are 1 to 3 in. (2.5–7.5 cm) long. The body of a chiton is low and oval, it is covered dorsally by a slightly convex shell consisting of eight linearly arranged overlapping plates. The shell may be dull or brightly colored. Most of the lower surface consists of a broad, flat foot with which the chiton clings to hard surfaces, often so tightly that a sharp instrument is needed to pry it loose. When dislodged, a chiton rolls into a ball. Beneath the shell is the char-

Deer Cave, in which Chu Hsi (Chu Hi), the 13th-century Confucian philosopher, lived and taught

Chiun (kī'ən), idol worshiped by the Hebrews in the wilderness Amos 5:26 Remphan Acts 7:43

Ch'ung-shan (chēōōng-shan) or **Kiungshan** (kyōōng-shan, jeōōng-), city, on Hainan island, 5 Kwangtung prov., China It was the chief town of the island until absorbed by Hai-k'ou (which is now the largest town) Formerly a treaty port, Ch'ung-shan became part of the People's Republic of China in 1950

Chiusi (kyōō'sē), Lat. *Clusium*, Etruscan *Chamars*, town (1971 pop. 8,756), in Tuscany, central Italy, in the Apennines Chiusi was one of the 12 sovereign towns of ancient Etruria, its semilegendary king LARS PORSENA is said to have marched from there against Rome (c. 500 B.C.) The town was taken by Rome (c. 225 B.C.) Many Etruscan ruins have been found, including tombs dating from the 5th cent. B.C., and there is an excellent Etruscan museum There are also Christian catacombs

chivalry (shiv'äl're), system of ethical ideals that arose from FEUDALISM and had its highest development in the 12th and 13th cent. Chivalric ethics originated chiefly in France and Spain and spread rapidly to the rest of the Continent and to England They represented a fusion of Christian and military concepts of morality and still form the basis of gentlemanly conduct Noble youths became pages in the castles of other nobles at the age of 7, at 14 they trained as squires in the service of knights, learning horsemanship and military techniques, and were themselves knighted usually at 21 The chief chivalric virtues were piety, honor, valor, courtesy, chastity, and loyalty The knight's loyalty was due to the spiritual master, God, to the temporal master, the suzerain, and to the mistress of the heart, his sworn love Love, in the chivalrous sense, was largely platonic, as a rule, only a virgin or another man's wife could be the chosen object of chivalrous love With the cult of the Virgin Mary, the relegation of noblewomen to a pedestal reached its highest expression The ideal of militant knighthood was greatly enhanced by the Crusades The monastic orders of knighthood, the KNIGHTS TEMPLARS and the KNIGHTS HOSPITALERS, produced soldiers sworn to uphold the Christian ideal Besides the battlefield, the TOURNAMENT was the chief arena in which the virtues of chivalry could be proved The code of chivalrous conduct was worked out with great subtlety in the courts of love that flourished in France and in Flanders There the most arduous questions of love and honor were argued before the noble ladies who presided (see COURTLY LOVE) The French military hero BAYARD was said to be the last embodiment of the ideals of chivalry In practice, chivalric conduct was never free from corruption, increasingly evident in the later Middle Ages Courtly love often deteriorated into promiscuity and adultery, pious militance into barbarous warfare Moreover, the chivalric duties were not owed to those outside the bounds of feudal obligation The outward trappings of chivalry and knighthood declined in the 15th cent., by which time wars were fought for victory and individual valor was irrelevant Artificial orders of chivalry, such as the Order of the Golden Fleece (1423), were created by rulers to promote loyalty, tournaments became ritualized, costly, and comparatively bloodless, and the traditions of knighthood became obsolete Medieval secular literature was primarily concerned with knighthood and chivalry Two masterpieces of this literature are the *Chanson de Roland* (c. 1098, see ROLAND) and *Sir Gawain and the Green Knight* (see PEARL, THE) ARTHURIAN LEGEND and the CHANSONS DE GESTE furnished bases for many later romances and epics The work of CHRÉTIEN DE TROYES and the ROMAN DE LA ROSE also had tremendous influence on European literature The endless chivalrous and pastoral romances, still widely read in the 16th cent., were satirized by Cervantes in *Don Quixote* In the 19th cent., however, the romantic movement brought about a revival of chivalrous ideals and literature For the lyric poetry of the age of chivalry, see TROUBADOURS, TROUVÈRES, MINNESINGER See also ORDERS OF KNIGHTHOOD See Sidney Painter, *French Chivalry* (1940), Léon Gautier, *Chivalry* (tr. 1965), R. W. Barber, *The Knight and Chivalry* (1970), C. T. Wood, *The Age of Chivalry* (1970)

Chladni, Ernst Florens Friedrich (ērnst flō'rēns frē'drikh klād'nē), 1756-1827, German physicist An authority on acoustics, he made studies of the transmission of sound in various gases and of vibrating plates of glass and metal covered with sand, on which were formed the so-called Chladni figures, or

acoustic figures He invented a musical instrument that he called the euphonium Chladni also studied meteorites and proposed that they are of extraterrestrial origin

Chloe (klō'ē), Corinthian woman in whose house there were Christians 1 Cor. 1:11

chloral hydrate (klōr'al hī'drāt), central nervous system DEPRESSANT that is widely used as a hypnotic, or sleep-inducing drug Chloral hydrate is the common ingredient, along with alcohol, in what are popularly known as knockout drops or Mickey Finns, the combination can induce acute intoxication and coma

chloramine: see HYDRAZINE

chloramphenicol (klōr'ām'fēn'ākōl'), ANTIBIOTIC effective against a wide range of gram-negative and gram-positive bacteria (see GRAM'S STAIN) It was originally isolated from a species of *Streptomyces* bacteria Chloramphenicol's antibiotic activity results from its interference with protein synthesis in invading microbes However, it is a very toxic substance, its most serious and potentially lethal effect being depression of red blood cell production in bone MARROW, cases of leukemia were also attributed to early use of chloramphenicol Because of its toxicity, chloramphenicol is rarely prescribed for infections that can be treated by other antibiotics It is used to treat typhoid fever, some forms of meningitis, cholera, rickettsial infections such as Rocky Mountain spotted fever and typhus, and diseases caused by the psittacosis group of bacteria Chloramphenicol is commonly used in biological research to study protein synthesis Chloromycetin is a trade name for chloramphenicol

chlorate and **perchlorate**, SALTS of chloric acid, HClO₃, and perchloric acid, HClO₄, respectively A chlorate may be formed (together with the corresponding chloride) by heating the hypochlorite, e.g., 3Ca(ClO)₂ → Ca(ClO₃)₂ + 2CaCl₂ This reaction takes place when chlorine gas is passed into a hot aqueous solution of a metal hydroxide, the hypochlorite is formed and decomposes almost immediately Commercially, a chlorate is derived when a hot aqueous metal chloride solution is decomposed by electrolysis, forming chlorine gas at the anode and metal hydroxide at the cathode (with evolution of hydrogen), the chlorine reacts with the hydroxide to form the hypochlorite, which decomposes to form the chlorate The most industrially important chlorate is potassium chlorate, or chlorate of potash, KClO₃, sodium chlorate, or chlorate of soda, NaClO₃, is also used Potassium chlorate is a colorless crystalline substance that melts at 356°C and decomposes violently at about 400°C It is a powerful oxidizing agent and is used in making explosives and matches, a mixture of potassium chlorate with phosphorus, sulfur, or any of numerous organic compounds (e.g., charcoal or sugar) explodes upon friction or percussion When a chlorate is heated, oxygen is evolved, often explosively, and the chloride is formed, e.g., 2KClO₃ → 2KCl + 3O₂ The reaction proceeds controllably at lower temperatures if a catalyst, e.g., manganese dioxide, is used, this provides a convenient source of oxygen If the chlorate is heated carefully at a lower temperature so that no oxygen is given off, the perchlorate and chloride are formed, e.g., 4KClO₃ → 3KClO₄ + KCl Perchlorates are safer to handle than chlorates, they are more stable when exposed to heat or shock Potassium perchlorate, KClO₄, is perhaps most widely used, e.g., in matches, fireworks, and explosives It is a colorless crystalline substance that melts at about 610°C Chloric acid, HClO₃·7H₂O, is a colorless substance that occurs only in solution It is a strong acid and a strong oxidizing agent that decomposes if heated above 40°C Under certain conditions it forms oxygen, water, and the explosive gas chlorine dioxide, ClO₂, under other conditions it forms perchloric acid and hydrochloric acid Perchloric acid, HClO₄, is a volatile, unstable, colorless liquid that is a strong, corrosive acid and a powerful oxidizing agent, especially when hot It explodes if heated to about 90°C or on contact with combustible materials The monohydrate, HClO₄·H₂O, is fairly stable and forms needlelike crystals that melt at 50°C It explodes if heated to 110°C The dihydrate, HClO₄·2H₂O, is a stable liquid that boils at 200°C Perchloric anhydride, or chlorine heptoxide, Cl₂O₇, is a colorless, oily liquid that boils at 82°C without exploding but that may be detonated by shock, it can be prepared by adding phosphorus pentoxide to cold perchloric acid The perchlorate free radical (chlorine tetroxide, ClO₄) can be prepared by adding bromine to silver perchlorate, it is extremely reactive and unstable

chlordane (klōr'dān) see INSECTICIDE

chloric acid: see CHLORATE

chloride, chemical compound containing chlorine Most chlorides are salts that are formed either by direct union of chlorine with a metal or by reaction of hydrochloric acid (a water solution of HYDROGEN CHLORIDE) with a metal, a metal oxide, or an inorganic base Chloride salts include SODIUM CHLORIDE (common salt), POTASSIUM CHLORIDE, CALCIUM CHLORIDE, and AMMONIUM CHLORIDE Most chloride salts are readily soluble in water, but MERCUROUS CHLORIDE (calomel) and SILVER CHLORIDE are insoluble, and lead chloride is only slightly soluble Some chlorides, e.g., antimony chloride and bismuth chloride, decompose in water, forming oxychlorides Many metal chlorides can be melted without decomposition, two exceptions are the chlorides of gold and platinum Most metal chlorides conduct electricity when fused or dissolved in water and can be decomposed by ELECTROLYSIS to chlorine gas and the metal Chlorine forms compounds with the other halogens and with oxygen, when chlorine is the more electronegative element in the compound, the compound is called a chloride Thus, compounds with bromine and iodine are bromine chloride, BrCl, and iodine chloride, ICl, but compounds with oxygen or fluorine (which are more electronegative than chlorine) are oxides (e.g., chlorine dioxide, ClO₂) or fluorides (e.g., chlorine fluoride, ClF) respectively Many organic compounds contain chlorine, as is indicated by common names such as carbon tetrachloride, methylene chloride, and methyl chloride However, in the nomenclature system for organic chemistry adopted by the International Union of Pure and Applied Chemistry (IUPAC), the presence in a compound of chlorine bonded to a carbon atom is indicated by the prefix or infix *chloro*, thus, carbon tetrachloride is tetrachloromethane, methylene chloride is dichloromethane, and methyl chloride is chloromethane

chloride of lime: see BLEACHING POWDER

chlorinated hydrocarbon insecticide: see INSECTICIDE

chlorine (klōr'ēn, klōr'-) [Gr., =green], gaseous chemical element, symbol Cl, at no. 17, at wt. 35.453, m.p. -100.98°C, b.p. -34.6°C, density 3.2 grams per liter at STP, valence -1, +1, +3, +5, +7 Chlorine is a greenish-yellow poisonous gas with a disagreeable, suffocating odor, it is about two and one-half times as dense as air Only fluorine among the nonmetals is more chemically active Chlorine belongs to the HALOGEN family of elements, found in group VIIa of the PERIODIC TABLE The gas is composed of diatomic molecules (Cl₂) with molecular weight 70.906 Chlorine is soluble in water, its aqueous solution, called chlorine water, consists of a mixture of chlorine, hydrochloric acid, and hypochlorous acid, only a part of the chlorine introduced actually goes into solution, the major part reacting chemically with the water Chlorine water has strong oxidizing properties resulting from the oxygen set free when the unstable hypochlorous acid decomposes Chlorine reacts readily with hydrogen to form hydrogen chloride, it burns if ignited in a hydrogen atmosphere and, if unignited, can form explosive mixtures with hydrogen, it also unites with the hydrogen in compounds such as turpentine, a hydrocarbon In the presence of moisture it combines directly with certain metals, such as copper and iron, to form CHLORIDES Iron ignites when heated in a chlorine atmosphere With metals and oxygen, chlorine forms several CHLORATES, it also combines with many nonmetals and certain radicals Because of its activity chlorine does not occur uncombined in nature, but its compounds are numerous and abundant Sodium chloride (common salt) is present in seawater, salt wells, and large salt deposits, often in association with other chlorides Chlorine is produced commercially chiefly by the electrolysis of sodium chloride, either molten or in solution Other chlorides are sometimes employed Chlorine can also be prepared from hydrochloric acid by oxidation of the hydrogen chloride (Deacon's process) and from bleaching powder Chlorine is used in water purification, as a DISINFECTANT and as an antiseptic (mercuric chloride), and in the manufacture of bleaching powder (chloride of lime), dyes, and explosives Chlorinated hydrocarbons have been used extensively as pesticides, some examples are DDT (see separate article), dieldrin, aldrin, endrin, lindane, chlordane, and heptachlor These compounds resist degradation and have become very troublesome environmental pollutants Carbon tetrachloride and trichloroethylene are used as solvents The Freon refrigerants are hydrocarbons

that have been reacted with chlorine and fluorine. Chlorine is an important constituent of many poison gases. It is used in such compounds as calomel, CHLOROFORM, and CHLORAL HYDRATE, which are used in medicine. It is also employed in the extraction of bromine from seawater. It is used in preparing some synthetic rubbers, in petroleum refining, and to prepare pure hydrochloric acid (see HYDROGEN CHLORIDE). Chlorine was discovered in 1774 by K. W. SCHÉELE, who thought it was a compound of oxygen; it was named and identified as an element by Sir Humphry DAVY in 1810.

chloroform (klōr'əfōrm) or **trichloromethane** (tri'klōrēmēth'ān), CHCl_3 , volatile, colorless, non-flammable liquid that has a sweetish taste and a somewhat pungent odor; it boils at 61.2°C . It dissolves freely in ethanol and ether but does not mix with water. Chloroform is produced by reaction of chlorine with ethanol and by the reduction of carbon tetrachloride with moist iron. It was once used as a general anesthetic in surgery but has been replaced by less toxic, safer anesthetics, such as ether. Chemically, it is employed as a solvent for fats, alkaloids, iodine, and other substances. When exposed to sunlight and air it reacts to form phosgene, a poisonous gas.

Chloromycetin (klōr'ōmīsēt'ən), trade name for CHLORAMPHENICOL.

chlorophyll (klōr'əfil'), green pigment that gives most plants their color and enables them to carry on the process of PHOTOSYNTHESIS. Chemically, chlorophyll consists of two compounds, chlorophyll a and chlorophyll b, both contain carbon, hydrogen, oxygen, nitrogen, and magnesium, but in slightly differing proportions. The molecular structure of the chlorophylls is similar to that of the heme portion of hemoglobin, except that the latter contains iron in place of magnesium. Within the photosynthetic cells of plants the chlorophyll is in the chloroplasts—small, roundish, dense protoplasmic bodies that contain the grana, or disks, where the chlorophyll molecules are located. Chloroplasts have been likened to electric batteries, in which the flat chlorophyll molecules are the plates and the grana are the cells. Associated with the chlorophyll in the chloroplasts are two yellow pigments, carotene and xanthophyll. Chlorophyll is the only substance in nature that can trap and store the energy of sunlight. The light used is mainly the red and blue-violet portions of the visible spectrum; the green portion is not absorbed and, reflected, gives chlorophyll its characteristic color. Although all the details of this energy-trapping process are not yet known, it has been shown that when light (in packets called photons, or quanta) is absorbed by the complex chlorophyll molecules, certain electrons are excited, i.e., raised to a higher energy level than normal. The excited electrons are led away by so-called electron-carrier molecules (one of which has been found to contain vitamins B and K), go through a series of reactions in which energy is given up bit by bit, and finally return to the chlorophyll molecule. The energy thus made available is used to "recharge" molecules of ADENOSINE TRIPHOSPHATE, the storehouse of chemical energy used in photosynthesis. The chloroplasts also form another energy-rich phosphorus compound, called TPNH_2 , using hydrogen from naturally dissociated water. The evolutionary advantage to plants of being independent of special sources of hydrogen is enormous, and this independence can be considered responsible not only for the spread of plants to all parts of the earth but of animals as well, since they depend on plants for

food and oxygen. Recently it was discovered that the chloroplasts contain DNA (see NUCLEIC ACID), the genetic code-bearing chemical found in genes.

Chlorophyta (klōr'ōfātə), division of the plant kingdom consisting of the photosynthetic organisms commonly known as green ALGAE and the stoneworts. The organisms are largely aquatic or marine plants consisting of one to several cells, a few types are terrestrial, occurring on moist soil, on the trunks of trees, on moist rocks, and even in snowbanks. Various species are highly specialized, some living exclusively on turtles, sloths, or within the gill mantles of marine mollusks. Cells of the Chlorophyta contain organelles called CHLOROPLASTS, in which photosynthesis occurs; the photosynthetic pigments chlorophyll a and chlorophyll b, and carotenoids, are the same as those found in higher plants and are found in similar proportions. There is no differentiation into specialized tissues among members of the division, even though the plant body, or thallus, may consist of several different kinds of cells. In some groups the reproductive cells, or gametes, are found in the two forms, eggs and sperm, in others all gametes are identical in appearance (isogametes). The zygote resulting from fertilization is neither attached to the parent plant nor dependent upon it; it develops directly into a new plant.

Class Chlorophyceae (green algae). This group contains the largest number of species of the division; it is the most diversified, ranging from common pond scums to the bright green seaweeds. The green algae vary from single cells to long strings and filaments, flat plates (the common sea lettuce), and even hollow tubes. In their diversity of structure and methods of reproduction, the green algae seem to represent many different evolutionary lines, which are brought together into one class largely for reasons of convenience. The cell wall of the green algae usually consists of CELLULOSE, which forms a compact inner layer, often in combination with other carbohydrate components. There is also usually a gelatinous or slimy outer layer secreted by the cell. The nucleus is well-organized and resembles that of higher plants. The chloroplasts, which show a wide variety of shapes and structure, generally possess a body called a pyrenoid, in which starch is stored. Some groups of green algae produce oil as well as starch. The vegetative cells of many of the unicellular green algae, as well as many isogametes, sperms, and forms known as zoospores, have flagella and are motile. The flagella are whiplike structures attached to a special organ in the cytoplasm. Green algae reproduce by both asexual and sexual methods. In asexual reproduction, a normal vegetative cell becomes modified to produce up to 64 flagellated, asexual zoospores. The zoospores are released through a pore in the sporangium wall, and, after swimming around for some time, they lose their flagella and become normal vegetative cells. Similar asexual spores, but without flagella, called applanospores, are produced in many species. Sexual reproduction in green algae is extremely varied. In its simplest form, two unicellular vegetative cells fuse to form a zygote, which, after MEIOSIS, produces four spores, each of which develops directly into a new vegetative cell. In another reproductive process, one vegetative cell, or gametangium, gives rise to from 4 to 16 smaller cells, which function as gametes. Both isogamy (production of similar cells that function as gametes) and heterogamy (production of distinct eggs and sperms) are common in the group. Both types of reproduction and almost all imaginable intergradations occur in green algae species. The zy-

gote produced by fertilization may either germinate at once to produce new vegetative plants, or develop a thick and resistant wall, and become a zygospore capable of resisting unfavorable environmental conditions. There are about 7,000 species of green algae.

Class Charophyceae (stoneworts). The stoneworts are an isolated, highly modified group of Chlorophyta, of great fossil age, dating as far back as the Devonian period. They are included within the Chlorophyta largely because their physiology and pigmentation is similar to that of the green algae. The plants consist of a complex, branched thallus with an erect stemlike structure and many whorls of short branches. They occur in shallow, fresh or brackish water, and especially in water rich in calcium, where they become stiff and lime-encrusted. Sexual reproduction in stoneworts is by fusion of unlike gametes, i.e., egg and sperm. The only two genera, *Chara* and *Nitella*, have relatively few species, which are not particularly varied, a fact that may reflect their great geological age. See G. M. Smith, *Freshwater Algae of the United States* (2d ed. 1950).

chloropicrin (klōr'əpik'rīn), colorless oily liquid used as a POISON GAS. It is a powerful irritant, causing lachrymation, vomiting, bronchitis, and pulmonary edema; lung injury from chloropicrin may result in death. Trace amounts in the air cause a burning sensation in the eyes, which serves as a warning of exposure. Chloropicrin is more toxic than chlorine but less toxic than PHOSGENE. It is relatively inert and does not react with the chemicals commonly used in gas masks. It has been extensively used as a vomiting gas by the military. It is also used industrially in small amounts as a warning agent in commercial fumigants and as an insecticide and disinfectant for grain. Chloropicrin has the formula CCl_3NO_2 . It boils at 112°C with partial decomposition to phosgene and nitrosyl chloride.

chloroplast, a complex, discrete green structure, or organelle, contained in the CYTOPLASM of plant cells. Chloroplasts are responsible for the green color of almost all plants and are lacking only in plants that do not make their own food, such as fungi and non-green parasitic or saprophytic higher plants. The chloroplast is generally flattened and lens-shaped and consists of a body, or stroma, in which are embedded from a few to as many as 50 submicroscopic bodies—the grana—made up of stacked, disklike plates. The chloroplast contains chlorophyll pigments, as well as yellow and orange carotenoid pigments. Chloroplasts are thus the central site of the photosynthetic process in plants. The chloroplasts of algae are simpler than those of higher plants, and may contain special, often conspicuous, starch-accumulating structures called pyrenoids.

chloroprene (klōr'əprēn') or **2-chloro-1,3-butadiene**, colorless liquid organic compound used in the synthesis of neoprene and certain other RUBBERS. The structure of the chloroprene molecule is very similar to that of isoprene; the molecule contains two double bonds and is readily polymerized.

chlormpromazine (klōr'prām'azēn'), one of a group of tranquilizing drugs called PHENOTHIAZINES that are useful in halting psychotic episodes. Chlormpromazine, sold under the trade name Thorazine, is often used to reduce the severe ANXIETY and agitation and the overactivity of some forms of SCHIZOPHRENIA.

Chmielnicki or **Khmelnitsky**, **Bohdan** (both bəkh'dān' khmēlnē'tskē), c. 1595–1657, hetman (leader) of Ukraine. An educated member of the Ukrainian gentry, he early joined the Ukrainian Cossacks. Elected (1648) hetman of the ZAPOROZYE Cossacks, he led their rebellion against oppressive Polish rule. At first successful, the revolt grew into a national revolution of the Ukrainian people. Two treaties (1649, 1651) with Poland—the second less satisfactory than the first—were broken by the Poles, and the war dragged on. As compromise with Poland proved to be impossible, Chmielnicki's objective came to be an independent Ukrainian state, for aid he turned to Czar Alexis of Russia. In 1654 at Pereiaslav (renamed Pereyaslav-Khmelnitski in 1944), Ukraine was proclaimed a protectorate of Moscow and recognized as autonomous. The alliance ultimately led to the destruction of Ukrainian autonomy, its immediate result was resumption of the war, ending only in 1667 with the Treaty of Andrusov, which partitioned Ukraine between Poland and Russia. See George Vernadsky, *Bohdan, Hetman of Ukraine* (1941).

Choate, Joseph Hodges, 1832–1917, American lawyer and diplomat, b. Salem, Mass., nephew of Rufus Choate. After being admitted (1855) to the bar, he moved to New York City. His legal career lasted over

50 years and included many famous cases, his brilliant presentation of cases won him an unrivaled reputation. Choate twice helped to arouse New York City to defeat Tammany Hall—in 1871, when the Tweed Ring was exposed, and again in 1894. He was president (1894) of the New York state constitutional convention and helped win public approval of the new constitution. In 1899 President William McKinley appointed him ambassador to Great Britain, and he served for six years with distinction, helping to promote Anglo-American friendship. In 1907 he headed the American delegation to the Second Hague Conference. See his autobiography, *Boyhood and Youth* (1917), biographies by T. G. Strong (1917) and E. S. Martin (2 vol., 1920).

Choate, Rufus, 1799–1859, American lawyer and Congressman, b. Essex co., Mass., uncle of Joseph Hodges Choate. Admitted to the bar in 1823, Rufus Choate gained national reputation as a lawyer and as an orator. He served (1830–34) in the U.S. House of Representatives and sat (1841–45) in the U.S. Senate, completing the unexpired term of his friend Daniel Webster. See biography by C. M. Fuess (1928, repr. 1970).

Chocano, José Santos (hōsā' san'tōs chōkā'nō), 1875–1934, Peruvian poet and revolutionary, one of the leaders of MODERNISMO. He gave an *indianista* (pro-Indian) slant to modernism, as in the poem "Quien sabe?" (1913). His most popular volume, *Alma America* [the soul of America] (1906) led Rubén Darío, the greatest of the *modernistas*, to develop native themes. Chocano was a notorious rake and a strident nationalist. Vigorous, eloquent, at times bombastic, Chocano did not restrict himself to *modernista* forms. Well-known collections of his poetry are *Fiat Lux* (1908) and *Primicias de oro de Indias* [first fruits of gold from the Indies] (1934). Having killed a political enemy, Chocano moved to Chile where he was himself murdered.

chocolate, general term for the products of the seeds of the CACAO or chocolate tree, used for making beverages or confectionery. The flavor of chocolate depends not only on the quality of the cocoa nibs (the remainder after the seeds are fermented, dried, and roasted) and the flavorings but also on a complex process of grinding, heating, and blending. The chocolate liquid formed in an intermediate stage is used in the confectionery trade as a covering for fruits, candies, or cookies, or the process may be continued and the resulting smooth mass of chocolate molded, cooled, and packaged as candy. It should be hard enough to snap when broken, have a mellow flow when melting, be free of gritty particles, and have a rich, dark color and an aromatic smell and flavor. The making of chocolate confectionery is in itself a well-developed industry of considerable commercial importance, employing highly specialized processes and machinery. A chocolate beverage was known to the Aztecs and through Spanish explorers found (c.1500) its way into Europe. In 1657 a shop was opened in London where chocolate was sold at luxury prices, sometimes as high as 15s a pound. It became a fashionable drink, many shops sprang up to become centers of political discussion and grew into famous clubs, such as the Cocoa Tree. Chocolate was first manufactured in the United States at Milton Lower Mills, near Dorchester, Mass., in 1765. About 1876, M. D. Peter of Vevey, Switzerland, perfected a process of making milk chocolate by combining the cocoa nib, sugar, fat, and condensed milk. It is a popular ingredient in custards, puddings, pastry, cakes, mousses, ice creams, and sauces as well as in confectionery. The United States has the world's largest chocolate-manufacturing industry. See P. P. Gott, *All About Candy and Chocolate* (1958), B. W. Minifie, *Chocolate, Cocoa and Confectionery* (1970).

Choctaw Indians (chōk'tō), North American Indians whose language belongs to the Muskogean branch of the Hoka-Siouan linguistic stock (see AMERICAN INDIAN LANGUAGES). They formerly occupied central and S Mississippi with some outlying groups in Alabama, Georgia, and Louisiana. Choctaw culture was similar to that of the Creek and Chickasaw Indians, who were their enemies in repeated wars. The Choctaw economy, unlike that of the Chickasaw, was based on agriculture, and the Choctaw were perhaps the most competent farmers in the Southeast. Friendly toward the French colonists, the Choctaw were their allies in wars against other tribes. After being forced to cede their lands in Alabama and Mississippi, they moved (1832) to the Indian Territory in Oklahoma, where they became one of the Five Civilized Tribes. See Angie Debo, *The Rise and Fall of the Choctaw Republic*

(3d ed. 1967), A. H. DeRosier, *The Removal of the Choctaw Indians* (1971), W. D. Baird, *Peter Pitchlynn: Chief of the Choctaws* (1972).

Choderlos de Laclos: see LACLOS, PIERRE AMBROISE FRANÇOIS CHODERLOS DE

Chodowiecki, Daniel Nikolaus (da'nēēl nē'kōlous khōdōv'yēt'skē), 1726–1801, German painter and engraver, b. Danzig. He was the most popular illustrator of his day in Prussia. *The Departure of Jean Calas* (1767) is his most famous painting. It is as an engraver, however, that Chodowiecki is best known. His book illustrations include designs for Schiller's *Räuber*, Cervantes's *Don Quixote*, Goldsmith's *Vicar of Wakefield*, and Shakespeare's works.

Chofu (chō'fō), city (1970 pop. 157,488), Tokyo Metropolis, E central Honshu, Japan, on the Tama River. It is a residential suburb of Tokyo.

choir [O Fr.] 1 A group of singers, traditionally the chorus organized to sing in a church. Usually, Roman Catholic, Anglican, and Lutheran choirs are composed of men and boys, but occasionally in these churches and customarily in other Protestant churches men and women form the choir. 2 That division of an organ usually used to accompany the singers, played from the lowest manual on the console. 3 A section of a chorus or orchestra, as the contrasted choirs of polychoral music, or brass choir, woodwind choir. 4 That part of a church reserved for the singers and the officiating clergy in a cathedral or abbey, the same area in a parish church is the chancel. See STALL.

choir stall: see STALL

Choiseul, César, comte Du Plessis-Praslin, duc de (sāzar' kōnt' du plēsē-prālān' duk dā shwazol'), 1598–1675, marshal of France, diplomat, and soldier. He served as ambassador to Turin and commanded the army in Lombardy during the Thirty Years War. In the FRONDE he sided with Cardinal Mazarin and defeated the vicomte de Turenne at Rethel (1650). Choiseul negotiated the Anglo-French alliance of 1670.

Choiseul, Étienne François, duc de (ātyēn' fra'nswā'), 1719–85, French statesman. After successful service in the army he entered the diplomatic service and gained support from Mme de Pompadour. As ambassador to Vienna (1757) he strengthened the Austrian alliance by conducting first negotiations toward the marriage of Marie Antoinette with the future Louis XVI. Later, in his capacity as minister of foreign affairs (1758–70), Choiseul negotiated the FAMILY COMPACT and the Treaty of Paris at the end of the Seven Years War, and he annexed Lorraine (1766) and Corsica (1768). As minister of war (1761–70) and of the navy (1761–66) he reorganized the fighting forces and introduced reforms. He supported the publication of the *Encyclopédie* and aided suppression of the Jesuits, which weakened his position at court. A clique surrounding King Louis XV's mistress, Mme Du Barry, caused his exile from court (1770). See his memoirs (1790), biography by R. H. Soltan (1909).

chokercherry: see CHERRY

chokedamp: see DAMP

Chola (chō'lā), S Indian dynasty, whose kingdom was mainly on the Coromandel Coast. Its chief capitals were at Kanchi (Kanchipuram) and TANJORE. The Chola kingdom was one of the three of ancient Tamil tradition, but the dynasty had been virtually submerged for centuries when at the end of the 9th cent. A.D. it rose again. Under the famous rulers Rajaraja I (reigned 985–1014) and Rajendra I (reigned 1014–42) Chola power reached its zenith. The former conquered Kerala and occupied N Ceylon (now Sri Lanka), the latter completed the conquest of Ceylon, invaded Bengal, and sent out a great naval expedition that occupied parts of Burma, Malaya, and Sumatra. For 300 years the Chola kingdom supported a flourishing social and economic life, marked by a flowering of Hindu culture. Its greatest architectural monument is an 11th-century temple at Tanjore, which was dedicated to Shiva in celebration of a military victory. By the 13th cent. the kingdom was in decline, and the dynasty ended in 1279.

cholera or **Asiatic cholera**, acute infectious disease of the intestines, occurring in warm regions. It results when food and water supplies are contaminated with feces containing the bacterium *Vibrio comma*. Overwhelming dehydration brought about by severe diarrhea and vomiting is the outstanding characteristic of the disease and is the main cause of death. Cholera has a short incubation period (two or three days) and runs a quick course. In untreated cases the death rate is high, averaging 50%, and as

high as 90% in epidemics, but with effective treatment the death rate is less than 3%. The intravenous replacement of body fluids and essential electrolytes and the restoration of kidney function are more important in therapy than the administration of antibacterial drugs. In regions of Asia where public sanitation is poor the disease is still endemic or epidemic.

cholesterol (kalēs'tarōl'), fatty substance found in the body tissues of vertebrates, it is only sparingly soluble in water, but much more soluble in some organic solvents. A STEROID, large concentrations of cholesterol are found in the brain, spinal cord, and liver. The liver is the most important site of cholesterol biosynthesis, although other sites include the adrenal glands and reproductive organs. By means of several enzymatic reactions, cholesterol is synthesized from ACETIC ACID, it then serves as the major

precursor for the synthesis of vitamin D at the surface of the skin, of the various steroid HORMONES, including CORTISOL, CORTISONE, and ALDOSTERONE in the ADRENAL GLANDS, and of the sex hormones progesterone, estrogen, and testosterone. Cholesterol is secreted in the liver secretion BILE, it sometimes crystallizes in the GALL BLADDER to form gallstones. The insolubility of cholesterol in water is also a factor in the development of atherosclerosis, the pathological deposition of plaques of cholesterol and other LIPIDS on the inside of major blood vessels that is associated with heart disease (see CORONARY HEART DISEASE). Unfortunately, the relationship between cholesterol and heart disease is not completely understood, although it has been shown that decreasing the amount of saturated, or animal, fats in the diet will cause a decrease in serum lipid and cholesterol levels, it has not yet been experimentally established that a reduction of serum lipids will actually delay atherosclerosis or coronary artery disease.

Cholet (shōlā'), city (1968 pop. 41,766), Maine-et-Loire dept., W France, in Poitou, on the Maine River. Cholet, a livestock market, has textile, metallurgical, and other industries. It was totally destroyed during the VENDEE wars.

choline: see VITAMIN

Cholon (chōlōn', Fr. shōlōn'), city, since 1932 part of SAIGON, South Vietnam, on the right bank of the Saigon River, a tributary of the Dong Nai. Adjacent to Saigon, with which it is connected by rail, road, and canal waterways, Cholon is an industrial center with many rice mills and factories. Founded c. 1780 by Chinese immigrants seeking to escape the civil disorders of Annam, it became a busy trading port long before Saigon was developed by the French. It is still largely a Chinese city, containing around two thirds of South Vietnam's entire Chinese population. Heavy fighting there during the 1968 Tet offensive in the VIETNAM WAR severely damaged the city. **Cholula** (chōlōō'lā), city (1970 pop. 20,913), Puebla state, E central Mexico. The site of the famous *Teocalli de Cholula*, a pre-Columbian pyramid of great antiquity, the city was an old Toltec center and, when the Spanish came, was an Aztec sacred city devoted to the worship of Quetzalcoatl. Suspecting native insurrection, Hernán Cortés destroyed the city in 1519, from 5,000 to 10,000 Indians were killed in the massacre of Cholula. Cortés then vowed to build a church for each of the 400 Aztec shrines, 70 were in fact built, one atop the pyramid. The picturesque city remains a place of pilgrimage and attracts many tourists.

Chomo Lhari (chōmōl'hū'rē, chōmāl'hā'rē), peak, 23,997 ft (7,314 m) high, on the Bhutan-China border, in the Himalayas. It is sacred to the Tibetans.

Chomsky, Noam (nōm chōm'skē), 1928–, educator and linguist, b. Philadelphia. Chomsky has taught at Massachusetts Institute of Technology since 1955 and has developed a theory of generative grammar that has revolutionized the scientific study of lan-

guage. Instead of starting with minimal sounds, as the structural linguists had, Chomsky began his abstract analysis of language, set out in his doctoral dissertation *Syntactic Structures* (1957), with the rudimentary or primitive sentence. This formed his basis for deriving innumerable syntactic combinations by means of a complex series of transformational rules. His other principal linguistic works include *Current Issues in Linguistic Theory* (1964), *Aspects of a Theory of Syntax* (1965), *Cartesian Linguistics* (1966), *The Sound Pattern of English* (with Morris Halle, 1968), *Language and Mind* (1972), and *Studies on Semantics in Generative Grammar* (1972). Among his political writings are *American Power and the New Mandarins* (1969), *At War with Asia* (1970), and *Peace in the Middle East?* (1974).

Chomutov (khō'mōōtōf), Ger. Komotau, city (1970 pop. 40,561), NW Czechoslovakia, near the East German border. Chomutov is an industrial center in a lignite-mining region and has steelworks and industries manufacturing machine tools, chemicals, paper, and glass. Chartered in 1396, it was disputed by Roman Catholics and Protestants in the 16th cent. In the city are the 13th-century Church of St. Catherine and a 16th-century town hall with a museum.

Chonan (chūn'ān'), city (1970 est. pop. 78,000), W South Korea. It is a railroad hub and a mining and agricultural center.

chondrite see METEORITE

Chone (chō'nā), town (1962 est. pop. 12,800), W Ecuador. Cacao, ivory nuts, and panama hats are shipped through Chone.

Chongjin or Chungjin (both chūng'jēn'), Jap. Seishin, city, NE North Korea, an ice-free port on the Sea of Japan. It was developed in the 1930s by the Japanese as an iron and steel center. The city has metallurgical plants, chemical factories, sawmills, and fish canneries.

Chongju (chūng'jōō'), city (1970 pop. 143,944), capital of North Chungchong prov., W central South Korea. It is a transportation hub and a marketing and processing center for the surrounding agricultural region. Rice milling, the production of fertilizers and textiles, and the brewing of sake (rice wine) are the city's major industries.

Choniates, Michael: see ACOMINATUS, MICHAEL

Choniates, Nicetas: see ACOMINATUS, NICETAS

Chonju (chūn'jōō'), city (1970 est. pop. 263,000), capital of North Cholla prov., SW South Korea. It is a transportation and agricultural center in the heart of the country's most densely populated and richest rice-growing area. Food processing and textile manufacturing are the chief industries. The city was the capital of the Hu Paekju dynasty (892-936). The founder of the Yi dynasty, Korea's last imperial line, is buried in Chonju.

Chopin, Frederic François (frādrāk' fraNswa' shō-pān'), 1810-49, composer for the piano, b. near Warsaw, of French and Polish parentage. With his lyrical, often melancholy, compositions, he brought romantic piano music to unprecedented heights of expressiveness. A prodigy as a pianist and a composer, he began performing at aristocratic salons in Warsaw, and in 1826 he began fulltime studies at the Warsaw Conservatory. After concert appearances in Vienna and Munich, he settled in Paris, where he gave his first concert in 1831. Although he remained always devoted to Polish culture and artists, he never returned to his homeland. In Paris he became closely associated with the principal composers, artists, and literary figures of his time. He was a virtuoso interpreter of his own works, but his dislike of playing in public made him prefer teaching and composing to the concert stage. In 1836, Liszt introduced him to Mme. Dudevant, better known by her pen name GEORGE SAND, with whom he spent the winter of 1838-39 in Majorca, there, despite worsening pulmonary illness, he wrote his 24 preludes, which are counted among his finest compositions. The stormy affair with the novelist lasted until 1847, by which time Chopin's illness had developed into tuberculosis. He made a last concert tour through Great Britain in 1848. Chopin established the piano as a solo instrument free from choral or orchestral influence. Even in the piano concertos in E Minor (1833) and in F Minor (1836), the orchestra is completely dominated by the piano. Other major works include the sonatas in B Flat Minor (1840) and B Minor (1845), and two sets of études (1833, 1837). Because of their highly romantic quality, some of his works have become known by descriptive titles that he did not give them, they were published simply as nocturnes, scherzos, ballades, waltzes, impromptus, fantasies, and the like. Polish nationalism is evident in his many polonaises and mazurkas. His

last concert was a benefit performance for Polish refugees, and at his funeral in Paris, Polish soil was strewn on his grave. See his selected correspondence ed. by B. E. Sydow (1962), biographies by F. Niecks (2 vol., 1888, repr. 1973), H. Weinstock (1949), and A. Walker, ed. (1966), studies by G. Abraham (1939), André Gide (1949), and D. Branson (1972).

Chopin, Kate O'Flaherty (shō'pān'), 1851-1904, American author, b. St. Louis. Of Creole-Irish descent, she married (1870) a Louisiana businessman and lived with him in Natchitoches parish and New Orleans. In these places she acquired an intimate knowledge of Creole and Cajun life, upon which she was to draw in many of her stories. After her husband's death in 1883, she returned with their six children to St. Louis and there began to write. Two collections of tales, *Bayou Folk* (1894) and *A Night in Acadie* (1897) earned her a reputation as a local colorist, but her novel *The Awakening* (1899) caused a storm of criticism because of its treatment of feminine sexuality. In depicting objectively a woman's confused groping toward self-understanding and self-acceptance, Chopin seemed to threaten the mores of her time although she did not explicitly attack them. Largely ignored for the next 60 years, her work is now praised for its literary merit as well as for its remarkable independence of mind and feeling. See her complete works, edited by Per Seyersted (2 vol., 1969) and the biography by Per Seyersted (1969).

choragic monuments (kārāj'ik, -rāj'-, kō-) [Gr., = of the choragus, the chorus leader], small decorative structures erected in ancient Greece to commemorate the victory of the leader of a chorus in the competitive choral dances. The prize for the competition, a tripod, was placed on the monument, and the date and the name of the performer were usually inscribed. The best known is that of Lycistrates (c. 335 B.C.), still standing in Athens, a graceful circular structure showing one of the early uses of Corinthian columns.

chorale (kōrāl'), any of the traditional hymns of the German Protestant Church. The form was developed after the Reformation to replace the PLAINSONG of the earlier service and as a means of congregational participation in the liturgy. Early chorales were mainly translations of Latin hymns set to folksong melodies. The chorale is strophic, written in simple language, and has a simple melody, but its phrasing and metrical structure are less regular than those of the English hymn. J. S. Bach reworked nearly 400 existing chorales and composed 30 new ones. The major development of the form was thereby concluded although there were some 19th-century additions to the repertory.

Chor-ashan (kōr-ā'shān), one of the places to whose inhabitants David sent spoils of war 1 Sam. 30:30. See ASHAN.

Chorazin (kōrā'zīn), city NW of the Sea of Galilee, denounced by Jesus. Mat. 11:21, Luke 10:13.

chord, in geometry, straight line segment both end points of which lie on the circumference of a circle or other curve, it is a segment of a SECANT. A chord passing through the center of a circle is a diameter. In the same circle or in equal circles, equal chords subtend equal arcs and equal central angles.

chord, in music, two or more simultaneously sounding pitches. In tonal music the fundamental chord is called the triad. It consists of three pitches, two at the interval of seven semitones and a third either three or four semitones from the lower, forming respectively the major or minor triad.

Chordata (kōrdā'tā, -dā'-), phylum of animals having a notochord, or dorsal stiffening rod, as the chief internal skeletal support at some stage of their development. Most chordates are vertebrates (animals with backbones), but the phylum also includes some small marine invertebrate animals. The three features unique to chordates and found in all of them at least during early development are the notochord, composed of gelatinous tissue and bound by a tough membrane, a tubular nerve cord (or spinal cord), located above the notochord, and gill slits leading into the pharynx, or anterior part of the digestive tract (the throat, in higher vertebrates). In addition, all have blood contained in vessels, and the tunicates and vertebrates have a ventrally located heart. All have a postanal tail, that is, an extension beyond the anus of the notochord or backbone and of the body-wall musculature, containing no internal organs. In vertebrates—animals of the subphylum Vertebrata—a backbone of bone or cartilage segments called vertebrae develops around the

notochord, its upward projections partially surround the nerve cord. In many fishes and in early fossil amphibians and reptiles the notochord persists in the adult and is enclosed by the vertebrae, in higher vertebrates, however, it disappears during embryonic development. There are two invertebrate subphyla, the Orophordata, or TUNICATES, and the Cephalochordata, or lancelets. A third invertebrate group, comprising the acorn worms and their relatives, shows affinities with chordates and has sometimes been considered a chordate subphylum, but is now often classified in a phylum of its own, the HEMICHORDATA.

Subphylum Orophordata. The tunicates are marine, filter-feeding animals. The most prominent tunicates are the sea squirts (class Ascidiacea), which show affinities to other chordates only in the juvenile stage. Adult sea squirts are sessile (attached), globular or tubular animals, often with prominent incurrent and excurrent siphons, many kinds grow in colonies. Most of the body of the adult is occupied by a very large pharynx with numerous gill slits that act as a sieve for food. Water taken into the incurrent siphon enters the pharynx and passes out through the gill slits, leaving food particles trapped in the pharynx. A groove in the pharynx called the endostyle secretes mucus that traps the particles and conveys them into the digestive tract, the movement of the mucus is caused by the action of cilia. Water leaves the atrium, a sac surrounding the pharynx, by way of the excurrent siphon. Thus the gill slits in tunicates serve a feeding function, not a respiratory function. The sea squirt larva is a free-swimming animal resembling a tadpole. The head, which will become the entire body of the adult, contains a rudimentary brain and sense organs, a small pharynx and digestive tract, and a ventral heart. Incurrent and excurrent openings are located at the top of the head. The tail is a muscular appendage that functions as a swimming organ. It contains a hollow nerve tube (connected to the brain), and a notochord that extends into the head and keeps the animal from telescoping when its muscles contract. When the larva is ready to undergo metamorphosis it attaches to an object head downward. The tail, notochord, and nerve cord degenerate, the pharynx enlarges, and the other organs shift in position, the incurrent and excurrent openings develop siphons. There are two other classes of tunicates, both consisting of small planktonic animals. The salps (Thaliacea) metamorphose into barrel-shaped adults that swim by muscular contractions. The larvaceans (Larvacea) are neotenous, that is, they achieve sexual maturity and reproduce without losing the larval form. Many zoologists believe that tunicates of the sea squirt type were the first chordates and that the larval tail, with its notochord and nerve cord, was evolved as a means of dispersing their larvae. According to this theory, the later chordates, including the vertebrates, are descended from neotenous tunicates that, like the larvaceans, failed to assume the adult form.

Subphylum Cephalochordata. This class includes the several species of lancelets, or amphioxys, small, fish-like, filter-feeding animals found in shallow water. A lancelet has a long body, pointed at both ends, with a large notochord that extends almost from tip to tip and is present throughout life. At one end is a mouth surrounded by prominent bristles and leading into a pharynx. The pharynx has gill slits, an endostyle similar to that of a sea squirt, and an atrium surrounding the pharynx. Water enters the mouth and leaves through the gill slits, and food is trapped in the pharynx. The dorsal, tubular nerve cord is slightly enlarged in the anterior region, forming a rudimentary brain. Nerves extend from the nerve cord to other parts of the body. The muscles, as in fishes, are a series of cone-shaped blocks that fit into each other like stacked paper cups. This is the most primitive occurrence of the segmental body wall structure characteristic of lower vertebrates. The colorless blood moves forward through a ventral vessel and back through a dorsal vessel, in the typical chordate pattern. There is no major heart, although many small enlargements of the vessel serve the function of hearts. There are no blood cells and no respiratory pigments. The excretory system, like that of many invertebrates, consists of segmentally arranged nephridia, there is no kidney. The gonads, unlike those of any other chordate, are numerous and segmentally arranged.

Subphylum Vertebrata. Vertebrates constitute the vast majority of living chordates, and they have evolved an enormous variety of forms. The backbone of vertebrates protects the nerve cord and serves as the axis of the internal skeleton. The skel-

eton provides strength and rigidity to the body and is an attachment site for muscles. The vertebrae in the middle region of the trunk give rise to pairs of ribs, which surround and protect the internal organs. A cartilaginous or bony case encloses the brain. Bone is a substance unique to vertebrates. It was formerly thought that vertebrates with cartilage skeletons (cyclostomes and sharklike fishes) were descended from early vertebrates that had not yet developed bone. However, very primitive fishes with bone skeletons are known from the fossil record, so lack of bone is now believed to be a degenerate rather than a primitive feature. All but the most primitive vertebrates, known as jawless fishes, have jaws and paired appendages. The fishes and, to a lesser extent, the amphibians and reptiles, show a segmental arrangement of the muscles of the body wall and of the nerves leading to them. There are eight vertebrate classes. Four are aquatic, and may be grouped together as the superclass Pisces, or FISH; four are terrestrial or (in the case of amphibians) semiterrestrial, and may be grouped as the superclass Tetrapoda, or four-footed animals. Fishes breathe water by means of gills located in internal passages, although they may also have lungs as supplementary air-breathing organs. Most move through the water by weaving movements of the trunk and tail. All have fins, and most have two sets of paired fins (pelvic and pectoral). Tetrapods breathe air, usually by means of lungs, and never have gills as adults, although the amphibians go through a gilled, water-breathing stage. Except where the appendages have been lost, as in snakes, all have two pairs of limbs, generally used for locomotion; these are homologous to the pelvic and pectoral fins of fish.

Class Agnatha. The Agnatha, or jawless fishes, are the oldest known vertebrates. The only surviving members of this class are the HAGFISH and LAMPREYS, known as cyclostomes. Cyclostomes have long, slender bodies with dorsal, ventral, and caudal (tail) fins, all in the median plane. Although in their lack of jaws or paired lateral appendages they represent a very primitive stage of vertebrate development, the modern cyclostomes are highly adapted for their particular ways of life. The hagfish is a specialized scavenger, and the lamprey is a parasite on other fishes. The lamprey has a round mouth without skeletal supports, a rasping tongue, and a single, dorsally located nostril. The gill passages are enlarged to form pouches and are lined with gill filaments that serve as a surface for the exchange of respiratory gases; in vertebrates the gill passages have acquired a respiratory function. In cyclostomes, as in all fishes, water is taken in through the mouth and expelled through the gill passages, as water passes over the thin-walled gill filaments, dissolved oxygen diffuses into the blood, and carbon dioxide diffuses out. The lamprey has a notochord extending from the head to near the tip of the tail. A few cartilaginous blocks around the notochord constitute the bare rudiments of a backbone, a cartilage frame-

work supports the gill region, and there is a rudimentary cartilage braincase. The meagerness of the skeleton is considered a degenerate, not a primitive condition. The larva of the manne lamprey is a small animal, resembling a lancelet, that uses the pharynx and gill passages for filter-feeding. It metamorphoses into the adult form before migrating to the sea. The extinct relatives of the cyclostomes, called ostracoderms, were jawless fishes with bony armor and in some cases a well-developed bony skeleton. **Class Placodermi.** The placoderms, an entirely extinct group of armored fishes, were the first jawed vertebrates. Jaws enabled vertebrates to become predators, an important factor in the later development of active, complex forms. The placoderms were also the first vertebrates to have the two pairs of lateral appendages (supported by pelvic and pectoral girdles) that characterized all later vertebrate groups. These primitive paired fins gave rise to the pelvic and pectoral fins of modern fishes and to the limbs of four-footed animals. The ostracoderms are thought to have given rise to both the sharklike and the bony fishes.

Class Chondrichthyes. The almost exclusively marine SHARKS, RAYS, and CHIMAERAS of the class Chondrichthyes have skeletons made of cartilage. The mouth, equipped in most sharks with numerous sharp teeth, is located on the underside of the head. Passages called gill arches lead from the pharynx to the exterior and are lined with gill filaments. The gill arches are supported by gill bars. Except in chimaeras, the external gill slits are not covered and are conspicuous on the surface of the body. The jaw consists of two distinct pieces, the upper part is not fused to the braincase as in higher vertebrates. The tail is asymmetrical, curving upward in a shape found in early fossil fishes and thought to be primitive. There is no lung or swim bladder. The skin is studded with toothlike structures called denticles. Sharks have typical vertebrate kidneys that excrete a very dilute urine consisting mostly of water, presumably the earliest vertebrates (ancestral to sharks) evolved in fresh water, where this function is necessary to maintain the correct concentration of the physiologically important salts in the tissues against the tendency for them to be diluted by the inward diffusion of water. In marine species, on the other hand, it is necessary to prevent the concentration of those salts from increasing. Although the kidneys of sharks pump out water, their body fluids contain ammonia in concentrations high enough to make the osmotic pressure equal to that of sea water; this prevents the inward diffusion of salts. Sharks have internal fertilization and lay large eggs, well supplied with yolk and protected by leathery shells. In a few species the eggs are hatched within the body. **Class Osteichthyes.** The bony fish of the class Osteichthyes are the predominant class of living fishes. In this group the bony skeleton has been retained and lungs and swim bladders have evolved. Early bony fishes evolved in fresh water under conditions of periodic drought and stagnation and developed

an internal, moisture-retaining organ, the lung, for gas exchange. Those fishes gave rise to two lines of descendants. Members of one line, the fleshy-finned fish, had thick fins with supporting bones, used for crawling. The only survivors of that group are the coelacanth, or LOBEFIN, which has a vestigial lung and crawls on the sea floor, and the freshwater LUNGFISHES of drought-ridden areas, which can crawl over land in search of water and even live out of water for several years. Early fleshy-finned fish gave rise to the first land vertebrates, the amphibians. The second line, the ray-finned fish, constitutes the predominant modern group. Ray-finned fish are highly specialized for aquatic life; they have developed thin, lightweight fins supported by slender rays, and used only for balance and steering. The lung, a ventral outpocketing of the pharynx, was no longer necessary as these fish invaded fresh waters and oceans throughout the world; it shifted to a dorsal position and evolved into a hydrostatic organ called the swim bladder, or air float. The swim bladder, along with the strong, lightweight skeletal construction, makes ray-finned fishes much lighter-bodied than sharks. The gill passages of ray-finned fishes resemble those of sharks, but have a bony covering, called the operculum, over the external gill slits. Ray-fins have a typical vertebrate kidney which, in freshwater forms, maintains the proper salt concentration in the tissues by excreting excess water. In the marine forms the activity of the kidney is offset by the activity of salt-secreting glands; in addition, the kidney may be modified so as to produce a more concentrated urine. The heart, like that of sharks, has two chambers, and there is no separation of oxygenated and deoxygenated blood in the circulatory system. A few primitive ray-fins (the sturgeon, the paddle fish, and the bowfin) have asymmetrical tails and thick scales regarded as primitive in construction. The higher ray-fins, or teleosts, have more or less symmetrical tail fins extending above and below the vertebral column, and typical fish scales made of very thin layers of bone. Most marine teleosts produce enormous numbers of small eggs that are externally fertilized and float in plankton; only a few of these survive. In many species there is a larval stage that is quite dissimilar to the adult. Teleosts have evolved a tremendous variety of forms and occupy very diverse ecological niches, both freshwater and marine.

Class Amphibia. The AMPHIBIANS, the first vertebrates to have limbs, evolved during the Devonian period. They are only partially terrestrial. Their externally fertilized eggs are laid in fresh water, and they go through a gilled, aquatic larval stage (the tadpole stage) before metamorphosing into land-living adults. The skin of the adult is water-permeable, and the animal must live in a moist environment to prevent desiccation. The adult usually breathes by means of lungs, although some breathe directly through the skin. The heart is a three-chambered structure that creates a partial separation between oxygenated blood, destined for the body tissues, and depleted blood, destined for the lungs; this provides better oxygenation than a system in which the two kinds of blood mix. There are only three groups of amphibians living today. The SALAMANDERS are closest to the basic amphibian stock in form and in method of locomotion. Although supported by limbs, they move with a wriggling motion similar to that of a fish. The FROGS and TOADS are specialized for jumping, with long, muscular hind legs, while the tropical CAECILIANS are burrowing forms that have lost all but vestigial traces of their limbs.

Class Reptilia. The REPTILES, which evolved from amphibians during the Carboniferous period, were the first vertebrate group to become entirely independent of water. This was made possible by the development of a scaly, water-resistant skin and of the terrestrial, or amniote, type of egg found in all higher land vertebrates. The amniote egg has an elaborate series of internal membranes (one of which is called the amnion) surrounding a pool of liquid in which the embryo develops; the membranes prevent desiccation and allow inward diffusion of oxygen. Reptilian eggs have porous shells and large amounts of yolk. Fertilization is internal. In most cases the eggs are laid unhatched; in a few species they are retained and hatched in the body. Reptiles, including such forms as turtles and sea snakes that have returned to an aquatic life, are air-breathing at all stages, and nearly all lay their eggs on land. Gill passages appear, as in birds and mammals, only in the embryo. During the Mesozoic era, reptiles were exceedingly diverse and numerous. The reptilian DINOSAURS included the largest terrestrial animals that have ever lived, as well as many smaller forms. There were also flying and aquatic

Common features in representative groups of the phylum Chordata

reptiles With the rise of the early mammals the decline of the reptiles began The only large and successful modern group of reptiles is the order of LIZARDS and SNAKES Snakes are descended from lizards, but have lost their limbs Reptiles, like fish and amphibians, are cold-blooded, that is, they have little ability to regulate their body temperature, which approaches that of the environment The reptiles gave rise to the two warm-blooded vertebrate groups, the birds and the mammals

Class Aves The BIRDS evolved from reptiles in the Jurassic period Their front limbs are modified into wings, and the breastbone is greatly enlarged to support flight muscles They have an insulating covering of feathers, which has been an important factor in their ability to regulate body temperature The other advance that enabled birds to become warm-blooded was the evolution of a four-chambered heart, making the circulatory system a complete double circuit oxygenated blood is pumped from the lungs to the tissues, and deoxygenated blood is pumped from the tissues to the lungs The only major group besides insects to invade the air, birds are much less restricted by external temperature requirements than cold-blooded animals, and they have spread throughout every part of the world They live in many kinds of habitat and have evolved a diversity of forms Some have become flightless terrestrial animals, while others are aquatic, using their wings for swimming instead of or in addition to flying Fertilization is internal The eggs of birds are similar to those of reptiles, but parental care of the eggs and young is highly developed

Class Mammalia The MAMMALS also arose from reptiles in the Jurassic period and are now the dominant form of terrestrial vertebrate life Like the birds, they have a four-chambered heart and a double-circuit circulatory system, and are able to regulate body temperature In the case of mammals the insulating covering is provided by hair, a feature unique to the class, although in a few forms (particularly in marine species) nearly all the hair is lost, and insulation is provided by fat A second distinguishing characteristic of mammals is the production of milk by the females for the nourishment of the young All mammals have internal fertilization, and all but the most primitive (the egg-laying MONOTREMES of Australia) bear live young The mammalian egg contains little yolk In the MARSUPIALS the young are born at an extremely undeveloped stage and continue to develop in a milk-supplied pouch In the vastly more numerous placental mammals nourishment is passed from the circulatory system of the mother to that of the embryo by means of a placenta, and the young are born well-developed Most mammals have highly evolved sense organs and larger brains than other vertebrates As a group they display great adaptability to a variety of conditions and have spread to all regions of the world The earliest placental mammals were small animals of the INSECTIVORE type, but adaptive radiation has resulted in great diversity of forms and ways of life Some mammals are predators, others are herbivores with specialized digestive systems Some have taken up an aquatic existence and a few marine forms (whales and sirenians) even give birth at sea Members of one group, the bats, have developed membranous wings supported by elongated fingers and lead an aerial existence The PRIMATES, the group that includes man, are fairly close to the original mammalian type in general structure (for example, they have five fingers and toes and walk flat on the sole of the foot), but they have undergone great evolutionary advances in the development of the brain, vision, and manual dexterity See M T Jollie, *Chordate Morphology* (1962), C K Weichert, *Anatomy of the Chordates* (4th ed 1970)

chorea (karē'ə, kō-) or **St. Vitus' dance**, acute disturbance of the central nervous system characterized by involuntary muscular movements of the face and extremities The disease, known also as Sydenham's chorea (not to be confused with Huntington's chorea, a hereditary disease of adults), is usually, but not always, a complication of RHEUMATIC FEVER Sydenham's chorea, a disease of children, especially females, usually appears between the ages of 7 and 14 Facial grimacing and jerking movements persist for 6 to 10 weeks and sometimes recur after months, or even years Eventually the symptoms disappear Although there is no specific treatment, sedatives and tranquilizers are helpful in suppressing the involuntary movements

choriocarcinoma: see NEOPLASM

Chorley, municipal borough (1971 pop 31,609), Lancashire, NW England Manufactures include cotton

goods and cotton mill machinery, rayon goods, rubber products, and footwear Nearby is Leyland, one of England's chief automotive centers

Chorotega (chōrōtā'ga), aboriginal Indians and language group of Honduras, Nicaragua, and Costa Rica Little is known of the Chorotega, primarily because of the absence of extensive ruins Contemporaneous with the Maya to the northwest, they inhabited principally the ULUA River valley and the MOSQUITO COAST With other tribes to the south and the CHIBCHA of Colombia, they formed a cultural link between the peoples of the Andean area and those of Mexico The Chorotega were probably democratic, with a chief chosen by elected council Chorotega culture became extinct in the Spanish colonial period

chorus, in the drama of ancient Greece Originally the chorus seems to have arisen from the singing of the DITHYRAMB, and the dithyrambic chorus allegedly became a true dramatic chorus when THESPIUS in the 6th cent B C introduced the actor First the chorus as a participating actor tied the histrionic interludes together, later, as a narrator, it commented on the action and divided it, creating acts And as tragedy developed the chorus shrank in size and actors increased in number Aeschylus began with a chorus of 50, but the number was soon decreased to 12 Sophocles used a chorus of 15 In the 3d cent B C the comic chorus contained only seven persons and in the 2d cent B C only four, the tragic chorus having disappeared altogether The chorus had ceased to play a vital part in the drama, Euripides assigned to it lyrics not necessarily integrated with the action Ultimately it was dispensed with in comedy as well

chorus, in music, large group of singers performing in concert, a group singing religious music is a CHOIR The term *chorus* may also be used for a group singing or dancing together in a musical or in ballet By extension it is also used to mean the refrain of a song Choral music has stemmed from religious and folk music, both usually having interspersed solo and group singing The chorus as a musical form is integral to opera, and since the 19th cent it has also been integrated into compositions such as the symphony Some modern choral groups, such as the Welsh singers, groups presenting spirituals, and the Don Cossack singers, continue the folk-chorus tradition Others are intentionally formed to present all sorts of group vocal works Choral societies grew numerous in the 19th cent, especially in Great Britain, the United States, and Germany Some are created for special purposes, such as festival choruses, many oratorio societies, social and school groups (including Glee clubs), and the Bach Choir of Bethlehem, Pa In the United States, two men who did much to promote choral singing in the 19th cent were William BILLINGS and Theodore Thomas After 1940 there was a marked increase in the popularity of choral groups, usually organized for stage performance, some of these have specialized in concert versions of opera

chorus frog: see TREE FROG

Chorzów (hō'zhōōf), city (1970 pop 151,338), S Poland A rail junction and a center of the Katowice mining and industrial region, it has iron, steel, and nitrogen plants, zinc foundries, and factories producing heavy machinery Formerly known as Krolewska Huta (Ger *Königshütte*), it passed from Germany to Poland in 1921 The city has a huge sports stadium

Chosen: see KOREA

Choshi (chō'shē), city (1970 pop 90,415), Chiba prefecture, central Honshu, Japan, on the Kashimada Sea at the mouth of the Tone River It is a fishing center and the major port of Chiba prefecture Great quantities of soy are produced in Choshi

Chosroes: see KHOSRU

Chotts, Plateau of the (shōts) [Arab, = salt lake], plateau region of the Atlas Mts, alt c 3,500 ft (1,070 m), N Algeria, N Africa The plateau is c 125 mi (200 km) wide in the west, narrowing in the east to become a series of valleys Enclosed by the Tell Atlas in the north and the Saharan Atlas in the south, the region has interior drainage, a semiarid climate, and is dotted with salt lakes and salt flats Its grasslands support nomadic herding The name is also spelled Shotts

Chou (jō), dynasty of China, which ruled, according to traditional dates, from 1122 B C. to 256 B C. or, according to some modern scholars, from c 1027 B C. to 256 B C The pastoral Chou people migrated from the Wei valley NW of the Yellow River c 1027 B C and overthrew the SHANG dynasty From their capital near modern Sian they dominated the N Chi-

na plain between Manchuria and the Yangtze valley By 800 B C., however, the local lords had become strong enough to form separate states, especially in the north and at the mouth of the Yangtze In later times the state of Ch'u controlled the middle Yangtze valley, and the border state of Ch'in grew in the northwest In the 6th cent B C the states of Wu and Yueh became major powers An anarchic period (403 B C-221 B C) of warring states followed, during which the Chou gave up their power to the emerging CH'IN dynasty Despite political disorder, the Chou era was the classical age of China CONFUCIUS, Mo-ti, LAO-TZE, MENCIUS, and Chuang-tze lived then Contemporary writings, notably the *Five Classics* (see CHINESE LITERATURE) and archaeological evidence picture the Chou civilization Iron implements were introduced from W and central Asia and the ox-drawn plow was first used Chou society was sharply divided between the aristocratic warrior class and the peasant masses and domestic slaves Writers of the anarchic period that followed it pictured the early Chou as an age of well-ordered beneficent feudalism, but this may merely reflect their own desire for political unity See Arthur Waley, *Three Ways of Thought in Ancient China* (1939), H G Creel, *The Birth of China* (1954) and Confucius and the Chinese Way (1960)

Chouans (shōō'anz, Fr shwaN) [from Norman French, = owls], peasants of W France who rose against the French Revolutionary government in 1793 One of their first leaders was Jean Cottereau, traditionally nicknamed Jean Chouan, marquis de La Rouerie [John the Owl, marquis of Mischief], and the Chouans supposedly used the hoot of an owl as a signal The movement eventually merged with the contemporary rising in the VENDÉE The name Chouannerie continued to be used in reference to the fierce guerrilla warfare that lasted until put down by Napoleon The so-called Petite Chouannerie persisted until 1815, when Napoleon was forced to divert troops from Waterloo to quell it Honoré de Balzac's novel *Les Chouans* pictures these people vividly

Chou En-lai (jō ēn-lī), 1898-, Chinese Communist leader A member of a noted Mandarin family, he was educated in China at the American-supported Nankai Middle School, and later attended (1917-19) a university in Japan His youthful participation in radical movements brought him several months' imprisonment in Tientsin After his release he studied (1920-22) in France A founder of the Chinese Communist party, he established (1922) the Paris-based Chinese Communist Youth Group, an organization for expatriate Chinese students He lived for a few months in England and then studied in Germany Chou returned (1924) to China and joined Sun Yat-sen, who was then cooperating with the Communists He served (1924-26) as deputy director of the political department at the Whampoa Military Academy, of which CHIANG KAI-SHEK was commandant After the NORTHERN EXPEDITION began, he worked as a labor organizer In 1927 he directed a general strike in Shanghai that laid the city open to Chiang's Nationalist forces Soon after, Chiang broke with the Communists, executing many of his former allies, and Chou became a fugitive from the Kuomintang Chou held prominent military and political posts in the Chinese Communist party, and he participated in the LONG MARCH (1934-35) of the Communist army to NW China During the partial Communist-Kuomintang rapprochement (1936-46) he was the chief Communist liaison officer In 1949, with the establishment of the People's Republic of China at Peking, Chou became premier and foreign minister He headed the Chinese Communist delegation to the Geneva Conference of 1954 and to the Bandung Conference (1955) In 1958 he relinquished the foreign ministry but retained the premiership A practical-minded administrator, Chou has maintained his position through all of Communist China's ideological upheavals, including the Great Leap Forward (1958) and the Cultural Revolution (1966-70) He is believed to be largely responsible for China's reestablishment of contacts with the West in the early 1970s

Chou-K'ou-tien: see PEKING

Chou-shan Archipelago (jō-shān), NE Chekiang prov., China, in the East China Sea, at the entrance to Hangchow Bay It includes the main island of Chou-shan and about 100 lesser islands, Ting-hai on Chou-shan is the major population center The archipelago forms the richest fishing grounds off the China coast The island of Puto (P'u-tō) was a sacred center of Buddhism, with many ancient temples and monasteries

Chouteau (shōōtō'), family of American fur traders. **René Auguste Chouteau**, 1749-1829, b. New Orleans, accompanied (1763) his stepfather, Pierre LA-CLEDE, on a trading expedition to the Illinois country and established (1764) the post that became St. Louis. He continued as chief assistant to LaCledé until the latter's death in 1778, when he took over the management of LaCledé's trading interests. Friendly relations with the Osage Indians enabled him to extend the business considerably, from 1794 to 1802 he held a monopoly on the Osage trade. When the United States acquired Louisiana, Chouteau became a territorial judge and later served as Federal commissioner in negotiating treaties with various Indian tribes. His half-brother, **Jean Pierre Chouteau**, 1758-1849, b. New Orleans, also devoted himself to the fur trade. He worked for René Auguste for many years and extended the trade into present-day Oklahoma, where he established (1796) the first permanent white settlement at Salina. After becoming (1804) U.S. agent for the Osage, he struck out on his own and with others founded (1809) the St. Louis Missouri Fur Company. One of the wealthiest men in St. Louis, he spent the last years of his life on a large plantation outside the city. Two of his sons, Auguste Pierre and Pierre, continued in the fur trade. **Auguste Pierre Chouteau**, 1786-1838, b. St. Louis, who graduated from West Point in 1806, resigned (1807) from the army and became (1809) a member of the St. Louis Missouri Fur Company, taking part in several expeditions. He served as a captain of the territorial militia in the War of 1812. While on a trading expedition to the upper Arkansas River in 1817, he was captured by the Spanish and imprisoned at Santa Fe for several months. After his release he continued to trade with the Osage and made his home at Salina, Okla. In 1832 he led a party including Washington Irving from St. Louis to his post, the journey is described by Irving in *Tour of the Prairies* (1835). **Pierre Chouteau**, 1789-1865, b. St. Louis, early entered his father's business and accompanied him on several expeditions until 1813, when he and a partner formed their own merchandising and Indian trading firm. In 1831 he became a member of Bernard Pratte and Company, which was the Western agent of the AMERICAN FUR COMPANY. With the withdrawal of John Jacob Astor from the American Fur Company in 1834, Pratte, Chouteau and Company bought all the Missouri River interests of the old company. Reorganized (1838) as Pierre Chouteau, Jr. and Company, its business extended from the Mississippi to the Rockies and from Texas to Minnesota until its dissolution in 1864. One of the most powerful men in the West, Chouteau also invested heavily in railroads, rolling mills, and mining. He became one of the leading financiers of his time and lived his later years in New York City.

chow chow, breed of powerful NONSPORTING DOG whose origins are obscure but whose development was accomplished many centuries ago in China. It stands from 18 to 20 in. (45.7-50.8 cm) high at the shoulder and weighs from 50 to 60 lb (22.7-27.2 kg). Its abundant double coat consists of a soft, woolly underlayer and a dense, straight topcoat that stands out from the body. It may be any solid color. The ancestors of the chow chow are believed by some to have been the mastiff of Tibet and the Samoyed. However, because it is the only breed possessing a black tongue, other authorities contend that it is a basic breed and the progenitor of the Samoyed, the Keeshond, the Norwegian elkhound, and the Pomeranian. Whatever the truth of its origins, it was used as an all-purpose hunting dog in China 2,000 years ago. Its name derives from the pidgin-English term for miscellaneous cargo, of which the dog formed a part, brought from China to England in the late 18th cent. It is raised as a companion and house pet. See DOG.

chowder, stew of fish or shellfish with potatoes, onions, and pork (usually salt pork), thickened with crumbled hard bread. It has probably been known in some form to most fishing communities. The name *chowder* seems to have originated from the French word *chaudière* (a large heavy pot used by fishermen to cook soups and stews). The name probably was carried to the French Canadian coasts and traveled from there to New England (noted for its clam chowder) and then south. Each locality on the eastern coast of the United States has its favorite recipe, based on the kinds of fish and vegetables available. The name is extended to include a mixture of vegetables only.

Chozeba (közē'ba) see ACHZIB 2

Chrétien de Troyes or **Chretien de Troyes** (both krātyāN' da trvā), fl. 1170, French poet, au-

thor of the first great literary treatments of the ARTHURIAN LEGEND. His narrative romances, composed c. 1170-c. 1185 in octosyllabic rhymed couplets, include *Érec et Énide*, *Cigès*, *Lancelot, le chevalier de la charette*, *Yvain, le chevalier au lion*, and *Perceval, le conte del Graal*, unfinished (see PARSIFAL). Chretien drew on popular legend and history, and imbued his romances with the ideals of chivalry current at the 12th-century court of Marie de Champagne, to which he was attached. His other surviving works include imitations of Ovid and *Guillaume d'Angleterre*, a non-Arthurian narrative. Translations of the Arthurian romances are included in W. W. Comfort's edition (1913) and in R. S. and L. H. Loomis, *Medieval Romances* (1957). See R. S. Loomis, *Arthurian Tradition & Chretien de Troyes* (1949), P. Haidu, *Aesthetic Distance in Chretien de Troyes* (1968), U. T. Holmes, *Chretien de Troyes* (1970).

Christ: see JESUS

Christadelphians (krīs'tadēl'fēanz) [Gr., = brothers of Christ], small religious denomination founded in the United States in 1848 by John Thomas. Its members live by the Scriptures and await the second coming of Christ on earth, who, they believe, will establish a theocracy with its center in Jerusalem. There is no ordained ministry. Christadelphians do not believe in the Trinity or the existence of hell. They do not vote, hold public office, or participate in war. There are c. 16,000 members in the United States and c. 20,000 members in Canada.

Christchurch, municipal borough (1971 pop. 31,373), Hampshire, S. central England, on Christchurch Bay at the confluence of the Avon and Stour rivers. Its industries include aircraft manufacturing and salmon fishing. Christchurch is also a resort. The town's history dates back to Anglo-Saxon times. Its name derives from the church that was part of the Augustinian priory founded there before the Norman conquest of England. In 1974, Christchurch became part of the new nonmetropolitan county of Dorset.

Christchurch, city (1971 pop. 165,637, urban agglomeration 257,505), E. South Island, New Zealand, at the base of Banks Peninsula. It is the second largest city in New Zealand. Industries include tanning, meat-packing, and woolens manufacturing. Lyttelton, nearby, is the port for Christchurch. The Univ. of Canterbury was founded in the city in 1873. There are Roman Catholic and Anglican cathedrals. Hagley Park contains botanical gardens and museums.

christening: see BAPTISM

Christian I, 1426-81, king of Denmark (1448-81), Norway (1450-81), and Sweden (1457-64), count of Oldenburg, and founder of the Oldenburg dynasty of Danish kings. In 1460 he also succeeded to SCHLESWIG and HOLSTEIN, the terms of the settlement have been cited to justify both Danish and German claims to SCHLESWIG-HOLSTEIN. A weak monarch despite the vastness of his lands, he made large concessions to the nobles, particularly in his German dominions, and barely controlled Sweden (see KALMAR UNION). His attempts to assert his authority in Sweden ended in 1471 with his defeat at Brunkeberg, near Stockholm, by Sten STURE (the elder). He was succeeded by his son John.

Christian II, 1481-1559, king of Denmark and Norway (1513-23) and Sweden (1520-23), son and successor of King John. After several unsuccessful attempts, he asserted claim to Sweden by force. However, his wholesale massacre of Swedish nobles at Stockholm (1520) alienated the Swedes, who raised Gustavus Vasa to the throne as GUSTAVUS I, thus ending the KALMAR UNION. In Denmark, Christian earned the hatred of the nobles and high clergy by thorough reforms in favor of the lower and middle classes, by inviting Lutheran preachers to Copenhagen, and by placing Sigbrit, mother of his Dutch mistress, in charge of the finances of the realm. In 1523 the nobles rebelled (particularly in Jutland), deposed Christian, and chose his uncle, Frederick I, as king. Christian fled, but in 1532 he was captured while attempting to recover the throne. He was imprisoned until his death. A gifted and educated ruler despite his despotic methods, Christian II did much to advance learning in Denmark.

Christian III, 1503-59, king of Denmark and Norway (1534-59). At the death of his father, Frederick I, his election was delayed because he was a Lutheran. The German city of LÜBECK invaded Denmark to reinstate the deposed CHRISTIAN II, and the minor nobility then forced the election of Christian III in 1534 to preserve Danish autonomy. Christian III allied

with GUSTAVUS I of Sweden to defeat Lubeck in 1536. That victory broke the power of the Hanseatic League and made the Danish fleet supreme in northern waters. Christian established (1536) Lutheranism in Denmark and imposed it on Norway. Never elected king by the Norwegians, he declared Norway a dependency of Denmark. His son Frederick II succeeded him.

Christian IV, 1577-1648, king of Denmark and Norway (1588-1648), son and successor of Frederick II. After assuming (1596) personal rule from a regency, he concentrated on building the navy, industry, and commerce. He rebuilt OSLO and renamed it Christiania. Aroused when CHARLES IX of Sweden asserted authority over Lapland, he made war on Sweden (the so-called Kalmar War, 1611-13) and largely dictated the peace. In the THIRTY YEARS WAR, urged on by England, France, and the Netherlands, he invaded (1625) Germany to defend Protestantism. Defeated (1626) by TILLY at Lutter, he was driven back in 1627. Schleswig, Holstein, and Jutland were overrun and plundered, Stralsund was besieged by the imperial troops under WALLENSTEIN. Christian, with the help of Gustavus II of Sweden, raised the siege of Stralsund, but in 1629 he signed with Holy Roman Emperor Ferdinand II a separate peace that was lenient to Denmark. His anti-Swedish policy brought on a war with Sweden (1643-45) in which Christian lost the Norwegian provinces of Jamtland and Harjedalen. His son Frederick III succeeded him.

Christian V, 1646-99, king of Denmark and Norway (1670-99), son and successor of Frederick III. His minister, GRIFFENFELD, who until his fall in 1676 dominated Christian's reign, made the monarchy absolute. Christian fought (1675-79) an unsuccessful war with CHARLES XI of Sweden. He was succeeded by his son Frederick IV.

Christian VII, 1749-1808, king of Denmark and Norway (1766-1808), son and successor of Frederick V. Shortly after his accession his mental illness made him dependent on his physician, STRUENSEE, who in 1770 caused the dismissal of Johann Hartwig Ernst BERNSTORFF and in 1771 became an all-powerful minister. After Struensee's downfall (1772), Christian's marriage with Caroline Matilda, sister of George III of England, was annulled. Andreas Peter BERNSTORFF became chief minister in 1773, and after 1784 Christian's son and successor, Frederick VI, acted as regent. Widespread liberal reforms were enacted under the direction of Bernstorff and Prince Frederick, notably the abolition of serfdom.

Christian VIII, 1786-1848, king of Denmark (1839-48), nephew of Christian VII, successor of Frederick VI. As governor and king (May-Oct., 1814) of Norway he accepted a liberal Norwegian constitution that is still in use with some modifications. His reign brought prosperity to Denmark. The nature of Danish rule in the duchies of SCHLESWIG-HOLSTEIN became a prominent issue in 1846. His son Frederick VII succeeded him.

Christian IX, 1818-1906, king of Denmark (1863-1906). A member of the cadet line of Sonderburg-Glücksburg, he succeeded Frederick VII, last of the direct line of Oldenburg. The London Conference of 1852 had settled on him the contested succession to the duchies of SCHLESWIG-HOLSTEIN, but in 1863 Christian accepted parliament's annexation of Schleswig to the Danish crown. This precipitated war (1864) with Prussia and Austria, in which Christian lost Schleswig, Holstein, and Lauenburg. In 1866 the Danish constitution was revised, granting the upper chamber more power than the lower. During Christian's reign there was continual liberal agitation for a more democratic constitution. He was succeeded by his son Frederick VIII. A younger son became king of Greece as George I.

Christian X, 1870-1947, king of Denmark (1912-47) and Iceland (1912-44), son and successor of Frederick VIII and brother of King Haakon VII of Norway. He granted (1915) a new constitution that included the enfranchisement of women. During the German occupation (1940-45) of Denmark, the king defied German authority and was placed (1943) under house arrest. He became a symbol of national resistance. In 1944, Iceland severed all ties with the Danish crown. Christian's son Frederick IX succeeded him.

Christian Brothers: see JOHN BAPTIST DE LA SALLE, ST. **Christian Catholic Church**, religious denomination founded (1896) in Chicago by John Alexander DOWIE. Its members are sometimes known as Zionites. The church has its center in ZION, Ill., which Dowie founded (1901) as a religious community. In addition to religious and educational activities in

Zion, the founder started various industries on a cooperative basis, an undertaking that was built up by Wilber Glenn Voliva, who became general overseer upon the deposition of Dowie in 1905. Zion is no longer exclusively a religious community. The church extensively supports foreign missions. See Rolvix Harlan, *John Alexander Dowie and the Christian Catholic Apostolic Church in Zion* (1906).

Christian Churches: see CONGREGATIONALISM, DISCIPLES OF CHRIST

Christian Endeavor, association in evangelical Protestant Churches for strengthening spiritual life and promoting Christian activities among its members. The first Young People's Society of Christian Endeavor was started in 1881 by Dr. Francis E. CLARK in Portland, Maine. Within a few years the organization had become not only interdenominational but international, and a world union was formed in 1895, with Clark as president. Started primarily as a youth movement, the association now includes all age groups and numbers in the millions. Many denominations are represented in the association's membership.

Christiania: see OSLO, Norway

Christian iconography: see under ICONOGRAPHY

Christianity, religion founded in Palestine by the followers of JESUS CHRIST. One of the world's major religions, it predominates in Europe and the Americas, where it has been a powerful historical force and cultural influence, but it also claims adherents in virtually every country of the world. The central teachings of traditional Christianity are that Jesus is the Son of God, the second person of the TRINITY of God the Father, the Son, and the HOLY GHOST, that his life on earth, his crucifixion, RESURRECTION, and ascension into heaven are proof of God's love for man and his forgiveness of man's sins, and that by faith in Christ man may attain salvation and eternal life (see CREED). This teaching is embodied in the BIBLE, specifically in the New Testament, but Christians accept also the Old Testament as sacred and authoritative Scripture. Christian ethics derive to a large extent from the Jewish tradition as presented in the Old Testament, particularly the TEN COMMANDMENTS, but with some difference of interpretation based on the practice and teachings of Jesus. Christianity may be further generally defined in terms of its practice of corporate worship and rites that usually include the use of SACRAMENTS and that are usually conducted by a trained clergyman within an organized church. There are, however, many different forms of worship, many interpretations of the role of the organized clergy, and many variations in polity and church organization within Christianity. In the two millennia of its history Christianity has been plagued by schism, based on doctrinal and organizational differences. Today there are three broad divisions, Roman Catholic, Orthodox Eastern, and Protestant, but within the category of Protestantism, there is a particularly large number of divergent denominations. Because of the complexity of these differences this article will describe the history of Christianity only to 1054, when the schism between Eastern and Western churches became final. Separate articles detail the history and doctrines of the ROMAN CATHOLIC CHURCH and ORTHODOX EASTERN CHURCH and of the other churches of ancient origin, the ARMENIAN CHURCH, the COPTIC CHURCH (see COPT), the JACOBITE CHURCH, and the NESTORIAN CHURCH. In the 16th cent. another major schism took place in the Western Church with the Protestant REFORMATION. For the Protestant churches, see PROTESTANTISM and articles on the separate churches. For the 20th-century movement that seeks to end the divisiveness in Christianity and achieve reunion, see ECUMENICAL MOVEMENT.

Early Christianity. Christianity is in a direct sense an offshoot of JUDAISM, because Jesus and his immediate followers were Jews living in Palestine and Jesus was believed by his followers to have fulfilled the Old Testament prophecies of the MESSIAH. Following a trend of proselytization in the Judaism of that period Christianity was from its beginnings expansionist. Its early missionaries (the most notable of whom was St. PAUL, who was also responsible for the formulation of much Christian doctrine) spread its teachings through Asia Minor to Alexandria and to Greece and Rome. MISSIONS have remained a major element in Christianity to the present day. For the first three centuries of Christianity, history is dependent on apologetic and religious writings; there are no chronicles (see PATRISTIC LITERATURE). Historians differ greatly on how far back the 4th-century picture of the church (which is quite clear) can be projected, especially respecting organization by bish-

ops (each bishop a monarch in the church of his city), celebration of a UTURGY entailing a sacrament and a sacrifice, and claims by the bishop of Rome to be head of all the churches (see PAPACY). There is evidence for these features in the 2d cent. A first problem for Christians was how to resist attempts to interpret the new beliefs in old pagan terms (e.g., Gnosticism) or to incorporate them in some inclusive system (e.g., Manichaeism). The earliest sectarian deviations were those of Marcion and of Montanism (2d cent.). They were handled resolutely by the church, the teachers of novelty were expelled (excommunicated). For 250 years it was a martyrs' church, the persecutions were official, legally motivated by refusal of Christians to worship the state and the Roman emperor. The chief persecutions were under Nero, Domitian, Trajan and the other Antonines, Maximin, Decius, Valerian, and Diocletian and Galerius. In 313, Constantine I and Licinius announced toleration of Christianity in the Edict of Milan. In the East the church passed from persecution directly to imperial control (caesaropapism), inaugurated by Constantine, enshrined later in Justinian's laws, and always a problem for the Orthodox churches. In the West the church remained independent because of the weakness of the emperor and the well-established authority of the bishop of Rome. For 300 years after A.D. 275 the church in the East was occupied with doctrinal controversies—Arianism, Nestorianism, Monophysitism, and Monothelitism. These arguments concerned the relationship of Jesus Christ to God and to man. Decisions were made at a series of general councils of bishops (see COUNCIL, ECUMENICAL); at them was composed the Nicene Creed, the official orthodox summary. These centuries saw a series of Christian writers of unequalled influence (the Fathers of the Church): Origen, St. Athanasius, St. Basil the Great, St. Gregory of Nyssa, St. Gregory Nazianzen, St. John Chrysostom, and Theodoret writing in Greek; St. Ambrose, St. Jerome, and St. Augustine writing in Latin. Origen and St. Jerome had a special role in the church's work of determining and preserving the text of the Bible. From the 3d cent. an element was MONASTICISM, first well organized by St. Basil. In the West it was a central feature in the missionary work of St. Martin (Gaul, 4th cent.) and St. Patrick (Ireland, 5th cent.), and it received definitive shape from St. Benedict and St. Gregory the Great, who thereby generated an activity of continuing vitality in the Roman Catholic Church. German invasions slowed the conversion of Western Europe (e.g., that of England was recommenced in the 6th cent.). All the first invaders were Arian, but the Franks (with Clovis) adopted orthodox Christianity, a fact that probably helped to consolidate their rule. Out of this kingdom came Pepin and Charlemagne, who, by alliance with the papacy and proclamation of an empire (800), charted an ideal of the Middle Ages. In the 7th and 8th cent. the Eastern Church lost to Islam all Asia except Asia Minor. Alienation from the West was exacerbated by the bitter struggle over ICONOCLASM, ecclesiastical animosity between Rome and Constantinople came to a head in the schism of the 9th cent. and attained a sort of legal permanence in 1054 (see TO IX, SAINT). Eastern and Western Christendom were already in the 9th cent. two different cultures, their one common tie was the Christian doctrine—even worship and practices were very different. From this time it is customary to distinguish Christian history in its Eastern and Western streams as that of the Orthodox Eastern and the Roman Catholic churches. See Philip Hughes, *History of the Church* (3 vol., rev. ed. 1949), K. S. Latourette, *History of the Expansion of Christianity* (7 vol., 1937-45, repr. 1970), *History of Christianity* (1953, repr. 1962), and *Christianity through the Ages* (1965), Jules Lebreton and Jacques Zeiller, *A History of the Early Church* (4 vol., 1944-46, repr. 1962), Hans Lietzmann, *The History of the Early Church* (4 vol., tr. 1961, repr. 1967), Asher Finkel, *The Pharsees and the Teacher of Nazareth* (1964), J. G. Davies, *The Early Christian Church* (1965), R. M. Grant, *Augustus to Constantine* (1970).

Christian of Anhalt, 1568-1630, prince of ANHALT (1603-30). He was a firm Calvinist and a skilled diplomat. As adviser to Frederick IV, elector palatine, he sought to build a strong Protestant alliance against the Catholic states and achieved limited success with the formation (1608) of the PROTESTANT UNION. Christian guided Frederick's son and successor, Frederick V (FREDERICK THE WINTER KING) and arranged his election (1619) to the Bohemian throne in place of the Roman Catholic king, FERDINAND II, also Holy Roman emperor. Supported by the Catholic League under Elector MAXIMILIAN I of Bavaria, Fer-

dinand sent an army to subdue the Bohemian rebels. When military aid that Christian counted on was not forthcoming, Christian was utterly defeated at the battle of the White Mountain. He was put under the imperial ban, but was pardoned in 1624.

Christian of Brunswick or Christian of Halberstadt, 1599-1626, Protestant military leader in the THIRTY YEARS WAR, titular bishop of Halberstadt (1616-23). One of the first allies of Frederick the Winter King, elector palatine of the Rhine, he took up arms in defense of the Palatinate in 1621. Defeated (1622) by the imperial commander TILLY, he went to the Netherlands. Christian then advanced into Germany but had to retreat, and Tilly turned the retreat into a rout at Stadtlohn (1623). While serving with CHRISTIAN IV of Denmark, he was defeated a third time (1626).

Christian Reformed Church, denomination formed after the secession of a group from the REFORMED CHURCH IN AMERICA in 1857. Colonists from Holland who began settling in Michigan in 1846 generally became members of the Reformed (Dutch) church there. A number of these immigrants, dissatisfied with the doctrinal laxity and practices of that church, separated from it in 1857 and united in a new congregation at Holland, Mich. Later other congregations of this "True Holland Reformed Church" were formed in neighboring states. Missionary work in Holland led many Dutch immigrants to join this church upon their arrival in the United States. In 1882, after a new secession movement in the Reformed Church in America, caused by the General Synod's refusal to condemn Freemasonry, a considerable addition to the church was made. In 1890 it adopted the name Christian Reformed Church, in that year it was joined by the True Reformed Dutch Church (1822) of New York and New Jersey. Its constitution is an adaptation of that approved by the Synod of Dort (1619). Its doctrines are drawn mainly from those of the Reformed Church in Holland. The church is very active in mission work both in the United States and abroad. See the centennial publication *One Hundred Years in the New World* (1957), study by Henry Beets (1946).

Christians, name taken by the followers of several evangelical preachers on the American frontier, notably James O'Kelley, Abner Jones, and Barton W. STONE, all of whom were antisectionarian. Some congregations joined the DISCIPLES OF CHRIST, a body with similar emphasis founded by Thomas and Alexander CAMPBELL, and the name Christians continued to be applied often to members of the Disciples' church. Other congregations of Christians united as a separate body that ultimately took the name of the Christian Church, this was merged in 1931 with the Congregational churches and the merged group became known as the Congregational Christian churches (see CONGREGATIONALISM). See also CHRISTIANITY.

Christian Science, religion founded upon principles of divine healing and laws expressed in the acts and sayings of Jesus Christ, as discovered and formulated by Mary Baker EDDY and practiced by the Church of Christ, Scientist. Christian Scientists deny the reality of the material world, a denial that guides not only their ultimate concerns, but also their everyday life. They argue that illness and sin are illusions, to be overcome by the mind, thus, they refuse medical help in fighting sickness. The occasion of Mary Baker Eddy's discovery of divine healing was her immediate recovery of life and health when in 1866 she read an account of healing by Jesus in the New Testament. In 1875 her *Science and Health* (later published as *Science and Health, with Key to the Scriptures*), the only authorized textbook of Christian Science, was published. In 1879 she established the Church of Christ, Scientist. In Boston in 1892 was organized the First Church of Christ, Scientist—the Mother Church, of which Christian Science churches throughout the world are branches. Each individual church is self-governing and self-supporting, but all accept the tenets framed by the founder and incorporated in the *Church Manual*. Upon her death in 1910, the administrative power was assumed, as laid down in the *Manual*, by the Christian Science Board of Directors. An extremely strong organization, the board enabled Christian Science to grow steadily in numbers and scope of activity during the first third of the 20th cent. Of the numerous publications issued, the most important include the *Christian Science Monitor*, a daily newspaper, the *Christian Science Quarterly*, the *Christian Science Sentinel*, and the *Christian Science Journal*. These are published by the Christian Science Publishing Society. Other activities are conducted by a

board of education and a board of lectureship. The churches have no individual pastors. Services are conducted by two readers, one reading from the Scriptures, the other from *Science and Health*. All churches use the same lessons at the same time. The teachings are drawn from the life and words of Jesus Christ. Although most Christian Scientists are in the United States, the religion is found in most countries with large Protestant populations. A great percentage of its adherents are women. No membership figures have been published since 1936, when there were over 250,000 members in the United States. Declining membership is indicated by the decreasing number of churches and societies listed since about 1950. See Robert Peel, *Christian Science: Its Encounter with American Culture* (1958), C. S. Braden, *Christian Science Today* (1959, repr. 1969), Stephen Gottschalk, *The Emergence of Christian Science in American Religious Life* (1974).

Christianshåb (krī's'tyans-hōp), town (1969 pop. 1,588) in Christianshåb dist. (1969 pop. 1,841), W. Greenland, on Disko Bay. The town was founded in 1734. It has a shrimp-canning factory.

Christian socialism, term used in Great Britain and the United States for a kind of socialism growing out of the clash between Christian ideals and the effects of competitive business. In Europe, it usually refers to a party or trade union directed by religious leaders in contrast to socialist unions and parties. The movement was begun in England in 1848, after the failure of CHARTISM. Influenced by Carlyle, Southey, Coleridge, and the Fourierists, rather than by Marx, such men as John Ludlow, Frederick Denison MAURICE, and Charles KINGSLEY sought to encourage the laboring masses and the church to cooperate against capitalism. They published periodicals and tracts, promoted workmen's associations, founded (1854) a workmen's college, and helped achieve some general reforms. Though their experiments in producers' cooperation failed, their traditions were carried on by the Fabian Society, by adherents of guild socialism, and by several Roman Catholic groups. The movement in the United States was organized with the formation (1889) of the Society of Christian Socialists, although there had been earlier activity by Washington GLADDEN, Richard Theodore ELY, and others. Other church groups joined or aided the socialist movement, but within the churches the movement was concerned more with the application of social gospel to immediate industrial and social problems than with political socialism. See C. E. Raven, *Christian Socialism, 1848-1854* (1920, repr. 1968), James Dombrowski, *The Early Days of Christian Socialism in America* (1936, repr. 1965).

Christians of Saint John: see MANDAËANS.

Christiansted (krī's'chanstēd'), town (1970 pop. 2,966), chief city of St. Croix, one of the U.S. Virgin Islands. It is a shipping port for sugar and rum; tourism is the leading industry. Founded in 1733, Christiansted served briefly as capital of the Danish West Indies.

Christie, Dame Agatha, 1891-, English detective story writer. In 1932 she married the archaeologist Sir Max MALLOWAN and accompanied him on several excavations in the Middle East. Christie is the author of over 80 books, most of them featuring either of her two famous detectives—Hercule Poirot, the egotistical Belgian, and Jane Marple, the elderly spinster. Her works, noted for their skillful plots, include the novels *The Mysterious Affair at Styles* (1920), *The Murder of Roger Ackroyd* (1926), *Death on the Nile* (1937), *And Then There Were None* (1940), *Death Comes as the End* (1945), *Funerals Are Fatal* (1953), *The Pale Horse* (1962), *Passenger to Frankfurt* (1970), and *Elephants Can Remember* (1973), and the plays *The Mouse Trap* (1952), one of the longest running plays in theatrical history, and *Witness for the Prosecution* (1954). Christie has also published novels under the pseudonym Mary Westmacott. She was named Dame Commander, Order of the British Empire, in 1971.

Christie's, English firm of art auctioneers and appraisers, one of the largest clearinghouses in the world for art objects of all kinds. Since its founding in 1766 by James Christie, its name has been a symbol of luxury in the English-speaking world. See M. C. Marillier, *Christie's, 1766-1925* (1926), Denys Sutton, *Christie's since the War, 1945-1958* (1959).

Christina, 1626-89, queen of Sweden (1632-54), daughter and successor of Gustavus II. From her father's death (1632) until 1644 she was under a regency headed by Chancellor Axel OXENSTIERNA. Her early devotion to state affairs soon gave place to

other interests, especially a zeal for learning. She attracted many foreign artists and scholars—including Descartes—to her court. Music and literature, especially the poetry of Jorge Stiernhielm (1598-1672), were encouraged. On her favorites she lavished titles, lands, and money, and by the end of her reign half of the crown lands had been given away. Her distaste for marriage caused her to designate her cousin Charles (later Charles X) as her successor. Weary of her duties and the growing antagonism of the nobles, and attracted to Catholicism, Christina abdicated in 1654. She left Sweden attired as a man, was received into the Catholic Church at Innsbruck in 1655, and settled at Rome. Her eccentricity and financial incompetence kept her affairs in continual disorder. On the death (1660) of Charles X, Christina returned to Sweden, she hoped to regain her throne but failed. She again went to Sweden in 1667 but was refused entrance into Stockholm because of her religion. She died in Rome and was buried at St. Peter's. See biographies by M. L. Goldsmith (1933), Alfred Neumann (tr. 1935), Sven Stolpe (1960, tr. 1966), C. H. J. Weibull (1960, tr. 1966), and Georgina Masson (1968).

Christine de Pisan: see PISAN, CHRISTINE DE.

Christmas [Christ's Mass], in the Christian calendar, feast of the nativity of Jesus Christ (Dec. 25). In liturgical importance it ranks after Easter, Pentecost, and EPIPHANY (Jan. 6). The observance probably does not date earlier than A.D. 200 and did not become widespread until the 4th cent. The date was undoubtedly chosen for its nearness to Epiphany, which, in the East, originally included a commemoration of the nativity. The date of Christmas coincides closely with the winter solstice, a time of rejoicing among many ancient cultures. Christmas, as the great popular festival of Western Europe, dates from the Middle Ages. In England after the Reformation the observance became a crux between Anglicans and other Protestants, and the celebration of Christmas was suppressed in Scotland and in much of New England until the 19th cent. The Yule Log [Yule, from O.E. = Christmas], the boar's head, the goose (in America the turkey), decoration with holly, hawthorn, wreaths, mistletoe, and the singing of carols (especially by waits) are all typically English (see CAROL). Gifts at Christmas are also English, elsewhere they are given at other times, as at Epiphany in Spain. Christmas cards first appeared c. 1846. The current concept of a jolly Santa Claus was first made popular in New York in the 19th cent. (see NICHOLAS, SAINT). The Christmas tree was a tradition from the Middle Ages in Germany. The crib (creche) with the scene at Bethlehem was popularized by the Franciscans. A familiar religious observance is the midnight service in Roman Catholic and some Protestant churches. See ADVENT and TWELFTH NIGHT. For an account of medieval and modern Yuletide customs, see Miles Hadfield and John Hadfield, *The Twelve Days of Christmas* (1961).

Christmasberry or **toyon** (tō'yān), evergreen tree or shrub (*Photinia arbutifolia*) of the family Rosaceae (ROSE family), found on the Pacific coast of North America. Its white flowers are followed by bright red berries, with its handsome leaves, it is used on the Pacific coast as a Christmas green. It is also called California holly. Most other species of *Photinia*, sometimes cultivated, are native to the Far East. Christmasberry is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Rosales, family Rosaceae.

Christmas fern: see FERN.

Christmas Island (1969 pop. 3,500), 60 sq. mi. (155 sq. km), in the Indian Ocean, c. 200 mi. (320 km) S of Java. The majority of the inhabitants are Chinese and Malays who work the extensive deposits of phosphate of lime. The island was annexed by Great Britain in 1888 and became part of the former STRAITS SETTLEMENTS in 1889. In 1958 it passed under Australian administration.

Christmas Island, largest atoll in the Pacific (1968 pop. 367), 222 sq. mi. (575 sq. km), in the LINE ISLANDS, a part of the British colony of the GILBERT AND ELLICE ISLANDS. The island is worked as a copra plantation by the British government, and most of the inhabitants work in the industry. The atoll was discovered by Capt. James COOK in 1777, annexed by Great Britain in 1888, and included in the Gilbert and Ellice Islands colony in 1919. British nuclear tests were conducted on the atoll in 1957 and 1958 and U.S. tests in 1962. The United States claims sovereignty over Christmas Island.

Christmas rose: see HELLEBORE.

Christ of the Andes, statue of Christ commemorating a series of peace and boundary treaties between

Argentina and Chile. Dedicated March 13, 1904, it stands in USALLATA PASS, high in the Andes, on the Argentine-Chilean boundary. A tablet (added in 1937) bears in Spanish the inscription "Sooner shall these mountains crumble into dust than Argentines and Chileans break the peace sworn at the feet of Christ the Redeemer."

Christophe, Henri (aNRē' krēstōf'), 1767-1820, Haitian revolutionary leader. A freed Negro slave, he aided TOUSSAINT L'OUVREUR in the liberation of Haiti and was army chief under DESSALINES. When the latter declared himself emperor, Christophe took part (1806) in a successful plot against his life and was elected president of the republic. Christophe, a pure-blooded Negro, then waged a savage and inconclusive struggle with Alexandre PÉTION, the champion of mulatto supremacy, who retained control of S. Haiti. In 1811, entrenching himself in N. Haiti, Christophe declared himself king as Henri I and entered upon an energetic but tyrannical reign. He created an autocracy patterned after the absolute monarchies of Europe. Compulsory labor enriched his fiefdom. Christophe surrounded himself with lavish, and sometimes ludicrous, magnificence, the pomp and splendor of his reign are still shown by the ruins of the citadel of La Ferrière, a formidable fortress on top of a mountain, surrounded by precipitous cliffs, and of the fabulous palace of Sans Souci, at Cap-Haïtien, his capital. In 1820, when he was suffering from partial paralysis, revolts broke out. In despair, Christophe committed suicide. See his correspondence with Thomas Clarkson, ed. by E. L. Griggs and C. H. Prator (1952, repr. 1968), biography by Hubert Cole (1967), J. W. Vandercock, *Black Majesty* (1928), Charles Moran, *Black Trumvirate: A Study of L'Ouvverture, Dessalines, Christophe* (1957).

Christopher, Saint [Gr. = Christ bearer], 3d cent., martyr of Asia Minor. His characteristic legend is that one day when he was carrying a little child over a river, he felt the child's weight almost too great to bear. The child was Jesus, carrying the world in his hands. Hence St. Christopher is usually represented as a giant, with the Holy Child on his shoulder, he leans on a staff. He is the patron of travelers, hence the practice of wearing his medal on journeys. His name was dropped from the liturgical calendar in 1969. Feast July 25.

Christ's-thorn, name for several Old World plants popularly said to have composed the crown of thorns. It is applied most often to two members of the family Rhamnaceae (BUCKTHORN family): (1) the Jerusalem thorn (*Paliurus spina-christi*), which is a spiny shrub or small tree with curious fruit resembling a miniature head under a wide-brimmed hat, and (2) a variety of jujube. Christ's-thorn is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Rhamnales, family Rhamnaceae.

Christus or **Cristus**, **Petrus** (both pē'tras krī's'tas), fl. 1444-c. 1473, Flemish painter, a follower and probably a pupil of the Van Eycks. In 1444 he became a free citizen of Bruges, where he remained until his death. Christus was successful in the rendering of geometric perspective and became noted for his fine, introspective treatment of figures, particularly in portraiture. Many of his works show a simplification of the compositions of Jan van Eyck, and there are traces of the influence of Roger van der Weyden. Among the paintings ascribed to Christus are the portraits of Edward Grymestone (Earl of Verulam, Coll., England), *Lamentation*, and a portrait of an unknown Carthusian monk (both Metropolitan Mus.), *Lamentation* (Brussels), and *Nativity* (National Gall. of Art, Washington, D.C.).

Christy, Edwin P., 1815-62, American showman, b. Philadelphia. He established c. 1846 in Buffalo, N.Y., a company of minstrels that came to be known as Christy's Minstrels. The company, although not the first of its kind, crystallized the pattern of the MINSTREL SHOW—the interlocutor, the semicircular arrangement of white performers in blackface, the end man, and the variety act. For over 10 years Christy had great success all over the United States and in England. He retired in 1854, and the group continued under the direction of George N. Harrington, who assumed the name Christy. Some of the songs of Stephen FOSTER were published bearing Christy's name as author and composer.

chromatic aberration: see ABBERRATION, in optics.

chromatic scale, in music: see SCALE.

chromatid (krō'matəd) see CHROMOSOME, CROSSING OVER.

chromatin: see CHROMOSOME.

chromatography (krō'matōg'rafē), resolution of a chemical mixture into its component compounds.

by passing it through a system that retards each compound to a varying degree, a system capable of accomplishing this is called a chromatograph. The retarding system can be a surface adsorbent, such as silica, alumina, cellulose, or charcoal, capable of reversibly adsorbing the compounds (see ADSORPTION). In column chromatography the adsorbent is packed into a column and a solution of the mixture is added at the top. An appropriate solvent is passed through the column, washing, or eluting, the compounds down the column. A polar substance that is adsorbed very tightly to the surface will be efficiently retarded by the column, while a nonpolar substance will elute very rapidly. By varying the nature of the solid adsorbent and the eluting solvent, a wide variety of resolutions, even of very similar substances, can be carried out. The earliest compounds separated by column chromatography were highly colored, hence the name chromatography [Gr. = color recording]. For analytical purposes a layer of the adsorbent can be spread on a glass plate. The plate is spotted with a solution of the mixture or, means of a thin capillary tube, and the solvent is allowed to evaporate. An eluting solvent is then allowed to move up the plate by capillary action, drawing the components of the mixture along by varying degrees. The plate is developed by spraying it with an oxidizing agent, so that each component becomes colored and appears as a dark spot on the plate. The location and size of the spots serve to identify and measure the relative quantities of the components. As in column chromatography, polar substances will not elute as well and will remain nearer the bottom of the plate, while nonpolar substances will elute to the top. This process is called thin-layer chromatography (TLC). In paper chromatography a procedure similar to TLC is used except that the cellulose in the paper acts as the adsorbent. The gas chromatograph (GC) is a system consisting of a liquid with a high boiling point impregnated on an inert solid support as the stationary phase and helium gas as the mobile phase. The stationary phase is packed into a thin metal column and helium gas is allowed to flow through it. The column is attached to an injection port, and the entire system is heated in an oven. A solution of the mixture is injected into the column through the injection port by means of a syringe and is immediately volatilized. The helium gas then sweeps the components out of the column and past a detector. The polarity of the compounds and their volatility determines how long they are retained by the column. When each component passes the detector, a peak is registered on a recorder. From the relative areas under the peaks, the relative quantities of the components can be obtained. By varying the polarity of the column and its temperature, many different resolutions can be carried out. Since the capacity of GC columns is very low, the gas chromatograph is used chiefly as an analytical tool, although it can be used for preparative purposes as well. For compounds that cannot be volatilized readily, the liquid chromatograph (LC) can be used instead of the GC. The stationary phase consists of a finely powdered solid adsorbent packed into a thin metal column and the mobile phase consists of an eluting solvent forced through the column by a high-pressure pump. The mixture to be analyzed is injected into the column and monitored by a detector. Many different LC packings and eluting solvents are available to achieve the desired resolution. In gel-permeation chromatography, compounds are separated on the basis of their molecular size. Porous beads of the gel are packed into a column and the mixture is added at the top in an appropriate solvent. Large molecules are forced straight down the column, while small molecules suck in the pores and are retarded. For compounds that can exist as ions, ion-exchange chromatography can be used to separate them from neutral or oppositely charged compounds. The mixture is added to a column packed with a porous, insoluble resin which has a negatively charged (anionic) group attached to it and an unattached, positively charged (cationic) counterion. A cation from the mixture will exchange with the positive counterion of the resin and will be retarded while neutral and anionic substances are not affected. Ion-exchange resins with exchangeable anions work in a similar manner. Electrophoresis can also be used as an effective tool for analyzing mixtures of ions. A strip of paper or a column of polymeric gel, saturated with an electrolyte, is set up so that it spans two solutions containing electrodes. The mixture to be analyzed is spotted onto the paper or gel and the two electrodes are connected to a high-energy power source (about 5,000 volts). Positive

ions will migrate in one direction and negative ions in the other. The greater the charge on the ion, the farther it will migrate. This method is especially useful for the resolution of mixtures of proteins.

chromite (krō'mīt), dark brown to black mineral. It is an iron-chromium oxide, FeCr_2O_4 , with traces of magnesium and aluminum. It crystallizes in the isometric system, but crystals are rare, and it usually occurs as irregular masses and small grains. The only commercial source of chromium and its compounds, chromite is also used in the manufacture of refractories. The principal countries producing chromite are the USSR, South Africa, Rhodesia, the Philippines, and Turkey.

chromium (krō'mēam) [Gr. = color], metallic chemical element; symbol Cr; at. no. 24, at. wt. 51.995, m.p. about 1850°C; b.p. 2482°C; sp. gr. about 7.2 at 20°C; valence -2, -3, -6. Chromium is a silver-gray, lustrous, brittle, hard metal that can be highly polished. It is found in group VI of the periodic table. It does not tarnish in air, but burns when heated, forming the green chromic oxide. When combined with oxygen, besides yielding chromic oxide, which is used as a pigment, it forms chromic anhydride (the red trioxide and anhydride of chromic acid). With other metallic elements, e.g., lead and potassium, together with oxygen, it forms the chromates and dichromates. These compounds are salts of chromic acid and are used as pigments in paints, in dyeing, and in the tanning of leather. Chrome yellow, a pigment, consists largely of lead chromate. Other chrome colors are black, red, orange, and green. In the chrome process for tanning leather, a dichromate is used, and chromium hydroxide, a basic compound of chromium, hydrogen, and oxygen, is precipitated and held in the leather. The hydroxide is used also as a mordant in dyeing cloth. A mixture of potassium dichromate and sulfuric acid is used as a powerful agent for cleaning laboratory glassware. Chromium is a comparatively rare element, never occurring by itself in nature but always in compounds. Its chief source is the mineral chromite, which is composed of iron, chromium, and oxygen and is found principally in the USSR, South Africa, Rhodesia, Turkey, and the Philippines. The element, in the form of chromic oxide, gives the greenish tint to the emerald and the aquamarine. Metallic chromium is prepared by reduction of the oxide by aluminum or by carbon. It is used in plating other metals because of its hardness and non-tarnishing properties. In alloys with other metals it contributes hardness, strength, and heat resistance. Its most important use is in the steel industry, where it is a constituent of several alloy steels, e.g., chromium steel or chrome steel. Stainless steel contains from 11% to 18% chromium. An alloy of nickel and chromium, often called Nichrome, is widely used as a heating element in electric toasters, coffee pots, and other appliances. Stellite is an extremely hard alloy of cobalt, chromium, and tungsten, with small amounts of iron, silicon, and carbon; it is used in metal cutting tools and for wear-resistant surfaces. A similar alloy, with molybdenum instead of tungsten, is used in surgical tools since it does not react with body fluids. Chromium was discovered in 1797 by L. N. Vauquelin.

chromoprotein: see PROTEIN.

chromosome (krō'masōm'), structural carrier of hereditary characteristics, found in the nucleus of every cell and so named for its readiness to absorb dyes. The term *chromosome* is usually reserved for the structure when it is condensed and readily visible during cell division (see MITOSIS). At other times the chromosome appears as a fibrous structure, called the chromonema, consisting of accumulations (called chromomeres) of chromatin, the dye-absorbing material. During nuclear division, when each chromosome splits, each of the duplicate chromosomes is called a chromatid. A certain number of chromosomes is characteristic of each species of plant and animal; e.g., the human has 46 chromosomes, the potato has 48, and the fruit fly *Drosophila* has 8. Each of these chromosome numbers is the so-called diploid number, i.e., the number found in the somatic (body) cells and in the germ cells that give rise to the gametes, or reproductive cells. When the germ cells divide in the two-step process of MEIOSIS, the chromosomes are separated in such a way that each daughter cell receives a haploid (half the diploid) number of chromosomes. Fusion of the male and female gametes in fertilization restores the diploid number in the fertilized egg, or zygote, which thus contains two sets of homologous chromosomes, one from each parent. The principal constituents of the chromosomes are nu-

cleoproteins containing deoxyribonucleic acid, or DNA (see NUCLEIC ACID). Chromosomes appear microscopically as a linear arrangement of genes, the factors that determine the inherited characteristics of all living organisms. The very large chromosomes in the salivary gland cells of *Drosophila* and other insects have furnished valuable material for the study of GENETICS.

chromosphere (krō'masfēr') [Gr. = color sphere], layer of rarefied gases in the solar atmosphere, it measures 6,000 mi (9,700 km) in thickness and lies between the photosphere (the sun's visible surface) and the corona (its outer atmosphere). The flash spectrum has been a valuable tool in the study of the chromosphere. This spectrum is obtained just before a solar eclipse reaches totality and is formed from the thin arc of the sun disappearing behind the moon's disk. An analysis of the emission lines gives information about the height of the chromosphere and the heights at which various elements exist in it. Using the flash spectrum, scientists find that the chromosphere is composed primarily of hydrogen, causing its visible reddish tint, and of helium, oxygen, calcium, iron, and titanium in lesser amounts. In itself, it consists of three distinct layers which decrease in density and increase abruptly in temperature. The lower chromosphere is about 10,800°F (6,000°C), the middle rises to 99,000°F (50,000°C), and the upper part, merging into the lower corona, reaches 1,800,000°F (1,000,000°C). At 600 mi (1,000 km) above the photosphere, the chromosphere separates into cool, high-density columns, called spicules, and hot, low-density material. The spicules, each about 500 mi (800 km) in diameter, shoot out at 20 mi per sec (32 km per sec) and rise as high as 10,000 mi (16,000 km) before falling back. Any point on the sun will erupt a spicule at the rate of about once every 24 hr. Other types of solar activity are found to occur in the chromosphere. The elements of each layer are sometimes distributed in bright, cloudlike patches called plages, or faculae, and in general are located along the same zones as sunspots and fluctuate with the same 11-yr cycle; the relationship between the two is not yet understood. Most spectacular of the solar features are the streams of hot gas, called prominences, which shoot out thousands or even hundreds of thousands of miles from the sun's surface at velocities as great as 250 mi per sec (40 km per sec). Two major classifications are the quiescent and the eruptive prominences. Quiescent prominences bulge out from the surface about 20,000 mi (32,000 km) and can last days or weeks. Eruptive prominences are thin flames of gas often reaching heights of 250,000 mi (400,000 km), they occur most frequently in the zones containing sunspots. Dark strandlike objects called filaments were discovered on the disk and were originally thought to be a special kind of feature. These are now known to be prominences seen against the bright background of the photosphere. Until the middle of the 19th cent. prominences could be viewed extending from the edge of the sun's disk only during a solar eclipse. However, in 1868 a method of observing them with a spectroscopic at any clear time of day was developed, and in 1930 the invention of the CORONAGRAPH allowed them to be continuously photographed. Another phenomenon occurring in the chromosphere is the solar flare, a sudden and intense brightening of a plage which lasts an average of 15 minutes. This feature is also associated with sunspots, although its nature is not well understood. Flares are found to disrupt magnetic compasses and radio signals on the earth.

chronicle, official record of events, set down in order of occurrence, important to the people of a nation, state, or city. Almanacs, *The Congressional Record* in the United States, and the *Annual Register* in England are chronicles. From ancient times rulers have made certain that written records of their achievements proclaimed their glory to posterity. King Alfred of England was perhaps the first to encourage objectively. The Anglo-Saxon Chronicle, in lively English prose, notes the inauspicious beginnings of the British navy in A.D. 897: while pursuing the Danes, Alfred's long boats ran aground at low tide. Other chronicles of literary as well as historical interest are Tacitus' *Annals* (1st cent. A.D.); Bece's *Historia Ecclesiastica Gentis Anglorum* (7th cent.); Geoffrey of Monmouth's *Historia Regum Britanniae* (c.1135); and Polish-Saxon *Chronicles of England, Scotland, and Ireland* (1577). Modern developments of the form include the daily metropolitan newspaper, which provides exhaustive coverage of a panorama of events, from space exploration to kitchen range experimentation, and such codifications of

journalistic sources as *The New York Times Index* and the *New York Times Idea Bank*—the latter a computerized *Index*, which makes any name or fact instantly available

chronicle plays, dramas based upon 16th-century chronicles of English, particularly those of Edward HALL and Raphael HOLINSHED. These plays became very popular late in the reign of Elizabeth I, when, in a burst of patriotism, the public became interested in the history of their country. Starting as loosely structured depictions of events featuring large casts, battle scenes, and much pageantry, the chronicles evolved into narratives of the events of the reign of a single king. Christopher Marlowe depicted the reign of Edward II whereas Shakespeare treated the histories of kings from Richard II to Henry VIII. His *Henry IV*, Parts I and II, and *Henry V* are marked by complex characterizations and comic subplots.

Chronicles or Paralipomenon (pār'ālīpōm'ōn) [Gr, =things left out], two books of the Old Testament, originally a single work in the Hebrew canon, called First and Second Chronicles in the Authorized Version, where they occupy the 13th and 14th places, and called First and Second Paralipomenon in Greek versions and in the Roman Catholic Bible. The books are a history of the Jewish kingdom under David (1 Chron. 10-29) and Solomon (2 Chron. 1-9) and, after the division of the kingdom, of the southern kingdom of Judah, including the Babylonian captivity (2 Chron. 10-36). The work commences with a collection of genealogies from Adam until the time of Saul (1 Chron. 1-9) and ends with the decree (538 B.C.) of the Persian king Cyrus restoring the Jews (2 Chron. 36:22-23). Thus the historical material parallels (and supplements) part of the narrative of First and Second Samuel and First and Second Kings, but from the point of view of one who adheres strictly to the house of David and to the worship in the Temple. Like Kings, these books quote their sources constantly. Originally Chronicles formed one book with Ezra and Nehemiah. For views of the higher criticism, see OLD TESTAMENT. See J. C. Whitcomb, *Solomon to the Exile: Studies in Kings and Chronicles* (1971).

chronometer, instrument for keeping highly accurate time, used especially in navigation. Before the advent of radio time signals it was the only device that provided the time accurately enough for a ship at sea to determine its longitude. A mechanical chronometer is a spring-driven escapement time-keeper, like a watch, but its parts are more massively built. Changes in the tension of the spring caused by variations in temperature are compensated for by devices included in it. Some modern chronometers are electronic, using the vibrations of a quartz crystal to regulate the rate at which a time-indicating display moves.

chrysalis (krī'sālīs) see PUPA

chrysanthemum (krī'sānthēməm), name for a large number of annual or perennial herbs of the genus *Chrysanthemum* of the family Compositae (COMPOSITE family), some cultivated in the Orient for at least 2,000 years. A chrysanthemum is the floral emblem of the imperial family of Japan, and, sharing the honor with the cherry blossom, it is the national flower, the highest officials are honored by orders of the chrysanthemum. The flower heads are mostly late blooming and of various shades of red, yellow, and white, they range from single daisylike to large rounded or shaggy heads. Chrysanthemums were introduced to England in the late 18th cent., and today innumerable named horticultural types exist. Most are varieties of *C. morifolium*, a species of indeterminate origin and no longer known in the wild form. Chrysanthemums rank with roses in commercial importance as cut flowers and pot and garden plants. The pyrethrum, feverfew, marguerite, and daisy belong to the same genus. Chrysanthemum is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Compositae.

Chryseis (krī'sē'is), in the *Iliad*, girl captured by Agamemnon. When ransom efforts failed, her father, the priest Chryses, appealed to Apollo, who promptly sent a plague to terrorize the Greek army, it continued until Chryseis was given up. Agamemnon took Briseis from Achilles to replace Chryseis.

chryselephantine (krī's'ēlafān'tīn, -tīn), Greek sculptural technique developed in the 6th cent. B.C. Sculptures, especially temple colossi, were made with an inner core of wood overlaid with ivory, to simulate flesh, and gold, to represent drapery. The great Parthenon Athena, now lost, was chryselephantine.

Chrysippus (krī's'īpəs), c.280-c.207 B.C. Greek Stoic philosopher, b. Soli, Cilicia. He was a disciple of

Cleanthes and succeeded him as head of the Academy in Athens. After Zeno, the founder of STOICISM, Chrysippus is considered the most eminent of the school. He systematized Stoicism and reconciled the factions that threatened to split the school. Chrysippus wrote with exquisite logic but also gave great weight to prophecy and the irrational. Only fragments of his work survive. See J. B. Gould, *The Philosophy of Chrysippus* (1970).

Chrysler, Walter Percy, 1875-1940, American industrialist, founder of the Chrysler Corp., b. Wamego, Kansas. He began as a machinist's apprentice and rose within the industry to become vice president in charge of operations of the General Motors Corp. in 1919. In 1920 he undertook the reorganization of the Willys Overland and Maxwell companies and in 1924 brought out the first Chrysler car. Within a short time he had made his company one of the largest of the automobile industry.

chrysoberyl (krī's'abēr'īl) [Gr, =golden beryl], a beryllium aluminate used as a gem. It has a vitreous luster and is transparent to translucent. The more valuable CAT'S-EYE is a variety of chrysoberyl. Another variety, alexandrite, was first discovered in the Ural Mts. of Russia, on the birthday of Czar Alexander II, for whom it was named. It is remarkable in that it is green by daylight and raspberry red under artificial light. It was popular in imperial Russia, both because of its association with the czar and because red and green were the colors of the empire. It is now found chiefly in Sri Lanka (formerly Ceylon) and Brazil.

chrysolite: see OLIVINE

Chrysoloras, Manuel (krī'səlōr'əs), c.1355-1415, Greek teacher and writer, b. Constantinople. Traveling to Italy on a diplomatic mission, he became celebrated for his teaching and introduced Greek literature into Florence and other Italian cities. Among his works were a Greek grammar and translations of Plato and Homer. His pupils included a number of the finest early Renaissance scholars. Through Chrysoloras's teaching, the culture of classical Greece became the foundation of humanist studies in the West.

Chrysophyta (krāsōf'āta), division of the plant kingdom consisting of four rather diverse classes of algae, of which the class containing the DIATOMS is the largest and best known. All four classes are placed together in this division because of their similar physiological behavior and structural composition. In the Chrysophyta, the cell walls, in the form of two overlapping shells, are rarely composed of cellulose, but instead usually contain large quantities of silica. The two flagella, when they occur, are usually dissimilar. The plants, which are photosynthetic, are yellowish green to golden brown because of the presence of large amounts of carotenoid pigments (xanthophylls) relative to the amount of chlorophyll. The chlorophyll pigment differs in type and amount from that of the green algae (division CHLOROPHYTA). The photosynthetic pigments are found in cell structures known as CHLOROPLASTS. The food storage products of chrysophytes consist of oils and complex polysaccharides, such products are unique to this group and are most closely related to those of the brown algae (division Phaeophyta). With the exception of diatoms, the four classes of chrysophytes are of little value in the plant-to-fish food chain. Class Chloromonadophyceae (chloromonads), class Xanthophyceae (yellow-green algae), and class Chrysophyceae (golden algae) comprise relatively small groups of marine and freshwater algae, largely single-celled plankton but occasionally colonial or filamentous. Class Bacillariophyceae contains the diatoms, single-celled or occasionally colonial, golden brown algae found commonly and abundantly in both fresh and salt water. Asexual reproduction of diatoms occurs by mitotic cell division, after which each daughter cell keeps one of the two overlapping shells, producing a new shell to fit within the old one (see MITOSIS). The manner of sexual reproduction varies according to the group of diatoms. With over 10,000 known species, the diatoms form the largest single and natural group of algae, they constitute most of the marine plankton that occurs in the colder seas and are thereby the prime food source for marine animals higher on the food chain. Moreover, since the silicon shells of diatoms are totally nonbiodegradable, they accumulate indefinitely in bottom deposits, through the geological ages they have formed layers of diatomaceous earth several hundreds of feet thick that are of considerable importance for many industrial purposes.

chrysoprase (krī's'āprās) [Gr, =golden leek], apple green variety of CHALCEDONY, used as a gem. The color is caused by the presence of nickel compounds. Silesia was long the chief source of chrysoprase. More recently it has been obtained in California and Oregon and in Australia.

Chrysorrhoeas. see JOHN OF DAMASCUS, SAINT

Chrysostom. see JOHN CHRYSOSTOM, SAINT

chrysotile. see SERPENTINE

Ch'uan-chou (chuan-jō) or **Tsinkiang**, town (197 est. pop. 130,000), SE Fukien prov., China, on an inlet of Formosa Strait. Local handicrafts, machine tools, and fertilizer are produced. Ch'uan-chou has been identified with Zaiton (Zaitun or Zayton) which was the departure point for Marco Polo's return journey. The Overseas Chinese Univ. is in the town.

Chuang-tze or **Chuang-tzu** (jwang-dzū, -dzō) (c.369-c.286 B.C.) Chinese Taoist writer. Little is known about his life. He was a native of the state of Meng, on the border of present-day Shantung and Honan provinces, and is said to have lived as a hermit. The collection of essays attributed to him called the *Chuang-tze*, is distinguished by its brilliant and original style, with abundant use of satire, paradox, and seemingly nonsensical stories. Chuang-tze emphasizes the relativity of all ideas and conventions that are the basis of judgments and distinctions, he puts forward as the solution to the problems of the human condition, freedom in identification with the universal Tao, or principle of Nature. He is less political in his orientation than the earlier Taoist LAO-TZE. He is also called Chuang Chou. See his complete works, tr. by Burton Watson (1968).

Chub (küb), an African people. Ezek. 30:5. This may be a textual error for Lub (i.e., LUBIM).

chub. see MINNOW

Chubut (chōōbōōt'), river, c.500 mi (805 km) long, rising in the Andes of SW Argentina and flowing E across Chubut prov. to the Atlantic Ocean at Rawson. The Chico River is its chief tributary. Sheep raising and fruit growing are important along the river's lower course.

Chu-chiang. see CANTON, river

Chu-chou or **Chuchow** (both jōō-jō), town (1970 est. pop. 350,000), E central Hunan prov., China, on the Hsiang River. It is a railroad center for lines running north-south and east-west, with large railway building and repair shops. Trucks and fertilizers are also manufactured, uranium is processed, and lead and zinc are mined nearby.

chuckwalla: see IGUANA

chuck-will's-widow. see GOATSUCKER

Chudskoye, Lake (chōōtskü'yā), or **Lake Peipus** (pī'pəs), Estonian *Peipsi Jarv*, c.1,390 sq mi (3,600 sq km), dividing the Estonian Republic from W Pskov oblast, NW European USSR. Its southern section is known as Lake Pskov. Lake Chudskoye, which is navigable, empties through the Narva River into the Gulf of Finland. The Russian coastal population engages in fishing. On the frozen strait between Lake Chudskoye and Lake Pskov, Alexander Nevsky defeated the Livonian Knights in 1242.

Chufut-Kale (chōōfōōt'-kal'yē') [Turk, =Jews' city], ruined fortress and town, S European USSR, in the Ukraine, in the Crimea. While under Turkish rule (1475-1783), it was the center of the Jewish sect of Karaites. Jewish inscriptions date back to 1203, and the region was probably the last refuge of the Crimean Khazars.

Chugach Mountains (chōōg'äch), one of the Pacific coastal ranges, S Alaska, extending from the St. Elias Mts. on the Alaska-Yukon border, NW to the Manuskas River. Mt. Marcus Baker, 13,176 ft (4,016 m), is the highest peak. Rugged, with forested lower slopes (the southern slope is a national forest) and glacier-covered summits, the Chugach are a barrier for movement inland from the coast. The Richardson Highway, a north-south road running from the coast to Fairbanks, Alaska, and the Copper River are the only corridors through the range.

Chuguchak. see TA'CHENG, China

Chu Hsi (jōō shē), 1130-1200, Chinese philosopher of Neo-Confucianism. While borrowing heavily from Buddhism, his new metaphysics reinvented Confucianism. According to Chu Hsi, the normative principle of human nature is pure and good. Expressed in concrete form human nature is less than perfect, but it can be refined through self-cultivation based on study of the classics. His thought was orthodox during the Yuan, Ming, and Ch'ing dynasties. For 600 years students memorized his classical

commentaries until the CHINESE EXAMINATION SYSTEM was abolished in 1905 See) P Bruce, *Chu Hsi and His Masters* (1923)

Chukchi Peninsula (chōōk'chē), northeastern extremity of Asia, terminating in Cape Dezhnev, Far Eastern USSR Washed by the E Siberian and Chukchi seas in the northeast, the peninsula is the eastern extension of the Anadyr mountain range. It is also known as Chukotsk. It is included in the Chukchi National Okrug (1970 pop 101,000). The capital is the village of Anadyr. A large portion of the inhabitants are Chukchi, the rest are Yakut, Eveny, Koryak, Eskimo, and Russians. The Chukchi language is of the Hyperborean family. The people are of two groups, seminomadic hunters and coast-dwelling fishermen. The okrug's coastline lies along the North Sea shipping route. There is mining (tin, lead, zinc, gold, and coal), hunting and trapping, reindeer raising, and fishing. Formed in 1930, the okrug is now part of the Magadan oblast.

Chukotsk: see CHUKCHI PENINSULA, USSR

Chulalongkorn (chōō'lāōng'kōrn) or **Rama V** (rā'mā), 1853-1910, king of Siam (1868-1910). Educated in part by a British governess, Anna Leonovens, and an English tutor, he greatly advanced the Westernization of Siam (present-day Thailand) begun by his father, King Mongkut. He departed from tradition by traveling abroad—to Singapore, Java, and India in 1871 and to Europe in 1897. He abolished slavery, simplified court etiquette, initiated the practice of sending young Siamese abroad for training, set up schools, reorganized the administration of justice, laid the foundations of a sound financial policy, and built public works. He also was responsible for the centralization of Siamese administration that checked the independence of the hereditary provincial chieftains (1892). The total effect of Chulalongkorn's reforms and of the foreign policy he directed was to preserve Siam as an independent state at a time when the rest of SE Asia was falling subject to France and Great Britain.

Chula Vista (chōō'la), city (1970 pop 67,901), San Diego co, S Calif, on San Diego Bay, inc 1911. Citrus fruits and vegetables are grown in the area, and aircraft engines and men's slacks are manufactured in the city. A junior college is there.

Chulym (chōōlīm'), river, c 1,075 mi (1,730 km) long, Krasnoyarsk Krai, S central Siberian USSR. It rises in the eastern slopes of the Kuznetsk Ala-Tau and flows N and W through Krasnoyarsk Krai and Tomsk oblast into the Ob. Its lower course is navigable. Another Chulym River, 140 mi (225 km) long, in SW Siberia, feeds Lake Chany.

Chumashan Indians (chōō'māshān), North American Indian group, formerly on the Pacific coast in the vicinity of Santa Barbara, Calif., and on three islands of the Santa Barbara archipelago. Their canoes were quite large, and their culture was more maritime than other California Indians. Spanish missions were established among them in the late 18th cent. Their practice of abortion, in addition to their being forced out by Spanish settlers, led to their extinction. They were sometimes called the Santa Barbara Indians.

Chun (kūn), in the Bible: see BEROthAI

Chunchon (chōōn'chūn'), city (1970 pop 122,672), capital of Kangwon prov., N South Korea. It is an important market town and rice-processing center. Textiles, silk yarn, and raw silk are also produced. Tungsten, mica, and fluorspar are mined nearby. Chunchon was the capital of the kingdom of Maek (250 B C-A D 660) and was later absorbed by Silla (see KOREA).

Ch'ung-ch'ing, see CHUNGKING, China

Chungin: see CHONGJIN, North Korea

Chungju (chōōng'jōō'), city (1970 pop 87,227), central South Korea. Chungju is an important agricultural center.

Chungking (chōōng'king') or **Ch'ung-ch'ing** (chōōng-ch'ing), city (1970 est pop 3,500,000), SE Szechwan prov., China, at the junction of the Yangtze and Chia-ling rivers. The commercial center of W China, it commands a large river trade. Surrounded on three sides by water, it is situated on a rock promontory, all supplies from the river front must be carried by stairway or inclined railway. A flourishing industrial city, it has railroad shops, shipyards, a large-scale integrated steel complex, cotton and silk mills, chemical and cement plants, food-processing establishments, machine shops, paper mills, and a developing motor vehicle industry. Large coal and iron mines are nearby. Chungking was opened as a treaty port in 1891. In Nov, 1937, just before the Japanese capture of Nanking in the

Second Sino-Japanese War, the capital of China was transferred to Chungking, where it remained until the end of hostilities. During that time administrative agencies, educational institutions, and industrial plants from all over the country were relocated in Chungking, and the population more than tripled. The city was taken by the Communists on Nov 30, 1949. Its many institutions of higher learning include Chungking Univ., Chungking Technical Univ., and a medical college.

Chung-shan (jōōng-shān) or **Shekki** (shē'kē'), town, S Kwangtung prov., SE China, near Macao. It is situated on Chung-shan island (sometimes called Macao island), and has sugar refineries. Sun Yat-sen was born there.

Chuquet, Nicolas (nēkōlā' shūkā'), c 1450-1500, French mathematician, probably b Paris. Little is known of Chuquet's life. At Lyons in 1484 he composed a manuscript on the science of numbers, which was finally published in two parts in 1880 and 1881. The first part, called the "Triparty," was a treatise on algebra and contained the first use of the RADICAL sign with an index (as in $\sqrt[n]{x}$), the second part contained the statement of, and the replies to, a set of 156 mathematical problems.

Chuquicamata (chōō'kēkāmā'tā), town, N Chile, on the western slopes of the Andes. At an elevation of 10,435 ft (3,181 m), Chuquicamata has one of the world's largest copper mines. The extensive open-pit mining of the region dates to 1915.

Chur (kōōr), Fr Coire, Romansh Cuera, city (1971 pop 31,193), capital of Grisons canton, E Switzerland, on the Plessur River. Chur is an important transportation junction. Manufactures include foodstuffs (especially chocolate), textiles, and metal products. Chur was capital of the Roman province of Rhaetia. In the 5th cent, it became an episcopal see, the bishops were later made princes of the Holy Roman Empire. The temporal power of the prince-bishops was limited (c 1465) by the townspeople and later, when the Reformation was accepted (1524-26), ended altogether. Outstanding buildings are a restored 8th-century church, the Renaissance episcopal palace, the cathedral (begun 12th cent.), and the Rhaetian Museum (of folklore). Most of the inhabitants speak Romansh. The Swiss painter Angelica Kauffmann was born in Chur.

Church, Benjamin, 1639-1718, New England colonial soldier in KING PHILIP'S WAR, b Plymouth, Mass. He took a leading part in the Great Swamp Fight (Dec., 1675), W of Kingston, R I., and finally hunted down and killed Philip in Aug., 1676.

Church, Frederick Edwin, 1826-1900, American landscape painter of the HUDSON RIVER SCHOOL, b Hartford, Conn., studied with Thomas Cole at Catskill, N Y. He traveled and painted in North and South America and in Europe and excelled in panoramic scenes. He preferred to paint exotic and foreign landscapes instead of the native scenery favored by other members of the school. His large canvases are noted for the accuracy and clarity of the scenery portrayed, and for a crystalline rendering of light. Church is represented in the Metropolitan Museum, the New York Public Library, the National Academy of Design, New York City, and the Corcoran Gallery.

Church, Sir Richard, 1784-1873, British army officer. After varied service, he organized a Greek regiment to defend (1812-15) the Ionian Islands, and in 1827 he was made generalissimo of the Greek insurgents in the Greek War of Independence. Residing in Greece, he subsequently engaged in politics there and was made (1854) a general in the Greek army.

Church, Richard William, 1815-90, English Anglican clergyman. He was educated at Oxford, where he became a follower of John Henry Newman. As dean of St Paul's (1871-90) he did much to disseminate High Church doctrine. His book *The Oxford Movement* (1891) was long the authoritative work on the subject. In 1846 he helped found the *Guardian*, an Anglican newspaper. See his life and letters (ed. by his daughter, 1894).

church [probably Gr. =divine], aggregation of Christian believers. The traditional belief has the church the community of believers, living and dead, headed by Jesus Christ, who founded it in the apostles. This is the doctrine of the mystical body of Christ (Eph 1:22-23). Some divisions speak of the church militant (the living), the church suffering (the dead in purgatory), and the church triumphant (the saints of heaven). The church is said to be recognizable by four marks (as in the Nicene Creed): it is one (united), holy (producing holy lives), catholic (universal, supranational), and apostolic (having continuity with the apostles). In the Orthodox East-

ern Church, the Roman Catholic Church, and the Church of England, crucial importance is attached to the unbroken tradition, as handed down through the Holy Ghost (see APOSTOLIC SUCCESSION), with this doctrine goes the apostolic power to administer grace through the SACRAMENTS. Certain men of the Reformation rejected the doctrine of apostolic succession and substituted for the authority of the church the authority of Scripture alone. Protestants generally interpret the oneness of the church in a mystical sense, the true church is held to be invisibly present in all Christian denominations. The ecumenical movement in recent years has stimulated fresh study on the doctrine of the church.

church [Gr. *kuraikon* = belonging to the Lord], in architecture, a building for Christian worship. The earliest churches date from the late 3d cent., before then Christians, because of persecutions, worshiped secretly, especially in private houses. In Rome and some other cities Christians worshiped at the martyrs' tombs in the underground cemeteries, or CATACOMBS. The catacomb chapel influenced the furnishing of churches, particularly the CRYPT. The BASILICA form came to be standard in Western Europe, while in the East the norm became the square church of BYZANTINE ARCHITECTURE, derived from the shape of the Greek cross. The interior of the Eastern church is characterized by an image screen (iconostasis) rendering the sanctuary invisible to the lay worshippers, except that the ALTAR may be seen through the doors of the screen. In the West, modifications of the basilica were developed in ROMANESQUE ARCHITECTURE and in GOTHIC ARCHITECTURE. BAROQUE architecture produced innovations in ecclesiastical design in the 17th cent. Western churches in general have an east-west ORIENTATION with the altar at the eastern end. In America, Colonial architects developed an austere beautiful type of spired church, patterned after the works of Christopher Wren and James Gibbs. Churches differ in importance according to their constitution and the position in the hierarchy of their clergy, the CATHEDRAL being the bishop's church. See CHAPEL, ABBEY, HAGIA SOPHIA, SAINT PETER'S CHURCH, articles on other important churches.

church and state. There have been several phases in the relationship between the Christian church and the state. The uncompromising refusal of the early Christians to accord divine honors to the Roman emperor was the chief cause of the imperial persecutions of the church. After CONSTANTINE gave it official status, the church at first remained fairly autonomous, but during the 4th cent. the emperor began to figure increasingly in religious affairs. In the East in the 6th cent., Justinian was ruler of church and state equally, and thereafter the ORTHODOX EASTERN CHURCH in the Byzantine Empire was in confirmed subservience to the state. This domination of state over church is called Erastianism, after the theologian ERASTUS. When the empire began to disintegrate, the power of the state over the church declined, and under the Ottoman sultans the situation was reversed to the extent that the patriarchs of Constantinople were given political power over the laymen of their churches. In Russia the Orthodox Church was quite dominated by the state. In the West different factors were in play. After 400 there was no central power in the West, but there was a central ecclesiastical power, the see of Rome, which had claimed primacy from the earliest times. The barbarian invasions and the ensuing anarchy resulted in a tremendous growth in the power of the PAPACY. With the appearance of strong political powers in Europe, particularly the HOLY ROMAN EMPIRE and the kingdom of France, a struggle began between the papacy and the temporal rulers. The principal contention was over INVESTITURE, but underlying it was violent disagreement as to the proper distribution of power, theories ranged from the belief that emperor or king, as ruler by divine right, should control church as well as state (a theory known also as caesaropapism) to the belief that the pope, as vicar of God on earth, should have the right of supervision over the state. The centuries-long struggle was highlighted by such bitter clashes as those between Pope Gregory VII and Holy Roman Emperor Henry IV, between Pope Innocent III and Emperor Frederick II and King Philip II of France, and between Pope Boniface VIII and King Philip IV of France. The conflict of GUELFIS AND GIBELINES began as part of the imperial-papal struggle. The nearest the papacy ever came to Erastianism was in the period during which the popes resided at Avignon, where they were virtually at the beck and call of the French kings. After the return of the papacy

journalistic sources as *The New York Times Index* and the *New York Times Idea Bank*—the latter a computerized *Index*, which makes any name or fact instantly available

chronicle plays, dramas based upon 16th-century chronicles of English, particularly those of Edward HALL and Raphael HOLINSHED. These plays became very popular late in the reign of Elizabeth I, when, in a burst of patriotism, the public became interested in the history of their country. Starting as loosely structured depictions of events featuring large casts, battle scenes, and much pageantry, the chronicles evolved into narratives of the events of the reign of a single king. Christopher Marlowe depicted the reign of Edward II whereas Shakespeare treated the histories of kings from Richard II to Henry VIII. His *Henry IV*, Parts I and II, and *Henry V* are marked by complex characterizations and comic subplots.

Chronicles or Paralipomenon (pär'älipöm'ñōn) [Gr., =things left out], two books of the Old Testament, originally a single work in the Hebrew canon, called First and Second Chronicles in the Authorized Version, where they occupy the 13th and 14th places, and called First and Second Paralipomenon in Greek versions and in the Roman Catholic Bible. The books are a history of the Jewish kingdom under David (1 Chron. 10-29) and Solomon (2 Chron. 1-9) and, after the division of the kingdom, of the southern kingdom of Judah, including the Babylonian captivity (2 Chron. 10-36). The work commences with a collection of genealogies from Adam until the time of Saul (1 Chron. 1-9) and ends with the decree (538 B.C.) of the Persian king Cyrus restoring the Jews (2 Chron. 36:22-23). Thus the historical material parallels (and supplements) part of the narrative of First and Second Samuel and First and Second Kings, but from the point of view of one who adheres strictly to the house of David and to the worship in the Temple. Like Kings, these books quote their sources constantly. Originally Chronicles formed one book with Ezra and Nehemiah. For views of the higher criticism, see OLD TESTAMENT. See J. C. Whitcomb, *Solomon to the Exile: Studies in Kings and Chronicles* (1971).

chronometer, instrument for keeping highly accurate time, used especially in navigation. Before the advent of radio time signals it was the only device that provided the time accurately enough for a ship at sea to determine its longitude. A mechanical chronometer is a spring-driven escapement timekeeper, like a watch, but its parts are more massively built. Changes in the tension of the spring caused by variations in temperature are compensated for by devices included in it. Some modern chronometers are electronic, using the vibrations of a quartz crystal to regulate the rate at which a time-indicating display moves.

chrysalis (krī'sälīs) see PUPA

chrysanthemum (krī'sānthēməm), name for a large number of annual or perennial herbs of the genus *Chrysanthemum* of the family Compositae (COMPOSITE family), some cultivated in the Orient for at least 2,000 years. A chrysanthemum is the floral emblem of the imperial family of Japan, and, sharing the honor with the cherry blossom, it is the national flower, the highest officials are honored by orders of the chrysanthemum. The flower heads are mostly late blooming and of various shades of red, yellow, and white, they range from single daisylike to large rounded or shaggy heads. Chrysanthemums were introduced to England in the late 18th cent., and today innumerable named horticultural types exist. Most are varieties of *C. morifolium*, a species of indeterminate origin and no longer known in the wild form. Chrysanthemums rank with roses in commercial importance as cut flowers and pot and garden plants. The pyrethrum, feverfew, marguerite, and daisy belong to the same genus. Chrysanthemum is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Asterales, family Compositae.

Chryseis (krī'sē'īs), in the *Iliad*, girl captured by Agamemnon. When ransom efforts failed, her father, the priest Chryses, appealed to Apollo, who promptly sent a plague to terrorize the Greek army, it continued until Chryseis was given up. Agamemnon took Briseis from Achilles to replace Chryseis.

chryselephantine (krī's'ēlafān'tīn, -tīn), Greek sculptural technique developed in the 6th cent. B.C. Sculptures, especially temple colossi, were made with an inner core of wood overlaid with ivory, to simulate flesh, and gold, to represent drapery. The great Parthenon Athena, now lost, was chryselephantine.

Chrysippus (krī'sīpəs), c. 280-c. 207 B.C., Greek Stoic philosopher, b. Soli, Cilicia. He was a disciple of

Cleanthes and succeeded him as head of the Academy in Athens. After Zeno, the founder of STOICISM, Chrysippus is considered the most eminent of the school. He systematized Stoicism and reconciled the factions that threatened to split the school. Chrysippus wrote with exquisite logic but also gave great weight to prophecy and the irrational. Only fragments of his work survive. See J. B. Gould, *The Philosophy of Chrysippus* (1970).

Chrysler, Walter Percy, 1875-1940, American industrialist, founder of the Chrysler Corp., b. Wamego, Kansas. He began as a machinist's apprentice and rose within the industry to become vice president in charge of operations of the General Motors Corp. in 1919. In 1920 he undertook the reorganization of the Willys Overland and Maxwell companies and in 1924 brought out the first Chrysler car. Within a short time he had made his company one of the largest of the automobile industry.

chrysoberyl (krī's'abēr'il) [Gr., =golden beryl], a beryllium aluminate used as a gem. It has a vitreous luster and is transparent to translucent. The more valuable CAT'S-EYE is a variety of chrysoberyl. Another variety, *alexandrite*, was first discovered in the Ural Mts. of Russia, on the birthday of Czar Alexander II, for whom it was named. It is remarkable in that it is green by daylight and raspberry red under artificial light. It was popular in imperial Russia, both because of its association with the czar and because red and green were the colors of the empire. It is now found chiefly in Sri Lanka (formerly Ceylon) and Brazil.

chrysolite: see OLIVINE

Chrysoloras, Manuel (krī'solór'as), c. 1355-1415, Greek teacher and writer, b. Constantinople. Traveling to Italy on a diplomatic mission, he became celebrated for his teaching and introduced Greek literature into Florence and other Italian cities. Among his works were a Greek grammar and translations of Plato and Homer. His pupils included a number of the finest early Renaissance scholars. Through Chrysoloras's teaching, the culture of classical Greece became the foundation of humanist studies in the West.

Chrysophyta (krāsōf'atə), division of the plant kingdom consisting of four rather diverse classes of algae, of which the class containing the DIATOMS is the largest and best known. All four classes are placed together in this division because of their similar physiological behavior and structural composition. In the Chrysophyta, the cell walls, in the form of two overlapping shells, are rarely composed of cellulose, but instead usually contain large quantities of silica. The two flagella, when they occur, are usually dissimilar. The plants, which are photosynthetic, are yellowish green to golden brown because of the presence of large amounts of carotenoid pigments (xanthophylls) relative to the amount of chlorophyll. The chlorophyll pigment differs in type and amount from that of the green algae (division CHLOROPHYTES). The photosynthetic pigments are found in cell structures known as CHLOROPLASTS. The food storage products of chrysophytes consist of oils and complex polysaccharides, such products are unique to this group and are most closely related to those of the brown algae (division Phaeophyta). With the exception of diatoms, the four classes of chrysophytes are of little value in the plant-to-fish food chain. Class Chloromonadophyceae (chloromonads), class Xanthophyceae (yellow-green algae), and class Chrysophyceae (golden algae) comprise relatively small groups of marine and freshwater algae, largely single-celled plankton but occasionally colonial or filamentous. Class Bacillariophyceae contains the diatoms, single-celled or occasionally colonial, golden brown algae found commonly and abundantly in both fresh and salt water. Asexual reproduction of diatoms occurs by mitotic cell division, after which each daughter cell keeps one of the two overlapping shells, producing a new shell to fit within the old one (see MITOSIS). The manner of sexual reproduction varies according to the group of diatoms. With over 10,000 known species, the diatoms form the largest single and natural group of algae, they constitute most of the marine plankton that occurs in the colder seas and are thereby the prime food source for marine animals higher on the food chain. Moreover, since the silicon shells of diatoms are totally nonbiodegradable, they accumulate indefinitely in bottom deposits, through the geological ages they have formed layers of diatomaceous earth several hundreds of feet thick that are of considerable importance for many industrial purposes.

chrysoprase (krī's'apraz) [Gr., =golden leek], apple-green variety of CHALCEDONY, used as a gem. The color is caused by the presence of nickel compounds. Silesia was long the chief source of chrysoprase. More recently it has been obtained in California and Oregon and in Australia.

Chrysorroas: see JOHN OF DAMASCUS, SAINT

Chrysostom: see JOHN CHRYSOSTOM, SAINT

chrysotile: see SERPENTINE

Ch'uan-chou (chuan-jō) or **Tsinkiang**, town (1970 est. pop. 130,000), SE Fukien prov., China, on an inlet of Formosa Strait. Local handicrafts, machine tools, and fertilizer are produced. Ch'uan-chou has been identified with Zaiton (Zaitun or Zayton), which was the departure point for Marco Polo's return journey. The Overseas Chinese Univ. is in the town.

Chuang-tze or **Chuang-tzu** (jwang-dzū, -dzōō), (c. 369-c. 286 B.C.) Chinese Taoist writer. Little is known about his life. He was a native of the state of Meng, on the border of present-day Shantung and Honan provinces, and is said to have lived as a hermit. The collection of essays attributed to him, called the *Chuang-tze*, is distinguished by its brilliant and original style, with abundant use of satire, paradox, and seemingly nonsensical stories. Chuang-tze emphasizes the relativity of all ideas and conventions that are the basis of judgments and distinctions, he puts forward as the solution to the problems of the human condition, freedom in identification with the universal Tao, or principle of Nature. He is less political in his orientation than the earlier Taoist LAO-TZE. He is also called Chuang Chou. See his complete works, tr. by Burton Watson (1968).

Chub (kūb), an African people. Ezek. 30:5. This may be a textual error for Lub (i.e., LUBIM).

chub: see MINNOW

Chubut (chōōbōōt'), river, c. 500 mi (805 km) long, rising in the Andes of SW Argentina and flowing E across Chubut prov. to the Atlantic Ocean at Rawson. The Chico River is its chief tributary. Sheep raising and fruit growing are important along the river's lower course.

Chu-chiang: see CANTON, river

Chu-chou or **Chuchow** (both jōō-jō), town (1970 est. pop. 350,000), E central Hunan prov., China, on the Hsiang River. It is a railroad center for lines running north-south and east-west, with large railway building and repair shops. Trucks and fertilizers are also manufactured, uranium is processed, and lead and zinc are mined nearby.

chuckwalla: see IGUANA

chuck-will's-widow: see GOATSUCKER

Chudskoye, Lake (chōōtskū'yə), or **Lake Peipus** (pī'pəs), Estonian *Peipsi Jarv*, c. 1,390 sq mi (3,600 sq km), dividing the Estonian Republic from W Pskov oblast, NW European USSR. Its southern section is known as Lake Pskov. Lake Chudskoye, which is navigable, empties through the Narva River into the Gulf of Finland. The Russian coastal population engages in fishing. On the frozen strait between Lake Chudskoye and Lake Pskov, Alexander Nevsky defeated the Livonian Knights in 1242.

Chufut-Kale (chōōfōōt'-kalē'yē) [Turk., =Jews' city], ruined fortress and town, S European USSR, in the Ukraine, in the Crimea. While under Turkish rule (1475-1783), it was the center of the Jewish sect of Karaites. Jewish inscriptions date back to 1203, and the region was probably the last refuge of the Crimean Khazars.

Chugach Mountains (chōō'gäch), one of the Pacific coastal ranges, S Alaska, extending from the St. Elias Mts., on the Alaska-Yukon border, NW to the Manuskwa River Mt. Marcus Baker, 13,176 ft (4,016 m), is the highest peak. Rugged, with forested lower slopes (the southern slope is a national forest) and glacier-covered summits, the Chugach are a barrier for movement inland from the coast. The Richardson Highway, a north-south road running from the coast to Fairbanks, Alaska, and the Copper River are the only corridors through the range.

Chuguchak: see TA CHENG, China

Chu Hsi (jōō shē), 1130-1200, Chinese philosopher of Neo-Confucianism. While borrowing heavily from Buddhism, his new metaphysics reinvigorated Confucianism. According to Chu Hsi, the normative principle of human nature is pure and good. Expressed in concrete form human nature is less than perfect, but it can be refined through self-cultivation based on study of the classics. His thought was orthodox during the Yuan, Ming, and Ch'ing dynasties. For 600 years students memorized his classical

commentaries until the CHINESE EXAMINATION SYSTEM was abolished in 1905 See J P Bruce, *Chu Hsi and His Masters* (1923)

Chukchi Peninsula (chōōk'chē), northeastern extremity of Asia, terminating in Cape Dezhnev, Far Eastern USSR Washed by the E Siberian and Chukchi seas in the northeast, the peninsula is the eastern extension of the Anadyr mountain range It is also known as Chukotsk It is included in the Chukchi National Okrug (1970 pop 101,000) The capital is the village of Anadyr A large portion of the inhabitants are Chukchi, the rest are Yakut, Eveny, Koryak, Eskimo, and Russians The Chukchi language is of the Hyperborean family The people are of two groups, seminomadic hunters and coast-dwelling fishermen The okrug's coastline lies along the North Sea shipping route There is mining (tin, lead, zinc, gold, and coal), hunting and trapping, reindeer raising, and fishing Formed in 1930, the okrug is now part of the Magadan oblast

Chukotsk see CHUKCHI PENINSULA, USSR

Chulalongkorn (chōō'lālong'kōrn) or **Rama V** (ra'-ma), 1853-1910, king of Siam (1868-1910) Educated in part by a British governess, Anna Leonowens, and an English tutor, he greatly advanced the Westernization of Siam (present-day Thailand) begun by his father, King Mongkut He departed from tradition by traveling abroad—to Singapore, Java, and India in 1871 and to Europe in 1897 He abolished slavery, simplified court etiquette, initiated the practice of sending young Siamese abroad for training, set up schools, reorganized the administration of justice, laid the foundations of a sound financial policy, and built public works He also was responsible for the centralization of Siamese administration that checked the independence of the hereditary provincial chieftains (1892) The total effect of Chulalongkorn's reforms and of the foreign policy he directed was to preserve Siam as an independent state at a time when the rest of SE Asia was falling subject to France and Great Britain

Chula Vista (chōō'la), city (1970 pop 67,901), San Diego co, S Calif, on San Diego Bay, inc 1911 Citrus fruits and vegetables are grown in the area, and aircraft engines and men's slacks are manufactured in the city A junior college is there

Chulym (chōōlīm'), river, c 1,075 mi (1,730 km) long, Krasnoyarsk Krai, S central Siberian USSR It rises in the eastern slopes of the Kuznetsk Ala-Tau and flows N and W through Krasnoyarsk Krai and Tomsk oblast into the Ob Its lower course is navigable Another Chulym River, 140 mi (225 km) long, in SW Siberia, feeds Lake Chany

Chumashan Indians (chōō'māshān), North American Indian group, formerly on the Pacific coast in the vicinity of Santa Barbara, Calif, and on three islands of the Santa Barbara archipelago Their canoes were quite large, and their culture was more maritime than other California Indians Spanish missions were established among them in the late 18th cent Their practice of abortion, in addition to their being forced out by Spanish settlers, led to their extinction They were sometimes called the Santa Barbara Indians

Chun (kūn), in the Bible see BEROETHAI

Chunchon (chōōn'chūn'), city (1970 pop 122,672), capital of Kangwon prov, N South Korea It is an important market town and rice-processing center Textiles, silk yarn, and raw silk are also produced Tungsten, mica, and fluorspar are mined nearby Chunchon was the capital of the kingdom of Maek (250 B C-A D 660) and was later absorbed by Silla (see KOREA)

Ch'ung-ch'ing see CHUNGKING, China

Chungjin see CHONGJIN, North Korea

Chungju (chōōng'jōō'), city (1970 pop 87,227), central South Korea Chungju is an important agricultural center

Chungking (chōōng'kīng') or **Ch'ung-ch'ing** (chōōng-chīng), city (1970 est pop 3,500,000), SE Szechwan prov, China, at the junction of the Yangtze and Chia-ling rivers The commercial center of W China, it commands a large river trade Surrounded on three sides by water, it is situated on a rock promontory, all supplies from the river front must be carried by stairway or inclined railway A flourishing industrial city, it has railroad shops, shipyards, a large-scale integrated steel complex, cotton and silk mills, chemical and cement plants, food-processing establishments, machine shops, paper mills, and a developing motor vehicle industry Large coal and iron mines are nearby Chungking was opened as a treaty port in 1891 In Nov, 1937, just before the Japanese capture of Nanking in the

Second Sino-Japanese War, the capital of China was transferred to Chungking, where it remained until the end of hostilities During that time administrative agencies, educational institutions, and industrial plants from all over the country were relocated in Chungking, and the population more than tripled The city was taken by the Communists on Nov 30, 1949 Its many institutions of higher learning include Chungking Univ, Chungking Technical Univ, and a medical college

Chung-shan (jōōng-shan) or **Shekki** (shē'kē'), town, S Kwangtung prov, SE China, near Macao It is situated on Chung-shan island (sometimes called Macao island), and has sugar refineries Sun Yat-sen was born there

Chuquet, Nicolas (nēkōla' shukā'), c 1450-1500, French mathematician, probably b Paris Little is known of Chuquet's life At Lyons in 1484 he composed a manuscript on the science of numbers, which was finally published in two parts in 1880 and 1881 The first part, called the "Tripartite," was a treatise on algebra and contained the first use of the RADICAL sign with an index (as in $\sqrt[n]{x}$), the second part contained the statement of, and the replies to, a set of 156 mathematical problems

Chuquicamata (chōō'kēkama'ta), town, N Chile, on the western slopes of the Andes At an elevation of 10,435 ft (3,181 m), Chuquicamata has one of the world's largest copper mines The extensive open-pit mining of the region dates to 1915

Chur (kōōr), Fr Coire, Romansh Cuera, city (1971 pop 31,193), capital of Grisons canton, E Switzerland, on the Plessur River Chur is an important transportation junction Manufactures include foodstuffs (especially chocolate), textiles, and metal products Chur was capital of the Roman province of Rhaetia In the 5th cent it became an episcopal see, the bishops were later made princes of the Holy Roman Empire The temporal power of the prince-bishops was limited (c 1465) by the townspeople and later, when the Reformation was accepted (1524-26), ended altogether Outstanding buildings are a restored 8th-century church, the Renaissance episcopal palace, the cathedral (begun 12th cent), and the Rhaetian Museum (of folklore) Most of the inhabitants speak Romansh The Swiss painter Angelica Kauffmann was born in Chur

Church, Benjamin, 1639-1718, New England colonial soldier in KING PHILIP WAR, b Plymouth, Mass He took a leading part in the Great Swamp Fight (Dec, 1675), W of Kingston, RI, and finally hunted down and killed Philip in Aug, 1676

Church, Frederick Edwin, 1826-1900, American landscape painter of the HUDSON RIVER SCHOOL, b Hartford, Conn, studied with Thomas Cole at Catskill, NY He traveled and painted in North and South America and in Europe and excelled in panoramic scenes He preferred to paint exotic and foreign landscapes instead of the native scenery favored by other members of the school His large canvases are noted for the accuracy and clarity of the scenery portrayed, and for a crystalline rendering of light Church is represented in the Metropolitan Museum, the New York Public Library, the National Academy of Design, New York City, and the Corcoran Gallery

Church, Sir Richard, 1784-1873, British army officer After varied service, he organized a Greek regiment to defend (1812-15) the Ionian Islands, and in 1827 he was made generalissimo of the Greek insurgents in the Greek War of Independence Residing in Greece, he subsequently engaged in politics there and was made (1854) a general in the Greek army

Church, Richard William, 1815-90, English Anglican clergyman He was educated at Oxford, where he became a follower of John Henry Newman As dean of St Paul's (1871-90) he did much to disseminate High Church doctrine His book *The Oxford Movement* (1891) was long the authoritative work on the subject In 1846 he helped found the *Guardian*, an Anglican newspaper See his life and letters (ed by his daughter, 1894)

church [probably Gr, =divine], aggregation of Christian believers The traditional belief has the church the community of believers, living and dead, headed by Jesus Christ, who founded it in the apostles This is the doctrine of the mystical body of Christ (Eph 1:22-23) Some divisions speak of the church militant (the living), the church suffering (the dead in purgatory), and the church triumphant (the saints of heaven) The church is said to be recognizable by four marks (as in the Nicene Creed) it is one (united), holy (producing holy lives), catholic (universal, supranational), and apostolic (having continuity with the apostles) In the Orthodox East-

ern Church, the Roman Catholic Church, and the Church of England, crucial importance is attached to the unbroken tradition, as handed down through the Holy Ghost (see APOSTOLIC SUCCESSION), with this doctrine goes the apostolic power to administer grace through the SACRAMENTS Certain men of the Reformation rejected the doctrine of apostolic succession and substituted for the authority of the church the authority of Scripture alone Protestants generally interpret the oneness of the church in a mystical sense, the true church is held to be invisibly present in all Christian denominations The ecumenical movement in recent years has stimulated fresh study on the doctrine of the church

church [Gr *kuraikon*=belonging to the Lord], in architecture, a building for Christian worship The earliest churches date from the late 3d cent, before then Christians, because of persecutions, worshiped secretly, especially in private houses In Rome and some other cities Christians worshiped at the martyrs' tombs in the underground cemeteries, or CATACOMBS The catacomb chapel influenced the furnishing of churches, particularly the CRYPT The BASILICA form came to be standard in Western Europe, while in the East the norm became the square church of BYZANTINE ARCHITECTURE, derived from the shape of the Greek cross The interior of the Eastern church is characterized by an image screen (iconostasis) rendering the sanctuary invisible to the lay worshippers, except that the ALTAR may be seen through the doors of the screen In the West, modifications of the basilica were developed in ROMANESQUE ARCHITECTURE and in GOTHIC ARCHITECTURE BAROQUE architecture produced innovations in ecclesiastical design in the 17th cent Western churches in general have an east-west ORIENTATION with the altar at the eastern end In America, Colonial architects developed an austere beautiful type of spired church, patterned after the works of Christopher WREN and James Gibbs Churches differ in importance according to their constitution and the position in the hierarchy of their clergy, the CATHEDRAL being the bishop's church See CHAPEL ABBEY, HAGIA SOPHIA, SAINT PETER'S CHURCH, articles on other important churches

church and state. There have been several phases in the relationship between the Christian church and the state The uncompromising refusal of the early Christians to accord divine honors to the Roman emperor was the chief cause of the imperial persecutions of the church After CONSTANTINE I gave it official status, the church at first remained fairly autonomous, but during the 4th cent the emperor began to figure increasingly in religious affairs In the East in the 6th cent, Justinian was ruler of church and state equally, and thereafter the ORTHODOX EASTERN CHURCH in the Byzantine Empire was in confirmed subservience to the state This domination of state over church is called Erastianism, after the theologian ERASTUS When the empire began to disintegrate, the power of the state over the church declined, and under the Ottoman sultans the situation was reversed to the extent that the patriarchs of Constantinople were given political power over the laymen of their churches In Russia the Orthodox Church was quite dominated by the state In the West different factors were in play After 400 there was no central power in the West, but there was a central ecclesiastical power, the see of Rome, which had claimed primacy from the earliest times The barbarian invasions and the ensuing anarchy resulted in a tremendous growth in the power of the PAPACY With the appearance of strong political powers in Europe, particularly the HOLY ROMAN EMPIRE and the kingdom of France, a struggle began between the papacy and the temporal rulers The principal contention was over INVESTITURE, but underlying it was violent disagreement as to the proper distribution of power, theories ranged from the belief that emperor or king, as ruler by divine right, should control church as well as state (a theory known also as caesaropapism) to the belief that the pope, as vicar of God on earth, should have the right of supervision over the state The centuries-long struggle was highlighted by such bitter clashes as those between Pope Gregory VII and Holy Roman Emperor Henry IV, between Pope Innocent III and Emperor Frederick II and King Philip II of France, and between Pope Boniface VIII and King Philip IV of France The conflict of GUELPHS AND GIBELLINES began as part of the imperial-papal struggle The nearest the papacy ever came to Erastianism was in the period during which the popes resided at Avignon, where they were virtually at the beck and call of the French kings After the return of the papacy

to Rome the popes generally maintained independence of temporal powers but on occasion were either influenced or coerced by king or emperor. The contest in England was perhaps no less bitter than on the Continent, but it was more sporadic. LANFRANC and ANSELM contended against King WILLIAM II, ST THOMAS À BECKET against Henry II. The REFORMATION introduced a great number of complicated factors into the relations of church and state. Different solutions have been found, ranging from the establishment of one particular church (as in England and the Scandinavian countries) to the total separation of church and state (as in the United States). The patterns of relation between church and state remain a living issue in today's society. See B D Hill, ed., *Church and State in the Middle Ages* (1970), Walter Ullmann, *The Growth of Papal Government in the Middle Ages* (3d ed 1970).

In the British Isles The most extreme form of Erastianism is seen in the Church of England (see ENGLAND, CHURCH OF), of which the monarch is supreme head. This situation derives from the strongly political character of the Protestant Reformation in England. It is notable that in the early history of religious dissent, the Puritans (see PURITANISM) did not wish to end the Established Church, their aim was rather to capture and control it. The church was not disestablished after the ENGLISH CIVIL WAR, Anglicanism, or Episcopalianism, was merely replaced by a Presbyterian establishment (although the latter was a dead letter from the beginning). After the Restoration (1660) of the monarchy, measures were taken against the Puritans that for the first time actually excluded them from the Church of England as NONCONFORMISTS. They and the Roman Catholics were the victims of religious and civil disabilities (gradually reduced) into the 19th cent. Although the state has taken less and less interest in supervising the Church of England, the connection is still very real, e.g., revisions of the BOOK OF COMMON PRAYER must be approved by Parliament, and appointments to all bishoprics are made by the monarch, acting on the advice of the prime minister. John CALVIN tended to a view directly opposed to that of the reforming English monarchs, in Geneva he set up a virtual theocracy with the state subordinate to the church. The Presbyterian churches have, therefore, maintained a stand for freedom of the church, and the Church of Scotland (see SCOTLAND, CHURCH OF) is much less under state control than is the Church of England. See T G Sanders, *Protestant Concepts of Church and State* (1964).

In the United States The Presbyterians in the British North American colonies helped in the struggle against the institution of an established church, particularly in Virginia. More important, however, was the broad principle of religious toleration forwarded by Roger WILLIAMS and others. This principle, befitting the heterogeneity of the colonies, ultimately triumphed against both the virtual theocracy of the New England Puritans and the conservative Established Church of the Southern colonists. The American idea of separation of church and state—complete noninterference on both sides—emerged. In the United States today there is a minimum of friction between church and state. The practical line of demarcation, however, continues to create problems, and any seeming transgression by either institution causes a tremendous outcry. Education has been a fertile field of controversy, debates have arisen over such questions as religious education in tax-supported schools and public aid to parochial schools. See study by A P Stokes and Leo Pfeffer (3 vol., 1950, rev ed., 1 vol., 1964), J F Wilson, ed., *Church and State in American History* (1965), Leo Pfeffer, *Church, State, and Freedom* (rev ed 1967). *On the Continent* In Europe, as in Latin America, the concept of separation of church and state is different from that in the United States, particularly in predominantly Roman Catholic countries. The wars of the Reformation produced, in the Peace of Augsburg (1555), a formula of *cuius regio, eius religio* [whose the region, his the religion], by which the ruling prince determined the religion of his territory. The compromise, curiously contrary to the idea of a universal Christian church, even more curiously corresponded to the principle practiced in Asia (e.g., the Buddhism of Asoka). It more or less prevailed in Europe after the Thirty Years War and the Peace of Westphalia (1648). Religion thus in a certain sense became a national affair, particularly in Protestant countries. The internationalism of the Roman Catholic Church, however, prevented nationalization in Catholic countries, despite such movements as GALICANISM in France. The church, when recognized as the state church, exercised consider-

able influence on the government of the state. More important, perhaps, was the fact that the church and its religious orders owned much property and exerted considerable economic influence. The CONCORDAT was used as a means of regulating the relation of church and state and delimiting the spheres of respective influence. Of the modern concordats perhaps the most famous was Napoleon I's Concordat of 1801. The opponents of clerical influence in the state, the anticlericals, in the 19th cent. agitated for the removal of clerical influence. To them the separation of church and state meant the ending of the establishment of the church and complete noninterference of the church in affairs of state but not noninterference of the state in such matters as church property and religious education. The clerical parties, on the other hand, fought to maintain establishment and property and (to some extent) the enforcement of ecclesiastical law by the civil arm. One of the most bitter of these contests took place in France, where ultimately the anticlericals triumphed, notably in the *Lois des associations* (1905), which in effect placed the church under subjection to the state. The contests were also bitter in Latin America, particularly in Mexico, where the church wielded an enormous influence. This struggle led under Plutarco E. Calles to the practical abolition of the church in Mexico and the harrying of priests in the 1920s, adjustments since that time have tended to an approximation of the complete noninterference rule prevalent in the United States. In Germany the relations of church and state reached a crucial point in the KULTURKAMPF of Otto von BISMARCK. Adolf Hitler, although he signed a concordat, undertook to reduce both Roman Catholic and Protestant churches to instruments of the National Socialist government. In Italy, the LATERAN TREATY, agreed to by Pius XI in 1929, ended the so-called Roman Question and secured recognition of the pope as a sovereign apart from the Italian government. In the Soviet Union, especially in its early period, the Communist party fostered much antireligious propaganda. A large percentage of the churches were closed. The Constitution of 1936, however, guaranteed freedom of religious worship, and the Russian Orthodox Church was subsequently revived. In 1944 two state-controlled councils were established to supervise religion, one regulates the affairs of the Russian Church, the other those of the other Christian denominations and of the Muslim, Jewish, and Buddhist groups. Similar systems of state control exist in many other Communist countries. See A H Dalton, *Church and State in France 1300-1907* (1907, repr 1972), E C Helmreich, *A Free Church in a Free State? The Catholic Church in Italy, Germany, France 1864-1914* (1964), J L Mechem, *Church and State in Latin America* (rev ed 1966), H H Stroup, *Church and State in Confrontation* (1967).

Churches of Christ, conservative body of Protestant Christians. Its founders were originally members of the DISCIPLES OF CHRIST who gradually withdrew from that body beginning c 1840. They objected to the use of musical instruments in the church and to the introduction of new titles and more power for the pastors. Each church is entirely self-governing. The Bible, especially the New Testament, is considered its complete and sufficient authority. The Churches of Christ, highly evangelistic, have emerged as one of the largest Christian denominations in the United States, especially strong in the South and the West. They were first listed as a separate group in the U.S. census of religious bodies of 1906. They claim a membership of c 2,400,000.

Churches of God in North America, evangelical and orthodox Christian bodies, Arminian in faith (see ARMINIANISM), with certain Baptist doctrines. Each local church has a council consisting of the pastor and of elders elected by the congregation. Baptism by immersion and the Lord's Supper, with the attendant ceremony of foot washing, are the principal ordinances. The Bible is the sole rule of faith and practice. The movement originated during revivals held by John Winebrenner, of Harrisburg, Pa. Opposition to his evangelistic methods led to his eventual exclusion in 1825 from the German Reformed Church. In 1830 the General Eldership of the Church of God was organized by the independent congregations of Winebrenner's founding. Later this became the General Eldership of the Churches of God in North America. Originally in Maryland and Pennsylvania, the churches are now found elsewhere in the United States.

Churchill, Charles, 1731-64, English poet and satirist. Upon his family's insistence he took religious

orders in 1756, but life as a London dandy suited him more, and he resigned his curacy. His first poem and perhaps his best work, *The Rosciad* (1761), a satire on the leading actresses and actors of the day, was an immediate success. His other works include *The Prophecy of Famine* (1763), a highly topical political satire, and *An Epistle to William Hogarth* (1763), attacking Hogarth for his heartless portrait of John Wilkes. See his works (ed. by Douglas Grant, 1956), study by W C Brown (1953).

Churchill, John: see MARLBOROUGH, JOHN CHURCHILL, 1ST DUKE OF.

Churchill, Lord Randolph Henry Spencer, 1849-95, English statesman, son of the 7th duke of Marlborough. A sincere Tory and a founder (1883) of the Primrose League, dedicated to upholding national institutions, he was nonetheless opposed to the traditional structure of Conservative rule. On entering (1874) the House of Commons, he began to attack the Conservative ministry with the incisive rhetoric for which he became famous. During William Gladstone's Liberal ministry (1880-85) he allied with other Tory independents to form the so-called "Fourth Party," which advocated a new conservatism, more democratic and more receptive to the need for social and political reforms. Acquainted with some of the problems of Ireland, having accompanied his father, the viceroy, there (1876-80), he was committed to continued union but recognized the extent of maladministration and was opposed to coercive measures. Churchill's appointment (1884) as chairman of the National Union of Conservative Associations and his advocacy of increased popular participation in the party organization, provoked a breach with the aristocratic leadership of Lord Salisbury, but Churchill's popularity necessitated Salisbury's acceptance of him into the new Tory government in 1885. He was secretary of state for India (1885-86) and chancellor of the exchequer and leader of the House of Commons (1886). His first budget implicitly criticized the entire foreign policy by its proposed drastic cuts in funds for the armed services. It was rejected by the cabinet and Churchill resigned. There was no effort at reconciliation and, unexpectedly, no popular outcry. Churchill continued as a member of Parliament but had no further active political role. In his last years he was crippled by illness. His American wife, Jennie Jerome, whom he married in 1874, was a leader in London society. She was the author of *Reminiscences* (1908) and two plays, *Borrowed Plumes* (1909) and *The Bill* (1912). She died in 1921. See biographies of Lord Randolph Churchill by their son, Winston S. Churchill (1906, repr 1952) and R R James (1959), Brian Roberts, *Churchills in Africa* (1970), biographies of Jennie Jerome by Anita Leslie (1969) and R G Martin (2 vol., 1969-71).

Churchill, Sarah: see MARLBOROUGH, SARAH CHURCHILL, DUCHESS OF.

Churchill, Winston, 1871-1947, American novelist, b. St. Louis, grad. Annapolis, 1894. He wrote several popular historical novels including *Richard Carvel* (1899), *The Crisis* (1901), and *The Crossing* (1904). His later books, such as *Coniston* (1906), *The Inside of the Cup* (1913), and *The Dwelling-Place of Light* (1917), reflected his interest in social, religious, and political problems.

Churchill, Sir Winston Leonard Spencer, 1874-1965, British statesman, soldier, and author, son of Lord Randolph Churchill. Educated at Harrow and Sandhurst, he became (1894) an officer in the 4th hussars. On leave in 1895 he saw his first military action in Cuba as a reporter for London's *Daily Graphic*. He served in India and in 1898 fought at Omdurman in the Sudan under Kitchener. Having resigned his commission, he was sent (1899) to cover the South African War by the *Morning Post*, and his accounts of his capture and imprisonment by the Boers and his escape raised him to the forefront of English journalists. He was elected to Parliament as a Conservative in 1900, but he subsequently switched to the Liberal party and was appointed undersecretary for the colonies in the cabinet of Sir Henry Campbell-Bannerman. He was (1908-10) president of the Board of Trade, and as home secretary (1910-11) originated important labor exchange and old age pension acts. Becoming first lord of the admiralty (1911), he presided over the naval expansion that preceded World War I. Discredited by the failure of the Dardanelles expedition, which he had championed, Churchill lost (1915) his admiralty post and served for a time on the front lines in France. Returning to office under Lloyd George, he served as minister of munitions (1917), secretary of state for war and for air (1918-21), and colonial secretary

(1921–22) In the last capacity he helped negotiate the treaty that set up the Irish Free State. After two defeats at the polls he returned to the House of Commons, once more as a Conservative, and held office (1924–29) as chancellor of the exchequer. His revaluation of the pound (1925) undoubtedly worsened the economic situation (as John Maynard Keynes pointed out) and thus was a factor leading to the general strike of 1926. He advocated aggressive action to end the strike and thus earned the lasting distrust of the labor movement. Out of office from 1929 to 1939, Churchill wrote and remained in the public eye with his support for Edward VIII in the abdication crisis of 1936 and with his vehement opposition to the Indian nationalist movement. He also issued unheeded warnings of the threat from Nazi Germany. When World War II broke out (Sept., 1939), Neville Chamberlain appointed him first lord of the admiralty. The following May, when Chamberlain was forced to resign, Churchill became prime minister. His stirring oratory, his energy, and his stubborn refusal to make peace until Adolf Hitler was crushed were crucial in rallying and maintaining British resistance to Germany during the grim years from 1940 to 1942. He met President Franklin Roosevelt at sea (see ATLANTIC CHARTER) before the entry of the United States into the war, twice addressed the U.S. Congress (Dec., 1941, May, 1942), twice went to Moscow (Aug., 1942, May, 1944), visited various battle fronts, and attended a long series of international conferences (see CASABLANCA CONFERENCE, QUEBEC CONFERENCE, CAIRO CONFERENCE, TEHRAN CONFERENCE, YALTA CONFERENCE, POTSDAM CONFERENCE). The British nation supported the vigorous program of his coalition cabinet until after the surrender of Germany. Then in July, 1945, Britain's desire for rapid social reform led to a Labour electoral victory, and Churchill became leader of the opposition. In 1946, on a visit to the United States, he made a controversial speech at Fulton, Mo., in which he warned of the expansive tendencies of the USSR (he had distrusted the Soviet government since its inception, when he was a leading advocate of Western intervention to overthrow it) and coined the expression "Iron Curtain." Churchill returned to power in 1951, and his government ended nationalization of the steel and auto industries but maintained most other socialist measures instituted by the Labour government. In 1953 he was honored with a knighthood and in the same year was awarded the Nobel Prize in Literature, not only for his writing but also for his oratory. After another Conservative electoral victory (1955), the aging prime minister retired from the leadership of his party, although he retained a seat in Parliament until 1964. Churchill was undoubtedly one of the greatest public figures of the 20th cent. Extraordinary vitality, imagination, and boldness characterized his whole career. His weaknesses, such as his opposition (except in the case of Ireland) to the expansion of colonial self-government, and his strengths, evidenced by his brilliant war leadership, sprang from the same source—the will to maintain Britain as a great power and a great democracy. His biographical and autobiographical works include *Lord Randolph Churchill* (1906), *My Early Life: A Roving Commission* (1930), and the study of his ancestor *Marlborough* (4 vol., 1933–38). *Blood, Sweat, and Tears* (1941) is one of a number of volumes of collected speeches. *World Crisis* (4 vol., 1923–29) is his account of World War I. *The Second World War* (6 vol., 1948–53) was followed by *A History of the English-speaking Peoples* (4 vol., 1956–58). See his complete speeches edited by R. R. James (8 vol., 1974), the multivolume study by his son Randolph Churchill and Martin Gilbert (1966–), biographies by Reginald Thompson (1963), Violet Bonham-Carter (1965), and Lord Moran (1966), A. J. P. Taylor and others, *Churchill Revised: A Critical Assessment* (1968), R. R. James, *Churchill: A Study in Failure, 1900–1939* (1970), Henry Pelling, *Churchill* (1974), R. W. Thompson, *Generalissimo Churchill* (1974).

Churchill. 1 River, c 600 mi (970 km) long, issuing as the Ashuanipi River from Ashuanipi Lake, SW Labrador, Canada, and flowing in an arc north, then southeast through a series of lakes to Churchill Falls and McLean Canyon. It then runs NE past Goose Bay and through Melville Lake and Hamilton Inlet to the Atlantic Ocean near Rigolet. The river has the greatest hydroelectric power potential of any river in North America, and Churchill Falls is the site of one of the world's largest hydroelectric power plants. Formerly known as the Hamilton River, it was renamed (1965) in honor of Sir Winston Churchill. 2 River, c 1,000 mi (1,610 km) long, issuing from Methy Lake, NW Sask., Canada, and flowing south-

east, east, and northeast across the lowlands of N Saskatchewan and N Manitoba to Hudson Bay at Churchill. It meets the Beaver River, its chief tributary, at Lac Île-à-la-Croix. Once a famous fur-trade route, it was discovered (1619) by Jens Munck, a Scandinavian sent by Christian IV, king of Denmark and Norway, to search for the Northwest Passage. In 1717 the Hudson's Bay Company established a trading post, later called Fort Prince of Wales, near the mouth of the river. A massive stone fort replaced the post in 1732 and served for many years as the British stronghold in the region. Captured (1782) by the French under Jean La Prouse, the fort was regained by the British and renamed Fort Churchill; its ruins are preserved in Fort Prince of Wales National Historic Park. Exploration of the upper reaches of the river was carried on by the Frobishers, Peter Pond, and Alexander Henry, all of the North West Company. A hydroelectric power station on the upper river supplies power for mining operations in Manitoba. The modern port of Churchill (1966 pop. 1,878), at the mouth of the river, is the western terminus (est. 1929) of the Hudson Bay Railway. There, in the short summer navigation season, grain from the Prairie Provinces is shipped abroad. See James Knight's journal, *The Founding of Churchill*, ed. by J. F. Kenney (1932), S. F. Olson, *The Lonely Land* (1961).

Churchill Downs, Ky. see LOUISVILLE

Churchill Falls, once spectacular waterfalls of the upper Churchill River, 245 ft (75 m) high, SW Labrador, Canada, known as Grand Falls until renamed (1965) in honor of Sir Winston Churchill. The falls were discovered (1839) by John McLean, a trader of the Hudson Bay Company, and were rediscovered in 1891, after having been generally forgotten because of their remote location. Four miles (6.4 km) above the falls, the Churchill River narrows to 200 ft (61 m) and negotiates a series of rapids before dropping into McLean Canyon, from which sheer cliffs rise several hundred feet on either side. The river flows 12 mi (19 km) through the canyon over a series of rapids. The total drop from the rapids above the main falls to the end of McLean Canyon is 1,038 ft (316 m). Because of their isolated location and harsh surroundings, the falls never became a tourist attraction. Churchill Falls is the site of the world's largest underground power plant, which has one of the largest hydroelectricity-generating capacities (5,225,000 kw) in the world. It was put into operation in June, 1972, and most of the power is sent to the Montreal vicinity. The falls are expected to dry up as the power plant approaches full operation, since greater amounts of water will be diverted to drive the nearby underground turbines.

church music. 1 Music intended for performance as part of services of worship. With few exceptions, music is essential to the ritual of every religion; the singing of prayers and portions of Scripture is part of Judaeo-Christian tradition, and a large number of melodies for specific parts of the liturgy were embodied in the medieval collection of church music called Gregorian chant. Additional musical settings of liturgy from later times to the present have added to the liturgical repertory. Such customary interpolations in the service as the motet, chorale, and hymn have achieved an integral place in many church services. This is also true of the Anglican anthem and was at one time true of the Lutheran cantata. See ANTHEM, ANTIPHON, CANTATA, CHANT, CHORALE, HYMN, MASS, MOTET, PLAINSONG. 2 Music intended for performance in a church outside of the regular worship service. This may include works taken from the repertory above as well as music of religious content, e.g., oratorios or sacred cantatas and instrumental music which is not specifically secular in nature. See CANTATA, CAROL, ORATORIO. See Erik Routley, *Twentieth-Century Church Music* (1964), E. H. Fellowes, *English Cathedral Music* (5th ed. 1969), Edward Dickinson, *Music in the History of the Western Church* (1902, repr. 1970).

Church of Christ, Scientist. see CHRISTIAN SCIENCE

Church of England. see ENGLAND, CHURCH OF

Church of God. see ADVENTISTS

Church of the Brethren. see BRETHREN

Church of the Nazarene, U.S. Protestant denomination established in 1908 through the union of the Church of the Nazarene, based in California, the Association of Pentecostal Churches, a New England group, and the Holiness Church of Christ whose origin was mainly in the Southwest. An evangelical group, the Nazarenes believe in entire sanctification, that is, that God "extirpates man's sinful nature" and removes the ability to sin after conver-

sion. Local churches are autonomous in matters of worship and evangelism, but a representative body maintains Sunday schools, Bible colleges, publishing enterprises, and other activities. See C. T. Corbeth, *Our Pioneer Nazarenes* (1958), and T. C. Smith, *Called unto Holiness* (1962).

Church Slavonic, language belonging to the South Slavic group of the Slavic subfamily of the Indo-European family of languages (see SLAVIC LANGUAGES). Although it is still the liturgical language of most branches of the Orthodox Eastern Church, Church Slavonic is extinct today as a spoken tongue. In its earliest period, from the 9th to the 11th cent. A.D., this language is variously termed Old Church Slavonic, Old Church Slavic, or Old Bulgarian. The year 1100 is the conventional dividing line between the ancestor, Old Church Slavonic, and its descendant, the later Church Slavonic, which flourished as the literary language of a number of Slavic peoples before the 18th cent. Old Church Slavonic was created in the 9th cent. by St. Cyril and St. Methodius for their translation of the Gospels and other religious texts. Scholars disagree as to which spoken Slavic dialect was chosen by the two saints as the basis for the language of their translations. In any case, because this dialect was inadequate for their purpose, they had to enrich and transform it, drawing on the vocabulary and syntax of Greek. Old Church Slavonic is the first Slavic language known to have been recorded in writing. Two alphabets were devised for it, the Glagolitic and the Cyrillic. Tradition makes St. Cyril the inventor of both, although this view has been questioned, and both alphabets are said to have been derived in part from the Greek. The earliest surviving documents in Old Church Slavonic date from the 10th and 11th cent. In time, as the South and East Slavic tongues influenced this literary language in their respective regions, three major forms of the later Church Slavonic arose: Bulgarian, Serbian, and Russian. For various historical reasons, Russian Church Slavonic eventually became the dominant form. The Western Slavs were not caught up in this development, since they came under the domination of the Roman Catholic Church after the 11th cent. At first employed for religious writings, Church Slavonic later came to be used in secular compositions as well. Today it is written in the Cyrillic alphabet. See Grigore Nandris, *Handbook of Old Church Slavonic* (1959), H. G. Lunt, *Old Church Slavonic Grammar* (4th ed. 1966).

Churchyard, Thomas, 1520?–1604, English author. In his youth he was page to Henry Howard, earl of Surrey. He spent most of his life as a professional soldier, serving in Scotland, Flanders, and France. His best-known work, the poem *Shore's Wife*, was contributed to the 1563 edition of the *Mirror for Magistrates*. Much of his work reflects his war experiences, most notably the narrative poems, *Wofull Warres in Flaunders* (1578) and *General Rehearsall of Warres* (1579).

churn: see BUTTER

Churriguera, José Benito (hōsā' bānē'tō chōōr-rēgā'ra), 1665–1725, Spanish architect and sculptor. A native of Madrid, he won fame for his design (1689) of the great catafalque for Queen Maria Luisa and for his ornate retables, characterized by twisted columns and elaborate leafwork. After 1690 he served as architect of the Cathedral of Salamanca, although he returned to Madrid after 1699. There he built a private palace (now the Academia de San Fernando) for the banker Don Juan de Goyeneche and also designed for him the urban complex Nuevo Baztan, including the glassworks, palace, and church. Associated with him were his brothers Joaquín and Alberto. Much of the architectural work of the Churriguera family has been subsequently altered. The term Churrigueraesque (chūr'ēgārēsk') describes the architecture of the late 17th and early 18th cent. in Spain, marked by extravagance of design and capricious use of Renaissance motives, the architects of the period used architectural forms to produce free and theatrical contrasts of line and surface with extreme richness and exuberance. The facade of the cathedral at Murcia illustrates the style's full expression. The Churrigueraesque manner was an important influence on the Spanish colonial work in the United States and in Mexico, where the mission buildings are frequently naive examples of that style, much modified by lack of trained workmen.

Churubusco, battle see CONTRERAS

Chusan Archipelago: see CHOU-SHAN ARCHIPELAGO, China

Chushan-rishathaim (kyōō'shān-rīshāthā'im), Mesopotamian king, conqueror and oppressor of Israel. Judges 3:8–10.

Chu Shih-chieh (jōō shū-jē), fl 1280-1303, Chinese mathematician. He contributed to the study of arithmetic and geometric SERIES and to that of finite differences. His two mathematical works, *Introduction to Mathematical Studies* and *Precious Mirror of the Four Elements*, were lost for a time in China and were recovered only in the 19th cent.

Chusovaya (chōōsavi'ə), river, c 460 mi (740 km) long, E European USSR. It rises in the central Urals and flows northwest through a major industrial region to join the Kama River at Perm, site of the Kama hydroelectric station. The Chusovaya is navigable c 250 mi (400 km).

Chu Ta (jōō tā), c 1626-c 1705, Chinese painter, also known as Pa-ta Shan-jen. He is said to have been a descendant of the imperial Ming family. Becoming a monk after the fall of the dynasty, he suffered from dumbness for a number of years and was known for his fits of madness and eccentric behavior. Despite his afflictions he became a founder of the school of painting known as Ch'ing. Most of his works are small-scale spontaneous studies of nature. His brush strokes, which seem free and careless at first glance, are filled with vitality and descriptive power. His works may be seen at the British Museum, Freer Gallery, Washington, D.C., and Museum of Fine Arts, Boston.

Chu Teh (jōō tū), 1886-, Chinese Communist soldier and leader. He was graduated (1911) from the Yunnan military academy and served in various positions with armies loyal to Sun Yat-sen. Stationed in Szechwan prov., he took up the life of a warlord from 1916 to 1920. In 1922 he went to Europe, where he met Chou En-lai and joined the Chinese Communist party. He studied political science at the Univ. of Göttingen but was expelled (1925) from Germany for radical activities. He returned to China by way of the USSR, and in 1927, when Chiang Kai-shek purged the Communists from the Kuomintang, Chu led an uprising in Nanchang and fled with troops to S Kiangsi prov. He joined forces there with Mao Tse-tung. When the Communist position became untenable, Chu led (1934-35) his section of the Red Army on the LONG MARCH to the northwest. In the Second Sino-Japanese War he was commander in chief of all Communist forces, a position he retained after the establishment (Sept., 1949) of the People's Republic of China in Peking. In 1954, Chu left his military position to serve (1954-59) as deputy chairman of the People's Republic of China. He later (1959-) became chairman of the National People's Congress, Communist China's major legislative body.

Chuvash Autonomous Soviet Socialist Republic (chōōvash'), autonomous republic (1970 pop 1,224,000, 7,066 sq mi (18,301 sq km), E central European USSR, in the middle Volga valley. CHEBOKSARY is the capital. The region, consisting largely of the Chuvash plateau, is wooded steppe. There are peat bogs and deposits of limestone, dolomite, clays, sands, and phosphorites. Grain, potatoes, flax, hemp, fruit, and sugar beets are grown, and livestock is raised. With about one third of the area in forests, both lumbering and woodworking are important occupations. Among the republic's other industries are oil and natural gas refining, metalworking, and food and flax processing. Chuvash make up some 70% of the population and Russians (who are mostly urban) around 25%; there are Mordvinian, Tatar, and Ukrainian minorities. The Chuvash, descendants of the medieval Bulgars, represent a mixture of Finnish and Mongolian peoples. They speak a Turkic language and adhere to Orthodox Christianity. Their wood carving is notable. Conquered by the Mongols in the 13th and 14th cent., the Chuvash came under Russian rule in 1552. The Chuvash Autonomous Oblast was established in 1920, it became an autonomous republic in 1925.

Chuzza (kyōō'zā), steward of Herod Antipas. Luke 8:3.

Chuzenji (chōōzān'jē), mountain lake, c 5 sq mi (13 sq km), Tochigi prefecture, central Honshu, Japan, in Nikko National Park. The lake is famed for its beauty. The Kegon waterfall (350 ft/107 m high) spills from the lake's outlet. On the shore stands the ancient Buddhist temple of Chuzenji. The lake is also called Satsu-no-umi [Sea of Happiness].

chyme (kīm), semiliquid substance found in the stomach and resulting from the partial digestion of food by the salivary enzyme amylase, the gastric enzyme pepsin, and hydrochloric acid. Secretion of hydrochloric acid by the stomach makes the chyme strongly acidic. The rhythmic muscular action of the stomach wall (peristalsis) moves the chyme into the duodenum, the first section of the small intestine,

where it stimulates the release of secretin, a hormone that increases the flow of pancreatic juice as well as bile and intestinal juices. Chyme also stimulates the release of cholecystokinin, a hormone that primarily increases the flow of bile but also increases the proportion of digestive enzymes in the pancreatic juice.

chymotrypsin (kī'mōtrīp'sīn), proteolytic, or protein-digesting, ENZYME active in the mammalian intestinal tract. It catalyzes the HYDROLYSIS of PROTEINS, degrading them into smaller molecules called PEPTIDES. Peptides are further split into free AMINO ACIDS. Chymotrypsin is produced in the pancreas as the inactive, or zymogen, form chymotrypsinogen. Along with other digestive enzymes of the pancreas, chymotrypsinogen is carried in the PANCREATIC JUICE through the pancreatic duct into the duodenum. There chymotrypsinogen is activated by another enzyme, trypsin, and by molecules of active chymotrypsin. Partly because it was one of the first enzymes available commercially in crystalline form, chymotrypsin has been studied extensively.

Cialdini, Enrico (ānrē'kō chaldē'nē), 1811-92, Italian general and diplomat. During the wars leading to Italian unification he fought in Sardinian service in the campaigns of 1848-49 and 1859 against Austria and, invading the Papal States in 1860, won at Castelfidardo. He led the siege of Gaeta and, after the surrender of Francis II of Naples in 1861, was made duke of Gaeta. Cialdini was (1861-62) civil and military commissioner of the former kingdom of Naples and became (1864) a senator. He succeeded (1866) La Marmora as commander in the Austro-Prussian War. He was (1876-81) ambassador to France until his retirement.

C.I.A.M. (Congres internationaux d'architecture moderne) Founded in 1928 by Helene de Mandrot, Sigfried GIEDION, and LE CORBUSIER, C.I.A.M. sought to divert architecture from academic preoccupations. The organization was the major instrument for propagating avant-garde ideas in architecture and town planning during the periods from 1930 to 1934 and between 1950 and 1955. The early congresses stressed rigid functional zoning and a single type of urban housing, at subsequent meetings members reacted against inflexible and mechanical concepts of orderly planning. Internal conflict led to the group's eventual collapse after the Dubrovnik congress of 1956.

Ciano, Galeazzo (galāat'sō chā'nō), 1903-44, Italian foreign minister and Fascist leader, son of Admiral Costanzo Ciano, conte di Cortellazzo. He entered on a diplomatic career, married (1930) Mussolini's daughter Edda, and became foreign minister in 1936. He helped to create the Rome-Berlin Axis and the military pact with Germany and was in part responsible for the attack on Greece in 1940. In 1943 he was dismissed as foreign minister and made ambassador to the Vatican. At the meeting of the Fascist grand council that preceded Mussolini's dismissal (1943) by the king, Ciano voted against the Duce. He was later arrested by the Germans, transferred to the Fascist authorities in N Italy, and executed for high treason. See his diaries (1946).

Ciardi, John (chēard'ē), 1916-, American poet, b Boston, grad Tufts College (B.A., 1938), Univ. of Michigan (M.A., 1939). His poetry, noted for its wit and perception, includes *Homeward to America* (1940), *Live Another Day* (1949), *I Marry You* (1958), *In the Stoneworks* (1961), and *Lives of X* (1971). He has also written *How Does A Poem Mean?* (1960), verse translations of Dante's *Inferno* (1954) and *Purgatorio* (1970), and *Dialogue With an Audience* (1963), reprints of his pieces for *The Saturday Review*, with readers' replies.

Cibber, Colley, 1671-1757, English dramatist and actor-manager. Joining the company at the Theatre Royal in 1690, Cibber became successful as a comedian, playing the fops of Restoration comedy. His first play, *Love's Last Shift* (1696), is a landmark in the history of the theater and is regarded as the first sentimental comedy. Of his 30 dramas, *She Wou'd and She Wou'd Not* (1702), *The Careless Husband* (1704), and *The Nonjuror* (1717) are the most notable. From 1710 to 1740 he was the manager of Drury Lane. He was appointed poet laureate in 1730. An extremely unpopular, social-climbing, and insolent man, he was ridiculed by the critics and bitterly attacked by Pope, who made him the hero of the final version of *The Dunciad*. Cibber's *Apology* (1740) is a mine of information about the theater of this period. See R. H. Barker, *Mr Cibber of Drury Lane* (1939), Leonard Ashley, *Colley Cibber* (1965). Both his son, Theophilus Cibber, 1703-58, and his daughter, Charlotte (Cibber) Clarke, d 1760?, went on the

stage with some success, earning wild and eccentric reputations in the tradition of the family. The wife of Theophilus, Susannah Maria (Arne) Cibber, 1714-66, sister of the composer Thomas Augustine Arne, sang in opera and appeared with great success in tragic roles.

Cibber or Cibert, Caius Gabriel (both sīb'ər), 1630-1700, Danish-English sculptor. Cibber was appointed carver to the king's closet for his services to William III of England. He worked for a time for Sir Christopher Wren. Cibber is best known for his statues *Melancholy* and *Raving Madness*, both in London. He also executed sculptures (destroyed) for the Royal Exchange and other works now at Chatsworth.

Cibola see MARCOS DE NIZA, CORONADO, FRANCISCO VÁSQUEZ DE

cicada (sīkā'dā), large, noise-producing INSECT of the order Homoptera, with a stout body, a wide, blunt head, protruding eyes, and two pairs of membranous wings. The front wings, which are longer than the rear pair, extend beyond the insect's abdomen. Male cicadas have platelike membranes on the thorax, which they vibrate like drum heads, producing a loud, shrill sound. Females of most species are mute. Characteristic songs are produced by members of different species, each also produces a noise indicating irritation, and some have special courtship songs. There are about 2,000 cicada species distributed throughout the tropical and temperate regions of the world, they are most numerous in the Orient and the Australian region. There are about 180 species in North America, adults of these species range from approximately 1 to 2 in (2.5-5 cm) in length. The periodical cicadas (*Megacicada* species), found in the eastern half of the continent, have the longest known life cycles of any insect. Because of their periodic appearance they are often called locusts, although they are not related to true locusts. Their life cycle takes 17 years in northern species (the so-called 17-year locusts) and 13 years in southern species, the two types overlap in parts of the United States. The female deposits her eggs in slits that she cuts in young twigs. In about six weeks the wingless, scaly larvae, or nymphs, drop from the tree and burrow into the ground, where they remain for 13 or 17 years, feeding on juices sucked from roots. The nymphs molt periodically as they grow, finally the full-grown nymphs emerge at night, climb tree trunks and fences, and shed their last larval skin. The winged adults, which generally emerge together in large numbers, live for about one week. Different broods mature at regular intervals, so that at least one colony is conspicuous in some part of the United States each year, and even in a given locality a brood may appear every few years. Other North American cicadas (*Tibicen* species and others) are known as dog-day cicadas, or harvest flies, because the adults appear in late summer. Their life cycle is thought to be similar to that of the periodical cicadas, but in most species it is completed in two years. Cicada larvae do little damage, but when adults appear in large numbers their egg-laying may damage young trees. Cicadas are sometimes kept for their song in the Orient, as they were in ancient Greece. They are classified in the phylum ARTHROPODA, class Insecta, order Homoptera, family Cicadidae.

cicely: see SWEET CICELY

Cicero (Marcus Tullius Cicero) (sīs'ərō) or **Tully**, 106 B.C.-43 B.C., greatest Roman orator, famous also as a politician and a philosopher. He studied law and philosophy at Rome, Athens, and Rhodes. His political posts included those of curule aedile (69 B.C.), praetor (66 B.C.), and consul (63 B.C.). He was always a member of the senatorial party, and as party leader he successfully prosecuted CATILINE. Later he was unable to prove that he had legal sanction to execute five members of Catiline's group, and on the charge of illegality he was exiled (58 B.C.) by his personal enemy, CLODIUS. He was recalled by Pompey the following year and was hailed as a hero. Strongly opposed to Julius CAESAR, Cicero was a leader of the party that caused him to convene (56 B.C.) the triumvirate at Lucca. In 51 B.C. he was governor of Cilicia, and on his return he joined Pompey against Caesar. After the civil war Caesar forgave Cicero, and he lived in honor at Rome under the dictatorship. He did not take part in the assassination of Caesar, but he applauded it. He and Marc ANTONY were bitter enemies, and Antony attacked Cicero in the senate. Cicero replied in the *First Philippic* and the *Second Philippic*, in which he sought to defend the republic. When Octavian (later AUGUSTUS) took Rome, he allowed Antony to put Cicero's name among those condemned, and Cicero

was put to death on Dec 7, 43 B.C. To the modern reader probably the most interesting of Cicero's voluminous writings are his letters to Atticus, his best friend, to Quintus, his brother, to Brutus, the conspirator, to Caelius, another close friend, and to miscellaneous persons. They reveal more of Roman life and political manners than does any other source. His philosophical works, which are generally stoical, include *De amicitia* [on friendship], *De officiis* [on duty], *De senectute* [on old age] or *Cato Major*, *De finibus* [on ends], a dialogue on the good, *The Tusculan Disputations*, and *De natura deorum* [on the nature of the gods], an attack on various philosophies, especially Epicureanism. His rhetorical works are of less general interest. *De oratore*, addressed to his brother, is a kind of handbook for the young orator. *Brutus* is an account of Roman oratory, and *Orator* is a discussion of the ideal orator. The most widely read of Cicero's works are his orations, which have become the standard of Latin. The most famous of these are the *Orationes against Catiline*, on the occasion of the conspiracy, and the *Philippics* against Antony. Other famous speeches are *Against Verres*, *On the Manilian Law*, *On Behalf of Archias*, *On Behalf of Balbus*, and *On Behalf of Roscius*. Cicero's literary and oratorical style is of the greatest purity, and his reputation as the unsurpassed master of Latin prose has never waned. See Loeb ed. of his works (2B vol., 1912-58), his letters (tr 1969), studies by T. A. Dorey (1965), David Stockton (1971), and D. R. S. Bailey (1972).

Cicero, Quintus Tullius, c 102 B.C.-43 B.C., Roman general, brother of Cicero the orator. After service in Asia he accompanied Julius Caesar to Britain (55 B.C.), wintered in Gaul (54 B.C.), where he fought off the attacks of Ambiorix, and went to Cilicia (51 B.C.) as legate with his brother. He fought for Pompey in the battle of Pharsala. He was proscribed and killed with his brother.

Cicero, town (1970 pop 67,058), Cook co., NE Ill., an industrial and residential suburb adjoining Chicago, inc 1867.

cichlid (sīk'lid), common name for members of the family Cichlidae, several hundred species of spiny-finned freshwater fishes of moderate or small size, native to Africa, S Asia, Mexico, and Central and South America. Cichlids are found in tropical waters, where they occupy the same ecological niche as their colder water relatives, the SUNFISHES. The larger species are food fish of some importance, and small species are popular as aquarium fish. Cichlids are noted for the care they give their young; the eggs are laid in a basin hollowed in the sand and, until they hatch, are stored in the mouth of either the male or the female, depending on the species. Cichlids are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Cichlidae.

Cid or **Cid Campeador** (sīd, Span thēth kāmpā-āthōr') [Span, =lord conqueror], d 1099, Spanish soldier and national hero, whose real name was Rodrigo (or Ruy) Díaz de Vivar. Under Ferdinand I and Sancho II of Castile he distinguished himself while fighting against the Moors, but Alfonso VI distrusted him and banished (1081) him from Castile. Entering the service of the Moorish ruler of Saragossa (a course not unusual among Castilian nobles of his time, in accord with the rights of a free lord in feudal society), he fought against Moors and Christians alike. In 1094 he conquered the kingdom of Valencia, which he ruled until his death. His widow Jimena surrendered the kingdom to the Almoravids in 1102. The Cid's exploits have been much romanticized. *The Song of the Cid*, an anonymous Old Spanish work of the 12th cent., has served as basis for numerous treatments, notably the plays by Guillen de Castro y Bellvis and Pierre Corneille. See Ramon Menendez Pidal, *The Cid and His Spain* (2 vol., 1929, tr 1934, repr 1971), Stephen Clissold, *In Search of the Cid* (1965).

cider, in Europe, fermented juice of apples, in the United States, unfermented apple juice, unless allowed to ferment, in which case it is known as hard cider. Selected apples are grated in a mill, and the juice is expressed and, for hard cider, fermented and filtered. The commercial product is usually pasteurized or treated with preservatives and is frequently blended to balance the chief constituents, sugar, malic acid, and tannin. In France cider is made principally in Normandy and Brittany. It is at its best after a year or two in cask. English cider from the southern and western counties is noted and rivals beer as a popular alcoholic beverage. Cider is popular also in Germany, Spain, and Switzerland. Perry is a similar beverage made from pears.

Ciego de Ávila (syā'gō dā ā'vēla), city (1970 pop 60,910), Camagüey prov., central Cuba. An important processing center in a sugarcane region, it is also Cuba's leading producer of pineapples and oranges. Cattle raising is another major industry. The city has excellent road and rail communications. Ciego de Ávila was founded in the late 16th cent.

Cienfuegos (syānfwā'gōs), city (1970 pop 85,248), Las Villas prov., central Cuba, a port on the Caribbean Sea. It is the marketing and processing center of a region producing sugarcane, tobacco, coffee, and rice, and it has rum distilleries. Sugar is the chief export. Established in 1819 by French emigrants from Louisiana and named for one of the original founders, Cienfuegos was destroyed by a tropical storm in 1825 and later rebuilt. In 1957 members of its naval academy staged an unsuccessful revolt against Cuban dictator Fulgencio Batista. Reported Soviet efforts to build a submarine base at the Cienfuegos harbor in 1970 ceased after the U.S. government expressed strong opposition.

Cierva, Juan de la (hwan dā la thyā'vā), 1895-1936, Spanish aeronautical engineer, inventor of a rotary-wing aircraft called an autogiro. He flew his first autogiro in 1923 and crossed the English Channel in an improved model in 1928. See his *Wings of Tomorrow* (1931).

Cieszyn: see TESCHEN

Cieza de León, Pedro (pā'thōr dā thēā'tha dā lāōn'), 1518?-1560, Spanish soldier and explorer in South America. His *Chronicle of Peru* is one of the most richly detailed accounts of the Spanish conquest. See *El Inca*, abr Eng tr (1959) by Harriet de Onís.

cigar and cigarette, tubular rolls of TOBACCO designed for smoking. Cigars consist of filler leaves held together by binder leaves and covered with a wrapper leaf, which is rolled spirally around the binder. Cigarettes consist of finely shredded tobacco enclosed in a paper wrapper, and they often have a filter tip at the end; they are usually shorter and narrower than cigars. In pre-Columbian times, Indians of the West Indies and in parts of Central and South America smoked tobacco and other plant products in the form of rolls similar to the modern cigar or cigarette. Spanish travelers to the Americas introduced the cigar to Spain by the late 1500s, whence it spread to other European countries. Spanish words such as *claro*, *colorado*, *maduro*, *panetela*, and *perfecto* are used to describe the color, shape, and quality of cigars. Havana cigars made of fine Cuban leaf are highly esteemed. The United States and most European countries have large cigar industries. The stogie, a slender roll usually made without binder, is named for Conestoga, Pa., where a cigar factory was established in the early 1800s. The cheroot, originally made in India and Manila, is of uniform thickness with both ends clipped. Cigars, except for very fine grades, have been made by machine since about 1902, cigarettes, since the last quarter of the 19th cent. The cigarette industry has increased phenomenally in the 20th cent., especially since World War I. The composition of cigarettes in the United States has changed, at first, imported Turkish tobacco was favored, then, the tobacco of Virginia. Since World War I, the most important U.S. commercial blends have consisted of the following types of tobacco: the flue-cured type (the most widely used), grown in Virginia, the Carolinas, Georgia, and Florida; Burley and Maryland, both air-cured types, and Turkish tobacco, added for its desired aroma and low nicotine content. Tobacco smoke contains nicotine, carbon dioxide, carbon monoxide, ammonia, aldehydes, and a number of organic tarry compounds. The use of filter-tipped cigarettes increased in the United States after medical reports in the early 1950s suggested a link between lung cancer and cigarette smoking. In 1964 the U.S. Surgeon General issued a report that condemned cigarettes as causing cancer and several respiratory diseases. Despite this report and other deterrents such as antismoking campaigns, a ban on television advertising, and warning labels on packages, cigarette consumption has continued to increase. By the early 1970s, Americans consumed about 550 billion cigarettes a year. See Zino Davidoff and Gilles Lambert, *The Connoisseur's Book of the Cigar* (tr 1969), Susan Wagner, *Cigarette Country* (1971).

Gignani, Carlo, Conte (kar'lō kōn'tā chēnya'nē), 1628-1719, Italian historical painter of the Bolognese school. He was a pupil of Francesco Albani. The influence of Guido Reni, Carracci, and particularly of Correggio is apparent in much of his fresco work. His notable paintings include *The Entry of Paul III*

into Bologna (painted for the public palace at Bologna), *Pera and Simon* (Vienna), *The Power of Love* (dual palace, Parma), and his masterpiece, the colossal *Assumption of the Virgin*, in the dome of the cathedral at Forlì, on which he worked for 20 years.

Cilicia (sīlīsh'ā), ancient region of SE Asia Minor, in present S Turkey, between the Mediterranean and the Taurus range. It included a high and barren plateau, Cilicia Trachia or Cilicia Tracheia, and a fertile plain, Cilicia Pedias. The area was under the domination of the Assyrian Empire before it became part of the Persian Empire. Greeks early settled on the coast, and Cilicia was hellenized to a great extent. In the Hellenistic period the region was disputed by the Seleucid kings of Syria and the Ptolemaic kings of Egypt. Tarsus and Seleucia (not to be confused with the port of Antioch) were the principal cities. They flourished after the region became part of the Roman Empire (a portion in 102 B.C., but most of it only after Pompey's campaign against the pirates there in 67 B.C.). Later Cilicia was included in the Byzantine Empire and in the 8th cent. was invaded by the Arabs. In 1080, Prince Reuben set up an Armenian state there, which became a kingdom in 1098 and is generally called Little Armenia. The Armenians cooperated with the rulers of the neighboring Latin Kingdom of Jerusalem. They maintained their independence against the Turks until 1375, when the Mamelukes conquered them. (For the later history of the region, see ARMENIA.) Cilicia is mentioned in the Bible (Acts 6, 9, 21, 39, 22, 3, Gal 1, 21). See Mary Gough, *Travel into Yesterday* (1954).

Cilician Gates (sīlīsh'ān), Turk *Kölek Boğazi*, mountain pass, S Turkey, leading across the Taurus range. Known to the ancients as the Pylae Ciliciae, it follows the gorge of the Gökoluk River. The gates have served for centuries as a natural highway linking Anatolia with the Mediterranean coast.

Cima, Giovanni Battista (jōvan'nē bat-tē'stā chē'mā), c 1459-c 1517, Venetian painter, called Cima da Conegliano. Influenced by Giovanni Bellini and Antonello da Messina, he created many fine altarpieces in the best tradition of Venetian coloring and landscape. Many of his paintings have remained in Venice. There are notable altarpieces of the *Madonna and Saints* in Vicenza and in Conegliano and one of *St. Peter, Martyr* in Milan. In the United States he is represented by numerous works, including a *Madonna and Saints* and *St. Jerome* (National Gall. of Art, Washington, D.C.), two paintings of the *Madonna* (Walters Art Gall., Baltimore), and two Bacchic scenes (Philadelphia Mus.).

Cimabue, Giovanni (jōvan'nē chēmabōō'ā), d c 1302, Florentine painter, whose real name was Cenni di Pepo or Peppi. The works with which his name is associated constitute a transition in painting from the strictly formalized Byzantine style, hitherto prevalent in Italy, to the freer expression of the 14th cent. Cimabue retained most of the old conventions but introduced greater naturalism in his treatment of figures. He was master of mosaics at the cathedral in Pisa, where a *St. John* is attributed to him. Other attributions include a fresco, *Madonna with Saints and Angels* (lower church of St. Francis in Assisi), frescoes representing the four evangelists, scenes from the lives of the Virgin and St. Peter, scenes from the Apocalypse, and the Crucifixion (all in the upper church of St. Francis in Assisi), and *Madonna Enthroned* (Uffizi). A major work credited to him, a *Crucifixion* (Santa Croce), was badly damaged in the flood that ravaged Florence in 1966. Cimabue is said to have been the teacher of Giotto. See studies by Eugenio Battisti (1966) and Alfred Nicholson (1932, repr 1972).

Cimarosa, Domenico (dōmē'nēkō chēmārō'za), 1749-1801, Italian operatic composer. He wrote almost 80 operas, which were successfully produced in Rome, Naples, Vienna, and St. Petersburg. His works, of which *Il matrimonio segreto* (1792) is the best known, are good examples of pure opera buffa. He also wrote serious operas and church and instrumental music notable for its clear and Mozartean effect.

Cimarron, river, 698 mi (1,123 km) long, rising in NE N Mex., and flowing generally E to the Arkansas River, W of Tulsa, Okla. The river winds through a thinly populated area where cattle and wheat are raised. Sections of its bed are dry during most of the year.

Cimarron, Territory of, now the Panhandle of Okla. It was settled in the early 1800s by cattle ranchers, many of them squatters. To protect their claims they attempted, in 1887, to create a separate territorial government at Beaver, Okla. After subse-

quent efforts toward this end failed in the U S Congress, Cimarron became part of the Oklahoma Territory in 1890

Cimber (Lucius Tilius Cimber), d after 44 B C, one of the assassins of Julius Caesar. He presented the petition that was used as a pretext to approach Caesar and held his hands or his toga as CASCA stabbed

Cimbri: see GERMAN

Cimmerians (sīm'ērēanz), ancient people of S Russia of whom little is actually known. They are mentioned in Homer, but they emerge into history only in the 8th cent B C when they were driven by the Scythians from their former home in Crimea and came to the region around Lake Van (in present-day E Turkey). Defeated (634 B C) by the Scythians, the Cimmerians swept across Asia Minor, plundering Lydia and breaking the power of Phrygia. The biblical GOMER may be the eponym of the Cimmerians, and they are mentioned in the inscriptions of the Assyrians, with whom they warred.

Cimon (sīm'ōn), d 449 B C, Athenian general and statesman, son of Miltiades. He fought at Salamis and shared command (with Aristides) of the fleet sent to rescue the Asiatic Greek cities from Persian domination. From 478 to 477 he helped Aristides form the Delian League. He conquered Skiros, subdued Asia Minor, and in 468 defeated the Persian sea and land forces on the Eurymedon River. On the death of Aristides he led the Athenian aristocratic and pro-Spartan party and was its chief statesman in succession to Themistocles. He was later sent into exile, from which he was recalled in 451 to conclude a peace with Sparta. He died while besieging Cytium, in Cyprus.

Cimpina (kūm'pēna), town (1970 est pop 25,000), S central Rumania, in Walachia. It is a major petroleum center, chemicals and oil-drilling equipment are also produced. The city is connected by oil pipeline with Ploiesti and with the port of Constanta on the Black Sea.

Cimpulung (kəmp'oolōng'), town (1970 est pop 27,000), S central Rumania, in Walachia, on the southern slope of the Transylvanian Alps. A commercial center, it has industries producing textiles and paper. It is also a summer resort. Founded in the 12th cent by German colonists, Cimpulung became the capital of Walachia in the 13th cent. The town has a 13th-century monastery with a tower and a 14th-century church (restored 17th-18th cent).

cinchona (sīngk'ōnə) or **chinchona** (chīngk'ōnə), name for species of the genus *Cinchona*, evergreen trees of the Madder family native to the Andean highlands from Bolivia to Colombia and also to some mountainous regions of Panama and Costa Rica. The trees are now cultivated elsewhere for the commercially valuable "Peruvian bark," the source of QUININE. Several species yield quinine and several other antimalarial alkaloids. The trees were named in honor of the countess of Chinchon who, legend says, was cured of a fever in 1638 by a preparation of the bark. At her instigation the bark was collected for malaria sufferers and later exported to Spain. Indians, however, had long used it for medicinal purposes. It is sometimes called Jesuits' bark because of the part the Jesuits played in its dispersal. So successful were the Dutch and English in transplanting cinchona to Java and India that until World War II these countries, especially Java, grew practically the entire commercial supply. The bark of the uprooted tree is beaten loose, peeled by hand, and dried quickly to prevent the loss of alkaloids. Final extraction is conducted in factories, chiefly in the United States or Europe. Cinchona is classified in the division PINOPHYTA, class Pinopsida. See M. L. Duran-Reynals, *The Fever Bark Tree* (1946), P. E. Thompson and L. M. Werbel, *Antimalarial Agents* (1972).

Cincinnati (sīnsanāt'ē, -nāt'ē), city (1970 pop 452,524), seat of Hamilton co, extreme SW Ohio, on the Ohio River opposite Covington, Ky, inc as a city 1819. The third largest city in the state, Cincinnati is the industrial, commercial, and cultural center for an extensive area including numerous suburbs in Ohio and Kentucky. It is also a port of entry with a large river front and good transportation facilities. Machine tools, transportation equipment (automobiles and parts, truck bodies, aircraft engines), radar equipment, electrical machinery, metal goods, and cosmetics are the chief manufactures. Cincinnati was founded in 1788 as Losantville, in 1790 Arthur St. Clair, the first governor of the Northwest Territory, renamed it Cincinnati for the Society of Cincinnati, a group of Revolutionary War officers. It was the first seat of the legislature of the Northwest Territory and a busy transshipping center for early settlers. After the opening of the Ohio and Erie

Canal (c 1832), the city developed as a shipping point for farm products and meat. A crime wave, the result of corrupt politics and lax law enforcement, provoked the Cincinnati riot in March, 1884, and G. B. Cox, a political boss, gained firm control of the city. A reform movement culminated in the establishment (1924) of the city-manager type of government (notable managers were Clarence A. Dykstra and Clarence O. Sherrill). The Univ. of Cincinnati, Edgecliff College, Xavier Univ., and several other educational institutions are in the city. William Howard Taft and his son Robert A. Taft were born in Cincinnati, where the Taft family has long been prominent. Cincinnati's landmarks are the Taft Museum, Eden Park, with the Cincinnati Art Museum, a museum of natural history, and zoological gardens. The city also has a symphony orchestra, a music conservatory, an art academy, and a large public library. Cincinnati suffered disastrous floods in 1884 and 1937, but Federal and state flood-control projects have now greatly reduced the danger.

Cincinnati, Society of the [Lat pl. of CININNATUS], organization formed (1783) by officers of the Continental Army just before their disbanding after the American Revolution. The organization, with a constitution drafted by Gen. Henry Knox, was founded for fraternal, patriotic, and allegedly nonpolitical purposes. George Washington was made president of the national society, and auxiliary state societies were organized. Membership was limited to officers of the Continental Army, certain officers of the French army that assisted the Continentals, and the eldest male descendants of both. The society provoked much opposition among the zealous Republicans of the time, who attacked it as the beginning of an aristocratic military nobility. The Tammany societies of New York, Philadelphia, and other cities were founded partly in opposition to it. Beginning in 1893 a successful revival of many of the defunct state organizations was made, and the society is still active as a patriotic service organization. It has about 2,500 members in one French and 13 U S branches. See W. S. Thomas, *The Society of the Cincinnati, 1783-1935* (1935), E. E. Hume, ed., *General Washington's Correspondence concerning the Society of the Cincinnati* (1941).

Cincinnati, University of, at Cincinnati, coeducational, founded 1819 as Cincinnati College, incorporated 1870 as a municipal university, opened 1873, affiliated with the state university system 1968. The College-Conservatory of Music merged with the university in 1962 and includes the former College of Music (est 1878) and Conservatory of Music (est 1867). The Art Academy of Cincinnati and Hebrew Union College-Jewish Institute of Religion are affiliated schools.

Cincinnati Art Museum, Cincinnati, Ohio. Founded in 1877 by the Women's Art Museum Association, the museum opened in 1886. Its collections contain examples spanning 3,000 years of artistic production. Works from Mesopotamia and medieval Europe are featured. The museum's European paintings include works by El Greco, Murillo, Mantegna, Tiepolo, and Titian. The museum also houses outstanding collections of oriental art and musical instruments.

Cininnatus (Lucius or Titus Quinctius Cincinnatus) (sīnsināt'as, -nāt'as), fl 5th cent B C, Roman patriot. He was consul in 460 B C and dictator twice (458 and 439). According to tradition, in his first dictatorship he came from his farm to defeat the Aequi and Volscians, who were threatening the city from the east and southeast. He returned from battle, resigned his dictatorship, and went home to his farm. In 439 he came out of retirement to put down the plebeians. The separation of legend from history in Cincinnatus' story is impossible.

Cinderella, heroine of one of the most famous folktales in the world. She is rescued from a life of drudgery by her fairy godmother and eventually marries a handsome prince. The story (dating back to 9th-century China) exists in 500 versions in Europe alone; it was included by both Charles Perrault and the Grimm brothers in their collections of tales.

cineraria (sīn'arār'ēa) see GROUNDSEL

Cinna (Lucius Cornelius Cinna) (sīn'a), d 84 B C, Roman politician, consul (87 B C-84 B C), and leader of the popular party. Shortly after Cinna's first election, SULLA left Rome to fight against Mithradates VI of Pontus, having received from Cinna and Cinna's colleague Gnaeus Octavius a promise to maintain Sulla's reforms. When Sulla was safely out

of Italy, Cinna revived certain anti-Sullan proposals, the conservatives opposed Cinna and expelled him from the city. Cinna promptly collected Roman soldiers and Italians in S Italy, called MARIUS from Africa, and returned to Rome. Cinna and Marius declared themselves consuls, and a great slaughter of Sulla's followers took place. After Marius' death Cinna remained consul. When Sulla defeated Mithradates and set out for Rome, Cinna and Cneius Papius CARBO raised an army to oppose him, but before the civil war began, Cinna was murdered in a mutiny at Brundisium. His daughter Cornelia was the first wife of Julius Caesar. See Harold Bennett, *Cinna and His Times* (1923). Cinna's son Lucius Cornelius Cinna, fl 44 B C, was a praetor who expressed approval of Caesar's assassination.

Cinna (Caius Helvius Cinna), d 44 B C, Roman tribune. At the funeral of Julius Caesar the mob mistook him for Lucius Cornelius Cinna and killed him. He was probably the minor poet Cinna, a friend of Catullus and author of the epic *Smyrna* (of which fragments survive).

cinnabar (sīn'ābar), mineral, the sulfide of mercury, HgS. Deep red in color, it is used as a pigment (see VERMILION), but principally it is a source of the metal mercury. It is mined in Spain, Italy, and in the United States in California. The mercury is obtained from it by roasting, the sulfur combining with oxygen and passing off as sulfur dioxide.

cinnamon, name for trees and shrubs of the genus *Cinnamomum* of the family Lauraceae (LAUREL family). Cinnamon spice comes chiefly from the Ceylon cinnamon (*C. zeylanicum*), now cultivated in several tropical regions. It is obtained by drying the central part of the bark and is marketed as stick cinnamon or in powdered form. The waste and other parts are used for oil of cinnamon, a medicine and flavoring. Cassia, cassia bark, or Chinese cinnamon (*C. cassia*) was used in China long before true cinnamon but is now considered an inferior substitute. Cinnamon and cassia (often confused) have been favorite spices since biblical times, used also as perfume and incense. Cinnamon trade successively passed (with political control of Ceylon, now Sri Lanka) to the Portuguese, Dutch, and British. *C. camphora* is the source of CAMPHOR. Cinnamon is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Magnoliales, family Lauraceae.

cinnamon vine: see YAM

Cinneroth (sīn'ārōth) see CHINNERETH 2

Cino da Pistoia (chē'nō da pēstō'ya), 1270-1337?, Italian jurist and poet, whose full name was Guittorino dei Sinibaldi, or Sighibuldi. A friend of Dante and Petrarch, he wrote treatises on jurisprudence as well as numerous lyrics and sonnets dealing with the psychology of love. His verse, musical and tender, foreshadows the work of Petrarch. For translations, see D. G. Rossetti, *The Early Italian Poets* (1904 ed.).

Cinq Mars, Henri Coeffier Ruzé d'Effiat, marquis de (āNré' kōēfyā' ruzā' dēfyā' mār'kē' dā sāN-mar'), 1620-42, French conspirator. Introduced at court by Cardinal Richelieu at an early age, Cinq Mars rapidly rose in King Louis XIII's favor and was made master of the horse. He joined in a conspiracy with Frederic Maurice de BOUTILLON and Gaston d'ORLÉANS against the cardinal. The discovery of a secret treaty they had signed with Spain led to their arrest, and Cinq Mars and his friend, François de Thou, were executed. The conspiracy formed the basis of Alfred de Vigny's novel *Cinq-Mars* and Gounod's opera of the same name. See Philippe Erlanger, *Richelieu and the Affair of Cinq-Mars* (tr 1971).

cinquefoil (sīngk'fōil) [O Fr, = five leaves], name for any plant of the widely distributed genus *Potentilla* of the family Rosaceae (ROSE family), chiefly herbs of north temperate and subarctic regions. Most cinquefoils are perennial, many but not all of them have leaves of five leaflets, for which they are also called five-finger. The flowers are most often yellow. Most North American species are native to cooler regions of the U S and Canada. The shrubby cinquefoil (*P. fruticosa*) and the silverweed (*P. anserina*) are common wildflowers in the West and the Northeast, they are thought to be naturalized from the Old World. These and other species are sometimes cultivated in rock gardens. Silverweed is one of the species reputed to have medicinal powers, hence the Latin name of the genus [*potens*=powerful]. Cinquefoil is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Rosaceae.

Cinque Ports (sīngk'), [O Fr, = five ports], name applied to an association of maritime towns in Sussex

and Kent, SE England. They originally numbered five: Hastings, Romney (now New Romney), Hythe, Dover, and Sandwich. The association was informally organized in the 11th cent., and a formal charter was drawn up in the 13th cent. In the 12th cent., Winchelsea and Rye were added with privileges and duties similar to those of the founding members. Later, neighboring places were added as "limbs" or "members." The Cinque Ports reached the peak of their significance during the Anglo-French struggle in the 14th cent. The main duty of the ports was the provision of ships and men for protection against invasion at a time when England had no permanent navy. (The ports form an arc along the coast most likely to receive an invasion from the European continent.) In return the crown allowed the members various privileges, such as exemption from taxation and from certain laws governing municipalities. The highest officer of the chartered organization was the lord warden of the Cinque Ports, who had extensive civil, military, and naval duties. His official residence was at Walmer Castle, near Deal. After Henry VII (1485-1509) founded the royal navy, the association declined. It contributed only five ships to defeat the Spanish Armada in 1588. Today the Cinque Ports court of admiralty still has some maritime jurisdiction. The office of lord warden still exists but has no real power.

Cinto, Monte (môn'tā chēn'tō), peak, 8,891 ft (2,710 m) high, NW Corsica, France, NW of Corte. It is the highest point on Corsica.

Cintra, Port Sintra (sēn'tra), town (1960 pop. 20,321), Lisboa dist., W Portugal, in Estremadura. The region has orange groves and vineyards as well as marble quarries, but Cintra is known primarily for its beautiful mountain location. The view is superb, and Cintra has been rapturously described not only by Portuguese writers but also by Byron and other foreigners. It flourished as a Moorish city, and there are still ruins of a Moorish castle. With Lisbon it was permanently retaken from the Moors by Alfonso I in 1147 and thereafter was a favorite residence of the Portuguese monarchs. Cintra has a royal palace (15th-16th cent.) and an old convent surrounded by a lovely park. Near the town, in the Peninsular War, the Convention of Cintra was agreed upon (1808) by the French, British, and Portuguese.

Circassia (sər'kash'ēa), historic region, encompassing roughly the area between the Black Sea, the Kuban River, and the Caucasus, now largely the KRASNODAR KRAY of SE European USSR. The Circassians are a Muslim people, whose Russian name is Cherkess and whose native name is Adyghe. They are now officially classified as three peoples: the Kabarda, in the Kabardino-Balkar ASSR, the Circassians or Cherkess, in the Karachay-Cherkess Autonomous Oblast, and the Adyghe, in the Adyghe Autonomous Oblast. The term Circassian has sometimes been incorrectly applied to all the mountain peoples of the N Caucasus. Known in antiquity, they inhabited the western side of the Caucasus and the Crimea and were known to the Greeks as the Zyukhoy. They were Christianized in the 6th cent. A.D. but adopted Islam in the 17th cent. after coming under the rule of the Ottoman Empire. In 1829 the Ottoman Turks were forced to cede Circassia to Russia. At this time the Circassians occupied almost the entire area between the main Caucasian range, the Kuban River, and the Black Sea. In the many Russo-Turkish wars in the first half of the 19th cent., the Circassians bitterly fought the Russians. After the Russian conquest of the area, many Circassians migrated to Turkey (1861-64). The men were warlike, proud, and handsome, the women were famous for their beauty, and many were sold into slavery in Turkey. There are today large Circassian groups in Turkey, Syria, and Jordan.

Circe (sūr'sē), in Greek mythology, enchantress, daughter of Helios. She lived on an island, where she decoyed sailors and treacherously changed them into beasts. According to the *Odyssey*, she changed the companions of Odysseus into swine, but with the aid of Hermes, Odysseus forced her to break the spell. In post-Homeric legend she bore Odysseus a son, Telegonus, who unwillingly killed his father.

circle, closed plane curve consisting of all points at a given distance from some fixed point, called the center. A circle is a CONIC SECTION cut by a plane perpendicular to the axis of the cone. The term circle is also used to refer to the region enclosed by the curve, more properly called a circular region. The radius of a circle is any line segment connecting the center and a point on the curve; the term is also used for the length r of this segment, i.e., the common distance of all points on the curve from the

Circle

center. Similarly, the circumference of a circle is either the curve itself or its length or ARC. A line segment whose two ends lie on the circumference is a chord, a chord through the center is the diameter. A secant is a line of indefinite length intersecting the circle at two points, the segment of it within the circle being a chord. A tangent to a circle is a straight line touching the circle at only one point, the point of contact, or tangency, and is always perpendicular to the radius drawn to this point. A circle is inscribed in a polygon if each side of the polygon is tangent to the circle, a circle is circumscribed about a polygon if all the vertices of the polygon lie on the circumference. The length of the circumference C of a circle is equal to π (see π) times twice the radius distance r , or $C = 2\pi r$. The area A bounded by a circle is given by $A = \pi r^2$. Greek geometry left many unsolved problems about circles, including the problem of squaring the circle, i.e., constructing a square with an area equal to that of a given circle, using only a straight edge and compass; it was finally proved impossible in the late 19th cent. (see GEOMETRIC PROBLEMS OF ANTIQUITY). In modern mathematics the circle is the basis for such theories as inversive geometry and certain non-Euclidean geometries. The circle figures significantly in many cultures. In religion and art it frequently symbolizes heaven, eternity, or the universe.

Circleville, city (1970 pop. 11,687), seat of Pickaway co., S central Ohio, on the Scioto River, in a farm area, inc. 1853. Corn, hogs, and poultry are processed in the city. Circleville was laid out in 1810 within the remains of a circular fort allegedly erected by mound builders. Its growth was spurred by the building of the Ohio and Erie Canal.

circuit, electric. see ELECTRIC CIRCUIT.

circuit breaker, electric device that, like a fuse, interrupts an electric current in a circuit when the current becomes too high. The advantage of a circuit breaker is that it can be reset after it has been tripped; a fuse must be replaced after it has been used once. When a current supplies enough energy to operate a trigger device in a breaker, a pair of contacts conducting the current are separated by preloaded springs or some similar mechanism. Generally, a circuit breaker registers the current either by the current's heating effect or by the magnetism it creates in passing through a small coil. Because it is usual for an electric arc to form between the contacts when a breaker opens, some means must be provided for preventing rapid erosion of the contacts. Normally this is done by opening the contacts fast enough to make the arc of short duration. The U.S. National Electric Code now requires that circuit breakers be used in all new home installations. Breakers for this service are usually of the thermally actuated type.

circuit rider, itinerant preacher of the Methodist denomination who served a "circuit" consisting usually of 20 to 40 "appointments." The circuit sys-

tem, devised by John Wesley for his English societies in their formative period and developed in America by Francis Asbury, proved especially adapted to the conditions of the American frontier and came into its own in the trans-Allegheny region. Its success was a factor in establishing Methodism in America. The circuit rider, traveling usually on horseback because it was economical and suited to the forest pathways, preached nearly every day and twice on Sundays, thus covering his circuit every four or five weeks. His appointments were usually in pioneer cabins, schoolhouses, or tavern barrooms. The circuit rider often had a limited education, but he was usually an effective preacher and lived a very self-sacrificing life. See E. K. Nottingham, *Methodism and the Frontier* (1941, repr. 1966); W. W. Sweet, *The Methodists, 1783-1840* (1946, repr. 1964).

circulatory system, group of organs that transport blood and the substances it carries to and from all parts of the body. The circulatory system consists of vessels that carry the blood, and a muscular pump, the HEART, that drives the blood. Of the vessels, the ARTERIES carry blood away from the heart, the main arterial vessel, the aorta, branches into smaller arteries, which in turn branch repeatedly into still smaller vessels and reach all parts of the body. Within the body tissues, the vessels are microscopic CAPILLARIES through which gas and nutrient exchange occurs (see RESPIRATION). Blood leaving the tissue capillaries enters converging large vessels, the VEINS, to return to the heart and lungs. The human heart is a four-chambered organ with a dividing wall, or septum, that separates it into a right heart for pumping blood from the returning veins into the lungs, and a left heart for pumping blood from the lungs to the body via the aorta. The circulatory system can be considered as composed of two components, the systemic circulation, which serves the body as a whole except for the lungs, and the pulmonary circulation, which carries the blood to and from the lungs. In the systemic circulation, purified oxygenated blood from the lungs returns to the heart from two pairs of pulmonary veins, a pair from each lung. It enters the left atrium, which contracts when filled, sending blood into the left ventricle. The bicuspid, or mitral, valve controls blood flow into the ventricle. Contraction of the powerful ventricle forces the blood under great pressure into the aortic arch and on into the aorta. The aorta branches into the coronary arteries, which nourish the heart muscle itself, and three major arteries from the aortic arch that supply the head, neck, and arms. The other major arteries branching off from the aorta are the renal arteries, which supply the kidneys, the celiac axis and superior and inferior mesenteric arteries, which supply the intestines, spleen, and liver, and the iliac arteries, which supply the lower trunk and become the femoral and popliteal arteries of the thighs and legs, respectively. The arteries contain fibrous tissue to regulate BLOOD PRESSURE and flow. Blood pressure, the lateral pressure on the walls of the arteries, is controlled by several factors including force of contraction of the heart, elasticity of the arterial walls, blood volume and thickness, and the resistance of the arterioles and capillaries. Within the tissues the small arterioles shade into capillaries, vessels about the diameter of a red blood cell, which form a network facilitating exchange of gases and nutrients. In addition, a system of shunts allows blood to bypass the capillary beds and helps to regulate body temperature. At the far end of the network, the capillaries converge to form venules, which in turn form veins. The inferior vena cava returns blood to the heart from the legs and trunk; it is supplied by the iliac veins from the legs, the hepatic veins from the liver, and the renal veins from the kidneys. The subclavian veins, draining the arms, and the jugular veins, draining the head and neck, join to form the superior vena cava. The two vena cavae, together with the coronary veins, return blood low in oxygen and high in carbon dioxide to the right atrium of the heart. Veins lack muscle tissue but many, especially in the limbs, contain one-way valves that prevent backward flow of blood. In the heart, the blood is pumped from the right atrium into the right ventricle, the tricuspid valve controls flow into the right ventricle. The contraction is simultaneous with that of the left atrium. The right ventricle contracts to force blood into the lungs through the pulmonary arteries. In the lungs oxygen is picked up and carbon dioxide eliminated, and the oxygenated blood returns to the heart via the pulmonary veins, thus completing the circuit. In pulmonary circulation the arteries carry oxygen-poor blood and the veins oxygen-rich blood, the

Circulatory system

terms *vein* and *artery* refer to vessels carrying blood to or away from the heart and not to the gas content of the blood carried. The organs most intimately related to the substances carried by the blood are the kidneys, which filter out nitrogenous wastes and regulate concentration of salts, the **SPLEEN**, which removes worn red blood cells and produces white blood cells, or lymphocytes, and the **LIVER**, which contributes clotting factors to the blood, helps to control blood sugar levels, also removes old red blood cells and, receiving all the veins from the intestines and stomach, detoxifies the blood before it returns to the vena cava (see **URINARY SYSTEM**). An auxiliary system, the **LYMPHATIC SYSTEM**, is composed of vessels that collect lymph from body tissues. Carried to converging vessels of increasing size, the lymph enters the thoracic duct and is emptied into a large vein near the heart. Disorders of the circulatory system result in diminished flow of blood and diminished oxygen exchange to the tissues. Acute impairment of blood flow to the heart muscle itself (heart attack) or to the brain (stroke) are most dangerous. Blood supply is also impeded in such conditions as **ARTERIOSCLEROSIS** and high blood pressure, low blood pressure resulting from injury (**SHOCK**) is manifested by inadequate blood flow. Structural defects of the heart affecting blood distribution may be congenital or caused by many diseases, e.g., **RHEUMATIC FEVER**. See also **HEART DISEASE**, **HYPERTENSIVE HEART DISEASE**.

circumcision (sûr'kamsîzh'ân), operation to remove the foreskin covering the glans of the penis. It dates back to prehistoric times and was widespread

throughout the Middle East as a religious rite before it was introduced among the Hebrews presumably by Abraham. It is performed by Jews on the eighth day after the birth of the male child, unless postponed for reasons of health. It is also practiced among Muslims and by peoples in many parts of the world. Explanations of the origin of circumcision are entirely conjectural. It is related to rites of initiation. Among Jews it is considered to involve membership in the community and to be a sign of the covenant between God and man. The decision that Christians need not practice circumcision is recorded in Acts 15; there was never, however, a prohibition of circumcision, and it is practiced by Coptic Christians. It is widely practiced in modern times as a sanitary measure. Female circumcision, in the form of excision of the labia minora and clitoris (clitoridectomy), is known in Islam and in certain tribes of Africa, South America, and elsewhere.

circumpolar star, star whose **DIURNAL CIRCLE** lies completely above or completely below an observer's horizon. A star whose diurnal circle lies above the horizon never sets, even though it cannot be seen during the day. Designation of a star as circumpolar depends on the observer's latitude. At the equator no star is circumpolar. At the North or South Pole all stars are circumpolar, since only one half of the celestial sphere can ever be seen. For an observer at any other latitude a star whose declination is greater than 90° minus the observer's latitude will be circumpolar, appearing to circle the celestial pole and remaining always above the horizon. A constellation made up entirely of circumpolar stars

is also called **circumpolar**. From most of the northern United States (above lat. 40°N) the Big Dipper is circumpolar.

circus [Lat. = ring, circle], associated historically with the horse and chariot races and athletic contests known in ancient Rome as the **Circensian games**. The Roman circus was a round or oval structure with tiers of seats for spectators, enclosing a space in which the races, games, and gladiatorial combats took place. Underneath were dressing rooms, dens for wild beasts, and rooms where properties were stored. The **Circus Maximus**, presumably built in the reign of Tarquin I (c. 616–c. 578 B.C.), and rebuilt by Julius Caesar, is said to have had a seating capacity of 350,000. Other famous *circi* of Rome were the **Circus Flaminius** (221 B.C.), the **Circus Nervae**, of Caligula and Nero, at which many Christians perished, and the **Circus Maxentius**. The circus of Septimius Severus at Constantinople and many others were often scenes of riot and bloodshed between factions of charioteers. The games, aside from races, were brutal and bloody, and for this reason the Greeks, even under Roman domination, never really accepted the circus. The modern circus, which originated in performances of equestrian feats in a horse ring strewn with sawdust, dates from the closing years of the 18th cent. The circus is a nomadic tent show, with trained animals, acrobats, and clowns. The main tent, known as the big top, is usually surrounded by various concessions and sideshows with freaks and wild animals. Even before 1830, traveling circuses were common in the United States and in England. After 1869 two rings were used in the main tent and the three-ring circus, as we know it today, was initiated by James A. Bailey. The most celebrated circus in America was "The Greatest Show on Earth" of P. T. Barnum, which, in merging with Bailey's, became Barnum and Bailey's. On Bailey's death in 1907 the circus was purchased by Ringling Brothers, and in 1919 the two circuses were combined. In its heyday from 1880 to 1920, the traveling circus has declined in recent years. See studies by H. R. North and Alden Hatch (1960), E. C. May (1932, repr. 1963), C. P. Fox and Tom Parkinson (1970), Marian Murray (1956, repr. 1973).

cire perdue (sêr pèrdu'), [Fr. = lost wax], sculptural process of hollow casting in metal. A model is made in plaster or clay, coated with wax in which the finer details are executed, and covered with a mold of perforated plaster or clay. It is then heated until the wax melts and runs out the holes, and molten metal (usually bronze) is poured in the mold at the top until the metal fills the space formerly occupied by the wax. When cool, the mold is broken, the core removed, and the metal is sometimes filed and polished (chased). The chief advantage of this process is that it takes far less metal than the method of solid casting, and the danger of cracking during the cooling process is lessened. The method, probably of Egyptian origin, was introduced into Greece in the 6th cent. B.C. by Rhœceus and Theodorus of Samos and was used extensively from the 5th cent. The **Zeus of Artemisium** (National Mus., Athens) and the **Charioteer of Delphi** (Delphi Mus.), both hollow casts, are the finest of the few Greek bronzes that have survived. In use throughout the world, *cire perdue* was introduced in China c. 200 B.C. and was employed later in casting the Benin bronzes of Africa. The great bronze masterpieces of the Renaissance were produced by this process (see the autobiography of Benvenuto Cellini for a detailed account). The method has enjoyed a recent revival, primarily for jewelry making, although it has been supplemented by other processes. See H. Jackson, *Lost Wax Bronze Casting* (1972), G. Pack, *Jewelry Making by the Lost Wax Process* (1968).

cirrhosis (sə-rō'sas), degeneration of tissue in an organ resulting in fibrosis, with nodule and scar formation. The term is most often used in relation to the liver, since that organ is most often involved in cirrhosis. The most prevalent form of cirrhosis of the liver, **portal cirrhosis**, appears in middle-aged males with a history of chronic alcoholism and is caused by protein deficiency (specifically choline), a type of malnutrition common in alcoholics. Protein deprivation is also responsible for **KWASHIORKOR**, a nutritional deficiency with symptoms resembling those of cirrhosis of the liver. **Biliary cirrhosis** is a type caused by disruption of bile flow and is more common in women. Failure of liver function results in gastrointestinal disturbances, emaciation, enlargement of the liver and spleen, jaundice, accumulation of fluid in the abdomen and other tissues of the body, and obstruction of the venous circulation with distention of the veins. It is not uncommon for

greatly distended veins in the esophagus to rupture and cause massive hemorrhage. Treatment is supportive—a diet with adequate protein (except where ammonia poisoning is a factor), vitamin supplements, transfusions to replace any blood loss, and removal of accumulated fluid.

cirrus: see CLOUD

Cirta: see CONSTANTINE, Algeria

Cis (sīs), same as KISH 1.

Cisalpine Republic (sīsāl'pīn), Italian state created by Napoleon Bonaparte in 1797 by uniting the Transpadane and Cispadane republics, which he had established (1796) N and S of the Po River. The new republic included the former duchies of Milan, Parma, and Modena, the legations of Bologna and Ferrara, and the Romagna. By the Treaty of Campo Formio (1797), Austria recognized the republic, to which were added the Venetian territories W of the Adige (including Bergamo and Brescia), the duchy of Mantua, and the formerly Swiss Valtellina. The republic was in fact subject to France, and its constitution was based on the French model. In 1799 the Austro-Russian armies occupied it, but Bonaparte recovered it in 1800. By the Treaty of Lunéville (1801) its nominal autonomy was restored. In 1802 it became the Italian Republic and in 1805, with the addition of Venetia, the Napoleonic kingdom of Italy. It was broken up by the Congress of Vienna (see VIENNA, CONGRESS OF) in 1815.

cis-butenedioic acid (sīs-byōō'tēndī'ōīk), IUPAC name for maleic acid, see FUMARIC ACID

Cislethania: see AUSTRO HUNGARIAN MONARCHY

Cisneros, Francisco Jiménez de: see JIMÉNEZ DE CISNEROS FRANCISCO

Cispadane Republic: see CISALPINE REPUBLIC

Cistercians (sistūr'shanz), monks of a Roman Catholic religious order founded (1098) by St. Robert, abbot of Molesme, in Cîteaux [*Cistercium*], Côte-d'Or dept., France. They reacted against the laxity in the Cluniac order. The particular stamp of the Cistercians stems from the abbacy (c. 1109–1134) of St. STEPHEN HARDING. The black habit of the Benedictines was changed to an unbleached white, and the Cistercians became known as White Monks. St. BERNARD OF CLAIRVAUX is often regarded as their "second founder." Through a return to strict asceticism and a life of poverty, the Cistercians sought to recover the ideals of the original Benedictines. They expanded greatly, especially during St. Bernard's lifetime, and at the close of the 12th cent. there were 530 Cistercian abbeys. The life and writings of St. Bernard were their guiding influence. They considered farming the chief occupation for monks and led Europe in the development of new agricultural techniques (In England the Cistercians were important in the growth of English wool culture.) The Cistercians were the first to make large use of lay brothers, conversi, who lived in the abbey under a separate discipline and aided the monks in their farm system. In the 13th cent. relaxation of fervor blunted Cistercian importance, and by 1400 they had ceased to be prominent, their place being taken by the Dominican and Franciscan friars. Of later reform attempts, the most important was the movement begun at La Trappe, France (17th cent.), those accepting the greater austerities were known popularly as TRAPPISTS, officially titled (after 1892) Cistercians of the Stricter Observance [Lat. abbr., *OCSO*], as distinct from Cistercians of the Common Observance [Lat. abbr., *SO Cist*]. Today the difference is not great. The unit of Cistercian life is the abbey. Its members compose a permanent communal entity, with the abbey joined in loose federation. Cistercian nuns (founded in the 12th cent.) have rules and customs paralleling those of the monks, they lead contemplative lives in complete seclusion from the world. A 17th-century reform of Cistercian nuns produced the remarkable development of PORT-ROYAL. Famous Cistercian abbeys include Cîteaux, Clairvaux, Fountains, Rievaulx, and Alcobaca. See A. J. Luddy, *The Order of Cîteaux* (1932), Louis Bouyer, *The Cistercian Heritage* (tr. 1958), M. B. Pennington, ed., *The Cistercian Spirit* (1970).

Citadel, The—The Military College of South Carolina, at Charleston, state supported, primarily for men, chartered 1842 as The Citadel, opened 1843. From 1882 to 1910 it was named the South Carolina Military Academy. The cadets are subject to military regulations.

Cîteaux see CISTERCIANS

Cithaeron (sithē'ran), Gr. *Kithairón*, mountain range, c. 10 mi (16 km) long, central Greece, between

Boeotia in the north and Attica in the south. It rises to 4,623 ft (1,409 m). The range was the scene of many events in Greek mythology and was especially sacred to Dionysius.

cithara: see KITHARA

cithern: see CITTERN

Citium (sish'ēam), ancient city of Cyprus, on the southeast coast, the modern Larnaca. Of Mycenaean origins, it was a major port with valuable saltworks and was an important center under Phoenician and Assyrian rulers. It is identical with the biblical KITHIM. Zeno was born there. It is also known as Citon.

citizen, member of a state, native or naturalized, who owes ALLEGIANCE to the government of the state and is entitled to certain rights. The citizen may be said to enjoy the most privileged form of NATIONALITY, he is at the furthest extreme from nonnational residents of a state (see ALIEN), but he may also be distinguished from nationals with a subject or servile status (e.g., slaves or serfs). (It should be noted, however, that in Great Britain and some other constitutional monarchies a citizen is called a subject.) The term *citizen* originally designated the inhabitant of a town. In ancient Greece property owners in the CITY-STATES were citizens and, as such, might vote and were subject to taxation and military service. Citizenship in the Roman Empire was at first limited to the residents of the city of Rome and was then extended in A.D. 212 to all free inhabitants of the empire. Under feudalism in Europe the concept of national citizenship disappeared. In time, however, city dwellers purchased the immunity of their cities from feudal dues, thereby achieving a privileged position and a power in local government, these rights were akin to those of citizenship and supplied much of the content of later legislation respecting citizenship. Modern concepts of national citizenship were first developed during the American and French revolutions. Today each country determines what class of persons are its citizens. In some countries citizenship is determined according to the *jus sanguinis* [Lat., =law of blood], whereby a legitimate child takes its citizenship from its father and an illegitimate child from its mother. In some countries the *jus soli* [Lat., =law of the soil] governs, and citizenship is determined by place of birth. These divergent systems may lead to conflicts that often result in dual nationality or loss of citizenship (statelessness). Although the Constitution of the United States, as written in 1787, uses the word *citizen* and empowers Congress to enact uniform NATURALIZATION laws, the term was not defined until the adoption (1868) of the FOURTEENTH AMENDMENT, which gave citizenship to former Negro slaves. As this amendment indicates, the United States generally follows the *jus soli*. However, Congress has also recognized, subject to strict rules, the principle of *jus sanguinis* so that children born of American parents abroad are citizens during their minority and can retain this citizenship at majority if they meet certain conditions. Until the 1940s the United States recognized several classes of nationals who were not citizens, e.g., Filipinos and Puerto Ricans. Today, however, all U.S. nationals are citizens. The United States recognizes the right of voluntary EXTRADITION, and in 1967 the Supreme Court ruled that citizenship can be lost only if freely and expressly renounced, Congress does not have the power to take it away.

citrange (sī'trānj) see ORANGE

citric acid or **2-hydroxy-1,2,3-propanetricarboxylic acid**, $\text{HO}_2\text{CCH}_2\text{C}(\text{OH})(\text{CO}_2\text{H})\text{CH}_2\text{CO}_2\text{H}$, an organic carboxylic acid containing three CARBOXYL GROUPS; it is a solid at room temperature, melts at 153°C, and decomposes at higher temperatures. It is responsible for the tart taste of various fruits in which it occurs, e.g., lemons, limes, oranges, pineapples, and gooseberries. It can be extracted from the juice of citrus fruits by adding calcium oxide (lime) to form calcium citrate, an insoluble precipitate that can be collected by filtration; the citric acid can be recovered from its calcium salt by adding sulfuric acid. It is obtained also by fermentation of glucose with the aid of the mold *Aspergillus niger* and can be obtained synthetically from acetone or glycerol. Citric acid is used in soft drinks and in laxatives and cathartics. Its salts, the citrates, have many uses, e.g., ferric ammonium citrate is used in making BLUEPRINT paper. Sour salt, used in cooking, is citric acid.

citric acid cycle, series of chemical reactions carried out in the living cell, in most higher animals, including man, it is essential for the oxidative METABOLISM of GLUCOSE and other simple sugars. The breakdown of glucose to carbon dioxide and water

is a complex set of chemical interconversions called CARBOHYDRATE CATABOLISM, and the citric acid cycle is the second of three major stages in the process, occurring between GLYCOLYSIS and oxidative PHOSPHORYLATION. This cycle is also known as the Krebs cycle, in recognition of the German chemist Hans Krebs, whose research into the cellular utilization of glucose contributed greatly to the modern understanding of this aspect of metabolism. The common designation for this series of reactions, citric acid cycle, is derived from the first product generated by the sequence of conversions, i.e., CITRIC ACID. The reactions are seen to comprise a cycle inasmuch as citric acid is both the first product and the final reactant, being regenerated at the conclusion of one complete set of chemical rearrangements. Citric acid is a so-called tricarboxylic acid, containing three carboxyl groups (COOH). Hence the citric acid cycle is sometimes referred to as the tricarboxylic acid (TCA) cycle. The citric acid cycle begins with the condensation of one molecule of a compound called oxaloacetic acid and one molecule of acetyl CoA (a derivative of coenzyme A, see COENZYME). The acetyl portion of acetyl CoA is derived from pyruvic acid, which is produced by the degradation of glucose in glycolysis. After condensation, the oxaloacetic acid and acetyl CoA react to produce citric acid, which serves as a substrate for seven distinct enzyme-catalyzed reactions that occur in sequence and proceed with the formation of seven intermediate compounds, including succinic acid, fumaric acid, and malic acid. Malic acid is converted to oxaloacetic acid, which, in turn, reacts with yet another molecule of acetyl CoA, thus producing citric acid, and the cycle begins again. Each turn of the citric acid cycle produces, simultaneously, two molecules of carbon dioxide and eight atoms of hydrogen as by-products. The carbon dioxide generated is an ultimate end product of glucose breakdown and is removed from the cell by the blood. The hydrogen atoms are donated as hydride ions to the system of electron transport molecules, which allow for oxidative phosphorylation. In most higher plants, in certain microorganisms, such as the bacterium *Escherichia coli*, and in the algae, the citric acid cycle is modified to a form called the glyoxylate cycle, so named because of the prominent intermediate, glyoxylic acid.

Citrine, Walter McLennan Citrine, Baron (sī'rēn'), 1887–, English trade union leader. An electrician, he became district secretary of the electrical trade union in 1914 and rose to be general secretary of the Trades Union Congress in 1926, president of the International Federation of Trades Unions in 1928, and president of the World Trade Union Conference in 1945. A skillful organizer, he led the conservative wing in labor and became powerful in the Labour government of Clement Attlee. He was created baron in 1946 and was chairman of the Central Electricity Authority (1947–57). His writings include *My Finnish Diary* (1940), *In Russia Now* (1942), and *British Trade Unions* (1942). See his autobiography, *Two Careers* (1967).

citron (sī'trān), name for a tree (*Citrus medica*) of the family Rutaceae (ORANGE family), and for its fruit, the earliest of the CITRUS FRUITS to be introduced to Europe from the Orient. The small evergreen tree is now cultivated commercially in the Mediterranean region and, to a lesser extent, in the West Indies, Florida, and California. The large fruit has a rough and furrowed surface and a thin outer rind of yellowish-green color. The inner rind is thick, white, and tender, and the pulp is small and acid. The juice is sometimes used as a beverage or syrup. The rind, candied and preserved, is used in confectionery and cookery. The name is also applied to a small variety of watermelon with a thick rind, used to make preserves. Citron is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Sapindales, family Rutaceae.

citronella, common name for a grass, *Cymbopogon nardus*, the source of oil of citronella, used in perfumes and soaps and as an insect repellent. The plant, with bluish green, lemon-scented leaves, is cultivated in Java and Sri Lanka. Citronella is classified in the division MAGNOLIOPHYTES, class Liliatae, order Cyperales, family Gramineae.

citrus fruits, widely used edible fruits of plants belonging to *Citrus* and related genera of the family Rutaceae (ORANGE family). Included are the tangerine, citrange, tangelo, orange, pomelo, GRAPEFRUIT, LEMON, LIME, CITRON, and KUMQUAT. Almost all the species bearing edible fruits are small trees native to SE Asia and the East Indies. The citron was introduced to the Mediterranean area from the Orient before Christian times, the others were spread

chiefly by the Arabs during the Middle Ages. Introduced throughout Europe during the Crusades, they were brought by Portuguese and Spanish explorers to the West Indies, whence they were introduced into North and South America. Commercially they are now the most important group of tropical and subtropical fruits in the world. The fruits are rich in vitamin C (ascorbic acid), various fruit acids (especially CITRIC ACID), and fruit sugar. The rind, which contains numerous oil glands, and the fragrant blossoms of some species are also a source of essential oils used for perfumes and similar products. See H J Webber and L D Batchelor, ed., *The Citrus Industry* (2 vol., 1943-48), H H Hume, *Citrus Fruits* (rev ed 1957), J T Hopkins, *Fifty Years of Citrus* (1960).

Città Vecchia (chêt-ta' vĕk'kya) [Ital., =old city], **Città Notabile**, or **Notabile** (nōta'bĕlā), Maltese **Mdina** (amdē'na), town, central Malta. It was the capital of Malta until supplanted by VALLETTA (1570). The town has a large 17th-century cathedral, the old palace of the grand masters of the Knights of Malta (Knights Hospitalers), and catacombs, some of which are pre-Christian.

cittern (sīt'arn), stringed musical instrument of the guitar family having an oval body, a flat back, and a fretted neck (see FRETTED INSTRUMENT). Its strings, made of wire and varying in number, were plucked

Cittern

It was first made in the Middle Ages and at that time was usually called citole or sitole. The name *cittern* was given to it in the 16th cent in England, where, as in all western Europe, it was very popular until the early part of the 18th cent. It has also been called cister, cistre, cithern, cithren, citharen, cetera, cither, cithara, gittern, and sitron.

city, densely populated urban center, larger than a village or a town, whose inhabitants are engaged primarily in commerce and industry. In the legal sense, in the United States a city is an incorporated municipality. Cities have appeared in diverse cultures, e.g., among the Aztecs, Maya, and Inca, in China and India, and in Mesopotamia and Egypt. In all these civilizations the cities were the centers of internal change and development. The history of ancient Europe is that of the Greek cities and of Rome (see CITY-STATE). From the decline of Rome the cities were in eclipse, and in Western Europe their role as centers of learning and the arts passed to the monasteries. The 11th cent saw the resurgence of vigorous cities, first in Italy and then in northern Europe, due mainly to a revival of trade, by the 13th cent, with the decline of feudalism, the dynamic life of the Middle Ages was centered in the cities. From that time dates the importance of the great modern cities, e.g., Milan, London, Paris, and the Hanseatic cities. The giant modern city is a product of the Industrial Revolution, which introduced large-scale manufacturing. Sheer size made old problems of urban life acute, some of them, such as sanitation, utilities, and distribution, have been better solved than others, such as HOUSING and transport. As urban life came to furnish more remunerative and varied employment opportunities, rural populations increasingly were attracted, and by the 20th cent some nations were faced with shortages of agricultural workers. Among movements to reform urban life some aim at abolishing cities as known today, this is the tradition exemplified by William Blake, Henry Thoreau, William Morris, Eric Gill, and Lewis Mumford. There are also less radical designs, like rational city planning and the development of rapid transit to distant suburbs. There have been many reforms aimed at restoring community life for the rootless strangers so frequent in modern cities, such as a common function of settlement houses, community centers, and other philanthropic and cooperative enterprises. Statistical study of cities is difficult, because figures are usually given by political units and rarely is an entire urban area a single, exclusive political unit. Cities are often complex, with suburbs within them, e.g., the Newark

area falls inside the New York metropolis. The word *megapolis* is sometimes used to describe the great swath of communities stretching N and S of New York City from Boston to Washington, D C. In Great Britain the term *conurbation* refers to a cluster of urban areas such as the one centered in London. There are similar complexes of cities in Asia, notably that of WU-HAN in China. See CITY GOVERNMENT, LOCAL GOVERNMENT. See Henry Pirenne, *Medieval Cities* (tr 1925, repr 1956), Gustave Glotz, *The Greek City and Its Institutions* (tr 1929, repr 1965), Max Weber, *The City* (tr 1958), Otis Duncan et al., *Metropolis and Region* (1960), Lewis Mumford, *The City in History* (1961), P M Hauser, ed., *The Study of Urbanization* (1965), Jane Jacobs, *The Economy of Cities* (1969), Stephan Thernstrom and Richard Sennett, ed., *Nineteenth-Century Cities* (1969), W A Robson and D E Regan, ed., *Great Cities of the World* (3d ed., 2 vol., 1972), D R Gordon, *City Limits* (1973).

City College of the City University of New York, coeducational, est 1847 as the Free Academy, called the College of the City of New York (CCNY) 1866-1929 (see NEW YORK, CITY UNIVERSITY OF). It includes schools of education, liberal arts, and technology. Its former school of business administration became BARUCH COLLEGE in 1968. Residents of New York City are admitted free to the baccalaureate program.

city government, political administration of urban areas. The English tradition of incorporating urban units (cities, boroughs, villages, towns) and allowing them freedom in most local matters is general in the United States (see CITY, LOCAL GOVERNMENT). The traditional U S city government had a mayor and council, whose members (aldermen) represented districts (wards). As the complexity of urban life increased in the 19th cent, the old system became less efficient. Problems included overlapping of old offices with new, poor methods of accounting and taxation, and much blatant graft. Hence there arose movements for municipal reform, which have become a recurrent feature of American political life. They have familiarized Americans with a gallery of such political figures as William M TWEED of New York City, Frank HAGUE of Jersey City, and William Hale THOMPSON of Chicago (see BOSSISM). Although the urban political machine has, in most cities, lost its former power, the traditional type of city government, also known as the independent executive type, remains the most common urban governmental form. It is often subdivided into the strong mayor type (e.g., New York City) and the weak mayor-strong council type (e.g., Los Angeles). Reform efforts, however, have resulted in the development of two fairly widespread alternative governmental types. The commission form has a board, both legislative and administrative, usually elected nonpartisan and at large. First adopted by Galveston, Texas, (1901), this system achieved great popularity in the early 1900s, but many cities (e.g., Buffalo and New Orleans) later abandoned it. The city manager plan gives the administration to one professional nonpolitical director. The system has gained in popularity, notable examples are in Staunton, Va., the first (1908), and Cincinnati, Ohio. A perennial problem of U S urban government is the division of urban areas among several independent city governments, survivals of old separate communities. The Eastern metropolises all provide examples, aggravated in some (e.g., New York City and Philadelphia), where state lines run through the heart of the metropolitan area. Attempts at efficiency have produced such organizations as the Port Authority of New York and New Jersey, a corporation set up by joint action of New York state and New Jersey, and assigned specific powers formerly held by local governments. Another problem besetting city government is the migration of middle-class families to the suburban areas, thus shrinking the tax base and financial resources of the cities. In the rest of the English-speaking world and wherever else there is much local self-government, American forms and problems are paralleled. Elsewhere, as typically in France, the local officers, albeit elected mayor and councillors, are largely figureheads, serving mainly to carry out the regulations of the central bureaucracy. See C M Kneier, *City Governments in the United States* (3d ed 1957), L I Ruchelman, *Big City Mayors* (1969), C R Adrian, *Governing Urban America* (4th ed 1972), W A Robson and D E Regan, eds, *Great Cities of the World* (2 vol., 1972).

city manager: see CITY GOVERNMENT

City of David, epithet of BETHLEHEM, the birthplace of David, and of JERUSALEM, its capital.

city of refuge: see SANCTUARY

City of Refuge National Historical Park: see NATIONAL PARKS AND MONUMENTS (table)

city planning, process of planning for the improvement of urban centers in order to provide healthy and safe living conditions, efficient transport and communication, adequate public facilities, and aesthetic surroundings. Planning that also includes outlying communities and highways is termed regional planning. Many ancient cities were built from definite plans. The fundamental feature of the plans of Babylon, Nineveh, and the cities of ancient Greece and of China was a geographical pattern of main streets running north and south and east and west, with a public square or forum in the center. This gridiron plan was also followed by the Romans, as in Lincoln and Chester in England, in all their towns. The Romans emphasized drainage and water supply and practiced zoning. In medieval cities, built with military security in mind, the only relief from the extremely narrow streets was the space formed by municipal and church squares. The living conditions of the poorer citizens were given little attention. With the Renaissance came the truly monumental views—wide avenues and long approaches creating vistas of handsome buildings. The new aim is seen first in special sections of a city, such as Michelangelo's grouping on the Capitoline at Rome and Bernini's piazza of St Peter's. In most European cities through the 17th and 18th cent there was fragmentary replanning of medieval streets. After the fire of 1666 in London, Sir Christopher WREN devised a superb plan for a complete rebuilding of the city, but the plan unfortunately was not carried out. In the 18th cent, Mannheim and Karlsruhe, Germany, were laid out geometrically, Emmanuel Herre planned Nancy, France, John Wood produced grand architectural streets and squares at Bath, and the new part of Edinburgh was laid out. In the early 19th cent John Nash planned certain sections of London, central Vienna was improved, and Baron HAUSSMAN remodeled Paris to produce the celebrated boulevard system with its spokes-and-hub design. Legislation that enabled cities to make and carry out planning designs was enacted earlier in Europe than in the United States. Such laws were passed in Italy in 1865, in Sweden in 1874, and in Prussia and Great Britain in 1875. Planning in Great Britain was especially concerned with slum elimination, its greatest exponent was Sir Patrick GEDDES. At the turn of the century Sir Ebenezer HOWARD was the founder of the modern garden city movement. The first English GARDEN CITY, Letchworth, was begun in 1903. In the United States, early New England towns, formally disposed along wide elm-lined central roadways or commons, exhibit a conscious planning. Annapolis, Md., Philadelphia, and Paterson, N J, were built after plans, but the most celebrated example is the city of Washington D C, laid out according to the plan devised (1791) by Pierre Charles L'ENFANT, under the supervision of George Washington and Thomas Jefferson—a rectangular plan with diagonal main thoroughfares superimposed and the Capital as the central feature. In the 19th cent Frederick LAW OLIMSTED was a pioneer in city planning, especially in developing parks. State legislation enabling cities to appoint planning commissions and in some cases giving them authority to carry out the plans began in Pennsylvania in 1891. The work of Daniel Hudson Burnham for the World's Columbian Exposition in Chicago, 1893, was a stimulus to city planning, and Burnham, with Edward Bennett, drew up a plan for Chicago, much of which was put into execution. In 1901 a commission composed of Burnham, Charles Follen McKim, and Frederick Law Olmsted, Jr., devised a scheme for the modern development and beautification of Washington, D C, adhering to L'Enfant's original plan as a basis for all new operations. A wide influence on planning in U S cities was exerted by the ZONING laws adopted in New York City in 1916, which controlled the uses of each district in the city and regulated the areas and heights of buildings in relation to street width. The important Regional Survey of New York and Environs, completed in 1929, took into consideration legal and social factors as well as internal transit problems and various modes of approach to the metropolitan area. Governmental efforts to provide employment during the depression of the 1930s led to the building (under the Federal Resettlement Administration) of three experimental model communities—Greenbelt, Md., Greendale, Wis., and Greenhills, Ohio. Among the many subsequent planned communities, built by private developers are Columbia, Md., and Reston, Va. The increase of traffic and crowding together of tall buildings have crippled the street plans of many cities—especially U S cities that have been handicapped by their rectangular or checkerboard layouts. Contemporary exam-

ples of planned cities include BRASÍLIA, the federal capital of Brazil, ROTTERDAM, main seaport of the Netherlands, and CHANDIGARH, the joint capital of the Indian states of Haryana and Punjab. In the larger U.S. cities, physical deterioration, crowding, and complex socioeconomic factors have produced vast slums. Most urban renewal programs of the mid-20th cent. were aimed at clearing these slums through the demolition of decayed buildings and the construction of low-income and middle-income housing projects. It was found, however, that the mere replacement of old buildings with new structures did not eliminate slum conditions. In contrast to traditional planning, which concentrated on improving the physical aspects of buildings and streets, modern city planning is increasingly concerned with the social and economic aspects of city living. The process of city planning is a highly complex, step-by-step procedure, usually involving a series of surveys and studies, development of a land-use plan and transportation plan, preparation of a budget, and approval of a unified master plan by various agencies or legislative bodies. City planners are usually part of an urban planning board or governmental agency that must take into account the characteristics and long-range welfare of the people of a particular urban community—their employment opportunities, income levels, need for transportation, schools, shopping areas, hospitals, parks and recreational facilities. The city planner is faced with the problems of traffic, congestion, and pollution, he must also consider the availability of police, fire, and sanitation services, the limitations posed by zoning and other regulations, and the problems of funding. In recent years, residents of many communities have demanded greater participation in the planning of their own neighborhoods, and some planners have worked closely together with community groups during various stages of the planning process. See Jane Jacobs, *The Death and Life of Great American Cities* (1961, repr. 1969), Lewis Mumford, *The City in History* (1961, repr. 1966), J. W. Reps, *The Making of Urban America* (1965), E. N. Bacon, *Design of Cities* (1966), Frederick Gibberd, *Town Design* (5th ed. 1967), W. H. Whyte, *The Last Landscape* (1968), Françoise Choay, *The Modern City Planning in the Nineteenth Century* (1969), Hila Colman, *City Planning* (1971).

city-state, in ancient Greece, autonomous political unit consisting of a city and surrounding countryside. The Greek word *polis* meant both city and city-state. From the beginning of Greek history to its climax in the 5th and 4th cent. B.C., the Greeks were organized into city-states, of which there were several hundred. Since the city-state was autonomous, different states—and the same state at different times—had a variety of governments, ranging from absolute monarchy to pure democracy. Only citizens participated in the government, or in the religious, social, and economic life of the city-state, and citizenship was limited to those born of citizen parents. A large proportion of the population of the city-state consisted of slaves. The degree of participation by the citizens in government was often limited by class distinctions. The government usually consisted of an assembly and council, the former predominated in democracies, the latter in oligarchies. Although the various city-states combined into religious or military federations under the hegemony of one city-state, these never endured for long, and Greece was left open to foreign attack by large centralized states to which it eventually became subject. See A. E. Zimmern, *The Greek Commonwealth* (5th rev. ed., 1931, repr. 1973), Gustave Glotz, *The Greek City and Its Institutions* (ed. by N. Mallinson, 1930, repr. 1969), Victor Ehrenberg, *The Greek State* (2d rev. ed., 1969, repr. 1972).

Ciudad [Span., =city]. For cities whose names begin thus but are not so listed, see under the following name, e.g., for Ciudad Juárez, see JUÁREZ.

Ciudad Bolívar (syōōthāth' bōlē'vār), city (1970 est. pop. 110,000), capital of Bolívar state, E Venezuela, an inland port on the Orinoco River. It is the commercial center of the eastern llanos, the Orinoco basin, and the GUAYANA HIGHLANDS. Wood products and leather are produced, and hides, cattle, and gold are exported. The city was founded in 1764 and called Angostura. The congress of Angostura (1819) made Simon BOLÍVAR president of Venezuela and later in the same year decreed the formation of the republic of Greater Colombia, with Bolívar as president. The city's Angostura suspension bridge (2,336 ft/712 m long, completed 1967) is the longest in South America.

Ciudad Guzman: see GUZMÁN, Mexico

Ciudad Juárez: see JUÁREZ, Mexico

Ciudad Real (thyōōthāth' rāal'), city (1970 pop. 41,708), capital of Ciudad Real prov., central Spain, in New Castile, on a fertile plain between the Jabalón and Guadiana rivers. It is an agricultural market place, with farm-related industries. Ciudad Real was founded by Alfonso X of Castile in the 13th cent., during the Peninsular War, the French defeated (1809) the Spanish in a battle nearby. The city preserves some of its medieval flavor, it has several notable Gothic churches.

Ciudad Rodrigo (rōthré'gō), town (1970 pop. 13,320), Salamanca prov., central Spain, in Leon, on the Agueda River near the Portuguese border. It is a trade center for a cattle-raising area. Originally a Roman settlement, the town was abandoned and reestablished in the 12th cent. as a fortress. It has preserved its medieval flavor and has been declared a historic monument.

civet (siv'ət) or **civet cat**, any of a large group of mostly nocturnal mammals of the Old World family Viverridae (civet family), which also includes the MONGOOSE. Civets are not true cats, but the civet family is related to the cat family (Felidae). Most civets have catlike bodies, long tails, and weasel-like faces. Their fur may be gray or brown, and may be marked in various patterns. All civets have scent-producing glands, located in a double pouch near the genitals. The fatty yellow secretion of these glands has a distinctive musky odor used for territorial marking. Commercially, this substance is known as civet and is used as a perfume fixative. Civet can be removed from captive animals every 14 to 20 days. Some civet species are hunted for their fur. The ground-living, or true, civets form a distinctive group within the family; these animals have a highly carnivorous diet. Most have dark spots and ringed tails. They include several Asian species (genus *Viverra*) and one African species (*Civettictis civetta*). Best known is the Indian civet, *V. zibetha*, of S Asia, from which most of the civet for perfume is derived. It has tawny fur with black spots and black bands on the tail. It is about 30 in. (76 cm) long, excluding the 20-in. (42-cm) tail, and about 15 in. (38 cm) high at the shoulder, it weighs up to 25 lb (11 kg). Its musk glands are greatly enlarged. Some of the ground-living civets are called linsangs and genets. The palm civets form another distinct group within the civet family. These are arboreal, largely fruit-eating animals of Africa and Asia, they are classified in several genera. The North American spotted skunk is sometimes popularly called civet but is not closely related to civets. Civets are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Viverridae.

civics, branch of learning that treats of the relationship between the citizen and his society and state, originally called civil government. In an educational sense it involves passing the tradition of the community to new generations with a view to establishing civic allegiance. With the large immigration into the United States in the latter half of the 19th cent., civics became a subject in the secondary schools and colleges through the influence of the National Education Association and other organizations.

Civil Aeronautics Board (CAB), independent agency of the executive branch of the U.S. Federal government. It was established by Congress in 1938 as the Civil Aeronautics Administration and charged with the encouragement and development of civil aviation and the formulation of economic and safety rules in air traffic. The Federal Aviation Act of 1958 transferred the safety-rulemaking function to the Federal Aviation Administration. The CAB authorizes all carriers and air routes, must approve all rates, and passes on any agreement between airlines. Its five members are appointed by the President with the consent of the Senate.

civil defense, nonmilitary activities designed to protect civilians and their property from enemy actions in time of war. A civil defense program usually includes measures taken during peace (e.g., building home shelters or air raid warning practice), measures to warn civilians of an impending attack, to protect them during attack, and to save their lives and property after attack. Civil defense grew in proportion to the use of aircraft in modern warfare, thus, warning and protection systems were primitive in World War I and greatly improved in World War II, when both sides engaged in the strategic bombing of civilian populations. After World War II the existence of nuclear weapons, the development of long-range bombers and missiles, and the ever-present possibility of war encouraged the establishment

of comprehensive civil defense systems. The principal U.S. civil defense agency was established by executive order in 1950, and in 1961 civil defense functions were transferred to the Defense Dept. The civil defense program in the United States has included the formulation of rescue and survival plans, the stockpiling of food and equipment, and the encouragement of home shelter construction. Early warning of attack is provided by chains of radar stations built across Canada. Opinion in the United States has been divided over the value of civil defense programs. Opponents of civil defense have maintained that, given the destructiveness of modern weapons, warning and shelter systems are useless and merely encourage war hysteria. Proponents of civil defense have asserted that, since a major danger from a nuclear attack is radioactive fallout, an adequate shelter program can save the lives of a large portion of the population. With the beginnings of a detente with the Soviet Union and the People's Republic of China in the 1970s, interest in civil defense in the United States, which peaked at the height of the cold war, had begun to decline. However, most industrialized countries still maintain some form of civil defense.

civil engineering: see ENGINEERING

Civilian Conservation Corps (CCC), established in 1933 by the U.S. Congress as a measure of the New Deal program. The CCC provided work and vocational training for unemployed single young men through conserving and developing the country's natural resources. At its peak in 1935, the organization had more than 500,000 members in over 2,600 camps. These were usually operated by the War Dept., but the men were not subject to military control. In 1939 the CCC was made part of the Federal Security Agency. Beginning in 1940, greater emphasis was placed on projects aiding national defense. Against President Franklin D. Roosevelt's request, Congress abolished the CCC in 1942.

Civilis (Julius Civilis) (siv'īlīs), fl. A.D. 70, Batavian chief who chose the unsettled period at the fall of NERO to raise a revolt in Germany, which quickly spread to Gaul (A.D. 69–A.D. 70). Its chief effect was to remove from VITELLIUS, who was struggling with VESPASIAN, any real support from Gaul. After Vespasian became emperor, he sent the Roman general Cerialis to put down the revolt. The rebels were treated with great consideration, and many entered the Roman service. Civilis' fate, however, is unknown.

civilization, culture with a relatively high degree of elaboration and technical development. The term *civilization* also designates that complex of cultural elements that first appeared in human history between 8,000 and 6,000 years ago. At that time, on a basis of agriculture, stock-raising, and metallurgy intensive occupational specialization began to appear in the river valleys of SW Asia. Writing appeared, as well as relatively dense urban aggregations that accommodated administrators, traders and other specialists. The specific characteristics of civilization are food production (plant and animal domestication), metallurgy, a high degree of occupational specialization, writing, and the growth of cities. Such characteristics have emerged in several parts of the prehistoric world: Mesopotamia, Egypt, China, Greece, Rome, India, Highland Peru and Bolivia, the valley of Mexico, and Guatemala. They were never fully realized in America north of the Rio Grande prior to European colonization.

civil law. As used in this article, the term *civil* signifies a modern legal system based upon ROMAN LAW, as distinguished from COMMON LAW. In common usage, however, it also means the rules that govern private legal affairs, in this sense civil law contrasts with public law and criminal law. With a few exceptions, the countries on the continent of Europe, the countries that were former colonies of such continental powers (e.g., the Latin American countries), and other countries that have recently adopted Western legal systems (e.g., Japan) use civil law. It is also the foundation for the law of Quebec prov. and of Louisiana. Modern countries that do not adhere to the civil law (this includes all states of the United States except Louisiana) for the most part were founded by England and apply the system of common law prevailing there. The law that had been in force throughout the Roman Empire when it controlled most of Europe and the Middle East was to some extent supplanted by GERMANIC LAWS when Germanic tribes carried out their great conquests. The principle of personal (as opposed to territorial) law was observed by the invaders, however, and thus the former Roman subjects

and their descendants were permitted to follow the Roman law (*leges romanorum*) in their affairs with one another. The great *CORPUS JURIS CIVILIS* of Justinian, compiled in the 6th cent and in use in the Byzantine Empire, served also to keep the old law alive. The medieval church, too, was an important guardian of Roman law, for much of the law used by the church was based upon Roman principles and concepts. Germanic law, although at first adequate, did not have legal concepts that suited the commercial requirements of the late Middle Ages, and there was then heavy borrowing of Roman ideas. As part of a concurrent revival of interest in classical culture, the late 11th and the 12th cent saw the resumption of systematic study of Roman law, chiefly in N Italy (notably at Bologna, where IRNE-RIUS gave the first lectures in Roman law), in S France, and in Spain. Extensive glosses and commentaries on the *Corpus Juris Civilis* and on other classical texts were produced. Through the agency of scholars and of judges trained in Roman law principles, these principles (though strongly modified) came to be observed in national courts in all classes of legal disputes, although for a long time courts of local jurisdiction continued to enforce customary law. Scholars of Roman law enjoyed increasing prestige, by 1500 the *Corpus Juris Civilis* had become the basis of legal science throughout Western Europe. The next step, emulating the systematizing of Justinian, was to state these principles in exact, ordered form, i.e., as a CODE. The CODE NAPOLEON (1804), the most famous of such works, had many successors. In England there was some interest in Roman law during the Renaissance, there, however, the early centralization of the legal system and the existence of an independent class of lawyers with an interest in the law as administered in the courts ensured the triumph of the common law. Nevertheless, civil law influenced the common law in the fields of admiralty law, testamentary law, and domestic relations, and civil law became the basis for the whole system of EQUITY. The tendency of civil law is to create unified legal systems by working out with maximum precision the conclusions to be drawn from basic principles. The civil law judge is bound by the provisions of the written law, and not by previous judicial interpretations. The traditional civil law decision states the applicable provision from the code or from a relevant STATUTE and the judgment is based upon that provision. See A. T. Von Mehren, *The Civil Law System* (1957); A. N. Yiannopoulos, ed., *Civil Law in the Modern World* (1965).

civil liberty: see LIBERTY

civil rights, rights that a nation's inhabitants enjoy by law. A distinction is usually recognized between civil liberties and civil rights. The former refers to negative restraints upon government, civil rights pertain to positive acts of government designed to protect persons against arbitrary or discriminatory treatment by government or individuals. The charter of the United Nations states as a central goal the expansion of both civil liberties and civil rights. In the United States civil rights are usually thought of in terms of the specific rights guaranteed in the Constitution: freedom of religion, of speech, and of the press, and the rights to due process of law and to equal protection under the law. Since the Civil War, much of the concern over civil rights in the United States has focused on efforts to extend these rights more fully to blacks. The first legislative attempts to grant blacks a political and legal status equal to that of whites were the Civil Rights Acts of 1866, 1870, 1871, and 1875. Those acts bestowed upon blacks such freedoms as the right to sue and be sued, to give evidence, and to hold real and personal property. The 1866 act was of dubious constitutionality and was reenacted in 1870 only after the passage of the FOURTEENTH AMENDMENT. The third Civil Rights Act (1871) attempted to guarantee to the blacks those social rights that were still withheld. It penalized innkeepers, proprietors of public establishments, and owners of public conveyances for discriminating against blacks in accommodations, but was invalidated by a decision of the Supreme Court in 1883 on the ground that these were not properly civil rights and hence not a field for Federal legislation. After the Civil Rights Act of 1875 there was no more Federal legislation in this field until the Civil Rights Acts of 1957 and 1960, although several states passed their own civil rights laws. The struggle to expand civil rights for blacks has been led by the National Association for the Advancement of Colored People, the Congress of Racial Equality, the Urban League, the Southern Christian Leadership Conference, and others. The civil rights movement, led especially by Martin Luther King, Jr., in the late 1950s

and 1960s and the executive leadership provided by President Lyndon Baines Johnson, encouraged the passage of the most comprehensive civil rights legislation to date, the Civil Rights Act of 1964, it prohibited discrimination for reason of color, race, religion, or national origin in places of public accommodation covered by interstate commerce, i.e., restaurants, hotels, motels, and theaters. Besides dealing with the desegregation of public schools, the act, in Title VII, forbade discrimination in employment (Title VII also prohibited discrimination on the basis of sex). In 1965 the Voting Rights Act was passed, which placed Federal observers at polls to ensure equal voting rights, and the Civil Rights Act of 1968 dealt with housing and real estate discrimination. In addition to congressional action on civil rights, there has been action by other branches of the government. The most notable of these were the Supreme Court decisions in 1954 and 1955 declaring racial segregation in public schools unconstitutional, and the court's rulings in 1955 banning segregation in publicly financed parks, playgrounds, and golf courses. In the 1960s women began to organize around the issue of their civil rights. By the early 1970s over 40 states had passed equal pay laws, and in 1972 the Senate adopted an equal rights amendment, if ratified by 38 states it would prohibit all discrimination based on sex. See A. J. M. Milne, *Freedom and Rights* (1968), Chester Anteau, *Federal Civil Rights Acts* (1971), A. L. Del Russo, *International Protection of Human Rights* (1971), H. J. Abraham, *Freedom and the Courts* (1972), T. R. Brooks, *The Walls Come Tumbling Down* (1974).

civil service, entire body of those employed in the civil administration as distinct from the military and excluding elected officials. The term was used in designating the British administration of India, and its first application elsewhere was in 1854 in England. Modern civil service personnel are usually chosen by examination and promoted on the basis of merit ratings. In democratic nations recruitment and advancement procedures are designed to divorce the civil service from political patronage. The use of competitive examinations to select civil officials was begun in China during the Han dynasty (206 B.C.-A.D. 220), and expanded to include all important positions during the Sung dynasty (960-1279, see CHINESE EXAMINATION SYSTEM). In the West, however, selection of civil administrators and staff on the basis of merit examinations is a late development. Despite important contributions to administrative structure and procedure, the Roman Empire seems to have recruited and promoted officials largely on the basis of custom and the judgement of superiors. The establishment of the modern civil service is closely associated with the decline of feudalism and the growth of national autocratic states. In Prussia, as early as the mid-17th cent., Frederick William, elector of Brandenburg, created an efficient civil administration staffed by civil servants chosen on a competitive basis. In France similar reforms preceded the Revolution, and they were the basis for the Napoleonic reforms that transformed the royal service into the civil service. Development of a professional civil service came several decades later in Great Britain and the United States. Owing doubtless in part to the spoils system so strongly established in the Jacksonian era, the United States lagged far behind other nations in standards of civil service competence and probity. Agitation for reform began shortly after the Civil War. In 1871, Congress authorized the President to prescribe regulations for admission to public service and to appoint the Civil Service Commission, which lasted only a few years. The scandals of President Grant's administration lent weight to the arguments of reformers. George W. Curtis, Dorman B. Eaton, and Carl Schurz. President Hayes favored reform and began to use competitive examinations as a basis for appointment to office. The assassination of President Garfield in 1881 by a disappointed office seeker precipitated the passage of the Pendleton Act in 1883, reestablishing the Civil Service Commission after a nine-year lapse. The commission draws up the rules governing examinations for those positions that Congress places in the classified civil service. All Presidents since Cleveland have expanded the classified list, and the great majority of Federal employees during peacetime are now classified. In 1939 the merit system was extended to sections of state administration receiving Federal grants. The Hatch Act of 1940 forbade campaign contributions by officeholders with the intention of divorcing the civil service from politics. Appointive power is shared by the President, who appoints the heads of all government departments and may remove his appointees

at will, by Congress, which controls its own employees, and by the Civil Service Commission and departmental appointing officers, in whose charge are vacancies in the classified service. Important changes were made in the structure of the U.S. civil service as a result of the reports issued (1949, 1955) by the two commissions known as the Hoover Commission. The organization of the government bureaucracy was streamlined by the creation of the General Services Administration, combining the operations and activities of some 60 government agencies. Of the world's civil services, the most outstanding on several counts is still the British, extremely powerful because of its permanency, its extensive grants of power from Parliament, and its reputation for absolute honesty, although it is criticized for a lack of flexibility and for class exclusiveness in its upper ranges. A Civil Service Commission and the beginnings of a system of competitive examinations were established in Great Britain in 1855, and the influential Whitley Councils, representing both government employees and administrators in questions dealing with service conditions, were set up after World War II. British civil servants are strictly excluded from politics. In Communist nations, on the other hand, the official party and the civil service tend to interpenetrate. The secretariat of the League of Nations and of the United Nations are possible precursors of an international civil service. See W. A. Robson, *The Civil Service in Britain and France* (1956), Paul Van Riper, *History of the United States Civil Service* (1958), E. A. Kracke, *The Civil Service in Britain and France* (1968), F. C. Mosher, *Democracy and the Public Service* (1968), Alan Gartner et al., ed., *Public Service Employment* (1973).

civil time, local TIME based on Greenwich mean time. Civil time may be formally defined as mean SOLAR TIME plus 12 hr, the civil day begins at midnight, while the mean solar day begins at noon. Civil time is usually not used, since it depends on the observer's longitude, instead, STANDARD TIME, which is the same throughout a given time zone, is generally adopted.

civil war, English: see ENGLISH CIVIL WAR

civil war, in Roman history see MARIUS and SULLA, POMPEY and JULIUS CAESAR

Civil War, in U.S. history, conflict (1861-65) between the Northern states (the Union) and the Southern states that seceded from the Union and formed the CONFEDERACY. It is generally known in the South as the War between the States and is also called the War of the Rebellion (the official Union designation), the War of Secession, and the War for Southern Independence. The name Civil War, although much criticized as inexact, is most widely accepted. It is, in fact, somewhat misleading, since the war was not a class struggle, but a sectional combat having its roots in such complex political, economic, social, and psychological elements that historians still do not agree on its basic causes. It has been characterized, in the words of William H. Seward, as the "irrepressible conflict." In another judgment the Civil War was viewed as criminally stupid, an unnecessary bloodletting brought on by arrogant extremists and blundering politicians. Both views accept the fact that in 1861 there existed a situation that, rightly or wrongly, had come to be regarded as insoluble by peaceful means. Earlier, in the days of the American Revolution and of the adoption of the Constitution, differences between North and South were dwarfed by their common interest in establishing a new nation. But sectionalism steadily grew stronger. In the 19th cent the South remained almost completely agricultural, with an economy and a social order largely founded on Negro slavery and the plantation. These mutually dependent institutions produced the staples, especially cotton, from which the South derived its wealth. The North had its own great agricultural resources, was always more advanced commercially, and was also expanding industrially. Hostility between the two sections grew perceptibly after 1820, the year of the MISSOURI COMPROMISE, which was intended as a permanent solution to the issue in which that hostility was most clearly expressed—the question of the extension or prohibition of slavery in the Federal territories of the West. Difficulties over the tariff (which led John C. CALHOUN and South Carolina to NULLIFICATION and to an extreme STATES' RIGHTS stand) and troubles over internal improvements were also involved, but the territorial issue nearly always loomed largest. In the North moral indignation increased with the rise of the ABOLITIONISTS in the 1830s. Since Negro slavery was unadaptable to much

of the territorial lands, which eventually would be admitted as free states, the South became more anxious about maintaining its position as an equal in the Union. Southerners thus strongly supported the annexation of Texas (certain to be a slave state) and the Mexican War and even agitated for the annexation of Cuba. The COMPROMISE OF 1850 marked the end of the period that might be called the era of compromise. The deaths in 1852 of Henry CLAY and Daniel WEBSTER left no leader of national stature, but only sectional spokesmen, such as W. H. SEWARD, Charles SUMNER, and Salmon P. CHASE in the North and Jefferson DAVIS and Robert TOOMBS in the South. With the KANSAS-NEBRASKA ACT (1854) and the consequent struggle over "bleeding" Kansas the factions first resorted to shooting. The South was ever alert to protect its "peculiar institution," even though many Southerners recognized slavery as an anachronism in a supposedly enlightened age. Passions aroused by arguments over the FUGITIVE SLAVE LAWS (which culminated in the DRED SCOTT CASE) and over slavery in general were further excited by the activities of the Northern abolitionist John BROWN and by the vigorous proslavery utterances of William L. YANCEY, one of the leading Southern FIRE-EATERS. The "wedges of separation" caused by slavery split large Protestant sects into Northern and Southern branches and dissolved the WHIG PARTY. Most Southern Whigs joined the DEMOCRATIC PARTY, one of the few remaining, if shaky, nationwide institutions. The new REPUBLICAN PARTY, heir to the FREE-SOIL PARTY and to the LIBERTY PARTY, was a strictly Northern phenomenon. The crucial point was reached in the presidential election of 1860, in which the Republican candidate, Abraham LINCOLN, defeated three opponents—Stephen A. DOUGLAS (Northern Democrat), John C. BRECKINRIDGE (Southern Democrat), and John BELL of the CONSTITUTIONAL UNION PARTY. Lincoln's victory was the signal for the SECESSION of South Carolina (Dec. 20, 1860), and that state was followed out of the Union by six other states—Mississippi, Florida, Alabama, Georgia, Louisiana, and Texas. Immediately the question of federal property in these states became important, especially the forts in the harbor of Charleston, S.C. (see FORT SUMTER). The outgoing President, James BUCHANAN, a Northern Democrat who was either truckling to the Southern, proslavery wing of his party or sincerely attempting to avert war, pursued a vacillating course. At any rate the question of the forts was still unsettled when Lincoln was inaugurated, and meanwhile there had been several futile efforts to reunite the sections, notably the CRITTENDEN COMPROMISE offered by Sen. J. J. Crittenden. Lincoln resolved to hold Sumter. The new Confederate government under President Jefferson Davis and South Carolina were equally determined to oust the Federals.

Sumter to Gettysburg When, on April 12, 1861, the Confederate commander P. G. T. BEAUREGARD, acting on instructions, ordered the firing on Fort Sumter, hostilities officially began. Lincoln immediately called for troops to be used against the seven seceding states, which were soon joined by Arkansas, North Carolina, Virginia, and Tennessee, completing the 11-state Confederacy. In the first important military campaign of the war untrained Union troops under Irvin McDOWELL, advancing on Richmond, now the Confederate capital, were routed by equally inexperienced Confederate soldiers led by Beauregard and Joseph E. JOHNSTON in the first battle of BULL RUN (July 21, 1861). This fiasco led Lincoln to bring up George B. MCCLELLAN (1826-85), fresh from his successes in West Virginia (admitted as the new state of WEST VIRGINIA in 1863). After the retirement of Winfield SCOTT in Nov., 1861, McClellan was for a few months the chief Northern commander. The able organizer of the Army of the Potomac, he nevertheless failed in the PENINSULAR CAMPAIGN (April-July, 1862), in which Robert E. LEE succeeded the wounded Johnston as commander of the Confederate Army of Northern Virginia. Lee planned the diversion in the Shenandoah Valley, which, brilliantly executed by Thomas J. (Stonewall) JACKSON, worked perfectly. Next to Lee himself Jackson, with his famous "foot cavalry," was the South's greatest general. Lee then went on to save Richmond in the SEVEN DAYS BATTLES (June 26-July 2) and was victorious in the second battle of Bull Run (Aug. 29-30), thoroughly trouncing John POPE. However, he also failed in his first invasion of enemy territory. In September, McClellan, whom Lincoln had restored to command of the defenses of Washington, checked Lee in Maryland (see ANTIETAM CAMPAIGN). When McClellan failed to attack the Confederates as they retreated, Lincoln removed him again, permanently

Two subsequent Union advances on Richmond, the first led by Ambrose E. BURNSIDE (see FREDERICKSBURG, BATTLE OF) and the second by Joseph HOOKER (see CHANCELLORSVILLE, BATTLE OF), ended in resounding defeats (Dec. 13, 1862, and May 2-4, 1863). Although Lee lost Jackson at Chancellorsville, the victory prompted him to try another invasion of the North. With his lieutenants Richard S. Ewell, James LONGSTREET, Ambrose P. HILL, and J. E. B. (Jeb) STUART, he moved via the Shenandoah Valley into S. Pennsylvania. There the Army of the Potomac, under still another new chief, George G. MEADE, rallied to stop him again in the greatest battle (July 1-3, 1863) of the war (see GETTYSBURG CAMPAIGN). In the meantime, with the vastly superior sea power built up by Secretary of the Navy Gideon WELLES, the Union had established a blockade of the Southern coast, which, though by no means completely effective, nevertheless limited the South's foreign trade to the uncertain prospects of blockade-running. In cooperation with the army the Union navy also attacked along the coasts. The forts guarding New Orleans, the largest Confederate port, fell (April 28, 1862) to a fleet under David G. FARRAGUT, and the city was occupied by troops commanded by Benjamin F. BUTLER (1818-93). The introduction of the ironclad warship (see ERICSSON, JOHN, MONITOR AND MERRIMACK) had revolutionized naval warfare, to the ultimate advantage of the industrial North. On the other hand, CONFEDERATE CRUISERS, built or bought in England (see ALABAMA CLAIMS) and captained by men such as Raphael SEMMES, destroyed or chased from the seas much of the U.S. merchant marine. Britain never formally recognized the Confederacy (neither did France) and maintained peaceful relations with the Union despite the provocation late in 1861 of the TRENT AFFAIR, which was adroitly handled by Secretary of State Seward. Charles Francis ADAMS (1807-86) at London and John BIGELOW at Paris were able diplomats, but probably more important in winning popular support for the Union in England and France was the EMANCIPATION PROCLAMATION, which Lincoln issued after Antietam. This act appealed for a time the anti-Lincoln radical Republicans in Congress, among them Benjamin F. WADE, Zachariah CHANDLER, Thaddeus STEVENS, and Henry W. DAVIS, with whom Secretary of the Treasury Salmon P. Chase and Secretary of War Edwin M. STANTON were allied. Not all Unionists were abolitionists, however, and the Emancipation Proclamation was not applied to the border slave states Delaware, Maryland, Kentucky, and Missouri (all remained loyal for Lincoln and kindred moderates, such as Postmaster General Montgomery BLAIR, the restoration of the Union, not the abolition of slavery, remained the principal objective of the war. The Union victories at Gettysburg and Vicksburg in July, 1863, marked a definite turning point in the war. Both sides now had seasoned, equally valiant soldiers, and in Lee and Ulysses S. GRANT each had a superior general. But the North, with its larger population and comparatively enormous industry, enjoyed a tremendous material advantage. Both sides also resorted to conscription, even though it met some resistance (see DRAFT RIOTS). Again, under Stanton, successor to Simon CAMERON, the overall administration of the Union army was more efficient. Problems of organization still remained, however, and Henry W. HALLECK continued in the difficult role of military adviser, with the title of general in chief. The Joint Congressional Committee on the Conduct of the War, organized in Dec., 1861, attempted to influence the actions as well as the appointment of Union generals (its efforts were particularly strong on behalf of Hooker). The chairman, Benjamin F. Wade, was frequently at odds with Lincoln, and the committee's investigations and high-handed actions lowered morale among the Union forces.

Grant and Sherman Lead to Victory That the "war was won in the West" has become axiomatic. There the rivers, conveniently flowing either north (the Cumberland and the Tennessee) or south (the Mississippi), invited Union penetration, as they did not in Virginia. In Feb., 1862, the Union gunboats of Andrew H. FOOTE forced the Confederates to retire from their post FORT HENRY on the Tennessee to their stronghold on the Cumberland, FORT DONELSON. There, on Feb. 16, 1862, Grant, commanding the Army of the Tennessee, won the first great Union victory of the war, and Nashville promptly fell without a struggle. Farther down the Tennessee, Grant was lucky to escape defeat in a bloody contest (April 6-7) with Albert S. JOHNSTON and Beauregard (see SHILOH, BATTLE OF). Minor Union successes at luka (Sept. 19) and CORINTH (Oct. 3-4) followed, while the counterinvasion by the Confederate Army

of Tennessee under Braxton BRAGG was stopped by Don Carlos BUELL at Perryville, Ky. (Oct. 8, 1862). William S. ROSECRANS, Buell's successor, then stalked Bragg through Tennessee, fought him to a standoff at MURFREESBORO (Dec. 21, 1862-Jan. 2, 1863), and finally, by outmaneuvering him, forced the Confederate general to withdraw S. of Chattanooga. Union gunboats had cleared the upper Mississippi (see ISLAND NO. 10, FORT PILLLOW), leading to the fall of Memphis on June 6, 1862. Grant's VICKSBURG CAMPAIGN, at first stalled by the raids of Confederate cavalrymen Nathan B. FORREST and Earl Van Dorn, was pressed to a victorious end in a brilliant movement in which the navy, represented by David D. PORTER, also had a hand. The Union now controlled the whole Mississippi, and the trans-Mississippi West was severed from the rest of the Confederacy. The fighting in that area (see WILSON'S CREEK, PEA RIDGE, PRAIRIE GROVE, ARKANSAS POST) had held Missouri for the Union and led to the partial conquest of Arkansas, but after the fall of Vicksburg, the war there, with the exception of the unsuccessful Union Red River expedition of Nathaniel P. BANKS and a last desperate Confederate raid into Missouri by Sterling PRICE (both in 1864), was largely confined to guerrilla activity. Back on the Georgia-Tennessee line in Sept., 1863, Bragg, having temporarily halted his retreat, severely jolted the Federals, who were saved from a complete rout by the magnificent stand of George H. THOMAS, the Rock of Chickamauga (see CHATTANOOGA CAMPAIGN). Grant, newly appointed supreme commander in the West, hurried to the scene and, with William T. SHERMAN, Hooker, and Thomas's fearless troops, drove Bragg back to Georgia (Nov. 25). Since Knoxville, occupied in September, withstood Longstreet's siege (Nov.-Dec.), all Tennessee, hotbed of Unionism, was now safely restored to the Union. In March, 1864, Lincoln, for many years an admirer of Grant, made him commander in chief. Leaving the West in Sherman's capable hands, Grant came east, took personal charge of Meade's Army of the Potomac, and engaged Lee in the WILDERNESS CAMPAIGN (May-June, 1864). Outnumbered but still spirited, the Army of Northern Virginia was slowly and painfully forced back toward Richmond, and in July the tenacious Grant began the long siege of PETERSBURG. Although Jubal A. EARLY won at MONOCACY (July 9), threatening the city of Washington, the Confederates were unable to repeat Jackson's successful diversion of 1862, and Philip H. SHERIDAN, victorious in the grand manner at CEDAR CREEK (Oct. 19), virtually ended Early's activities in the Shenandoah Valley. For his part, Sherman, opposed first by the wily Joe Johnston and then by John B. HOOD, won the ATLANTA CAMPAIGN (May-Sept., 1864). On the political front, a movement within the Republican party to shelve Lincoln had collapsed, and, with Andrew JOHNSON, his own choice for Vice President over the incumbent Hannibal HAMLIN, the President was renominated in June, 1864. The Democrats nominated McClellan, who still had a strong popular following, on an ambiguous peace platform (largely dictated by Clement L. VALLANDIGHAM, leader of the COPPERHEADS), which the ex-general repudiated. Even so Lincoln was easily reelected. After the fall of Atlanta, which had contributed to Lincoln's victory, Sherman's troops made their destructive march through Georgia. Hood had failed to draw Sherman back by invading Union-held Tennessee, and after the battle of Franklin (Nov. 30) Hood's army was almost completely annihilated by Thomas at Nashville (Dec. 15-16, 1864). Sherman presented Lincoln with the Christmas gift of Savannah, Ga., and then moved north through the Carolinas. Farragut's victory at Mobile Bay (Aug. 5, 1864) had effectively closed that port, and on Jan. 15, 1865, Wilmington, N.C., was also cut off (see FORT FISHER). After Sheridan's victory at FIVE FORKS (April 1), the Petersburg lines were breached and the Confederates evacuated Richmond (April 3). With his retreat blocked by Sheridan, Lee, wisely giving up the futile contest, surrendered to Grant at APPOMATTOX COURTHOUSE on April 9, 1865. The surviving Confederate armies also yielded when they heard of Lee's capitulation.

The New Nation The long war was over, but for the victors the peace was marred by the assassination of Abraham Lincoln, the greatest figure of the war. The ex-Confederate states, after enduring the further unpleasantness of RECONSTRUCTION with its corruption and vindictiveness, were readmitted to the Union, which had been saved and in which slavery was now abolished. The Civil War brought death to more Americans than did any other war, including World War II. Photographs by Mathew B. BRADY and others reveal some of the horror behind the statis-

tics The war cost untold billions and nourished rather than canceled the hatreds and intolerance that persisted for decades It established many of the patterns, especially a strong central government, which are now taken for granted in our national life Virtually every battlefield, with its graves, is either a national or a state park Monuments commemorating Civil War figures and events are conspicuous in almost all sizable Northern towns and are even more numerous in the Upper South Notable fictional treatments of the war are Stephen Crane's *Red Badge of Courage* (1896) and Margaret Mitchell's *Gone with the Wind* (1936), and there is one outstanding work in verse—Stephen Vincent Benet's *John Brown's Body* (1928) The quantity of historical literature on the Civil War is enormous, and there is no single, adequate bibliographical guide For bibliographies, see Allan Nevins et al, ed, *Civil War Books A Critical Bibliography* (2 vol, 1967-69) On the causes of, and events leading up to, the war, see A C Cole, *The Irrepressible Conflict, 1850-1865* ("History of American Life" series, Vol VII, 1934, rev ed 1938, repr 1971), G F Milton, *The Eve of Conflict* (1934), A O Craven, *The Coming of the Civil War* (1942, new ed 1957) and *Civil War in the Making* (1959, repr 1968) Standard, older works on the military phase are C C Buel and R U Johnson, ed, *Battles and Leaders of the Civil War* (4 vol, 1877, new ed 1956), J C Ropes, *The Story of the Civil War* (2 vol, 1898-99, completed by W R Livermore, 1913), Sir Frederick Maurice, *Statesmen and Soldiers of the Civil War* (1926) R E Lee A Biography (4 vol, 1934-35) and Lee's Lieutenants (3 vol, 1942-44), both by Douglas Southall Freeman, and *Lincoln Finds a General* (5 vol, 1949-59), by K P Williams, are definitive in their respective fields See also T L Livermore, *Numbers and Losses in the Civil War in America, 1861-1865* (1901, new ed 1957, repr 1969), J F Rhodes, *History of the Civil War, 1861-1865* (1917, new ed 1961), J B McMaster, *A History of the People of the United States during Lincoln's Administration* (1927), E C Smith, *The Borderland in the Civil War* (1927, repr 1970), R S Henry, *The Story of the Confederacy* (1931, rev ed 1957), C R Fish, *The American Civil War An Interpretation* (1937), Margaret Leech, *Reveille in Washington* (1941), Allan Nevins, *Ordeal of the Union* (8 vol, 1947-71), Bruce Catton, *A Stillness at Appomattox* (1953) and other studies, Benjamin Quarles, *The Negro in the Civil War* (1953, repr 1968), L M Starr, *Bohemian Brigade* (1954), J B Mitchell, *Decisive Battles of the Civil War* (1955), R S West, Jr, *Mr Lincoln's Navy* (1957), Shelby Foote, *The Civil War* (2 vol, 1958-63), M M Boatner, *The Civil War Dictionary* (1959), *American Heritage Picture History of the Civil War* (ed by R M Ketchum et al, 1960), R F Nichols, *The Stakes of Power* (1961), Virgil Jones, *The Civil War at Sea* (3 vol, 1960-62), J M McPherson, *The Negro's Civil War* (1965), J C Randall, *The Civil War and Reconstruction* (2d ed, with David Donald, 1969) See also the bibliographies in separate articles on the major events of the war

ivitali, Matteo (mat-tē'ō chēvētā'īē), 1436-1501, Italian sculptor and architect, born and worked in Lucca, where his work is best represented Trained in Florence, he executed elaborate tomb sculptures of biblical figures in the Chapel of San Giovanni Battista in Genoa Cathedral

ivitavecchia (chēvētā-vēk'kēā), city (1971 pop 43,434), in Latium, W central Italy, on the Tyrrhenian Sea The harbor, favored by Trajan (early 2d cent AD), is still the chief port of Rome It also handles traffic for the Terni industrial area and is the main maritime link with Sardinia Industries of the city include fishing and petroleum refining The arsenal in Civitavecchia was built by Bernini, and Michelangelo directed the final stages of the construction of the powerful citadel (begun 1508, nearly destroyed in World War II)

Cl, chemical symbol of the element CHLORINE

Clackmannanshire (klākmān'ānshīr), county (1971 pop 45,553), 55 sq mi (142 sq km), central Scotland, at the head of the Firth of Forth ALLOA is the administrative center Clackmannanshire is the smallest county in area in Scotland Part of the Ochil Hills are in the north The county has an important coal industry, as well as dairy and grain farming and sheep raising In 1975 Clackmannanshire became part of the Central region

Clacton, urban district (1971 pop 37,942), Essex, E central England It is a seaside resort situated on high cliffs The Norman Church of St John was restored there in 1865

Claffin, Tennessee: see WOODHULL VICTORIA (CLAF LIN)

Claiborne, William (klā'bōrn), c 1587-c 1677, Virginia colonist, b Westmorland co, England He emigrated to Virginia in 1621 as official surveyor and then served as secretary of state (1626-37, 1652-60) of that colony He traded with the Indians, explored near the head of Chesapeake Bay, and established a fort and settlement on Kent Island in the Chesapeake He opposed the grant of Maryland to Lord Baltimore, and after Baltimore's order (1634) for his arrest, Claiborne undertook armed resistance from his stronghold Claiborne went (1637) to England to justify his conduct, but the issue was decided in favor of Lord Baltimore In 1642, Claiborne was made treasurer of Virginia, and several years later, claiming the authority of Parliament, he invaded Maryland and drove out the governor, Leonard Calvert He controlled Maryland for several years and was a member (1652-57) of its governing commission

Claiborne, William Charles Coles, 1775-1817, governor of Louisiana, b Sussex co, Va He began law practice in Sullivan co, Tenn, and was appointed a judge of the state supreme court in 1796 As a Congressman (1797-1801) he supported Jefferson, and in 1801 the President made him governor of Mississippi Territory In 1803, Claiborne was one of the commissioners appointed to receive Louisiana from France after the Louisiana Purchase, and he was governor (1804-12) of the newly organized Territory of Orleans American government was not well received by the Creoles, and Claiborne had many quarrels with legislators and others He was also criticized for his apparent approval of the questionable activities of Gen James Wilkinson However, when the Territory of Orleans was admitted to the Union in 1812 as the state of Louisiana, Claiborne was elected governor and served until 1816 In 1817 he was elected to the US Senate but died before he could take his seat See Dunbar Rowland, ed, *Official Letterbooks of W C C Claiborne, 1801-1816* (6 vol, 1917)

Clair, René (rənā' klār), 1898-, French film director, writer, and producer Clair's films, notable for fantasy and satire, first received international attention in 1930 His *Sous les toits de Paris* (1929), one of the first artistic "talkies," was followed by *Le Million* (1931) and *À nous la liberté* (1932) *The Ghost Goes West*, made in England in 1936, *Les Belles de Nuit* (1952), and *Les Fêtes Galantes* (1965) are among his notable films In 1962 he was elected to the French Academy, the first film director to be so honored See his *Reflections on the Cinema* (tr 1953) and *Cinema Yesterday and Today*, ed by R C Dale (1972)

Clairaut, Alexis Claude (alēksēs' klōd klērō'), 1713-65, French mathematician He assisted P L M de Maupertuis in measuring (1736) a degree of an arc of a meridian in Lapland He is noted for his work on differential equations and on curves and for formulating Clairaut's theorem dealing with geodesic lines on the surface of an ellipsoid

Claire, Ina, 1892?- , American actress, b Washington, D C, originally named Ina Fagan Claire began her stage career in 1909, impersonating Sir Harry LAUDER Noted for her gay and elegant style, she performed in vaudeville and in many successful shows on Broadway and in London, including *The Quaker Girl*, *Ziegfeld Follies*, and *The Confidential Clerk* Among her few films were *The Awful Truth* (1929), *Ninotchka* (1939), and *Claudia* (1942)

Clairton, city (1970 pop 15,051), Allegheny co, SW Pa, an industrial suburb of Pittsburgh, on the Monongahela River, settled 1770, inc 1903 Its extensive steelworks turn out a great variety of products Coal mines and oil wells are also found in the area, and coke, coke by-products, and chemicals are important manufactures

clairvoyance (klār'vō'āns), power to perceive, as though visually, objects or persons not discernible through the ordinary sense channels Clairvoyance may occur in a supposedly normal state (second sight) or more generally in a trance induced by various agencies, such as drugs, fasting, illness, or crystal gazing See SPIRITISM and PARAPSYCHOLOGY

Clallam Indians (klāl'ām), North American Indians whose language belongs to the Salishan branch of the Algonquian-Wakashan linguistic stock (see AMERICAN INDIAN LANGUAGES) They formerly occupied the south shore of Puget Sound, in the present state of Washington

clam, common name for certain BIVALVE mollusks, especially for marine species that live buried in mud or sand and have valves (the two pieces of the shell) of equal size The oval valves, which cover the right and left sides of the animal, are hinged together at

the top by an elastic ligament Clams burrow by means of a muscular foot, located at the front end, which can be extruded between the valves The head, located within the shell, is rudimentary, without eyes or antennae Water containing oxygen and food particles enters through an incurrent siphon, waste-containing water is expelled through an excurrent siphon The two tubes project from the end opposite the foot and may be united in a single structure called the neck The sexes are usually separate Eggs and sperm are deposited in the water, the fertilized egg develops into a free-swimming larva without a shell, which may not attain the adult form for several months Clams are highly valued as food The soft-shell clam, or steamer (*Mya arenaria*), of both coasts of North America, is one of the most popular eating clams The hard-shell clam (*Mercentaria mercenaria*), abundant from the Gulf of St Lawrence to Texas, was called quahog by some Indians, who used the violet portion of the shell for wampum Small hard-shell clams are called little-necks, or cherrystones The razor clam (*Ensis*), shaped like an old-fashioned straight razor, burrows rapidly and swims by means of its foot The Atlantic razor clam, found from Labrador to W Florida and prized for its flavor, may attain lengths of 10 in (25 cm) The Eastern surf clam (*Spisula solidissima*) frequents sandy bottoms in shallow water from Labrador to North Carolina and is much used for bait There are also several Pacific surf clams Other Pacific clams include the succulent Pismo clam (*Tridacna stultorum*), found from mid-California southward and protected by law from overdigging, and the GEODUCK of the Pacific Northwest, which may weigh as much as 12 lb (5.4 kg) The valves of many small clams are familiar seashells, such as those of the pea-sized amethyst gem clam The GIANT CLAM of the Pacific Ocean may reach a weight of 500 lb (227 kg) and a length of 5 ft (150 cm) There are two families of freshwater bivalves called clams The small freshwater clams (family Sphaeriidae) are hermaphroditic, they retain the fertilized eggs in a brood pouch and bear young with shells The large freshwater clams (family Unionidae) are also called freshwater MUSSELS, the nacreous inner layer of their shells is a source of mother-of-pearl The larvae of these clams are parasitic on the gills of fish The term clam is sometimes used synonymously with bivalve, in this sense it includes the OYSTERS, SCALLOPS, and marine mussels Clams are classified in the phylum MOLLUSCA, class Pelecypoda

Clamart (klamar'), suburb SW of Paris (1968 pop 55,299), Hauts-de-Seine dept, N central France There are pharmaceutical laboratories, a tobacco factory, and nurseries in the town Fruits and vegetables are grown, and tourism is important On the outskirts of Clamart are an airplane factory and a military airfield

clam shrimp: see SHRIMP

clamworm: see ANNELIDA, WORM

clan, social group based on actual or alleged unilateral descent from a common ancestor Such groups have been known in all parts of the world and include some that claim the parentage or special protection of an animal, plant, or other object (see TO TEM) They also include such familiar groups as the Highland clans of Scotland (the English word clan comes from Gaelic) Most clans stress mutual obligations and duties Clan descent is traced in one line only, male or female The word clan has by some been restricted to those descended through the mother (matrilineal) in contrast to the GENS, descended through the father (patrilineal) The word sib has been much used to cover both types A clan includes several family groups Most clans are exogamous and regard marriages among their members as incest A clan is distinguished from a lineage in that a clan merely claims common ancestry, a lineage can be traced to a common progenitor A clan may have several lineages Several clans may be combined into a larger social group called a phratry If a tribe includes two clans or phratries, each clan or phratry is called a moiety See Sir Iain Moncreiffe, *The Highland Clans* (1967)

Clanricarde, Ulick de Burgh, 5th earl and marquess of (yōō'lik də būrg, klānrīk'ārd), 1604-57, Irish Catholic nobleman He assisted James Butler, 12th earl of ORMONDE, in his attempt, during the English civil war, to unite Catholic and Protestant royalists and hold Ireland loyal to Charles I When Ormonde left Ireland (1650), he named Clanricarde his deputy Clanricarde made peace (1652) with Oliver Cromwell at the request of Charles II

clapboard (klāp'bōrd), board used for the exterior finish of a wood-framed building and attached horizontally to the wood studs The word, in its original

and strict use, refers to a product of New England, boards of similar type made elsewhere are termed siding. Clapboards are particularly characteristic of the United States, having been steadily used since the earliest years of the colonial settlements. Each clapboard overlaps the one below it, leaving a few inches exposed to the weather. White pine is considered the best wood for clapboards, cedar, cypress, and spruce are also used.

Clapham, Sir John Harold, 1873–1946, English economic historian. He was lecturer, professor and administrator at Cambridge from 1908 to 1943. Outstanding among his many authoritative, classic works on British economic history are *An Economic History of Modern Britain* (2d ed., 3 vol., 1931–38) and *The Bank of England* (1944). Other books include *The Economic Development of France and Germany, 1815–1914* (4th ed., 1936), a comparative study, and *A Concise Economic History of Britain, from the Earliest Times to 1750* (1949), a useful standard survey.

Clapham Sect, group of English social reformers, active c 1790–1830, so named because their activities centered on the home in Clapham, London, of Henry Thornton and William Wilberforce. Most of the members were evangelical Anglicans and members of Parliament. They included Zachary Macaulay, Thomas Babington, John Venn, James Stephen, and Hannah More. Known as the “Saints,” they worked for the abolition of the slave trade and slavery, improvement of prison conditions, and other humane legislation. They published a journal, the *Christian Observer*, and helped to found several missionary and tract societies, including the British and Foreign Bible Society and the Church Missionary Society. See E. M. Howse, *Saints in Politics* (1952, repr. 1971).

Clapp, Verner, 1901–72, American librarian, b. Johannesburg, South Africa. After studying philosophy at Harvard, Clapp worked for the Library of Congress (1922–1956), becoming chief assistant librarian in 1947. He also did much work for the United Nations and served as chairman of the U.S. Library Mission to Japan (1947–48). From 1956 to 1967 he was president of the Council on Library Resources. He has written *The Future of the Research Library* (1963) and *Copyright: A Librarian's View* (1968).

Clapperton, Hugh, 1788–1827, British explorer, b. Annan, Scotland. After serving with the British navy in East India and Canada he made two journeys to W. Africa. On the initial journey (1822–25) he was one of the first Europeans to reach Lake Chad (Feb. 4, 1823). He traveled through the Hausa states and collected much information about Kano and Sokoto. Clapperton's second expedition sought to discover the mouth of the Niger River. Before he could accomplish this task he died near Sokoto on April 13, 1827. His servant, R. L. Lander, returned to England with his records, which were published (1829) as the *Journal of a Second Expedition into the Interior of Africa*. See Henry Williams, *Quest beyond the Sahara* (1965).

Clare or Clara, Saint, 1193?–1253, Italian nun of Assisi, devoted from her youth to St. FRANCIS, to whom she took a vow of poverty. She led a life of great austerity. She organized her companions into the Franciscan nuns, or Poor Clares, and struggled a long time for the preservation of the primitive poverty of her order. Feast Aug. 12.

Clare, John, 1793–1864, English nature poet. He is numbered among the romantic poets. His *Poems Descriptive of Rural Life and Scenery* (1820) brought him a brief period of fame. Subsequent volumes included *The Village Minstrel* (1821) and *Rural Muse* (1835). Throughout his life he suffered fits of melancholy, which were intensified by financial difficulties and bad health. In 1837 he was declared insane and committed to an asylum. See biographies by J. W. Tibble and A. Northgrave (2d ed. 1972) and Frederick Martin (1865, repr. 1973), studies by Mark Storey, ed. (1973) and J. M. Todd (1973).

Clare, John Fitzgibbon, 1st earl of, 1749–1802, Irish statesman. He was (1783–89) attorney general of Ireland and in 1789 became lord chancellor. A resolute upholder of the Protestant ascendancy in Ireland, he denounced the Catholic Relief Act of 1793 and helped to thwart Lord Fitzwilliam in his move toward Catholic Emancipation. He was instrumental in effecting the Act of Union (1800) between England and Ireland. Clare, who was created earl in 1795, was so unpopular in Ireland that his funeral was broken up by a mob.

Clare, Richard de. see PEMBROKE, RICHARD DE CLARE 2D EARL OF

Clare, county (1971 pop. 74,844), 1,231 sq mi (3,188 sq km), W. Republic of Ireland, between Galway Bay

and the Shannon River. The county town is Ennis. The terrain is broken and hilly, with many bogs and lakes, and the coastline is especially rugged, much of the land is completely barren. Fishing is carried on, and sheep, cattle, pigs, and poultry are raised. Chief crops are oats and potatoes. Woolens are produced, and there are flour mills and slate quarries. The population has declined steadily for more than 100 years. The region came under the control of the Anglo-Norman Clare family in the 13th cent.

Clare Island, c 6 sq mi (15 sq km), Co. Mayo, W. Republic of Ireland, at the entrance to Clew Bay. There are ruins of a 13th-century Carmelite abbey and of the 16th-century castle of Grania or Grace O'Malley, queen of the island.

Claremont, 1. City (1970 pop. 23,464), Los Angeles co., S. Calif., in a citrus farm area at the foot of the San Gabriel Mts., inc. 1907. It is mainly residential. The Claremont Colleges, a theological school, and a large botanical garden are there. 2. City (1970 pop. 14,221), Sullivan co., SW N.H., in a farm and dairy area, on the Sugar River near its junction with the Connecticut, inc. 1764. It is a summer resort and has plants manufacturing shoes, textiles, machinery, and paper. The oldest Roman Catholic church in the state (begun 1823) is there, and in nearby West Claremont is Union Church, the state's oldest Episcopal church (begun 1773). A replica of a pre-Revolutionary fort complex is nearby.

Claremont Colleges, at Claremont, Calif., including five liberal arts and sciences colleges and a graduate school, founded 1925, known until 1961 as the Associated Colleges at Claremont. Their history began with Pomona College (inc. 1887, opened 1888, coeducational), which centers its curriculum in the social sciences and humanities. Scripps College (chartered 1926, opened 1927, for women) has a noted humanities program. Claremont Men's College (chartered and opened 1946) concentrates on preparing students for careers in business and government. Harvey Mudd College (inc. 1955, opened 1957, coeducational) stresses science and engineering. Pitzer College (founded 1963, for women) emphasizes the liberal arts. The Claremont Univ. Center (1925) is the central coordinating institution and the graduate school.

Clarence, George, duke of, 1449–78, son of Richard, duke of York, and brother of EDWARD IV. In defiance of Edward, Clarence married Isabel Neville and joined her father, Richard Neville, earl of WARWICK, in rebellion against the king in 1469–70. He deserted that party in 1471, however, and was reconciled with Edward. In 1478, exasperated by Clarence's continued factiousness, Edward had him attainted for treason by Parliament. He was sent to the Tower of London, where he was secretly executed. It was rumored that he was drowned in a butt of malmsey wine.

Clarence, Lionel, duke of, 1338–68, third son of Edward III of England. His marriage (1352) to Elizabeth de Burgh gained him the title and lands of the earl of Ulster. Governor of Ireland from 1361 to 1367, he presided (1366) at the assembly where the notorious Statute of Kilkenny was adopted, forbidding marriage between the English settlers and the Irish. Clarence died soon after his later marriage to Violante Visconti. His daughter, Philippa, married Edmund Mortimer, 3d earl of March. Their granddaughter, Anne Mortimer, married Richard, earl of Cambridge, and their son, Richard, duke of YORK, derived his claim to the throne through his descent from Lionel.

Clarendon, Edward Hyde, 1st earl of (klâr'əndan), 1609–74, English statesman and historian. Elected (1640) to the Short and Long parliaments, he was at first associated with the opposition to CHARLES I and helped prepare the impeachment of the earl of Strafford. The increasing radicalism of the opposition, however, led him to offer his services to the king, whom he aided by drafting a reply to the Grand Remonstrance. After the outbreak of the civil war, Hyde was appointed (1643) chancellor of the exchequer, and he represented (1645) Charles in the unsuccessful Uxbridge negotiations to end the war. Hyde followed Prince Charles (later CHARLES II) into exile in 1646 and became one of his chief advisers. Pursuing Hyde's policy, Charles awaited the appearance of a strong, friendly faction in England and successfully negotiated his own restoration (1660) without foreign aid. After Charles's return to England, Hyde became (1660) lord chancellor and was created earl of Clarendon (1661). Clarendon hoped to achieve a lenient religious settlement that would conciliate the Puritans, but his wishes were over-

borne by the militantly Anglican Cavalier Parliament, which passed the ironically named CLARENDON CODE. He was unjustly blamed by the public for the sale (1662) of Dunkirk to the French and for the second DUTCH WAR (which he opposed), and he was unpopular with the licentious Restoration court. In 1667, Charles dismissed him from office, using him as a scapegoat for military failures and financial breakdown in the Dutch War. Impeachment proceedings were begun, and Clarendon fled England to live the remainder of his life in exile. As a statesman he was consistent and moderate, never wavering from his early views on constitutional monarchy but blind to new political forces created by the English civil war. Through the marriage (1660) of his daughter Anne to the duke of York (later James II), Clarendon was the grandfather of two queens, Mary II and Anne. His renowned *History of the Rebellion* (standard ed., 6 vol., 1888), written partly from memory and partly from documents, is an indispensable account of the civil war. See his autobiography (1857), study by B. H. G. Wormald (1951, repr. 1964).

Clarendon, George William Frederick Villiers, 4th earl of, 1800–1870, British statesman. He was ambassador (1833–39) to Spain during the difficult period of the Carlist war and then lord privy seal (1839–41). As lord lieutenant of Ireland (1847–52), he made efforts to ease disorder and distress during the famine. He was foreign secretary (1853–58) during the Crimean War, held together the French alliance with England, and was one of the negotiators of the Peace of Paris (1856). He was twice again foreign secretary (1865–66, 1868–70), and during the latter period he laid the foundation for the settlement of the ALABAMA CLAIMS of the United States. See biography by H. E. Maxwell (1913), George Villiers, *Vanished Victorian* (1938).

Clarendon, Constitutions of, 1164, articles issued by King HENRY II of England at the Council of Clarendon defining the customs governing relations between church and state. In the anarchic conditions of the previous reign, the church had extended its jurisdiction in various ways, and it was the king's object to curb the growth of ecclesiastical power by securing the assent of the English prelates to this codification, which he claimed represented the practices followed during the reign of his grandfather, Henry I. The majority of the 16 articles dealt with church authority and the competence of ecclesiastical courts, while others defined the extent of papal authority in England, and they were in fact a fair statement of earlier customs. However, several articles were contrary to canon law, and controversy centered on two clauses in particular that which provided for the secular punishment of clerics convicted of crime in the ecclesiastical courts (already a major point at issue between the king and the archbishop of Canterbury, THOMAS A. BECKET) and that which forbade appeals to Rome without royal consent. After much debate, the English prelates assented to the Constitutions at Clarendon, but after the pope had condemned the codification, Becket repudiated his agreement. When the bitter quarrel between the king and his archbishop ended (1170) in Becket's murder, Henry felt compelled to amend the Constitutions, explicitly revoking the two controversial clauses. However, for the most part the Constitutions of Clarendon remained in effect as part of the law of the land. See A. L. Poole, *From Domesday Book to Magna Carta, 1087–1216* (2d ed. 1955).

Clarendon Code, 1661–65, group of English statutes passed after the Restoration of Charles II to strengthen the position of the Church of England. The Corporation Act (1661) required all officers of incorporated municipalities to take communion according to the rites of the Church of England and to abjure the Presbyterian covenant. The Act of Uniformity (1662) required all ministers in England and Wales to use and subscribe to the Book of Common Prayer, nearly 2,000 ministers resigned rather than submit to this act. The Conventicle Act (1664) forbade the assembling of five or more persons for religious worship other than Anglican. The Five-Mile Act (1665) forbade any nonconforming preacher or teacher to come within 5 mi (8.1 km) of a city or corporate town where he had served as minister. These laws, named after Edward Hyde, earl of CLARENDON, chief minister of Charles II at the time of their passage, decreased the following of numerous dissenting sects, especially the Presbyterians. Clarendon himself opposed their enactment, but after their passage he worked for their enforcement. Charles II, to court popularity with dissenters and to ease the position of Roman Catholics (with whom

he was in sympathy), attempted to interfere with the operation of these laws by his unsuccessful declarations of indulgence in 1662 and 1672. As a political device to weaken the Whigs, the Clarendon Code was largely superseded by the TEST ACT of 1673, although some of the statutes, in modified form, remained in force for some time.

Clarens (klaraN'), village, Vaud canton, W Switzerland, on the Lake of Geneva. A resort near Montreux, Clarens was once the residence of Lord Byron. The Clarens region is immortalized in Rousseau's *Nouvelle Héloïse*.

claret: see WINE

Clarín: see ALAS, LEOPOLDO

clarinet, musical wind instrument of cylindrical bore employing a single reed. The clarinet family comprises all single-reed instruments, including the saxophone. The predecessor of the modern clarinet was the simpler chalumeau, which J. C. Denner of Nuremberg improved (c 1700) into the clarinet. It was accepted into the orchestra during the 18th

Clarinet

cent, and Mozart used it extensively. Major improvements of the key system during the 19th cent. employed the principles of Theobald Boehm. The clarinets in B flat and A are the standard orchestral instruments. The higher, shriller E flat clarinet is also a band instrument and is used occasionally in the orchestra. Of the larger clarinets, the B flat bass clarinet is the most important. The E flat alto and the E flat contrabass clarinets are mainly band instruments. Clarinets were once made in other keys, but all of these instruments are now obsolete. The basset-horn, a type of alto clarinet, was much used by Mozart and was revived by Richard Strauss. The clarinet is a TRANSPOSING INSTRUMENT. See F. G. Rendall, *The Clarinet* (3d rev. ed. 1971).

Clark, Abraham, 1726-94, political leader in the American Revolution, signer of the Declaration of Independence, b. Elizabethtown (now Elizabeth), N.J. After holding several local offices, Clark became, at the beginning of the American Revolution, a member and later secretary of the New Jersey committee of safety. He was a member (1775) of the New Jersey provincial congress, which appointed him (1776) delegate to the Continental Congress. Clark served three terms in Congress (1776-78, 1779-83, 1787-89), and in the interim periods he served in the New Jersey legislature.

Clark, Alvan, 1804-87, American astronomer and maker of astronomical lenses, b. Ashfield, Mass. In 1846 the firm of Alvan Clark & Sons was established at Cambridgeport, Mass.; it became famous as the manufacturer of the largest and finest telescope lenses. The first achromatic lenses made in the United States were produced there. Clark's son, Alvan Graham Clark, 1832-97, b. Fall River, Mass., became a partner in the business. Among lenses made under his direction are the 26-in. lens at the U.S. Naval Observatory, Washington, D.C., the 36-in. lens at Lick Observatory, California, and the 40-in. lens at Yerkes Observatory, Wisconsin, which is the largest refracting telescope in the world. The younger Clark discovered a number of double stars as well as the companion star of Sirius.

Clark, Champ, 1850-1921, American legislator, b. near Lawrenceburg, Ky. His full name was James Beauchamp Clark. After a career as lawyer, newspaper editor, and politician in Missouri, he was (1893-95, 1897-1921) a member of the U.S. House of Representatives, becoming (1907) Democratic leader. He organized (1910) the successful fight against Speaker Joseph Cannon and his arbitrary control of legislative procedure. Clark served as speaker from 1911 to 1919. At the Democratic convention in 1912 he was the leading candidate for the Democratic nomination for President until William Jennings Bryan shifted his support to Woodrow Wilson. See his autobiographical *My Quarter Century of American Politics* (1920, repr. 1969).

Clark, Francis Edward, 1851-1927, American Congregational clergyman, founder of CHRISTIAN EN

DEAVOR. He was born of American parents in Aylmer, Que., and was graduated from Dartmouth College in 1873. While serving as pastor of the Williston Congregational Church in Portland, Maine, he organized (1881) the first Young People's Society of Christian Endeavor. He was a lifelong leader in this movement.

Clark, George Rogers, 1752-1818, American Revolutionary general, conqueror of the Old Northwest, b. near Charlottesville, Va., brother of William Clark. A surveyor, he was interested in Western lands, served (1774) in Lord Dunmore's War, and later went to what is now Kentucky for the OHIO COMPANY. In 1776 he secured the Virginia legislature's assertion of sovereignty over the Kentucky region, thereby obtaining military and financial support. He returned in time to repel British and Indian attacks on Harrodsburg, Ky., and other posts. In 1778 he made plans for aggressive action against the British in the Old Northwest and, going to Virginia, persuaded Gov. Patrick Henry and his council to send an expedition. At its head, he swept into the Illinois country and took the British-held settlements of KASKASKIA, CAHOKIA, and VINCENNES. The British under Gen. Henry Hamilton advanced from Detroit and retook Vincennes after Clark had left. Winter and Ohio floods halted Hamilton there, but Clark and his men, defying cruel conditions of cold and hardship, braved the flooded bottom lands to return to Vincennes. With the heroic aid of Francis Vigo, François Bosseron, and Father Gibault, he struck at the British fort and surprised and captured Hamilton and the garrison in Feb. 1779. After this, the greatest of his exploits, Clark hoped to capture Detroit, but adequate supplies never came from Virginia to the fort he had built (Fort Nelson, where Louisville now stands), and he remained inactive. In 1782 the British and the Indians disastrously defeated the Kentuckians in the battle of Blue Licks. The ensuing unrest led Clark, who had not taken part in the battle, to lead another expedition northward against the Indians and again establish control of the region. His services had been rewarded by the rank of brigadier general in the Virginia militia, and he was made an Indian commissioner. In 1786 he led another expedition against the Indians in Ohio. His own narrative of the capture of Vincennes is in Milo M. Quarle, ed., *The Capture of Old Vincennes* (1927). See biographies by J. A. James (1928, repr. 1970) and John Bakeless (1957), A. W. Derleth, *Vincennes: Portal to the West* (1968).

Clark, John, 1766-1832, governor of Georgia (1819-23), b. Edgecomb co., N.C. As a boy he served with his father, Elijah Clarke, in the American Revolution and afterwards won distinction as an Indian fighter. He became the hero and leader of the democratic frontiersmen of Georgia in their political struggle with the planters of the coast and the wealthy farmers of the uplands. As governor, he proposed (1821) an amendment to the state constitution to provide for the popular election of governors; it was finally adopted in 1824.

Clark, Jonas Gilman, 1815-1900, founder of Clark Univ., b. Hubbardston, Mass. After a long career in business and finance, he became interested in higher education, making extended trips of observation abroad and interviewing American college presidents. In 1887 he founded Clark Univ. at Worcester, Mass., with an endowment of \$1 million, to which, by his will, was added his residuary estate for the establishment of Clark College, the undergraduate school.

Clark, Kenneth Bancroft, 1914-, American educator and psychologist, b. Panama Canal Zone, grad. Howard (B.A., 1935) and Columbia (Ph.D., 1940). He taught psychology at Howard (1937-38), Hampton Institute (1940-41), and the City College of New York (since 1942). Clark was the author of a study on racial discrimination that was cited by the U.S. Supreme Court in its 1954 school desegregation ruling. An early leader in the civil rights movement, he founded the Northside Center for Child Development and Harlem Youth Opportunities Unlimited (HARYOU, 1962). His works include *Prejudice and Your Child* (1955) and *Dark Ghettos* (1965).

Clark, Kenneth MacKenzie (Lord Clark of Saltwood), 1903-, English art historian. After working with Bernard Berenson in Florence, Clark was keeper of the department of fine art at the Ashmolean Museum, Oxford (1931-34). From 1934 to 1945 he was the director of the National Gallery, London, and thereafter Slade professor of fine arts at Oxford until 1950 and from 1961 to 1962. He became chairman of the Arts Council of Great Britain from

1955 to 1960. Among Clark's outstanding writings are two studies on Leonardo da Vinci, *The Drawings at Windsor Castle* (1935, with Carlo Pedretti) and *Leonardo da Vinci* (2d ed. 1952), a study of the paintings of Piero della Francesca (2d ed. 1969), *Landscape into Art* (1949), *The Nude* (1955), *Rembrandt and the Italian Renaissance* (1966), and *The Romantic Rebellion* (1974). His cultural survey *Civilisation* (1970) is based on his popular lecture series for television. See his bibliography, ed. by R. M. Slythe (rev. ed. 1971).

Clark, Lewis Gaylord, 1808?-1873, American editor and writer, b. near Syracuse, N.Y. He was the editor (1834-60) of the *Knickerbocker Magazine* and made it a leading literary publication of its day. He wrote *Knickerbocker Sketch-Book* (1845) and *Knickerbocker Knacks from an Editor's Table* (1852). His twin brother, Willis Gaylord Clark, 1808?-1841, was co-editor (1834-41) of the *Knickerbocker*. His *Literary Remains* (1844) includes the sketches and verse that he contributed to the magazine. See *The Letters of Willis Gaylord Clark and Lewis Gaylord Clark* (ed. by L. W. Dunlop, 1940).

Clark, Mark Wayne, 1896-, U.S. general, b. Madison Barracks, N.Y. A West Point graduate, he served as a captain in World War I and rose to become (1940) army ground forces chief of staff. During World War II, he commanded (1943-44) the U.S. 5th Army in N. Africa and in Italy, became (1944) Allied commander in Italy, and was promoted (1945) to full general. He served (1945) as head of the U.S. occupation forces in Austria. From May, 1952, to Oct., 1953, he was supreme commander of UN forces in Korea and also commander of U.S. forces in the Far East. Retiring from the army, he served (1954-66) as president of The Citadel, at Charleston, S.C. *Calculated Risk* (1950) and *From the Danube to the Yalu* (1954) are his memoirs of World War II and of the postwar period.

Clark, Ramsey, 1927-, Attorney General of the United States (1967-69), b. Dallas, Texas, son of Tom Campbell Clark. Admitted to the bar in 1951, William Ramsey Clark practiced law in Dallas. After serving as Assistant Attorney General in charge of the lands division (1961-65), Deputy Attorney General (1965-66), and acting Attorney General (Oct., 1966-Feb., 1967), he was appointed by Lyndon B. Johnson to succeed Nicholas Katzenbach. As Attorney General, Clark proved to be a vigorous defender of civil liberties and civil rights, he opposed the use of government wiretaps and initiated the first Northern school desegregation case. He later became active in the antiwar movement, and he visited North Vietnam in 1972. In 1974 he was the Democratic candidate for the U.S. Senate from New York but was defeated by Jacob K. Javits. Clark wrote *Crime in America* (1970). For an account of his career as Attorney General, see *Justice* by Richard Harris (1970).

Clark, Tom Campbell, 1899-, U.S. Attorney General (1945-49), Associate Justice of the U.S. Supreme Court (1949-67), b. Dallas, Texas, father of Ramsey Clark. He received his law degree from the Univ. of Texas. A protégé of Tom Connally, a Democratic Senator from Texas, Clark became (1937) special assistant to the Attorney General, coordinated (1942) war relocation of the West Coast Japanese, and headed the antitrust division (1943) and the criminal division (1945) of the Dept. of Justice. As Attorney General, he was noted for suits against trusts and disloyal groups. He was appointed (Aug., 1949) by President Harry S. Truman to the Supreme Court bench as successor to Frank Murphy. His opinions on the court were generally conservative on criminal and civil rights and control of alleged subversives. Clark retired from the court in 1967 after his son, Ramsey, was named U.S. Attorney General.

Clark, Walter, 1846-1924, American jurist, b. Halifax co., N.C., grad. Univ. of North Carolina (A.B., 1864, A.M., 1867). He entered the Confederate army at 15 and was commended for gallantry in action at Antietam and Fredericksburg. Clark was appointed (1885) judge of the superior court and elected (1889) to the supreme court of North Carolina, where he served until his death. He gained a national reputation for his independent decisions and supported many progressive causes in addresses and articles. Clark prepared an *Annotated Code of Civil Procedure*, annotated 164 volumes of *Supreme Court Reports*, edited 16 volumes of the *State Records of North Carolina*, and did other writing and translating. See his *Papers* (ed. by A. L. Brooks and H. T. Lefler, 2 vol., 1948-51), biography by A. L. Brooks (1944).

Clark, William, 1770-1838, American explorer, one of the leaders of the LEWIS AND CLARK EXPEDITION, b Caroline co, Va, brother of George Rogers Clark. He was an army officer (1792-96), serving in a number of Indian engagements. In 1803 he was chosen by his friend Meriwether Lewis to accompany the overland expedition to the Pacific. His observations of nature enlarged the findings of the expedition, his journals and maps recorded its history. In 1807, after the expedition had returned, Clark was appointed superintendent of Indian affairs, with headquarters at St Louis, and from 1813 to 1821 he was governor of Missouri Territory. During the War of 1812, he led (1814) an expedition against the British and Indians in the upper Mississippi valley, upon reaching Prairie du Chien, Wis, he built Fort Shelby. Later, with Auguste Chouteau, he negotiated a number of important treaties with the Indians and aided in suppressing the Winnebago and Black Hawk uprisings. He was again superintendent of Indian affairs from 1821 until his death. See bibliography under LEWIS AND CLARK EXPEDITION.

Clark, William Andrews, 1839-1925, U.S. Senator and copper magnate, b Fayette co, Pa. He moved to Montana, where he amassed a large fortune from the development of copper mines. He wielded immense power and had a long feud with Marcus DALY for control of the copper deposits and of political forces—virtually for control of Montana. Clark had political ambitions and was president of the Montana constitutional conventions of 1884 and 1889 but was defeated in the 1888 campaign to be territorial delegate to Congress. Daly blocked Clark's moves skillfully, and, although Clark claimed election as one of Montana's first Senators, the Senate instead seated his Republican opponent. In 1893 the state legislature was deadlocked, and Montana was left with only one Senator. After another deadlock in 1899, Clark was declared elected only to resign when confronted by a Senate investigation and a pending resolution to void his election. In 1901 he was duly elected and this time served his term and retired. He tied the exploitation of copper to Eastern capital, winning over such brilliant rivals as F. Augustus Heinze, and was powerful in copper development in Arizona as well as in Montana. See W. D. Mangam, *Clarks: An American Phenomenon* (1941).

Clark, William Smith, 1826-86, American educator, b Ashfield, Mass, grad Amherst, 1848, and studied chemistry and botany at Göttingen (Ph D, 1852). He taught at Amherst until the Civil War, fought in many battles, and emerged from the struggle a brigadier general. He was elected to the Massachusetts General Court in 1864, 1865, and 1867 and while there secured the location at Amherst of the Massachusetts Agricultural College (the present-day Univ of Massachusetts). He was president of this institution from 1867 to 1879, helped organize its work, and taught botany and horticulture. He went to Japan (1876-77) to establish the Imperial College of Agriculture at Sapporo.

Clark, Willis Gaylord. See CLARK, LEWIS GAYLORD.

Clark College: see ATLANTA UNIV. CENTER.

Clarke, Charles Cowden, 1787-1877, English lecturer and author. He was a close friend of Keats, who was a pupil of Clarke's father. Clarke's lectures on Shakespeare were published as *Shakespeare Characters* (1863). He and his wife, Mary Victoria (Novello) Cowden Clarke, 1809-98, wrote *Recollections of Writers* (1878), and she compiled *The Complete Concordance to Shakespeare* (1844-45). See study by R. D. Altick (1948, repr 1973).

Clarke, James Freeman, 1810-88, American Unitarian clergyman and author, b Hanover, N.H. While in charge of the Unitarian church in Louisville, Ky (1833-40), he was for three years editor of the *Western Messenger*. He helped found the Church of the Disciples in Boston in 1841 and was its pastor until 1888, except in the years from 1850 to 1854. He was (1867-71) a nonresident professor in the Harvard Divinity School. The Transcendental Club, with such members as Bronson Alcott and Emerson, included Clarke, and he was active in the anti-slavery, woman-suffrage, and other reform movements. Among his books, influential in their day, were *Ten Great Religions* (2 vol, 1871-83), *Orthodoxy Its Truths and Errors* (1866), and *Essentials and Non-Essentials in Religion* (1878). See biography by E. E. Hale (1891, repr 1968), which includes a fragmentary autobiography, study by A. S. Bolster (1954).

Clarke, John, 1609-76, one of the founders of Rhode Island, b Westhorpe, Suffolk, England. He emigrated to Boston in 1637 and shortly thereafter joined Anne HUTCHINSON (with whom he had sided

in the antinomian controversy) and William CODDINGTON in founding (1638) Portsmouth on Aquidneck (Rhode Island). The next year, he and Coddington withdrew to found Newport, where he was both physician and Baptist pastor. Clarke favored the 1647 union of the Aquidneck settlements with Providence and Warwick and in 1651 went with Roger Williams to England to defend the union against Coddington's attacks. They were successful, and Williams soon returned. Clarke remained in England and was influential in securing the liberal charter of 1663. On his return to Rhode Island he served (1664-69) in the general assembly and was thrice elected deputy governor. His *Ill News from New England* (1652) was an arraignment of Massachusetts authorities for their hostility to religious liberty.

Clarke, Mary Victoria (Novello) Cowden: see under CLARKE, CHARLES COWDEN.

Clarke, Samuel, 1675-1729, English philosopher and divine. His chief interest was rational theology, and, although a critic of the deists, he was in sympathy with some of their ideas. He supported the theories of Newton and argued with Leibniz in defense of the existence of absolute space. Clarke maintained that ethical law is as constant as mathematical law. His published works include many translations, lectures, sermons, and commentaries. His treatise *The Scripture Doctrine of Unity* appeared in 1712. The Leibniz correspondence was published in 1717.

Clarke, Walter, c 1638-1714, colonial governor of Rhode Island, b Newport, R.I. He was deputy governor (1679-86, 1700-1714) and was three times governor (1676-77, 1686, 1696-98) of Rhode Island. He is chiefly remembered for his refusal to surrender the Rhode Island charter upon the demand of Sir Edmund ANDROS.

Clarksburg, city (1970 pop 24,864), seat of Harrison co, N central W Va, at the confluence of Elk Creek and the West Fork of the Monongahela River, inc 1795. It is an industrial and shipping center for an area of coal mines, oil and natural gas fields, and grazing lands. Glass and glass products are the chief manufactures. The city was an important Union supply base in the Civil War, and remains of Federal earthworks are preserved in Lowndes Hill park. A two-year branch of Salem College is in Clarksburg. The city is the birthplace of Stonewall Jackson, a plaque designates the site.

Clarksdale, city (1970 pop 21,673), seat of Coahoma co, NW Miss, on the Sunflower River, inc 1882. It is a processing and distributing center for a cotton producing area. Its manufactures include paper, conveyor belts, house trailers, locks, and rubber products.

Clarkson, Thomas, 1760-1846, English abolitionist. He devoted most of his life to agitation against slavery, and the voluminous information that he gathered on the slave trade helped to influence Parliament. With William WILBERFORCE he shares the chief credit for the act of 1807 abolishing the British slave trade. His best-known books are a history of Parliament's abolition of the slave trade (1805) and a memoir of William Penn (1813). See his correspondence with Henri Christophe, ed by E. L. Griggs and C. H. Prator (1952, repr 1968), biography by E. L. Griggs (1936).

Clarksville. 1 Town (1970 pop 13,806), Clark co, S central Ind, on the Ohio River, opposite Louisville, Ky, founded 1784 by George Rogers Clark. Soap is the chief manufacture. 2 City (1970 pop 31,719), seat of Montgomery co, NW Tenn, on the Cumberland and Red rivers, in a farm, livestock, and tobacco region, platted 1784, inc as a city 1855. It is an important market and processing center for dark and burley tobacco. Its industries include meat-packing and the manufacture of snuff, footwear, tires, and air-conditioning equipment. Austin Peay State Univ is in Clarksville. Part of U.S. Fort Campbell is within the city limits.

Clark University, at Worcester, Mass, coeducational, chartered 1887, opened as a graduate school 1889. It was the second graduate school to be formed in the United States. Its undergraduate college (est 1902) was integrated with the university in 1920.

clary: see SAGE.

class, in taxonomy: see CLASSIFICATION.

class action, in law, device that permits one or more people to sue or to be sued as the representative of a large group of people interested in the matter. In most types of suits all members of the class are bound by the decision, even if they do not appear

It is permitted in Federal and most U.S. state courts. Certain requirements must be met, e.g., the class must be so large that individual suit would be impractical, and the named parties who bring the suit must adequately represent the class. Class actions have been successfully used in civil rights cases. They are more controversial when a small sum, e.g., \$60, is sought by each member and the main financial benefactor will be the lawyer.

classicism, term that, when applied generally, means clearness, elegance, symmetry, and repose produced by attention to traditional forms. It is sometimes synonymous with excellence or artistic quality of high distinction. More precisely, the term refers to the admiration and imitation of Greek and Roman art, architecture, and literature, the stylistic features and aims most particularly admired include restraint, simplicity, balance, unity of design, and a strong sense of form. Conversely, the term implies the absence of subjectivity, emotionalism, and excessive enthusiasm. Because the principles of classicism were derived from the rules and practices of the ancients, the term came to mean the adherence to specific academic canons. The first major revival of classicism, designated neoclassicism, occurred during the Renaissance. As a result of the intensified interest in Greek and Roman culture, especially the works of Plato and Cicero, classical standards were reinstated as the ideal norm. In Florence, Cosimo de' Medici gathered a circle of humanists (see HUMANISM) who collected, studied, expounded, and imitated the classics. A group of Latin literary stylists called the "Ciceronians" would not use any word not found in Cicero's writings. Other writers espoused simpler styles described by Dionysius of Halicarnassus and by Quintilian. Among these were Francis Bacon, who not only reintroduced the empirical method to scientific investigation, but did much to establish plain classical style in the writing of English prose. In applying the same theories to poetry, Ben Jonson did much to correct the artificiality of Petrarchan convention. Also important were the epigrams and *carpe diem* lyrics inspired by the GREEK ANTHOLOGY and other classical writings. Renaissance painters whose works reflect the classical influence include Mantegna, Raphael, and Michelangelo. It is generally thought that neoclassicism found its highest English expression in the Augustan period (during the reign of Queen Anne), particularly in the writings of Dryden and Pope. In France, the Pleiade (see under PLEIAD) had so set the tone for French letters by the end of the 16th cent that it was natural for the playwrights Corneille and Racine to be ruled by the *Poetics* of Aristotle. In Germany, the classical stream was deflected in the last quarter of the 18th cent by the period of STURM UND DRANG, but it was revived later in the century when Goethe and Schiller wrote classical drama and Haydn, Mozart, and Beethoven utilized the principles of classical form in their music. The Napoleonic revival of the idea of the Roman Empire brought with it a new international burst of imitation in architecture (see CLASSIC REVIVAL) and painting (whose foremost exponents were David and Ingres). In 20th-century Europe and America there has been a renewed interest in Greek literature, and classical models have been somewhat revived, as in the work of Ezra Pound and T. S. Eliot. These men, as well as many of the proponents of new criticism (see CRITICISM), have, in their rejection of impressionism and ROMANTICISM, stressed neoclassical restraint in their writings. In art, classical elements can be found in the paintings of Cézanne and the cubists and in the architectural designs of such men as Mies van der Rohe. Spearheading the 20th-century neoclassical revival in music, a reaction to romanticism, were Prokofiev, Stravinsky, and Bartok. See T. S. Eliot, *What Is a Classic?* (1946), Gilbert Highet, *The Classical Tradition* (1949, repr 1957), P. O. Kristeller, *Renaissance Thought* (1961), W. J. Bate, *From Classic to Romantic* (1961), Gilbert Murray, *The Classical Tradition in Poetry* (1927, repr 1968), Charles Rosen, *The Classical Style* (1971), R. R. Bolgar, ed, *Classical Influences on European Culture* (1971).

classic revival, widely diffused phase of taste (known as neoclassic) which influenced architecture and the arts in Europe and the United States during the last years of the 18th and the first half of the 19th cent. The era was characterized by enthusiasm for classical antiquity and for archaeological knowledge, stimulated by the excavations of Roman remains at Pompeii and Herculaneum and by the commencement of archaeological investigation in

Greece by James Stuart and Nicholas Revett in 1751. The results were embodied in their joint work, *Antiquities of Athens*, of which the first volume (1762) is considered to have been responsible for a changed direction in taste. Stuart's garden temple in Greek Doric style (1758) at Hagley, England, was the first example of Greek revival design in Western Europe, but the utilization of Greek material was generally delayed until the latter part of the revival, while the earlier phase confined itself to Roman models. In France the imitation of ancient Rome predominated in the crystallizing of the Empire style sponsored by Napoleon. In the United States, after the Revolution, this same spirit served in the formation of a style for public buildings. Thomas Jefferson's design for the Virginia state capitol (1785) at Richmond marks the return to the monumental Roman temple for inspiration. In America the Greek phase, known as neo-Grec or Greek revival, achieved its first expression, and an exceedingly influential one, in the Bank of Pennsylvania, Philadelphia (1799), it was designed by Benjamin H. Latrobe to imitate a Greek Ionic temple. The Roman and the Greek aspects of the classic revival eventually allied themselves in a Greco-Roman form. The influence of the revival was felt everywhere in Europe and particularly in Great Britain. But in no country did it dominate as in the United States, where classic colonnades were appended to state capitols and to modest farm houses throughout the land. After the Civil War its severe later phase was extinguished by the romantic styles of the Victorian period. Among the important buildings of the American classic revival are the Washington monument, Baltimore (1815), by Robert Mills, Bank of the United States, Philadelphia (1819-24), by William Strickland, campus buildings, Univ. of Virginia (1817-26), by Thomas Jefferson, Merchants' Exchange, Philadelphia (1832-34), by William Strickland, main building, Girard College, Philadelphia (1833-47), by T. U. Walter, and dome and wings of the Capitol at Washington (1851-65), by T. U. Walter. See Talbot Hamlin, *Greek Revival Architecture in America* (1944), D. Wiebenson, *Sources of Greek Revival Architecture* (1969).

classification, in biology, the systematic categorization of organisms into a coherent scheme. The original purpose of biological classification, or systematics, was to organize the vast number of known plants and animals into categories that could be named, remembered, and discussed. Modern classification has the additional purpose of attempting to

show the evolutionary relationships among organisms. A system based on categories that show such relationships is called a natural system of classification, one based on categories assigned for convenience, without regard to significant relationships, is called artificial. (For example, a classification of flowers by color is an artificial system.) Modern classification is part of the broader science of taxonomy, the study of the relationships of organisms, which includes collection, preservation, and study of specimens, and analysis of data provided by various areas of biological research. Nomenclature is the assigning of names to organisms and to the categories in which they are classified. The broadest division of organisms is into kingdoms. Traditionally there have been two kingdoms, Animalia and Plantae, but many unicellular and simple multicellular organisms are not easily classified as either plants or animals. In 1866 the zoologist Ernst Heinrich HAECKEL proposed a third kingdom, the Protista, to include all protozoans, algae, fungi, and bacteria. His proposal found fairly wide acceptance in the 20th cent., however, as the protists include fundamentally dissimilar organisms, a fourth kingdom, the Monera, has been proposed for the bacteria and blue-green algae, which differ from all other organisms in that they lack well-defined cell nuclei. Five- and six-kingdom systems have also been proposed. Kingdoms are divided into a hierarchical system of categories called taxa (sing. taxon). The taxa are, from most to least inclusive: phylum (usually called division in botany), class, order, family, genus, and species. Where these divisions are not adequate for making necessary distinctions, intermediate divisions are added, such as suborder and superfamily. The species, the fundamental unit of classification, consists of populations of genetically similar, interbreeding or potentially interbreeding individuals. If two populations of a species are completely isolated geographically and therefore evolve separately, they will be considered two species once they are no longer capable of mixing genetically if brought together. In a few cases interbreeding is possible between members of closely related but clearly distinct species—for example, horses, asses, and zebras can all interbreed. However, the offspring of such crosses are usually sterile, so that the two groups are nonetheless kept separate by their genetic incompatibility. Populations within a species that show recognizable, inherited differences from one another but are capable of interbreeding freely are called subspecies, races, or varieties. The genus (pl. genera) is a grouping of similar, closely related spe-

cies. For example, the domestic cat and the bobcat are species of the genus *Felis*, dogs, wolves, and jackals belong to the genus *Canis*. Often the genus is an easily recognized grouping with a popular name, for example, the various oak species, such as black oak and live oak, form the oak genus (*Quercus*). Similarly, genera are grouped into families, families into orders, orders into classes, and classes into phyla or divisions. The lower a taxon is in the hierarchy, the more closely related are its members. The earliest known system of classification is that of Aristotle, who attempted in the 4th cent. B.C. to group animals according to such criteria as mode of reproduction and possession or lack of red blood. Aristotle's pupil Theophrastus classified plants according to their uses and their methods of cultivation. Little interest was shown in classification until science became a focal area of activity in the 17th and 18th cent., when botanists and zoologists began to devise the modern scheme of categories. The designation of groups was based almost entirely on superficial anatomical resemblances. Before the idea of EVOLUTION there was no impetus to show more meaningful relationships among species; the species was thought to be uniquely created and fixed in character, the only real, or natural, taxon, while the higher taxa were regarded as artificial means of organizing information. However, since anatomical resemblance is an important indication of relationship, such early classification efforts resulted in a system that in many areas approximated a natural one and (with much modification) is still used. The most extensive work was done in the mid-18th cent. by Carolus LINNAEUS, who devised the presently used system of nomenclature. As biologists came to accept the work of Charles DARWIN in the second half of the 19th cent., they began to stress the significance of evolutionary relationships for classification. Although comparative anatomy remained of foremost importance, other evidence of relationship was sought as well. Paleontology provided fossil evidence of the common ancestry of various groups, embryology provided comparisons of early development in different species, an important clue to their relationships. In the 20th cent., evidence provided by genetics and physiology became increasingly important. Recently there has been much emphasis on the use of biochemistry in taxonomy, as in the comparison of the serum proteins of different animal species. Computers are increasingly used to analyze data relevant to taxonomy. A modern branch of discipline, called numerical taxonomy, uses computers to compare very large numbers of traits without weighting any type of trait—in contrast to the traditional view of certain characteristics as more significant than others in showing relationships. For example, the structure of flower parts is considered more significant than the shape of the leaves in flowering plants because leaf shape appears to evolve much more quickly, with very dissimilar forms sometimes occurring in species with a recent common ancestor. Much of the science of taxonomy has been concerned with judging which traits are most significant. If new evidence reveals a better basis for subdividing a taxon than that previously used, the classification of the group in question may be revised, although there is often disagreement among taxonomists about such revisions. The present system of binomial nomenclature identifies each species by a scientific name of two words, Latin in form and usually derived from Greek or Latin roots. The first name (capitalized) is the genus of the organism, the second (not capitalized) is its species. The scientific name of the white oak is *Quercus alba*, while red oak is *Quercus rubra*. The first name applies to all species of the genus—*Quercus* is the name of all oaks—but the entire binomial applies only to a single species. Many scientific names describe some characteristic of the organism (*alba* = white, *rubra* = red), many are derived from the name of the discoverer or the geographic location of the organism. Genus and species names are always italicized when printed, the names of other taxa (families, etc.) are not. When a species (or several species of the same genus) is mentioned repeatedly, the genus may be abbreviated after its first mention, as in *Q. alba*. Subspecies are indicated by a trinomial, for example, the southern bald eagle is *Haliaeetus leucocephalus leucocephalus*, as distinguished from the northern bald eagle, *H. leucocephalus washingtoniensis*. The advantages of scientific over common names are that they are accepted by speakers of all languages, that each name applies only to one species, and that each species has only one name. This avoids the confusion that often arises

EXAMPLES OF SYSTEMATIC CLASSIFICATION

COMMON NAME	SPECIES NAME	GENUS	FAMILY	ORDER	CLASS	PHYLUM (DIVISION)	KINGDOM	
Man	<i>Homo sapiens</i>	<i>Homo</i>	Hominidae	Primates	Mammalia	Chordata	Animalia	
Rhesus monkey	<i>Macaca mulatta</i>	<i>Macaca</i>	Cercopithecidae					
Leopard frog	<i>Rana pipiens</i>	<i>Rana</i>	Ranidae	Anura	Amphibia			
Wood frog	<i>Rana sylvatica</i>							
Long-winged grasshopper	<i>Dissosteira longipennis</i>	<i>Dissosteira</i>	Acrididae	Orthoptera	Insecta	Arthropoda		
Black widow spider	<i>Latrodectus mactans</i>	<i>Latrodectus</i>	Theridiidae	Araneae	Arachnida			
White clover	<i>Trifolium repens</i>	<i>Trifolium</i>	Leguminosae	Rosales	Magnoliopsida	Magnoliophyta		Plantae
Black cherry	<i>Prunus serotina</i>	<i>Prunus</i>	Rosaceae					
Wood lily	<i>Lilium philadelphicum</i>	<i>Lilium</i>	Liliaceae	Liliales	Liliatae			
Ponderosa pine	<i>Pinus ponderosa</i>	<i>Pinus</i>	Pinaceae	Coniferales	Pinopsida	Pinophyta		
Ginkgo tree	<i>Ginkgo biloba</i>	<i>Ginkgo</i>	Ginkgoaceae	Ginkgoales	Ginkgoopsida			
Haircap moss	<i>Polytrichum juniperum</i>	<i>Polytrichum</i>	Polytrichaceae	Polytrichales	Musci	Bryophyta		

from the use of a common name to designate different things in different places (for example, see ELK), or from the existence of several common names for a single species. There are two international organizations for the determination of the rules of nomenclature and the recording of specific names, one for zoology and one for botany. According to the rules they have established, the first name to be published (from the work of Linnaeus on) is the correct name of any organism, unless it is reclassified in such a way as to affect that name (for example, if it is moved from one genus to another). In such a case definite rules of priority also apply. See G. G. Simpson, *Principles of Animal Taxonomy* (1961), Arthur Cronquist, *Evolution and Classification of Flowering Plants* (1968), Ernst Mayr, *Principles of Systematic Zoology* (1969), O. T. Solbrig, *Principles and Methods of Plant Biosystematics* (1970), A. J. Cain, *Animal Species and Their Evolution* (3d ed. 1971), Nicholas Jardine and Robin Sibson, *Mathematical Taxonomy* (1971), Theodore Savory, *Animal Taxonomy* (1972), D. W. Shimwell, *The Description and Classification of Vegetation* (1972), D. H. Valentine, ed., *Taxonomy, Phytogeography, and Evolution* (1972).

Clatsop Indians, North American Indians of the Penutian linguistic stock (see AMERICAN INDIAN LANGUAGES). They lived on the Northwest coast S of the Columbia River.

Clauda, Greece. see GÁVDHOS.

Claude, Jean (zhāN klōd'), 1619-87, French Protestant theologian. As Protestant pastor at Paris, Claude received considerable attention for his disagreements with the Roman Catholic apologist Jacques Bossuet, Pierre Nicole, and the Jansenist Antoine Arnauld. He was expelled from France after the revocation of the Edict of Nantes.

Claudel, Paul (pōl klōdēl'), 1868-1955, French dramatist, poet, and diplomat. He was ambassador to Tokyo (1921-27), Washington, D.C. (1927-33), and Brussels (1933-35). Claudel's writings deal largely with man's inner spirit, and reveal the influence of his profound and mystical Catholicism. His early plays were inspired by the French symbolists, notably by Rimbaud. Perhaps his finest play is *L'Annonce faite à Marie* (1912, tr. *Tidings Brought to Mary*, 1916). Among his other dramas is the lengthy *Le Soulier de satin* (1929, tr. *The Satin Slipper*, 1931). In his theatrical works Claudel combined extensive use of symbols—primarily religious—and exotic backgrounds with the techniques of pantomime, ballet, music, and the cinema. The rich lyric verse of *Cinq Grandes Odes* (1910) marks his highest poetic achievement. His prose works include *Art poétique* (1906) and writings on the Bible. See study by R. Burchan (1966).

Claude Lorrain (klōd lōrāN'), whose original name was **Claude Gellée** or **Gellée** (zhālā'), 1600-1682, French painter, b. Lorraine. Claude was the foremost landscape painter of his time. In Rome at about 12 years of age he was employed as a pastry cook for the landscape painter Augustino Tassi, whose apprentice he soon became. He traveled in Italy and France, and returned to settle permanently in Rome by 1627. Under the patronage of Pope Urban VIII he rapidly rose to fame. His poetic treatment of landscape raised this subject matter to eminence alongside the more esteemed religious and historical genres. Claude's paintings became so popular and widely imitated that in order to avoid forgeries, he began to record his compositions in a notebook of drawings (Duke of Devonshire Coll., Chatsworth). Engravings of them were later made and published as the *Liber veritatis* (1777). His early works reflect the late mannerist style of Tassi and that of the northerners Brill and Elsheimer. Although he began by using the traditional device of compartmentalized stages—foreground, middle ground, and background—in his later landscapes he opened up unlimited vistas, introducing lyrical variations of light and atmosphere. In *The Expulsion of Hagar* (1668, Munich) he defied conventional composition for strong effect. In his later works light was the primary subject. It dissolved forms, drawing the eye into vast panoramas of land and sea. Claude's harbor scenes and views of the Roman countryside exercised a lasting influence on the art of landscape painting. Poussin was indebted to him, as was Richard Wilson, and he was consciously emulated two centuries later by J. M. W. Turner. Claude's work is best represented in England. It can be seen in the National Gallery, London, the Doria Palace, Rome, the Louvre, the Prado, and in many American collections, including the museums of New York City, Boston, Kansas City, St. Louis, and San Francisco. See study by Marcel Röthlisberger (1961).

Claude Michel: see CLODION.

Claudia (klōd'ēa), Christian who sent greetings to Timothy 2 Tim. 4:21.

Claudian (Claudius Claudianus) (klōd'ēan), d. 404?, last notable Latin classic poet. Probably born in Alexandria, he flourished at court under Arcadius and Honorius. Besides panegyrics, idylls, epigrams, and occasional poems, he wrote several epics, the most ambitious of which is the *Rape of Proserpine*, perhaps inferior to his epic attack *Against Rufinus*. He has been highly regarded as a vigorous, skillful, and imaginative writer. See T. Hodgkin, *Claudian, the Last of the Roman Poets* (1875), study by Alan Cameron (1970).

Claudius I (Tiberius Claudius Drusus Nero Germanicus) (klōd'ēas), 10 B.C.-A.D. 54, Roman emperor (A.D. 41-A.D. 54), son of Nero Claudius Drusus Germanicus and thus nephew of Tiberius. When CAUGULA was murdered (A.D. 41), the soldiers found Claudius, who had been of little importance, hiding in abject terror behind a curtain in the palace. They hauled him forth, and the Praetorians proclaimed him emperor. This act offended the senators, who never forgave Claudius. It also made him favor the army. He annexed Mauretania and landed in A.D. 43 in Britain, which he made a province. Agrippa's kingdom of Judaea and the kingdom of Thrace were reabsorbed into the empire, and the authority of the provincial procurators was extended. He caused MESSALINA, his third wife, to be executed and was in turn supposedly poisoned by her successor, AGRIPPA II, after she had persuaded him to pass over his son BRITANNICUS as heir in favor of NERO, her son by a former husband. Claudius was much reviled by his enemies and historians have accused him of being only a tool in the hands of his freedmen-secretaries and his wives, there are indications, however, that he had considerable administrative ability. Claudius' literary works are lost. He is the chief figure in two novels by Robert Graves, *I, Claudius* (1934) and *Claudius the God* (1935). See studies by Arnaldo Momigliano (tr. 1962) and V. M. Sramuzza (1940).

Claudius II (Marcus Aurelius Claudius), d. 270, Roman emperor (268-70), called Gothicus. A successful general under Valerian, Claudius put down the revolt in which GALLIENUS was killed. He succeeded Gallienus and went to the East to resist the Goths who were overrunning the empire. In 269, Claudius overwhelmed the Goths at Naissus (now Nis, Yugoslavia). He died of the plague the following year and was succeeded by AURELIAN.

Claudius, ancient Roman gens. **Appius Claudius Sabinus Inregillensis** or **Regillensis** was a Sabine, he came (c. 504 B.C.) with his tribe to Rome. While consul (495), he caused the withdrawal of the plebeians to the sacred mount because of his severe interpretation of the laws of debt. His Sabine name was Attius Clausus. **Appius Claudius Crassus** was decemvir (451-449 B.C.). He seems to have sought to placate the plebeians and was known as a lawgiver, but his career ended in failure. Legend says that his attempt to rape VIRGINIA caused a revolt in which he was killed and which led to the fall of the decemvirs. **Appius Claudius Caecus**, while censor (312-308 B.C.), increased the role taken by the lower classes in public affairs. He was consul (307 and 296) and later persuaded the senate to reject the peace proposals of PYRRHUS. He constructed the first Roman aqueduct and began construction of the Appian Way. **Publius Claudius Pulcher**, while consul (249 B.C.), attacked the Carthaginian fleet at Drepanum and was defeated. It was believed that he was defeated because he threw the sacred chickens into the sea. **Appius Claudius Pulcher**, d. c. 48 B.C., campaigned in Asia (72 B.C.). He became praetor (57 B.C.), propraetor in Sardinia (56 B.C.), consul (54 B.C.), and proconsul of Cilicia (53 B.C.). He sought through Pompey the assistance of his rival Cicero to secure his acquittal from impeachment for bribery. He joined Pompey in the civil war and died in Euboea before the battle at Pharsala. For **Publius Claudius Pulcher**, see CLODIUS.

Claudius Lysias (līs'ēas), official at Jerusalem who saved Paul from the mob. Acts 23:24.

Clausel or **Claudel, Bertrand** (bētrāN' klōzēl'), 1772-1842, marshal of France. Having served in the French Revolutionary Wars and in the Napoleonic campaigns, particularly in the Peninsular War, he was created count (1813). He joined Napoleon in the Hundred Days (1815) and after the Restoration spent some time in exile in the United States, returning (1820) to France to become a deputy of the opposition. After the July Revolution he was sent to Algeria as commander in chief (1830) and was made

marshal (1831). Again commander in chief and governor general in Algeria (1835-37), he was blamed for French reverses there.

Clausewitz, Karl von (karl fən klou'zavīts), 1780-1831, Prussian general and writer on military strategy. He served in the Rhine campaigns (1793-94), won the regard of Gerhard von Scharnhorst at the Berlin Military Academy, and served in the wars against Napoleon Bonaparte. In the service of Russia from 1812 until 1814, he helped negotiate the convention of Tauroggen (1812), which prepared the way for the alliance of Prussia, Russia, and Great Britain against Napoleon. Later he reentered the Prussian army, fought at Waterloo, and was appointed (1818) director of the Prussian war college. His masterpiece, *On War*, was unfinished and was published after his death. The doctrines expounded in it, including that of total war (that all citizens, territory, and property of the enemy nation should be attacked in every way possible) and that of war itself as a political act (a continuation of diplomacy by other means, in which political leaders of the state must determine the war's scope and objectives and exercise control of its direction) had an enormous effect on military strategy and tactics.

Clausius, Rudolf Julius Emanuel (rōdōlf yōō'lyōōs āma'nōōēl klou'zēōōs), 1822-88, German mathematical physicist. A pioneer in the science of thermodynamics, he introduced the concept of entropy and restated the second law of thermodynamics: heat cannot of itself pass from a colder to a hotter body. He applied his researches on heat, electricity, and molecular physics to the development of the kinetic theory of gases and in formulating a theory of electrolysis wherein he states that electric forces are merely directing agents in the interchange of ions. A professor at the Polytechnic Institute, Zurich (1855-67), and at the universities of Würzburg (1867-69) and Bonn (from 1869), he wrote *Die Potentialfunktion und das Potential* (1859) and *Die mechanische Wärmetheorie* (1865-67, tr. *The Mechanical Theory of Heat*, 1879).

Clausthal-Zellerfeld (klous'tāl-tsēl'arfēlt), town (1970 pop. 14,821), Lower Saxony, E. West Germany, a resort in the Harz mts. Its manufactures include textiles and wood products. The town was once a center for the mining of copper, zinc, and lead ores.

Claudel, Bertrand. see CLAUSÉL BERTRAND.

Claverhouse, John Graham of: see DUNDEE, JOHN GRAHAM OF CLAVERHOUSE 1ST VISCOUNT.

clavichord (klāv'ikōrd), keyboard musical instrument invented in the Middle Ages. It consists of a small rectangular wooden box, placed upon a table or upon legs, containing a sounding board and a set

Clavichord

of strings. Keys caused the strings to be struck with small wedges of metal called tangents, which not only set the string into vibration but determined its vibrating length by means of a sort of fretting (see FRETTED INSTRUMENT). Thus one string sufficed for about four keys. Early in the 18th cent., clavichords were built with a string for each key, such instruments were more expensive and harder to tune, but gradually supplanted the older ones. The clavichord became musically important in the 16th cent. and remained popular until the end of the 18th cent.

when it was displaced by the pianoforte. It is a drawing room instrument with a delicate, expressive tone. See Philip James, *Early Keyboard Instruments* (1930), Denis Matthews, ed., *Keyboard Music* (1972).

Clavière, Étienne (ätyēn' klavyēr'), 1735-93, French financier. A merchant and banker of Geneva, he participated (1782) in the popular revolution at Geneva and was forced to leave when the aristocrats returned to power in the same year. He settled in Paris. During the French Revolution Clavière was an adviser to the comte de Mirabeau on financial policy and had a part in the issuing of ASSIGNATS. He was finance minister in the king's Girondist cabinet of March-June, 1792. Clavière fell with the GIRONDISTS and committed suicide rather than face the Revolutionary Tribunal.

Clavijero, Francisco Javier (fransēs'kō havyēr' klavēhārō), 1731-87, Mexican scholar and historian. A Jesuit, he taught in Mexico until the expulsion of the order (1767). From his refuge in Italy he wrote several works, the most important being *The History of Mexico* (tr. 1787), which shows an immense knowledge of Indian languages, customs, and history.

Clavius, Cristoph (krīs'tōf klāvēās), 1537-1612, German astronomer and mathematician. He entered the Jesuit order in 1555 and studied at Coimbra and Rome. He taught mathematics at the Collegio Romano from 1565. In a commentary on Euclid (1574) and other works, Clavius collected mathematical knowledge, adding some proofs and methods of his own, he helped spread elements of modern algebraic notation such as the plus sign and parentheses. His *Commentary on the Sphere of Sacrobosco* (1581), which had many editions, was the standard astronomical text of his time. In 1582 his proposed reform of the calendar was adopted by Pope Gregory XIII. In the last years of his life he confirmed Galileo's telescopic observations, although he did not accept them as proof of the Copernican theory.

Clawson, city (1970 pop. 17,617), Oakland co., SE Mich., a residential suburb between Pontiac and Detroit, settled c. 1833, inc. 1920.

Claxton, Philander Priestly, 1862-1957, American educator, b. Bedford co., Tenn., grad. Univ. of Tennessee (B.A., 1882, M.A., 1887) and studied at Johns Hopkins Univ. and in Germany. After several years' experience as a superintendent of schools in North Carolina, he taught at the North Carolina State Normal and Industrial College (1893-1902) and later was professor of education at the Univ. of Tennessee (1902-11). He served (1911-21) as U.S. commissioner of education, his administration being distinguished by marked expansion of the activities of the Bureau of Education. Claxton was afterwards provost (1921-23) of the Univ. of Alabama and superintendent of schools (1923-29), Tulsa, Okla., and from 1930 was president of the Austin Peay Normal School in Clarksville, Tenn. See biography by C. L. Lewis (1948).

Clay, Cassius Marcellus, 1810-1903, American politician and diplomat, b. Madison co., Ky. Although he came from a slaveholding family, Clay early came to abhor the institution of slavery. In 1845 he established at Lexington, Ky., the *True American*, an abolitionist paper. His press was in his absence moved by his enemies to Cincinnati, and he continued its publication there and at Louisville. He served as a captain in the Mexican War and was captured and for a time imprisoned. In 1851 he was an unsuccessful candidate for governor of Kentucky on an anti-slavery ticket, he captured enough votes, however, to cause the defeat of the Whig candidate and thus hastened the collapse of the Whigs in Kentucky. He was minister to Russia (1861-62, 1863-69) and served briefly in the Civil War as a major general of volunteers. See his autobiography (1866), his writings, ed. by Horace Greeley (1848, repr. 1969), biographies by D. L. Smiley (1962) and W. H. Townsend (1967).

Clay, Cassius Marcellus, Jr.: see ALI, MUHAMMAD
Clay, Clement Claiborne, 1816-82, U.S. Senator (1853-61), b. Huntsville, Ala. A legislator and then a judge in his native state, he was twice elected to the U.S. Senate and became an ardent defender of the states' rights doctrine. He left the Senate upon Alabama's secession and entered the Confederate senate, refusing the appointment as Secretary of War in the Confederacy. In 1864 he was sent by Jefferson Davis with two others on a diplomatic mission to Canada, which was intended to open peace negotiations with the Federal government. Lincoln finally decided not to see him, and after a year in Canada, Clay returned to the South. After the assassination

of Lincoln, he was accused of having taken part in a plot in Canada against Lincoln's life and also of having planned raids across the border, and a reward was offered for him. He gave himself up, was held at Fortress Monroe for almost a year without trial, and then was freed. His wife, Virginia Clay-Clopton, wrote *A Belle of the Fifties* (1904), a description of their Washington, D.C., home when it was a gathering place of capital society.

Clay, Henry, 1777-1852, American statesman, b. Hanover co., Va. His father died when Henry was four years old, and Clay's formal schooling was limited to three years. His stepfather secured (1792) for him a clerk's position in the Virginia high court of chancery. There he gained the regard of George WYTHE, who directed his reading. Clay also read law under Robert Brooke, attorney general of Virginia, and in 1797 he was licensed to practice. Moving in the same year to Lexington, Ky., he quickly gained wide reputation as a lawyer and orator. He served (1803-6) in the Kentucky legislature and was (1805-7) professor of law at Transylvania Univ. Having spent the short session of 1806-7 in the U.S. Senate, he returned (1807) to the state legislature, became (1808) speaker, and remained there until he was chosen to fill an unexpired term (1810-11) in the U.S. Senate. In 1810 he was elected to the U.S. House of Representatives and served (1811-14) as speaker. As spokesman of Western expansionist interests and leader of the "war hawks," Clay stirred up enthusiasm for war with Great Britain and helped bring on the War of 1812. He resigned (1814) from Congress to aid in the peace negotiations leading to the Treaty of Ghent. He again served (1815-21) in the House, again was speaker (1815-20), and began to formulate his "American system," a national program that ultimately included Federal aid for internal improvements and tariff protection of American industries. In 1821, Clay, to pacify sectional interests, pushed the MISSOURI COMPROMISE through the House. In the House for the last time (1823-25), he once more became (1823) speaker, and he did much to augment the powers of that office. In this session he secured the western extension of the NATIONAL ROAD and, against much opposition, eloquently carried through the Tariff of 1824. As a candidate for the presidency in 1824, Clay had the fourth largest number of electoral votes, and, with no candidate having a majority, the election went to the House, where the three highest were to be voted upon. It became Clay's duty to vote for one of his rivals. Despite the Western interests of Andrew JACKSON and despite the instructions of Kentucky to vote for him, Clay's dislike for the military hero was so intense that he voted for John Quincy ADAMS. When President Adams appointed Clay Secretary of State, Jackson's friends cried "corrupt bargain" and charged Clay with political collusion. Evidence has not been found to prove this, but the accusation impeded Clay's future political fortunes. As Secretary of State (1825-29), he secured congressional approval—which came too late for the American delegates to attend—of U.S. participation in the Pan American Congress of 1826. In 1828, Clay again supported Adams for President, and Jackson's success bitterly disappointed him. Although he intended to retire from politics, Clay was elected (1831) to the U.S. Senate and now led the National Republicans, who were beginning to call themselves Whigs (because they opposed Jackson's "tyranny"). Hoping to embarrass Jackson, Clay led the opposition in the Senate to the President's policies, but when the election came Jackson was overwhelmingly reelected. Clay's chagrin was buried in the crisis developing over the tariff. South Carolina's NULLIFICATION of the tariffs of 1828 and 1832 as well as Jackson's threats of armed invasion of that state allowed Clay to gain politically—working, even at the cost of his own protectionist views, toward a compromise with the John C. CALHOUN faction, he helped to promote the Compromise Tariff of 1833. Clay opposed the Jackson regime at every turn, particularly on the bank issue. When Jackson had the deposits removed (1833) from the BANK OF THE UNITED STATES to his "pet banks," Clay secured in the Senate passage of a resolution—later expunged (Jan., 1837) from the record—censuring the President for his act. Refusing to run for President in 1836, Clay continued his opposition tactics against Van Buren's administration and fought the SUBTREASURY system in vain. In 1840, Clay lost the Whig nomination to William H. Harrison, mainly because of Thurlow Weed's adroit politics. Clay supported Harrison and, when Harrison was elected, was offered the post of Secretary of State, but he chose to stay in the Senate. He now planned to reestablish the Bank of the United States, but the unexpected accession of John TYLER to the presidency and his vetoes of Clay's bills caused Clay to resign his Senate seat. In 1844 he ran against James K. POLK, an avowed expansionist. Earlier Clay had publicly opposed the annexation of Texas, and he restated his position in the "Alabama Letters," agreeing to annexation if it could be accomplished with the common consent of the Union and without war. This maneuver probably lost him New York state, with which he could have won the election. His failure was crushing for him and for the Whig party. In 1848 his party refused him its nomination, feeling that he had no chance, so that his presidential aspirations were never fulfilled. He reentered (1849) the Senate when the country faced the slavery question in the territory newly acquired by the Mexican War. Clay denounced the extremists in both North and South, asserted the superior claims of the Union, and was chiefly instrumental in shaping the COMPROMISE OF 1850. It was the third time that he saved the Union in a crisis, and thus he has been called the Great Pacifier and the Great Compromiser. Publication of his papers (ed. by James Hopkins) was begun in 1959. See also his works (7 vol., 1896), biographies by Carl Schurz (1887, repr. 1968), Glyndon Van Deusen (1937), and Bernard Mayo (1937, repr. 1966).

Clay, Lucius DuBignon, 1897-, American general, b. Marietta, Ga. A graduate of West Point and an engineering officer, he held many army administrative posts and became (1944) deputy director of the office of War Mobilization and Reconversion. Clay was (1945-47) deputy chief of the U.S. military government in Germany before he directed operations in the Berlin blockade as U.S. military governor (1947-49). Clay retired from the army as a full general in May, 1949, to enter private business. After the closing of the borders between East and West Berlin by the Communists, he served (Sept., 1961-May, 1962) as President Kennedy's personal representative in Berlin with the rank of ambassador. He wrote *Decision in Germany* (1950).

clay, common name for a number of fine-grained, earthy materials that become plastic when wet. The individual clay particles are always smaller than 0.004 mm. Clays often form colloidal suspensions when immersed in water, but the clay particles flocculate (clump) and settle quickly in saline water. Clays are easily molded into a form that they retain when dry, and they become hard and lose their plasticity when subjected to heat. Chemically, clays are hydrous aluminum silicates, ordinarily containing impurities, e.g., potassium, sodium, calcium, magnesium, or iron, in small amounts. Clay consists of a sheet of interconnected silicates combined with a second sheetlike grouping of metallic atoms, oxygen, and hydroxyl, forming a two-layer mineral such as KAOLINITE. Sometimes the latter sheetlike structure is found sandwiched between two silica sheets, forming a three-layer mineral such as vermiculite. Clays are divided into two classes: residual clay, found in the place of origin, and transported clay, also known as sedimentary clay, removed from the place of origin by an agent of erosion and deposited in a new and possibly distant position. Residual clays are most commonly formed by surface weathering, which gives rise to clay in three ways—by the chemical decomposition of rocks, such as granite, containing silica and alumina, by the solution of rocks, such as limestone, containing clayey impurities, which, being insoluble, are deposited as clay, and by the disintegration and solution of shale. One of the commonest processes of clay formation is the chemical decomposition of FELDSPAR. In the lithification process, compacted clay layers can be transformed into shale. Under the intense heat and pressure that may develop in the layers, the shale can be metamorphosed into slate. From prehistoric times, clay has been indispensable in architecture, in industry, and in agriculture. As a building material, it is used in the form of BRICK, either sun-dried (adobe) or fired. Clays are also of great industrial importance, e.g., in the manufacture of TILE for wall and floor coverings, of porcelain, china, and earthenware, and of pipe for drainage and sewage. Properties of the clays used in such products that must be taken into consideration include plasticity, shrinkage under firing and under air drying, fineness of grain, color after firing, hardness, cohesion, and capacity of the surface to take decoration. On the basis of such qualities clays are variously divided into classes or groups, products are generally made

from mixtures of clays and other substances. The purest clays are the CHINA CLAYS and kaolins. "Ball clay" is a name for a group of plastic, refractory clays used with other clays to improve their plasticity and to increase their strength. Bentonites are clays composed of very fine particles derived usually from volcanic ash. They are composed chiefly of the hydrous magnesium-calcium-aluminum silicate called montmorillonite. Highly absorbent, bentonite is much used in foundry work for facing the molds and preparing the molding sands for casting metals. The less absorbent bentonites are used chiefly in the oil industry, e.g., as filtering and deodorizing agents in the refining of petroleum and, mixed with other materials, as drilling muds to protect the cutting bit while drilling. Other uses are in the making of fillers, sizings, and dressings in construction, in clarifying water and wine, in purifying sewage, and in the paper, ceramics, plastics, and rubber industries. Clay is one of the three principal types of soil, the other two being sand and loam. A certain amount of clay is a desirable constituent of soil, since it binds other kinds of particles together and makes the whole retentive of water. Excessively clayey soils, however, are exceedingly difficult to cultivate. Their stiffness presents resistance to implements, impedes the growth of the plants, and prevents free circulation of air around the roots. They are cold and sticky in wet weather, while in dry weather they bake hard and crack. Clods form very often in clayey soils. Clays can be improved by the addition of lime, chalk, or organic matter, sodium nitrate, however, intensifies the injurious effects. In spite of their disadvantages, the richness of clay soils makes them favorable to the growth of crops that have been started in other soil. See also FULLER'S EARTH. See R. E. Grim, *Clay Mineralogy* (2d ed 1968), R. W. Grimshaw, *The Chemistry and Physics of Clays and Allied Ceramic Materials* (4th ed 1971).

clay pan* see HARDPAN

Clayton, Henry De Lamar, 1857-1929, U.S. Congressman, b. Barbour co., Ala. A Democrat, he was a member of the House of Representatives from 1897 to 1915 and later a Federal district judge. He is chiefly remembered as the author of the CLAYTON ANTITRUST ACT.

Clayton, John Middleton, 1796-1856, American statesman, b. Sussex co., Del. Admitted (1819) to the bar, he practiced at Dover, Del., held many state offices, and was twice (1828, 1845) elected to the U.S. Senate. In the presidential election of 1848 he gave his support to Zachary Taylor and was rewarded with the position of Secretary of State, an office he held until Taylor's death in 1850. As Secretary of State he negotiated the CLAYTON-BULWER TREATY, which checked British expansion in Central America and temporarily settled a rivalry that had brought England and the United States into conflict. He reentered the Senate in 1852.

Clayton, city (1970 pop. 16,222), seat of St. Louis co., E central Mo., a suburb of St. Louis, inc. 1919.

Clayton Antitrust Act, 1914, passed by the U.S. Congress as an amendment to clarify and supplement the SHERMAN ANTITRUST ACT of 1890. It was drafted by Henry De Lamar Clayton. The act prohibited exclusive sales contracts, local price cutting to freeze out competitors, rebates, interlocking directorates in corporations capitalized at \$1 million or more in the same field of business, and intercorporate stock holdings. Labor unions and agricultural cooperatives were excluded from the forbidden combinations in the restraint of trade. The act restricted the use of the INJUNCTION against labor, and it legalized peaceful strikes, picketing, and boycotts. It declared that "the labor of a human being is not a commodity or article of commerce." Organized labor was as heartened by the act as it had been dejected by the doctrine of the DANBURY HATTERS CASE, but judicial construction soon made the labor provisions of the act meaningless. The Clayton Antitrust Act was the basis for a great many important and much-publicized suits against large corporations. Later amendments to the act strengthened its provisions against unfair price cutting (1936) and intercorporate stock holdings (1950).

Clayton-Bulwer Treaty, concluded (April 19, 1850) at Washington, D.C., between the United States, represented by Secretary of State John M. Clayton, and Great Britain, represented by the British plenipotentiary Sir Henry Bulwer. American and British rivalries in Central America, particularly over a proposed isthmian canal, led to the treaty. Its most important article provided "that neither will ever obtain or maintain for itself any exclusive control over the said ship canal that neither will ever

erect or maintain any fortifications commanding the same or occupy, or fortify, or colonize or assume, or exercise any dominion over Nicaragua, Costa Rica, the Mosquito coast [in present-day Honduras and Nicaragua], or any part of Central America." Although the treaty was soon ratified by the Senate, it was one of the most unpopular in U.S. history, viewed by some as a betrayal of the Monroe Doctrine. Successive Secretaries of State tried in vain to secure modifications that would enable the United States to build its own canal and exercise, under restrictions, political control over it, but it was not until 1901, with the HAY-PAUNCEFOTE TREATIES, that this end was finally achieved. See M. W. Williams, *Anglo-American Isthmian Diplomacy, 1815-1915* (1916, repr. 1965).

Clazomenae (klāzōm'ānē), ancient city of W Asia Minor, 20 mi (32 km) W of present-day Izmir, Turkey. It was one of the 12 Ionian cities of Asia Minor. The city was founded on the mainland but was later moved to a small island, and Alexander the Great built a causeway to it. The town continued to flourish through the Hellenistic and Roman periods. It was the birthplace of the philosopher Anaxagoras and was famous for its black-figure pottery and its terra-cotta sarcophagi.

Cleanthes (klēān'thēz), 3d cent. B.C., Greek philosopher, head of the Stoic school following Zeno.

Cleararchus (klēār'kās), d. 401 B.C., Spartan officer, celebrated as the leader of the Ten Thousand (see ANABASIS). Sent in 410 to govern Byzantium, he made himself unpopular by his harsh discipline, and Alcibiades took the city in 408 B.C. Cleararchus later returned and made himself virtual ruler, thereby incurring the anger of the Spartans, who forced him to leave (403). He sought refuge with Cyrus the Younger of Persia, who used him to recruit and later command the Greek mercenary force in support of Cyrus' claim to the throne. At CUNAXA, Cleararchus fought boldly, but Cyrus' forces were defeated. After the battle he led the Greek force (the Ten Thousand) in retreat, but was lured into a conference by TISSAPHERNES and treacherously murdered. The story of the retreat was made famous by Xenophon.

clearcutting: see FORESTRY

Clearfield, city (1970 pop. 13,316), Davis co., N Utah, inc. 1922. Hill Air Force Base and a naval supply depot are the major employers.

clearing, in banking, the periodic settling of bankers' claims against each other. For that purpose local banks form clearinghouse associations. Clearinghouses are said to have existed in Florence by A.D. 800. They were certainly perfected in Lyons by 1463, and their use was widespread in 18th-century Europe. The first modern clearinghouse was either at Edinburgh (1760) or at London (1773), clearinghouses were then established in Dublin (1846), New York (1853), Paris (1872), and Berlin (1883). Before the introduction of clearinghouses each bank periodically sent runners to other banks to adjust claims bilaterally. The clearinghouse instead holds meetings of representatives of all banks in a given area to adjust claims and is thus a major labor-saving device. The New York Clearing House, for example, clears checks, stock certificates, and coupons several times daily. Each bank sends a delivery clerk and a settling clerk to the house, they bring with them bundles of checks and other obligations due their banks from other banks, each bank being represented by a separate package. Lists of such obligations are handed to an inspector before clearing begins, the total of the lists is the total amount to be settled that day. When clearing begins, each delivery clerk passes from one desk to another, depositing on each his bank's claims upon the bank represented at that desk. When a settling clerk at any one desk has received all his packages, he draws up a statement of the demands made upon his bank, as shown by the totals of the packages. He sends the statement to the manager of the clearinghouse, along with the total that his bank is owed. When all settling clerks have finished, the accounts are examined and proved, and the manager certifies the amounts that each bank owes to and is entitled to receive from the other banks. The balance (debit or credit) for each bank is forwarded to the Federal Reserve bank, which adjusts the accounts of each bank. All packages of claims are accepted at the clearinghouse desks without examination, they are later carried back to the banks receiving them and are there examined. If any claims are found invalid, the banks concerned rectify the error without using the clearinghouse. Dues, usually in proportion to the number of transactions presented by each bank per year, support the clearinghouse. With the consent of the

clearing association, nonmembers may be permitted to clear through members. Intercity balances in the United States are settled on the books of the Federal Reserve banks daily by telegraphic transfers. Clearing is practiced also by stock and commodity exchanges. International claims are settled by clearing unions, groups of central banks and other major financial institutions. The most famous such group is the European Payments Union (created 1950). See F. P. Thomson, *Money in the Computer Age* (1968).

Clear Lake, 65 sq mi (168 sq km), W Calif., in wooded hills NW of San Francisco. It is the largest freshwater lake entirely within California and is a fishing resort. Mt. Konochi rises nearly 3,000 ft (910 m) on the west shore.

clearstory: see CLERESTORY

Clearwater, residential and resort city (1970 pop. 52,074), seat of Pinellas co., W Fla., on the Pinellas peninsula, on Clearwater Bay and the Gulf of Mexico, inc. 1891. Its thriving tourist industry dates from 1896. A landscaped causeway connects the city proper with a 4-mi (6.4-km) long island of white sand beaches fronting on the Gulf. Several national corporate headquarters are in the city. Clearwater was settled after the establishment there of Fort Harrison in 1841. It is linked with Tampa by a causeway across Old Tampa Bay to the east. It is the seat of Clearwater Christian College and a junior college, and has an art center, a theater, and many recreational facilities.

Clearwater, river, c.190 mi (305 km) long, rising in several branches in the Bitterroot Range, N Idaho, and flowing west to join the Snake River at Lewiston, Idaho. The gold-mining era in Idaho began in 1860, when gold was discovered and mining camps were set up on the river's southern fork.

cleavage, tendency of many minerals to split along definite smooth planar surfaces determined by their crystal structure. The directions of these surfaces are related to weaknesses in the atomic structure of the mineral and are always parallel to a possible crystal face. The property of cleavage is useful in identifying a mineral species. The tendency for certain varieties of metamorphic and sedimentary rock to split along more or less smooth surfaces is sometimes referred to as rock cleavage. Flagstone, slate, and schist are noted for this property, which arises from the parallel alignment of fine, platy mineral grains themselves displaying cleavage.

Cleaveland, Moses, 1754-1806, American pioneer, b. Canterbury, Conn. After serving (1777-81) in the American Revolution, he practiced law in his native town and entered (1787) the state legislature. When the Connecticut Land Company purchased (1795) land in the WESTERN RESERVE region of Ohio, Cleaveland was chosen as one of the directors and surveyors of the company. In 1796 he led a party of men to the mouth of the Cuyahoga River, where he determined to develop the main settlement. The surveyors named the site Cleaveland, which name it bore until c.1830, when it became Cleveland.

Cleburne, Patrick Ronayne (klē'bərən), 1828-64, Confederate general, b. Co. Cork, Ireland. He emigrated to America in 1849 and was practicing law in Helena, Ark., when the Civil War broke out. Cleburne, who had served in the British army, was made a brigadier general in March, 1862. He commanded a brigade at Shiloh (April), and a division at Richmond (Aug.) and Perryville, Ky. (Oct.). Promoted to major general (Dec.), he distinguished himself further at Murfreesboro and in the campaigns around Chattanooga and Atlanta. Cleburne was one of the most persistent of the group of Southern generals who advocated that slaves be freed and used as soldiers. His last service was in the Tennessee campaign of 1864, he was killed at the battle of Franklin (Nov.). See biography by Howell and Elizabeth Purdue, Ella Lonn, *Foreigners in the Confederacy* (1940, repr. 1965).

Cleburne, city (1970 pop. 16,015), seat of Johnson co., N Texas, inc. 1907. It is a rail, processing, and medical center in a farming area. The city has huge railroad shops, cotton mills, limestone-processing plants, and factories producing a variety of products. Two rodeos are held there annually. A state park is nearby.

Cleef or Cleve, Joos van (yōs vān klāf, klā'və), c.1485-1540, early Flemish portrait painter. Much of his life was spent in Antwerp. He is often identified with the Master of the Death of the Virgin from altarpieces in Munich and Cologne. Portraits of Henry VIII (Hampton Court) and Francis I (Johnson Coll., Philadelphia) are attributed to him. A sentimental *Holy Family* by Joos is in the National Gallery, London.

Cleethorpes (klē'thōrps), municipal borough (1971 pop 35,785), in the Parts of Lindsey, Lincolnshire, E central England, on the Humber River estuary. It is a popular resort, with many recreational facilities. The nearby Church of Old Clew was dedicated in 1192 by the bishop of Lincoln. In 1974, Cleethorpes became part of the new nonmetropolitan county of Humberside.

clef, in music see MUSICAL NOTATION

cleft palate, incomplete fusion of bones of the palate. The cleft may be confined to the soft palate at the back of the mouth, it may include the hard palate, or roof of the mouth, or it may extend through the gum and lip, producing a gap in the teeth and a HARELIP. The condition appears to be hereditary but not under the control of a single pair of genes. A cleft palate causes separation between the oral and nasal cavities. An infant cannot develop proper suction for drinking, and there is the danger of milk entering the nasal cavity and being aspirated into the lungs. Formula must be carefully placed at the back of the tongue for normal swallowing to take place. Ear infection may result from food or fluid passing from the nasal cavity to the middle ear by way of the Eustachian tubes. Proper speech articulation is difficult unless the cleft is surgically closed. The proper time for such an operation is in dispute, some authorities prefer early closure, before the cleft interferes with development of normal speech habits, while others prefer to wait for several years until facial growth has been completed.

Cleisthenes, fl. 510 B.C., Athenian statesman. He was the head of his family, the ALKMAEONIDAE, after the exile of Hippias, and with Spartan help had made himself undisputed ruler of Athens by 506 B.C. He established a more democratic constitution by weakening the clan system and the local parties and by organizing the districts into political rather than social divisions. The Alkmaeonidae thus became leaders of a democratic party, a reorientation making them anti-Spartan instead of pro-Spartan as earlier. An attempt of his rival, Isagoras, to overturn the reforms of Cleisthenes after Cleisthenes had been sent into exile failed, and Cleisthenes was recalled. Sparta aided Isagoras, and Spartan hatred of the Alkmaeonidae began with Cleisthenes. The name also appears as Clisthenes.

Cleveland, John see CLEVELAND, JOHN

clématis (klēm'ātis), any plant of the large genus *Clematis* (sometimes subdivided into three or four genera), widely distributed herbs or vines of the family Ranunculaceae (BUTTERCUP family), many of them native. The vines are the more popular and are usually profuse bloomers, some have an irritating juice, leafstalks serving as tendrils, and small dry fruits with a feathery taillike appendage. The flowers are varied in shape and color. Most popular in North America are the Jackman *clematis* (*C. jackmanii*), a large purple hybrid, and the Japanese *clematis* (*C. paniculata*) with small white flowers. Some *clematis* are called virgin's-bower, traveler's-joy, leatherflower, and old-man's-beard. *Clematis* is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Ranunculales, family Ranunculaceae.

Clemenceau, Georges (zhōrzh klāmaNsō'), 1841-1929, French political figure, twice premier (1906-9, 1917-20), called "the Tiger." He was trained as a doctor, but his republicanism brought him into conflict with the government of Napoleon III, and he went (1865) to the United States, where he spent several years as a journalist and a teacher. Returning to France in 1869, he was mayor of Montmartre in Paris after the overthrow (1870) of Napoleon III. His political career, beginning in revolution, continued to be a stormy one punctuated by verbal and physical duels. As a Socialist, he opposed the moderate Léon GAMBETTA, drove Jules FERRY from power, and first supported but then bitterly opposed General BOULANGER. A member of the chamber of deputies from 1876, he failed to win reelection in 1893 after being implicated in the Panama Canal scandal, and then unjustly accused of being in the pay of the British. During the next nine years he devoted himself to journalism, writing a daily article in *La Justice*, and founding (1900) *Le Bloc*. He was a passionate defender of Alfred Dreyfus in the DREYFUS AFFAIR. In 1902, Clemenceau was elected senator, and in 1906 he became minister of the interior and then premier. During his tenure the first crisis over MOROCCO was settled and the alliance with Great Britain strengthened. Clemenceau's harsh measures against strikers caused his final breach with the Socialists. In 1909 his cabinet fell and Aristide BRIAND became premier. In the next years Clemenceau vigorously attacked Germany and pressed for military pre-

paredness. His newspaper, *L'Homme libre* (after its suppression in 1914, *L'Homme enchaîné*) attacked the government for defeatism even after the outbreak of World War I. Succeeding Paul PAINLEVÉ as premier in Nov., 1917, Clemenceau formed a coalition cabinet in which he was also minister of war. He renewed the dispirited morale of France and pushed the war vigorously until the final victory. Leading the French delegation at the Paris Peace Conference, Clemenceau was the main antagonist of Woodrow WILSON; he regarded the Versailles Treaty as inadequate in guaranteeing the security of France. Ironically, he was defeated in the presidential election of 1920 because of what was regarded as his leniency toward Germany. Alexandre Millebrand succeeded him as premier. Clemenceau retired to his native Vendée, where he wrote *In the Evening of My Thought* (tr. 1929) and other works. See biographies by Geoffrey Bruun (1943, repr. 1962) and J. H. Jackson (1946, repr. 1962), Wythe Williams, *The Tiger of France* (1949).

Clemens, Samuel Langhorne: see TWAIN, MARK

Clement I, Saint, or Clement of Rome, d. A.D. 97?, pope (A.D. 88?-A.D. 97?), martyr, successor of St. Cletus. He may have known the apostles Peter and Paul, and after them he was the most esteemed figure in the church. His letter to the church at Corinth was considered canonical by some until the 4th cent. It is notable for the authority Clement assumes in resolving the factionalism that was afflicting the Corinthians and in enjoining the need for order in the church. St. Clement was the first Christian writer to use the myth of the phoenix as an allegory of the Resurrection. Many writings have been wrongly attributed to him, particularly the so-called Second Epistle of St. Clement to the Corinthians. He is represented in frescoes in the Church of San Clemente, Rome. He was succeeded by St. Evaristus. Feast Nov. 23. See J. A. Kleist, tr., *The Epistles of St. Clement of Rome and St. Ignatius of Antioch* (1946).

Clement III, antipope see GUIBERT OF RAVENNA

Clement IV, d. 1268, pope (1265-68), a Frenchman named Guy le Gros Foulques, successor of Urban IV. He was a lay adviser of King Louis IX of France, but after his wife's death he entered the church. As pope he continued the struggle against the HOHENSTAUFEN by confirming the agreement with CHARLES I (Charles of Anjou) that gave Charles the crown of Naples, by raising an army for him, and by investing him with the kingdom. When CONRADIN attacked Charles, Clement had a crusade preached against him. He was a strong opponent of nepotism, and he was the patron of Roger BACON. He was succeeded by Gregory X.

Clement V, 1264-1314, pope (1305-14), a Frenchman named Bertrand de Got, successor of Benedict XII. He was made archbishop of Bordeaux by BONIFACE VIII, who trusted him, surprisingly, he was also in some favor at the court of PHILIP IV, even though Philip and the pope were archenemies. He was crowned pope at Lyons in Philip's presence and lived the rest of his life in France. In 1309 he settled at Avignon, beginning the long, controversial residency of the PAPACY there. The pontificate of Clement is one long chronicle of dictation by the French king. Although Clement effectively squelched Philip's effort to have Boniface posthumously condemned as a heretic—an act that would have been disastrous to the papacy—he supported Philip in the infamous suppression of the KNIGHTS TEMPLARS. He called the Council of Vienne (1311, see VIENNE, COUNCIL OF) to settle the issue and to deal with questions of heresy and church reform. He opposed Philip by supporting the election and coronation (1312) of Henry VII as Holy Roman emperor, but later renounced Henry for his policies in Italy. The *Constitutiones Clementinae*, issued by the pope in 1313, are important in canon law. He was succeeded by John XXII.

Clement VI, 1291-1352, pope (1342-52), a Frenchman named Pierre Roger, successor of Benedict XII. His court was at Avignon. He had been archbishop of Sens, archbishop of Rouen, and cardinal (1338). The principal event of his pontificate was the PLAGUE known as the Black Death (1348-50), Clement did what he could for sufferers. He tried to stem the wave of anti-Semitism brought on by the plague, and he did much to protect the Jews. In Roman affairs Clement at first favored Cola di Rienzi, then helped to defeat him. He had a quarrel with Holy Roman Emperor LOUIS IV over the annulment of Margaret Maultasch's marriage; the struggle was aggravated by enmity between the pope and the German archbishops, caused by the elevation of Prague into an archbishopric, detaching it from Mainz. The

years before the Black Death were the heyday of papal AVIGNON, which Clement purchased (1348) from JOANNA I. Clement spent extravagantly, had an elegant court, patronized the arts, and vastly favored his relatives. He was completely pro-French. He was succeeded by Innocent VI.

Clement VII, antipope (1378-94) see ROBERT OF GENÈVA

Clement VII, c. 1475-1534, pope (1523-34), a Florentine named Giulio de' Medici, successor of Adrian VI. He was the son of Giuliano de' Medici, who was the younger brother of Lorenzo de' Medici, Clement was therefore first cousin of Pope Leo X. In 1513 he became a cardinal and as archbishop of Florence, was noted as a reformer. He was a chief supporter and adviser of Adrian in his attempts to reform the church. As pope, however, he proved to be unaware of the menace of Lutheranism to the church and certainly not the man for the opening battles of the Reformation. His relations with Holy Roman Emperor CHARLES V were never very cordial, since Clement allied himself with FRANCIS I of France in the League of Cognac (1526). As a result of his hostility to the emperor, the imperial troops under Charles de Bourbon attacked Rome in 1527, sacked the city, and held the pope for some months. Eventually (1529) peace was achieved between Clement and Charles V, and he crowned Charles emperor. About 1527 the first stage of the struggle of HENRY VIII of England against the church began. Clement's behavior in the matter of the divorce and the dispensations for a new marriage has been called vacillating, but when the situation became critical, he put the irrevocable Cardinal CAMPEGIO in charge of the case with Cardinal Wolsey. Later canon lawyers have steadily maintained that, whether he was influenced by Charles V or not, Clement followed the only course possible on legal grounds. He was a patron of Raphael, Michelangelo, and Benvenuto Cellini. He was succeeded by Paul III.

Clement VIII, 1536-1605, pope (1592-1605), a Florentine named Ippolito Aldobrandini, successor of Innocent IX. He reversed the policy of his predecessors by allying the Holy See with France rather than with Spain, which had assumed a dictatorial attitude over the papacy. Clement absolved HENRY IV of France after his abjuration of Protestantism, and the two rulers were thereafter on most friendly terms. Clement was distinguished for his piety, and he labored for the improvement of the clergy and of the charitable institutions of Rome. His confessors were St. PHILIP NERI and BARONIUS, whom he created cardinal. He was succeeded by Leo XI.

Clement XI, 1649-1721, pope (1700-1721), an Italian (b. Urbino) named Giovanni Francesco Albani, successor of Innocent XII. He was known in his youth for his prodigious learning and brilliance. He became cardinal in 1690. As pope he was involved in the struggle between France and Austria over the throne of Spain; he recognized PHILIP V but later was forced into recognizing Charles of Hapsburg, the other claimant. The chief spiritual concern of his pontificate was that of Jansenism (see under JANSEN, CORNELIS). The brief *Vineam Domini* (1705) condemned the Jansenist ideas on papal infallibility, and in 1713 he issued the bull *Unigenitus*, which condemned certain other Jansenist propositions. He was succeeded by Innocent XIII.

Clement XIV, 1705-74, pope (1769-74), an Italian (b. near Rimini) named Lorenzo Ganganelli, successor of Clement XIII. He was prominent for many years in pontifical affairs at Rome, and he was created cardinal in 1759. He was a Conventual Franciscan. He inherited from his predecessor the hostility of every state of Catholic Europe. Clement XIV's part in the suppression of the Jesuits (see JESUS, SOCIETY OF) has been greatly discussed; he was probably pressured into it. The suppression removed the pope's only independent support and put the church wholly into the hands of the secular princes. He was succeeded by Pius VI.

Clement, one of Paul's co-workers. Philip 4:3. He is traditionally identified with St. Clement.

Clement, Jacques (zhak klāman'), 1567-89, French Dominican monk, assassin of HENRY III of France. An adherent of the LEAGUE, he thought Henry a danger to the Church because of his recognition of a Protestant successor. Clement was killed by the king's attendants immediately after the stabbing.

Clemente, Roberto Walker, 1934-72, Puerto Rican baseball player, b. Carolina, Puerto Rico. He played his entire major league career with the Pittsburgh Pirates (1955-72) and was the mainspring of their successes for 18 years. He was one of 11 players to reach the 3,000-hit plateau. A right fielder, Clemente

was capable of throwing out a runner from his knees. He had a lifetime batting average of .317 and hit 240 home runs. He died in an airplane crash while attempting to take food and medicine to earthquake victims in Nicaragua in Dec., 1972. He is a national hero in Puerto Rico.

Clementi, Muzio (mōō'sēō klāmēn'tē), 1752-1832, Italian composer, pianist, and conductor. He wrote more than 100 piano sonatas, which set the definitive form, and he had an enormous influence on almost everything concerning the piano. Educated in Italy, he went (1766) to England to live and study. In 1773 he caused a sensation in London as a pianist, and he conducted the Italian Opera there from 1777 to 1780. In 1781 he went on a concert tour of Europe, which climaxed in a piano contest with Mozart, who disparaged his talents. He returned to London in 1782 and, except for tours on the Continent, spent the rest of his life there. Clementi amassed a fortune as performer, conductor, and proprietor of a piano factory and publishing house. Teacher of many musicians, including the pianists J. B. Cramer and John Field and the composer Meyerbeer, he is especially remembered for his series of etudes, *Gravitas ad Parnassum* (1817), he also wrote several symphonies. See catalog by A. Tyson (1967).

Clement of Alexandria (Titus Flavius Clemens), d. c.215, Greek theologian. Born in Athens, he traveled widely and was converted to Christianity. He studied and taught at the catechetical school in Alexandria until the persecution of 202. ORIGEN was his pupil there. He probably died in Caesarea, Cappadocia. Clement was one of the first to attempt a synthesis of Platonic and Christian thought, in this his successors in the Alexandrian school were more successful. Only a few works survive. The *Address to the Greeks* (*Protrepticus*) sets forth the inferiority of Greek thought to Christianity. Appended to the *Tutor* (*Pedagogus*) are two hymns, among the earliest Christian poems. His homily, *Who Is the Rich Man? Who Is Saved?* is a well-written fragment. The *Miscellanies* (*Stromateis*) is a collection of notes on Gnosticism. He attacked Gnosticism, but he himself has been called a Christian Gnostic. Although Clement remained entirely orthodox, in his writing he strove to state the faith in terms of contemporary thought. He was long venerated as a saint, but PHOTIUS, in the 9th cent., regarded Clement as a heretic. Because of Photius's contentions the name of Clement was removed from the Roman martyrology. See studies by E. F. Osborn (1957), W. E. G. Floyd (1971), S. R. Lilla (1971), and Morton Smith (1973).

Clement of Rome. see CLEMENT I, SAINT

Clements, Frederic Edward, 1874-1945, American plant ecologist and pioneer in the study of succession (see ECOLOGY), b. Lincoln, Nebr., grad. Univ. of Nebraska, 1894. From 1917 to 1941 he was in charge of ecological research at Carnegie Institution, Washington. Among his works are *Research Methods in Ecology* (1905), *Plant Succession and Indicators* (1928, repr. 1973), *Flower Families and Ancestors* (1928, with Edith Clements), *Plant Ecology* (1929, with J. E. Weaver), and *The Genera of Fungi* (1931, repr. 1965, with C. L. Shear).

Clemson University, mainly at Clemson, S.C., co-educational, land-grant, state supported, opened in 1893 as a college, gained university status in 1964. There are branches at Greenville and Sumter. The university includes programs in textile and computer research and maintains an institute in forestry, wildlife science, and marine biology.

Cleobis see BITON

Cleobulus (klēabyōō'las), fl. 6th cent. ? B.C., one of the SEVEN WISE MEN OF GREECE, tyrant of Lindus on Rhodes, and a writer of verse. He was said to have first put riddles in literary form.

Cleomedes (klēōmē'dēz, klēō'-), fl. 2d cent., Greek astronomer. In a treatise on the circular theory of heavenly bodies, he recorded several hypotheses, e.g., the earth's spherical form and the moon's revolutions, which were established by later scientists.

Cleomenes I (klēōm'tnēz), d. c.489 B.C., king of Sparta after 518 B.C. In accordance with Sparta's policy of helping oligarchies in other states at the expense of the tyrants or the people, Cleomenes joined the Athenians in ousting the tyrant Hippas, but to Cleomenes' dismay CLEISTHENES, the principal Athenian aristocrat, sided with the people and took the power (510 B.C.). Twice Cleomenes attacked democratic Athens. The first time he expelled Cleisthenes, who, however, quickly returned to power, thus halting Spartan influence. The second time Corinth checkmated Sparta by refusing to help in an attack that would have disturbed the balance of

power. Cleomenes' reputation for ruthlessness is due chiefly to his attack (c.494 B.C.) on Argos, in which he slaughtered 6,000 Argives—an exploit that gave Sparta hegemony in S. Greece for many years. **Cleomenes III**, c.260-219 B.C., king of Sparta (235-221 B.C.). He was probably the most energetic king Sparta ever had, a conscious imitator of AGIS III. In his determined effort to restore the prestige of the city, he began (227 B.C.) a war against the ACHAean LEAGUE and was successful in many battles. At home his reforms were revolutionary: the kingship was made the supreme power, the ephorate was abolished, and the citizenship was widely extended, apparently to decrease the danger of discontent and to ally the people with the king. Cleomenes came to his downfall suddenly in 222 B.C. (or possibly 221 B.C.) when the Achaean League, allied with ANTI-GONUS III of Macedon, routed the Spartan army. Cleomenes fled to Egypt to the protection of his patron, Ptolemy III. Imprisoned by Ptolemy's successor, he escaped, but, failing in an attempt to stir up a revolt in Alexandria, he committed suicide.

Cleon (klē'ōn), d. 422 B.C., Athenian political leader. The son of a tanner, he had little education, nevertheless, he was a gifted speaker. He began his political career with a series of relentless attacks on PERICLES. He was antagonistic to Sparta and successfully opposed (425 B.C.) Sparta's peace proposals. In the same year he was given command of the Athenian force blockading Sphacteria (an island at the mouth of the Bay of Pylos) and was brilliantly successful against the Spartans. Three years later he was given another command against the Spartans at Amphipolis, but he failed and was killed in action. His reputation as a vulgar and unprincipled demagogue is chiefly due to accounts by his enemies Thucydides and Aristophanes.

Cleopas (klēō'pās), one of the two who met the risen Jesus on the way to Emmaus. Luke 24:18. Perhaps the same as CLEOPHAS.

Cleopatra (klēōpā'trā, -pā'-, -pā'-), 69 B.C.-30 B.C., queen of Egypt, one of the great romantic heroines of all time. Her name was widely used in the Ptolemaic family, there were many earlier Cleopatras. The daughter of Ptolemy XI, she was married at the age of 17 (as was the family custom) to her younger brother PTOLEMY XII. The force and character of the royal pair was, however, concentrated in the alluring (though apparently not beautiful) and ambitious queen. She led a revolt against her brother, and, obtaining the aid of Julius Caesar, she won the kingdom, although it remained a vassal of Rome. Her young brother-husband was accidentally drowned in the Nile. She then married her still younger brother PTOLEMY XIII, but she was the mistress of Caesar and followed him to Rome, there she bore a son, Caesarion (later PTOLEMY XIV), who was said to be his. Returning to Egypt after the murder of Caesar and the battle of PHILIPPI, she was visited (42 B.C.) by Marc ANTONY, who had come to demand an account of her actions. He fell hopelessly in love with her, and Cleopatra, conscious of her royalty and even her claims to divinity as the pharaoh's daughter, seems to have hoped to use Antony to reestablish the real power of the Egyptian throne. They were married in 36 B.C. Most of the Romans feared and hated Cleopatra, and Octavian (later AUGUSTUS) undertook to destroy the two lovers. Antony and Cleopatra were defeated off Actium in 31 B.C., and, returning to Alexandria, they undertook to defend themselves in Egypt. When they failed, Antony committed suicide by falling on his sword. Cleopatra, faced by the cold and unmoved Octavian, also killed herself. Her schemes failed, but her ambition, capability, and remarkable charm have left a great impression on history. Shakespeare's Antony and Cleopatra, based on Plutarch, describes the tragic end of the queen's career, and Dryden's *All for Love* or, *The World Well Lost* is a reworking of Shakespeare. Caesar and Cleopatra, the comedy by G. B. Shaw, deals with the early years of her story. See biographies by Jack Lindsay (1971) and Michael Grant (1973), study by H. Volkmann (tr. 1958).

Cleopatra's Needles, name in popular use for two obelisks of red granite from Egypt. Originally erected at Heliopolis (c.1475 B.C.) by Thutmose III, they were transported to Alexandria (c.14 B.C.) under Augustus and in the 19th cent. were sent separately as gifts of Ismail Pasha to England (1878) and the United States (1880). The British ONEUSK, 68.5 ft (20.9 m) high, stands on the Thames embankment in London. The American one, 69.5 ft (21.2 m) high, is in Central Park in New York City. The hieroglyphic inscriptions of Thutmose III and Ramses II covering its sides have suffered more from erosion, because

of air pollution, in the few years since the stone came to the Western world than in the many centuries before it left Egypt.

Cleophas (klēō'fās), husband of one of the Marys who stood at the foot of the Cross. John 19:25. This is apparently Mary the mother of St. James the Less. Mat. 27:56, Mark 15:40. But the father of James the Less is Alphaeus. Mat. 10:3, Mark 3:18, Luke 6:15. An explanation is that Cleophas is the Aramaic form and Alphaeus the Greek form of the same name. Some identify CLEOPAS with Cleophas.

Clepsydra (klēp'sīdrā) or **water clock**, ancient device for measuring time by means of the flow of water from a container. A simple form of clepsydra was an earthenware vessel with a small opening through which the water dripped, as the water level dropped, it exposed marks on the walls of the vessel that indicated the time that had elapsed since the vessel was full. More elaborate clepsydres were later developed. Some were double vessels, the larger one below containing a float that rose with the water and marked the hours on a scale. A form more closely foreshadowing the clock had a cord fastened to the float so that it turned a wheel, whose movement indicated the time. A further step was the use of gear wheels and a turning pointer. It is believed that clepsydres were used in Egypt c.2000 B.C., from Egypt they were introduced into Greece and later from there into Rome.

clerestory or clearstory (both klēr'stōr'ē), a part of a building whose walls rise higher than the roofs of adjoining parts of the structure. Pierced by windows, it is chiefly a device for obtaining extra light.

Clerestory

It had an early use in certain Egyptian temples, as at Karnak, and was used later in the great halls of Roman basilicas. It became a characteristic element of medieval churches, receiving its fullest development in churches of the Gothic period.

clergy: see MINISTRY, MONASTICISM, ORDERS, HOLY

clergy, benefit of: see BENEFIT OF CLERGY

Clergy Reserves, those lands set apart in Upper and Lower Canada under the British Constitutional Act of 1791 "for the support and maintenance of a Protestant clergy." "Protestant clergy" was interpreted to mean the clergy of the Church of England. This interpretation was fiercely upheld by John Strachan and others but dissatisfied other Protestant denominations and became an issue in the Rebellion of 1837. The method of allotting reserves kept discontinuous plots out of cultivation and prevented settlement and the expansion of roads. An act of 1840 by the assembly of Upper Canada provided for the sale and distribution of the reserves, but this was disallowed by the British government. In 1854 the government finally passed a law secularizing the reserves, but the Anglican and Presbyterian churches retained the endowments that had been granted them.

Clericus, Johannes: see LE CLERC, JEAN

Clerk-Maxwell, James: see MAXWELL, JAMES CLERK

Clermont-Ferrand (klēmōn'-fērān'), city (1968 pop. 148,896), capital of Puy-de-Dôme dept., central France, in Auvergne, on the Tretaine River. It is an industrial center, home of the Michelin and other tire factories, and of important metallurgical works. The capital of the former province of Auvergne, it was formed in 1731 by the merger of Clermont and Montferrand. Clermont was built in Roman times near the site of Gergovia, which Vercingetorix held against Julius Caesar in 52 B.C. and which was later destroyed. An episcopal see since the 3d cent., it was the site of several church councils, notably that of 1095, where Pope Urban II preached the First Crusade (see CRUSADES). The city is picturesquely

situated near the Puy de Dôme peak. It is built largely of the dark volcanic rock of the region. The Gothic Cathedral of Notre-Dame (13th-14th cent.) and the Romanesque Church of Notre-Dame du Port (12th cent.) are among the notable buildings. Blaise Pascal was born in Clermont-Ferrand. There is a university (founded 1854) in the city.

Cletus (klĕ'təs) or **Anacletus, Saint** (ănăklĕ'təs), d. A.D. 88?, pope (A.D. 76–A.D. 88?), martyr, a Roman, successor of St. Linus and predecessor of St. Clement I. He is mentioned in the Canon of the Mass. Feast: April 26.

Cleve, Joos van* see CLEEF, JOOS VAN

Cleveland, Barbara Villiers, duchess of (vīl'ərz, vīl'yərz), 1641–1709, mistress of King Charles II of England. She became Charles's mistress at 8reda in 1660 and returned with him to England at the Restoration. The king made her husband, Roger Palmer, earl of Castlemaine. Lady Castlemaine was the arch-enemy of the earl of Clarendon, the lord chancellor, and her glee at his downfall (1667) is recorded in Pepys's diary. She was made duchess in 1670, but by 1671 had been supplanted in Charles's affections by Louise de Keroualle (the future duchess of Portsmouth). She had borne the king several children. See biographies by Margaret Gilmour (1941) and Allen Andrews (1970).

Cleveland, Frederick Albert, 1865–1946, American economist, b. Sterling, Ill., studied at DePauw Univ. and at the Univ. of Chicago, Ph.D. Univ. of Pennsylvania, 1900. He taught at the Univ. of Pennsylvania (1900–1903) and was professor of finance at New York Univ. (1903–5). He was a leader in budget reform and a member of several committees investigating public finances, serving as director (1907–17) of the bureau of municipal research in New York City and Philadelphia, as financial adviser (1910–13) to President Taft, and as financial adviser (1929–35) to the Chinese government. From 1919 until his retirement in 1939 he was professor of U.S. citizenship at Boston Univ. He wrote many books on finance and government, including *Funds and Their Uses* (rev. ed. 1922), *American Citizenship* (1927), and *Modern Scientific Knowledge* (1929).

Cleveland, Grover (Stephen Grover Cleveland), 1837–1908, 22d (1885–89) and 24th (1893–97) President of the United States, b. Caldwell, N.J., son of a Presbyterian clergyman. A lawyer in Buffalo, N.Y., he became (1882) the "veto mayor" who drove corruption from the city administration. He won the attention of Daniel MANNING and the reform Democrats and was elected governor of New York. Cleveland further built his reputation as an enemy of machine politics by breaking violently with the Tammany leader, John KELLY, and supporting the bills prepared by Theodore Roosevelt to improve the government of New York City. By 1884 he was a national figure, and he was nominated as Democratic "clean-government" candidate for President to oppose James B. BLAINE. Cleveland, hated by Tammany and favored by political reformers, got the votes of many reform Republicans—the "mugwumps," who voted against their party. The campaign was notably bitter and was marked by the "Rum, Romanism, and Rebellion" speech of a Blaine supporter, which deeply offended Roman Catholics and may have swung the vote to Cleveland in the key state of New York. Cleveland as President continued his independent, conscientious, but conservative course. He did not go far enough in civil service reform to satisfy the zealots, but at the same time by keeping Republican government employees who were not "offensive partisans" he offended the Democratic spoilsmen. Cleveland was continually at odds with the Republican-controlled Senate. The surplus revenue accumulating in the treasury largely because high Civil War tariffs were still in force fostered much "pork barrel" legislation. Cleveland vetoed such laws and argued for a lower tariff, devoting the whole of his annual message to Congress in 1887 to the question. The tariff was a major issue in the 1888 election. Cleveland received a popular majority but lost the electoral majority to his Republican opponent, Benjamin HARRISON. A romantic note in his first administration was his marriage (1886) in the White House to his former ward, Frances Folsom. In 1889 he retired to private life as a New York City lawyer, but opposition to measures of the Republican administration, notably the McKinley Tariff Act of 1890, brought him a new following. In 1892 he was again elected President. The Panic of 1893 struck a hard blow at his administration. Though the more radical Democrats saw salvation in free coinage of silver, the independent President sought to improve the economic situation by securing repeal of the SHER-

MAN SILVER PURCHASE ACT with the help of conservative Republicans. Cleveland still urged lower tariffs, although the best opportunity had passed, since the treasury now had a deficit rather than a surplus. The Wilson Bill, embodying Cleveland's tariff ideas, passed the House of Representatives but was so altered by Senator A. P. GORMAN and other protectionist Democrats that Cleveland, in disgust, refused to sign it. The rift between the President and the radical Democrats widened, especially over the gold standard, which Cleveland upheld. In the Pullman strike in 1894, Cleveland, on the grounds that the movement of U.S. mail was being halted by the strikers under Eugene V. DEBS, sent troops into the area over the protest of Gov. J. P. ALTGELD of Illinois. The strike was broken by the use of Federal injunctions and the arrest of the strike leaders. In foreign affairs both of Cleveland's administrations were marked by a strong stand on the VENEZUELA BOUNDARY DISPUTE, which called forth a statement greatly enlarging the scope of the Monroe Doctrine. He refused to recognize the government set up in Hawaii by a revolution that was engineered by Americans who expected speedy annexation to the United States (although he recognized the republic in 1894), and he tried to discourage support of the revolutionists in Cuba. The more radical wing of the Democrats—the silver Democrats—got control of the party in 1896 and nominated William Jennings Bryan, repudiating Cleveland. His strong second term had put him at odds with many (he was nicknamed the Great Obstructionist), and his *Presidential Problems* (1904) was mainly a defense of his own attitude on some of the major issues. Cleveland's independence and conscientiousness in office marked him as a man of courage and personal integrity. See biographies by Robert McElroy (1923), Allan Nevins (1932), H. S. Merrill (1957), and R. G. Tugwell (1968).

Cleveland or Cleveland, John, 1613–58, English poet and political satirist. He served the royalist cause both as soldier and poet. His best-known work was *The Rebel Scot* (1644). Though his contemporary fame was great, and his works originally went through 20 editions, he is known today chiefly for the lyrics "Fuscará" and "Mark Antony." See editions of his poems by J. M. Berdan (1911) and by Brian Morris and Eleanor Withington (1967).

Cleveland, nonmetropolitan county (1972 est. pop. 567,000), NE England, created under the Local Government Act of 1972 (effective 1974). It is composed of the county boroughs of Harlepool and Teesside and parts of the former counties of Durham and Yorkshire (North Riding).

Cleveland, 1 City (1970 pop. 13,327), seat of Bolivar co., NW Miss., in the rich delta cotton country, inc. 1886. It is a farm market center (rice and soybeans are also grown in the area), and its manufactures include pharmaceuticals, aluminum doors, tiles, and pens and pencils. The city is the seat of Delta State College and has a coliseum. 2 City (1970 pop. 750,879), seat of Cuyahoga co., NE Ohio, a port of entry on Lake Erie at the mouth of the Cuyahoga River, laid out (1796) by Moses Cleaveland, chartered as a city 1836. Ohio's largest city and the tenth largest in the United States (1970), it is a great ore port, a large Great Lakes shipping point, and one of the nation's leading iron and steel centers. In addition to many metallurgical manufactures, it has chemical, oil-refining, electrical, automobile, garment, and food-processing industries. There are also numerous research firms, the National Aeronautics and Space Administration has a large research center there, and the research laboratory headquarters of the General Electric Company are in nearby Nela Park. Cleveland grew rapidly after the opening of the first section of the Ohio and Erie Canal in 1827 and the arrival of the railroad in 1851. Its central location midway between the coal and oil fields of Pennsylvania and (via the Great Lakes) the Minnesota iron mines spurred its industrialization, it was there that John D. Rockefeller began his oil dynasty. Cleveland is the seat of Case Western Reserve Univ., Cleveland State Univ., John Carroll Univ., Notre Dame College, St. John College of Cleveland, Ursuline College, Ohio College of Podiatric Medicine, St. Mary Seminary, the Cleveland Institute of Art, the Cleveland Institute of Music, and a large community college. The many points of interest include the Mall (civic center), the Terminal Tower, the Western Reserve Historical Society Museum, the museum of natural history, with a planetarium, Wade Park, with the Cleveland Museum of Art and the Fine Arts Garden, Rockefeller Park, enclosing the Shakespeare and Cultural Gardens, Severance Hall, where con-

certs of the Cleveland Symphony Orchestra are performed, Gordon Park, with an aquarium, a museum of historical medicine, and Cleveland zoo. The city also has a fine public library. The *Cleveland Plain Dealer* is a nationally known newspaper. In Lake View Cemetery are the graves of James A. Garfield, Mark Hanna (who made his fortune in Cleveland), John Hay, and John D. Rockefeller. Although the city has been a leader in urban renewal and slum clearance projects, it was plagued during the 1960s by racial disorders, especially in the Hough and Glenville sections, riots in the summer of 1968 resulted in 11 deaths and much property damage. See W. H. Alburn and M. R. Alburn, *This Cleveland of Ours* (4 vol., 1933), E. J. Benton, *Cultural Story of an American City: Cleveland* (3 vol., 1943–46), E. H. Chapman, *Cleveland Village to Metropolis* (1964). 3 City (1970 pop. 20,561), seat of Bradley co., SE Tenn., in a farm and timber area, inc. 1838. Lee College and two junior colleges are there. Cleveland is headquarters of Cherokee National Forest.

Cleveland Heights, city (1970 pop. 60,767), Cuyahoga co., NE Ohio, a residential suburb of Cleveland, inc. 1903. It is known for its beautiful homes. Forest Hills Park, once part of an estate owned by John D. Rockefeller, offers recreational facilities.

Cleveland Orchestra, one of the foremost orchestras in the United States. It gave its first performance in 1918 under the direction of Nikolai Sokoloff, who was conductor until 1933. In its early years the orchestra played in the Cleveland Masonic Temple, but in 1931 it moved into Severance Hall, the gift of John L. Severance. Sokoloff was succeeded as conductor by Artur Rodzinski (1933–43) and Erich Leinsdorf (1943–44), but the orchestra's peak of fame was achieved under the direction of George SZELL (1946–71). Szell, a perfectionist and disciplinarian, brought the orchestra to international attention, leading it on several European tours. He was succeeded by Lorin Maazel.

Cleveland State University, at Cleveland, Ohio, coeducational, founded 1964, incorporating Fenn College (est. 1923). The university consists of six colleges, including graduate studies and law. Among its research facilities are an Institute of Urban Studies and a Computer Center.

Cleves (klĕvz), Ger. Kleve or Cleve, city (1970 pop. 43,447), North Rhine-Westphalia, W. West Germany, near the Dutch border. Its manufactures include shoes and food and tobacco products. It is a rail junction and popular resort. Among its noteworthy buildings are the collegiate church (14th–15th cent.), which contains the tombs of the dukes of Cleves, and the 11th-century Schwanenburg [Ger. = swans' castle], which is associated with the legend of Lohengrin.

Cleves, duchy of, former state, W. West Germany, on both sides of the lower Rhine, bordering on the Netherlands. Cleves was the capital. A county from late Carolingian times, it acquired (late 14th cent.) the county of Mark, in Westphalia, and in 1417 was made a duchy. In 1521, Duke John III of Cleves inherited through marriage the duchies of Julich and Berg and the county of Ravensberg. His daughter, Anne of Cleves, was married in 1540 to Henry VIII of England. In 1609 the male line became extinct, and a complicated dynastic quarrel for the succession followed. Brandenburg acquired (1614) Cleves, Mark, and Ravensberg, the Palatinate-Neuburg line of the Bavarian house of Wittelsbach took Julich and Berg. The succession was not finally settled until 1666, when the Treaty of Cleves confirmed the division. Cleves was held by France during the French Revolutionary Wars and in 1815 was returned to Prussia.

Clew Bay, inlet of the Atlantic Ocean, c. 15 mi (25 km) long and 10 mi (16.1 km) wide, Co. Mayo, W. Republic of Ireland. There are about 300 islands in the eastern part of the bay, some of which are cultivated. Clare Island is at the entrance.

Clews, Henry, c. 1836–1923, American financier, b. England. He emigrated to the United States c. 1850 and joined an import business as a junior clerk. In 1859 he cofounded the banking firm that later became Livermore, Clews, and Company, the second largest marketer of Federal bonds during the Civil War. His own firm, Clews and Company, was formed in 1877. Refusing public office, he nevertheless organized the "Committee of 70," which deposited the Tweed Ring in New York City. He served as President Grant's economic consultant in Japan and wrote and lectured widely on diverse social, political, and economic issues. He wrote *Fifty Years in Wall Street* (1908).

Cliburn, Van (Harvey Lavan Cliburn) (klī'bərən), 1934–, American pianist, b. Shreveport, La. Until

1951, Cliburn studied with his mother, a concert pianist. He later became a pupil of Rosina Lhevinne at the Juilliard School of Music. Cliburn was catapulted to fame as winner of the 1958 International Tchaikovsky Piano Competition in Moscow. His superb technique and romantic interpretations are especially well-suited to Romantic music.

Clichy (klĕshĕ'), suburb N of Paris (1968 pop. 52,704), Hauts-de-Seine dept., N central France. It is a modern industrial city with iron works, automobile parts, metal products, machinery, and plastics are also manufactured. Clichy was once a residence of Merovingian kings and was called Clippiacum in Latin. Dagobert I, king of the Franks, also resided there (7th cent.). The Church of St. Vincent de Paul, named for the saint who was parish priest to Clichy, is a major landmark.

click beetle, common name for members of the widespread BEETLE family Elateridae. Also called elater beetle, the click beetle has a hinge across the front of the body that allows it to flex, and a spine-and-groove arrangement on the underside of the body that provides a snapping mechanism. When a click beetle is turned on its back it cannot right itself by rolling onto its short legs. It arches its body upward so that only the ends touch the ground, then straightens suddenly, causing the spine to slide into the groove. This sends the beetle spinning through the air and produces a loud click. If the beetle lands on its back again it repeats the performance. A click beetle also snaps its body when it is picked up, which may cause the predator to drop it. Click beetles have long, flat bodies, generally rectangular, but curved at the ends. They range in length from 1/4 in. to 4 in. (6.4–102 mm), most are black or brown. Most adults are nocturnal leaf-eaters. The larvae, called WIREWORMS, are destructive to a large variety of plants. Some tropical click beetles are brilliantly luminescent. Click beetles are classified in the phylum ARTHROPODA, class Insecta, order Coleoptera, family Elateridae.

cliff dwellers, American Indians of the Anasazi culture who were builders of the ancient cliff dwellings found in the canyons and on the mesas of the U.S. Southwest, principally on the tributaries of the Rio Grande and the Colorado River in New Mexico, Arizona, Utah, and Colorado. It was once thought that these ruins were the work of an extinct aboriginal people, but it has been established that they were built (11th–14th cent.) by the ancestors of the present PUEBLO INDIANS. The dwellings were large communal habitations built on ledges in the canyon walls and on the flat tops of the mesas. Access to the cliffs was very difficult and thus highly defensible against nomadic predatory tribes such as the Navaho. The cliff dwellers were sedentary agriculturists who planted crops in the river valleys below their high-perched houses. They were experts at irrigating the fields. Their lives were organized on a communal pattern, and the many kivas (see KIVA) show that their religious ceremonies were like those of the Pueblo Indians today. Many of the dwellings are now in national parks. Some of the better-known ones are those of the Mesa Verde National Park, in Colorado, where there are more than 300 dwellings, Yucca House National Monument, also in Colorado, Hovenweep National Monument, in Utah, and Casa Grande, Montezuma Castle, and Wupatki national monuments, in Arizona. See William Current, *Pueblo Architecture of the Southwest* (1971).

Clifford, Clark McAdams, 1906–, U.S. government official, b. Fort Scott, Kansas. Admitted to the bar in 1928, he engaged in private practice before serving (1944–46) in the U.S. navy during World War II. As special adviser (1946–50) to President Harry S. Truman, Clifford was influential in foreign policy and defense matters, helping to formulate the Truman Doctrine (1947) and the legislation that created (1949) the Department of Defense. He also planned Truman's successful campaign strategy in 1948. After a period of private law practice, Clifford served (1961–63) as a foreign policy adviser to President John F. Kennedy and then became (1963) chairman of the Foreign Intelligence Advisory Board. In this capacity he supervised all U.S. espionage operations and played a crucial role in determining U.S. military policy in Vietnam. Clifford also served (1968–69) as Secretary of Defense in Lyndon B. Johnson's cabinet.

Clifford of Chudleigh, Thomas Clifford, 1st Baron (chŭd'le), 1630–73, English statesman. Member (1667–73) of the CABAL at Charles II's court, he held a number of offices, rising to be acting secretary of state and lord treasurer (1672). He was created Baron Clifford in 1672. Henry Bennet, earl of Arlington,

and Clifford, both alleged Roman Catholics, knew of the secret clauses of the Treaty of Dover (1670), which provided for the reestablishment of Roman Catholicism in England. He was forced to resign by passage of the Test Act (1673), which excluded Roman Catholics from office. He died soon afterward, possibly by suicide.

Cliffside Park, borough (1970 pop. 14,387), Bergen co., NE N.J., on the palisades above the Hudson River, opposite New York City, inc. 1895. A residential suburb, it has some light industry.

Clifton, industrial city (1970 pop. 82,437), Passaic co., NE N.J., on the Passaic River, settled 1685, set off from Passaic and inc. 1917. It has steel, textile, chemical, and electronic industries.

climacteric: see MENOPAUSE

climate, average weather condition over a long period of time, taking into account temperature, precipitation (see RAIN), HUMIDITY, WIND, barometric pressure, and other phenomena. The major influence governing the climate of a region is its latitude, and this is modified by one or more secondary influences including position relative to land and water masses, altitude, TOPOGRAPHY, prevailing winds, OCEAN currents, and prevalence of cyclonic storms. A broad latitudinal division of the earth's surface into climatic zones includes the equatorial zone, or DOLDRUMS, characterized by high temperatures with small seasonal and diurnal change and heavy rainfall, the subtropical, including the trade-wind belts and the HORSE LATITUDES, a dry region with uniformly mild temperatures and little wind, the intermediate, the region of the prevailing westerlies that, because of several secondary influences, displays wide temperature ranges and marked changeability of weather, and the polar, a region of short summers and long winters, where the ground is generally perpetually frozen (see PERMAFROST). The transitional climate between those of the subtropical and intermediate zones, known as the Mediterranean type, is found in areas bordering the Mediterranean Sea and on the west coasts of continents. It is characterized by mild temperatures with moderate winter rainfall under the influence of the moisture-laden prevailing westerlies and dry summers under the influence of the horse latitudes or the trade winds. Climatic types combining the basic factor of latitude with one or more secondary influences include the continental and the marine. Except in the equatorial region, the continental type is marked by dry, sunny weather with low humidity and seasonal extremes in temperature, noteworthy are the Sahara (with the highest temperature on record, 136°F, or 58°C, at Tripoli) and Siberia (with the lowest recorded surface temperature, –93.6°F, or –70°C, at Verkhoyansk). The marine is characterized by small annual and diurnal temperature variation and by copious rainfall on the windward side of coastal highlands and mountainous islands, notable is the mean annual precipitation of 451 in. at Mt. Waialeale, Hawaii. The coastal, or littoral, climate is one in which the direction of the prevailing winds plays a dominant role—the east coasts having generally the heavier rainfall in the trade-wind belts, the west coasts in westerly belts. Both coasts have a climate resembling the continental during the season when the wind is blowing from the interior of the continent. An instance of the coastal type, in which the precipitation is accentuated by the nearness of a mountain barrier, is the west coast of North America from Alaska to Oregon, where the mean annual precipitation averages 80 to 100 in., almost all of it falling during the winter months. Also included are the mountain and plateau climates, where elevation is the dominant factor (the temperature decreasing about 3°F per 1,000 ft., or 5.5°C per 1,000 m, of ascent and rainfall increasing with altitude up to about 6,000 ft./1,800 m, then decreasing with further elevation). Climatology, the science of climate and its relation to plant and animal life, is important in many fields, including agriculture, aviation, medicine, botany, zoology, geology, and geography. The effect of climate on man is sometimes thought to explain the relatively greater development of lands having a variable climate, usually in middle latitudes, where the annual temperature range is conducive to both mental and physical activity. Changes in climate affect the plant and animal life of a given area. Fossils of animals discovered in North America, Greenland, and Siberia and the presence of coal beds in North America and Europe, on one hand, and evidence of glaciation in these same areas, on the other, indicate that they must have experienced alternately warmer and colder climates than they now possess. Despite yearly fluctuations of climatic elements, there has been, appar-

ently, little overall change during the period of recorded history. Climatic cycles (variations in weather elements that recur with considerable regularity) have been claimed to exist, the 35-year cycle postulated by Eduard Bruckner, German geographer and meteorologist, was well investigated in Europe, and an 11-year sunspot cycle has been advanced. There is currently much concern that human activities are changing the earth's climate in harmful ways. For example, some scientists believe that the release of large quantities of gases and particulates into the atmosphere from the burning of fuel and from industrial processes is at least partly responsible for a slight lowering of mean temperatures throughout the world. If the trend continues, another ice age may be triggered. See Robert Silverberg, *The Challenge of Climate* (1969), H. H. Lamb, *Climate Present, Past and Future* (Vol. 1, 1972).

Climax, Saint John: see JOHN CLIMAX, SAINT

climax community: see ECOLOGY

climbing perch or walking fish, member of the labyrinth fish family, adapted to living in oxygen-depleted water or on dry land. It is not related to the true perch. Labyrinth fishes are spiny-finned fishes of Africa and SE Asia, which have a labyrinthine chamber over the gills that enables them to absorb and retain atmospheric oxygen. Members of some species can remain out of water for several days and will even suffocate (drown) if held under water. The climbing perch, *Anabas testudineus*, of SE Asia, is brown and reaches a length of 10 in. (25 cm). Climbing perches travel in search of water when their ponds dry up, they walk with jerky movements, supported by the spiny edges of the gill plates and propelled by the fins and tail. They are said to climb low trees. The family also includes the PARADISE FISHES, the BETTA, and the GOURAMI, all are popular aquarium fishes. The land-walking MUDDSKIPPER is of a different family. Climbing perches are classified in the phylum CHORDATA, subphylum Vertebrata, class Osteichthyes, order Perciformes, family Anabantidae.

climbing plant, any plant that in growing to its full height requires some support. Climbing plants may clamber over a support (climbing rose), twine up a slender support (hop, honeysuckle), or grasp the support by special processes such as adventitious aerial roots (English ivy, poison ivy, trumpet creeper), tendrils (see TENDRIL), or hook-tipped leaves (gloriosa lily, rattan). Some climbing plants when not supported become trailing plants (English ivy). Climbing types are to be found in nearly every group of plant, e.g., the ferns (climbing fern), palms (rattan), grasses (some bamboos), lilies (gloriosa lily), and cacti (night-blooming cereus). Tropical kinds—usually called lianas—are particularly abundant. A sturdy vine may strangle a supporting tree, and then, as the strangler fig, become a tree itself.

Clinch, river, c. 300 mi (480 km) long, formed by the junction of two forks in SW Va., and flowing generally SW across E Tenn. to the Tennessee River at Kingston. Its waters and those of its tributary, the Powell, are used to make a reservoir at Norris Dam, at its mouth the Clinch forms Watts Bar Reservoir. The river is thus an important part of the system of the Tennessee Valley Authority. In late colonial days the Clinch was one of the routes for settlers going to Tennessee.

cline, in biology, any gradual change in a particular characteristic of a population of organisms from one end of the geographical range of the population to the other. Gradients of characteristics usually accompany, and are responses to, environmental gradients, for example, a mountain range features gradients from top to bottom such as a temperature gradient (colder to warmer) and a humidity gradient (wetter to drier). In species of birds and mammals, there is usually a cline in body size, with smaller individuals in warm climates and larger individuals tending to be found in colder climates.

Clingmans Dome, mountain, Tenn. see GREAT SMOKY MOUNTAINS

clinic, name for an institution providing medical diagnosis and treatment for ambulatory patients. The forerunner of the modern clinic was the dispensary, which dispensed free drugs and served only those who could not afford to pay a fee. Dispensaries began to appear in London toward the end of the 17th cent. In the United States the first dispensary was founded in Philadelphia in 1786 through the efforts of Benjamin Rush. Another was established in New York City in 1791, and one in Boston in 1796. Home care was often provided by the early clinics, but later they evolved as places for treatment of those who could visit them. As the clinic movement grew and

concern for public health increased, facilities for providing diagnosis and treatment improved. Present-day clinics are maintained by private and city hospitals, by city health departments, by industrial and labor organizations, and by groups of private physicians. Some clinics specialize in vaccination and other measures to prevent infectious disease. Some are established to promote the health of babies and mothers. Others exist to facilitate the diagnosis of tuberculosis or cancer so that these diseases may be treated as early as possible. There are also clinics concerned with mental health. Clinics designated as health centers offer all the health services that are considered essential. They provide free, comprehensive service for people who cannot afford private care. In some areas mobile units travel from place to place providing various kinds of medical and dental care. Clinics maintained by industrial and labor organizations are often free for members, but others charge a nominal fee, in hospital clinics the fee is usually based on the individual's ability to pay.

Clink, district in Southwark, a Greater London borough, England. The Clink prison was used from the 13th cent as a detention place for heretics. Its name is now a slang term for a prison or jail.

Clinton, De Witt, 1769-1828, American statesman, b. New Windsor, N.Y., son of James CLINTON. He was admitted (1790) to the New York state bar but soon became secretary to his uncle, George CLINTON, first governor of the state, and in that position (1790-95) he gained considerable political experience and influence at an early age. In 1797 he entered the state legislature. As a U.S. Senator (1802-3), Clinton introduced the Twelfth Amendment to the Constitution and opposed sentiment for hostilities against Spain. In 1803 he became mayor of New York City, and in 10 annual terms (between 1803 and 1815) he promoted public education, city planning, city fortifications, public sanitation, and relief for the poor. While mayor he was successful in dictating the nomination of two governors. Clinton also held office as state senator (1806-11) and lieutenant governor (1811-13). He advocated removal of the political disabilities of Roman Catholics, abolition of slavery, and amelioration of severe punishment for debt and misdemeanors. He ran unsuccessfully for President against James Madison in 1812, with support from both Federalists and Republicans. As canal commissioner after 1810, Clinton sponsored the ERIE CANAL and the Champlain-Hudson Canal. From 1817 to 1823 he was governor. Clinton continued to give constant support to the canal projects, but in 1824, after suffering temporary political reverses and through the opposition of the ALBANY REGENCY and TAMMANY, he was deprived of his post as canal commissioner. Again governor from 1825 until his death, Clinton celebrated the completion of the canals and promoted public and normal schools, manufacturing, and legal reform. See biography by Dorothy Bobbe (1933, rev. ed. 1962), H. L. McBain, *De Witt Clinton and the Origin of the Spoils System* (1907, repr. 1967), Dixon Ryan Fox, *Decline of Aristocracy in the Politics of New York* (1919, repr. 1965).

Clinton, George, c. 1686-1761, colonial governor of New York (1743-53), b. England, father of Sir Henry Clinton. He entered (1708) the British navy and rose to the rank of admiral in 1747. Through family connections, Clinton was appointed (1741) governor of New York and arrived in the colony in 1743. Under the influence of James DeLancey he tried to conciliate the assembly and acquiesced on the issue of increased legislative control over revenues. Clinton later quarreled with DeLancey, his attempts to regain his lost powers failed, and his administration resulted in a permanent weakening of royal government in New York. Clinton was recalled (1753) to England and later served (1754-60) in Parliament.

Clinton, George, 1739-1812, American statesman, Vice President of the United States (1805-1812), b. Little Britain, N.Y. Before he was 20 he served on a privateer and, in the French and Indian War, accompanied the regiment of his father, Charles Clinton, in the expedition against Fort Frontenac led by John Bradstreet. After studying law in New York City he began practice in Ulster co. and was elected (1768) to the provincial assembly, where he became a leader of the anti-British faction. In 1775, Clinton was elected one of the state's delegates to the Second Continental Congress. Military duties as a brigadier general in the Continental Army prevented his signing the Declaration of Independence. Clinton's defense of the Hudson, although courageous, resulted in the capture of Fort Clinton and Fort Montgomery by the British general, Sir Henry CLINTON.

Under the new state constitution, which George Clinton helped to frame, he was elected (June, 1777) the first governor of New York state. His energy and leadership as governor for six successive terms (1777-95) led to his being called the father of New York state. He managed trade and public welfare problems ably, and he successfully settled the Indian troubles in W. New York. He advanced New York's claims to the NEW HAMPSHIRE GRANTS (now Vermont), initiated action on building canals (later realized by his nephew, De Witt CLINTON), and unsuccessfully fought the transfer from New York to the United States of the right to collect duties at the port of New York. An advocate of state sovereignty, Clinton was one of the chief opponents of the Federal Constitution, writing seven letters against ratification, signed Cato, in the *New York Journal*. These were answered by Alexander HAMILTON in his letters, signed Caesar, in the *Daily Advertiser*. Clinton's views on the Constitution were opposed by a rapidly growing party, the Federalists, under the leadership of John JAY Jay, running against Clinton for governor, lost the election of 1792 only by a questionable manipulation of returns on the part of the Clintonians, and in 1795 Jay won with ease, Clinton having declined to become a candidate. As a result of his alliance with the Livingstons and Aaron Burr, Clinton became governor for a seventh term in the Republican triumph of 1800. In 1804 he was elected Vice President for President Jefferson's second term. He sought the presidency in 1808, having won support for that office in previous elections, but again he received only the vice presidency, this time under James Madison. See his *Public Papers* (ed. by Hugh Hastings and J. A. Holden, 10 vol., 1899-1914), E. W. Spaulding, *His Excellency George Clinton* (1938, repr. 1964) and *New York in the Critical Period, 1783-1789* (1932, repr. 1960).

Clinton, Sir Henry, 1738?-1795, British general in the American Revolution, b. Newfoundland, son of George Clinton (1686?-1761). He was an officer in the New York militia and then in the Coldstream Guards. He had distinguished himself in America by service in the French and Indian Wars long before he arrived in Boston in 1775 with the reinforcements for Gov. Thomas Gage. He took part in the battle of Bunker Hill (1775), commanded (1776) an unsuccessful expedition against Charleston, S.C., and served under Sir William HOWE in the battle of Long Island, in the occupation of New York, and at White Plains. In 1777 he headed the British occupation of Rhode Island. When Howe moved on Philadelphia, Clinton assumed the command of New York. He did not fulfill the part expected of the New York command in the British strategy that resulted in defeat with the SARATOGA CAMPAIGN, he advanced up the Hudson valley, capturing the patriot strongholds of Fort Clinton (strongly defended by James Clinton) and Fort Montgomery, but after burning Kingston he turned back. Sir Henry (knighted 1777) succeeded Howe in the supreme command in America in 1778. Acting on orders from London, he evacuated Philadelphia and, after Washington's attempt to halt him failed (see MONMOUTH, BATTLE OF), he reached New York. He complained that Lord George Germain did not answer his requests for supplies and twice tried to resign. In Dec., 1779, he left Baron KNYPSHAUSEN in command in New York and redeemed his failure of 1776 by capturing Charleston (1780). After placing Cornwallis in command in the Carolinas, he returned to New York. In 1781, expecting Washington to attack, he remained in New York too long and failed to aid Cornwallis in the YORKTOWN CAMPAIGN. He resigned and was succeeded by Sir Guy CARLETON. He was later (1794-95) governor of Gibraltar. He recorded his campaigns from 1775 to 1782 (published in 1954 as *The American Rebellion*, ed. by W. B. Willcox). Cornwallis criticized his account, and the controversy between the two continued until Clinton's death. See W. B. Willcox, *Portrait of a General* (1964).

Clinton, James, 1733-1812, American Revolutionary general, b. Orange co., N.Y., brother of George Clinton and father of De Witt Clinton. He served in the French and Indian Wars and early in the Revolution took part in the disastrous Quebec campaign. His most noted exploit was his heroic but futile defense of Fort Clinton (near Kingston, N.Y.) against the British drive up the Hudson valley under Sir Henry CLINTON. In 1777 James Clinton later fought (1779) with Gen. John Sullivan against the Indians and served at Yorktown (1781).

Clinton, 1. Resort town (1970 pop. 10,267), Middlesex co., S. Conn., on Long Island Sound, settled 1663, set off from Killingworth and inc. 1838. A monu-

ment commemorates the early years of the school that later became Yale Univ. 2. City (1970 pop. 34,719), seat of Clinton co., E. central Iowa, on the Mississippi, in a rich corn and livestock area, inc. 1859. An industrial and rail center, it has food-processing (especially corn) and diverse manufacturing industries. Clinton grew as a lumbering town and in the 1880s was the greatest sawmill center in the Midwest. Two junior colleges are there. 3. Industrial town (1970 pop. 13,383), Worcester co., E. central Mass., on the Nashua River, near Wachusett Reservoir, in a farm and wooded area, settled c. 1654, set off from Lancaster and inc. 1850. Once an important textile center, it now has chemical and metallurgical industries.

Clio: see MUSES

clipper, type of sailing ship, designed for speed. Long and narrow, the clipper had the greatest beam aft of the center, the bow cleaved the waves, and the ship carried, besides topgallant and royal sails, skysails and moonrakers—a veritable cloud of sails. The type originated in the United States. Baltimore clippers and Atlantic packet ships were the forerunners of the true Yankee clipper, which may be said to have emerged with the *Ann McKim*, completed in Baltimore in 1833. The Yankee clipper was brought to perfection by Donald McKay of Boston, who built such vessels as the *Flying Cloud*, the *Glory of the Seas*, and the *Lightning*. U.S. and British clippers came to be known as China clippers because they utilized their speed to carry on a flourishing China trade in tea and opium. Clippers sailed from the U.S. Atlantic coast around Cape Horn to California in the days of the gold rush. They steadily reduced the time for their long voyages and held famous races. The clipper came into being only after its finally successful rival, the steamship, was engaging in transoceanic voyages. In the early days the clipper easily outran the plodding steam vessel, but, ironically, the improved steamship began to forge ahead even as some of the fastest and most beautiful clippers were being built. When the *Cutty Sark*, one of the swiftest and most celebrated British clippers, was completed at Dunbarton, Scotland, in 1869, the era of the commercial sailing ship had nearly come to an end. See Howard I. Chapelle, *The History of American Sailing Ships* (1935).

Clipperton Island, uninhabited atoll, c. 2 sq. mi (5.2 sq. km), in the Pacific Ocean, c. 800 mi (1,290 km) SW of Mexico. It was used as a base by John Clipperton, an English pirate. The French claimed it in 1858, the Americans held it for a time in the Spanish-American War, and Mexican troops occupied it in 1897. The conflict between France and Mexico was referred to the king of Italy for arbitration in 1908. The award was made (1931) in favor of France, and Mexico surrendered the island in 1932.

Clisson, Olivier de (ôlèv'ä' da klësôn'), 1336-1407, French soldier, b. Brittany. He fought on the English side in the War of the BRETON SUCCESSION but entered the French service as companion in arms to Bertrand Du Guesclin. In 1380 he became constable of France. He defeated (1382) the insurgents of Ghent under Philip van ARTEVELDE at Roosebeke. One of the MARMOUSETS, he made use of his position to satisfy his boundless avidity, he became one of the richest men of his time. After King Charles VI became (1392) insane, Clisson retired to Brittany, where he served as guardian of the duchy after the death (1399) of Duke John de Montfort.

Clisthenes: see CLEISTHENES

Clive, Kitty (Catherine Raftor), 1711-85, English singer and actress. She made her debut (c. 1728) at Drury Lane under the management of Colley Cibber and worked for many years with David Garrick, with whom she never got along. Her charm, wit, and vivacity, linked with a fine singing voice, brought her great success in light comedy and farce. She was a friend of Samuel Johnson, of Fielding, in whose plays and adaptations she appeared, and of Horace Walpole, who gave her a cottage, Clive's-Den, upon her retirement. There she held an informal salon and wrote several farces. She was painted by Hogarth.

Clive, Robert, Baron Clive of Plassey (pläs'ë), 1725-74, British soldier and statesman. He went to India in 1743 as a clerk for the British East India Company and entered the military service of the company in 1744, he soon distinguished himself in the fighting against the French. Clive's brilliant capture of Arcot (1751) and the relief of the siege of Trichinopoly (1752) thwarted DUPLEX, who had been on the verge of achieving French hegemony in S. India. In 1757, Clive, then governor of Fort St. David

near Madras, recovered Calcutta from the nawab of Bengal, Siraj-ud-daula. Then, after defeating the nawab at Plassey, he replaced him with the more compliant Mir Jafar. Bengal thus passed under effective British control, and Clive became the first governor. His victories over the Dutch at Biderra (1759) consolidated the British position as the dominant European power in India. Returning (1760) to England, he was given an Irish peerage as Baron Clive of Plassey. As governor of Bengal again from 1765 to 1767, Clive greatly reduced corruption and inefficiency in a formerly disordered administration and reached a settlement with the states of Bihar and Orissa. But his assumption of the right to collect the revenues of those states involved the company in the complexities of wide territorial administration, which it was ill equipped to handle. This was one of the factors that eventually led the British government to assume responsibility for British rule in India. After his return to England, Clive was bitterly attacked by politicians and others and was accused by Parliament of peculation. He was acquitted (1773) after a long investigation, but, broken in health, he committed suicide. See the famous *Essay on Clive* by T. B. Macaulay, biography by A. M. Davies (1939), H. H. Dodwell, *Dupleix and Clive* (1920, repr. 1967), R. J. Minney, *Clive of India* (rev. ed. 1957), G. B. Malleson, *Lord Clive and the Establishment of the English in India* (1962), Michael Edwardes, *Plassey: The Founding of an Empire* (1970).

cloaca (klōā'ka), in biology, enlarged posterior end of the digestive tract of some animals. The cloaca, from the Latin word for sewer, is a single chamber into which passes solid and liquid waste materials as well as the products of the reproductive organs, the gametes. Cloacas are found in amphibians, reptiles, birds, and lower mammals; higher mammals have a separate rectal outlet, the anus. The term cloaca is also used for analogous chambers in many invertebrates, such as animals of the phylum Aschelminthes.

clock, instrument for measuring and indicating time. Predecessors of the clock were the **SUNDIAL**, the **HOURGLASS**, and the **CLEPSYDRA**. The operation of a clock depends on a stable mechanical oscillator, such as a swinging pendulum or a mass connected to a spring, by means of which the energy stored in a raised weight or coiled spring advances a pointer or other indicating device at a controlled rate. It is not definitely known when the first mechanical clocks were invented. Some authorities attribute the first weight-driven clock to Pacificus, archdeacon of Verona in the 9th cent. Gerbert, a learned monk who became Pope Sylvester II, is often credited with the invention of a mechanical clock, c.996. Mechanical figures that struck a bell on the hour were installed in St. Paul's Cathedral, London, in 1286, a dial was added to the clock in the 14th cent. Clocks were placed in a clock tower at Westminster Hall, London, in 1288 and in the cathedral at Canterbury in 1292. In France, Rouen was especially noted for the skill of its clockmakers and watchmakers. One of the most famous clocks is in the cathedral of Strasbourg; the clock was first placed in the cathedral in 1352, and in the 16th cent. it was reconstructed. In the 19th cent. a new astronomical clock similar to the first two clocks was constructed. Its elaborate mechanical devices include the Twelve Apostles, a crowing cock, a revolving celestial globe, and an automatic calendar dial. Probably the early clock closest to the modern ones was that constructed in the 14th cent. for the tower of the palace (later the Palais de Justice) of Charles V of France by the clockmaker Henry de Vick (Vic, Wieck, Wyck) of Wurttemberg. Until the 17th cent. few mechanical clocks were found outside of cathedral towers, monasteries, abbeys, and public squares. The early clocks driven by hanging weights were bulky and heavy. When the coiled spring came into use (c.1500), it made possible the construction of the smaller and lighter-weight types. By applying Galileo's law of the pendulum, the Dutch scientist Christiaan Huygens invented (1656 or 1657) a pendulum clock, probably the first. Early clocks used in dwellings in the 17th cent. were variously known as lantern clocks, birdcage clocks, and sheep's-head clocks; they were of brass, sometimes ornate, with a gong bell at the top supported by a frame. Before the pendulum was introduced, they were spring-driven or weight-driven, those driven by weights had to be placed on a wall bracket to allow space for the falling weights. These clocks, probably obtained chiefly from England and Holland, were used in the Virginia and New England colonies. Clocks with long cases to conceal the long pendulums and

A pendulum clock. Weight-driven clock mechanism

weights came into use after the mid-17th cent., these were the forerunners of the grandfather clocks. With the development of the craft of cabinetmaking, more attention was concentrated on the clock case. In France the tall cabinet clocks, or grandfather clocks, were often of oak elaborately ornamented with brass and gilt. Those made in England were at first of oak and later of walnut and mahogany, simpler in style, their chief decoration was inlay work. Among the well-known clocks of the world are the clock known as Big Ben in the tower next to Westminster Bridge in the British Houses of Parliament and the tower clock in the Metropolitan Life Insurance Company building, New York City. Electric clocks were made in the second half of the 19th cent. but were not used extensively in homes until after c.1930. The hands of an electric clock are driven by a synchronous electric motor supplied with alternating current of a stable frequency. The quartz clock, invented c.1929, uses the vibrations of a quartz crystal to drive a synchronous motor at a very precise rate. Some quartz clocks have an error of less than one thousandth of a second per day. The **ATOMIC CLOCK** is even more precise. See **WATCH**. See C. W. Drepper, *American Clocks & Clockmakers* (2d ed. 1958), H. A. Lloyd, *The Complete Book of Old Clocks* (1965), Brooks Palmer, *A Treasury of American Clocks* (1967), Eric Bruton, *Clocks and Watches, 1400-1900* (1967), F. J. Britten, *Old Clocks and Watches and Their Makers* (8th ed. 1973), Kenneth Welch, *The History of Clocks and Watches* (1972).

Clodia (klō'dēā), fl. 1st cent. B.C., Roman matron, famous among the ancient Romans for her beauty, sister of Publius Clodius. She was suspected of murdering her husband, Quintus Caecilius Metellus Celer (see **METELLUS**, family), and she accused her lover, Marcus Caelius Rufus, of trying to murder her. According to tradition one of her many lovers was the poet **CATULLUS**, if this is true then it was she whom he immortalized as **Lesbia**.

Clodion (klō'dēōn') or **Claude Michel** (klōd mē-shēl'), 1738-1814, French rococo sculptor. He executed several important commissions under Louis XVI but is best remembered for his bas-reliefs and small figure groups in bronze and terra-cotta representing fauns, nymphs, and children. He is represented in the Louvre and in the Metropolitan Museum.

Clodius (Publius Clodius Pulcher) (klō'dēās), d. 52 B.C., Roman politician. He belonged to the Claudian gens (see **CLAUDIUS**), and his name is also written as Publius Claudius Pulcher. He was brother to Appius Claudius Pulcher and to the notorious Clodia. In 62 B.C. he created a tremendous scandal when, disguised as a woman, he entered the house of Julius Caesar at the time of the women's mysteries of Bona Dea. Cicero prosecuted him for sacrilege, but Clodius, probably by heavy bribery, won an acquittal. The results were that Caesar divorced his wife Pompeia, and Cicero earned Clodius' unswerving hatred. In 58 B.C., Clodius was tribune of the people, put into office by the First Triumvirate (Caesar, Crassus, and Pompey) probably under the mistaken impression that he would be a tool. Instead, he proved himself a demagogue, seeking popularity in every way. He exiled Cicero on specious charges arising from the conspiracy of Catiline, and he sent Cato the Younger to Cyprus. Clodius spent much of his money in organizing gangs of bullies to intimidate the city. The tribune Milo (initially supported by Pompey) organized a conservative gang, and Rome was plagued with bloody rioting until Clodius was killed by Milo's gang. His irresponsible actions had prepared the way for the civil war of Caesar and Pompey.

Clogher (klōkh'ər), rural district (1971 pop. 9,554), Co. Tyrone, central Northern Ireland, on the Blackwater River. A religious center since St. Patrick's time, Clogher is the seat of a Protestant bishop; its cathedral was rebuilt in the 18th cent. and restored in 1956. The cathedral of the Roman Catholic bishop of Clogher is at Monaghan, Republic of Ireland.

cloisonné (klōizənā', -sənā'), method of enamel decoration of metal surfaces, such as vases and jewel boxes. Metal filaments (which form the **cloisons** or separating elements) are attached at right angles to the surface outlining the design to be used. These miniature compartments are filled with colored enamel in paste form, and the object is then heated in order to fuse the enamel to the surface and develop its transparency and permanent colors. When finished, the enamel and **cloisons** are closely joined in a smooth, even surface showing the pattern in various colors defined by the metal partitions which prevented their fusing with one another. Probably invented in the Middle East, cloisonné has been

highly perfected by the Chinese, the Japanese, and the French

cloister, unroofed space forming part of a religious establishment and surrounded by the various buildings or by enclosing walls. Generally, it is provided on all sides with a vaulted passageway consisting of continuous colonnades or arcades opening onto a court. The cloister is a characteristic part of monastic institutions (see ABBEY), serving both as sheltered access to the various units of the group and for the recreation of the monks. Cloisters became an important architectural form in the 11th cent., a period marked by active monastery building all over Europe. They were not limited to monastic houses, but were built in some English colleges, as at Oxford and Eton, and in some churches, mostly in England and Spain. In N France many of the original cloisters have disappeared, but superb Romanesque cloisters remain in 5 France, Italy and Sicily, and 5 Spain. In the typical examples the arches are supported by delicate columns, generally coupled, the elaborate capitals of the paired columns sometimes being interlaced. The 13th-century cloisters of two Roman churches, St John Lateran and St Paul's outside the Walls, are notable Romanesque examples, distinguished by twin spiral columns inlaid with rich glass mosaics. Of the Gothic period, the English cloisters are especially fine, as at Salisbury, Wells, and Westminster Abbey. The Renaissance cloisters are confined chiefly to Italy and Spain. In the New World the Spanish colonists began in the 16th cent to build simple cloisters, generally arcaded, in Mexico, Cuba, and California.

Cloisters, the, museum of medieval art, in Fort Tryon Park, New York City, overlooking the Hudson River. A branch of the Metropolitan Museum of Art, it was opened to the public in May, 1938. The building includes four French cloisters, a 12th-century Romanesque chapel, and a chapter house. The core of the collection it houses consists of six or seven hundred examples of medieval painting, sculpture, and other forms of art gathered in France by George Grey BARNARD. This collection was bought by John D. Rockefeller, Jr., in 1925, and presented to the Metropolitan Museum. Later additions to it include a series of 15th-century tapestries, *Hunt of the Unicorn*, a tapestry series of the 14th cent, *The Nine Heroes*, the famous *Mérode Altarpiece* by Robert Campin, and the Bury St Edmunds ivory crucifix (see J. J. Rorimer, *The Cloisters* (3d ed 1963) and *Medieval Monuments at the Cloisters* (rev ed 1972)).

Clomid (klō'mīd) see FERTILITY DRUG

clone, group of organisms, all of which are descended from a single individual through asexual reproduction, as in a pure cell culture of bacteria. Except for changes in the hereditary material that come about by MUTATION, all members of a clone are genetically identical. Laboratory experiments in cloning have resulted in the development of a frog from a cell of an existing animal, and the laboratory fertilization and early development of human eggs, such experiments have raised questions about the eventual possibility of cloning of identical humans from cells of a preexisting individual.

Clonmacnoise (klōnmāknoiz'), village, Co. Offaly, central Republic of Ireland, on the Shannon River. The monastery founded (548) on the site by St. Kieran became the most famous in Ireland. It survived 1,000 years of raids and invasions, until it was destroyed by the English in 1552. Today there are ruins of a cathedral (first built 904), several churches, two round towers, three sculptured crosses, over 200 inscribed stones, and a castle (built 1214). The ruins comprise a national monument. The annual feast of St. Kieran is held at Clonmacnoise.

Clonmel (klōnmēl'), municipal borough (1971 pop 11,630), administrative center of South Riding, Co. Tipperary, S Republic of Ireland, on the Suir River. Footwear, cider, enamelware, tubular steel furniture, perambulators, and canned meat are produced there. It is also a tourist center with good hunting and salmon fishing. Clonmel was once a stronghold of the powerful Anglo-Norman Butler family. Oliver Cromwell captured it in 1650. There are a number of restored ecclesiastical sites. Laurence Sterne was born in Clonmel.

Clontarf (klōntarf'), suburb of Dublin, Co. Dublin, E Republic of Ireland. It was the scene of a decisive defeat (1014) of the Danes by the Irish under Brian Boru, who himself was killed in the fighting. Clontarf Castle was built in 1835 on the site of an ancient castle that belonged successively to the Knights Templars and the Knights Hospitallers.

Clootz or Cloots, Anacharsis (anakarsēs' klōts), 1755-94, French revolutionary, self-styled Orator of the Human Race. Born near Cleves and a member of the lesser German nobility, his given name was originally Jean Baptiste. Fanatically devoted to humanitarian ideals and to the liberal ideas of the ENCYCLOPÉDIE, he came to Paris in 1776 and spent his large fortune for the advancement of those ideas. After the outbreak of the French Revolution, he headed (1790) a delegation of foreigners as "ambassadors of the human race" to the National Assembly, he adopted the name Anacharsis and was elected to the Convention, the revolutionary assembly. His enthusiasm was sincere but bordered on eccentricity. Clootz was executed during the REIGN OF TERROR.

closed-end investment company: see MUTUAL FUND

closed shop and open shop. The term "closed shop" is used to signify an establishment employing only members of a labor union. The union shop, a closely allied term, indicates a company where employees do not have to belong to a labor union when hired but are required to join within a specified period of time in order to keep their jobs. An open shop, strictly speaking, is one that does not restrict its employees to union members. The medieval trade guilds acted as closed shops, as did the 18th-century trade clubs. Among European workers the issue of the closed shop has not been so sharply contested as in the United States, where since c 1840 the closed-shop policy had been adopted by most labor unions. Judicial decisions from 1850 to 1898 usually decided that strikes held to achieve a closed shop were illegal. For a period of time after the passage of the Wagner Act (see NATIONAL LABOR RELATIONS BOARD) in 1935, decisions of the Federal courts tended to uphold the legality of the closed shop. Many states, however, either by legislation or by court decision, have banned the closed shop. In 1947 the TAFT-HARTLEY ACT declared the closed shop illegal and union shops were also prohibited unless authorized in a secret poll by a majority of the workers; it was amended (1951) to allow union shops without a vote of the majority of the workers. Thereafter, a campaign was begun by business leaders in certain industries to have so-called right-to-work laws enacted at the state level. More than one third of the states passed such laws, the effect being to declare the union shop illegal. It is argued in favor of the closed shop that unions can win a fair return for their labor only through solidarity, since there is always—except in wartime—an oversupply of labor, and that, since all employees of a plant share in the advantages won through collective bargaining, all workers should contribute to union funds. Arguments in favor of the open shop are that forcing unwilling workers to pay union dues is an infringement of their rights, that union membership is sometimes closed to certain workers or the initiation fee so high as to be an effective bar to membership, and that employers are deprived of the privilege of hiring competent workers or firing incompetent ones. See J. E. Johnsen, comp., *The Closed Shop* (1942), a summary of the arguments on both sides, J. R. Dempsey, *The Operation of the Right to Work Laws* (1958, repr 1961), W. E. J. McCarthy, *The Closed Shop in Britain* (1964).

closet drama, a play that is meant to be read rather than performed. Precursors of the form existed in classical times. Plato's *Apology* is often regarded as tragic drama rather than philosophic dialogue. The dialogues of Cicero, Strabo, and Seneca were probably declaimed rather than acted, since only the comic theater survived transplantation from Greece to Rome. Closet dramas were particularly popular in the early 19th cent. when melodrama and burlesque dominated the theater, and poets attempted to raise dramatic standards by reviving past traditions. Byron's *Manfred* (1817) and Shelley's *The Cenci* (1819) imitate Shakespeare, and Goethe's *Faust* (Part I, 1808, Part II, 1832) draws in part on the Elizabethan tradition. Milton's *Samson Agonistes* (1671) and Shelley's *Prometheus Unbound* (1819) are based on Greek tragedies. Notable among other closet dramas are Robert Browning's *Stratford* (1837) and *Pippa Passes* (1841).

Cloatare I (klōtār'), d. 561, Frankish king, son of CLOVIS I. On his father's death (511) he and his brothers received equal shares of the Frankish kingdom. His capital was at Soissons. In 524 he and his brother CHILDEBERT I divided the kingdom of their deceased brother Clodomir, whose children they murdered. With his brother Theodoric he conquered Thuringia. In 534 Cloatare and Childebert seized and divided the First Kingdom of Burgundy, and in 542

they attacked the Visigoths of Spain but were repulsed before Saragossa. The deaths of Theodebald, Theodoric's grandson (555), and of Childebert (558) made Cloatare sole king of the Franks. His sons Chilperic I and Sigebert I inherited Neustria and Austrasia respectively, his sons Charibert and GUNTRAM divided the remainder of the kingdom.

Cloatare II, d. 629, Frankish king, son of CHILPERIC I and FREDGUNE. He succeeded (584) his father as king of Neustria, but his mother ruled for him until her death (597). In 613, after the death of his cousin Theodoric II, king of AUSTRASIA, he was called in by Austrasian nobles to assume rule. He thus became king of all the Franks. He put BRUNHILDA to death, restored peace with the help of the nobility, and was compelled to grant (614) a charter giving far-reaching privileges to nobles and clergy. He was also forced to agree that each of the component parts of the Frankish lands, Austrasia, Neustria, and Burgundy, was to have its own mayor of the palace, the mayors of the palace were the chief royal administrators. In 623 he sent his son DAGOBERT I to be king of Austrasia. Dagobert later succeeded to all the Frankish lands.

clotbur see COCKLEBUR

clothes moth, name for several species of moths of the family Tineidae, whose larvae feed on wool, furs, feathers, upholstery, and a variety of animal products. Clothes moths are of Old World origin. Those commonest in North America are the case-bearing clothes moth, *Tinea pellionella*, and the webbing clothes moth, *Tineola bisselliella*. The adults are yellowish or buff moths, often called millers, with a wingspread of about 1/2 in. (1.2 cm). They lay 100 to 150 eggs on the material which is to provide food for the larvae, they do not feed on fabrics themselves. The larva of the case-bearing clothes moth makes an open-ended case out of food fibers and its own silk; it feeds and pupates (see INSECT) within the case. The webbing clothes moth larva makes no case, but when it pupates it builds a cocoon of silk and fibers. The life cycle is completed most rapidly at average room temperature and about 75% humidity. The tapestry, or carpet, moth, *Trichophaga tapetzella*, attacks upholstery. Fumigation, sunning, cleaning, brushing, and cold storage help to prevent damage. Clothes moths are classified in the phylum ARTHROPODA, class Insecta, order Lepidoptera, family Tineidae.

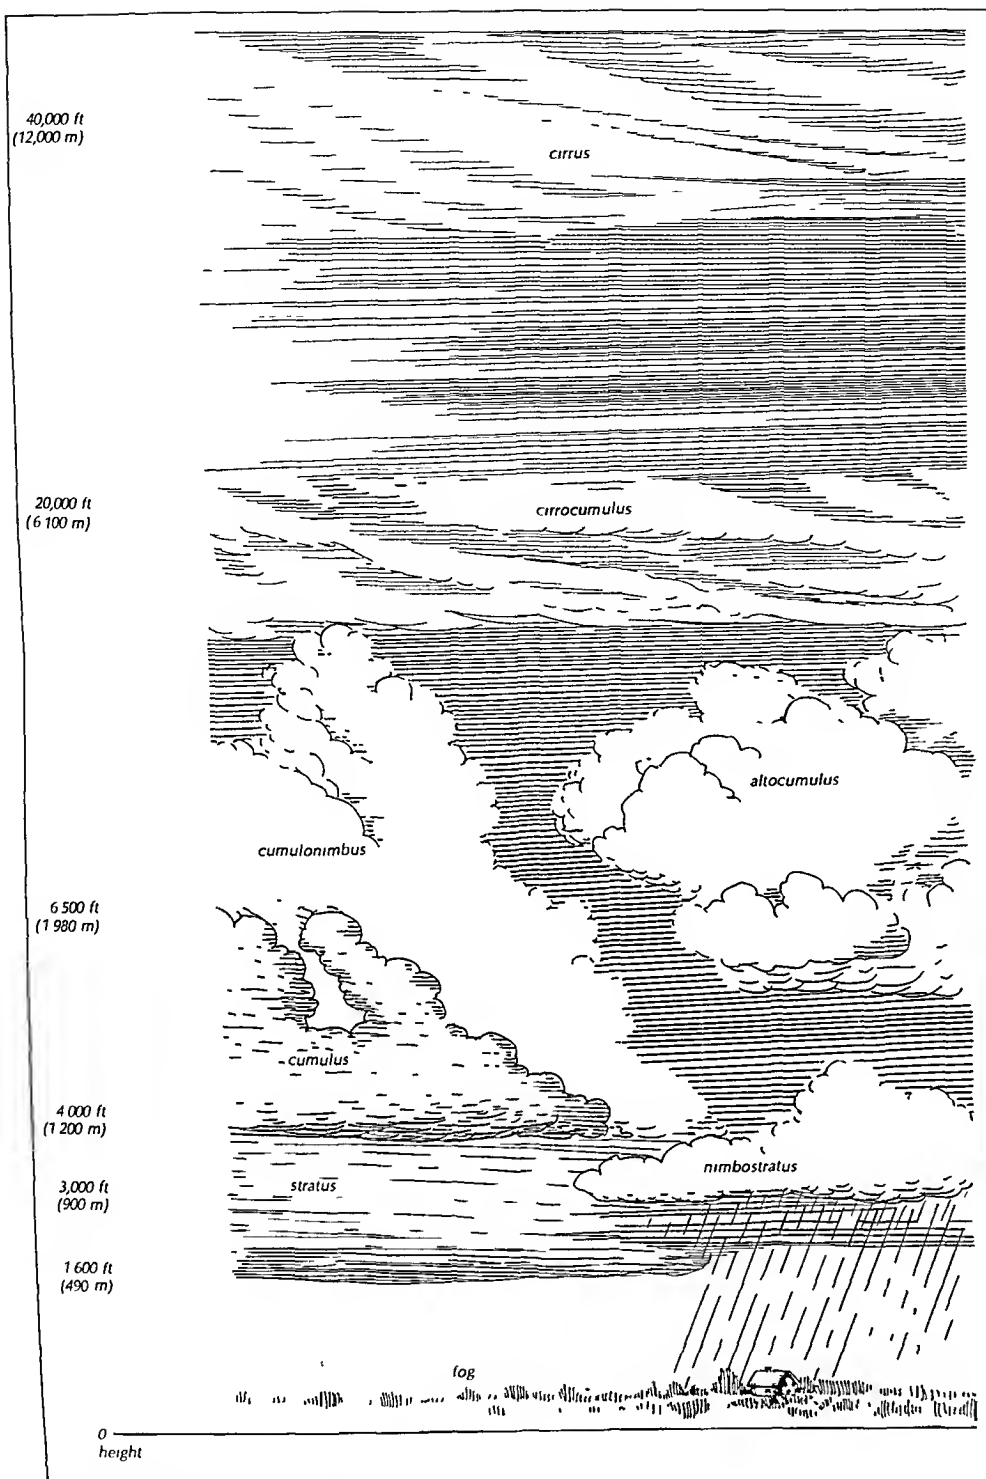

clothing: see COSTUME

Clotho: see FATES

cloth of gold, fabric woven wholly or partly of gold threads. From remote times gold has been used as material for weaving either alone or with other fibers. In India tapestries were made from gold threads as fine as silk. Cloth of gold was woven on Byzantine looms from the 7th to the 9th cent. and on those of Sicily, Cyprus, Lucca, and Venice in the 10th cent. Some narrow webs were woven in England, as well as palls of gold and silver cloth. Cloths of estate were magnificent gold tissues used to canopy or cover thrones. Baldachin, or fine cloth with gold warp and silk weft, was used ceremonially and also for rich clothing. The use of gold textiles and embroideries in the Middle Ages is illustrated by the pageantry at the meeting of the FIELD OF THE CLOTH OF GOLD (1520). Gold thread for weaving and embroidery is still made in India, Delhi alone producing many miles per annum, working in the ancient manner. Gold or silver gilt wire is drawn through holes, successively smaller, in a specially devised metal plate, and is used either round or flattened. Modern metallic cloth, known as lame, is commonly made of a core yarn wound with a thin metal thread, or lame. Various artificial metallic cloths are also produced.

Clotilda, Saint, d. 545, Frankish queen. She converted her husband, CLOVIS I, to Christianity and built with him in Paris the Church of the Apostles Peter and Paul, later renamed (10th cent.) Sainte-Genevieve. After her husband's death she spent her life caring for the poor. Feast: June 3.

cloud, aggregation of minute particles of water or ice suspended in the air. Clouds are formed when air containing water vapor is cooled below a critical temperature called the DEW point, and the resulting moisture condenses into droplets on microscopic dust particles (condensation nuclei) in the atmosphere. The air is normally cooled by expansion during its upward movement. Clouds are occasionally produced by a reduction of pressure aloft or by the mixing of warmer and cooler air currents. Upward flow of air in the atmosphere may be caused by convection resulting from intense solar heating of

Approximate heights of some types of clouds

the ground, by a cold wedge of air (cold front) near the ground causing a mass of warm air to be forced aloft, or by a mountain range at an angle to the wind. A classification of cloud forms was first made (1801) by French naturalist Jean Lamarck. In 1803, Luke Howard, an English scientist, devised a classification that was adopted by the International Meteorological Commission (1929). His designations for three primary cloud types, cirrus, cumulus, and stratus, and their compound forms, are still widely used in modified form. The classification used today comprises four main divisions: high clouds, 20,000 to 40,000 ft (6,100–12,200 m), intermediate clouds, 6,500 to 20,000 ft (1,980–6,100 m), low clouds, near ground level to 6,500 ft (1,980 m), and clouds with vertical development, 1,600 ft to over 20,000 ft (490–6,100 m). High cloud forms include *cirrus*, detached clouds of delicate and fibrous appearance, without shading, generally white in color, often resembling tufts or featherlike plumes, and composed entirely of ice crystals, *cirrocumulus* (mackerel sky), composed of small white flakes or very small globular

masses, arranged in groups, lines, or ripples, and *cirrostratus*, a thin whitish veil, sometimes giving the entire sky a milky appearance, which does not blur the outline of the sun or moon but frequently produces a halo. Intermediate clouds include *altocumulus*, a layer or patches composed of flattened globular masses arranged in groups, lines, or waves, with individual clouds sometimes so close together that their edges join, and *altostratus*, resembling thick cirrostratus without halo phenomena, like a gray veil, through which the sun or the moon shows vaguely or is sometimes completely hidden. Low clouds include *stratocumulus*, a cloud layer or patches composed of fairly large globular masses or flakes, soft and gray with darker parts, arranged in groups, lines, or rolls, often with the rolls so close together that their edges join, *stratus*, a uniform layer resembling fog but not resting on the ground, and *nimbostratus*, a nearly uniform, dark gray layer, amorphous in character and usually producing continuous rain or snow. Clouds having vertical development include *cumulus*, a thick, detached cloud,

generally associated with fair weather, usually with a horizontal base and a dome-shaped upper surface that frequently resembles a head of cauliflower and shows strong contrasts of light and shadow when the sun illuminates it from the side, and *cumulonimbus*, the thunderstorm cloud, heavy masses of great vertical development whose summits rise in the form of mountains or towers, the upper parts having a fibrous texture, often spreading out in the shape of an anvil, and sometimes reaching the STRATOSPHERE. Cumulonimbus generally produces showers of rain, snow, hailstorms, or thunderstorms. Cloudiness (or proportion of the sky covered by any form of cloud), measured in tenths, is one of the elements of climate. WEATHER is called clear when the sky is less than $\frac{3}{10}$ clouded, partly cloudy when it is $\frac{3}{10}$ to $\frac{7}{10}$ clouded, and cloudy when it is more than $\frac{7}{10}$ clouded, the extremes are cloudless and overcast. The cloudiness of the United States averages somewhat less than 50% (i.e., the country receives somewhat more than 50% of the possible sunshine), the Great Lakes region and the coast of Washington and Oregon have the greatest cloudiness (60–70%), and the SW United States—Arizona and adjacent areas—are the least cloudy (10–30%). In aviation, the base of any cloud layer that, when considered in combination with clouds below, results in a cover of more than $\frac{5}{10}$ of the celestial dome, is termed the ceiling. See A. H. Gordon, *Elements of Dynamic Meteorology* (1962); R. S. Scorer, *Clouds of the World* (1972).

cloud chamber, device used to detect ELEMENTARY PARTICLES and other ionizing radiation. A cloud chamber consists essentially of a closed container filled with a supersaturated vapor, e.g., water in air. When ionizing radiation passes through the vapor, it leaves a trail of charged particles (ions) that serve as condensation centers for the vapor, which condenses around them. The path of the radiation is thus indicated by tracks of tiny liquid droplets in the supersaturated vapor. The cloud chamber was invented c. 1900 by C. T. R. Wilson. In the type devised by him, which is often called the Wilson cloud chamber, air or another gas is saturated with water

Simplified cloud chamber. A supersaturated vapor is created by withdrawing the piston. Particles enter the chamber and leave visible tracks by ionizing air molecules, which serve as condensation nuclei to form cloud droplets.

vapor and enclosed in a cylinder fitted with a transparent window at the top and a piston or other pressure-regulating device at the bottom. When the pressure in the chamber is suddenly reduced, e.g., by lowering the piston, the gas-vapor mixture is cooled, producing supersaturation. Cloud chambers of this design are sometimes called the pulsed type, since they do not maintain a continuous state of supersaturation of the vapor. A more recent design is the diffusion cloud chamber. In this device a large temperature difference is maintained between the top and bottom of the chamber, usually by cooling the bottom of the chamber with dry ice. The gas in the chamber, usually air, is saturated with a vapor, usually alcohol, the air-vapor mixture cools as it diffuses toward the cool bottom, becoming supersaturated. If the gas is kept saturated with a fresh supply of vapor, e.g., by an alcohol-soaked pad inside the top of the chamber, the operation of the chamber can be essentially continuous. One disadvantage of the cloud chamber is the relatively low density of the gas, which limits the number of interactions between ionizing radiation and molecules of the gas. For this reason physicists have developed other particle detectors, notably the BUBBLE CHAMBER and the SPARK CHAMBER.

Clouet, Jean (zhaN klōōā'), called **Janet** or **Jehan-net**, c 1485–1540, portrait and miniature painter. He was court painter and valet de chambre to the French king Francis I. He is thought to have been Flemish and may have been related to Jehan Clouet, painter to the duke of Burgundy in the late 15th cent. None of the work attributed to Jean Clouet can be proved to have been his. It includes portraits of Francis I (Louvre), the dauphin Francis (Antwerp), and Charles de Cosse (Metropolitan Mus.), seven miniature portraits (Bibliothèque nationale), and a large number of portrait drawings, all of the highest quality. The drawings are characterized by a geometric simplicity of form and softness of modeling. His son, **François Clouet**, c 1510–c 1572, also called Janet or Jehannet, inherited his father's talent and position, serving as court painter successively under Francis I, Henry II, Francis II, and Charles IX. His work is unsurpassed in clarity and precision of draughtsmanship. He enjoyed a high reputation and was patronized by all the notables of the court. Attributed to him are two portraits of Francis (Uffizi, Louvre), portraits of Catherine de' Medici (Versailles), Elizabeth of Austria (Louvre), and Charles IX (Vienna), and one thought to be of Diane de Poitiers (called Lady in Her Bath, National Gall., Washington, D.C.). There are also a large number of portrait drawings preserved in Chantilly and in the Bibliothèque nationale and the Cabinet des Estampes, Paris. See his complete drawings, miniatures, and paintings, ed. by Peter Mellen (1971).

Clough, Arthur Hugh (klūf), 1819–61, English poet. He was educated at Rugby and Balliol College, Oxford, where he became friends with Matthew Arnold. After graduation (1941) he was fellow and tutor of Oriel College until 1848 when he resigned. During the next few years he traveled on the Continent. In 1852, inspired by his friendship with Emerson, he went to Harvard and lectured. He pursued a civil service career until his health failed in 1860. His first published work, *The Bothie of Toper-na-Vuo-llich*, a narrative in hexameters, appeared in 1848, followed by *Ambarvalia*, a collection of lyrics, in 1849. His posthumous poems include "Amours de Voyage," the dialogues "Dyspichus," and the tales "Mari Magno." He is perhaps best known for the short lyric, "Say not the struggle naught availeth," and as the subject of Arnold's elegy, "Thyrsis." Skeptical, somewhat cynical, Clough was closer in spirit to the 20th cent. than to the 19th. His poetry reveals not only his doubts about religion and about himself but also his awareness of the social and intellectual problems of his day. Clough's sister, Anne Jemima Clough (1820–92) was important as a leader in the education of women. See his complete poems (ed. by H. F. Lowry and others, 1951), his letters (ed. by F. L. Mulhauser, 1957), biography by K. C. Chorley (1962), studies by F. J. Woodward (1954), W. E. Houghton (1963), E. B. Greenberger (1970), and R. K. Biswas (1972).

clove, name for a small evergreen tree (*Syzygium aromaticum* or *Eugenia caryophyllata*) of the family Myrtaceae (MYRTLE family) and for its unopened flower bud, an important spice. The buds, whose folded petals are enclosed in four toothlike lobes of the calyx, are gathered by hand, dried, and marketed either whole or ground for culinary purposes. Clove oil, obtained by distillation, is widely used in synthetic vanilla and other flavorings as well as in perfumes; it is often considered medicinal and antiseptic. The spicy fragrance of cloves was used by the Chinese (c 3d cent. B.C.) and by the Romans, but the first instance of finding the tree growing wild was recorded by the Portuguese when they discovered the Spice Islands. The Portuguese and then the Dutch held the clove trade in monopoly, eliminating the tree from all but a single island, until the late 18th cent. Today cloves are products also of other tropical areas, e.g., the West Indies and islands off E. Africa such as Madagascar and Zanzibar. Clove is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Myrtales, family Myrtaceae.

clover, any plant of the genus *Trifolium*, leguminous hay and forage plants of the family Leguminosae (PULSE family). Most of the species are native to north temperate or subtropical regions, and all the American cultivated forms have been introduced from Europe. Red clover (*T. pratense*), the state flower of Vermont, was the leading leguminous hay crop of the northeastern regions until it was surpassed by alfalfa. It is frequently seeded with timothy. Swedish, or alsike, clover (*T. hybridum*) is similarly used in the same area. The common white, or Dutch, clover (*T. repens*) is also cultivated at times but is considered a weed in fields and pastures,

where it spreads rapidly. Its dried flower and seed heads have been used for making bread during famines in Ireland and the leaves are eaten as salad in some parts of the United States. The clovers are excellent honey plants. Other plants are sometimes called clover, e.g., the related melilot, or SWEET CLOVER. Clover was used by the Greeks in garlands and other decorations. The druids held it sacred. It is said to have been the early emblem of Ireland from which the shamrock is derived, and it is an emblem of the Trinity. English and American poets have celebrated it. A four-leaved clover is thought to bring good luck. See also LESPEDEZA, TREFOIL. Clover is classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Rosales, family Leguminosae. See bulletins of the U.S. Dept. of Agriculture.

Clovio, Giorgio Giulio (jōr'jō jōō'lyō klō'vyō), 1498–1578, Italian illuminator, miniaturist, and painter, also called Macedo or Il Macedone because of his Macedonian origin. He studied at Rome with Giulio Romano and at Verona under Girolamo de' Libri, from whom he learned illuminating. Clovio was employed by Louis II of Hungary, Cardinal Farnese at Rome, and other princely patrons. Among the best known of the many works ascribed to him are the illuminations for the *Book of the Hours of the Blessed Virgin*, his masterpiece, the manuscript biography of Frederick, duke of Urbino (Vatican Library), Cardinal Grimani's *Commentary on the Epistle to the Romans* (Soane Mus., London), *The Victories of Emperor Charles V* (British Mus.), and the *Farnese Breviary* (Pierpont Morgan Library, New York).

Clovis I (klō'vīs), c 466–511, Frankish king (481–511), son of Childeric I and founder of the Merovingian monarchy. Originally little more than a tribal chieftain, he became sole leader of the Salian FRANKS by force of perseverance and by murdering a number of relatives. In 486 he defeated the Roman legions under Syagrius at Soissons, virtually ending Roman domination over Gaul. He then subdued the Thuringians. After his marriage (493) to the Burgundian princess CLOTILDA, he had his children baptized but was not immediately converted himself. In 496, while locked in battle with the Alemanni, he vowed to become a Christian if he gained the victory. Clovis defeated the Alemanni and was baptized, reputedly with 3,000 of his followers, by St. Remi, bishop of Rheims. Thereafter Clovis was the champion of orthodox Christianity against the Arian heretics, the Burgundians, and the Visigoths. He attacked the Burgundians (500) at Dijon and the Visigoths (507) under ALARIC II at Vouille. When he died, he was master of most of Gaul—except Burgundy, Gascony, Provence, and Septimania—and of SW Germany. Shortly before his death he probably had the Salian Law revised and put into writing. Clovis united all Franks under his rule, gained the support of the Gallic clergy, made Paris his base of operations, and extended his conquests into Germany. He thus laid the foundation, which even 400 years of chaos and misrule could not destroy, of the French monarchy and foreshadowed the conquests of Charlemagne. He was succeeded by his four sons, THEODORIC I, Clodomir, CHILDEBERT I, and CLOTAIRE I. See the history of GREGORY OF TOURS, Ferdinand Lot, *The End of the Ancient World and the Beginnings of the Middle Ages* (1927, tr. 1953, repr. 1961).

Clovis 1 City (1970 pop. 13,856), Fresno co., S central Calif., near the foothills of the Sierra Nevada range, inc. 1912. It is a trade center in a farm and vineyard area. **2** City (1970 pop. 28,495), seat of Curry co., E N. Mex., near the Texas line, inc. 1909. It is a railroad division point, the trade center of a cattle and irrigated farm area (with large stockyards), and the home of Cannon Air Force Base, a tactical air command facility. A junior college is in Clovis, and a state park is nearby. A huge county fair and a rodeo are annual events there.

clown, a jester or buffoon, in a circus or a pantomime. See FOOL.

clubfoot or **talipes** (tāl'apēz'), deformity in which the foot is twisted out of position. Maldevelopment is usually congenital, although it can result from injury or disease (e.g., poliomyelitis) after birth. It can affect one or both feet. Often the foot is twisted downward, with the heel and toe turning inward, causing only part of the foot—the heel, the toes, or the outer margin—to touch the ground, walking is difficult or impossible. Correction can be made in infancy by manipulation, braces, and casts, in severe cases only surgery can correct the condition.

club moss, name generally used for the living species of the class Lycopodiopsida, a primitive subdivision of vascular plants. The Lycopodiopsida

reached their zenith in the Carboniferous period, when they reached the size of trees, and contributed to the coal deposits then being formed. They are now close to extinction. Although they resemble the mosses, they are considered to be evolutionarily more advanced because they are vascular. Club mosses are usually creeping or epiphytic and often inhabit moist places, especially in tropical and subtropical forests. They reproduce by means of spores, either clustered into small cones or borne in the axils of the small scalelike leaves. The principal genera are *Lycopodium* and *Selaginella*. Some species of *Lycopodium* are called ground pine or creeping cedar, especially those that resemble miniature hemlocks with flattened fan-shaped branches, and are often used for Christmas decorations. The spores of *L. clavatum* are gathered and sold as lycopodium powder, or vegetable sulfur, a highly inflammable yellow powder sometimes used for pharmaceutical purposes (e.g., as an absorbent powder) and in fireworks. *Selaginella* species, often incorrectly called *Lycopodium*, are frequently grown as ornamentals. One of the best known is a RESURRECTION PLANT. Club mosses constitute the division LYCOPODIOPHYTA, class Lycopodiopsida.

clubroot, disease of cabbages, turnips, radishes, and other plants belonging to the family Cruciferae (MUSTARD family). It is induced by a slime mold that attacks the roots, causing, in the cabbage, undeveloped heads or a failure to head at all. Clubroot can be partially or in some cases completely controlled by the application of lime (if the soil is very acid), by rotation of crops, and by soil sterilization. The disease is also called finger-and-toe from the swollen shape it gives to roots. Slime molds (class Myxomycetes) are classified in the division FUNGI.

club rush: see CATTAIL, SEDGE.

Cluj (klōōzh), Hung. *Kolozsvár*, Ger. *Klausenburg*, city (1970 est. pop. 203,000), W. central Rumania, in Transylvania, on the Someșul River. The largest city in Transylvania and the second largest in Rumania, it is the administrative center of an agricultural and mineral-rich area. Its diverse manufactures include machinery, metal products, electrical equipment, chemicals, textiles, and footwear. The city is also a noted educational center with two universities, a branch of the Rumanian Academy of Sciences, a fine arts institute, a polytechnic institute, and several scientific research centers. Cluj was founded by German colonists in the 12th cent. and became a thriving commercial and cultural center in the Middle Ages. It was made a free city in 1405 by the king of Hungary. Stephen Bathory founded (1581) a Jesuit academy there, and the city became (16th cent.) the chief cultural and religious center of Transylvania. It was incorporated into Austria-Hungary in 1867 and was transferred to Rumania in 1920. Hungarian forces occupied the city during World War II. Landmarks include the 14th-century Gothic Church of St. Michael, the house where King Matthias I of Hungary was born (1440), and the ruins of an 11th-century church. Cluj is also noted for its botanical gardens. About half the population is Hungarian.

clumber spaniel, breed of medium-sized SPORTING DOG developed in France and perfected at Clumber Park, an English estate. It stands about 17 in. (43.2 cm) high at the shoulder and weighs between 50 and 60 lb (22.7–27.2 kg). Its dense coat of straight, silky hair is lemon and white or orange and white and forms long, luxuriant fringes, or feathers, on the chest and legs. The heavy-boned, low, short body of the clumber resembles no other spaniel and suggests early crossbreeding with the basset hound. The tail is docked. Although a slow worker, the clumber makes an excellent hunter and retriever when trained. See DOG.

Cluniac order, medieval organization of BENEDICTINES centered at the abbey of CLUNY, France. Founded in 910 by the monk Berno, the abbey's unique constitution provided it freedom from lay supervision and (after 1016) from jurisdiction of the local bishop. With its independence thus guaranteed, Cluny became the fountainhead of the most far-reaching religious reform movement in the Middle Ages. During its height (c 950–c 1130) it was second only to the papacy as the chief religious force in Europe. Hundreds of priories were opened, and many Benedictine abbeys were reformed, some joining the strict Cluniac obedience. In all, nearly 1,000 houses located in many countries were under obedience to the abbot of Cluny. Many Cluniac monks became bishops and through provincial synods were thus able to spread reform in church life throughout Europe. Churches were built, the liturgy was beautified, and schools were opened. Cluny

stoutly supported the popes (and was itself under papal protection) and served vitally in the great reform program of Pope St. Gregory VII, particularly in the matter of church independence from lay control. Cluniac zeal diminished in the 12th cent., and the order fell into a state of wealthy decline as the reforming initiative was taken up by the Cistercians. The French Revolution suppressed the remnants of the order and destroyed the abbey at Cluny. The highly centralized organization of the Cluniacs had a permanent effect on Western monasticism.

Cluny (klōō'nē, Fr klūnē'), former abbey, E France, in the present Saône-et-Loire dept., founded (910) by St. Berno, a Burgundian monk. He and his successors, all vigorous reformers, made their abbey the center of the CLUNIAC ORDER. Cluny became one of the chief religious and cultural centers of Europe. The abbey remains presently house a national school of arts and trades. The abbey church (10th cent. in part), once the largest church in the world, and the churches of Notre Dame (13th cent.) and of St. Marcellus (12th cent.) are there.

Cluny Museum, 14th- and 15th-century Gothic and Renaissance structure in Paris, built by Pierre de Chalus, abbot of Cluny, and rebuilt by Jacques d'Ambroise. The site is that of the ancient Roman baths of Emperor Julian. Acquired by the nation after the Revolution, it was subsequently purchased by the antiquarian Du Sommerard, who installed his collection of art objects of the Middle Ages and the Renaissance. The city of Paris purchased the entire property at Du Sommerard's death (1842) and presented it to the state. The museum's 24 galleries display a variety of medieval works, with emphasis on carved wood, metalwork, textiles, and stained glass. A number of superb tapestries of the 15th and 16th cent., produced in Flanders and the Loire valley, are among the museum's greatest treasures.

Clurman, Harold, 1901-, American director, manager, critic, and author, b. New York City. In his early years he acted in minor roles, becoming associated with New York's Group Theatre as founder and managing director in 1931. After his debut as a director with *Awake and Sing*, he became known for his direction of works by Tennessee Williams, Arthur Miller, Eugene O'Neill, and William Inge, among many others. Clurman has written much theater criticism and several books, including *The Fervent Years* (1945), a history of the Group Theatre. See his *On Directing* (1972) and *All People are Famous* (1974).

Clusium, see CHIUSI, Italy.

cluster, in astronomy, see STAR CLUSTER, GALAXY.

clutch, in automobiles, see TRANSMISSION.

Clwyd (klōō'id), nonmetropolitan county (1972 est. pop. 354,000), N Wales, created under the Local Government Act of 1972 (effective 1974). It comprises the former county of FLINTSHIRE and portions of the former counties of Denbigh and Merioneth.

Clwyd, river, c. 30 mi (50 km) long, rising in Clwyd (Denbighshire), N Wales. It flows N through the Vale of Clwyd to the Irish Sea at Rhyl. The vale is notable for its excellent pastureland.

Clyde, Colin Campbell, Baron, see CAMPBELL, COLIN, BARON CLYDE.

Clyde, principal river of SW Scotland, 106 mi (171 km) long, rising in the Southern Uplands and flowing generally NW through Glasgow to the Firth of Clyde. It drains c. 1,480 sq mi (3,830 sq km). The lower Clyde, traversing the heart of Clydeside (Scotland's great population, industrial, and shipbuilding region), is the main route of commercial water traffic in Scotland. The river has been deepened and widened and is navigable for oceangoing vessels to Glasgow. It is connected with the Firth of Forth by the Forth and Clyde Canal. Clydeport, which includes the docks at Glasgow, Clydebank, and Greenock, is an important general cargo, ore, oil, and container port. Erskine Bridge (1,000 ft/305 m long, opened 1970), between Clydebank and Renfrew, is one of the world's longest cable-stayed bridges. A 10-lane bridge (opened 1970) crosses the Clyde at Glasgow. The middle course of the river flows through Clydesdale, a noted farming and orchard region. Bonnington (9,840-kw capacity) and Stonebyres (5,680-kw capacity) are hydroelectric power stations at the Falls of the Clyde near Lanark. The Firth of Clyde, c. 50 mi (80 km) wide and 2 to 25 mi (3.2-40 km) wide, an arm of the North Channel, extends SW from Dunoon to Ailsa Craig. It is rimmed by yacht basins, summer resorts, and small ports. Bute, Arran, and the Cumbraes are the chief islands.

Clydebank, burgh (1971 pop. 48,296), Dumbartonshire, W central Scotland, on the north bank of the

Clyde River. The chief industry is shipbuilding. The ocean liners *Queen Mary* and *Queen Elizabeth* were built there. In 1975, Clydebank became part of the Strathclyde region.

Clydesdale horse, breed of DRAFT HORSE developed in Scotland. It closely resembles the SHIRE HORSE, although it is not as heavy. The Clydesdale is characterized by its graceful, springy step. Initially imported by the United States from Canada, the breed became widely popular owing to its good disposition. It was particularly favored by merchants, who used it to spectacular advantage in the transportation of commercial goods. It is still retained today by horse buffs and private patrons. It averages about 16 hands (64 in./160 cm) high, weighs around 1,800 lb (800 kg), and is characteristically colored rich brown or bay. It has white markings on the face and on the legs, which have luxurious feathering around the fetlocks.

Clymene (klīm'anē), in Greek mythology, 1 Daughter of the Titan Oceanus. The wife of Iapetus, she bore him Atlas, Prometheus, Epimetheus, and Menoetius. 2 Nymph, wife of Helios and mother of Phaëthon.

Clymer, George (klī'mar), 1739-1813, American political leader, signer of the Declaration of Independence, b. Philadelphia. A prosperous merchant, he ardently supported the colonial cause before the American Revolution and served (1775-76) as one of the Continental treasurers. In 1776 he served as delegate to the Continental Congress, where he signed the Declaration of Independence. He was again (1780-83) a delegate to the Continental Congress. Clymer was the first president of the Bank of Philadelphia, and he helped to organize the Bank of North America. While in the Pennsylvania legislature (1785-88), he wrote a report leading to penal code reforms. Clymer, a delegate to the Federal Convention, was a member (1789-91) of the first U.S. Congress.

Clytemnestra (klī'təm'nēs'trā), in Greek mythology, the daughter of Leda and Tyndareus. Homer described her as the noble-minded wife of Agamemnon, persuaded to infidelity by the tyrant Aegisthus. However, the Greek tragedians, most specifically Aeschylus, depicted her as remorseless and vengeful. She was the mother by Agamemnon of Orestes, Electra, and Iphigenia. She conspired with Aegisthus to murder Agamemnon on his return from the Trojan War, giving various justifications, most notably the sacrifice of Iphigenia by Agamemnon at the onset of the war. Orestes, who had been living in exile, returned and avenged the death of his father by killing his mother and Aegisthus.

Cm, chemical symbol of the element CURIUM.

CMP (cytidine monophosphate) see CYTOSINE.

CN, ordinary TEAR GAS. The chemical name for CN is chloroacetophenone.

Cnidaria (nīdār'ēə) or **Coelenterata** (sālēntērā'tā), phylum of invertebrate animals comprising the SEA ANEMONES, CORALS, JELLYFISH, and HYDROIDS. Cnidarians are radially symmetrical (see SYMMETRY, BIOLOGICAL). The mouth, located at the center of one end of the body, opens into a gastrovascular cavity, which is used for digestion and distribution of food, an anus is lacking. Cnidarians are further characterized by having a body wall composed of three layers: an outer epidermis, an inner gastrodermis, and a middle mesoglea. Tentacles encircle the mouth and are used in part for food capture. Specialized stinging structures, called nematocysts, are a characteristic of the phylum and are borne in the tentacles and often in other body parts. These contain a coiled fiber that can be extruded suddenly. Some nematocysts contain toxic substances and are defense mechanisms, while others are adhesive, helping to anchor the animal or to entangle prey. Two body forms and two life styles are characteristic of the Cnidaria (see POLYP AND MEDUSA). The sessile hydroid, or polyp, form is more or less cylindrical, attached to its substratum at its aboral (opposite the mouth) end, with the mouth and surrounding tentacles at the upper, oral, free end. Colonies of hydroids comprise several different types of individuals: some function in feeding, some in defense, and some in reproduction. The motile jellyfish, or medusoid form, is flattened, with the tentacles usually located at the body margin. The medusoid's convex aboral surface is oriented upward, and the concave oral surface is oriented downward. With few exceptions, the cnidarians are marine. There are over 9,000 known living species; fossil records of cnidarians date back to the Ordovician era. Cnidarians are carnivorous, the major part of their diet con-

sisting of crustaceans. Animals in this phylum have no specialized excretory or respiratory organs and possess a primitive nervous system. Both sexual and asexual reproduction occur. There are three classes of cnidarians.

Internal anatomy of Hydra, representative of the phylum Cnidaria.

Class Hydrozoa. The Hydrozoa include solitary or colonial cnidarians, which have a noncellular mesoglea, lack tentacles within the gastrovascular cavity, and have no gullet. As a rule, the hydroid stage predominates in the life cycle, although in some the jellyfish stage is larger. The order Hydrida includes the many small, colonial hydroids so often seen clinging to wharfs and submerged objects along the sea coasts everywhere, economically important because they foul surfaces. The order also includes solitary hydroids, some reaching several inches in height. One, in the genus *Branchiocerianthus*, is said to reach 8 or 9 ft (244-274.5 cm) in length. The common fresh-water genus *Hydra* also belongs to this order, as does the fresh-water jellyfish, genus *Craspedacusta*, and the commonly studied hydroid jellyfish, genus *Gonionemus*. There are also pelagic hydroid colonies, unusual in having one very large hydroid member, which lives with its mouth downward and its aboral surface upward, like a jellyfish. The aboral end is equipped with a projecting sail. *Velella*, the purple sailor, is an example. The order Milleporina includes colonial organisms that form a massive, porous exoskeleton, somewhat resembling corals. They are sometimes abundant in tropical seas and may contribute to coral reef formation. The order Siphonophora includes often large, floating colonies made up of members of varying form and function. Typical is *Physalia*, the Portuguese man-of-war. Its colorful float is a gas-filled member of the colony and attains lengths up to 1 ft (30 cm). Other members of the colony hang downward from the lower surface of the float, some of these have very powerful nematocysts able to cause severe physiological reaction in swimmers coming in contact with them. These organisms are able to kill sizable fish with their tentacles.

Class Scyphozoa. Cnidarians of class Scyphozoa have a predominant jellyfish stage. They are characterized by a cellular mesoglea and tentacles in their gastrovascular cavity. All of the largest jellyfish belong to this class. The common *Aurelia aurita* is seen in bays and harbors, sometimes in large numbers. It is pallid, unlike some of the more colorful species in the genus *Cyanea*. Stalked jellyfish, the Stauromedusae, are unusual members of the Scyphozoa; they are found attached to seaweed, especially in cooler marine habitats. The order Rhizostomea includes jellyfish in which the original mouth has closed, and which have many subsidiary mouths found in frilled oral arms. *Cassiopea* is a well-known example, living in warmer, shallow waters, where it is often found lying on the bottom upside down, exposing its green algal symbionts to the sun.

Class Anthozoa. Class Anthozoa includes Cnidaria that have no jellyfish stage. This is the largest class of cnidarians, containing over 6,000 species. A gullet

extends for a short distance into the gastrovascular cavity, and septa are present, which increase the surface for digestion and absorption. Anthozoa are flower animals, including a great many beautiful and colorful organisms, e.g., the SEA ANEMONE, SEA PANSY, SEA FAN, and CORAL. Anthozoans are colonial or solitary organisms. Subclass Alcyonaria includes almost universally colonial organisms in which each of the polyps, or hydroid members, has eight feathery tentacles. Most of them produce a skeleton, and many make some contributions to CORAL REEFS. While some are found in temperate seas, they are especially common in subtropical to tropical regions. The organ pipe coral (*Tubipora*), a soft coral (*Alcyonium*), the Indo-Pacific blue coral (*Helio-pora*), and the SEA PENS, which have a stalk extending into the bottom mud or sand, are some typical alcyonarian corals. Horny corals, of the order Gorgonacea, are, perhaps, the best known. These form branching, upright colonies and have a skeleton that is partly composed of a horny material called gorgonin. These are the SEA WHIPS and sea fans, so characteristic of shallow tropical waters. The subclass Zoantharia includes both solitary and colonial forms, in which the polyp has more than 8 tentacles. The solitary sea anemones belong here, in the order Actiniaria, characterized by the lack of a skeleton. The stony corals so important in forming coral reefs belong to the order Madreporaria; they are especially characterized by their calcium carbonate exoskeleton, marked by many cups for the polyps, each of which contains stony septa dividing the gastrovascular cavity into compartments. The shape of coral skeletons depends on the pattern of growth of the colony. For example, in brain corals the polyps are arranged linearly, in the eyed coral (*Oculina*) the polyps are separated from each other by spaces, giving the skeleton a pitted appearance. The burrowing anemone, *Cerianthus*, lives in burrows in the sand and has a greatly elongated body. It is characteristic of the order Ceriantharia. See W. J. Rees, ed., *The Cnidaria and Their Evolution* (1966).

Cnidus or **Cnidus** (both nī'das), ancient Greek city of Caria, SW Asia Minor, on Cape Krio, in present SW Asiatic Turkey. It was partly on the peninsula and partly on an island that had been created by cutting through the peninsula. One of the cities of the Dorian Hexapolis, it sought to maintain its independence but fell (540 B.C.) under Persian rule. It had a large trade, particularly in wine, and was also noted for its medical school and other institutions of learning. One of the most famous statues of the ancient world, Aphrodite by Praxiteles, was there. In the waters off Cnidus the Athenians under Conon defeated the Spartans under Pisander in 394 B.C. Cnidus retained its importance in Roman times and is mentioned in the Bible (Acts 27:7, 1 Mac 15:23).

Cnossus or **Knossos** (both nōs'as), ancient city of Crete, on the north coast, near modern Iraklion. The site was occupied long before 3000 B.C., and it was the center of an important Bronze Age culture. It is from a study of the great palace, as well as other sites in Crete, that knowledge of the MINOAN CIVILIZATION has been drawn. The city was destroyed before 1500 B.C. (possibly by earthquake) and was splendidly rebuilt only to be destroyed again c. 1400 B.C., probably at the hands of invaders from the Greek mainland. This marked the end of Minoan culture. Cnossus later became an ordinary but flourishing Greek city, and it continued to exist through the Roman period until the 4th cent. A.D. In Greek legend it was the capital of King Minos and the site of the labyrinth. The name also appears as Cnosus and Knossus. See Sir A. J. Evans, *Palace of Minos* (4 vol., 1921-35), Leonard Cottrell, *Bull of Minos* (1953), E. L. Bennett, *The Knossos Tablets* (1956), L. R. Palmer, *A New Guide to the Palace of Knossos* (1969).

Co, chemical symbol of the element COBALT.

coach dog: see DALMATIAN.

Coachella Valley (kō'achē'l'a), arid region, SE Calif., N of the Salton Sea. Water is brought into the region by artesian wells and by the Coachella Canal (123 mi/198 km long), a branch of the All-American Canal built between 1938 and 1948, more than 100,000 acres (40,500 hectares) have been irrigated. Truck crops, dates (90% of U.S. production), citrus fruits, and alfalfa are grown in the region.

coachwhip snake: see RACER.

coagulation (kōäg'yōlā'shən), the collecting into a mass of minute particles of a solid dispersed throughout a liquid (a sol), usually followed by the precipitation or separation of the solid mass from the liquid. The casein in milk is coagulated (curdled) by the addition of acetic acid or citric acid.

The albumin in egg white is coagulated by heating. The clotting of blood is another example of coagulation. Coagulation usually involves a chemical reaction. Lyophobic particles (see COLLOID) lose their electric charge by reacting with oppositely charged particles. Lyophilic particles undergo a reaction that causes them to lose their solubility. In either case coagulation occurs. The formation of a gel by evaporation or cooling of a sol is usually called gelation rather than coagulation.

Coahuila (kōawē'l'a), state (1970 pop. 1,140,959), 58,067 sq mi (150,394 sq km), N Mexico, on the northward bulge of the Rio Grande, S of Texas. SALTILLO is the capital. In the eastern part of the state, where peaks of the Sierra Madre Oriental rise, are quantities of silver, copper, lead, iron, and zinc. Coahuila is Mexico's chief coal-producing state and a leading national producer of iron and steel. Lumbering is important, and northeast of the mountains, in the drainage area of the Rio Grande, there is considerable cattle raising. Across W Coahuila and E Chihuahua lie vast and arid plains (some of them recently irrigated), which are broken by barren mountains, most notable of these plains is the Bolson de Mapimi, extending into Chihuahua. South of the Bolson is a fertile lake region, center of a vast inland basin, which absorbs rivers with no outlet to the sea. A considerable portion of the LAGUNA DISTRICT lies in this area. TORREÓN is the chief metropolis. Coahuila produces cotton, corn, grapes, and most temperate grains and tropical fruits. Exploration of the territory began in the 16th cent. but was hampered by Indian hostility. After playing some part in the war against Spain, Coahuila was combined (1830) with Texas, a proceeding that caused dissatisfaction among the American minority and contributed to the Texas Revolution (1835-36). During the Mexican War, Saltillo was of strategic importance, and the battle of Buena Vista was fought nearby. Joined with Nuevo Leon by the constitution of 1857, Coahuila regained its separate status in 1868. The revolutionary leaders Francisco I. Madero and Venustiano Carranza were born in the state.

coal, fuel substance of plant origin, largely or almost entirely composed of carbon with varying amounts of mineral matter. There is a complete series of carbonaceous fuels, which differ from each other in the relative amounts of moisture, volatile matter, and fixed carbon they contain. Of the carbonaceous fuels, those containing the largest amounts of fixed carbon and the smallest amounts of moisture and volatile matter are the most useful to man. The lowest in carbon content, *peat*, is followed in ascending order by LIGNITE and the various forms of coal—subbituminous coal or black lignite (a slightly higher grade than lignite), bituminous coal, semibituminous (a high-grade bituminous coal), semianthracite (a low-grade anthracite), and anthracite. Lignite and subbituminous coal, because of the high percentage of moisture they contain, tend to crumble on exposure to the air. Bituminous coal, being more consolidated, does not crumble easily, it is a deep black in color, burns readily, and is used extensively as fuel in industries and on railroads and in making COKE. Anthracite, which is nearly pure carbon, is very hard, black, and lustrous, and is extensively used as a domestic fuel. Cannel coal, a dull, homogeneous variety of bituminous coal, is composed of pollen grains, spores, and other particles of plant origin. It ignites and burns easily, with a candlelike flame, but its fuel value is low. Coal is found in beds or seams interstratified with shales, clays, sandstones, or (rarely) limestones. It is usually underlain by an underclay (a layer of clay containing roots of plants). The vegetable origin of coal is supported by the presence in coal of carbonized fibers, stems, leaves, and seeds of plants, which can be detected with the naked eye in the softer varieties and with the microscope in harder coal. Sometimes carbonized tree stumps have been found standing in layers of coal. The general interpretation of these facts is that coal originated in swamps similar to present-day peat bogs and in lagoons, probably partly from plants growing in the area and partly from plant material carried in by water and wind. From the thickness of coal seams, it is assumed that the coal swamps were located near sea level and were subject to repeated submergence, so that a great quantity of vegetable matter accumulated over a long period of time. The initial processes of disintegration and decomposition of the organic matter were brought about by the action of bacteria and other microorganisms. Peat, the first product formed, is altered to form lignite and coal through metamorphism. The pressure of the accumulated layers of

overlying sediments and rock upon the submerged plant matter forced out much of the water and caused some of the volatile substances to escape and the nonvolatile carbon material to form a more compact mass. The greater the stress exerted in the process of metamorphism, the higher was the grade of coal produced. Cannel coal was probably formed in ponds, rather than in lagoons or swamps, as it occurs in lenticular masses and is frequently found to contain fossil fish. Coal was formed chiefly in the CARBONIFEROUS PERIOD of geologic time, but valuable deposits date also from the Permian, Triassic, Jurassic, Cretaceous, and Tertiary periods. The chief coal fields of the United States are the Appalachian (from N Pennsylvania into Alabama), the Eastern Interior (Illinois, Kentucky, and Indiana), the Northern Interior (Michigan), the Western Interior (Iowa, Kansas, Missouri, Oklahoma, and Arkansas), the Rocky Mountain (Colorado, Wyoming, Utah, New Mexico, Montana, and North Dakota), the Pacific (Washington), and the Gulf Coast (Texas, Arkansas, and Louisiana). In Europe the chief coal-producing countries are Germany, Great Britain, Russia, Poland, France, and Belgium. There are valuable coal fields in China, India, South Africa, and Australia, but few in South America. See Wilfrid Francis, *Coal* (1954), D. W. van Krevelen, *Coal* (2d ed. 1962), I. A. Williamson, *Coal Mining Geology* (1967).

coalfish: see COD.

coal gas, gas obtained in the destructive distillation of soft coal, as a by-product in the preparation of COKE. Its composition varies, but in general it is made up largely of hydrogen and methane with small amounts of other hydrocarbons, carbon monoxide (a poisonous gas), carbon dioxide, and nitrogen. It is used as a fuel and illuminant.

coal mining, physical extraction of coal resources to yield coal, also, the business of exploring for, developing, mining, and transporting coal in any form. Strip mining is the process in which the overburden (earth and rock material overlying the coal) is removed to expose a coal seam or coal bed. Excavators either dispose of the overburden or store the waste material for replacement after the coal has been extracted. Once exposed, the coal is usually removed in a separate operation. Surface soil is often stripped separately and spread back onto the reclaimed surface. The environment can also be protected by seeding or planting grass or trees on the fertilized restored surface of a strip mine. The term *strip mining* is most often used in reference to coal mining, although the process may also be used to extract certain metallic ores as well. Sometimes the terms *open-pit*, *open-cast*, or *surface mining* are used in the same sense, although they usually refer to metalliferous mining or the mining of other minerals. Underground coal mining is the extraction of coal from below the surface of the earth. The coal is worked through tunnels, passages, and openings that are connected to the surface for the purpose of the removal of the coal. Mechanical equipment breaks the coal to a size suitable for haulage. Alternatively, the coal is drilled, and the resultant holes are loaded with explosives and blasted in order to break the coal to the desired size. In order to protect the miners and equipment in an underground coal mine, much attention is paid to maintaining and supporting a safe roof or overhead ceiling for the extraction openings. Long-wall mining is a method of underground mining believed to have been developed in Shropshire, England, near the end of the 17th cent. A long face, or working section, of coal, some 600 ft (180 m) in length, is operated at one time. The miners and machinery at the working face are usually protected by hydraulic jacks or mechanical props which are advanced as the coal is extracted. The excavated, or gob, area is either allowed to cave in, or is filled in by waste material called stowing. The Anderton shear is a widely used coal cutter and loader for long-wall mining. It shears coal from the face as it moves in one direction and loads coal onto an armored conveyor as it travels back in the opposite direction. It is ordinarily used for coal seams greater than 3.5 ft (91 cm) in thickness.

Coalsack: see MILKY WAY.

coal tar, product of the destructive distillation of bituminous coal. Coal tar can be distilled into many fractions to yield a number of useful organic products, including benzene, toluene, xylene, naphthalene, anthracene, and phenanthrene. These substances, called the coal-tar crudes, form the starting point for the synthesis of numerous products—notably dyes, drugs, explosives, flavorings, perfumes, preservatives, synthetic resins, and paints and stains. The residual pitch left from the fractional distillation

is used for paving, roofing, waterproofing, and insulation

Coalville, urban district (1971 pop 28,334), Leicestershire, central England Coalville is a modern town in the center of the Leicestershire coal field Besides coal mining, there are hosiery, footwear, and plastics industries

Coamo (kwa'mō), town (1970 pop 12,077), S central Puerto Rico, on the Coamo River It is the trade center of a sugar and tobacco region and has garment factories The town was founded in the 16th cent

coast, land bordering an ocean or other large body of water The line of contact between the land and water surfaces is called the shoreline It fluctuates with the waves and tides Sometimes the terms *coast* and *shore* are used synonymously, but often *shore* is interpreted to mean only the zone between the shorelines at high tide and low tide, and *coast* indicates a strip of land of indefinite width landward of the shore Classically, coasts have been designated as submergent if they resulted from a rise in the relative sea level and emergent if they resulted from a decline Young submergent coasts usually are irregular and have deep water offshore and many good harbors, either bays or estuaries Much of the coast of New England and most of the Atlantic coast of Europe are young submergent coasts according to this classification scheme Gradually the submergent coast, subjected to erosive attacks of the ocean and other agents, becomes mature Headlands are worn back to form cliffs, at the base of which deposits of eroded material accumulate as fringing beaches, spits and bars also grow up from material that is carried by currents and deposited in deeper water The shoreline is called mature when it is smooth, the headlands having been cut away and the bays either filled up or closed off by spits Emergent shorelines usually have shallow water for some distance offshore Such shorelines are found along the Atlantic coast of the SE United States and along part of the coast of Argentina, near the Rio de la Plata This classification system does not adequately describe many coasts, partly because many of them exhibit features of both submergence and emergence Because of these and other problems a classification system that is based on the most recent and predominant geologic agent forming the coast has become popular Under this scheme, there are essentially two major types of coasts Primary coasts are youthful coasts formed where the sea rests against a land mass whose topography was formed by terrestrial agents These coasts include land erosion coasts (Maine), volcanic coasts (Hawaii), deposition coasts (Nile Delta coast), and fault coasts (Red Sea) Secondary coasts are formed chiefly and most recently by marine agents, and may even be primary coasts that have been severely modified by wave action These coasts include wave erosion coasts, marine deposition coasts, and coasts built by organisms (reefs and mangrove coasts) The nature of the coastline of a country or a state is an important factor in its economic development because it relates to defense, fishing, recreation, and overseas commerce See C A M King, *Beaches and Coasts* (2d ed 1972)

coast guard, special naval force assigned to seaboard duties Its primary responsibilities usually consist in suppressing contraband trade and aiding vessels in distress The British coast guard was established just after the Napoleonic Wars for the purpose of preventing smuggling When the Coast Guard Act of 1856 put this task under the direction of the admiralty, the British coast guard was reorganized to perform coast-watching and lifesaving duties In the United States a coast guard was formed in 1915 when an act of Congress combined the Revenue Cutter Service with the Life Saving Service The cutter service had been established by Congress in 1790, at the suggestion of Alexander Hamilton, to prevent smuggling, until the creation of the navy it was the only U.S. armed service afloat The Life Saving Service developed some years later (see LIFESAVING) The U.S. coast guard subsequently absorbed the Lighthouse Service (1939) and the Bureau of Marine Inspection and Navigation (1942) In peacetime the coast guard is under the jurisdiction of the Dept of Transportation, in wartime, and for such other periods as the President may direct, it is under the control of the navy In addition to its rescue and antismuggling activities, the service enforces navigation rules and maintains jurisdiction over the regulations concerning the construction and equipment of merchant ships and over the licensing of merchant marine officers and seamen It also operates and maintains weather ships, an ice patrol in

the N Atlantic, and various navigational aids, including lighthouses, lightships, buoys, and loran stations The Coast Guard Academy, for the training of officers, is located in New London, Conn See studies by M F Willoughby (1957), H R Kaplan (1972), and Gene Gurney (1973)

Coast Mountains, range, W British Columbia and SE Alaska, extending c 1,000 mi (1,610 km) parallel to the Pacific coast, from the mountains of Alaska near the Yukon border to the Cascade Range near the Fraser River Mt Waddington (13,260 ft/4,042 m) is the highest peak The geologically complex range, composed mainly of metamorphic rocks, slopes steeply to the Pacific Ocean, where the shoreline is deeply indented by fjords The Coast Mts have been heavily eroded by mountain glaciers, numerous rivers, including the Fraser, the Skeena, and the Stikine, have cut deep gorges across the range The average annual precipitation of c 90 in (230 cm) makes the region one of the wettest parts of Canada Its slopes are heavily forested, and lumbering is important In the Coast Mts is Kemanu, one of Canada's largest hydroelectric plants The Coast Mts are sometimes confused with the geologically distinct COAST RANGES

coast protection, methods used to protect coastal lands from erosion Beaches can exist only where a delicate dynamic equilibrium exists between the amount of sand supplied to the beach and the inevitable losses caused by wave erosion Various activities of man have upset this equilibrium, decidedly increasing the rate of erosion of the shorelines For example, the plethora of dams constructed across major drainage systems has served to entrap sediment that would normally reach the coastal zone, imperiling the existence of beaches by cutting off their natural sand supply Mining of beach sand has removed millions of tons of sand from coasts and drastically upset the balance between natural supply and losses Historically, man has considered coast protection a local problem, and has attacked the problem by building structures to inhibit the transportation of sand from his local area However, it has been learned that building structures to solve a local erosion problem may extend and intensify the erosion problem along nearby beaches, requiring the construction of structures along an entire coast For example, many structures block littoral drift, which is a movement of sand parallel to the coast, both on the beach and offshore, caused by waves The blockage results in a depletion of sand downcurrent from the structure Several different kinds of structures are built Sea walls are constructed at the edge of the shore facing the ocean waves Designed to protect only the beach areas behind them, they cause an increased loss of sediment in front of and beneath them BREAKWATERS are long piers built offshore parallel to the shoreline, they are designed to provide calm anchorages in an area behind them called a wave shadow At the breakwater off Santa Monica, Calif., the wave shadow impeded the littoral drift, producing a deposition of sand behind the breakwater and extensive erosion of the beach downcurrent Groins are lines of rock or pilings constructed perpendicular to the shoreline They act as a partial barrier to littoral drift, trapping sand on the updrift side and causing erosion on the downdrift side Jetties are often built at river mouths and harbor entrances, projecting out into the ocean to direct and confine littoral currents and to prevent silting of the harbor entrance Jetties cause the same problems of downdrift erosion as groins In some instances it has been necessary to pump the sand trapped by the structure to adjacent beaches downdrift Efforts have also been made to prevent erosion using the natural materials at hand Artificial dunes have been built by bulldozing sand back from the beach or by placing snow fences to trap windblown sand Since beaches themselves are effective in dissipating wave energy, one remedy to the lack of a sand supply is to pump sand directly onto the beach from interior or offshore zones Unlike other man-made structures, artificial beaches do not harm the shore downdrift

Coast Ranges, series of mountain ranges along the Pacific coast of North America, extending from SE Alaska to Baja California, from 2,000 to 20,000 ft (610-6,100 m) high The ranges include the St Elias Mts in SE Alaska and SW Yukon, which have the highest elevations, a partially submerged portion that forms the islands off the coast of SE Alaska and British Columbia, the Olympic Mts in Washington, the Coast Ranges in Oregon, the Klamath Mts, Coast Ranges, and Los Angeles Ranges in California, and the Peninsular Range in Baja California The

Coast Ranges are rugged, geologically young mountains, formed by faulting and folding and are composed mainly of granitic rock, the northern third is glaciated N of San Francisco the ranges are humid and thickly forested, the southern parts are dry and covered with brush and grass Lumbering, mining, and tourism are important

Coatbridge, burgh (1971 pop 52,131), Lanarkshire, S central Scotland In Coatbridge a variety of iron and steel products are manufactured In 1975, Coatbridge became part of the Strathclyde region

Coates, Albert, 1882-1953, Russian-English conductor and composer, b St Petersburg, studied at the Leipzig Conservatory under Nikisch After conducting in Germany (1906-10), he returned to Russia and conducted at St Petersburg until 1917 In 1919 he settled in England where, except for brief teaching assignments in the United States, he remained until 1946, when he moved to the Union of South Africa Although he was a prolific composer, his works have seldom been performed Among them are the operas *Samuel Pepys* (1929), *Pickwick* (1936), and *Van Hunks and the Devil* (1952)

Coatesville, city (1970 pop 12,331), Chester co., SE Pa, on Brandywine Creek, in a farm area, settled c 1717, inc as a city 1916 It is a steel center Joseph Hergesheimer wrote about this region in *The Three Black Pennys* A U.S. veterans hospital is there The Revolutionary battle of BRANDYWINE (Sept 11, 1777) was fought to the south of the city, the area is now a state park

coatimundi (kō'a'tēmūn'dē) or **coatí**, omnivore of North and South America related to the RACCOON The coatimundi has a long snout, an elongated body, and a long bushy tail banded with dark rings The coat color varies from yellowish brown or reddish brown to black The males are significantly larger than the females and may be more than 50 in (127 cm) long and may weigh up to 25 lb (11 kg) Active both day and night, the coatimundi is a forest dweller and an agile tree climber It eats lizards, birds, and fruit and uses its long mobile snout to grub for insects and roots On the ground, its short forelegs give it a bearlike gait as it lumbers along with its tail erect Females and their young travel in bands, but males are solitary and join the band only in the mating season The young, typically four to six in number, are born following a gestation period of about seventy-seven days The species *Nasua narica* is native to SW United States *N. rufa*, the ring-tailed coatimundi, is a related species that ranges from Mexico to Peru Coatimundis are often raised as pets in Mexico They are classified in the phylum CHORDATA, subphylum Vertebrata, class Mammalia, order Carnivora, family Procyonidae

coat of arms: see BLAZONRY and HERALDRY

Coatzacoalcas (kwātsakwal'kōs), city (1970 pop 73,563), Veracruz state, E central Mexico, at the mouth of the Coatzacoalcas River It is a port on the Gulf of Campeche, as well as the northern terminus of rail traffic across the Isthmus of Tehuantepec Highway communications are also good The city is an important commercial center Oil, sulfur, and timber are exported, and the port facilities have been enlarged to enable Coatzacoalcas to handle foreign trade

coaxial cable: see CABLE

cobalamin: see COENZYME, VITAMIN

Cobalt (kō'bōlt), town (1971 pop 2,197), E Ont., Canada, NE of Sudbury, near Lake Timiskaming Cobalt deposits were discovered in 1903 The town is also the center of one of the world's richest silver districts The town has a mining museum

cobalt, metallic chemical element, symbol Co, at no 27, at wt 58.9332, m.p. 1495°C, b.p. about 2870°C, sp. gr. 8.9 at 20°C, valence +2 or +3 Cobalt is a silver-white, lustrous, hard, brittle metal It is a member of group VIII of the PERIODIC TABLE Like iron, it can be magnetized It is similar to iron and nickel in its physical properties The element is active chemically, forming many compounds, e.g., the series of cobaltous and cobaltic salts and the complex cobalt amines derived from cobaltic salts and ammonia Cobalt yellow, green, and blue are pigments of high quality that contain cobalt, another blue pigment, smalt, is made by powdering a fused mixture of cobalt oxide, potassium carbonate, and sand, these pigments are often used for coloring glass and ceramics Cobalt chloride, used as an invisible ink, is almost colorless in dilute solution when applied to paper Upon heating it undergoes dehydration and turns blue, becoming colorless again when the heat is removed and water is taken up The element rarely occurs uncombined in nature but is often found in meteoric metal It is a

constituent of the minerals COBALTITE and SMALTITE and of other ores, usually in association with other metals. Pure cobalt metal is prepared by reduction of its compounds by aluminum (the Goldschmidt process), by carbon, or by hydrogen. It is a component of several alloys, including the high-speed steels carboloy and stellite, from which very hard cutting tools are made. It is a component of some stainless steels, and of high-temperature alloys for use in jet engines. Alnico, an alloy of cobalt, aluminum, nickel, and other metals, is used to make high-strength permanent magnets. As an element in the diet of sheep, cobalt prevents a disease called sway-back and improves the quality of the wool. A radioactive isotope, cobalt-60 (with gamma ray emission 25 times that of radium), is prepared by neutron bombardment. It is used for cancer therapy and in industry for detecting flaws in metal parts. See HYDROGEN BOMB. Cobalt was discovered in 1735 by Georg Brandt, a Swedish chemist.

cobalt bomb: see HYDROGEN BOMB

cobaltite (kō'bōltīt, kō'bōlt'īt), opaque, silver-white, sometimes reddish or grayish mineral of the pyrite group, a compound of cobalt, arsenic, and sulfur, CoAsS. It occurs in crystals of the cubic system, also in compact to granular masses. It is an important ore of cobalt, found chiefly in Sweden, Norway, Zaire, and Ontario (Canada).

Cobb, Howell, 1815-68, American politician, b. Jefferson co., Ga. In 1837 he became solicitor general of the western judicial circuit of Georgia, a district populated largely by small farmers of Unionist sentiments. He championed their cause and from 1843 to 1851 represented them in the House of Representatives. He was elected floor leader of the Democrats in 1848 and speaker in 1849. Cobb united with the Whigs in Georgia to win approval of the Compromise of 1850. His followers and the Whigs formed the short-lived Constitutional Union party, which elected him to the governorship (1851-53). Cobb was returned to Congress in 1855, and in 1857 President Buchanan appointed him Secretary of the Treasury. After Lincoln's election he resigned, advocated secession, and was chairman of the convention in Montgomery, Ala., that organized the Confederacy. In the Civil War he rose to the rank of major general (1863) but saw little active fighting. See Horace Montgomery, *Howell Cobb's Confederate Career* (1959).

Cobb, Irvin Shrewsbury, 1876-1944, American author, b. Paducah, Ky. He was a noted New York humorist and columnist. Although he wrote over 60 books, Cobb is best known for his humorous stories of Kentucky local color, first collected in *Old Judge Priest* (1915). Among his other books of humor are *Speaking of Operations* (1916) and *Red Likker* (1929). See his autobiography, *Exit Laughing* (1942), study by F. G. Neuman (1934, repr. 1974).

Cobb, Lee J., 1911-, American actor, b. New York City. He first performed with the Pasadena (Calif.) Playhouse in 1929 and made his Broadway debut in *Crime and Punishment* (1935). Cobb created the role of Willy Loman in Arthur Miller's *Death of a Salesman* (1948-49, repeated for television in 1965). He performed Shakespeare in New York, including *The Merchant of Venice* and *King Lear*. His films include *On the Waterfront* (1954), *Twelve Angry Men* (1957), and *The Brothers Karamazov* (1958).

Cobb, Thomas Reade Rootes, 1823-62, American lawyer, b. Jefferson co., Ga., brother of Howell Cobb. Admitted to the bar in 1842, he edited 20 volumes of the Georgia supreme court reports (1849-57), prepared *A Digest of the Statute Laws of the State of Georgia* (1851), and compiled (1858-61) a new state criminal code. Cobb was a militant secessionist. In the Georgia secession convention he was chairman of the committee that wrote a new state constitution (1861) and helped write the Confederate Constitution. In the Civil War he organized and led Cobb's Legion. Promoted to brigadier general in Nov., 1862, he was killed at Fredericksburg the following month.

Cobb, Ty (Tyrus Raymond Cobb), 1886-1961, American baseball player, b. Narrows, Ga. In 1905 he joined the Detroit Tigers as center fielder and in his 24 years in the American League was one of the most spectacular and brilliant players of the game. Cobb, called the "Georgia Peach" by his admirers, had a 367 lifetime batting average, made 4,191 major-league hits, stole 892 bases, and won 12 batting championships. He was (1921-26) manager of the Detroit team, played (1927-28) with the Philadelphia Athletics, and then retired from baseball. He was the first elected (1936) member of the National Baseball Hall of Fame. See his autobiography (1961).

Cobbett, William (kōb'īt), 1763?-1835, British journalist and reformer. The son of a farm laborer, he ran away from home at 14 and later joined the British army. He resigned in order to expose abuses in the military forces, but, unable to prove his accusations, he fled to France to escape suit and thence went to the United States. In America, in his *Observations on Priestley's Emigration* (1794), *Porcupine's Gazette* (1797-99), and other pamphlets and periodicals, Cobbett defended the British monarchy and praised aristocratic government in preference to democracy. His outspoken and skillful disparagement of French Jacobinism and of the pro-French party in the United States made him a major target of the Jeffersonian Republicans. Dr. Benjamin RUSH secured a \$5,000 verdict against him for libel in 1799, and shortly afterward Cobbett returned to England. As the threat of French Jacobinism dwindled, Cobbett's Tory patriotism gave way to a deep concern for the condition of the working classes, especially rural workers, in the rapidly industrializing English society, and by 1807 he had become a Radical. His *Political Register*, begun in 1802 and published intermittently throughout the remainder of his life, was one of the greatest reform journals of the period and achieved an unparalleled influence among the working classes. For his attacks on the use of flogging as military punishment he was fined and imprisoned (1810-12). Severe financial difficulties forced him to sell his *Parliamentary Debates* to Hansard's printing firm, (see HANSARD). After the passage (1817) of the Gagging Acts to suppress radicalism and to hinder the circulation of reform literature, Cobbett fled once again to the United States. He settled on a farm on Long Island and wrote his famous *Grammar of the English Language* (1818). Returning to England in 1819, he became a central figure in the agitation for parliamentary reform, but he also found time to write many books, the most important of which, *Rural Rides* (1830), comprises a classic portrayal of the situation of the rural worker. After the Reform Bill was passed in 1832, Cobbett was elected to Parliament, where he became a member of the Radical minority. See biographies by G. D. H. Cole (3d ed. 1947, repr. 1971), G. K. Chesterton (1926), J. W. Osborne (1966), and James Sambrook (1973).

Cobden, Richard (kōb'dən), 1804-65, British politician, a leading spokesman for the MANCHESTER SCHOOL. He made a fortune as a calico printer in Manchester. A firm believer in free trade, after 1838 he devoted himself to the formation and work of the ANTI-CORN-LAW LEAGUE. Campaigning both inside and outside Parliament (to which he was elected in 1841), he finally won over Sir Robert PEEL, and the corn laws were repealed in 1846. After 1849, Cobden concerned himself chiefly with foreign policy, advocating nonintervention in Europe and an end to imperial expansion. He became unpopular for his opposition to the Crimean War (1854-56) and lost his parliamentary seat in 1857. Re-elected in 1859, he negotiated (1859-60) the "Cobden Treaty" for reciprocal tariffs with France. Like his close associate John BRIGHT, he favored the North in the Civil War in the United States (which he had twice visited). His many speeches, letters, and pamphlets have been published. See biographies by John Morley (1882) and J. A. Hobson (1919, new ed. 1968), study by D. Read (1967).

Cōbh (kōv) [Irish, =cove], urban district (1971 pop. 6,049), Co. Cork, S. Republic of Ireland, on the south shore of Great Island in Cork Harbour. Originally called Cove of Cork, the town was renamed Queenstown upon being visited by Queen Victoria in 1849. The name Cōbh was resumed in 1922. There are large docks and stations of naval stores. Situated on slopes above the harbor and having a fine climate, Cōbh has become a seaside resort. It is the headquarters of the Royal Cork Yacht Club, the oldest yacht club in the world (founded in the early 18th cent.), and there is an annual regatta. Steel is manufactured nearby at Haubowline Island.

Cobham, John Oldcastle, Lord see OLDCASTLE, SIR JOHN

Coblentz, William Weber (kō'blēnts), 1873-1962, American physicist, b. North Lima, Ohio, grad. Case School of Applied Science (B.S., 1900) and Cornell (Ph.D., 1903). From 1905 to 1945 he was physicist with the National Bureau of Standards. He was the first to verify Planck's law, and he conducted valuable researches on infrared and ultraviolet radiation, the measurement of stellar radiation and planetary temperatures, and the optical properties of iodine.

Coblentz, West Germany see KOBLENZ

COBOL [from COmmon BUssiness-ORiented Language], symbolic language used for programming a COMPUTER for business applications.

Cobourg Peninsula, c. 50 mi (80 km) long and 25 mi (40 km) wide, N. Northern Territory, Australia, E. of Melville Island. It is a reserve for native flora and fauna.

cobra, name for African and Asian snakes of the family Elapidae that are equipped with inflatable neck hoods. The family also includes the African MAMBAS, the Asian kraits, the New World CORAL SNAKES and a large number of Australian snakes. All members of the family are poisonous and have short, rigid fangs attached at the front of the mouth. Cobras are found in most of Africa and in S. Asia. They are nocturnal hunters, and most feed on small mammals, birds, and frogs. Females of all but one species lay eggs. The hood, which serves as a warning device, consists of loose skin around the neck, when the snake is excited it spreads the hood by extending the underlying long, movable ribs, and inflating it with air from the lungs. The king cobra (*Ophiophagus hannah*), or hamadryad, largest of all venomous snakes, is found in S. Asia, it may reach a length of 18 ft (5.5 m) and feeds chiefly on other snakes. The Indian cobra (*Naja naja*), a common snake of the same region, is usually 4 to 5 ft (1.2-1.6 m) long, its large hood is marked on the back by a pattern of figures resembling eyes. It preys on rats and is therefore often found in houses. The Indian cobra and the Egyptian cobra (*Naja haje*) are often displayed by snake charmers. The cobras appear to respond to the music played by the charmer, but, like all snakes, they are deaf, and only follow the movements of the charmer. As cobras do not strike accurately during the day, charmers are seldom bitten. Most cases of snakebite from cobras occur when humans walking barefoot at night disturb the animal. Cobra venom is not as toxic as that of some other members of the family, the fatality rate among human victims is thought to be about 10%. Some African cobras can eject a spray of venom through the openings of the fangs, aiming accurately to a distance of at least 6 ft (1.8 m). Among these is the ringhals (*Hemachatus hemachatus*) of S. Africa, which aims the spray at the eyes of the victim, causing great pain and sometimes blindness. The ringhals is the only cobra that bears live young. Cobras are classified in the phylum CHORDATA, subphylum Vertebrata, class Reptilia, order Squamata, family Elapidae.

Cobre, El (ēl kō'brā), town (1970 pop. 3,952), SE Cuba, in a high valley of the Sierra Maestra. Once famous for rich copper mines (hence the name El Cobre), it is now chiefly noted for a shrine to Our Lady of Charity (La Virgen de la Caridad del Cobre). Cuba's patron saint. Guerrilla warfare raged in the neighboring mountains during Fidel Castro's revolution.

Coburg (kō'bōrk), city (1970 pop. 42,619), Bavaria, E. central West Germany, on the Itz River. It has metal, glass, and ceramics industries and is known for its toys and Christmas ornaments. Mentioned in the 11th cent., Coburg in 1353 passed to the house of WETTIN. It was the alternate capital (with Gotha) of Saxe-Coburg-Gotha from 1826 to 1918 and joined Bavaria in 1920. The large ducal castle (16th cent.) was the residence of Martin Luther in 1530. The city has a modern convention hall (1962).

Coburg Peninsula, Australia see COBOURG PENINSULA

Coburn, Alvin Langdon, 1882-, American photographer, b. Boston. Coburn began making photographs at eight and by 1905 had become renowned for his thoughtful, perceptive portraits of European literary and artistic celebrities. Living and working in England most of his life, he produced superb photographs of urban and marine scenes and landscapes that were widely published and exhibited. See his autobiography (1966).

coca (kō'kə), common name for shrubs of the genus *Erythroxylon*, particularly *E. coca*, of the family Erythroxylaceae, and found abundantly in upland regions and on mountain slopes of South America, as well as in Australia, India, and Africa. Certain South American Indians chew the leaves mixed with an alkali, lime, which acts with saliva to release the drug COCAINE from the leaves. In the low doses used by the Indians, the drug acts as a stimulant and an appetite depressant with physiological effects similar to those of TOBACCO. Until the time of the Spanish conquest, only the Inca aristocracy was privileged to chew the coca leaves, but afterwards, the Spanish encouraged the enslaved Indians all to use coca in order to get them to endure long periods of

heavy labor and physical hardships. A cocaine-free extract of coca leaves is used in some soft drinks. Coca, a different plant than the cocoa plant CACAO, is grown commercially in Sri Lanka (Ceylon), Java, and Taiwan. Coca is classified in the division MAGNOLIOPHYTES, class Magnoliopsida, order Linales, family Erythroxylaceae.

cocaine (kōk'ān, kō'kān), alkaloid drug derived from the leaves of the COCA shrub. Cocaine acts as an anesthetic, depressing nerve endings and nerve trunks, however, it also stimulates the central NERVOUS SYSTEM, producing, in humans, euphoric effects, hallucinatory experiences, and temporary increases in physical energy. The drug's stimulatory effects make it psychologically habit-forming, but the body does not develop tolerance to the drug, i.e., does not need increasing doses to achieve the original effect. Withdrawal from habitual use of cocaine is characterized by severe depression, which acts to encourage return to use of the drug. Long-term use can result in digestive disorders, weight loss, general physical deterioration, and marked deterioration of the nervous system. Cocaine has been found to induce nervous system aberrations, including a PSYCHOSIS that is characterized by the common delusion that ants or other insects are crawling along or under the skin. Habitual injection of cocaine frequently results in skin abscesses. A combination of cocaine and MORPHINE or HEROIN, known as a speedball, is used by some drug addicts (see DRUG ADDICTION AND DRUG ABUSE).

Cocceius, Johannes (kōksē'ās), 1603–69, German theologian, whose surname was originally Koch or Koken. Born in Bremen, he went to Holland, where he was professor at Francken and Leiden. He produced many learned writings, among them his great dictionary of the Hebrew language (1669), often reprinted. Cocceius held a theory of life based upon the Bible. He made the biblical COVENANT between God and man the central idea of his theology. In his examination of the Old Testament he found Jesus Christ prefigured throughout. His followers, Cocceians, perpetuated and emphasized his teachings.

coccidioidomycosis (kōksīd'ēoi'dōmīkō'sīs), systemic fungal disease (see FUNGUS INFECTION) endemic to arid regions of the Americas. Its original site is in the respiratory tract, from which it can spread to the skin, bones, and central nervous system. Manifestations of the disease range from complete absence of symptoms to systemic infection and death. Coccidioidomycosis is contracted by inhaling dust infected with the fungal spores. The soil that supports *Coccidioides* spores is indigenous to dry, hot geographical areas, SW United States, Argentina, and Paraguay are areas of high incidence of infection. In 60% of the cases no clinical evidence of the disease is present and the only recognizable sign is a positive skin test, in 15% symptoms resembling those of influenza occur, and in 25% more serious signs such as swelling of the knees, weakness, pleural pain, and prostration occur. Diagnosis is made upon positive cultural identification of the virus. Although an antifungal drug is effective in some cases, there is no specific treatment except for bed rest.

coccyx (kōk'sīks) see SPINAL COLUMN

Cochabamba (kōchabāmb'a), city (1971 est. pop. 180,000), alt. c. 8,400 ft (2,560 m), capital of Cochabamba dept., W central Bolivia, the second largest city in Bolivia. It is a commercial center in an agricultural region that ships grains, fruits, and cattle. Industries produce goods mainly for local consumption. Founded in 1574, the city was called Villa de Oropeza and was renamed in 1786. Cochabamba has many historical buildings, including a convent, with five paintings by the Spanish artist GOYA, and a monument to the women of the city who fought and died in the Bolivian war of independence (1815). Cochabamba also has a university.

Cochin, Charles Nicolas (sharl nēkōla' kōshān'), 1715–90, French engraver, designer, writer on art, and painter to the French court. His works, more than 1,500 in number, include historical subjects, such as the *Marriage of the Dauphin*, vignettes and frontispieces, book illustrations, and pencil and crayon portraits.

Cochin (kō'chīn'), former princely state, 1,493 sq mi (3,867 sq km), SW India, on the Arabian Sea. Now part of Kerala state, the region of Cochin has one of the highest population densities in India. Agriculture is the chief economic activity, rice, coconuts, tapioca, pepper, and vegetable oils are produced. Ernakulam was the former capital and Cochin (1971 pop. 438,420) the chief port. The finest port S of Bombay, Cochin has a naval base and shipbuilding industry. Tires, paper, chemicals, and tiles are manu-

factured. After Vasco da Gama visited Cochin (1502), the Portuguese established a settlement there. The Dutch captured it in 1663 and the British in 1795. In adjoining Mattancheri there is a community of descendants of Jews expelled from Portugal in the 16th cent.

Cochin China (kō'chīn, kō'—), Fr. *Cochinchine*, historic region (c. 26,500 sq mi/68,600 sq km) of South Vietnam, SE Asia. The capital and chief city was SAIGON. Cochin China was bounded by Cambodia on the northwest and north, by the historic region of ANNAM on the northeast, by the South China Sea on the east and south, and by the Gulf of Siam on the west. It included the rich MEKONG delta, one of the world's great rice-growing regions, and, in the northeast, the southern spurs of the Annamese Cordillera, where rubber, coffee, tea, oil palm, and sugarcane plantations were established. Only the Plaine des Joncs [reed plain] and the mangrove-covered Ca Mau peninsula were not cultivated. Cochin China was originally part of the KHMER EMPIRE. In the 17th cent. the Annamese (later called Vietnamese) gradually infiltrated through the mouths of the Mekong, increasing their commercial influence until in the middle of the 18th cent. they became masters of the region. After the French occupied Saigon (1859), Annam ceded to France both E Cochin China (1862) and W Cochin China (1867). Unlike the other sections of Indochina, which were French protectorates under native rulers, Cochin China was administered by the French as a colony, thus, French influence was strongest there. After World War II the status of Cochin China became a major issue in the relations between France and Vietnam. Constituted (1946) as an independent republic within the Federation of Indochina, Cochin China was later (1949) permitted by the French to join with Annam and Tonkin in Vietnam. After 1954, when Vietnam was partitioned, Cochin China became the heartland of South Vietnam, it was later divided into several provinces.

cochineal (kōchīnēl', kōch'īnēl'), natural dye obtained from an extract of the bodies of the females of a scale insect (*Coccus cacti*) found on certain species of cactus, especially *Nopalea coccinellifera*, native to Mexico and Central America. The insects' bodies contain the pigment called carminic acid, which is obtained by subjecting a mass of the crushed insects to steam or dry heat, such large numbers of the insects are needed to produce a small amount of dye that the cost is high. Once commonly used as a scarlet-red mordant dye for wool and as a food color, cochineal has been largely replaced by synthetic products. It is used chiefly now as a biological stain.

Cochise (kōchēs', kōchē'sā), c. 1815–1874, chief of the Chiricahua group of APACHE INDIANS in Arizona. He was friendly with the whites until 1861, when some of his relatives were hanged by U.S. soldiers for a crime they did not commit. Afterward he waged relentless war against the U.S. army and became noted for his courage, integrity, and military skill. His friendship with Thomas JEFFORDS became the key to peace. In 1872, Gen. Oliver OTIS HOWARD, the Indian commissioner, requested Jeffords to accompany him to Cochise's mountain stronghold. As a result of the peace talks, Cochise agreed to live on the reservation that Howard promised would be created from the chief's native territory. After the death of Cochise, however, his people were removed to another reservation. The southeastern-most county of Arizona is named for him.

cochlea (kōk'lēā) see EAR

Cochrane, Thomas: see DUNDONALD, THOMAS COCHRANE, 10TH EARL OF

Cock or Kock, Hieronymus (both hē'ərō'nīmās kōk), 1510–70, Flemish painter and engraver. In Antwerp he was the first great publisher of prints and made numerous plates after Bruegel, Bosch, and Floris.

Cockaigne or Cockayne, Land of (both kōk'ān'), legendary country described in medieval tales, where delicacies of food and drink were to be had for the taking. *The Land of Cockayne* is a 13th-century English poem satirizing monastic life.

cockatoo see PARROT

Cockburn, Sir Alexander James Edmund, 1802–80, British jurist. He was called to the bar in 1829, and a volume of reports on election cases (1832) brought him into national prominence as a trial lawyer. He was made recorder for Southampton (1841) and was elected to Parliament from there (1847). He was noted particularly for his defense advocacy, one of his most famous successes being the acquittal (1843) of Daniel McNaghten, who had killed Sir

Robert Peel's secretary, on grounds of insanity, the "McNaghten rules" became the basic definition of criminal responsibility in most English-speaking jurisdictions. In Parliament, Cockburn successfully defended Lord Palmerston's handling of the "Don Pacifico" dispute (1850). He served as attorney general (1851–56) and was chief justice of common pleas (1856–59) and lord chief justice (1859–80), presiding over the famous TICHBORNE CASE.

Cockburn, Sir George, 1772–1853, British admiral. He served in the Mediterranean, and in the War of 1812 he participated in the Chesapeake Bay expeditions and in the burning of Washington. He conveyed Napoleon I in the *Northumberland* to St. Helena, remaining there as governor (1815–16).

Cockburn Island: see MANITOULIN ISLANDS

cockchafer: see JUNE BEETLE

Cockcroft, Sir John Douglas, 1897–1967, English physicist, educated at the Univ. of Manchester and at St. John's College, Cambridge. He was a fellow of St. John's College (1928–46) and professor of natural philosophy at Cambridge (1939–46). After serving (1941–44) as chief superintendent of the Air Defence Research and Development Establishment, he directed (1944–46) the atomic energy division of the National Research Council of Canada and became (1946) the director of the British Atomic Energy Research Establishment. The 1951 Nobel Prize in Physics was awarded jointly to Cockcroft and E. T. S. Walton for their pioneer work in transmuting atomic nuclei by bombarding elements with artificially accelerated atomic particles. He was knighted in 1948.

Cockerell, Charles Robert (kōk'əral), 1788–1863, English architect, archaeologist, and writer. While excavating at Bassae, Aegina, and other sites in Italy, Greece, and Asia Minor, he studied the remains of ancient architecture and designed restorations for the temple of Zeus at Agrigento, Sicily. In 1819 he was appointed surveyor of St. Paul's Cathedral, London, and in 1833 he became chief architect of the Bank of England, designing the buildings at Bristol, Liverpool, and Manchester and making alterations in the London branch. From 1840 to 1857 he served as professor of architecture in the Royal Academy and during 1860–61 was president of the Royal Institute of British Architects. His works include the Taylor buildings, Oxford, Hanover Chapel, London, and the National Monument, Edinburgh. He completed the interior of St. George's Hall, Liverpool. Most of Cockerell's works bear the stamp of the CLASSIC REVIVAL, of which he was a notable exponent.

cocker spaniel, breed of small SPORTING DOG developed from English cocker spaniels brought to the United States in the 1880s. It stands from 14 to 15 in (35.6–38.1 cm) high at the shoulder and weighs about 25 lb (11.3 kg). Its silky, flat, or wavy coat is moderately long and forms fringes, or feathers, on the underside of the body and on the legs, chest, and ears. The coat may be of any solid color or a combination of two or more colors (parti-colored), such as white with red or tan markings or black and tan. The tail is docked. The smallest of the sporting-dog breeds, cockers can be trained to flush game and retrieve. According to some authorities their name derives from their proficiency at hunting woodcocks. They have also been exceptionally popular as house pets. See DOG.

cockfighting, sport of pitting gamecocks against each other. Popular in Asia, in Latin America, and in some areas of the United States, it is an ancient form of amusement, having been practiced in Persia, Greece, and Rome. It has long been opposed by the clergy and by humane groups. Massachusetts passed (1836) the first law in the United States forbidding cockfighting, most other states have since taken similar action. Great Britain prohibited cockfighting by law in 1849. There are several forms of cockfighting, including the single battle and the round-robin tournament. The jousts are usually held in a small circular pit into which the gamecocks—specially bred and trained for fighting—are placed beak to beak by their handlers and then released. Local rules prevail, and a combatant is defeated when he refuses to fight, is unable to fight, or is killed. Metal spurs sometimes are attached to the fowl's natural spurs to make action deadlier.

cockle, common name applied to the heart-shaped, jumping or leaping marine BIVALVE mollusks, belonging to the order Eulamellibranchia. The brittle shells are of uniform size, are obliquely spherical, and possess distinct radiating ridges, or ribs, which aid the animal in gripping the sand. The mantle has three distinct apertures (inhalant, exhalant, and pedal) through which the inhalant and exhalant si-

phons and the foot protrude. The cockle lives in sand and mud in shallow water, often in brackish inlets. It burrows until only the siphons project, pulling in water from which the animal strains the minute planktonic organisms on which it feeds. All cockles are hermaphroditic. In order to accomplish the characteristic jumping form of forward locomotion, the large, powerful, muscular foot is bent backward beneath the shell and then straightened. In most adults, the foot is about as long as the greatest length of the shell. Several species of cockles are considered by man to be good, edible clams. In the British Isles, great numbers of cockles are taken annually for food from densely populated beds. These beds have been known to migrate in units, probably in response to changes in currents. *Protothaca staminea*, the rock cockle, is among the best known and most widely used for food. It usually does not exceed 3 in (7.5 cm) in length. Rock cockles are poor diggers and inhabit packed mud, or gravel mixed with sand, usually 8 in (20 cm) below the surface. They are found on the Pacific Coast near the rocky shores of bays and estuaries. Those inhabiting the open coast during the summer months should not be eaten because they may be infected with toxin-producing organisms. *P. semidecussata*, the Japanese littleneck clam, is smaller but considered to be better-flavored than the rock cockle. The shell is more elongated, with a brownish to bluish banding on one end. It inhabits an environment similar to that of *P. staminea* and is widespread in Puget Sound, Wash., British Columbia, and San Francisco and Tomales Bay, Calif. Unlike the genus *Protothaca*, the basket cockles (*Clinocardium nuttalli*, or *Cardium corbis*) are good diggers and have a large foot. Lacking siphon tubes, basket cockles burrow only slightly beneath the surface and inhabit sand flats, particularly along the Pacific Coast. They are considered good eating clams but are too few in number to be widely marketed. They are most abundant in British Columbia and in Puget Sound, Wash., with fewer found south as far as Baja California and north as far as the Bering Sea. The hard shell cockles, genus *Chione*, are found from San Pedro, Calif., S into Mexico. The giant Atlantic cockle, *Di-nocardium robustum* (*Cardium magnum*), reaches 5 in (12.5 cm) in diameter and is found along the Atlantic Coast from Virginia to Brazil. It has shells with toothed margins, strikingly colored in yellowish brown with spots and transverse stripes of chestnut or purple. Cockles are classified in the phylum MOLLUSCA, class Pelecypoda, order Eulamellibranchia.

cocklebur or **clotbur**, any species of the genus *Xanthium*, widely distributed coarse annual plants of the family Compositae (COMPOSITE family). They are often persistent weeds, the two-seeded oval burrs are particularly troublesome to sheep growers and the very young plants are poisonous to livestock. Cockleburs are often confused with burdock. Cockleburs are classified in the division MAGNOLIOPHYTA, class Magnoliopsida, order Asterales, family Compositae.

cock of the plains: see GROUSE

cock-of-the-rock: see CONINGA

Cockpit Country, hilly region on the plateau of Jamaica, c 200 sq mi (520 sq km), W central Jamaica. Composed of limestone rock, the region has many sink holes, caverns, and subterranean streams.

Cockran, William Bourke, 1854–1923, American political leader, b. Co. Sligo, Ireland. He emigrated to New York City at the age of 17 and in 1876 was admitted to the bar. At first opposed to Tammany Hall, W. Bourke Cockran later joined (1883) the organization, although he subsequently remained independent in action. He supported the gold standard and William McKinley in 1896, anti-imperialism and William Jennings Bryan in 1900, and Theodore Roosevelt's Bull Moose ticket in 1912. As a member (1887–89, 1891–95, 1904–9, and 1921–23) of the U.S. House of Representatives, Cockran was a supporter of organized labor and an opponent of restrictions on immigration. He defended Thomas J. Mooney in 1918. See biography by James McGurran (1948, repr. 1972).

Cockrell, Francis Marion, 1834–1915, Confederate general and U.S. Senator, b. Johnson Co., Mo. Enlisting as a private with Confederate forces in the Civil War, he became a brigadier general in 1863. Cockrell's Brigade was a famous unit in the Western fighting. After the war Cockrell entered Democratic politics, and in 1874, Missouri elected him to the U.S. Senate, where he served until 1905. See biography by Francis Marion Cockrell II (1962).

cockroach or **roach**, name applied to approximately 3,500 species of flat-bodied, oval INSECTS forming the suborder Blattaria of the order Orthoptera. Cockroaches have long antennae, long legs adapted to running, and a flat extension of the upper body wall that conceals the head. They range from ¼ in to 3 in (6–7.6 cm) in length. Some cockroaches have two pairs of well-developed wings, the front pair covering the hind pair when at rest, others have reduced wings or none at all. In some species only the wings of the female are reduced or absent. Many species are able to fly well, although the familiar household species do not fly. Most cockroaches are shiny brown or black, but bright yellows, reds, and greens occur in some tropical species. Cockroaches are night-active insects and most live in damp places, most are omnivorous scavengers. They are worldwide in distribution but are most numerous in the tropics. Most species live in the wild in their native regions, e.g., the wood cockroaches, species of the genus *Parcoblatta*, found under forest litter in the NE United States. A few tropical and subtropical species that have been introduced into the temperate zone have become residents in human homes, where they multiply rapidly and are serious pests. They invade food supplies and emit foul-smelling glandular secretions. Their shape enables them to use tiny cracks as hiding places. They are popularly believed to be carriers of human diseases, although this has not been proved. The large, dark Oriental cockroach, *Blatta orientalis*, is a cosmopolitan household species. The smaller German cockroach, or Croton bug, *Blattella germanica*, native to Europe, is the common urban cockroach of the NE United States. The American cockroach, *Periplaneta americana*, is a large light-reddish species that invades houses in the S United States. Cockroaches reproduce sexually. Their eggs are encased in capsules called oothecae, which in some species remain attached to the abdomen of the female until the eggs hatch. In a few species the ootheca is retained within the body of the female and the young are born live. Young resemble the adults except in size. The group as a whole is extremely old, fossil evidence indicates its extreme abundance during the Carboniferous period, about 350 million years ago. These ancient cockroaches were able to fly and were probably the first flying animals. Cockroaches are classified in five families of the phylum ARTHROPODA, class Insecta, order Orthoptera, suborder Blattaria.

cockscomb: see AMARANTH

cocksfoot: see ORCHARD GRASS
